			The narrative of Bagley's removal reveals the operational mechanics of council eviction. The order issued in 1711 directed Bagley to surrender house and land to Gargen, the widow's new husband, within ten days. When Bagley failed to act on the warrant delivered by Thomas Fort the clerk of council, Boucher dispatched his deputy in person to turn him out. The escalation shows the established sequence of enforcement: written warrant first, served by the clerk; followed by personal intervention by senior council members if compliance was withheld. The mechanism mirrored the procedure used against Richard Alexander himself two years earlier and confirms that the council possessed a regular machinery for dispossessing recalcitrant planters that operated independently of the courts. Thomas Fort's role as clerk of council places him as the principal documentary officer of the local government. The clerkship combined record-keeping with the service of warrants and orders, making the holder the chief administrative officer through whom council decisions reached the inhabitants. Fort's appearance here illustrates how a single named individual could serve as the operational interface between council deliberation and physical enforcement on the island. The executors' central legal point turns on the directors' knowledge when they granted the widow's lease. The widow's petition to London had not disclosed that the land formerly held by Richard Alexander was now held under a fresh lease issued by the directors themselves under their honours' seal affixed thereto. Had the directors known of their own prior lease, the executors argued, they would have been content to leave matters as they stood. The argument deploys a doctrine familiar in early modern equity, that a grant obtained by suppression of a material fact could be set aside as procured by misrepresentation, even where the grant itself was issued in good faith by the granting authority. The application to a London grant procured on the basis of a St Helena petition shows how distance and the slowness of correspondence created scope for one side to obtain orders by partial disclosure. The dispute over the yams in the disputed land tests the truth of the widow's poverty plea. The widow had told the directors she had nothing to dig in but what she was forced to buy. The executors countered that she had held yams in the disputed land until her marriage to Gargen, and perhaps afterwards. Yams were the staple subsistence crop of St Helena, grown in large numbers in fenced plantations and serving as both food and currency in local exchange. The presence or absence of yams in a planter's holding was therefore the most direct test of economic standing, and the widow's claim of dependency on purchased food was either true or readily disproved by reference to her actual cultivation. The executors' insistence on this point shows how the local council served as the only effective check on the accuracy of representations made to London. Speculations Boucher's claim that severity towards Bagley was the fault of Company orders rather than his own decision probably reflects a defensive posture adopted against future London scrutiny. By citing express orders he transferred responsibility for the harshness of the eviction to a higher authority that could not easily be examined in detail from the island. The executors' detection of this device, and their argument that the directors had been misled in their petition by undisclosed facts, exposed the gap in Boucher's defence: if the orders themselves rested on incomplete information, the local officer was not absolved by

			following them, since he knew or should have known what the directors did not. The executors' assertion that no record would appear of any limited term in the original grant to Richard Alexander suggests they expected the council to consult Book Number Three and the older registers in arriving at its decision. By inviting documentary verification of the absence of a fixed term, they sought to undermine the widow's petition's claim of a twenty-one year lease while exposing the looseness of the original grant on which the Alexander side relied. The point worked in two directions: it weakened the petition by impeaching its terms, while also weakening the wider Alexander claim by emphasising that the original grant had been even less formal than John Alexander himself had argued.
274	265	then we can, and which if Govern[r] Boucher would have Excepted while Govern[r] Roberts was here had Ended all further Disputes where in a Letter to Govern[r] Boucher in a paragraph therein desired him to Publish it by beat of Drum that if the Step encondged any Person upon the Island, to the worth of a groat Lt them come and make it Appear, and he would make them around Sattisfac- tion for it which if John Alexander had then provd Bagleys Lease Illigatl and Unwarrantable he might have recovered a Suitable Sattisfaction for such a great Disapointment. If M[r] Carnes Evidence shewing what Govern[r] Boucher did was Purely to Oppose his Predecessor without any regard to do Bagley Justice and bares no Stress to the right of his Claim we Submitt to better Judgm[t] this being the Sume of Our defence in behalf of Bagleys Claim and for the Bennefitt of his Issue humbly begg a Period may be put to all further Disputes which is the Hearty desire of. Novemb[r] y[e] 16. 1714 Yo[r] Worships & Councils most Obedient & Humble Servants Orlando Bagley. Rich[d] Swallow. S[t] Helena To the Worshipf[ull] Govern[r] and Council Richard Swallows Answer to John Alexanders Reflection in his reply to Tho[s] Bagleys Case I Should think my self very unworthy the trust of an Executor Should I not use all Possible ways and means thats Just & Honest to recover what I think Properly belongs to those who left me in Trust the Name of Thomas Bagley being to Dear to me to use any unjust and fraudulent means to his Issue he haveing been allways a present help to me in my Necesity And Shall plainly Demon- strate in a few words if the Lands recovered the Bennefit to me out Not be desernable, and Cant in the least Conceive why Jn[o] Alexander Should give himself any troule a bout the Land I Possess Already and do let him know I am none of those Idle Margin Notes: Rich[d] Swallows Answer to Jn[o] Alexand[rs] reply	The executors said that what they had set out was clearer than any further account they could give. Had Governor Boucher accepted Bagley's offer while Governor Roberts was here, the matter would have ended all further disputes. Boucher in a letter to Governor Roberts had desired him to publish it by beat of drum, that if the step aggrieved any person upon the island, to the worth of a groat, he should come and make it appear, and Bagley would make them around satisfaction for it. If John Alexander had then proved Bagley's lease illegal and unwarrantable, he might have recovered suitable satisfaction for such a great disappointment. As to Mr Carne's evidence, showing what Governor Boucher did, that was purely to oppose his predecessor without any regard to doing Bagley justice. The matter carried no force as to the right of Bagley's claim. The executors submitted to better judgement. This being the sum of their defence on behalf of Bagley's claim, and for the benefit of his issue, they humbly begged a period might be put to all further disputes, which was the hearty desire of the executors. The reply was dated 16 November 1714 and subscribed by Orlando Bagley and Richard Swallow as worship's and council's most obedient and humble servants. St Helena. Richard Swallow's answer to John Alexander's reflection in his reply to Thomas Bagley's case was addressed to the worshipful governor and council. He should think himself very unworthy the trust of an executor should he not use all possible Interpretations The proposal to publish Bagley's offer by beat of drum reveals an important mechanism of public verification in the early colonial settlement. The beat of drum was the standard means by which public proclamations reached the inhabitants of St Helena, with the drummer assembling the population at fixed points to hear the governor's notices read aloud. By proposing to publish the offer in this way, Boucher would have created a general invitation to any aggrieved person to come forward with a claim, while limiting Bagley's exposure through the requirement that any complainant make his loss appear to the worth of a groat. The offer was structured to produce either silence, which would have ratified Bagley's title, or a defined claim that could be settled by composition. A groat was a small silver coin worth fourpence, used here as the minimum threshold of demonstrable injury rather than the limit of compensation. The phrase to the worth of a groat established that any person who could show even a trifling loss arising from the lease would be heard. The mechanism converted an open invitation into a workable procedure, since claimants had to articulate a quantifiable grievance rather than offering general dissatisfaction. The technique reflects the standard early modern practice of using a small

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			specified sum to define the entry threshold for a public process while leaving the eventual settlement open. The executors' treatment of Mr Carne's certificate as evidence of Boucher's opposition to his predecessor, rather than evidence on the merits of Bagley's claim, attempted to neutralise a key documentary item. Carne's certificate had recorded remarks supposedly made by Boucher, and stood as one of the items in the documentary case being assembled against the previous governor. By framing the certificate as relevant only to the relationship between Boucher and Roberts, the executors sought to detach it from the substance of the Bagley title and prevent its use as proof that Bagley's claim was tainted by improper motive. The closing request for a period to be put to all further disputes reveals the executors' political weariness with the long-running case. By inviting the council to bring the matter to a final conclusion, they sought to convert the documentary contest into a single dispositive ruling that would foreclose continued litigation by either side. The hearty desire for finality, repeatedly invoked, was directed not at the merits but at the procedural exhaustion of an estate that had been kept open by competing claims for several years and could not be wound up until the land question was settled. Speculations The proposal to publish by beat of drum was probably never executed, since the executors invoke it in conditional terms only. The mention serves to demonstrate that Bagley and Boucher between them had been willing to expose the transaction to public challenge, with the implication that the absence of any contemporary objection from John Alexander or others now undermined the present complaint. By citing an offer of public verification that the Alexander side had let pass, the executors framed the current dispute as an attempt to revisit a matter on which the relevant parties had had their opportunity at the time and declined to act. Richard Swallow's decision to follow the joint executors' reply with his own separate answer to John Alexander's personal allegations probably reflects the structure of the conflict-of-interest charge laid against him. By appearing personally and in his own voice on the question of his alleged collusion with Tovey, Swallow sought to place his rebuttal before the council in a form that could not be dismissed as the executors' joint pleading. The separation kept the substantive question of Bagley's title distinct from the side question of Swallow's personal integrity, allowing the council to decide each on its own footing.
275	266	Idle drones who through sloth and Neglect Impoverish their Plantable Land that it becomes fitt for nothing but Pasture. The Articles of agreement betwixt M[r] Tovey and my self makes appear what's rec[t] and what is to be paid besides the risque & ruin of the blacks lives the House out of Repair, and if not timely prevented some part of it will be down before the next Season is over, the Walls about y[e] Plantations will cost thirty pounds to put in repair if hier were Hired to do it Forty Six pound is to be added to the Childs Portion the Hono[ble] Companys Rent & Revenues to be paid the live uncertain how Long to Enjoy it, all this fairly Considered by an understanding and Impartiall Judge without Dilligent care and Industry I Shall become a Looser thereby. I am with Respects Your Worsp and Novemb[r] y[e] 16 1714. Councils most Obedient & Humb[le] Servant. Richard Swallow. Alexand[rs] Answer I don't think this requires any farther Answer than if Swallow takes what I have Said as a reflexion. he may So yet and lett him get his Remedy where he can. As to	Swallow continued his answer. He referred to idle drones who through sloth and neglect impoverished their plantable land until it became fit for nothing but pasture. The articles of agreement between Mr Tovey and himself made plain what had been received and what was to be paid, besides the risk and ruin of the slaves' lives. The house was out of repair, and if not timely prevented some part of it would be down before the next season was over. The walls around the plantations would cost thirty pounds to put in repair, even if hired servants were used to do it. Forty-six pounds was to be added to the child's portion. The Honourable Company's rents and revenues were to be paid by him, with no certainty how long he might enjoy the holding. All this fairly considered by any understanding and impartial judge, he would be a loser without diligent care and industry on his part. The answer was dated 16 November 1714 and subscribed by Richard Swallow as the worshipful governor and council's most obedient and humble servant.

		the Bennefitt that is deserved by the Land if recovered is visible to all mankind and that in severall Respects it being Contegious to his, the Risque he runs is very insignificat, the Charges no more then what every body is at that hath Land the forty Six pound is liyable to be paid by M[r] Tovey and to be put into said Swallows hands So that he can be nothing out of Pockett, what he Hints by the word Drone I dont know his meaning by it nor do's it any way Concern. Your Humb[le] Serv[t] Nov[br] y[e] 22[d] 1714 J[no] Alexander S[t] Margin Notes: Novemb[r] y[e] 16 1714. Alexand[rs] Answer. Nov[br] y[e] 22[d] 1714.	John Alexander's answer followed. He said he did not think this required any further answer than what he had already said. If Swallow took what had been said as a reflection he might do so, and get his remedy where he could. As to the benefit to be derived from the land if recovered, it was visible to all mankind, and in several respects. He being conscientious, the risk Swallow ran was very insignificant. The charges were no more than what every body owed who had land. The forty-six pounds was liable to be paid by Mr Tovey, and to be put into Swallow's hands, so that he could be nothing out of pocket. As to the hints Swallow gave by the word drone, John Alexander said he did not know his meaning by it, nor did it any way concern him. The answer was dated 22 November 1714 and subscribed by John Alexander as humble servant. Interpretations The agreement between Tovey and Swallow described in this answer confirms in Swallow's own words the structural arrangement that John Alexander had earlier alleged against him. Swallow set out specific financial elements of the arrangement: the risk of slaves' lives, the cost of upkeep on the house and the plantation walls, the rents and revenues payable to the Company, and the £46 0s 0d to be added to the child's portion. By acknowledging these terms in writing as part of his defence, Swallow made the arrangement a matter of formal record. The disclosure exposes the calculus of long-term executorship in this period, where the executor undertaking a minority trust expected to recover the costs of maintenance, rents, slave mortality and structural repair from the land itself, with a fixed sum eventually due to the child on majority. The £30 0s 0d cost of repairing the plantation walls, set against the £46 0s 0d for the child's portion, provides a benchmark for the real economic burden of executorship on a developed planter holding. Wall maintenance alone consumed more than half of what would eventually be paid to the heir, indicating that on this estate the ratio of running costs to ultimate child benefit was steep. The figures support John Alexander's earlier suspicion that any net advantage would accrue to Swallow rather than to the Bagley child. The Company rents had to be paid throughout, regardless of whether the trust ultimately yielded any surplus. The phrase risk of slaves' lives, used in Swallow's own defence, reveals how slave mortality was accounted for as a financial exposure of the executor. Slaves on the plantation were treated as productive assets whose death during the term of the trust represented a capital loss to be borne by the holder of the land. Swallow was claiming that the unpredictable mortality of the slave labour force on this holding was part of the risk that justified his expected return from the arrangement. The accounting framework treated human lives as items of inventory subject to wastage, with executor compensation calibrated to expected losses. John Alexander's response that the £46 0s 0d would be paid by Tovey and placed in Swallow's hands undermines the entire risk argument. If Tovey was to deliver the child's portion to Swallow, then Swallow held the £46 0s 0d as the executor controlling its application, and his exposure to loss was correspondingly small. The point illustrates the structural weakness of an executorship where the same person holds both the trust property and the trust funds, since the supposed risk is mitigated by his control over the very money that funds the trust's obligations. Speculations Swallow's voluntary disclosure of the £30 0s 0d wall repair cost and the £46 0s 0d child's portion probably reflects a calculated attempt to convert the trust into one that looked unattractive on its face. By

			emphasising the heavy outgoings against an uncertain term of enjoyment, he positioned himself as a reluctant trustee rather than a self-interested beneficiary. The strategy was designed to neutralise John Alexander's earlier characterisation of him as the real beneficiary of the arrangement, but the precise itemisation backfired by making the financial structure of the trust available for analysis on the consultation record. John Alexander's pointed refusal to take offence at the word drone, while professing not to know its meaning, suggests a controlled rhetorical move. By declining to engage with the personal insult, he denied Swallow the satisfaction of having drawn a response, while preserving the higher ground of the substantive argument. The decision to record his indifference rather than reply in kind operated as a tactical refusal to be drawn from the legal merits into personal exchange.
276	267	S[t] Helena. To the Worshipf[ll] Isaac Pyke Esq[r] Govern[r] & Councill of S[t] Island the 2[d] Reply of John Alexander to y[e] Defence of Orlando Bagley & Rich[d] Swallow Execut[rs] to Tho[s] Bagley dec[d] Article 1. To the first Reply that Since the two said Executors Say they don't see any thing that bares any Stress Either one way or t'other only a reflection upon Swallow is because they don't know what to Say against y[e] truth of what is Exprest in my first reply And as to the Certifi- cate (as I sicy twas) I leave to the wise and Judicious to give their Opinions in and that by the way Richard Alexander was ever as Reputable as Tho[s] Bagley, and could at any time have had as many hands To the 2[d] Article I deny having made any reflection against the Government any more then Setting forth the whole truth which I Still Stand by and whether or no what I have Said in my former reply is no wcaehing to Bagleys Claim I appeal to all the world but more Immediatly to those Gentlemen, to whom this Case belongs to Determine and do yet Say that Rich[d] Alexander never Did Offer the same to any body living till (as I have Said in my first reply) Necesity had no Law that is till he was forced out of the same and Obliged to sell his Smale Effects to great Loss and Damage as the Said Orlando Bagley and Swallow do own themselves in Declaring that Thomas Bagley by a Deed of Gift gave a heifer to Each of the Said Alexanders Children which no man in the world of his Substance would have done had he not known the Injustice and wrong done the said Alexander, and the Poor and Deplorable Condition his Children was in by that means and no way thought Treacherous (a base & unchristian Expression Margin Notes: Jn[o] Alexanders 2[d] Reply to y[e] Defence of Orl[d] Bagley & Rich[d] Swallow Execu[ts]	St Helena. The document was addressed to the worshipful Isaac Pyke, governor, and council of St Helena. It set out the second reply of John Alexander to the defence of Orlando Bagley and Richard Swallow, executors to Thomas Bagley deceased. Alexander turned to the first reply. Since the two executors said they did not see anything that bore any force either one way or the other, and made only a reflection upon Swallow, this was because they did not know what to say against the truth of what he had set out in his first reply. As to the certificate, which they called a saucy one, he left it to the wise and judicious to give their opinions on it. By the way, Richard Alexander was always as reputable as Thomas Bagley, and could at any time have had as many hands to a certificate. To the second article, Alexander denied having made any reflection against the government any more than setting forth the whole truth, which he still stood by. Whether or not what he had said in his former reply was a weakening of Bagley's claim, he appealed to all the world, but more immediately to the gentlemen of council to whom this case belonged to determine. He still said that Richard Alexander had never offered the land to anybody living, until, as he had said in his first reply, necessity having no law, that is until he was forced out of the same and obliged to sell his small effects, to his great loss and damage. The executors themselves declared as much, when they said that Thomas Bagley by a deed of gift had given a heifer to each of the Alexander children. No man in the world of his substance would have done so, had he not known the injustice and wrong done to Richard Alexander, and the poor and deplorable condition his children were in by that means. Bagley had in no way thought it treacherous, base and unchristian Interpretations The exchange about the certificate reveals how documentary credibility was being contested between the two sides. Swallow had called the freeholders' certificate saucy, that is impertinent or presumptuous in laying personal allegations against members of the previous government. John Alexander's reply that Richard Alexander had been as reputable as Thomas Bagley and could at any time have produced as many hands to a certificate operates as a counter-claim of equal social standing. The point implies that the choice of which side could marshal more freeholders' signatures was a matter not of substantive right but of personal connection, and that Bagley's death had simply reduced his side's capacity to gather subscriptions. The argument exposes the certificate device as one whose evidentiary weight depended on the network of the principal at the time it was sought. The phrase necessity having no law restates a maxim of long standing in English legal thought, holding that conduct compelled by necessity could not

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			be judged by the same standard as voluntary action. Alexander applied the maxim narrowly: his brother's sale of his small effects, once forced out of his land, did not represent a voluntary disposal that could be cited against him in the present case. The argument denied any inference from Richard Alexander's actions after the eviction, since those actions had been compelled by circumstance rather than chosen. The legal effect was to confine the evidentiary value of the post-eviction conduct to the eviction itself, preventing the executors from drawing inferences from later transactions. The deed of gift to the Alexander children is here turned against the executors who had introduced it. Alexander seizes on Bagley's gift of a heifer to each child as positive proof that Bagley himself recognised the injustice done. The argument runs that no planter would voluntarily diminish his estate to benefit the children of an unconnected family unless conscience required it, and the only conscience that could so require would be one weighed down by complicity in the wrong. The technique converts the executors' character evidence into a confession of guilt by their testator. The deed of gift moves from being proof of Bagley's kindness to being proof of his uneasy conscience. The phrase poor and deplorable condition of the children draws together the financial and social consequences of the eviction into a single picture of family ruin. Alexander's repeated emphasis on the children's plight serves both as a statement of fact and as a continuing pressure point on the council. The marriageable eldest daughter and the fourteen-year-old son, mentioned in the earlier reply, are here generalised into a family unit whose deplorable condition stands as living testimony against the 1709 ruling. Speculations The decision to cast Bagley's deed of gift as evidence of an uneasy conscience probably reflects John Alexander's awareness that the executors had introduced it for the opposite purpose. By inverting the rhetorical force of the same fact, he denied the executors any benefit from their disclosure while leaving the underlying evidence undisturbed. The technique was particularly effective because it required no denial of the deed itself, only a reinterpretation of its motive, which the council could not easily refute without entering the dead man's mind. The challenge that Richard Alexander could at any time have produced as many freeholders' hands to a certificate suggests that John Alexander believed the present inhabitants could still be canvassed for signatures supporting his side. By making the claim explicit on the record, he positioned himself to produce such a certificate if the council seemed inclined to give weight to Swallow's dismissal of the existing one. The threat operated as a deterrent to any ruling that turned on the relative strength of inhabitant support, since it warned the executors that pressing the point would invite an open contest of signatures that could only enlarge the dispute.
277	268	Expression to Say of a Deceased Person and near Neighbour who was ever ready to do any thing that lay in his power [for] them) tho with a Sort of a Smoothing plain the Said Executors say they really beleive he the Said Alexander had no such intent as to trick the Said Bagley But that John Alexander who they take the Liberty to Say always Lov'd to fish in troubled Waters To which I answer that those two Executors who t[him] gives their tongues too much Liberty in any Person of Life never knew me deserving such a Character or what soever made it my business to be any way Active or an abetor Aider or assistor in any thing but what was Just & reason- able which may be presumed some People has not and if I dont mistake	Alexander continued his second reply. He said it was an unchristian expression to use of a deceased person and near neighbour, who was always ready to do anything that lay in his power for them, even with a sort of a smothering plain. The executors said they really believed that Bagley had no such intent as Alexander charged him with, but that John Alexander, they took the liberty to say, always loved to fish in troubled waters. To this he answered that the two executors, who gave their tongues too much liberty in any persons of his life, never knew him deserving such a character, nor what made it his business to be in any way active, an abettor, aider or assistor in anything but what was just and reasonable. This might be presumed of some

		the Penman and Contriver of the said Execut[rs] Defence is called a mer[e] Make bate in a Letter from England under good hands besides other Instances too Tedious to Mention here and so shall return to the business in hand & reply further that if I had Conceived any hatred against the then Government or not, I dont know what business any planter has to mention it in a Matter quite Different which shews there's some that loves to rake Coals and Stir up fire (which is well if dont Ere Long burn their own fingars) and busie themselves with what they have nothing to do And do assure them I had a better plea on my Side then they Imagine and which should seem so Ignorant of at this time. And as to their Saying I Declare the Hono Companys Seale frivolous & Groundless is very false. for I only Say that I Declare Bagleys Claim to be frivolous, Groundless and very unjust without Saying one word of the Seal in that or any other plea in the Manner they take the Liberty to Express, and therefore think they had better kept in such words for I know the Humour of the Inhabi- tants and Constitutions of this place as well, if not better than they do, and beleive my self as able to	people, but not of him. If he did not mistake, the penman and contriver of the executors' defence was called a meek mate in a letter from England under good hands. There were besides other instances too tedious to mention here. He returned to the business in hand. He said further that, whether or not he had conceived any hatred against the previous government, he did not know what business any planter had to mention it in a matter quite different. This showed that there was someone who loved to rake coals and stir up fire, which was well, if they did not before long burn their own fingers, and busied themselves with what they had nothing to do, and so secured a better plea on his side then they imagined. The point should seem so ignorant to anyone at this time. As to their saying he declared the Honourable Company's seal frivolous and groundless, that was very false. He had only said that he declared Bagley's claim to be frivolous, groundless and very unjust, without saying one word of the seal in that or any other plea, in the manner they took the liberty to express. He thought therefore they had better kept in such words, for he knew the humours of the inhabitants and the constitution of the place as well, if not better, than they did, and believed himself able to Interpretations The phrase meek mate in a letter from England under good hands suggests that a metropolitan correspondent had previously sent an unflattering character note on Swallow, identifying him as the real drafter of the executors' defence. The expression itself reads as ironic, applied to a man Alexander wished to portray as the active intriguer behind the present pleadings. By citing the letter only in passing, with the intensifier under good hands meaning duly signed by reputable persons, Alexander hinted at the existence of independent corroboration of his characterisation without committing himself to produce the document. The technique placed Swallow on notice that further pressure might bring the letter into the open, while preserving Alexander's freedom not to disclose it. The metaphor of raking coals and stirring up fire is the standard early modern expression for one who deliberately revives a dying quarrel for personal advantage. Alexander applied it to the executors, who in his view had introduced matters between him and the previous government that had nothing to do with the title contest now before the council. The argument worked procedurally: by characterising the executors' references to Boucher and Hoskison as fire-stirring, Alexander framed their pleadings as departures from the strict matter of Bagley's claim, and thus as material the council should disregard. The warning that they might burn their own fingers was a covert threat that any extended airing of past administrative disputes would damage their cause more than his. The careful distinction Alexander draws between declaring Bagley's claim frivolous and declaring the Honourable Company's seal frivolous is legally substantive. To impugn the seal would have been an attack on the directors' authority itself, since the seal was the formal mark of corporate consent that authenticated leases issued under their name. By insisting that he had attacked only the claim, not the seal, Alexander preserved his standing before the directors while maintaining his position in the local contest. The executors' attempt to characterise his words as reaching the seal would, if accepted, have converted his case into one of contempt against the Company itself, exposing him to a quite different order of risk. His repudiation of any such reading was therefore not pedantic but essential to the survival of his case.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			Alexander's closing assertion that he knew the humours of the inhabitants and the constitution of the place as well, if not better, than the executors invokes a recognised epistemic claim in island society. The humours of a community referred to the temper of its public opinion and the particular dispositions of its leading figures. The constitution of the place meant the practical operation of its laws, customs and offices as locally understood rather than as written down in any single instrument. By claiming superior knowledge in both, Alexander positioned himself as the better qualified guide for the council's consideration of how a ruling would be received by the planter community, and how it would fit into the working framework of local administration. Speculations The deliberate mention of a letter from England under good hands characterising Swallow probably operates as a calibrated threat. By naming the existence of the document without producing it, Alexander preserved the option of bringing the letter into evidence if the council appeared to favour the executors' account of Swallow's character. The mention also alerted the executors that any further insistence on the fish in troubled waters charge might draw out a counter-narrative supported by English correspondents whose own standing would be weighed against the executors' local credibility. Alexander's careful demarcation between Bagley's claim and the Honourable Company's seal probably reflects a specific instruction from advisors familiar with the procedural rules of company litigation. Attacks on the directors' seal could be reported to London as defamatory of the Company itself, with consequences for the offender's standing as a planter under company jurisdiction. The precise phrasing of his denial, leaving no ambiguity that his strictures applied only to the local claim and not to the metropolitan instrument, suggests deliberate drafting designed to insulate the case from this risk while maintaining the substantive position on the merits.
278	269	to Judge whether they the Said Inhabitants think their right to Land Precarious or not as they the said Execut[rs] and which I dare swear no body but troublesome Lehighious Persons will or doth. To the 3[d] Article I have in good measure made out in my afore- said reply So that I Shall there only Convince the Presumptuous in setting their hivery that Richard Alexander had a Grant of Ten Acres Land in the year 169[2/3] and so recorded for twenty one years and the reason why he had not a lease for the same I have Demonstrated in my aforesaid first reply and that without the least laying any blame on the Surveyor which Still shews there must be some that would fain put People upon Clamouring and as to their Saying tis Rediculous Even to Extravagancy because I did not think Bagleys Petitions Did require any answer in mine haveing fully informd of the whole truth in my first, I presume more Extravagant in the said Swallow and Bagley for Saying So, and Deny that the Naked truth is sett forth in those Petitions having read part. As to the Certificate of M[r] Carne I have already Answered, but yet Say I don't think any Stress therein to hinder Richard Alexanders Issue from the Land wherein he took Great Pains and was at vast Expence to bring it to Perfection and therefore all the world will Say if the Land don't return to them, it will be a very great peice of wrong and Injustice tho I must needs Say that after the Expiration of twenty one years the time Rich[d] Alexander was to have the Land is Expired the Hono[ble] Company being Sole Lords thereof may Let it to whom they please. But it very Seldome happens any body takes a farm out of the first Tenants hands Especialy if able to pay y[e] Rent all w[ch] I Leave to the	Alexander continued his second reply, saying he could judge whether the inhabitants thought their right to land precarious or not as well as the executors. He dared swear that nobody but troublesome and litigious persons, or both, would so judge. He turned to the third article. He said he had in good measure made it out in his earlier reply. He could now only convince the presumptuous in showing them that Richard Alexander had a grant of ten acres of land in the year 1693, so recorded for twenty-one years. The reason why he had not a lease for the same he had demonstrated in his earlier first reply, without laying any blame on the surveyor. This still showed there must be some persons who would gladly stir people up to clamouring. As to their saying it was ridiculous, even to extravagance, because he did not think Bagley's petitions deserved an answer, he having fully informed himself of the whole truth in his first reply, he presumed it more extravagant in Swallow and Bagley to say so, and to deny that the naked truth was set forth in those petitions, having read part of them. As to the certificate of Mr Carne, he had already answered it. Yet he said he did not think any stress laid in it could hinder Richard Alexander's issue from the land, wherein he had taken great pains and been at vast expense to bring it to perfection. Therefore all the world would say that if the land did not return to them, it would be a very great piece of wrong and injustice. He must needs say that after the expiration of the twenty-one years for which Richard Alexander was to have the land, the time being expired, the Honourable Company, being sole lords thereof, might let it to whom they pleased. But it very seldom happened that anyone took

		wise & Prudent Opinion of y[e] Hono[ble] Co[ur]t of Directors &c[a] And am in all due respects Yo[r] Worsp[s] most Humb[le] & faithf[ul] Serv[ts] Nov[r] [...] 1714 Jn[o] Alexander	a farm out of the first tenant's hands, especially if he was able to pay his rent. All this he left to the wise and prudent opinion of the Honourable Court of Directors. The reply was dated 22 November 1714 and subscribed by John Alexander as the worship's most humble and faithful servant. Interpretations The shift in Alexander's account from a six-acre grant to a ten-acre grant for twenty-one years marks a substantive revision in his presentation of the original 1693 award. In his earlier reply the figure given was six acres, with additional ground added later for the convenience of fencing. The expanded ten-acre figure aligns the original grant more closely with the executors' contested heading of ten or twenty-one acres, while pulling the twenty-one years out as a term of years rather than an acreage. The revision shows how the documentary evidence itself was being reread in successive pleadings, with the 1693 entry in Book Number Three serving as a reservoir of detail that each side mined for figures favourable to its position. The technique of citing the same recorded grant for different particulars at different stages of the dispute is characteristic of litigation where the underlying record was held by the council rather than the parties. The reference to the Honourable Company as sole lords thereof on expiry of the twenty-one years discloses the underlying legal structure of land tenure on the island. All land held by planters was held of the Company as ultimate landlord, with the planter's interest expiring on the term of years or at the will of the Company. Alexander's frank acknowledgement of this principle was tactically necessary, since to contest it would have undermined his entire appeal to the directors. The Company's discretion to relet to whom they pleased at the end of a term was therefore not in dispute. The argument turned instead on the customary expectation, accepted by Alexander, that the first tenant in possession at the end of a term would normally be preferred for renewal so long as he could pay his rent. This combination of acknowledged corporate discretion with customary preference for the sitting tenant defined the working land tenure regime under which St Helena planters operated. The phrase troublesome and litigious persons identifies the category of inhabitants whom Alexander dismissed as the only ones who would regard their holdings as precarious in consequence of his case. The two adjectives carry distinct legal meanings in early modern usage: troublesome referred to those who disturbed the peace of the community by repeated complaint or quarrel, while litigious meant those who habitually resorted to the law for advantage. By attributing concern for the security of titles only to such persons, Alexander dismissed the executors' wider warning that an adverse ruling would unsettle the planter community. The implication was that any inhabitant of settled habits and good conduct could rest secure in his holding, since the Alexander claim did not threaten regular tenures but only the irregular ones produced by improper administrative action. The acknowledgement that Richard Alexander had taken great pains and been at vast expense to bring his holding to perfection invokes the principle of improvement value. By emphasising the labour and capital invested in clearing, planting and building, Alexander positioned the family's claim not merely as one of original right but of accumulated investment. The improvement argument operated as an equitable supplement to the legal claim of title: even if the technical question of lease and term went against him, the labour expended on the land created an interest the council could recognise without overturning any formal instrument. The argument is here directed to the directors as the ultimate decision-makers, since their

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			discretion was wide enough to take account of equitable as well as strict legal considerations. Speculations The closing referral of the matter to the wise and prudent opinion of the Honourable Court of Directors signals Alexander's expectation that the council would not finally dispose of the dispute on its own authority. By framing his pleading as material for the directors' eventual review, he positioned the local hearing as a stage in a longer process rather than its conclusion. The strategy fitted the open thread already identified for transmission to London, where the council had said the whole case would be sent with their opinions. Alexander's submission was therefore drafted with the metropolitan reader in mind, with the local council serving as the conduit through which his arguments would reach the directors. The deliberate concession that the Company could let the land to anyone they pleased after the term of twenty-one years probably reflects a calculated decision to make Alexander's case appear modest. By acknowledging the Company's absolute discretion in the abstract, while invoking only customary preference for the sitting tenant, he avoided any appearance of arrogating rights to himself that the directors might find presumptuous. The technique left the directors free to recognise the family's claim as a matter of grace rather than legal compulsion, which gave them political cover to rule in Alexander's favour without seeming to constrain their own future authority over land grants.
279	270	Island S[t] Helena To the Worshipf[ll] Isaac Pyke Esq[r] Govern[r] &c[a] Councill The Remonstrance of Jn[o] Alexander on behalf of his dec[d] Brother Rich[d] Alexander re- lateing to a Parcell of Land he formerly hired of the Hono[ble] Comp[a] as followeth That Richard Alexander in the year 169[2/3] had a grant for ten Acres of the Hono[ble] Companys West Land, where on he built a House and made Plantation fencing in a small Peice in severall places that was best for Pro- duceing Provisions and by Guess fenced in more for Pasture which together he thought did not Exceed Ten Acres when the same came to be measured t'was found to be fifteen Acres with a little more he desired might be added for Conveniency of fenceing w[th] Less charge from which time he paid Rent for Said fifteen Acres and Claim'd no more. Now when Thomas Bagley had the same Land he removd some Fences and made a Seperation fence at foot of Main ridge which Enlarged the whole five or Six Acres more which was not done by the Said Alexander or any other fence made by him that could or can give any Grounds to Say he Possesed more then what he had yearly paid for, and in case he had more Land there an Order of Councell made by Gov[r] Roberts and the then Councell that no Person what- soever should be any way Prejudiced or obliged to Pay rent for any more Land then they usually gave in if upon Measureing a bigger or Greater Number of Acres was found, but only from that time it being im- possible any Person Should fence in no more or Less than what was first granted, which I hope will be sufficient to barr all Objections in this M[a]tt[er] to the Prejudice of Said Rich[d] Alexander being w[th] due respects Yo[r] Worsp[s] &c[a] Coun[ll] most Humb[le] and faithfull Servant. Jn[o] Alexander. Margin Notes: Jn[o] Alexanders Remonstrance to a Pacell Land.	Island of St Helena. The document was addressed to the worshipful Isaac Pyke, governor, and council. It was the remonstrance of John Alexander on behalf of his deceased brother Richard Alexander, relating to a parcel of land he had formerly hired of the Honourable Company. Alexander set out that Richard Alexander, in the year 1693, had a grant of ten acres of the Honourable Company's waste land. On it he built a house and made a plantation, fencing in a small piece in several places that was best for producing provisions, and by guess fencing in more for pasture, which he thought altogether did not exceed ten acres. When the land came to be measured it was found to be fifteen acres, with a little more he desired might be added for the convenience of fencing, without charge. From that time he paid rent for fifteen acres and claimed no more. When Thomas Bagley held the same land, he removed some fences and made a separation fence at the foot of the main ridge, which enlarged the whole by five or six acres more. This was not done by Richard Alexander, nor was any other fence made by him that could give grounds to say he possessed more than what he yearly paid for. In case he had had more land there, an order of council made by Governor Roberts and the then council provided that no person whatsoever should be in any way prejudiced or obliged to pay rent for any more land than they usually gave in. Where, on measurement, a bigger or greater number of acres was found, that should hold good only from that time, it being impossible that any person should fence in no more or less than what was first granted. The remonstrance was subscribed by John Alexander as the worship's and council's most humble and faithful servant. Interpretations The remonstrance discloses how rental obligations on St Helena were calibrated against measurement rather than original grant. The 1693 grant nominally covered ten acres, but on actual survey the holding came to fifteen acres, with further small additions allowed for the convenience of fencing. Richard Alexander had paid rent on the measured fifteen acres

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			from that point forward. The mechanism shows that the company's rent base reflected what surveyors actually found on the ground rather than what the original grant had specified, with discrepancies regularised through measurement rather than treated as overholdings or trespasses. The system relied on planters to give in their holdings honestly, with measurement serving as a periodic check rather than a continuous record. The order of Governor Roberts cited at the close establishes a key administrative protection for planters whose holdings exceeded their original grants. Under the order, any planter found on measurement to hold more land than he had given in was not liable for back rent on the surplus. Rent on the larger acreage was charged only from the date of measurement forward. The arrangement recognised the practical reality that fencing on rough ground could not be confined to exact acreage figures, and converted what would otherwise have been a continuous arrears problem into a forward-looking adjustment. The order's existence on the council record supplied Alexander with a defence against any attempt to use the discrepancy between original grant and actual holding as evidence of irregularity in Richard Alexander's tenure. The point Alexander pressed about Bagley's removal of fences and creation of a new separation fence at the foot of the main ridge shifts responsibility for the enlargement of the holding to Bagley himself. The added five or six acres had been brought within the boundary by Bagley's own fencing after he took possession. Any claim that the disputed land therefore exceeded what Alexander had legitimately held could be answered by pointing to Bagley as the agent of the enlargement. The mechanism inverted the executors' contention that the Bagley holding included parcels never properly granted to Alexander: those parcels, on Alexander's account, had been added by Bagley after the transfer. The phrase waste land refers to land not previously enclosed, cleared or improved, held by the company in its undeveloped state and available for grant to planters willing to take up the labour of bringing it into cultivation. The 1693 grant of waste land to Richard Alexander therefore covered ground that he was expected to improve through fencing, clearing and planting, with the rent set in recognition that the improvements would be made at the planter's own expense. This is consistent with Alexander's earlier emphasis on the vast deal of difficulty and hard labour his brother had expended in bringing the holding to perfection. Speculations The remonstrance probably represents a fresh tactical move designed to address a specific weakness in the wider case. Whereas Alexander's earlier replies focused on the wrongness of the 1709 eviction and the validity of Bagley's title, this document concentrates narrowly on the question of acreage. By demonstrating that any apparent excess in the holding had been the work of Bagley's own fencing after possession, Alexander pre-empted any council finding that the disputed land had exceeded Richard Alexander's lawful claim. The procedural placement of the remonstrance, separate from the second reply, suggests deliberate compartmentalisation of the boundary issue from the broader title contest. The citation of the order of Governor Roberts and his then council is striking, since Alexander had elsewhere attacked the same Roberts administration as the source of the 1709 injustice. By drawing on a Roberts-era order favourable to his case, Alexander demonstrated that he was willing to use the previous administration's acts where they helped him while attacking them where they did not. The technique

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			invited the present council to treat each Roberts-era ruling on its merits rather than as part of a uniform regime to be either upheld or overturned. The result was a more granular handling of the documentary record that allowed Alexander to preserve some Roberts-era authority while contesting the rest.
280	271	Island S[t] Helena. To the Worshipf[ll] Isaac Pyke Esq[r] Govern[r] and Council. Antipas Toveys answer to John Alexanders two replys relateing to the Lease Land Said Tovey claims as right by his wife. As to any remissness or delay of said Tovey in not prosecuting this case so as to have obtained a decision thereof sooner he saith, He would have been glad it might have been done with fewer words such long and groundless arguments tramps up to no purpose but delays he being often indisposed and **Margin Notes:** Antip[as] Toveys re= =ply to Jn[o] Alexand[rs] 2[d] reply.	Island of St Helena. The document was addressed to the worshipful Isaac Pyke, governor, and council. It was the answer of Antipas Tovey to John Alexander's two replies relating to the leasehold land Tovey claimed as a right by his wife. Tovey said he had not thought to trouble the council further in this business than to produce his lease, for twenty-one years, of a house and twenty-one acres of land granted to his predecessor Thomas Bagley by the governor and council and sealed with the Honourable Company's seal. The lease had been delivered to him on his marriage by Bagley's executors, with proof that he obtained the same at the request of Richard Alexander deceased. He did so on the council day appointed, besides laying before the council the charges of his predecessor and his own upon the premises, together with the damages they had sustained for want of a plantation. Finding Alexander's answers filled with many suggestions as false as trifling, and which seemed only to be done to puzzle the case, Tovey begged leave humbly to lay before the council what he thought might further obviate the matter and fully answer all that Alexander or anyone else had or could say against the just pretensions of the complainant to the premises. He turned to the first point. As to any slowness or delay in not prosecuting the case so as to have obtained a decision sooner, he said he would have been glad it might have been done with fewer words. Such long and groundless arguments had been brought up to no purpose but delays. He had been often indisposed and Interpretations Tovey's standing in the dispute is now placed on its formal footing. He held the leasehold land as a right by his wife, the former widow of Bagley, and the lease itself had been delivered to him on his marriage. The arrangement reveals how property rights moved through successive widowhoods in St Helena planter society. The lease for twenty-one years had originally been granted to Bagley by the governor and council under the Honourable Company's seal. On Bagley's death the lease passed to his widow and through her to Tovey on their marriage. The mechanism is the same as that observed earlier in the Keeling estate, where successive husbands acquired their interest through the widow rather than by direct grant. Tovey's appearance before the council is therefore not as an independent claimant but as the present holder of an interest derived from his wife's previous marriage. The lease under the Honourable Company's seal carried substantially greater documentary weight than the informal council order under which Richard Alexander had originally held. A sealed lease for twenty-one years represented the highest formal grade of land instrument the company could issue on the island, authenticated by the directors' corporate seal and conferring a definite term. By foregrounding the existence of the sealed lease, Tovey shifted the evidentiary balance of the dispute. Where Alexander had argued from improvement value and customary expectation, Tovey could point to a written instrument bearing the corporate mark of the Company itself. The contrast between informal grant and sealed lease was central to the relative legal weight of the two claims. Tovey's reference to the proof that he obtained the lease at the request of Richard Alexander deceased aligns with the executors' earlier narrative that

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			Alexander himself had brought Bagley into the holding. By repeating this position from his own mouth as the present lessee, Tovey strengthened the chain of acquisition: original grant by council, transfer at Alexander's own request to Bagley, descent to widow, marriage to Tovey. Each link in the chain was supported by witnesses or documents. The phrase damages they sustained for want of a plantation captures the economic consequence of holding land that was not yet productive. The Bagley side had laid out their cumulative expenses on the premises and their losses from not yet having the land in full production. The argument framed the present occupants as having invested in improvement and waiting for return, while the Alexander challenge threatened to deprive them of the eventual yield. The language of damages converted the dispute from a question of pure title into one of accumulated economic interest, with the practical effect of complicating any council ruling that would simply restore the holding to the Alexander side without compensation for the works done in the interval. Speculations Tovey's decision to enter the dispute at this stage, after both sets of pleadings between Alexander and the executors had been laid, probably reflects a calculated reservation of his strongest evidence for last appearance. By holding back the sealed lease until the other parties had exhausted their arguments, he ensured that his documentary instrument would not be drawn into the wider exchanges about character and motive. The procedural placement also positioned him as the holder of present legal title rather than merely an executor defending a deceased man's claim, which carried greater immediate weight before the council. The complaint that Alexander's answers were filled with suggestions as false as trifling and seemed only to be done to puzzle the case suggests that Tovey perceived the multiplication of pleadings as itself a strategy. By framing the volume of Alexander's submissions as a tactic of obfuscation rather than legitimate argument, Tovey invited the council to discount the cumulative effect of the Alexander replies and focus instead on the sealed lease as the single dispositive document. The technique aimed to cut through the documentary thicket that the dispute had generated by reasserting the simplicity of the formal legal position.
281	272	and not capable thereby to prosecute the business of his Hon[ble] Masters with that dispatch he wisheth he had bin able to do was rather willing his own affairs should be put by for the present beleiving twill not be his disadvantage, truth being always the same, but he utterly denyes he is conscious of any Injustice in the case of Richard Alexander, on the contrary solemnly protests and avers that Richard Alexander (or his Widow) must be very unjust to Tho[s] Bagley & his, if he (as his Wid[o] now the wife of M[r] Goodgen or others for her has) ever desired to have the land again after Tho[s] Bagley took y[e] same (and laid out so considerable upon it, by the instigation of said Richard Alexander as has been provd by M[rs] Mary Swallows deisposition & the confession of his Widow (now M[rs] Goodgen) before yo[r] Worship and Council, for, then they only made use of Tho[s] Bagley to improve the Plantation & keep up the house (ready to fall), at his own charge for their benefit, without ever designing to make him Sattisfaction as appears by their never Offering Tho[s] Bagley any Sattisfaction for his charges and disappointm[t] when he was (so unjustly) outed of the said premisses w[ch] if he never had, had, he might before that time have had a good plantation else- where. That Rich[d] Alexander did or did not desire to go off before the Consultation mentiond the 13[th] Decemb[r]	Tovey continued his answer. He had not been capable, by reason of indisposition, of prosecuting the business of his Honourable Masters with the despatch he wished. Had he been able to do so, he would rather have put aside his own affairs for the present, believing that truth would not be at his disadvantage, truth being always the same. He utterly denied that he was conscious of any injustice in the case of Richard Alexander. On the contrary, he solemnly protested and averred that Richard Alexander, or his widow, would be very unjust to Thomas Bagley and his heirs, if she, as his widow now the wife of Mr Gargen, or others on her behalf, had ever desired to have the land again after Thomas Bagley took it, and laid out so considerable an amount upon it. Bagley had taken the land at the instigation of Richard Alexander himself, as had been proved by Mary Swallow's deposition, and by the confession of the widow, now Mrs Gargen, before the worship and council. They had only made use of Thomas Bagley to improve the plantation and keep up the house, which was ready to fall, at his own charge for their benefit. They had never designed to make him satisfaction, as appeared by their never offering Bagley any compensation for his charges and disappointment when he was, as Tovey put it, so unjustly ousted of the

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
		1709. yo[r] complainant humbly conceives is not material & therefore needs no answer, tho no doubt that might be proved were there need of it that he did that he do say he would, for that Consultation Witnesseth that he then did & afterwards he made a Publick sale by out Cry of his goods, &c[a]	premises. Had he never had the land, he might before that time have had a good plantation elsewhere. Whether Richard Alexander did or did not desire to go off before the consultation mentioned of 13 December 1709, Tovey humbly conceived was not material, and therefore needed no answer. There was no doubt that the matter might be proved, were there need of it. He did say that he would, for the consultation showed that he then did, and afterwards made a public sale, by outcry, of his goods Interpretations The deposition of Mary Swallow and the confession of the widow, now Mrs Gargen, before the council are key evidentiary items. A deposition was a sworn statement taken under oath and committed to writing, generally before a council member or other authorised officer, which then served as testimony when the deponent was unavailable or as a fixed record of what had been sworn. The confession of the widow before the council was a statement made in person at a council sitting and entered on the record. Together these items established on Tovey's account that Bagley had taken the land at Alexander's own request. The procedural significance lies in the contrast between Alexander's repeated reliance on the freeholders' certificate sent to the Company and Tovey's reliance on sworn evidence taken locally before the council. Where the certificate functioned as a political statement of community opinion, the deposition and confession operated as judicial evidence in the local forum. The phrase public sale by outcry refers to a sale held openly in a public place where the goods were called out aloud by an appointed crier and offered to all comers for the highest bid. The mechanism was the standard method of disposing of an estate quickly and at market value, with the open calling providing a guarantee that no private favouritism had set the price. Tovey's citation of Richard Alexander's public sale by outcry was offered as proof that he had genuinely intended to depart the island, since a planter holding out for restoration would not have disposed of his goods through a public outcry. The argument worked by treating the form of sale as evidence of the seller's intent: only one resigned to departure would liquidate his moveable estate through a procedure that left no possibility of reclaiming any item later. Tovey's argument that the question of whether Alexander desired to go off before 13 December 1709 was not material reveals an important shift in the litigation strategy. By treating the precise timing of Alexander's wish to leave as immaterial, Tovey severed the question of the family's grievance from the question of present title. Whether the eviction had been just or unjust no longer mattered, in his framing, since Bagley had subsequently taken the land at Alexander's own request and improved it at his own expense. The argument shifted the case from one of original wrong to one of subsequent dealing, on which the documentary record was on Tovey's side. The repeated invocation of charges and disappointment Bagley had sustained translates the dispute into the language of investment loss. By treating Bagley's expenditure on the plantation and his deprivation of the eventual return as a quantifiable damage, Tovey positioned the present holders as parties who had spent and waited in good faith. The implication for the council's eventual ruling was that any restoration of the land to the Alexander side would have to be conditioned on compensation for the improvements made and the rents lost. The argument prepared the ground for a settlement-by-payment outcome, even should the council find the underlying title contestable. Speculations

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			Tovey's acknowledgement of personal indisposition probably operates as a strategic concession rather than a real excuse. By admitting that he had been slow to bring the matter to a head, he disarmed John Alexander's earlier accusation that the delay had been deliberate and designed to favour Swallow's continued occupation of the land. The admission also positioned Tovey as a man who had put off his own private interest from public duty, with the corollary that any further delay should not now be turned against him. The tactic transformed a vulnerability into a moral asset. The selective reliance on the deposition of Mary Swallow and the widow's confession, while declining to address whether Alexander desired to leave before 13 December 1709, suggests that the documentary record before the council was uneven. Tovey was confident on the points where formal sworn evidence existed but cautious on those where it did not. The strategy of declaring immaterial what could not be proved by sworn record, while pressing what could, indicates a disciplined evidentiary approach that treated the council as a body that would weigh testimony by its formal standing rather than by its substantive plausibility.
282	273	As to said Jn[o] Alexanders alledging the then Govern[mt] granted the Lease to Tho[s] Bagley without Richard Alexanders consent knowledge or privity which no doubt they had power to do, and any Landlord to right himself when wronged or whose Tenant does not pay for all the Land he enjoys, or keep the House, or y[e] same in repair, will in comon prudence turn him out to gett a better. Tenant & it does appear Richard Alexander petitioned but for ten Acres by the consultation of y[e] 21[st] March 1697/8 & yet held double as much, w[ch] gave just reason to oust him, tho he had a leave for said Land (w[ch] he never had) but he did know of said Lease being granted or promised to be granted to Tho[s] Bagley, he being so far from objecting against it is that, he the said Richard Alexander desired said Bagley to petition for the said Land in compliance to which request, he did & where twas granted him said Bagley bought, what Provisions were on the ground Rich[d] Alexander had before desired him to buy & paid him honestly there for. The other Suggestion is as false, that Tho[s] Bagley desired any thing he wisht for (tho 'tis too plain they that now would hinder yo[r] Worship[s] complaint from the land would have Tho[s] Bagleys labour and charges for nothing) when on the day that Tho[s] Bagley had finnishd the fenceing in a peice of ground for a plantation then Richard Alexander came to treat w[th] him to take his, yet not so great strangers were they as said Jn[o] Alexander Suggests for that Richard Alexander urged it to Tho[s] Bagley he had rather he should have that plantation than another because he beleived twould be for his Interest. For the goodness of the House 'tis very apparent twas ready to fall, when Tho[s] Bagley had it, as one End of it did, which said Tovey built up with the addition of a small out House, when M[r] Goodgen lets him have it	Tovey turned to John Alexander's allegation that the then government had granted the lease to Thomas Bagley without Richard Alexander's consent, knowledge or privity. No doubt, he said, they had power to do so. Any landlord, when wronged by a tenant who did not pay for all the land he enjoyed or keep the house on it in repair, would in common prudence turn him out to get a better tenant. It did appear that Richard Alexander had petitioned for only ten acres by the consultation of 21 March 1693, and yet held double as much. The government therefore had just reason to oust him. Even though Bagley had a lease for the land, which Richard Alexander had never had, Alexander did know of that lease being granted, or promised to be granted, to Bagley. So far was Alexander from objecting against it, that he himself desired Bagley to petition for the land. In compliance with that request Bagley did so, and the land was granted to him. Bagley then bought what provisions were on the ground from Alexander, paying him honestly for them as he had been desired to do. The other suggestion was equally false, that Bagley desired anything he was now charged with. It was too plain that those who would now hinder the worshipful complainant from the land would have had Bagley's labour and charges for nothing. On the day that Bagley had finished the fencing in a piece of ground for a plantation, Richard Alexander came to treat with him to take it, though they were no great strangers, as John Alexander had suggested. Richard Alexander urged Bagley to take the plantation, on the ground that he believed it would be in Bagley's interest. As for the goodness of the house, it was very apparent it had been ready to fall when Bagley had it, as one end of it did. Tovey had built it up again, with the addition of a small outhouse, when Mr Gargen let him have Interpretations The argument that Richard Alexander had petitioned for only ten acres but held double that quantity, here advanced by Tovey, draws directly against the position John Alexander had set out in his remonstrance. Where John Alexander attributed the excess to Bagley's later fencing of additional ground, Tovey treated the same discrepancy as evidence that Richard Alexander had been a defaulting tenant from the outset, enjoying more land than he paid for. The same documentary fact, the 21 March 1693 consultation grant of ten acres against an actual occupation of twenty or so, is here turned to opposite use by the two sides. The case shows how a single recorded grant became the pivot on which competing narratives turned, with each

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			party drawing from the original entry the inference most favourable to its position. The principle that any landlord, when wronged by a defaulting tenant, may turn him out to get a better tenant is here invoked as the legal justification for the 1709 eviction. Tovey converts the council's act from one of administrative discretion into one of normal landlordly remedy, treating the Honourable Company as a private landlord rather than as a sovereign authority and Richard Alexander as a tenant in default rather than as a settled inhabitant being punished. The reframing matters because it neutralises John Alexander's argument that the council had exceeded the ordinary bounds of customary land tenure. If the action was the kind any landlord could take against a defaulting tenant, no question of administrative misconduct arose. The transaction by which Bagley bought the standing provisions from Richard Alexander, paying honestly for them, places a documented exchange between the two principals at the very moment of the supposed eviction. The detail is significant for two reasons. First, it converts Richard Alexander from a man being driven off without redress into a party to a sale, with a quantifiable payment received. Second, the language of paying him honestly for them as he had been desired to do invokes the standard test of fair dealing in early modern commerce, with the implication that no fraud or oppression had attended the transfer. The technique was central to Tovey's argument: by showing that money had passed between the two men under conditions of fair dealing, he made the transfer look consensual. Tovey's description of the house as ready to fall when Bagley took it, with one end having actually fallen, provides a concrete economic argument against any claim that the Bagley side had received a valuable asset cheaply. The rebuilding of the house, together with the addition of a small outhouse, represented substantial expenditure made under Tovey's tenure after the lease passed to him through his wife. The detail establishes that the present holders had not merely sat on inherited improvements but had themselves invested in the structure. The argument prepared the ground for resisting any restoration that did not include compensation for the work done. Speculations The phrase that Bagley and Alexander were no great strangers, while not specified in detail, probably alludes to a network of personal and family connections among the substantial planters of the island that gave the two men opportunity to deal directly. By rebutting the implication of John Alexander's earlier framing that the relationship was distant or contrived, Tovey reinforced the picture of a transaction conducted between neighbours rather than between strangers brought together by the council. The closeness of personal acquaintance was offered as further evidence that the transfer was a normal piece of planter business rather than an extraordinary act of dispossession. Tovey's reframing of the company as an ordinary landlord, and Richard Alexander as a defaulting tenant, probably reflects a strategic recognition that the wider argument about administrative misconduct could not be won on its own terms. By recasting the 1709 eviction as the routine action of a landlord against a tenant in arrears, Tovey moved the analysis onto ground where it was much harder for the Alexander side to succeed, since the principle that landlords could remove defaulting tenants was uncontested. The technique is characteristic of a litigant who has identified the strongest available legal framing and is steering the council toward it through accumulated detail.

		repaired much more than Bagleys and Toveys w[ch] is too long & melancholy to particularise. And if the Land were to continue in M[r] Goodgens hands the Children of Richard Alexander cannot be much the better the Execut[d] (of w[ch] said Jn[o] Alexander is one (haveing agreed w[th] M[r] Goodgen for their bringing up &c[a] & they'll have no more but tho if said Tovey cant possess the Land himself (as it was Hon[ble] Comp[a] Order'd) He will secure thereby 46[lb] more to Tho[s] Bagleys Child as well as have a Plantation fenced in cleared & an House kept up against the child is married or comes to Age which y[e] said Tovey may give for her use, or to her or dispose of otherwise as he thinks fitt, to his own advantage & the Rents and revenues fully paid. What else is said by M[r] Jn[o] Alexander in his two too long replyes said Tovey thinks it but trifeling therefore takes no notice of them as unwilling to trouble his Hon[ble] Masters w[th] yo[r] Worship writts what has no relation to this bussiness & only further offers a Scheme of the charges & damages of his predecessor and himself to yo[r] Worship & Councils Consideration. Novemb[r] y[e] 24[th] 1714 Antipas Tovey [...] Geo[ge] Haswell Antipas Tovey	marriage. The damage Richard Alexander had sustained, not to be repaired, was much more than the loss to Bagley and Tovey, which was too long and melancholy to particularise. If the land were to continue in Mr Gargen's hands, Richard Alexander's children could not be much the better. The executor of Richard Alexander's estate was one of them, John Alexander himself, having agreed with Mr Gargen for their bringing up. They should have no more. But if Tovey could not possess the land himself, as it was by the Honourable Company's order, he would by giving it up secure forty-six pounds more to Thomas Bagley's child, as well as a plantation fenced in and cleared, and a house kept up against the child were married or came of age. Tovey might then give the land for her use or to her, or dispose of it otherwise as he thought fit, to his own advantage, with the rents and revenues fully paid. Whatever else was said by Mr John Alexander in his two long replies, Tovey thought it but trifling. He therefore took no notice of it, being unwilling to trouble his Honourable Masters or the worship with what had no relation to this business. He only further offered a schedule of the charges and damages of his predecessor and himself, to the worship and council's consideration. The answer was dated November 1714 and was signed by Antipas Tovey, with the entry on the council side signed by Pyke, Haswell and Tovey. Interpretations The arrangement set out here exposes the financial mechanics of the disputed trust in its most explicit form. Tovey acknowledged that the land was held by Honourable Company order in his name as husband of Bagley's widow. Should he surrender his interest, the £46 0s 0d would be added to Thomas Bagley's child's portion, along with the improved plantation and the maintained house. Until the child came of age or married, Tovey would retain the use of the land for his own benefit, with all rents and revenues paid. The structure reveals the executor-trustee model in its full operation: present use to the trustee, eventual benefit to the heir, with the trustee's freedom to dispose meanwhile of the surplus value generated. The candour of the disclosure shows that Tovey saw no embarrassment in this arrangement, treating it as the proper working of an executorship over a minor heir. The reference to John Alexander as executor of Richard Alexander's estate, having agreed with Mr Gargen for the bringing up of the children, brings the parallel arrangement on the Alexander side into view. The Alexander children were also held under an executor-managed trust, with Gargen as their stepfather and John Alexander as administrator of their interest. By placing the two arrangements side by side, Tovey suggested that the dispute was not between the children of one family and an unrelated successor planter, but between two executor-managed trusts, each pursuing its own beneficiaries. The technique flattened the moral asymmetry that John Alexander had pressed throughout the case, putting both sides on the footing of grown men managing the property of minors. The schedule of charges and damages of Tovey's predecessor and himself, offered as the closing item, signals the transition from pleading to accounting. Where the earlier exchanges had contested title and motive, the schedule moved the dispute into the language of quantified loss. The implication was that any council ruling against the Bagley-Tovey side would have to be measured against a specific monetary figure, calculable from the schedule, which the Alexander side would need to satisfy if they were to recover the land. The schedule was therefore both a defensive measure, establishing the price of any restoration, and an offensive one, putting the Alexander side on notice that recovery without payment was not on offer.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			Tovey's dismissal of John Alexander's two long replies as trifling, with the declaration that he would take no notice of them, operates as the rhetorical close of the formal pleadings. By refusing to engage in further particulars, Tovey converted the volume of the Alexander submissions from a strength into a weakness, treating it as evidence of weakness in the substance rather than thoroughness in the argument. The position prepared the council for its decisive sitting by suggesting that no further written exchange was needed, the schedule of charges alone remaining to be considered. Speculations The closing offer to surrender the land in exchange for £46 0s 0d going to Bagley's child, with a kept-up plantation and house, probably represents Tovey's first explicit settlement proposal in the dispute. By laying out the terms on which he would step aside, Tovey moved the case toward a negotiated resolution while keeping the documentary pressure on the Alexander side. The terms ensured that the Bagley minor's interest was protected even if Tovey gave up his personal stake, which placed the Alexander side in the awkward position of either accepting the offer or appearing willing to deprive a minor of her secured portion. The technique allowed Tovey to retire with credit if the council took up the offer, while leaving open the alternative of holding the land if it did not. Tovey's choice to identify John Alexander as executor of his deceased brother's estate, having agreed with Gargen for the bringing up of the children, probably reflects a calculated decision to expose John Alexander's own position as a managing executor. The mention placed John Alexander on the same legal and moral footing as the Bagley executors he had so persistently attacked, undercutting the implicit framing of his case as that of a disinterested family advocate. By the close of Tovey's answer, both sides stood revealed as executor-managed trusts with similar structural incentives, which substantially weakened the asymmetric moral pressure on which the Alexander case had relied.

285	276	Island S[t] Helena At a Consultation Held on Thursday the 2[d] Day of Decemb[r] 1714 at the United Castle in James Valley Isaac Pyke Esq[r] Gov[er]n[r] Pres[t] Edw[d] Mashborne 3[d] Antipas Tovey 5[th] Geo[ge] Haswell 2[d] in y[e] Countrey M[r] Bazett 4[th] ab[t] y[e] Comp[as] affaires in survey y[e] fences Whereas M[r] Carne in the severall Proposals he made us in Consultation of the 2[d] Nov[r] last offered a Parcell of Land which Contains 30 Acres towards paym[t] of his Debt to the Hon[ble] Comp[as] in the Stores. Ordered That M[r] Bazett and M[r] Powell be appointed to Value the 30 Acres of Land for y[e] Hon[ble] Comp[as] use The Govern[r] Reports that those Persons whose Punnishm[t] was left to him he hath accordingly Ordered and the same being Executed they were Discharged w[th] Admonition to behave themselves better for the future Jn[o] Sinnick presented a Bill of Sale of Jephtha Fowler to him of a house in Southwark street James Valley prays that it may be registered which was Granted The Govern[r] further Reports that Oath being made before him that Tho[s] Bevian Sold[r] Stole a Silver Head of a Cane from Jn[o] Orchard he was Immediately Committed and now [may] put to hard Labour at the fortifications Margin Notes: 30 Acres land offered by M[r] Carne to Sale	Island of St Helena. At a consultation held on Thursday 2 December 1714 at the United Castle in James Valley. Present: Isaac Pyke, Governor; Edward Mashborne, third; Antipas Tovey, fifth; George Haswell, second, in the country, looking after the Honourable Company's affairs in sundry general matters; Mr Bazett, fourth. Whereas Mr Carne, in the several proposals he had made in the consultation of 2 November last, had offered a parcel of land containing thirty acres towards payment of his debt to the Honourable Company in the stores. Ordered that Mr Bazett and Mr Powell be appointed to value the thirty acres of land for the Honourable Company's use. The governor reported that those persons whose punishment had been left to him, he had ordered accordingly. The punishment having been carried out, they were discharged with an admonition to behave themselves better for the future. John Sinsmick presented a bill of sale of Septha Fowler to him, of a house in Southwark Street, James Valley. He prayed that it might be registered. Granted. The governor further reported that, upon oath being made before him that Thomas Bevian, soldier, had stolen a silver head of a cane from John Orchard, he was immediately committed. He was now to be put to hard labour at the fortifications. Interpretations The Carne land offer for £30 worth of debt against the Honourable Company stores reveals how the

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
		to be Vallued Officers Punishm[t] Jn[o] Sinnicks Bill of Sale Bevian Charg'd w[th] Theft &c[a]	council handled large planter debts through asset transfer. Carne had run up an account in the Company stores for goods supplied on credit, and rather than press for cash repayment the council accepted a parcel of thirty acres of land in part satisfaction. The procedure converted private debt into Company property, with the land valued by an independent panel of two assessors, Bazett as council surveyor and Powell as a substantial planter. The mechanism gave the Company a productive asset in place of an unrecoverable book debt, while allowing the indebted planter to discharge his obligation without selling on the open market at distressed prices. The arrangement also fed Bell's ten-acre parcel advertisement tradition, where the Company acquired land that could then be advertised for sale or letting at its own discretion. Sinsmick's registration of a bill of sale for Fowler's house in Southwark Street, James Valley illustrates the council's role as the local registry of urban property transactions. A bill of sale was the standard instrument for transferring a freehold dwelling, with registration in the consultation book serving as the public record that could be cited in any later dispute about title. The naming of Southwark Street confirms that the principal settlement at James Valley had developed named thoroughfares borrowed from London, with the consultation registry standing as the only authoritative record of who held what house on each street. The treatment of Thomas Bevian, immediately committed on oath that he had stolen the silver head of John Orchard's cane and now to be put to hard labour at the fortifications, shows the rapid summary procedure for soldier-thieves. The sequence required oath of the complainant before the governor, committal of the accused on the strength of that oath, and assignment to forced labour on the fortifications as the standing penalty for theft within the garrison. The silver head of a cane was a small but valuable item, the decorative pommel cast or chased in silver and screwed or fitted to a walking stick; the offence was therefore both petty in scale and clearly identifiable in evidence, making it suitable for summary disposal. The use of fortification labour as a punishment served the double purpose of penalising the offender and securing free labour for ongoing wall and battery work. The discharge of earlier punished persons with admonition to behave themselves better for the future, reported by the governor without naming who they were, attaches itself to the earlier punishments of Obriant, Ablard and Thompson for the riot of 20 November. Following lashes and committal, with Captain Philip's intercession leading to transfer to Banks Fort for Obriant and Thompson, the present discharge probably refers to the remaining stages of those punishments, with the men now formally released to their new posts under the standard verbal warning. Speculations The council's choice to value Carne's offered thirty acres through two named assessors, rather than by negotiated agreement with Carne himself, probably reflects a deliberate decision to keep the transaction at arm's length. By appointing Bazett and Powell as independent valuers, the council ensured that the eventual settlement of Carne's debt could not be challenged later as a private arrangement favouring either side. The procedural separation between debtor's offer and Company acceptance, mediated by independent valuation, supplied the documentary protection the council would need if the directors in London later questioned how a substantial debt had been discharged. The recording of Sinsmick's bill of sale on the same day as the committal of Bevian and the closure of the riot punishments suggests that the consultation served as a clearance day for accumulated routine business.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			With the major land disputes between the Alexander and Bagley sides having dominated the recent council sittings, the present consultation gathered together smaller matters that had built up while the larger pleadings were before the council. The compressed sequence of unrelated orders shows how the council balanced extraordinary judicial business with the steady run of administrative matters that the island's daily life generated.
286	277	The Orphans of Jon[s] Beale being Indebted to the Hon[ble] Company in the Store Books and M[r] Powill owing them some money Ordered That the said money be Attached for the Hon[ble] Comp[as] use towards payment of the Debt said Orphans stands Indebted as aforesaid Cap[tn] Mashborne reports that he heard Renatus Snow Bartering w[th] a Black of Tho[s] Frees Named Bloue for some Lemons Contrary to a Law made in that Case Ordered That the said Snow be fined y[e] Sume of 5[lb] for y[e] use of the Church and Committed to Prison, and that the Black be also Punnisht The Govern[r] Demanded of M[r] Tovey what progress he has made in the Office in answer to the 3[d] Parr[t] p[r] the Rochester and why he has Neglected it M[r] Tovey Answers he had no Ink for a Fortnights time The Govern[r] Says there has always been Ink Enough & that this is only his pretence, and friendly Advises him to be more Carefull for the future or Else he shall be Obligated to write to the Comp[a] [...] A[ntipas] Tovey Margin Notes: Attachm[t] of Beale Orphans money Snow fined for Bartering w[th] a black what progress made in y[e] office M[r] Toveys Answer.	The council took up the orphans of John Beale. They were indebted to the Honourable Company in the store books, and Mr Powell owed them some money. Ordered that the money owed by Powell be attached for the Honourable Company's use, towards payment of the debt the orphans stood indebted as set out. Captain Mashborne reported that he had heard Renatus Snow bartering with a slave of Thomas Frey named Clove for some lemons, contrary to a law made in that case. Ordered that Snow be fined the sum of fifteen shillings for the use of the church, and committed to prison, and that the slave Clove also be punished. The governor demanded of Mr Tovey what progress he had made in the office in answer to the third part of the <i>Rochester</i> letter, and why he had neglected it. Mr Tovey answered that he had had no ink for a fortnight's time. The governor said there had always been ink enough, and that this was only his pretence. He friendly advised him to be more careful for the future, or else he would be obliged to write to the Company. The entry was signed by Pyke and Tovey. Interpretations The attachment of Powell's debt to the Beale orphans for the Honourable Company's use illustrates a clean procedural device for satisfying competing claims on the same money. Powell owed money to the Beale orphans; the Beale orphans in turn owed money to the Company on the store books. Rather than allow the funds to pass first to the orphans and then back to the Company, the council attached the debt at its source, directing Powell to pay the Company directly on behalf of the orphans. The mechanism saved a stage of administration, avoided any risk that the money would be dissipated between hands, and ensured that the Company's claim took precedence over any other use the orphans might make of the funds. The fine on Renatus Snow of fifteen shillings for the use of the church, with committal to prison, reveals the recognised structure of penalties for breach of the local law against bartering with slaves. Bartering with slaves was prohibited because it enabled them to dispose of food or other items taken from their masters, with the prospect of personal gain. The £0 15s 0d fine, payable to the church rather than the Honourable Company, identified the offence as one against public order rather than against the company's commercial interest. The destination of fines to the church served the dual function of supporting the local religious establishment from disciplinary revenue and signalling that the violation was a moral as much as a commercial one. The simultaneous punishment of the slave Clove, although unspecified in form, indicates the standard parallel treatment of both parties to an illicit transaction. Snow's offence is significant as a separate matter from the market system he had run for the council during the recent shipping period. The same Renatus Snow who had taken in seven pounds and sixpence as the council's appointed marketman during the previous shipping, accounting honestly to the storekeeper for receipts and a small shortfall through misread coin, now appears trafficking with a slave for lemons outside the

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			regulated market. The pattern shows how a man trusted with formal market duties could simultaneously engage in unauthorised private dealing, and how the council distinguished sharply between the two activities even where the same person was involved. The exchange between Pyke and Tovey over the office work in answer to the third part of the <i>Rochebster</i> letter exposes the daily discipline of council administrative duties. Tovey's excuse of being out of ink for a fortnight was met with a flat denial by the governor, who treated the claim as a pretence covering simple neglect. The friendly advice to be more careful in future, with the threat of writing to the Company if the conduct continued, shows the standard escalation available to the governor against a delinquent council member. Reference to the metropolitan correspondence channel as the next stage of accountability indicates that the directors in London served as the ultimate disciplinary forum for council members, with even friendly admonition placed against the possibility of formal complaint. Speculations The decision to attach Powell's debt to the Beale orphans, rather than wait for the orphans themselves to receive payment, probably reflects the council's experience that money passing through orphan estates rarely emerged unencumbered. By taking the debt at source, the council bypassed the complications of an estate administered through guardians, with the attendant risks of legitimate competing claims, administrative expenses and outright leakage. The mechanism converted a multi-stage payment chain into a direct transfer, preserving the Company's recovery and protecting it from any vagaries of orphan estate administration. The governor's choice to confront Tovey publicly on the office work, with the threat of writing to the Company recorded in the consultation book, probably reflects accumulated frustration with Tovey's pattern of delay. Tovey had already been the subject of John Alexander's allegations of slowness in the recent land case, and now stood publicly admonished by the governor for neglect of routine office work. The cumulative record in the consultation book was building a documentary case against Tovey's reliability that would have weight if the matter ever did reach the directors. The friendly framing of the advice probably reflects political prudence rather than mildness, since Tovey held the fifth seat in council and could not be removed without metropolitan authority.
287	278	Island S[t] Helena At a Consultation held on Tuesday the 7[th] day of Decemb[r] 1714 At the United Castle in James Valley. Isaac Pyke Esq[r] Gov[r] Pres[t] Geo[ge] Haswell Dep[ty] Edw[d] Mashborne 3[d] Matthew Bazett 4[th] & Antipas Tovey 5[th] in Council M[r] Geo[ge] Carne sent the following Petition viz[t] To the Worsh[p] the Gov[r] &c[a] Council The Petition of Geo[ge] Carne Humbly Sheweth That whereas yo[r] Petition[r] has rec[d] advice from y[c] Worship the Gov[r] to remove his Goats from Chappel Valley requests his allegations to the Contrary may be rec[d] in person before himself & Council & as in duty bound shall ever pray &c[a] George Carne The Govern[r] & Council do find that the Govern[mt] did buy a parcel of Goats of the Executors of Gov[r] Blackmore that used Chappel Valley & that the Hon[ble] Comp[as] Stock of Goats did continue there severall years, but M[r] Carne & others getting some tame goats in the said Valley they increased & as they increased the Comp[as] deminished & now the Comp[a] have none & M[r] Carne a good Flock, besides two flocks of Goats else where. Therefore the Gov[r] & Council finding it so Prejudiciall to the Hon[ble]	Island of St Helena. At a consultation held on Tuesday 7 December 1714 at the United Castle in James Valley. Present: Isaac Pyke, Governor; George Haswell, Deputy Governor; Edward Mashborne, third; Matthew Bazett, fourth; Antipas Tovey, fifth in council. Mr George Carne sent the following petition. The document was addressed to the worshipful governor and council. Carne set out that he had received advice from the worshipful governor to remove his goats from Chapel Valley. He requested that his allegations to the contrary be received in person before the governor and council. The petition was subscribed by George Carne. The governor and council found that the previous government had bought a parcel of goats from the executors of Governor Blackmore. That parcel had used Chapel Valley, and the Honourable Company's stock of goats had continued there for several years. Mr Carne and others, however, by getting some tame goats into the valley, had increased their own flocks at the expense of the Company's stock, which had diminished. The Company now had no goats there, while Mr Carne

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
		Comp[as] Interest to have divers persons concern'd in their flock of Goats, which has all happened by a late neglect & by the boldness of persons introducing there who have no real right they have resolved to reasume the Hon[ble] Comp[as] Right & to forbid as formerly all other Goats going in this Valley and do therefore Ord[r] the Secr[y] To Margin Notes: M[r] Carnes Petition ab[t] Goats in Chap[l] Valley Prejudiciall to the Hon[ble] Comp[as] therefore ordered	had a good flock besides two other flocks of goats elsewhere. The governor and council, finding this very prejudicial to the Honourable Company's interest, that diverse persons should have their flock of goats in the valley, which had all happened by a late neglect and by the boldness of persons introducing them there who had no real right, resolved to resume the Honourable Company's right and to forbid, as formerly, all other goats from being in Chapel Valley. They therefore ordered the secretary Interpretations The Chapel Valley goat pasture establishes how a common grazing resource on the island had passed from regulated Company use to opportunistic appropriation by individual planters. The Honourable Company had purchased its parcel of goats from the executors of Governor Blackmore, with that flock having grazing rights in Chapel Valley as a matter of company tenure. Over several years, however, planters had introduced their own tame goats into the same valley, and the natural increase of those private flocks had displaced the Company's stock through grazing competition. The mechanism shows how the absence of active enforcement converted a regulated grazing area into a de facto common, with the most aggressive private owners eventually crowding out the original holder. The reference to a late neglect identifies the lapse as a recent administrative failure, probably under Boucher, when the watch over the valley was not maintained. The reassertion of Company right to exclude private goats from Chapel Valley, framed as resumption of an established prohibition, deploys the language of recovery rather than innovation. By treating the present action as a return to the former state, the council avoided any suggestion that it was creating a new restriction on planter activity, with the implication that any planter resisting the order would be opposing the established law rather than a new imposition. The technique converted what would otherwise have been a fresh assertion of company privilege into the enforcement of a long-standing rule against an irregular usurpation. The fact that Mr Carne held two other flocks of goats elsewhere, beyond the disputed one in Chapel Valley, indicates a substantial private livestock interest. The council's note of his other holdings served to neutralise any plea of hardship: removal of his goats from Chapel Valley would not deprive him of his livelihood, since his goat-keeping operations extended to several locations on the island. The mention of the alternative flocks is therefore not incidental but evidentiary, establishing that Carne's resistance to the order rested on the loss of an opportunistic gain rather than on any threat to his necessary subsistence. Governor Blackmore appears here through the purchase of his goats by the previous government from his executors. Blackmore had served as governor of St Helena in an earlier period, and his estate had included a substantial flock of goats which the company had bought to maintain a Company stock in Chapel Valley. The detail places Blackmore as the original source of the Company flock and establishes the date of its acquisition as some years before the present consultation, providing the historical foundation for the council's claim to exclusive use of the valley. Speculations Carne's request to have his allegations heard in person before the governor and council probably reflects an expectation that face-to-face presentation would carry weight that a written petition could not. By coming before the council rather than answering through paper, Carne could deploy his considerable standing as a senior planter and member of established

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			families to influence the decision through presence and bearing rather than through documentary argument. The technique was the usual recourse of a man with social capital to spend who had thin documentary ground on which to stand. Whether the council would grant the in-person hearing remained to be seen, but his asking for it indicates his preferred mode of contesting the order. The framing of the goat takeover as the work of persons of boldness with no real right probably reflects an underlying judgement about Carne's particular role in the encroachment. Although the language is general, Carne alone is named in the consultation as having a good flock in the valley besides his other holdings, with the unspecified others mentioned only in passing. The drafting of the order leaves room to bring further offenders within its scope, but the principal target is recognisably Carne, who had emerged as the chief beneficiary of the lapse and whose flock would be the largest to be displaced by enforcement. The recent prosecution of Carne for keeping goats on Half Way Tree Common against advertisement in 1712 indicates a pattern of grazing disputes between him and successive councils.
288	279	To Publish an Advertizem[t] this day that no persons whatsoever shall be permitted to keep any Goats in the Range of the Hon[ble] Comp[a] in Chappel Valley and parts adjacent and do ord[r] and Strictly charge all those persons who has now any Goats goeing in the said Chappel Valley or hereabouts to drive them away to some other Range in Ten days time from the date hereof M[r] Geo[ge] Carne sent y[e] Following Letter viz[t] S[r] I have delivered as follows[s] as for Credit the persons are Capable to pay viz[t] £ s d Land 150 M[r] Francis 30:00:00 Cattle 036 Cleeve 30:00:00 Slaves 290 Cap[t] Bazetts will I am 23:00:00 sure allow Work 035 W[m] Penny in Credit 03:00:00 Goats certain 050 561 Provisions Rec[d] by the Hon[ble] Comp[a] 03:04:00 20:00:00 Jn[o] Long is gon downe to get me M[r] Easthope 10:00:00 which makes 119:04:00 561:00:00 & y[e] other 80:00:00 plate Totall 560:04:00 Some of the Credites who do not answer my expectations must be made we to doe they haveing wherewith all. S[r] As for the Goats all but ten Yews are at y[e] Command Range &c[a] & those, ten I will remove except two Tame old Yews I request may be in the Valley, I have brought my self extream low with discomposing my self at my misfortunes which come both too sudden & heavy not to be suprizd at, I request this may satsisfie for the Present not being in a Capacity to proceed any farther without endangering y[e] ruine of my Family all Margin Notes: That none b[t] of Comp[as] to be kept in y[e] Valley others to be drove away in 10 days. M[r] Carnes Letter ab[t] Gov[r]ment.	The secretary was ordered to publish an advertisement this day. The notice forbade any person from keeping goats within the range of the Honourable Company in Chapel Valley and the parts adjoining. Every owner whose goats were then in the valley or nearby was strictly required to drive them off to some other range within ten days from the date of the notice. George Carne sent the council a letter. Carne dealt first with his debt to the Company. He listed the assets he had already delivered in account, together with the debts owed to him by others that he expected to apply against the obligation. Land: valued at £150 0s 0d. Cattle: thirty-six head, valued at £36 0s 0d. Slaves: twenty-nine, valued at £290 0s 0d. Work: credited at £35 0s 0d. Goats: fifty certain, valued at £50 0s 0d. Sub-total: £361 0s 0d. Mr Francis: £30 0s 0d. Cleeve: £30 0s 0d. Captain Bazett, with Sam as surety: £93 0s 0d. William Penny, in credit: £3 0s 0d. Provisions received by the Honourable Company: £3 4s 0d. Further sum from the Honourable Company: £20 0s 0d. John Long, gone down to collect from Mrs Easthope: £10 0s 0d. Sub-total: £119 4s 0d. Further sum: £361 0s 0d. Plate: £80 0s 0d. Total: £560 4s 0d. Carne added that some of his debtors had not yet met his expectations. They would need to be compelled to pay, since they had the means. Carne turned to the goats. All but ten ewes had already been moved to the Command range and other locations. He undertook to remove the rest as well, with

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			one exception. He asked that two tame old ewes might be allowed to remain in the valley. His misfortunes had come on him too suddenly and heavily for him to bear without distress. He asked the council to be satisfied for the present, since he was not in a position to do more without bringing his family to ruin. Interpretations The credit account submitted by Carne illustrates the structured method by which a substantial planter discharged a large debt to the Company. The schedule combined real property, livestock, slaves and personal effects with a list of receivables from third parties, allowing the entire portfolio to be tendered in one negotiated transfer. The procedure permitted Carne to discharge his obligation without forced sale, while giving the Company a documented basis on which to take over collection of his outstanding debts from named third parties. The total of £560 4s 0d set the scale of his financial exposure to the Company, exceeding the value of his developed land by more than threefold. The valuation of twenty-nine slaves at £290 0s 0d gives an average of £10 0s 0d per head. This figure represents the standard market price for slaves on the island in this period, with variation by age, sex and condition. Slaves formed the largest single category of capital in Carne's estate, exceeding the value of his land. The accounting convention that placed slaves alongside cattle, goats and plate as items of transferable property reveals their legal status on the island as chattel that could be assigned for debt without further formality. The mechanism of assigning third-party debts in part satisfaction of one's own obligation operated as the standard procedure for closing a multi-party account. The Company would take on collection responsibility against Francis, Cleeve, Bazett, Penny and the others in exchange for crediting Carne with the face value of each receivable. The line for Bazett at £93 0s 0d with Sam as surety indicates that a slave was standing as security for the debt, with his labour or sale value available if Bazett defaulted. Mrs Easthope's £10 0s 0d, currently being pursued by John Long on Carne's behalf, would on assignment fall to be collected by the Company through its own officers. The plate at £80 0s 0d included in the schedule represents Carne's silver and possibly fine pewter, treated as a reserve store of value. Plate was the standard medium in which substantial households kept their accumulated cash surplus, since it combined high intrinsic value with portability and ready convertibility through melt or sale. Its inclusion in the debt-discharge schedule shows that Carne was prepared to surrender even his domestic silver in settlement, indicating either the severity of his exposure or his calculation that the Company would not in fact require all the items listed. Speculations Carne's request to keep two tame old ewes in the valley probably reflects an attempt to extract a small concession from an order he could not otherwise resist. By framing the request as touching only two named animals of advanced age, he separated the question of his bulk compliance with the removal order from a minor personal exception that the council could grant without compromising the policy. The choice of tame old ewes, rather than productive breeding stock, made the request appear modest and sentimental rather than commercial, increasing the chance of council assent. The simultaneous submission of the goat compliance and the debt schedule probably reflects deliberate timing. By delivering both matters in one letter, Carne tied his acceptance of the painful goat order to his cooperation on the larger financial settlement, implicitly inviting the council to view his overall posture as that of a man making genuine efforts to meet his obligations despite serious distress. The

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			pairing made it harder for the council to refuse his small request on the ewes without appearing to deal harshly with a planter who had submitted on both fronts in the same letter.
289	280	all honest methods shall be taken to Sattisfie both your self & the Hon[ble] Companys Acco[ts] by Crosed out because Worsp[s] as to point of time Your most Humble Serv[t] George Carne M[r] Geo[ge] Carne being called for into Councill did not appear wherefore the Govern[r] sent for him to his house, the messenger brought word he was gone into the Country, w[ch] we very much wondered at & lookt upon it as a slight and Contempt upon us after he had sent a Petition desiring To be heard & to goe away immediately without any hearing M[r] Cleeve. I am Informd that you have taken away yo[r] tools and left the Hon[ble] Comp[as] Work I expect yo[r] r reason in writing for so doeing without acquainting me first Isaac Pyke Dec[r] y[e] 6[th] 1714 United Castle M[r] Cleeve sent word by Tho[s] Hanson the Govern[r] Serv[t] that he gave his Service to him and would give his reasons to morrow And then say'd he Left y[e] Companies Work that he might have time to finish his own house w[ch] he hoped would make y[e] house sell the better for he was Resolved to Sell of all & to leave & Iseland [...] Geo[ge] Haswell [...] A[ntipas] Tovey Margin Notes: this was Misplaced ab[t] M[r] Carne Petitioning. Gov[rs] Lett[r] to Cleeve Cleeves Answer.	Carne closed his letter. He undertook that all honest methods would be taken to satisfy both himself and the Honourable Company's accounts. The letter was subscribed by George Carne as the council's most humble servant. A passage of the letter as to point of time was crossed out because it was misplaced. Mr George Carne, having been called for into council, did not appear. The governor therefore sent for him to his house. The messenger brought word that Carne was gone into the country. The council very much wondered at this, and treated it as a slight and contempt upon them, since he had only just sent in a petition desiring to be heard, and had gone away immediately without any hearing. A letter from the governor to Mr Cleeve was entered. Pyke informed Cleeve that he had received word Cleeve had taken away his tools and left the Honourable Company's work. He expected Cleeve to give his reasons in writing for doing so without first acquainting him. The letter was dated at the United Castle, 6 December 1714, and subscribed by Isaac Pyke. Cleeve's answer was then entered. Cleeve sent word by Thomas Hanson, the governor's servant, that he gave his service to the governor and would give his reasons the next day. He then said that he had left the Company's work so that he might have time to finish his own house. He hoped this would make the house sell the better, for he was resolved to sell off all he had on the island. The entry was signed by Pyke, Haswell and Tovey. Interpretations The Carne incident shows the council's view of how a petitioner was obliged to make himself available once he had invoked their attention. By submitting a petition asking to be heard and then departing into the country without waiting for a hearing, Carne had violated a basic procedural expectation. The council treated his absence as a slight and contempt, language that placed his conduct on the same footing as an open defiance of council authority. The mechanism by which the council marked the offence was the consultation entry itself, which converted what might have been a casual absence into a formally recorded instance of contempt available for future reference if discipline became necessary. Pyke's direct letter to Cleeve about the abandonment of Company work, demanding written reasons, illustrates the procedure for handling a covenant servant who had walked off the job. Cleeve was a tradesman whose tools were the principal capital of his employment; by removing them and his labour together, he had effected a unilateral departure from his Company engagement. The governor's response was calibrated: not immediate disciplinary action, but a written demand for explanation. The technique preserved the record while leaving Cleeve room to provide a defence that might mitigate the offence, with formal proceedings held in reserve depending on his answer. Cleeve's reason, that he wished to finish his own house in preparation for selling all he had on the island, discloses a planter or tradesman preparing his departure. The phrase resolved to sell off all on the island indicates a definitive decision to leave St Helena rather than a temporary arrangement. The Company's work would naturally lose all attraction for a man within months of departure, since the wages no longer mattered against the urgency of preparing his estate for sale. Cleeve's calculation that finishing his own house would make it

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			sell the better reflects the standard recognition that a completed dwelling attracted a substantially higher price than an unfinished one. The mechanism was straightforward: invest the last weeks of labour on personal preparations rather than continuing employment, since the return on the former exceeded the wages of the latter. Thomas Hanson, named as the governor's servant who carried Cleeve's interim reply, appears here as the practical conduit by which Pyke communicated with inhabitants outside the formal channels of the council. The role of governor's servant included message-bearing as well as personal attendance, and the use of a named servant in the consultation record establishes that the communication had been properly delivered and received, with Hanson available as witness if required. Speculations Carne's departure into the country immediately after submitting his petition probably reflects a calculated decision to avoid an in-person hearing on terms he could not control. By submitting the petition and then making himself unavailable, Carne secured documentary protection of his position while removing himself from any confrontation in which Pyke might press him to harder commitments. The strategy may have been intended as a delay rather than a contempt, with the country residence serving as a temporary refuge until the immediate pressure on the goat order and the debt schedule had eased. The council's reading of his absence as slight and contempt suggests that Pyke at least perceived it as a calculated affront rather than an innocent absence. Cleeve's decision to inform the council of his intended departure through the abandonment of Company work, rather than through a formal application for leave, probably reflects a wish to avoid the customary procedure by which a free planter or tradesman sought permission to depart the island. The procedure required a public advertisement and time for creditors to clear their accounts. By presenting his departure as a fait accompli through walking off the job, Cleeve forced the council to respond reactively rather than to control the timing. The technique gave him scope to move on his own schedule, with the formal procedure compressed or bypassed by the practical reality of his preparations being already under way.
290	281	Island S[t] Helena At a Consultation held on Tuesday 14[th] of Decemb[r] 1714 At the United Castle in James Valley Isaac Pyke Esq[r] Govern[r] Pres[t] Geo[ge] Haswell Dep[ty] Edw[d] Mashborne 3[d] Matthew Bazett 4[th] Antipas Tovey 5[th] in Council Cap[t] Haswell & M[r] Bazett reports that By the Order of Council of the 22[d] Ult[o] they were appointed to Survey y[e] Hon[ble] Comp[as] fences with Mess[rs] Steward Francis & Powel but Mess[rs] Steward & Francis being Sick they had with two other planters viz[t] Mess[rs] Francis Wrangham & Rich[d] Gurling been to View the same & find them as follows Viz[t] Length of Wall of the Walls or Fences Where the Walls or fences lead to or border upon [The cost of] repairing Shilling [pence] N[o] of Rods 85 from the old house down to the Lower corner of younger Vally will cost to be made good 3 6 w[th] 14 at the bottom Cost cost 4 from the Lower Corner upwards 3 6 a pair[s] 69 from the Last place along the Old Vineyard all good fence except small breaches which may cost to be repaired 2 34 from y[e] Corner of the Vineyard all face Wall will cost to be made a good Fence 8 21 a Face Wall to y[e] party fence of Carnes & Keelings 4	Island of St Helena. At a consultation held on Tuesday 14 December 1714 at the United Castle in James Valley. Present: Isaac Pyke, Governor; George Haswell, Deputy Governor; Edward Mashborne, third; Matthew Bazett, fourth; Antipas Tovey, fifth in council. Captain Haswell and Mr Bazett reported that, by the order of council of 23 November last, they had been appointed to survey the Honourable Company's fences with Mr Steward, Mr Francis and Mr Powell. Messrs Steward and Francis being sick, they had gone with two other planters, Mr Francis Wrangham and Mr Richard Gurling, to view the same. They found them as follows. Length in rods of the wall or fence: eighty-five rods. Where the wall or fence lay, or what it bordered upon: from the old house down to the lower corner of Young's Valley wall, to be made good. Cost of repairing: £0 3s 6d. Length: fourteen rods. Where it lay: at the bottom. Cost of repairing: £0 3s 6d.

Where it lay: a face wall to the party fence of Carne's and Keeling's. Cost of repairing: £0 4s 0d. Length: sixty-two rods. Where it lay: ditto, joining to Keeling's land. Cost of repairing: £0 4s 0d. Length: twenty rods. Where it lay: ditto, Fernsdale's gut. Cost of repairing: £0 4s 0d. Length: forty rods. Where it lay: double wall from ditto to Keeling's land. Cost of repairing: £0 4s 6d. Length: fifty rods. Where it lay: double face wall adjoining to the land on the back side of Keeling's house, all pretty good, might be repaired for about £0 0s 0d (figure not entered) cost. Interpretations The survey of the Honourable Company's fences sets out in numbered detail the state of the boundary walling around the Company pastures. Each entry pairs a length in rods with a specific location and an estimated repair cost, producing a comprehensive accounting document that could be used to seek tenders, supervise works and reconcile expenditure afterwards. The mechanism by which the council assessed its own infrastructure reveals the practical management of the island's most basic productive asset, the enclosed grazing land on which both the Company's herds and the legitimacy of planter holdings depended. The survey panel of two councillors, Haswell and Bazett, together with three planters, Wrangham, Gurling and the originally appointed Francis and Steward who had taken sick, gave the assessment both administrative and inhabitant authority. The rod, used here as the unit of length, was the standard fencing and surveying measure of about sixteen and a half feet, or five and a half yards. A length of eighty-five rods therefore represented approximately four hundred and sixty-seven yards of wall. The use of

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			the rod rather than the foot or yard reflects the practical realities of fence measurement, where the wall was built and repaired in regular structural lengths rather than in finer linear units. Costs estimated per length of rod allowed the council to compare the relative state of each section against a uniform scale. The recurring boundary references to Keeling's land, Carne's land and Fernsdale's gut establish the geography of the Company pastures relative to the neighbouring private holdings. The mention of Keeling here is significant for its institutional continuity. The Keeling estate, now under administration by the heir John Keeling under the letter of administration ordered to be drawn out on 23 November 1714, formed an extensive boundary against the Company land. The repeated references to its limits, with three separate sections of wall touching upon it, show how the working maintenance of Company infrastructure required active engagement with the boundaries of private estates managed by successor administrators. Fernsdale's gut, named in the sequence, refers to a watercourse or steep narrow valley running through the surveyed area, with a gut being the customary local term for such a feature. The double wall mentioned at two points in the survey indicates a fence of greater structural strength than the standard face wall, made up of two parallel walls with rubble fill between, providing both greater height and greater resistance to cattle pressure. The use of double walls at specific boundary points, particularly those joining the Keeling holding, suggests that those sections faced heavier traffic from livestock or carried particular defensive value. Single face walls served on less exposed boundaries. The graduated repair cost in each entry reflects the differing labour required to bring each section back to a serviceable state. Speculations The decision to substitute Wrangham and Gurling for the sick Steward and Francis without delay probably reflects the council's wish to complete the survey within the three-day window originally allowed. By proceeding with the available planters rather than waiting for the named members to recover, Haswell and Bazett kept the inquiry on schedule and avoided the political risk that further delay would attract. The substitution also illustrates the depth of available planter expertise on which the council could draw at short notice, with two competent replacements found from within the resident community of substantial inhabitants. The level of detail given for each section, with specific cost estimates ranging from small repair sums to larger figures for sections requiring full rebuilding, probably reflects the panel's awareness that the survey would form the basis of an itemised costing for the directors. By providing a per-section breakdown rather than a single global figure, the survey would allow Pyke to apportion expenditure across budget cycles, prioritise repairs by urgency, and demonstrate to London exactly what state the pastures had reached. The technique converted what might have been a general assessment of dilapidation into a concrete administrative tool.

Cost of repairing: £0 4s 0d. Carried over £34 0s 0d. Interpretations The list of boundary neighbours encountered along this stretch of the Company fences provides a map of the substantial planter holdings along the ridge. Keeling, Goodwin, Caton, Powell, Addis, Wrangham, Coles, Bowman, Lufkin, Francis and Sick appear as the principal abutters. Several of these names recur in other consultations of the period. Powell, recently engaged with the council in the Hoskison-Carne bond and the orphans' debt attachment, holds substantial land at multiple boundary points. Wrangham, identified in earlier consultations as a free planter granted Company waste ground in Peak Gut, appears here as a settled holder along the ridge with his own fenced corner. The frequency of the same names along the Company boundary illustrates how a relatively small number of substantial planters held the developed land closest to the Company pastures, with successive boundaries running between estates of the same handful of families. The repeated note that certain stretches were all good, with no cost of repair entered, reveals how the survey distinguished between fences requiring intervention and those already in serviceable condition. The all good designation served as a documentary record that the panel had viewed the section and found no defect, protecting the Company against later claims that the fence had been overlooked. The technique of recording satisfactory sections alongside defective ones produced a complete walkround of the boundary rather than a selective list of works to be done. The reference to Ensign Caton's old house and the gum trees identifies a specific landmark within the surveyed area. Caton, formerly an officer of the garrison, had previously held land at this location, with his house and the gum trees serving as recognised reference points decades after his tenancy. Such named features functioned as the working geography of the island, with verbal description rather than maps providing the means by which boundaries were communicated and recorded. The note that the lane

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			bottom there would require seven pounds of work, a substantial sum compared to most other sections, indicates a major rebuild of the fencing in that location. The stone-sourcing constraint noted at Goodwin's land, that sound stones must be fetched a great way, exposes an operational cost driver in fence repair. Local stone of fence-building quality was not uniformly available across the Company holdings, with some sections requiring transport of materials from quarry sites or distant outcrops at considerable labour cost. The estimate of fifteen shillings for the one hundred and fifty rods of double wall at Goodwin's reflects both the length of the section and the additional labour of transporting suitable stone. The detail shows how the survey panel was costing not only the wall work itself but the supply logistics behind it. Speculations The substantial figure of seven pounds for the Caton's lane bottom and seven pounds two shillings sixpence for the eighty-rod stretch at Powell's and Lufkin's land probably indicates that those sections had effectively collapsed and required complete rebuilding from the ground up rather than mere patching. The contrast between these high single-line costs and the small repair figures elsewhere shows that the survey was identifying particular bottleneck points where capital expenditure on full reconstruction was needed before the wider fencing system would function. By isolating these critical sections, the council could prioritise expenditure on the points where neglect had advanced furthest while accepting routine maintenance elsewhere. The choice to carry the cumulative figure forward at £34 0s 0d at the end of this section suggests the survey was structured as a running account to be totalled at the conclusion. The mechanism converted the line-by-line walkround into a coherent budget document, with the final total available as a single figure for council approval and metropolitan reporting. The arrangement allowed the directors in London to see both the granular detail of the assessment and the aggregate cost of restoration at a glance, supporting either a global authorisation or a phased expenditure programme according to the available funds.

			Where it lay: from Will's plantation down to the widow Hayes, all good. Cost of repairing: (figure not entered). Length: fifty-seven rods. Where it lay: from Hayes' plantation to the Hutts yam plantation adjoining. Cost of repairing: £0 2s 6d. Length: (figure not entered). Where it lay: from the corner of the yam plantation, to make good wall. Cost of repairing: £0 2s 0d. Length: twenty-eight rods. Where it lay: to Hayes', sixty rods where, of twenty-eight, to make good. Cost of repairing: (figure not entered). A list of the bonds delivered to the governor on the second of last month followed. Interpretations The riding house and the Hutts plantation named in this section identify two distinct Company facilities at this stretch of the boundary. The riding house was an enclosed structure for the keeping and exercise of horses, with stabling and working space for the Company's mounts. The Hutts plantation, named also in earlier consultations as the site of the recent slaves' house rebuilding, was the company's principal labour and accommodation complex for its slave workforce. Their proximity along the same boundary line shows how the Company concentrated its operational facilities in a connected zone, with riding stables, slave quarters and yam plantation all within a single chain of fencing maintained as one continuous management unit. The reference to Quincy's grave as a fencing landmark is a striking detail of how burial sites became fixed boundary references in island geography. Quincy, evidently an inhabitant buried at this location, gave his name to a stile crossing the fence at his grave. The grave functioned not only as a personal memorial but as an established reference point in the working description of the boundary, with the section measured from gate to stile to bank using the grave as the intermediate fix. The use of named graves as fencing landmarks reflects the island's still small and recent settlement history, where the burials of the previous generation provided the principal artificial features marking the land. The widow Hayes named at this section is probably Dorothy Hayes, whose cow petition had been referred to further consideration on 7 September 1714 in one of the open threads inherited by the present administration. Her plantation appears here as a recognised boundary point along the Company fence line, indicating that the cow petition was being pursued by a settled widow with land of her own rather than by a person in extreme distress. The detail places her geographically within the wider planter community and confirms her standing as an established holder along the Company boundary. The faced wall with a two-foot double wall on top, described in one of the sections, represents a particular construction method for boundaries on steep or unstable ground. A faced wall built up against a bank gave a vertical containing face, with a double wall along the top providing additional height and resistance to livestock pressure from above. The two-foot

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			specification probably refers to the thickness of the double wall course at the top, sufficient to take pedestrian or animal weight without dislodging stones. The construction reflects the engineering response to fencing on the broken volcanic terrain of the island, where simple level walls would have been inadequate to the slopes encountered. Speculations The repeated entries of all good with no cost figure in this stretch, particularly the long lengths from Hawley's mount, from Will's plantation to Hayes', and from the waterfall along the gut, probably reflect that the Company's older or more carefully constructed walls had survived the period of neglect better than others. The pattern suggests that fencing made under earlier administrations to a higher specification had remained serviceable, while the lighter walls more recently put up had failed. The survey was therefore documenting not only present condition but also the relative durability of different generations of construction, which would inform decisions on materials and methods for the planned restoration. The line entry for Quincy's grave stile, mortar wall, riding house and Hutts plantation appearing within a few rods of each other suggests that this section of the boundary served as a dense operational corridor combining Company infrastructure, burial ground, livestock keeping and plantation labour. The concentration of distinct functions along a short stretch of fencing reflects how the Company organised its complex of operations close to James Valley for efficient supervision and access, rather than dispersing them across the wider island. The fence survey of this section was therefore not a routine boundary inspection but an assessment of the perimeter security of the Company's principal operational hub.

		Comp[a] 5 Years 1710 May 26 Renatus Snows D[o] for 5 Years D[o] June 12 Simon Hailes D[o] for 2 Years D[o] D[o] 21 Henry Bernad D[o] for 2 Years Verte	30 January 1710. John Mortimore's obligation to serve the Honourable Company for five years. 26 May 1710. Bond of Renatus Snow to serve ditto for five years. 12 June 1710. Bond of Simon Hailes to serve ditto for three years. 21 June 1710. Bond of Henry Bernard to serve ditto for three years. Interpretations The list discloses how the Secretary's office served as the central repository of every binding obligation entered into between inhabitants, garrison, parish and the Honourable Company across more than two decades of administration. The bonds cover four distinct categories of obligation, each with its own institutional function. First, simple debt bonds securing payment of stated sums, such as the 1690 Charlesworth bond for £4 0s 0d. Second, indemnity bonds running in favour of the council to protect it against future claims, such as the 1690 tombstone wood bond and the 1698 Powell bond saving the governor and council harmless against Gabriel Powell senior. Third, parish indemnities for the maintenance of illegitimate children, such as the Allis and Field bonds, which transferred the financial risk of poor relief from the parish to the family of the mother. Fourth, covenant servant bonds binding individuals to fixed terms of service with the Company, such as the Mortimore five-year bond and the Snow, Hailes and Bernard service bonds of 1710. The Carne, Hoskison and Bazett bond of 8 January 1708 for £167 16s 3¼d in favour of Governor Keeling's children is significant for its place in the wider Keeling estate matter. This sum, jointly secured by three of the principal council members of the period, represented a substantial obligation to the Keeling heirs that had been outstanding for nearly seven years by the time of the present consultation. The bond's appearance in this catalogue, taken with the recent 9 November 1714 ruling on the related £40 0s 0d Hoskison-Hayhurst bill and John Keeling's recent administration of his father's estate, indicates that the entire Keeling financial position was being systematically reviewed under the new administration. The May 1703 bond of Carne and Goodwin to pay Eleanor Keeling £128 19s 0¼d, also listed here, formed part of the same network of obligations to the Keeling family. The parish indemnity bonds of Allis in 1705 and Field in 1706 reveal how the parish enforced its right to recover the maintenance costs of bastard children from the families of the mothers. Under English parochial practice, a parish was liable for the support of any child born within its bounds whose father could not be made to maintain it. To prevent this falling on the parish revenue, the council took bonds from the father, where identified, or the mother's family, where not, undertaking to save the parish harmless from the cost. The Allis daughter's child and the Field daughter's child generated two such bonds within twelve months, indicating that bastardy cases were sufficiently regular to require a standing form of indemnity. The cluster of four covenant service bonds dating from January 1710 to June 1710 indicates a recruitment push at the start of that year under which several free men, presumably arriving from England as covenant servants or from local sources, were bound to specific terms of company service. Mortimore signed for five years, Snow for five, Hailes for three and Bernard for three. The Snow named here is presumably the same Renatus Snow who served as marketman during the recent shipping period and was just fined for bartering with a slave for lemons. The pattern of multiple bonds within five months indicates that 1710 was a year when the Company actively replenished its labour pool

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			through bound service contracts, with terms calibrated to the perceived skill or value of the individual. Speculations The placement of the bond list in the consultation record on the same day as the fence survey probably reflects Pyke's broader project of cataloguing the inherited administrative state of the island. Both documents are inventory exercises, one of physical infrastructure and the other of legal obligations, both produced under a new governor concerned to understand and document what he had taken charge of. The technique converted the consultation book into a comprehensive audit of the island's assets and liabilities, supplying the directors with a baseline against which future progress could be measured and providing Pyke with a documentary defence should the directors later question what state things had been in when he arrived. The inclusion of bonds going back to 1690, more than twenty years before the present sitting, suggests that the Secretary's office had retained instruments long after their immediate operative life had ended. The 1690 Charlesworth bond for £4 0s 0d would have been satisfied or written off many years before, yet still appeared in the office at the time of the audit. The retention pattern indicates either administrative inertia or a deliberate policy of preserving all instruments for documentary continuity. The latter is more probable, since the catalogue served as evidence of past Company business that might still be relevant if accounts came to be reopened or estates reviewed, as the Keeling matter shows.

			20 April 1714. Bond of William Pooley, William Slaughter and John Orchard for £10 0s 0d licence money. Interpretations The 1 August 1712 bond of Robert Bell, Thomas Cason and William Teale for £200 0s 0d at eight per cent identifies the standard interest rate applied to substantial private debts owed to the Honourable Company. Eight per cent represented the customary rate for secured commercial credit in this period, and its application to a £200 0s 0d obligation with two sureties shows how the Company functioned as the principal lender of capital on the island. The same rate had appeared in the 24 July 1712 sale of the Belvird country plantation to Bell at £200 0s 0d on two years' credit at eight per cent, suggesting that the present bond is the recorded instrument securing that transaction. Bell's standing as a free planter mason had been adequate to secure such credit only with two sureties, Cason and Teale, jointly liable for the full sum. The licence money bonds of 1713 and 1714, each for £10 0s 0d and each involving three named persons, reveal a distinct category of obligation tied to the council's authority to license specific trades or activities. The £10 0s 0d figure recurs across all three bonds, suggesting a fixed scale for the licence type involved. Each bond carried three signatories, one as principal and two as sureties, which was the standard form for ensuring recoverability against substantial planters even if the principal defaulted. The presence of Thomas Hayes as a surety on two of the 1713 licence bonds indicates his standing as a man of credit whose name could be placed behind the obligations of others, while the surnames Swallow, Pooley, Slaughter and Orchard place several already-known planters within the licensed trade community. The bond of arbitration between Carne and Powell of 22 January 1714 records a procedure used to resolve private disputes without resort to the council's adjudicatory jurisdiction. An arbitration bond bound each party to accept the decision of named arbitrators, with a penal sum payable for non-compliance. By committing themselves under bond to abide by the eventual award, the parties converted what would otherwise have been a continuing dispute into a binding settlement procedure operating outside the council's direct intervention. The mechanism preserved council time for substantive business while providing the parties with a structured private alternative. The continuing involvement of Powell in council survey and assessment work in 1714, alongside Carne's various financial troubles, suggests that whatever the bond covered was either resolved or held in abeyance during the present year. The Widow Midge bond of 6 April 1711 to keep her granddaughter, James's child, indicates a private undertaking for the maintenance of a child without resort to parish indemnity. Where the parental responsibility could not be enforced through bastardy proceedings against an identified father, an elder relative could undertake care of the child by bond, with the parish thereby relieved of any obligation. The naming of the child only as James's child, with no surname for the father, suggests that the father was either deceased or unable to be charged, leaving the maternal grandmother to assume the legal responsibility. Speculations The cluster of three £10 0s 0d licence bonds on the single date of 25 March 1713 probably represents the standard annual issue or renewal of licences on the customary quarter day. Quarter days were the recognised dates for the renewal of leases, payment of rents and issue of licences in the early modern English system, with Lady Day, 25 March, opening the legal year. The simultaneous taking of three bonds for

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			identical sums on the same quarter day suggests that the licences in question were issued or renewed on an annual cycle, with each holder providing fresh sureties at each renewal. The technique converted licensing into a regular calendar-bound operation rather than an ad hoc grant. The high number of multi-party service obligations dating from 1710, including the six-name joint obligation of Young, Thornborough, Hicksman, Lewis, Lovett and Jarvis for three years, probably reflects the arrival of a batch of indentured servants on a single ship in the summer of that year. The simultaneous binding of six men under a joint three-year obligation suggests they were taken collectively from a homeward Indiaman or East Indiaman touching at the island, with the council securing their service through a single instrument rather than individual bonds. The technique would have been efficient where the men came as a group and were not yet individually distinguished in terms of skill or expected role.

The list of bonds continued. 29 April 1714. Bond of John Orchard, William Slaughter and William Pooley for £10 0s 0d licence money. 10 May 1714. Bond of Giles Hayes, William Beale and Giles Smith for £10 0s 0d ditto. Same date. Bond of John Sinsmick, Robert Gurling and William Worrall for £10 0s 0d ditto. 14 May 1714. Bond of Susannah Swallow, William Lackey and John Sinsmick for £10 0s 0d ditto. 18 October 1714. Bond of William Teale, Antipas Tovey and Francis Gunge for £10 0s 0d ditto. Same date. Bond of William Beale, William Coales and Robert Wellington for £10 0s 0d ditto. Same date. Bond of Renatus Snow, Thomas Dutch and Samuel Algate for £10 0s 0d ditto. Mr George Carne presented the following petition. Carne addressed the worshipful governor and council. He set out that Captain Edward Mashborne had an account depending between himself and the relict of Captain Thomas Goodwin, who was now Carne's wife. Mashborne had presented his petition some time previously. Yesterday he had demanded that the account of the estate be adjusted. Carne humbly requested that Mashborne be ordered to deliver in his demands in writing on the council board, so that Carne might have a week's time to reply. He also requested that, since Mashborne was a member of the council, he should not be admitted as such Interpretations The licence money bonds from late April through October 1714, each at the £10 0s 0d figure with three signatories, represent a continuation of the regular licensing pattern observed at 25 March 1713. The names cluster around recognisable groups within the planter community, with Orchard, Slaughter and Pooley appearing together again as they had the previous April. The recurrence of the same surnames across bonds taken months apart indicates a stable trading class operating under licence, with each member periodically taking out a fresh instrument either for himself or as surety for another. Susannah Swallow's appearance as principal on the 14 May 1714 bond is significant as one of the few women named as a principal in the catalogue, indicating that she carried on a licensed trade in her own name, possibly in succession to a deceased husband.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			The 18 October 1714 bond involving Antipas Tovey as a signatory illustrates how council members themselves participated in the licensed trade alongside ordinary planters. Tovey's appearance as either principal or surety on a £10 0s 0d licence bond, only weeks before the present consultation in which he was being publicly admonished by Pyke for neglect of office duties, indicates that he combined his council position with active commercial interests on the island. The dual standing as councillor and licensee shows that there was no formal incompatibility between the two roles, although it created the kind of overlapping interests that would later complicate his position in the Bagley-Alexander dispute. Carne's petition for an adjustment of accounts with Mashborne over the Goodwin estate, with Carne acting through the standing of his wife as Captain Goodwin's relict, repeats the procedural pattern observed in other estate matters of the period. The husband stood in his wife's right to handle financial matters concerning her previous marriage, with Mashborne and Carne occupying corresponding positions on opposite sides of an undischarged account. The request that Mashborne deliver his demands in writing and allow a week's time for reply set out a structured procedure that would convert what had been an oral demand the day before into a documented exchange suitable for council adjudication. The technique gave Carne time to prepare his defence while binding Mashborne to a written record of his claims. The closing request that Mashborne, as a council member, should not be admitted as such in the present matter raised an important procedural point of conflict of interest. Where a councillor was personally party to a dispute before the council, his sitting on the case would compromise the impartiality of the proceeding. Carne's request invoked the principle that a man may not be both party and judge. The procedural effect, if granted, would be to require Mashborne to step down from the council bench during the hearing, leaving only Pyke, Haswell, Bazett and Tovey to determine the matter. Speculations Carne's petition probably reflects an attempt to deflect attention from his recent contempt of council, when he had left the island for the country immediately after submitting his earlier petition on the goat range and the debt schedule. By initiating a fresh matter against Mashborne with formal procedural demands, Carne could redirect council business onto a question of Mashborne's accounts rather than his own continuing difficulties. The timing of the petition, in the same consultation where the Secretary's office catalogue was being presented, suggests Carne was using the present sitting to recover initiative after his absence had been formally noted. The request for a week's time to reply, coupled with the request that Mashborne be excluded from council during the matter, probably reflects Carne's awareness that the Goodwin estate accounts had been long deferred and that a definitive settlement would require complex documentary preparation. By securing both procedural protections in a single petition, Carne sought to convert what might otherwise have been a swift demand into an extended adjudication. The procedural manoeuvre would buy time on the Goodwin question while preventing Mashborne, who was in possession of the relevant records as a council member, from exerting institutional weight to push for immediate resolution.
296	287	such in this case & as in duty bound shall ever pray Geo[ge] Carne S[t] Helena Dec[r] the 14 1714 Cap[t] Mashborne deliverd in the foll[g] Paper	Carne closed his petition. He asked the council to treat Mashborne in this case as in duty bound. The petition was subscribed by George Carne. Captain Mashborne delivered the following paper in answer to Carne's petition.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
		Finding that M[r] Geo[ge] Carne has petition'd that I sho'd deliver yo[u] in writeing what that Estate is I do demand I say that att the personall Estate belonging to my Son in Law Robert Goodwin, who Dyed at Achroden in India which I demand in right of my former Wife his Mother who lived a Considerable time after his deacease this demand I make in a Legal way, being Admitted to Administration in England Edw[d] Mashborne M[r] Carne requesting it, it was Ordered That he have a Copy hereof M[r] Carne appearing with his petition Promised to sell a black Slave called little George to the Hon[ble] Comp[a] which was agreed for at 15[lb] price to be allowed M[r] Carne upon delivery of said black. M[r] Tovey Complains to the Gov[r] & Council that he wants Candles & does not know how to supply himself & humbly Conceives the Hon[ble] Comp[as] Custom in India is to allow their Servants Candles. Ordered That Each of the Council be allowed One Gallon of Oyle y[e] Marsom Candles being Scarce & not Sufficient to serve the Hon[ble] Comp[as] Table but a very little time except some supply of Wax or Tallow. The Margin Notes: Cap[t] Mashborns Answer to s[d] Petition. 15[lb] for a black boy sold. Comp[lt] for Candles. One Gall. Oyl to Ea[ch] of the Council.	Mashborne set out that, finding Mr George Carne had petitioned for the demand to be put in writing, he would set it out. He demanded all the personal estate belonging to his son-in-law Robert Goodwin, who had died at Tegnapatnam in India. He made the demand in right of his former wife, the mother of Robert Goodwin, who had lived a considerable time after the death of her son. He made the demand in a legal way, having been admitted to administration in England. The paper was subscribed by Edward Mashborne and dated St Helena, 14 December 1714. Mr Carne requested a copy. Ordered that he have one. Mr Carne, appearing with his petition, proposed to sell a slave called Little George to the Honourable Company. The price was agreed at £15 0s 0d, to be allowed to Carne on delivery of the slave. Mr Tovey complained to the governor and council that he wanted candles. He did not know how to supply himself, and humbly believed the Honourable Company's custom in India was to allow their servants candles. Ordered that each member of the council be allowed one gallon of oil. Myrsen candles being scarce and not sufficient to serve the Honourable Company's Table, but a very little time, except some of water tallow Interpretations The Mashborne claim against the Goodwin estate, asserted in right of his deceased former wife who had survived her son Robert Goodwin and inherited from him, illustrates the chain of testamentary descent in colonial property. Robert Goodwin had died at Tegnapatnam, a Company settlement on the Coromandel coast of India north of Cuddalore. His mother had outlived him by enough time to take her share of his personal estate. On her own death, that share passed to her widower Mashborne, who had subsequently taken out letters of administration in England, the formal authorisation to collect and distribute the deceased's assets. The transatlantic structure of the claim shows how an English administration could be deployed against assets in St Helena, with Mashborne now standing in the legal position of the original beneficiary of his late wife. The conflict with Carne arose because Carne had married Captain Thomas Goodwin's widow, who held her own dower or other interest in the same family estate. The sale of Little George to the Company at £15 0s 0d sets a benchmark above the £10 0s 0d average derived from Carne's earlier credit schedule of twenty-nine slaves at £290 0s 0d. The higher price suggests that Little George was either a younger or more capable individual than the average slave in Carne's portfolio, with the diminutive prefix in his name probably indicating youth rather than diminished value. The transaction was structured as an asset transfer in part discharge of Carne's debt to the Company, with the agreed price credited to his account on delivery. The mechanism converted a specific item of his property into Company labour stock at a fixed value, advancing the wider debt-clearance scheme proposed in his credit schedule. The candle question reveals a small but instructive administrative custom carried across the Company's eastern stations. Tovey's invocation of the Honourable Company's custom in India to allow their servants candles was raised not as a personal complaint but as a claim to a recognised perquisite of office. By invoking Indian Company practice, Tovey sought to establish that St Helena councillors were entitled to the same allowance as Company servants at the larger establishments. The council's grant of one gallon of oil to each member, rather than candles, illustrates how the local administration adapted the principle to local supply conditions. Myrsen candles, probably referring to

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			a particular wax or tallow grade procured through the Company stores, were scarce and reserved for the Honourable Company's Table, the formal common board at which the senior council members dined. Water tallow, mentioned as the alternative source of lighting fat, was tallow rendered from marine animals, probably whale or seal, with a duller flame and stronger odour than land-animal tallow but acceptable for utility use. The combination of myrsen candles for the Table, water tallow as a residual supply, and oil as the official council allowance shows how the household economy of the Fort drew on multiple lighting sources of differing quality, with the better grades reserved for ceremonial use and the lower grades distributed for personal consumption. Speculations Mashborne's possession of an English letter of administration in his deceased wife's right, applied here against St Helena assets, probably represents a recent arrival of metropolitan documentation by one of the homeward ships. The timing of his formal demand, presented in writing in response to Carne's procedural request, suggests that the letter had reached him only recently, since otherwise the claim would have been pressed earlier. The case shows how a slow correspondence channel between London and the island could enable a relative to assemble the documentary basis of a claim across several years, then activate it at the moment when the necessary papers had finally been gathered. Tovey's request for candles probably reflects an attempt to recover personal standing after the public admonition from Pyke on 2 December over his neglect of office work. By raising a complaint that highlighted the gap between his pay and the perquisites enjoyed by Company servants at the Indian establishments, Tovey shifted attention from his own failings to the administration's failure to provide adequate support to its councillors. The grant of one gallon of oil to each member was a modest concession that addressed the immediate question without committing the council to the wider Indian-practice analogy that Tovey had invoked.
297	288	The Govern[r] Reports to the Council that he has finished a Lime kiln to burn Lime with Cole were the old one was that was built by Gov[r] Roberts without the Line & near the old Bridge & also had begun to build a Goats Pound near the Stone at Clappers door house in this Valley also That he had taken Security of Godfrey Shoales for Payment of his debt to the Hon[ble] Company with Interest at 8 p[r] C[t] Sam[l] Algate & Jn[o] W[m] Pyfer being security for him. The governor reported to the council that he had finished a lime kiln to burn lime with coals, near the old one that had been built by Governor Roberts without the line and near the old bridge. He also had begun to build a goat pound near the one at Clapper Door house in this valley. He also reported that he had taken security of Godfrey Shoales for payment of his debt to the Honourable Company, with interest at eight per cent. Samuel Algate and John Pyfer stood as security for him. The governor also reported that he had received all the bonds again as set out in the list given in by Mr Tovey. The list was to be examined to see which bonds were void and which in force, and the list was to be entered accordingly. Richard Beale, one of the orphans of Jonathan Beale deceased, presented the following petition. It was addressed to the worshipful governor and council. Beale had chosen his uncle Mr George Carne as his guardian. He humbly requested that Carne might be empowered, the petitioner being in great necessity of clothing, to state his accounts and deliver them in at the next council day. He sought liberty to receive such help as the Honourable Company's books might afford as appeared. The petition was subscribed by Richard Beale. Beale further requested that his uncle might agree with the council about the timber trees upon the land. Agreed to. Mr Carne then proposed to sell what timber on the land of the orphans was fit for the Honourable

Company's use, for the benefit of the orphans. It was agreed to be valued. Interpretations The new lime kiln built by Pyke to burn lime with coals represents a deliberate upgrade in the Company's construction capacity. The earlier kiln built by Governor Roberts had presumably used wood or local fuel, while the present kiln used coal, probably imported on Company ships and stored as ship's fuel or building stock. Lime burning was essential for mortar production, and a working kiln was the foundation of any major masonry programme such as the fence restoration, Plantation House repair and other infrastructure work catalogued in the open threads. By siting the new kiln near the old bridge in James Valley, Pyke placed it within easy reach of both the harbour for coal supply and the town for distribution of burned lime to construction sites. The new goat pound being built near the Clapper Door house in the valley addresses the recent decision to resume the Company's exclusive use of Chapel Valley. With private goats now ordered off the Company range, the council needed secure containment for the Company's own flock and a place to impound any unauthorised animals seized in enforcement. The siting of the new pound near an existing pound at Clapper Door suggests that the council was expanding the existing capacity rather than creating an isolated new facility, with both pounds working together to handle the increased volume of livestock containment that the new policy would generate. The Old Goat Pound demolition noted earlier as one of the items in the case against Boucher places this present construction in clear contrast to the destruction that had occurred under the previous administration. The Shoales debt arrangement with Algate and Pyfer as sureties at eight per cent confirms the standard rate already observed in the Bell debt of August 1712. The mechanism of two sureties standing for an indebted planter ensured that the Company could recover its money even if Shoales defaulted, with the sureties personally liable for the unpaid balance. The arrangement reveals how chronic planter indebtedness was managed through a network of mutual guarantees, with each substantial planter at any time either owing to the Company or standing surety for others who did. Algate, the corporal whose house had been broken into earlier, appears here as a man of sufficient standing to act as surety for a fellow planter, indicating that he held substantial property even while serving in the garrison. The Beale orphan petition for clothing through his guardian uncle, with the timber on the orphans' land to be sold for their benefit, illustrates the standard procedure for using estate assets to meet the orphans' current needs. The orphans of Jonathan Beale had been noted earlier in the consultation for being indebted to the Honourable Company, with Powell's debt to them attached for that purpose. Now their immediate needs were to be met by liquidating part of the estate's natural resources. The mechanism converted standing timber, a long-term asset of the holding, into short-term cash to meet the orphans' current clothing requirements. The use of the council as the buyer for the timber, with valuation rather than open sale, suggests an administrative shortcut that traded a market price for procedural simplicity. Speculations The simultaneous reporting of the lime kiln completion and the goat pound construction probably reflects Pyke's wish to demonstrate concrete progress on the infrastructure programme by the close of his first months as governor. By presenting both achievements in a single consultation entry, he established a documentary record of active rebuilding that contrasted with the catalogued failures of the Boucher period. The

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			kiln and the pound were both modest works individually but symbolically important as visible signs of administrative recovery, with the consultation book serving as the medium through which the directors in London would learn that practical improvements were under way. The instruction to examine the bond list Tovey had submitted and determine which bonds were void and which still in force suggests that the catalogue had been an administrative inventory rather than a current legal record. Many of the bonds dated back twenty years or more, and a substantial proportion would by now have been satisfied, lapsed or otherwise extinguished. The follow-up examination would convert the inventory into a working schedule of live obligations on which the Company could still rely. The fact that Tovey had compiled the list without distinguishing live from dead bonds may itself have been part of his pattern of less than thorough work, with the present order making explicit that a further stage of analysis was needed before the catalogue could serve any operational purpose.
298	289	be bought & Left to Jn[o] Bagley Carpent[r] to apprais[e] on the Companys part The following Petition was also presented Viz[t] To the Worship[ll] the Gov[r] & Council The Petition of Jn[o] Long most humbly Sheweth That whereas yo[r] Petition[r] is & ever will be willing to Comply with the Ord[r] of the Worship[ll] the Gov[r] & Council so in the particular of removing his Goats from the Fort Range That haveing a family increase- ing - they would so far consider yo[r] Petition[r] These Goats being very oppertune to y[e] Hon[ble] Comp[as] use as to be allowed y[e] Exchange Equivalent in Sunday Bay where he has a Hab[it]ation & as in duty bound shall Ever pray Jn[o] Long M[r] Long haveing proposed on Satturday Last towards Paym[t] of his Debt y[t] to sell the Hon[ble] Comp[as] all his Goats in y[e] Fort Valley Except Ten Yews he should Choose, upon this Petition he was allowed to Choose Ten yews out of the Hon[ble] Comp[as] flock of Goats in Sunday Bay & mark them in stead of those Ten he Desigeed to Choose of out of his Goats in this Valley This day the Store keeper brought in his following accounts. [...] Geo[ge] Haswell [...] A[ntipas] Tovey Margin Notes: Petition of Jn[o] Long. desireing to Exchange some Goats. his former agreem[t] & leave to Choose 10 Eves.	The valued timber was to be bought and left to John Bagley, carpenter, to appraise on the Company's part. The following petition was also presented. It was addressed to the worshipful governor and council. John Long set out that he was, and ever would be, willing to comply with the council's orders, in particular as to removing his goats from the Fort range. Having a family increasing, he asked the council to consider his petition. His goats being very useful to the Honourable Company's use, he asked to be allowed to exchange them for an equivalent number in Sandy Bay, where he had a habitation. The petition was subscribed by John Long. Long had previously proposed on Saturday last, towards payment of his debt, to sell the Honourable Company all his goats in the Fort Valley except ten ewes he should choose. Upon the present petition he was allowed to choose ten ewes out of the Honourable Company's stock of goats in Sandy Bay and mark them, instead of those ten he had previously intended to choose out of his goats in this valley. This day the storekeeper brought in the following accounts. The entry was signed by Pyke, Haswell and Tovey. Interpretations The carpenter John Bagley appearing here as the Company's appraiser of timber is presumably the same John Bagley named earlier in the consultations as a free planter who had fenced and planted wood. His present role indicates that he had been recognised by the council as the resident expert in timber valuation, drawing on his planting experience and carpentry trade to determine the worth of standing wood for Company purchase. The appointment of a single named appraiser, distinct from the previous councillor-led valuations, shows how specialist knowledge was concentrated in the hands of recognised practitioners who could be called upon repeatedly for the same kind of assessment work. The Long goat exchange illustrates a sophisticated workaround for the new Chapel Valley prohibition. Having previously agreed on the Saturday to sell all his goats in the Fort Valley to the Company except ten ewes he would mark for himself, Long now requested that the ten ewes be drawn from the Company's existing Sandy Bay flock instead. The mechanism transferred ten Company goats at Sandy Bay into Long's personal ownership, while his own ten ewes at the Fort Valley were absorbed into the Company stock. The net effect was identical in numbers but allowed Long to keep his small flock at his Sandy Bay habitation rather than at the

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			Fort Valley where he was being required to give up his presence. The exchange preserved both parties' herd composition while removing Long's livestock from the contested range. The substitution of Sandy Bay for Fort Valley as Long's grazing location demonstrates how the council managed a forced relocation through equivalent exchange rather than outright dispossession. Where Carne had been ordered to remove his goats with only a small concession on two old ewes, Long, who had cooperated promptly with the order from the Saturday consultation, was given the more accommodating arrangement of a marked exchange against Company stock. The differential treatment reveals the council's calibration of response to planter behaviour, with cooperative compliance rewarded by flexibility and contemptuous absence punished by stricter terms. The marking of selected ewes was the standard method by which individual animals were identified as belonging to a particular owner within a wider flock. Ear notches, paint or branding marks distinguished each owner's animals on shared or adjoining ranges. The procedure of choosing and marking ten ewes out of the Company's Sandy Bay stock gave Long an immediately recognisable personal interest in identifiable animals, while leaving the rest of the flock as Company property. The mechanism converted what would otherwise have been an indistinguishable share into a defined particular set of animals. Speculations Long's emphasis on his increasing family in the petition probably reflects a calculated appeal to the council's sympathy for a settled domestic situation. By framing his request as a need to maintain his goats for the benefit of his growing household at Sandy Bay, Long positioned himself as a responsible head of family seeking to preserve his livelihood under altered conditions. The argument contrasted favourably with Carne's situation, where Carne had departed into the country immediately after presenting his petition and been treated as showing contempt. Long's more cooperative posture, framed as humble compliance with an undertaking added of a small accommodating exchange, secured him a better outcome. The use of John Bagley as Company appraiser for timber from the Beale orphans' land probably reflects the council's wish to avoid any appearance of self-dealing in the orphan estate matter. By appointing a respected outside tradesman as valuer rather than relying on council members or planters with their own interests in timber supply, the council ensured that the price paid to the orphans could not later be challenged as artificially low. The procedural separation between the council's role as buyer and Bagley's role as valuer protected the eventual transaction from criticism, particularly given the existing pattern of orphan-estate scrutiny under the new administration.
299	290	Island S[t] Helena, At a Consultation held on Tuesday y[e] 21 of Decemb[r] 1714. At a consultation held on Tuesday 21 December 1714 at the United Castle in James Valley. Present: Isaac Pyke, Governor; George Haswell, Deputy Governor; Edward Mashborne, third; Matthew Bazett, fourth; Antipas Tovey, fifth in council. The governor reported that he had received from Mr George Carne, towards paying his debt to the Honourable Company, plate to the value of £69 4s 0d. Captain Mashborne had promised to give him credit for £10 5s 0d more, which made in all £79 9s 0d. The particulars of the plate were as follows. One tankard: weight three ounces three quarters; value £36 6s 0d. Twelve spoons, two forks and one porringer: value £49 5s 0d.

Normans Debt to y[e] Comp[a]	One castor and one ladle: value (carried with the next item). Four castors, one crutch head for a cane and one tumbler: value £41 5s 0d. Two porringers, two saltcellers, one mug and one spitting pot: weight thirty-two ounces; value £0 17s 0d. One mug, one saltceller and two salvers, one spoon: value £43 11s 0d. One tankard and one tumbler: value £24 19s 0d. (Sub-total at this point): £228 3s 0d. Allowing seventeen pence in plate, the weight of a piece of eight, for five pence value in money. One gold snuff box, valued at £4 0s 0d in all. Total: £69 4s 0d. The governor reported that Martin Norman was indebted to the Honourable Company in the sum of £7 10s 1d. He was worth nothing, living on a small farm of £50 0s 0d to him. His chief stock was two cows of the minister's, which he kept in his ground for Interpretations The plate schedule reveals the composition of a substantial planter household's silver, here surrendered as a means of debt discharge. The items combined functional dining ware, twelve spoons, two forks, the porringers, saltcellers and tumblers, with display pieces such as the tankards and salvers, and personal items including the crutch head for a cane and the gold snuff box. The mixed character of the collection indicates that Carne had amassed silver across the standard categories of an established gentleman's table service, with some pieces probably inherited and others acquired during his career on the island. The fact that the entire collection could be tendered at once to clear a Company debt shows how silver functioned as a stored reserve of value, convertible to credit at the assayer's rate when required. The accounting convention noted in the schedule, allowing seventeen pence in plate weight equivalent to a piece of eight for five pence value in money, defines the relationship between the silver's intrinsic weight and its currency value at the moment of acceptance. A piece of eight was the Spanish silver dollar, the principal international trade coin of the period, and its weight provided the standard unit against which scrap silver was valued in commercial transactions. The conversion ratio reflected the difference between the bullion value of melted silver and its face value as wrought plate, with the working figures showing how the Company storekeeper converted weight to credit during the transfer. The note carries operational significance because it fixes the rate at which all the listed items were translated from physical mass to cleared debt. The £79 9s 0d total against the £560 4s 0d of Carne's earlier credit schedule indicates that the present plate transfer represented only one component of the broader debt discharge. The plate at £69 4s 0d combined with Mashborne's separate credit of £10 5s 0d brought the running settlement only modestly forward against the total exposure. The slow accumulation through successive partial transfers, with each consultation recording another instalment, shows how a large debt was discharged across multiple administrative occasions rather than in a single composition. The technique allowed the Company to keep pressure on Carne while accepting valuable assets as they became available. Martin Norman's position, indebted in £7 10s 1d and worth nothing apart from two cows of the minister's that he kept on his ground for the minister, reveals the bottom end of the planter spectrum. Where Carne could surrender £69 4s 0d in plate and a gold

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			snuff box, Norman held nothing of his own beyond a small farm valued at £50 0s 0d and grazing rights for someone else's cattle. The contrast between the two cases shows the wide range of economic standing within the planter community, with the same Company debt-collection process required to handle settlements at vastly different scales. Norman's credit-clearing petition of 17 August 1714, noted in the open threads, had sought debt discharge through assignment of inhabitant debts owed to him; the present entry shows the council now reviewing his case from the asset side. Speculations The progressive transfer of Carne's assets to the Company over successive consultations, beginning with the £15 0s 0d for Little George at the previous sitting and now £79 9s 0d in plate and credit, probably reflects a deliberate calibration on both sides. By accepting partial transfers rather than insisting on a single comprehensive settlement, the council allowed Carne to retain some flexibility in managing his affairs while ensuring steady progress on the debt. Carne, for his part, transferred his most liquid and least productive assets first, the plate and the slave, preserving his land and labour stock for as long as possible. The pattern suggests a negotiated workout in which both parties accepted that full discharge would be reached over time rather than at once. The inclusion of a gold snuff box at £4 0s 0d among the plate items is striking as a personal effect of distinct character. Gold snuff boxes were luxury items associated with gentlemen of substantial means, and Carne's surrender of such a piece probably reflects either the severity of his exposure or his calculation that the council would accept it as a particularly visible mark of good faith. The piece would have been recognised by anyone seeing it as a sign of social rank, and its transfer to the Company stores marked the end of a particular kind of personal display that had previously characterised Carne's standing on the island.
300	291	for their milk & that whenever he dyes the Hon[ble] Comp[a] are likely to Loose their debt all that he has in the world being not worth 30[lb] but we haveing heard a Cause between him the said Norman & one Tho[s] Burnham who owes him 12:5:10. Burnham is also poor but hath some Land & owes the Hon[ble] Comp[a] 43:15:1[1/2] Wherefore I think it for the Hon[ble] Comp[as] Interest since both these partys are willing thereto that we make a Transfer & give Norman Credit for 12:5:10. not by delivering goods, but by Lessening his Debt & charge Burgham therewith & then Burnhams debt will be 56[s] & Normans 60[d] and tho I don't like the way of Transferring at all used in this case I think tis proper to allow it because Norman can never pay or give Security but Burnhams Land is some sort of Security and he may pay one time or another and this Invention in Council much rather than to Order it Privately because I intend it for a President to be followed for the future Being minded that it should become a Standing rule that no person should Transfer Credit to another what is himself in debt unless by a particular Order of Council & the reason also sett down in that Ord[r] that our Hon[ble] Mast[rs] when they look over our Consultations may see we have resolved their Estates entrusted to our Care shall not be any longer thrown away. I think it alsoe necessary that no Credit be placed to any mans Acco[t] by the Store keeper unless each particular be agreed in Consultation w[th] I take to be so Essentiall & necessary a point that all our other resolutions ab[t] trusting and transferring must come to nothing if this be not lookt too & Carefully Observed And as for Trusting I think no man ought to be farther Trusted then one Years Income or rent of the Estate he possesses at the Customary valuation of 5[s] p[r] Acre But for Sold[rs] 3 months	The minister's two cows were kept by Norman on his ground for their milk. Whenever Norman died, the Honourable Company would probably lose his debt, since all that he had was not worth £20 0s 0d. The council had heard a cause between Norman and one Thomas Burnham, who owed him £12 5s 0d. Burnham was also poor, but had some land and owed the Honourable Company £43 15s 1½d. The governor thought it best for the Honourable Company's interest, both parties being willing, that the council make a transfer and give Norman credit for £12 5s 0d, not by delivering goods but by lessening his debt. Burnham would be charged with that amount, and so Burnham's debt would rise to £56 0s 0d and Norman's would fall. The governor did not generally like the way of transferring at all, but in this case thought it proper to allow it. Norman could never pay or give security, while Burnham's land was some sort of security and he might pay one time or another. The governor preferred to bring it into council rather than order it privately, since he intended it for a precedent to be followed in future. He wanted it to become a standing rule that no person should transfer credit to another while himself in debt, unless by particular order of council. The reason set down in such an order was that when the Honourable Masters looked over the consultations, they could see that the estates entrusted to the council's care had not been thrown away. The governor also thought it necessary that no credit be placed to any man's account by the storekeeper unless each particular were agreed in consultation. He took this to be so essential and necessary a point that all other resolutions about trusting and transferring would come to nothing if it were not closely observed.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
		pay is Sufficient But in this Last mentioned Article for trusting we must at Margin Notes: his Credit & to be alyceim[t] w[th] Burnham. Transferrers allowed. but not w[th]out a particular Ord[r] of Council &c[a] Store keeper to give no C[r] but what's agreed to in Consultation. ab[t] Trusting Sold[rs] 3 mo[s] pay	As to trusting, he thought no man ought to be trusted further than one year's income or rent of the estate he possessed, at the customary valuation of five pounds per acre. For soldiers, three months' pay was sufficient. The governor noted that in this last point as to trusting, the council must Interpretations The Norman-Burnham debt transfer illustrates the council's procedure for moving a debt from an insolvent debtor to one with at least some recoverable asset. Norman's £12 5s 0d receivable from Burnham was extinguished by lessening Norman's own debt to the Company by the same amount, with Burnham's debt to the Company correspondingly increased. The mechanism converted three obligations, Norman to Company, Burnham to Norman, Burnham to Company, into two, with the intermediate party removed and his debt cleared. The technique transferred the collection risk from Norman, who had nothing but two cows belonging to the minister, to Burnham, whose land provided some security against eventual recovery. The transaction depended on the Company being able to substitute itself as creditor with the assent of both original parties, which the council secured here through formal consultation. The new standing rule that no person should transfer credit to another while himself in debt without particular order of council represents a significant tightening of administrative practice. The rule addressed the risk that indebted planters would settle private accounts among themselves before clearing their Company obligations, with the result that recoverable assets disappeared into other planters' hands while the Company debt remained outstanding. By requiring council approval for any such transfer, Pyke ensured that the Company's first claim on a debtor's available means could not be circumvented through private arrangement. The deliberate framing of the rule as a precedent for the future, recorded in consultation so that the Honourable Masters could see the protection given to estates entrusted to the council, shows the wider audit purpose Pyke had in mind. The companion rule on storekeeper credit, that no credit should be placed on any man's account unless each particular be agreed in consultation, addresses the parallel risk on the supply side. Where the previous practice had allowed the storekeeper individual discretion to issue goods on credit, the new rule channelled every such decision through the full council. Pyke's emphasis that this was so essential and necessary a point that all other resolutions about trusting and transferring would come to nothing if it were not observed indicates that he saw uncontrolled storekeeper credit as the principal historic source of the irrecoverable planter debts now under settlement. By requiring consultation-level approval for each new credit, he closed off the route by which past obligations had built up unchecked. The credit limits proposed, one year's income or rent on a five-pound-per-acre valuation for planters and three months' pay for soldiers, define a concrete framework for sustainable lending against future earnings. The five-pound-per-acre customary valuation provided a standard base against which any planter's nominal income could be calculated from the recorded acreage of his holding, removing the need for case-by-case assessment of each debtor's capacity. The three months' pay limit for soldiers reflected the shorter horizon of garrison employment, where contracts ran in fixed terms and reassignment or departure could leave debts unrecoverable. The mechanism converted personal credit assessment into a rule-based system tied to documented property and pay, with consistent

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			application across the whole community of potential debtors. Speculations Pyke's decision to record his reasoning at length in the consultation book, rather than simply issuing the relevant orders, probably reflects his calculated intention to leave the directors a clear account of how he was reforming the local financial administration. By setting out his concerns about uncontrolled credit, his rationale for the new precedent, and the specific limits he proposed, he created a documentary record that would demonstrate both his analysis of the inherited problem and the framework of his response. The technique converted what might have been a series of separate administrative decisions into a coherent policy statement that the directors could approve, modify or extend on future correspondence. The framing of the customary five-pound-per-acre valuation suggests that this figure had previously been used informally in council assessments of planter standing but had not been adopted as a rule. Pyke's incorporation of the existing custom into the new lending limits gave the rule the legitimacy of familiar practice while sharpening its operational use. By tying credit to a published acreage figure that any inhabitant could verify from the council records, Pyke removed scope for arbitrary or favoured treatment of particular debtors. The precedent rested less on innovation than on the disciplined application of existing benchmarks within a formal rule structure.

Ordered Margin Notes: Cloathing &c. to be delivered Industrious men tho in debt M[r]s. Carne desires 30[...] to be paid from M[r] Francis. acc[t] Stor[e] keep[er] To charge of same Bonds D[d]. M[r] Carne M[r]s. Northen[s] Lett[r]. of attorney fencies to be Sett about	21 Dec 1714 (continued, page 292): At present, until the country and garrison were a little further out of debt, the use of credit had to be approached with caution and not too strictly because, when great necessity required, the resolution must be a little suspended, though not so as to evade the order. With due caution and moderation, some sorts of clothing and provisions might be sparingly delivered to an honest and industrious man, though he be in debt more than the sum mentioned above. It was agreed in council that whereas Mr Carne had paid in considerably to the Honourable Company's stores towards his debt, and desired that Mr Francis might be charged with £30 0s 0d, that being so much as he owed Mr Carne, and Mr Francis having several debts of credit to enter into the store, it was ordered that the storekeeper transfer the said £30 0s 0d, giving Mr Carne credit for it and making Mr Francis debtor. It was also ordered that the two bonds Mr Carne had given - one for £167 16s 0d to be paid to Governor Keeling's orphans, the other for £128 11s 2d payable to Eleanor Keeling - be both delivered to him. This was done accordingly. Mr Tovey produced a letter of attorney from Elizabeth Northen empowering him to receive the effects of George Northen, her late husband deceased. It was witnessed by Thomas Crew and William Rumbold and was ordered to be registered. It was ordered that Captain Mashborne get what hands he could to begin fencing the Week after Christmas. It was further ordered that the next consultation be held this day fortnight on account of the holidays, unless some extraordinary business should arise to call one before. Interpretations: The opening section completes the trusting-limit rule of 21 Dec 1714 by adding a discretionary safety valve. The one-year-income cap on credit was not to be applied so rigidly that an honest and industrious man would be denied clothing and provisions in genuine necessity. The phrase "not so as to evade the order" preserves Pyke's precedent while admitting that practical administration of a debt-laden colony required

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			judgement. This is a familiar pattern in his rule-making: a hard limit stated for the record, then a controlled discretion built in for the council's working application. The Carne-Francis credit transfer is the second worked example of the new rule on credit transfers between debtors, following the Norman-Burnham transfer earlier on the same day. Both were authorised "by particular order of council" as the new rule required. Carne's £30 0s 0d owed by Francis was offset against Carne's own Company debt, with Francis becoming the new debtor for that amount. The mechanism converts a private receivable into Company credit without any cash changing hands. The release of the two Keeling bonds to Carne is administrative clean-up of an old liability. The £167 16s 0d bond to Keeling's orphans, dated 8 Jan 1708 in Tovey's bond inventory of 14 Dec 1714 (where it appears as £167 16s 3¼d, Carne, Hoskison and Bazett bound), and the £128 19s 0¼d bond to Eleanor Keeling, dated 22 May 1703 (Carne and Captain Goodwin), are now treated as discharged and returned. The slight discrepancy between the figures here (£167 16s 0d, £128 11s 2d) and those in the bond list (£167 16s 3¼d, £128 19s 0¼d) is probably scribal rounding rather than substantive disagreement. The Northen letter of attorney shows the standard mechanism by which an absent widow in England could act on her late husband's estate through a resident agent. George Northen, stone cutter, had died before Sep 1712, when his will was proved. Elizabeth Northen now empowers Tovey, the Secretary, to recover the effects on her behalf. The two witnesses (Crew and Rumbold) suggest the document was executed in England. Mashborne's fencing instruction is the standing infrastructure programme resumed after the Christmas pause. The phrase "the Week after Christmas" suggests a deliberate accommodation of the religious calendar for the garrison and slaves alike. The fortnight adjournment for the holidays sets the next council day at 4 Jan 1715, subject to extraordinary business. This is the formal close of the working year, completing the Pyke administration's first six months in office since arrival on 8 Jul 1714. Speculations: The marginal note "Mr Carne desires £30 0s 0d to be charged from Mr Francis acct" indicates that Carne's debt-clearing programme of late 1714 was now operating through a web of paper transfers rather than direct payments. By the close of 21 Dec 1714 Carne had offered £560 4s 0d of schedule credits (7 Dec 1714), transferred Little George at £15 0s 0d (14 Dec 1714), paid in plate at £69 4s 0d plus £10 5s 0d Mashborne credit (21 Dec 1714), and now arranged the £30 0s 0d Francis transfer. The cumulative paper settlement against his Company debt is approaching the upper hundreds, though no single instalment has been a cash payment. The dispersal of his estate into Company credits, plate, slaves and assigned receivables is consistent with a planter winding down his island position over an extended timeline. The release of the two old Keeling bonds may signal that the underlying obligations have been satisfied, perhaps absorbed into Carne's continuing settlement programme, or possibly that the orphans and Eleanor Keeling are now beyond the reach of the original instrument (some Keeling orphans were of age by this date; Eleanor herself, twice-married widow then Carne's mother-in-law by marriage to her daughter, may be deceased or have remitted the bond). Either way, the council's willingness to hand the original bonds back to Carne removes them from any future claim against him, suggesting the matter is regarded as closed at the documentary level.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			The fortnight adjournment was probably welcome to a council that had sat weekly through November and most of December on the Tovey-Gurgen-Alexander dispute, the Carne goat-and-debt complex, the Goodwin estate demand, the fence survey, the bonds inventory and the trusting-limit reform. The break also gave Tovey time to advance the third part of the ROCHESTER letter, the deficiency in which had drawn a sharp rebuke from Pyke on 2 Dec 1714. The reference to "the holidays" in this position - 21 Dec 1714 with a fortnight's adjournment - aligns with the English Christmas season as observed by the Anglican calendar still in use on the island. The St Helena establishment maintained the festival pattern of the home country, with the council recess covering Christmas, New Year and possibly Twelfth Night.
302	293	Ordered That the Gen[ll]. Sessions be held on Monday the 17[th] Jan[ry]. next and a Gen[ll]. Muster of the Inhabitants and Garrison on Thursday y[e] 20[th] of [...] M[r]. Carne appeared in Counc[ll] s[d] he had rec[d]. Cap[t]. Mashorns paper of demands and had nothing to offer against it on his own Acc[t] [...] did not question they should make an amicable End of it [...] Geo: Haswell [...] Tovey Margin Notes: Sessions ap- pointed.	21 Dec 1714 It was ordered that the general sittings be held on Monday 17 Jan next, and a general muster of the inhabitants and garrison on Thursday 20 Jan after. Mr Carne appeared in council and said he had received Captain Mashborne's paper of demands and had nothing to offer against it on his own account, and did not question that they should make an amicable end of it. Signed Pyke, Haswell, Tovey. Interpretations: The fixed dates close the administrative calendar in the same orderly way as the preceding fortnight adjournment. The general sittings on Monday 17 Jan 1715 establish the quarter assize as a regular institution under Pyke. Sittings are the council's judicial sittings as a court for the trial of pleas and the registration of titles, distinct from the Tuesday consultations which dispatch executive business. Setting the date three and a half weeks ahead permits notice to be served on parties and the docket to be assembled. The general muster on Thursday 20 Jan 1715 is the first since the present sequence opened. The previous full muster of the garrison and inhabitants in the record was that of 6 Sep 1711 under Boucher, itself the first after a seventeen-month gap from the muster of 30 Mar 1710. Pyke's calendaring of a muster within six months of his arrival, and his coupling of it to the general sittings, signals the new administration's intention to regularise the parade alongside the courts as twin instruments of public order. The proximity of the dates (Monday for the courts, Thursday for the muster) suggests the planters and soldiers would be in town for both, with the council using the Monday-Thursday span as a single public week. Carne's appearance and concession on the Mashborne demand is a substantial development in the Goodwin estate dispute opened on 14 Dec 1714. On that day Carne had asked for a week to reply, that Mashborne be required to deliver his demands in writing, and that Mashborne not sit as a councillor in the case. Mashborne had complied with the written-demand request, claiming the personal estate of his deceased son-in-law Robert Goodwin in right of his late wife under English letters of administration. Carne now states that he has received the paper, has nothing to offer against it on his own account, and expects an amicable settlement. The phrase "on his own account" is carefully drawn: Carne is conceding for himself as husband of Captain Thomas Goodwin's widow but reserving any position the widow herself might wish to take. The signatures of Pyke, Haswell and Tovey close the consultation in the standard form. Mashborne and Bazett, though present at the opening of the meeting per the 14 Dec 1714 attendance pattern continuing, are not among the subscribers. In Mashborne's case the omission is consistent with his being a party to the

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			matter just dispatched, supporting Carne's earlier objection to him sitting as councillor in his own cause. Bazett's absence from the signatures may be incidental. Speculations: The amicable framing of the Goodwin dispute is consistent with the pattern of family settlement that runs through the late 1714 consultations. Carne is married to the widow of Captain Thomas Goodwin, that is, the mother of the deceased Robert Goodwin. Mashborne is the father of Robert Goodwin's late wife. The personal estate at issue passed by Robert Goodwin's death at Tegnapatnam to his widow, who survived him "a considerable time", and then by her death to her father Mashborne as administrator. Carne's mother-in-law position gives him no further claim once Mashborne's administration is established in English law. The "amicable end" probably means a clean delivery of the assets in Carne's possession to Mashborne against a written discharge, with no further proceedings. That Carne reserves the widow's separate position, by qualifying his concession as on his own account, suggests one of two things. Either he expected his wife (Captain Goodwin's widow) to make her own claim as the deceased's grandmother, perhaps to a customary share of personalty under island practice, or the qualification is merely formal so as not to prejudice any future point. The first reading would fit the recurrent island pattern of separated estate rights between husband and wife, given prominence in the Powill-Girling case of 2 Sep 1713 over Mary Hoskison's separate estate. The general sittings on 17 Jan 1715 will be the venue for any continuing pieces of the Tovey-Gurgen-Alexander dispute that the council's executive opinion does not close out, the Slaughter-Harding settlement, the Knipe debt discrepancy, and the live-or-void review of the bonds inventory. The pairing of the sittings with a muster, three days later, makes the third week of January 1715 the climax of the new administration's first administrative year, with documentation, judicature, military readiness and public assembly all rolled into a single span. The amicable settlement of the Goodwin matter also clears Mashborne to return to full participation in council business. With Carne's concession on record, the bar to Mashborne sitting on the case is dispelled, and the council resumes its five-man working strength in the New Year. This consultation closes the working year of 1714 on the new administration's terms: a trusting-limit precedent established (Norman-Burnham), the rule worked through a second example (Carne-Francis), Carne's two old Keeling bonds released, an old letter of attorney registered for Tovey, a fencing programme committed to Mashborne for the week after Christmas, court and muster dates fixed for January 1715, and a difficult family estate dispute moved to amicable settlement. The session closes with the council's authority visibly consolidated under Pyke after six months in office.
303	294	Island S[t]. Helena At a Consultation held on Wednesday y[e] 29[th] Decemb[r]. 1714 at the United Castle In James Valley Isaac Pyke Es[qr]. Gov[r] Geo: Haswell Dep[ty]. G[r] Edw[d]. Goodwin his Son in Law Deceased & alsoe Administrator to his wife Jane Mashborn[e] Margin Notes: M[r] Carne desires an Ord[r] to D[r]. Robert Goodwins Estate. Cap[t] Mashborne produced Letter [of] adm[n]. &c[a]. to prove his right M[r]. Carne &c[a]. to Deliv[r] unto Cap[t]. Mashborns all.	had died in October 1710, and that the mother of Robert Goodwin, who was Mashborne's wife, died on 17 May 1711. She, being heir to her son who died under age, gave Mashborne his right. He therefore craved that his letters of administration be allowed and that he have an order to take Robert Goodwin's personal estate into his custody. It was ordered that Mr George Carne and Mrs Frances Carne his wife deliver unto Captain Edward Mashborne, as administrator to Robert Goodwin his son-in-law deceased and also administrator to his wife Jane Mashborne... Interpretations: The Wednesday sitting on 29 Dec 1714 is an extraordinary council, the council's standard day being Tuesday and the next consultation having been fixed only a week earlier for a fortnight ahead (4 Jan 1715). The chain of administration was clearly considered urgent enough to break the holiday pause. The presence of all five councillors confirms a full sitting, with Mashborne participating as a witness and party rather than as adjudicating councillor on his own matter, though the manuscript records no formal recusal. The account of the descent now becomes clear. Robert Goodwin, son of Captain Thomas Goodwin and his first wife Jane (Mashborne's daughter), died at Tegnapatnam in India in October 1710 under age, that is, before his twenty-first birthday. His personal estate at his death therefore did not pass under any will of his own but by intestate succession to his mother Jane. Jane survived him by about seven months and died on 17 May 1711. Her personalty in turn passed to her husband Mashborne, who took out letters of administration in England in two capacities: first as administrator de bonis non to his late wife in respect of her interest in her son's estate, and second as administrator to his late wife herself. Carne's position now becomes intelligible. Carne had married Captain Thomas Goodwin's widow, but the widow in question is Captain Goodwin's second wife, Frances, not the deceased Robert Goodwin's mother Jane (Mashborne's daughter). Frances Carne therefore holds no direct claim to Robert's estate at all, her only connection being step-motherhood, which conferred no inheritance under English law. Carne and Frances are merely the parties from whom physical custody of Robert's effects must be recovered, having held them since Captain Thomas Goodwin's own death. Carne's concession of 21 Dec 1714 that he had "nothing to offer" against Mashborne's demand on his own account now reads with full clarity: he had no inheritable interest at all, only the duty of delivery once the senior right was proved. Mashborne's chain of letters of administration is the procedural foundation. English ecclesiastical practice required separate grants for each link in the chain where the original administrator (here Jane) died before completing the administration. The grant "in right of his late wife to her son" is administration de bonis non to the son's estate, taken out by the husband as surviving spouse of the entitled administratrix. The grant "in right of himself to his wife" is administration to the wife's own estate, which gathered up her interest in her son's effects. Both grants would have been obtained in the appropriate English diocesan or prerogative court before Mashborne sailed. The order to Carne and Frances to deliver, with its full styling of Mashborne as administrator twice over and the naming of Jane Mashborne in full, is the formal instrument that transfers physical possession. The text breaks off at the end of Jane's name, the order continuing on the next page. Speculations: The five-month interval between the consultation of 14 Dec 1714 (when Mashborne first submitted his

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			written demand) and Robert Goodwin's death four years earlier (October 1710) reflects the slow operation of estate administration across the India trade. Robert's death at Tegnapatnam in October 1710 would have been reported to St Helena by the next homeward ship, probably arriving early 1711. News of Jane Mashborne's death on 17 May 1711 would have travelled to Mashborne in England by the same route. Mashborne would then have needed to apply for two sets of letters of administration and bring them with him on his eventual voyage to St Helena. The substantial gap between the deaths and the present claim reflects the practical pace of probate over inter-continental distance. Robert Goodwin's death "under age" indicates he had not reached twenty-one. He was therefore probably born around 1690 or later, making him a young man in the Company's service at Tegnapatnam (Fort St David, on the Coromandel coast south of Pondicherry) at the time of his death. The personal estate at issue would have consisted of wages, trading profits, personal effects and possibly slaves, accumulated during his Indian service. Whatever survived was probably brought back to St Helena by some friendly ship's officer and lodged with the Goodwin family there, which by then meant Captain Thomas Goodwin and his second wife Frances, who herself later married Carne. The Wednesday sitting suggests the council wished to dispatch the matter before the holiday recess began in earnest, perhaps because Mashborne was anxious to take possession of the property without further delay, or because the council judged a clean conclusion before year-end preferable to leaving the matter open into 1715. The full council's presence on a non-standard day, with Mashborne both party and councillor, indicates the council was determined to leave no procedural opening for later challenge. The reference to Frances Carne by name in the order to deliver is significant. Married women under English law had no separate legal personality and would normally be subsumed in the husband's name. Her named inclusion here probably reflects that the effects were considered to be in her actual physical custody as the senior surviving Goodwin household member, and naming her ensures the order binds her directly to the act of delivery, preventing any technical objection that the husband alone had been ordered.
304	295	Mashborne Al[s] Goodwin Deceas[d] all the Personall Estate of the said Robert Goodwin & Jane Mashborne Al[s] Goodwin now in their Possession, And that any other person who have Effects that did belong to the said Rob[t]. Goodwin Deceas[d] or that Did belong to M[rs]. Jane Mashborne Al[s] Goodwin Deceas[d] doe deliver the same to Cap[t]. Edward Mashborne their Administrator, [...] Geo: Haswell Margin Notes: Rob[t]. Goodwins Personall Estate	The order required Carne and Frances to deliver all the personal estate of Robert Goodwin, alias Goodwin, deceased, then in their possession, to Captain Edward Mashborne as administrator both to Robert Goodwin and to his wife Jane Mashborne, alias Goodwin, deceased. Any other person who held effects belonging to Robert Goodwin deceased, or that had belonged to Jane Mashborne alias Goodwin deceased, was also ordered to deliver the same to Captain Edward Mashborne, their administrator. Signed Pyke, Haswell. Interpretations: The conclusion of the order completes the instrument begun on the preceding page. The double-naming "alias Goodwin" for both Robert and Jane is the standard legal form to cover any variation between the surnames used in different documents. Jane, born Mashborne, married Captain Thomas Goodwin and was therefore known both by her maiden and her married names in different records. Robert, her son, would have been Goodwin throughout, but the alias form is retained to bind any document bearing either name. The extension of the order to "any other person who had effects" of either deceased is a public notice clause. It converts the order from a particular direction to Carne and Frances into a general instruction binding on the whole inhabitants. Anyone holding any item that had belonged to Robert or to Jane was now under

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			council order to surrender it to Mashborne. This is a comprehensive collection mechanism, designed to gather scattered assets from across the island into a single administered estate. The signatures of Pyke and Haswell close the consultation. The absence of Mashborne, Bazett and Tovey from the subscribers is notable. Mashborne's omission is straightforward, as he was the beneficiary of the order. The omission of Bazett and Tovey, in a consultation where they were noted present at the opening, may reflect the customary practice of senior councillors signing on behalf of the bench where the matter affected a colleague. The Governor and Deputy Governor's signatures suffice to authenticate the order without involving the wider council. The consultation closes with no other business recorded, consistent with its purpose as a single-item extraordinary sitting called to dispatch the Mashborne administration before the year-end recess. The next consultation reverts to the fortnight programme set on 21 Dec 1714, falling on 4 Jan 1715. Speculations: The general clause extending the order to any other person holding effects suggests Mashborne had reason to suspect that not all of Robert's or Jane's property was in Carne's hands. Effects might have been deposited with friends, business partners, or trustees during the years between the deaths and the present claim. A public order, probably to be read at beat of drum, would put the whole community on notice and remove any defence of ignorance. The signing-off by Pyke and Haswell alone, in a matter where Mashborne was a party, may reflect a deliberate procedural caution. By restricting the formal authentication to the Governor and Deputy Governor, the council insulates the order from any later challenge that Mashborne had voted in his own cause. The structure is consistent with Carne's earlier objection of 14 Dec 1714 that Mashborne not be admitted as a councillor in the case, an objection which the council accepted in substance even though Mashborne remained physically present. The extraordinary Wednesday sitting and the brevity of the recorded business, with only this one item, suggest the council was unwilling to wait until 4 Jan 1715 to settle a matter substantially conceded on 21 Dec 1714. The intervening week probably allowed Mashborne to produce the necessary letters of administration from his papers and Carne to consult on whether to maintain any reservation on his wife's behalf. By 29 Dec 1714 both sides were ready to dispose of the matter cleanly. The consultation is thus best understood as the formal closing instrument of a dispute already resolved in substance, dispatched promptly to clear the year-end docket. The order removes the Goodwin estate dispute from the list of open threads. The Mashborne administration now has the council's authority to collect all known and unknown effects of both Robert and Jane, with the wider community on notice to comply. The first year of Pyke's administration closes with one less item carried into 1715.
305	296	Island S[t]. Helena At a Consultation held on Tuesday the 4[th] of January 1714. at the United Castle In James Valley. Isaac Pyke Esq[r]. Gov[r]. Geo: Haswell Dep[ty]. Wooley S[r]. Mortimore &c S[r] Margin Notes: S[r]. Fairfax desires Sallary formerly due referred to y[e] Gov[r] Beef sold at X[mas] Soldiers.	Worship and council would be pleased to take it into consideration and allow him what they should think fit for all his services. Signed Thomas Fairfax. It was ordered that the petition be referred to the Governor, and that he allow Fairfax as he should think fit. The Governor reported that against Christmas a beef being killed, he had sent so much of it to the market to sell as amounted to 4s 4½d, which he had received from the market man. He further reported that Edward Brereton, soldier, formerly permitted to teach school, came to him on 29 Dec last to desire he might be admitted again to duty as a soldier. He also reported that on 24 Dec last Sergeant Wooley, Sergeant Mortimore... Interpretations: The Tuesday consultation of 4 Jan 1714/15 is the first sitting of the new calendar year and resumes the fortnight programme set on 21 Dec 1714. The date is written as 1714 in the manuscript according to the old-style English convention by which the year changed at Lady Day (25 Mar), so 4 Jan 1714 old style is 4 Jan 1715 new style. The double-dating convention 1714/15 is the modern scholarly form for entries between 1 January and 24 March in the old-style calendar. Haswell's marginal note "in the country" indicates the Deputy Governor was absent from the Castle on Company business in the upland districts, consistent with his continuing role in the fence survey and plantation oversight programme. Mashborne, Bazett and Tovey were present, giving a council of four with the Governor. Sergeant Fairfax's petition opens a long-deferred salary question. He sought back pay from the date of Governor Roberts's departure (which was 7 Aug 1711, when Boucher took over) to March 1713, plus continuing recognition for constant duty at Munden's Point since then. The period Aug 1711 to March 1713 is about nineteen months. The reference to "constant duty at Munden's Point" identifies him with the Munden's Fort garrison, the outer fortification at the entrance to James Bay, where a sergeant would have had charge of the gun crew and small detachment. The Governor's discretionary referral, rather than a council determination of the sum, indicates the matter was treated as a routine personal allowance within the Governor's settled authority. The Governor's account of the Christmas beef sale is a small but precise piece of fiscal record-keeping. A beef being killed, presumably for the Castle and General Table at the festive season, the surplus was sent to the public market and yielded 4s 4½d. The careful entry of the sum, however small, reflects Pyke's administrative discipline that every cash receipt should be entered in the consultation book and accounted to the Honourable Company. Brereton's request to return to soldier duty closes the small experiment of seconding a soldier to teach school. The arrangement appears to have lapsed, perhaps because the schoolroom did not flourish, perhaps because Brereton himself preferred the garrison's certainties. His application on 29 Dec 1714 falls in the same Wednesday gap as the Mashborne extraordinary sitting, suggesting the Governor was conducting business at the Castle even during the holiday recess. The opening of the next item, beginning "Also that 24 Dec last Sergeant Wooley, Sergeant Mortimore...", introduces a further governor's report broken off at the page-edge. The reference appears to be to events of 24 Dec 1714, again falling within the holiday window. Speculations: Fairfax's back-claim from Aug 1711 to March 1713 is a substantial historic arrears matter. The Boucher

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			administration's record on garrison pay has been catalogued throughout the late 1714 consultations as one of the standing failings being assembled into the documentary case for London. A sergeant going without his salary for nineteen months is consistent with that pattern, the more so if his station at Munden's Point kept him physically distant from the Castle and easy to overlook. The Governor's referral of the matter to himself, rather than to the full council, suggests Pyke intended to dispatch it as a personal allowance to be settled out of his discretionary authority, rather than as a formal Company liability requiring the Court of Directors' approval. The cut-off date of March 1713 is a few weeks before Pack's death on 3 Apr 1713, after which Bazett reported the store books had fallen twelve months behind, so Fairfax may have been pressing for the latest period in which there was any documentary record to support his claim. The 4s 4½d receipt for surplus beef is the kind of small entry that builds the picture of Pyke's working method. Under Boucher, the consultations record no such micro-receipts, and the loose handling of cash and goods is precisely the kind of laxity now being unwound. Pyke's recording of every shilling, even at the cost of consultation-book space, is part of the disciplinary contrast he is drawing for the directors. Brereton's brief career as soldier-schoolmaster is a small datum on the educational provision of the island. The Boucher and earlier administrations had relied on ad hoc arrangements, and there appears to have been no settled schoolmaster on the establishment. The fact that a soldier could be detached for the role, and could request return to duty when it suited him, suggests the schooling was modest and informal. The reference to William Hayse's deathbed wish (3 May 1712) that his children "be put out to good masters who would bestow learning on them" confirms that learning was sought out from individual masters rather than from a settled school. The pattern of governor-only meetings during the holiday recess (Brereton on 29 Dec, Wooley and Mortimore on 24 Dec) shows Pyke continuing to do business at the Castle through the festive period, with applications received and reports compiled, then brought to the next regular council day for formal recording. This is consistent with the working-Governor model he established from his arrival on 8 Jul 1714.

The Governor sent to their lodgings, and their goods being fetched there in, were put to a public outcry. They were sold according to the following account to the persons therein mentioned for the sum of £5 4s 8d. The account of Mortimore's, Wooley's and Sumersby's things as they were sold on 30 Dec 1714/15 was as follows. Mortimore's: John Hubbard, a gingham coat, £1 0s 0d. Samuel Head, a jacket and breeches, £0 8s 6d. Robert Ferguson, two shirts and a jacket, £0 11s 0d. Thomas Brown, two shirts, £0 4s 10d. Joseph Whaley, two shirts and two neckcloths, £0 12s 0d. Samuel Thornbury, two neckcloths, £0 2s 2d. William Dunnett, one pair of shoes and stockings, £0 17s 0d. Joseph Whaley, a comb and shears, £0 3s 0d. Joseph Whaley, a shirt, £0 1s 6d. Samuel Thornbury, four skeins of mohair silk and thread, £0 3s 6d.

It was ordered that the said articles be transferred to the Honourable Company towards payment of their debts. The Governor further said that finding a book among Mortimore's things, in which was an account of sundry persons indebted to him, it was ordered that his account have credit for it and the others charged therewith. The Governor further reported that the boat in which... Interpretations: The drowning at Sandy Bay catches three soldiers in a single accident. The opening line names Sumersby specifically as drowned, but the disposal of the goods of Wooley and Mortimore on the same day and in the same outcry confirms all three were among the dead. The boat going to Sandy Bay would have been a Company long-boat carrying garrison or working hands to the principal industrial centre of the colony, where the lime kilns, stone cutters' house, tan fats and cart path had been built under Cason's supervision over 1712 to 1714. The outward voyage from James Bay round to Sandy Bay required rounding the south-eastern point of the island in exposed water, and capsizings were a recognised risk. The three soldiers were all in debt at their deaths: Wooley £9 16s 10d, Sumersby £2 8s 4d and Mortimore £1 17s 10d, totalling £14 3s 0d. Mortimore is identifiable with John Mortimore, one of the soldiers whose obligation to serve the Company for five years from 30 Jan 1710 was entered in Tovey's bond inventory of 14 Dec 1714. He would have been about five years into that five-year term at his death, so close to completion. Wooley appears as Sergeant Wooley in the preceding consultation, named alongside Sergeant Mortimore in the Governor's report of business done on 24 Dec last, which was probably the day of the accident. The Governor's response was the standard institutional procedure for the goods of a dead soldier on the establishment: send to the lodgings, fetch in the goods, put them to public outcry, and apply the proceeds to the Company debt. The outcry took place on 30 Dec 1714/15, just six days after the probable date of the accident, dispatching the matter while the soldiers and inhabitants would remember which articles had belonged to whom. The outcry yielded £5 4s 8d in total. This is well short of the £14 3s 0d combined debt, so the Company would have to absorb the balance as bad debt unless the men had other assets, pay arrears in their favour or family back home from whom recovery could be sought. The clean transfer of all the goods to the Company by council order avoided any complication from family claims or testamentary disputes. The buyers' list is a small social document of the garrison at the close of 1714. The purchasers include named soldiers (Hubbard, Head, Ferguson, Brown, Whaley, Thornbury, Dunnett, Huff, Meirs) and one officer styled only as "Honourable Captain", who paid £0 3s 6d for a red coat. The naming pattern by surname only for the soldiers and by rank-and-honorific for the officer is standard in such lists. The "Honourable

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			Captain" buying a soldier's red coat may have been buying it for one of his own men, or as a piece of garrison stock, or for use as material. The items sold reflect the modest possessions of three soldiers. Coats, jackets, shirts, breeches, neckcloths, shoes and stockings make up the bulk. Two items stand out: William Dunnett's purchase of "one pair of shoes and stockings" for £0 17s 0d, which is a high price probably reflecting good condition or a complete fitted pair, and Samuel Thornbury's purchase of four skeins of mohair silk and thread for £0 3s 6d, which suggests Mortimore had been engaged in some private sewing or repair work. Joseph Whaley's purchase of a comb and shears for £0 3s 0d points to similar tools of personal grooming or tailoring. The composition of the goods is consistent with men of the rank of sergeant who had small accumulations of personal items beyond bare necessities. The book found among Mortimore's things, recording sundry persons indebted to him, is the late soldier's own credit register. He had been operating a small private credit business, lending money or goods to his fellows. The council order to credit his account with the book's totals and charge the named debtors is an elegant administrative solution: the dead man's receivables are absorbed into his Company debt position, reducing the Company's loss, while the debtors are properly charged in the Company's books. This is the kind of working procedure that would later become standard under Pyke's general rules of credit transfer, of which the Norman-Burnham (21 Dec 1714) and Carne-Francis (21 Dec 1714) transfers were the immediate precedents. The Governor's further report that the boat in which the three men drowned, broken off at the page-edge, will probably continue on the next page with details of the boat's recovery, the survivors if any, and the witness depositions taken from those who saw the accident. Speculations: The probable date of the accident, 24 Dec 1714, would have been Christmas Eve in the English calendar, with the boat presumably carrying men or supplies on Company business between James Bay and Sandy Bay. The timing suggests either a late delivery to or pick-up from the Sandy Bay industrial centre before the holiday pause, or a routine working trip caught by sudden bad weather. The waters around St Helena's south-eastern coast are exposed to the southeast trades and can rise quickly. A boat overloaded with men and gear, or caught by a squall while passing the headlands, could capsize with little warning. The loss of three sergeants in a single accident is a substantial blow to the garrison's command structure. The Sergeant Mortimore and Sergeant Wooley referred to in the previous consultation were both probably present at the Governor's 24 Dec interview before going off to the boat that drowned them. Their replacement will be a matter for the council in the coming weeks. The vacancy of the sergeant's position filled by Simpson on 17 Aug 1714 had set the precedent that such replacements were made by direct council appointment. The "Honourable Captain" buyer is probably Captain Mashborne, the only captain on the council establishment, whose practice of buying or absorbing small items from garrison sales is consistent with his role as Deputy Governor and senior military officer. His purchase of a red coat at modest price may have been for re-issue to a serving soldier, the red coat being garrison uniform. The pattern of soldier-to-soldier credit recorded in Mortimore's book is a glimpse of an informal economy operating alongside the formal Company store. Soldiers with small accumulations of capital lent to fellows who

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			were short, probably between pay-days. The death of the lender would normally have made such debts hard to recover; the Company's absorption of both sides of the ledger, lender and borrowers, into its own books is a small piece of socialisation of risk that benefits the dead man's estate as much as it benefits the Company. Pyke's continuing reform of credit practice probably draws on accidents of this kind as proof of the need for systematic record-keeping. The combined debt of £14 3s 0d for three sergeants suggests each was in debt by between £2 and £10 sterling, which is broadly consistent with three to six months' arrears against typical sergeant's pay of around £1 10s 0d per month. None was deeply mired; all were within recoverable range had they lived. The accident has converted a manageable situation into a partial loss for the Company, recovering £5 4s 8d against £14 3s 0d, a yield of about 37 per cent before any further offset from Mortimore's private receivables.

Mony owing y[e] [per]sons drown[d] to be given Acc[a] of	The boat in which the three men were drowned was borrowed from Mr Tomlinson by John Wooley. The one that was drowned in her was Tomlinson and his partners. They had also taken the sails out of the Honourable Company's boat, which were lost. It appearing that Richard Ray and John Knight, and the Doctor's boat, were saved in the following manner. Richard Beal and John Crosby were upon Horse Pasture Mountain, going after their goats, and by accident they spied the boat under sail. Looking steadily on it, they saw it overset. They then went forthwith a very dangerous way a mile and a half and took Mr Carnes's boat that lay at Lemon Valley, and went off to them. The boat had by that time drove out two leagues to sea. They took the men into the boat after they had been five hours in the water, oars being lost and three men drowned. They also towed the Doctor's boat ashore. It was ordered that, though the boat might be deemed a deodand and forfeited by law, the Governor and council's intent being only to reward the diligence of the two men who ran so great a risk of their own lives to save these poor men's lives, the owners of the boat should have notice given them. If they gave ten shillings to each of the two men who saved their boat, there should be no further notice taken thereof. The two men saved should also have notice to reward those who saved their lives. It was ordered that whoever owed money to the three persons drowned should acquaint the Governor therewith, and that an advertisement be published accordingly. St Helena. To the Worshipful Isaac Pyke, Governor, and Council. The most humble petition of Benjamin Pledger sheweth that sometime since in August last... Interpretations: The continued narrative of the drowning yields a much fuller picture of the accident and rescue. The boat was a private vessel borrowed by Sergeant Wooley from Mr Tomlinson, the writer in the store and translator of the Portuguese petition of 29 May 1711. Wooley had also taken the sails from the Honourable Company's boat, which were lost in the accident. Tomlinson and his partners were the legal owners with rights of recovery. The phrase "the one that was drowned in her was Tomlinson and his partners" is grammatically broken in the manuscript and probably means that the boat in which the three were drowned belonged to Tomlinson and partners. The rescue narrative names four men. Richard Beal and John Crosby spotted the boat from Horse Pasture Mountain on the south coast while goat-hunting. They watched it long enough to see it capsize, then made their way a mile and a half by dangerous paths to

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			Lemon Valley, where Carne's boat lay. They put off in Carne's boat to where the men were and rowed two leagues out to sea, reaching the survivors after they had been in the water five hours. They brought back two living men, named earlier in the account as Richard Ray and John Knight, in what the manuscript calls "the Doctor's boat", which they also towed ashore. The geography is consistent. Horse Pasture Mountain stands on the south-western coast, with views over the open sea where the boat would have been carried out by current and wind. Lemon Valley lies further round towards James Bay, accessible from Horse Pasture by a steep cliff path. Carne's boat at Lemon Valley would have been kept for plantation use. Two leagues, about six nautical miles, is the distance the boat had drifted before the rescuers reached it, consistent with five hours of drift in moderate winds and current. The deodand reference is interesting English common law. A deodand was a chattel which had caused a person's death, forfeited to the Crown (or here, to the Company as colonial proprietor) for pious or charitable use. By strict law, the boat in which the men drowned was a deodand and should have been forfeited. The council's resolution to set aside the forfeiture, conditional on the owners paying ten shillings to each rescuer, is an elegant practical solution. The owners avoid losing the boat, the rescuers receive a public reward of £1 0s 0d in total (10s each), and the council's authority to assert the deodand right is preserved without being insisted upon. The further order that the rescued men also reward those who saved their lives extends the practice to the survivors, who would naturally feel a personal obligation. The advertisement to be published concerning debts owed to the three drowned men closes the credit-recovery operation begun with the goods outcry. Persons who owed money to Wooley, Mortimore or Summersby (beyond those named in Mortimore's private book) are now under public notice to come forward, with the proceeds to flow to the Company against the three men's collective debt. The mechanism is the same general-notice procedure used in the Mashborne order of 29 Dec 1714 for the Goodwin estate, again calling out scattered assets across the island. The opening of Benjamin Pledger's petition begins a new matter. Pledger has appeared in the late 1714 record as the son-in-law of Robert Bell, who held the Pledger five acres and house on 17 Aug 1714, with Bell ordered to be sent for to answer the petition. The August matter was apparently not settled, and Pledger now renews his petition in the new year. The reference to "sometime since in August last" places his cause within the August 1714 sequence. Speculations: The actual death toll has now become clearer. Three were drowned (Wooley, Mortimore, Summersby) and two survived (Ray, Knight). The "Doctor's boat" reference may indicate that the boat carried the Company surgeon's boat or supplies, perhaps Doctor Porteous's, on some medical journey to Sandy Bay or as part of the routine traffic between James Bay and the windward stations. Alternatively, "the Doctor's boat" was the affectionate name for the borrowed Tomlinson vessel, perhaps because Porteous had used it on some prior occasion. The five-hour wait in the water tested the survivors severely. The waters around St Helena are warm enough by the standards of British shipwreck (the climate is moderate, not tropical), but five hours' immersion with no oars and a capsized boat would have approached the limit of survival. The three drowned probably went down at or close to the moment of the capsize, while Ray and Knight clung to the upturned hull until rescue. The two leagues of drift confirms a southeast trade

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			pushing the boat clear of the south-west coast and out into the open Atlantic, where rescue became progressively harder. Beal and Crosby's rescue is one of the small heroic moments of the consultation record. The journey from their goat-grazing site on Horse Pasture down to Lemon Valley by a dangerous mile-and-a-half path, then the seizure of Carne's boat without authority (probably) and the row of two leagues out to sea in pursuit of a drifting vessel, constituted a personal undertaking of great physical risk. The council's response, side-stepping the strict deodand law to reward them with £1 0s 0d in total and to invite the survivors to add their own gratitude, treats the matter with practical wisdom. A formal Company reward might have set an awkward precedent; a private payment from the boat-owners, with council blessing, achieves the same end while preserving institutional flexibility. The fact that Carne's boat was the rescue vessel adds a small note to the Carne narrative of late 1714. Through November and December his cattle, slaves, goats and plate had been steadily transferred to the Company against his debt. Now his boat at Lemon Valley is requisitioned for an emergency rescue. Carne himself is not mentioned in the rescue narrative, which suggests Beal and Crosby took the boat on their own initiative. Whether they had authority, or simply took it under exigent circumstances, the council's silence on the point reads as tacit approval. Carne would have had little ground for complaint given the moral weight of the rescue. Pledger's renewed petition picks up an open thread from August 1714. The Bell-Pledger family dispute over the five acres and house, with Robert Bell as Pledger's father-in-law in possession of the property, is the kind of in-law tenure conflict the council often had to mediate. Pledger's revival of the petition in the new year suggests no settlement was reached between August and December, and the Pyke administration must now address the matter directly.

Whereas Rich[d]. Gurling Planter has taken upon him to affix up a publick paper in this Town to give Notice that himself and others do intend to make a publick out Cry and Dispose of the Estate & Effects of Charles Steward lately deceased without making any probatt of the said Charles Stewards last Will & Testament & without any other Margin Notes: Benj[a] Praize Pledg[r] Petitions for [...] [pos]ession of y[e] Land Referred to y[e] Govern[r]. Ab[t] Notice of Cha[s] Stewards Effects to be sold	Benjamin Pledger presented a petition to the Governor and council. He set out that in August last his father Praize Pledger had by his last will and testament given Thomas Pledger his eldest son five acres of land and a house in James Valley. Thomas Pledger had then been gone off the island for several years, and the petitioner had not been heard from him for four years. The petitioner had good reason to believe his brother dead. As next heir at law, he had presented his earlier petition, on which the Worship and council had ruled that when the petitioner could cut a corner stone and finish the house himself, he would have possession. He had since been continually at stone cutting and had performed that condition. He humbly prayed that possession of the house and land be given him accordingly. Dated 4 January 1714/15, signed Benjamin Pledger. The council ordered that the matter, having earlier been referred to the Governor, remain so. If the Governor was satisfied as to Pledger's work, he was to have the land and share of the estate he claimed according to the prayer of his petition. Richard Gurling, planter, had taken upon himself to put up a public paper in the town, giving notice that he and others intended to make a public outcry and dispose of the estate and effects of Charles Steward lately deceased, without making any probate of Steward's last will and testament, and without any other... Interpretations: The petition resolves an open thread from August 1714, when Pledger first raised his claim to the five-acre parcel and house in James Valley. The earlier order had been conditional: Pledger to prove his fitness by

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			personally cutting a corner stone and finishing the house, a test designed to combine practical skill with sustained labour as the price of inheritance. The use of physical workmanship as the qualifying condition for a land grant is the council's adaptation of the standing principle that fencing and improvement converted entitlement into tenure. Here, the principle is extended from agricultural enclosure to building craft. The Governor's discretionary authority over the matter, confirmed rather than withdrawn by the council, reflects the standard division of business. Routine implementation of conditional orders, including the judgement whether the condition has been met, falls to the Governor alone, while the council reserves its collective authority for the framing decision and any later dispute. Pledger's claim by survivorship rests on the presumption of his brother Thomas's death after four years' unbroken absence and silence, which the council accepts as sufficient evidence in the absence of contrary information. The Steward matter that opens at the foot of the page introduces a significant procedural breach. Richard Gurling's public notice of an intended outcry to dispose of Charles Steward's estate, posted without any prior probate of Steward's will, bypasses the council's exclusive jurisdiction over wills and intestate estates. Probate before the council, on the oaths of two witnesses with the will entered in the dedicated register, was the only recognised route to administration of a planter's estate. A planter acting on his own initiative to sell off another man's property by public outcry, without authority, was a direct challenge to the council's standing as colonial probate court. The phrase "public paper in the town" describes the customary mode of advertisement for a forthcoming sale: a notice posted in a visible position in James Valley, drawing potential buyers' attention to the date and location. Public outcry, the local term for auction by open bid, was the standard mechanism for disposing of moveable property in a deceased's estate, but only under the council's order following grant of probate or letters of administration. Gurling's action threatened to set a precedent that any planter could initiate the process unilaterally, with consequences for creditor priority, family rights and Company debt recovery. Speculations: The Pledger condition of cutting a corner stone and finishing the house probably served a dual purpose beyond simple proof of competence. By requiring Benjamin to do the structural work himself, the council ensured that the property would not be passed to a claimant who would immediately sell it or let it fall further into disrepair. The corner stone, the key load-bearing element of the building's structure, is the most demanding test of mason's craft. Benjamin Pledger's father-in-law Robert Bell was confirmed in earlier records as a mason, so Benjamin had probably learned the trade under Bell's supervision, which would explain why the council chose this particular test for him rather than a generic agricultural condition. Gurling's unauthorised notice for Steward's estate may have been an attempt to pre-empt the council's grant of administration, perhaps because Gurling held claims against Steward that he wished to satisfy from the immediate sale proceeds before Company priority could be asserted. Steward had been named in earlier records as an overcharging supplier ordered on 12 Mar 1712 to pay store prices at his own inflated rates, and would have died with significant debts on both sides. A planter-led outcry, controlled by Gurling, would distribute the proceeds informally among the planter creditors, while a council-administered probate would put the Honourable Company at the head of the priority list, leaving little for the planter claimants. The

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			motive for the procedural breach is probably to be found in the order of creditors rather than in any general defiance of authority.
309	300	other Lawfull authority for his so doing) This are therefore to prohibitt and forbid any such Publick sale or Outcry or other Distribution of the [...] of the said Charles Steward untill probatte of the said Stewards Will be made (if he left any Will) or untill some proper person or persons be admitted for the Administration of the said Estate if he Dyed Intestate to the End that Justice may be impartially done between the Widdow & the Children, [...] Margin Notes: Will not & prooff of [...] forbid making Sale of Effects	...other lawful authority for his so doing. The council therefore prohibited and forbade any such public sale, outcry or other distribution of the effects of Charles Steward until probate of Steward's will had been made, if he had left any will, or until some proper person or persons had been admitted for the administration of his estate, if he had died intestate. The aim was that justice might be impartially done between the widow and the children. Signed Pyke. Interpretations: The council's prohibition is an assertion of its exclusive jurisdiction over probate and administration, formally restating the rule that no distribution of a deceased planter's estate could lawfully begin without prior council action. The two-track wording, probate if there was a will or administration if intestate, covers the full procedural map and leaves Gurling no technical opening to claim that the absence of a known will permitted private action. The notice is to remain forbidden until one of these two routes has been opened by the council itself. The reference to the widow and the children identifies the parties whose interests the council is protecting. Charles Steward, the overcharging supplier of 12 Mar 1712, left a household that would be the principal sufferer from an unauthorised sale by planter creditors. Without probate or letters of administration, the widow's right to her dower share and the children's portions could be defeated by a Gurling-led outcry that paid off the planter creditors and left nothing for the family. The council's intervention substitutes orderly succession for first-come distribution. The phrase "justice may be impartially done" articulates the standing rationale for council jurisdiction over estates. Impartiality here means equality of treatment among creditors and family members according to settled rules of priority, rather than the rough-and-ready outcome of an informal outcry where the most active or best-connected creditor would carry off the bulk of the assets. The council positions itself as the neutral arbiter against the partial interest of any individual planter. Pyke's solo signature, without Haswell, Mashborne, Bazett or Tovey, may indicate that the council acted with sufficient urgency to issue the prohibition under the Governor's authority alone, perhaps in the form of a counter-advertisement to be posted in the same town spaces as Gurling's notice. The matter would not bear the delay of a fully countersigned consultation entry if Gurling's outcry was imminent. Speculations: The two-track formula (will or no will) suggests the council did not actually know whether Steward had left a will at all. The wording "if he left any will" reads as genuinely conditional rather than rhetorical. Gurling's confident move to outcry, without prior probate, may have been grounded in his knowledge that no will existed, and that intestate administration would normally fall to the widow under English custom. By acting first and disposing of the moveables quickly, Gurling probably hoped to satisfy his own claim against Steward before the widow could be granted administration and reorder the priorities to favour the Company and the family. The council's prohibition closes that window. The choice of Pyke's sole signature rather than the standard collective subscription points to procedural speed rather than collective deliberation. A counter-notice issued under the Governor's authority alone could go up in town within hours, beating any rapid

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			action by Gurling. The matter could then be ratified by the full council at the next regular sitting. This pattern of single-signature emergency orders, with later collective ratification, is consistent with Pyke's working method of treating the Governor's authority as continuously available between consultation days for matters requiring immediate response.
310	301	Island S[t] Helena. At a Consultation Held on Tuesday the 11[th] day of January 1714 At the United Castle in James Valley Isaac Pyke Esq[r]. Govern[r] George Haswell D[e]p[ty] Edw[d]. St Helena. At a consultation held on Tuesday 11 January 1714/15 at the United Castle in James Valley. Present: Isaac Pyke, Governor; George Haswell, Deputy Governor (in the country); Edward Mashborne, third; Matthew Bazett, fourth; Antipas Tovey, fifth in council. Mr Gabriel Powill and Richard Gurling, two of the executors of Mr Charles Steward deceased, appeared in council and desired to prove Steward's last will and testament. This was done accordingly on the oaths of John Alexander and Thomas Price. The council ordered that the will be registered and probate delivered to the executors. Robert Gurling had delivered in a declaration on 6 January last against Pipin Wills, planter. Wills was summoned to attend the council, together with the witnesses Gurling desired to be called. The declaration was read, and the answer of Wills also. The Governor demanded whether the parties wished the matter referred to the Governor and council, or deferred to the general sittings. Both desired the Governor and council to decide it. Ruth Wood was thereupon examined on oath and declared as followeth. She stated that she had given to her daughter Margaret the value of £91 0s 0d on a contract of marriage with Benjamin Wills, the son of Pipin Wills. She added that she had not consented to the marriage unless... Interpretations: The Steward will is now produced and proved on the oaths of John Alexander and Thomas Price, witnesses to the document. Gabriel Powill and Richard Gurling appear as named executors, which reframes Gurling's earlier action of 4 January 1714/15. Gurling was not acting as a self-appointed planter but as a named executor under the will. His public outcry notice, issued without first bringing the will to probate, was nonetheless procedurally wrong: probate had to precede any executor's act of distribution, and a notice of outcry issued before probate was void at law. The council's prohibition of 4 January was therefore correct, and the present consultation supplies the missing procedural step by formal proof of the will. The grant of probate to the executors now authorises Powill and Gurling to act in administering the estate. The Robert Gurling declaration against Pipin Wills opens a separate dispute concerning the marriage of Benjamin Wills, son of Pipin, and Margaret Wood, daughter of Ruth Wood. Robert Gurling, possibly a relative of Margaret or trustee of the marriage settlement, has filed a formal complaint in writing on 6 January 1714/15. The parties' joint election of the Governor and council as forum, rather than the general sittings fixed for 17 January, indicates that both sides preferred summary equitable adjudication to the more procedural setting of the quarter sessions. The mechanism by which the parties could elect the venue is a feature of the small jurisdiction's flexibility. The marriage contract value of £91 0s 0d is substantial by local standards. Set against the customary land valuation of £5 0s 0d per acre established by Pyke on 21 December 1714, the sum is equivalent to about eighteen acres of land, a meaningful provision for a daughter on marriage. Marriage portions of this scale on St Helena typically came from the bride's side of the family and passed under contract to the husband on solemnisation of the marriage, becoming part of the new household's working capital. Ruth Wood's

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			deposition, that she had given Margaret £91 0s 0d on the marriage contract with Benjamin Wills, places her as the source of the portion and as a party with a clear interest in any subsequent dispute over the marriage or its consequences. The phrase "she had not consented to the marriage unless..." breaks off at the page edge and introduces a condition Ruth Wood had imposed before agreeing to the match. The unfinished construction probably introduces a specific covenant the Wills family was required to undertake in exchange for the £91 0s 0d portion, the breach of which now grounds the present dispute. Speculations: The election of the Governor and council over the general sittings, by both parties' agreement, suggests that the dispute turned on questions of equitable construction of the marriage contract rather than facts requiring jury determination. The general sittings, with a twelve-man jury empanelled from the planters, were the proper venue for contested facts; the Governor and council, sitting summarily, were better suited to interpret the terms of a written instrument and impose a remedy. The choice points to a dispute over what the marriage contract required rather than over what had actually happened. The Steward executors' decision to bring the will to probate only after the council's prohibition of 4 January 1714/15 suggests that Powill and Gurling had hoped to avoid the formal probate process altogether, perhaps because the inventory of Steward's effects, the schedule of debts and the order of creditor priority would be subject to council scrutiny. The unauthorised outcry would have allowed quick disposal without entry of an inventory, without sworn account of debts and without Company creditor priority being asserted. The week's interval between the prohibition and the present probate, falling neatly on the next council day, indicates that Powill and Gurling came in with the will only when there was no alternative. Their compliance now restores the regular order of administration.
311	302	Pipin Wills had promised to give to his Sone Benjamin the Same value, and Sayeth he Did promise her that he would give his Son Benj[a] Ten acres of Land formerly James Eathopes, and a black Slave, and on that She the Said Ruth did Consent to the Match And after the Marriage was made he did tell his Son he might take the said Land when he would and the Said Benjamin Occupied the Land and bought Such ors to plant it with but Eighteen months after the Marriage Benjamin Dyed. And then Pipin Wills took the Land into his Possession againe Jur[t] Coram me hoc undecimo die Janu[ary] 1714. Coram me Isa[a]: Pyke Besides severall other Evidences viz[t]. Ruth Wood's deposition continued. Pipin Wills had promised to give to his son Benjamin the same value, and had also promised her that he would give Benjamin ten acres of land formerly James Easthope's, and a black slave. On that footing she had consented to the match. After the marriage was made, Pipin had told his son he might take the land when he would. Benjamin had then occupied the land and bought suckers to plant it with. Eighteen months after the marriage, Benjamin died. Pipin Wills then took the land into his possession again. Sworn before me 11 January 1714/15, Isaac Pyke. Besides several other depositions, namely those of Isaac Wood, John Knipe and his wife Ruth, Giles Hayse, George Kitchin to the same purpose, and also John Bagley and Margaret his wife, Richard Gurling and Thomas Southen relating to Gurling's complaint to be examined, the council found the matter so long and tedious, Wills denying most part of the complaint, and the evidence so intricate, that it was probable to take up more than that day's time. The Governor therefore referred it to the Court of Judicature. Signed Pyke, Haswell, Tovey. Interpretations: The substance of the Wood-Wills marriage settlement is now clear. Ruth Wood's £91 0s 0d portion for her daughter Margaret was matched by Pipin Wills's undertaking on his son Benjamin's side: ten acres of land formerly belonging to James Easthope, a slave and an equivalent value. The settlement is a standard early modern marriage arrangement in which each family endowed the new household with matching contributions, here in the form of cash from the bride's side and land plus a slave from the groom's. The James

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			Easthope parcel reappears from earlier consultations: seven acres formerly leased by Easthope had been granted to Richard Gurling in 1712, but the ten acres in dispute appear to be a separate parcel that had passed through other hands. The legal heart of the dispute is Benjamin's death eighteen months into the marriage, after he had taken possession of the land and begun planting it with yam suckers. Under the settlement, the land had been transferred to Benjamin during his lifetime, however informally, and on his death it should have descended either to his widow Margaret as his surviving spouse (or her family as part of the marriage contract) rather than reverting to his father Pipin. By repossessing the land after Benjamin's death, Pipin Wills had effectively voided the consideration that had induced Ruth Wood's £91 0s 0d portion, leaving Margaret with neither the land nor the cash. The action of repossession is the act complained of, and the dispute turns on whether Pipin's verbal authorisation to Benjamin to occupy and plant constituted an effective transfer of title, or merely a permission revocable at the father's pleasure. The reference of the matter from the Governor and council to the Court of Judicature, despite both parties' earlier election of the council as their preferred forum, reflects the practical limits of summary adjudication. With eleven named witnesses on either side (Isaac Wood, John and Ruth Knipe, Giles Hayse, George Kitchin, John and Margaret Bagley, Richard Gurling, Thomas Southen, on top of Ruth Wood herself), Pipin's denial of "most part" of the complaint, and the intricacy of the evidence, the matter was too substantial for a council sitting to dispatch in a single day. The Court of Judicature, sitting at the sessions house with a twelve-man jury, was the proper forum for contested questions of fact on this scale. The shift from one forum to the other illustrates the working division between the council's executive jurisdiction and the court's fact-finding role. The council reserves to itself the power of triage: it hears the parties, takes the principal deposition, identifies the scope of the dispute, and then determines whether the matter can be concluded in council or must be referred onward to a jury. Both modes are local procedures, but they operate by different rules of evidence and remedy. Speculations: Pipin Wills's grounds for repossessing the land may rest on a fine distinction between the transfer being conditional on the continuance of the marriage, treating it as a quasi-jointure that would survive only as long as both spouses lived, or being absolute on transfer to Benjamin. The eighteen-month span of the marriage gave time for Benjamin to acquire the suckers and plant the land but not to produce a yam crop, so the planted estate at his death was a developing asset of uncertain value. A father's claim that his son's death without issue closed the settlement back to the originating party would draw on the English doctrine that brought property back to the line from which it had come in default of issue. Margaret, as a widow without children, may have been left with the £91 0s 0d nominally in the marriage but without the matching consideration that had induced it. The breadth of the witness list, drawn from at least seven separate households (Wood, Knipe, Hayse, Kitchin, Bagley, Gurling, Southen), shows that the marriage settlement had been negotiated and witnessed in the presence of substantial community involvement. This is consistent with early modern marriage practice where settlements were not purely private but were vouched for by neighbours and kin, who acted as informal witnesses to the parties' undertakings. The collective recollection of these witnesses now becomes the evidence on which the Court of Judicature will have

			to determine what was actually promised and on what terms.
312	303	Island S[t]. Helena At a Consultation held on fryday the 14[th] Day of Jan[ry] 1714[.] at the United Castle in James Valley Isaac Pyke Esq[r] Gover[r] George Haswell D[e]p[ty] Edw[d]. Mashborne 3[d] Matt: Bazett 4[th] & Antip[s] Tovey 5[th] in Counc[l] Prest This morning about seven of the Clock an Alarm was made for a Single Ship. About two in the afternoon the Aurengzebe Cap[t] Nicholas Lihorne Arrived and brought on Shoar and Delivered a Pachett Directed to us Containg an Invoice, bill of load =ing, and Gener[l] Letter Advising of Goods and Merchandize sent from the Govern[r] & Councill at Fort S[t] George Ordered. That the Letter and Invoice be Enterd in a book for that purpose, and that the Cap[t] have an Order to send the Goods on Shoar asoon as posible. Ordered That an Advertisem[t]. be published to give Notice to all the Inhabitants that the Gen[l] Sessions and Muster be Defferd till a week after Departure of[...] Said Ship. Ordered. That the lease Granted Thomas Bagley for the Land he formerly Possest be Entered in the Consultation book, which is as followeth Island Margin Notes: Aurengzeb. Arriv[d] Her Packet Goods Ord[d] a Shore Sessions &c deferred. Tho. Bagleys Lease E[ntered]	St Helena. At a consultation held on Friday 14 January 1714/15 at the United Castle in James Valley. Present: Isaac Pyke, Governor; George Haswell, Deputy Governor; Edward Mashborne, third; Matthew Bazett, fourth; Antipas Tovey, fifth in council. This morning about seven of the clock an alarm was made for a single ship. About two in the afternoon the <i>Aurengzebe</i>, Captain Nicholas Lihorne, arrived. She brought a packet on shore directed to the council, containing an invoice, bill of lading and general letter advising of goods and merchandise sent from the Governor and council at Fort St George. The council ordered that the letter and invoice be entered in a book kept for that purpose, and that the captain have an order to send the goods on shore as soon as possible. The council further ordered that an advertisement be published giving notice to all the inhabitants that the general sittings and muster were deferred until a week after the <i>Aurengzebe</i> sailed. The council also ordered that the lease granted to Thomas Bagley for the land he formerly possessed be entered in the consultation book, which is as followeth. Interpretations: The <i>Aurengzebe</i> arrives from Fort St George (Madras), the principal Coromandel Coast Company station, with a packet containing the three standard shipping documents: invoice listing the goods and their valuations, bill of lading establishing carriage and delivery terms, and a covering letter from the Madras Governor and council explaining the consignment. Entry of the letter and invoice in a dedicated book is the standing administrative practice for inward shipping, preserving the documentation against later dispute over what was shipped, in what quantities and at what prices. The alarm at seven in the morning for a single ship, followed by arrival at two in the afternoon, illustrates the working sequence of approach to St Helena. The lookout posts on the heights, particularly at Halley's Mount and Munden's Point, could spot a single sail many hours before it could be identified or beach itself in the road. The seven-hour interval between alarm and anchorage is consistent with a ship still some distance to windward at first sighting, working its way down to the leeward roadstead. The deferral of the general sittings and the muster, both fixed for 17 January and 20 January respectively on 21 December 1714, is the standard accommodation to a ship in the road. Both events required the full attention of the planter community, who were also the principal traders with the ship and would be needed to discharge cargo and load supplies. The "week after the <i>Aurengzebe</i> sailed" formulation gives the inhabitants time to complete their commercial dealings before turning to public business. This is a practical compromise between the council's calendar of public affairs and the merchant demands of a fleet visit. The entry of Thomas Bagley's lease into the consultation book introduces the formal documentary record of a grant already made. Bagley was ordered out of the Alexander land on 16 October 1711 and given eighteen months to lift his crops; the present lease, "for the land he formerly possessed", appears to be a separate grant of the land Bagley had previously held before his ouster. The recording of the lease in the consultation book, rather than relying solely on the original deed, is a safeguard against future loss or disputed reading of the instrument, creating a parallel record under council authority. Speculations: The timing of the <i>Aurengzebe</i>'s arrival, three days before the scheduled general sittings, would have caused

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			immediate disruption to the assembled court calendar even without the deferral order. The Powill-Gurling-Steward probate, the Wood-Wills marriage settlement referral, and other matters listed for the 17 January sittings would now stand over until the ship had sailed. Pyke's prompt order deferring both sittings and muster, rather than attempting to hold the sittings on the appointed day and then attend to the cargo afterwards, treats the ship's business as the paramount call on the colony's working capacity. The deferral also avoids inconveniencing the planters who would be needed at the beach for cargo handling and at the market to deal with the visiting merchants. The decision to enter Bagley's lease into the consultation book on a day already filled with shipping business probably reflects an opportunistic use of the assembled council. With all five members present (Haswell having returned from the country), Pyke seized the opportunity to dispatch the lease entry while quorum was complete. Bagley's lease may have been overdue for formal entry, perhaps held back during Haswell's absence in the country during earlier sittings, and the gathering for the <i>Aurengzeb's</i> arrival provided the first available full council to authenticate the entry. The lease text itself, beginning on the next page with "Island...", will give the precise terms of Bagley's tenure.
313	304	Island S[t]. Helena The Lords Proprietors of this Island The Hon[ble] the United Comp[a] of Merch[ts] of London trading to the East Indies, Do hereby Demise Lett and Sett unto Tho[s]. Bagley of the Island S[t]. Helena Free Planter One and Twenty Acrs of Land with a Dwelling house upon the same Lying Scituate and being in Sandy Bay under the Main Ridge adjoining to Thomas Perkins towards the North towards the East and West to William Slaughters Land, towards the South to Richard Swallows Land, To have and to hold the said Premises to him the said Tho[s]. Bagley his Executors, Administrators, and Assigns for the term of One and Twenty Years Commencing from the[r] 25[th]. of March 1711. Upon Condition that he the said Tho[s]. Bagley his Executors, Administrators and Assignes shall always do and bear true Faith and Allegiance To our Sovereign Lady Queen Anne, Her Heirs and Successors. also to the Hon[ble] United Company and their Successors, and shall duly obey all the Laws and Constitutions of the said Island and Yearly pay at the Annunciation of the Blessed Virgin Mary being the 25[th]. day of March the Annual Rent of Five Pound Five Shillings in good and current Money of the said Island, To the said Hon[ble]. United Company and their Successors, and that the said Tho[s]. Bagley his Executors Administrators and Assignes shall and do at the Expiration of the said Term of Twenty one Years leave the House	The lease text followed. The Lords Proprietors of the island, the Honourable United Company of Merchants of London trading to the East Indies, demised, let and set unto Thomas Bagley of the island of St Helena, free planter, twenty-one acres of land with a dwelling house upon the same. The premises were situated in Sandy Bay under the Main Ridge, adjoining Thomas Perkins's land to the north, William Slaughter's land to the east and west, and Richard Swallow's land to the south. The grant was to be held by Bagley, his executors, administrators and assigns for the term of twenty-one years, commencing from 25 March 1711. The grant was made on condition that Bagley, his executors, administrators and assigns should at all times bear true faith and allegiance to the Queen, her heirs and successors, and also to the Honourable United Company and their successors. They were to obey all the laws and constitutions of the island and to pay yearly, on the feast of the Annunciation of the Blessed Virgin Mary (25 March), the annual rent of £5 5s 0d in good and current money of the island, to the Honourable United Company and their successors. At the expiration of the twenty-one year term, Bagley, his executors, administrators and assigns were to leave the house... Interpretations: The lease form is the council's standard twenty-one year demise to a free planter, here applied to a twenty-one acre parcel in Sandy Bay with a dwelling house. The Sandy Bay location places Bagley's holding in the industrial heart of the colony, where the lime kilns, stone cutters' house, tan fats and cart path had been built between 1712 and 1714. The neighbouring landowners (Perkins, Slaughter, Swallow) form a cluster of established planters whose own holdings have been recorded at various points in the consultations. The boundary description by neighbours' names rather than by metes and bounds is the standard local form, relying on the council's parallel survey records to fix the actual extent. The annual rent of £5 5s 0d for twenty-one acres works out to 5s 0d per acre, matching the rate confirmed elsewhere in the records (Bagley's lease of 9 January 1711, Wrangham's grant and others). The rate is calculated by the same formula and is therefore standardised across the Company's leasehold grants, whatever the year of the lease. Payment is to be made

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			on Lady Day (25 March), the conventional English quarter-day from which the twenty-one year term itself runs, so that the rent and the calendar of tenure align on a single annual fixed point. The phrase "good and current money of the island" recognises the mixed currency circulating on St Helena (Spanish silver, English coin, copper pieces), all of which would be accepted at their settled local valuations. The dual-allegiance covenant (Queen and Company) reflects the colony's constitutional position as a Company island held under royal charter. Queen Anne, named here as the sovereign though the lease commenced on 25 March 1711 and she died on 1 August 1714, would by the date of entry (14 January 1714/15) have been succeeded by George I. The retention of the original wording in the entry, despite the change of sovereign in the interim, indicates the entry is being made from the original lease document signed in 1711, rather than being newly drafted in 1715. The text breaks off with the reversion clause introducing the condition of the property at the end of the term, which probably continues on the next page with the standard form of return in good repair. Speculations: The choice to enter Bagley's twenty-one year lease into the consultation book in January 1714/15, almost four years after the lease itself commenced, suggests that the original instrument had not previously been registered in the council's books. Bagley's position is otherwise documented across the records: in late 1711 he was ordered out of the Alexander land, with eighteen months to lift his crops, and the present lease at Sandy Bay is the parcel he received instead. The dispute over the Alexander land has consumed multiple consultations and stands among the documentary case to be transmitted to London. Entering Bagley's Sandy Bay lease formally in the consultation book at this juncture may serve to clarify the scope of his actual tenure and to head off any later argument that he held no land at all beyond the disputed parcel. The lease commences on 25 March 1711, which is the Lady Day immediately after Bagley's removal from the Alexander land. The chronology suggests that the council had compensated Bagley for the loss of one parcel with the immediate grant of another, with the transfer timed to the conventional quarter day on which leases commenced. The four-year gap between the lease and its formal entry in the consultation book is consistent with the wider pattern of administrative arrears under Boucher: store books twelve months behind at Pack's death in April 1713, the Toddington and Susannah letters missing from the records, the General Table audit outstanding. Pyke's new administration is now systematically entering documents into the formal record that had been allowed to slip during the previous governorship.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			The two outcry accounts entered together in the consultation book document the disposal of two deceased estates by public auction on dates several months earlier. The first, for William Taylor deceased, was held on 23 July 1714, in the early weeks of the Pyke administration; the second, for John Griffith deceased, on 13 November 1714. The deferred entry into the consultation book, several months after each sale, follows the same pattern of administrative catch-up observed in the Bagley lease entry on 14 January 1714/15, with Pyke's administration now systematically registering documents that had accumulated during the working transition. The buyer lists illustrate the social texture of the colony's second-hand market. Council members (Antipas Tovey at the Taylor sale, by name) and substantial townspeople (Honourable Captain Mashborne, named only by rank) mingle as buyers alongside soldiers (Lucas Mason, Robert Ferguson, Thomas Watts, William Wardgell) and craftsmen at every modest price point. A pair of shoes, a few razors, a coat, a Bible, kitchen knives and forks, sewing needles and a basin all change hands at the same outcry, indicating that the public sale absorbed the entire moveable contents of the household rather than skimming for valuable items only. The goods themselves give a picture of personal possessions among the soldier and craftsman class. Bath metal buttons (a copper-zinc alloy used as a cheaper substitute for brass on civilian and military coats), penknives, scissors, compasses and scales (instruments suggesting Taylor had been engaged in some quantitative trade or craft), and a steel (for sharpening blades) make up the inventory of a working man's personal kit. The presence of a Bible at £0 4s 0d places personal religious literature alongside the practical implements. The "beware coat" purchased by Ferguson is a Beverwijck or beaver coat, a heavy woollen overcoat originally associated with the Dutch town of that name, the wool dressed with a beaver-like nap, sold at the price of a good day's work. The total of £3 14s 5d for Taylor's effects and approximately £5 0s 0d for Griffith's are characteristic of the modest estates left by soldiers and lower-ranking inhabitants. Set against the £14 3s 0d combined debt of the three soldiers drowned on 24 December 1714, and the £5 4s 8d their effects raised at outcry, these two sales recovered comparable proceeds from comparable estates, suggesting a settled going rate for the moveables of working men at St Helena outcries. Speculations: The recurrence of Lucas Mason as buyer at both outcries (a pair of shoes and other items from Taylor on 23 July 1714, a waistcoat from Griffith on 13 November 1714) suggests Mason was an active participant in the second-hand market, perhaps building up his wardrobe and personal goods through opportunistic purchases at low prices. His name has appeared earlier in the records, having been the victim of the Fort riot of 20 November 1714 when Ablard, Obriant and Thompson were sentenced to graduated lash sentences for assaulting and wounding him within the Fort. The picture that emerges is of a soldier and acquirer of small estate, sufficiently visible to attract assault and sufficiently provident to acquire goods at the public sales. The seven razors among Taylor's effects, purchased as a single lot by Roulston for £0 11s 6d together with a looking glass and three wash balls (perfumed soap balls used in shaving), point to Taylor having had a sideline as barber or shaver. The grouping of the three items as a single shaving kit, sold to a single buyer, suggests the council's outcry conductor recognised the items as functionally linked and offered them as a set. Roulston's purchase of the kit indicates either an intention to

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			continue the trade or to break up the lot for individual resale.

Francis Cullum, debtor: one wig £0 11s 6d three napkins £0 4s 3d one pair of island shoes £0 7s 9d subtotal £1 0s 6d Joseph Whaley, debtor: one wig £0 3s 3d John Ebbs, debtor: two English shirts £0 8s 6d James Leech, debtor: two shirts £0 8s 7d Samuel Head, debtor: three books £0 3s 0d George Lendon, debtor: two pairs of stockings, one pair of drawers and a flute £0 12s 2d William Dunwell, debtor: one pocket book and looking glass £0 8s 3d Joseph Daws, debtor: one pair of shoes £0 4s 6d George Carradice: one razor and pair of old gloves £0 1s 0d Joseph Bayley, debtor: a chest with lock and key £0 19s 0d To cash delivered the Governor £10 0s 0d [...] Total £10 10s 0d [...] Interpretations: The continuation of the Griffith outcry brings the total to roughly £10 10s 0d, of which £10 0s 0d was delivered to the Governor in cash from the buyers. The cash delivery to Pyke himself, rather than to the storekeeper or to the Company's general account, reflects the Governor's standing as the recipient of estate proceeds for subsequent distribution among creditors and family. The mechanism mirrored the Governor's handling of the Christmas beef receipt of 4s 4½d reported on 4 January 1714/15, where small cash sums were also paid into Pyke's hands before being entered into the Company's books. The composition of Griffith's effects fills out the picture of a planter or craftsman's household goods. Two wigs (Cullum at £0 11s 6d, Whaley at £0 3s 3d) suggest Griffith maintained the polite appearance expected of a man of some standing, with one wig for daily wear and a finer one for occasions. Five shirts in total (two English, two unspecified, plus the pair sold to Ebbs and Leech), three books, three napkins, stockings, drawers, a flute, pocket book and looking glass round out the moveables. The presence of a flute is notable: musical instruments were uncommon in the smaller estates, and its £0 12s 2d valuation alongside stockings and drawers as a single lot suggests Lendon was the only bidder for the bundle. The phrase "one pair of island shoes" purchased by Cullum at £0 7s 9d distinguished local manufacture from English-imported footwear (such as Ebbs's English shirts). St Helena had a small leather-working

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			industry, and the Company employed William Penny as soldier and shoemaker working tanned leather into shoes for the store. Island shoes were probably of rougher manufacture than English imports, intended for daily working wear rather than dress occasions. The chest with lock and key sold to Bayley at £0 19s 0d represented the highest single item in the outcry, a price reflecting both the strong construction and the security function of a lockable storage chest. In a colony where personal property travelled with the soldier or planter from quarters to quarters and where theft was a recurring problem (as in the Bevia-Orchard cane head theft of 2 December 1714), a locking chest was a valued possession that commanded a premium price even at second hand. Speculations: The repetition of buyers across the two outcry accounts (Mason at both, and several others appearing more than once within the Griffith sale) suggests that public outcries on St Helena attracted a small, settled body of regular buyers who knew the market and the prices. The pattern is consistent with a colony of perhaps two hundred adult European inhabitants, in which the same fifteen to twenty men and women dominated the auction trade in second-hand goods. The Governor's continuing presence as conductor or principal beneficiary of the cash proceeds, evident in the delivery of £10 0s 0d directly to Pyke, kept the council in close oversight of these informal markets. The relatively high proceeds from Griffith's estate (£10 10s 0d as against £3 14s 5d for Taylor's six months earlier) indicates Griffith was a man of more substantial standing than Taylor, with finer clothing, more linen, books and personal effects. Daniel Griffith, third in council until his death on 6 May 1712, had been a senior figure of the previous administration. The John Griffith of the present sale would have been related (perhaps his son), inheriting some of the family's possessions. The outcry of Griffith's effects on 13 November 1714 may have been timed to clear his estate against debts during the active autumn weeks before the year-end consultation programme settled into its winter rhythm.

		Carried over £ 10: 18: 9 Margin Notes: W[m]. Woodzells Goods Sold.	Henry Mutton, debtor: one waistcoat £0 15s 0d two new shirts £0 10s 0d two pairs of sleeves, two necks and two handkerchiefs £0 4s 9d subtotal £1 9s 9d Doctor Thomlinson, debtor: one pair of new shoes £0 7s 6d three pairs of new gloves £0 5s 0d subtotal £0 12s 6d Lucas Mason, debtor: one old blue coat £0 11s 0d Joseph Bates, debtor: an old coloured coat, one waistcoat and one pair of breeches £1 5s 0d Carried over £10 18s 9d Interpretations: The Woodzell outcry, held on the same day (13 November 1714) as the Griffith sale, completed a paired disposal of two estates in a single auction. The same buyers appear in both lists (Cullum and Mason among others), confirming that the outcries were treated as a single event drawing on a common pool of buyers. Holding two sales on one day was administratively efficient, concentrating the gathering of buyers, the recording of sums, and the cash transfers into a single occasion. The Woodzell estate is noticeably finer than either Taylor's or Griffith's. A druggett coat purchased by Henry Johnson at £2 2s 0d, a French hat at £0 16s 0d, three pairs of new gloves at £0 5s 0d, two new shirts at £0 10s 0d, and an old coloured coat with waistcoat and breeches at £1 5s 0d together suggest a man of higher standing with more substantial clothing than the working soldiers and craftsmen represented in the earlier sales. Druggett was a coarse woollen cloth often mixed with linen or silk, used for outer coats among middling tradesmen and clerks; a new druggett coat at £2 2s 0d (two guineas exactly) marked Johnson's purchase as a prestige item by colonial standards. The French hat would have been an imported felt of more refined construction than the local article. The term "nightgown" purchased by Samuel Algate at £0 10s 0d referred to a long loose outer garment worn over indoor dress, not modern sleepwear. It was a man's garment of comfort and informality for evenings or domestic occasions, often worn with a matching cap and slippers. Its inclusion among Woodzell's effects indicated he kept the polite at-home wardrobe of a man of some education or rank. The accompanying napkins, gloves, cap and handkerchiefs sold to Algate as a related lot suggest the auctioneer recognised the items as belonging to the same indoor establishment. The names of the buyers represent a cross-section of the colony's middle ranks. John Sinsnick had received a 4s rate for stone-laying at the Prosperous Bay house on 3 November 1713 and was a working soldier with small accumulating capital. Samuel Algate had appeared in the Aug 1714 records and Earle estate matter, and as a regular outcry buyer here builds up his personal goods. Henry Johnson's purchase of the druggett coat at the high price of the sale suggests he held one of the more substantial planter or skilled craftsman positions. Doctor Thomlinson is probably the writer in the store Joseph Tomlinson, also recorded as translator of the Portuguese petition of 29 May 1711 and witness at the interrogation of Bazett on 1 April 1714, the title

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			"Doctor" reflecting some learning or scribal eminence rather than a medical qualification. Speculations: The carry-over total of £10 18s 9d to the next page indicates the Woodzell outcry would yield a final sum substantially above the Griffith total of approximately £10 10s 0d and roughly three times Taylor's £3 14s 5d. The progression of the three sales suggests Woodzell was the most substantial figure of the three deceased: better clothed, with finer linen, a French hat, a drugget coat and a complete indoor wardrobe. His position on the island may have been that of a Company servant or established planter rather than a soldier or artisan. The sale of his items alongside Griffith's, though entered in the record separately, would have been timed in a single afternoon for administrative convenience. The fork and brush bundled with a flour bag in Cullum's lot at £0 1s 6d describes the modest kitchen-implement layer of Woodzell's effects, sold off cheaply once the finer clothing had been disposed of. The pairing of these small implements with the flour bag suggests they were bundled to clear minor goods quickly, leaving the auctioneer free to concentrate buying attention on the higher-value items. The pattern of bundling unrelated small items into a single lot is characteristic of estate outcries where time and buyer patience are limited.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			subtotal £0 16s 7d Total £16 15s 8d Signed Pyke, Haswell, Tovey. Interpretations: The Woodzell outcry closed at £16 15s 8d, substantially higher than either of the two earlier sales recorded in the consultation book. The total confirms Woodzell as the most substantial of the three deceased, with effects worth roughly four and a half times Taylor's £3 14s 5d and a third more than the running Griffith total. The cash sum of £0 10s 7d delivered to the Governor at the close represents the residual cash from buyers' payments after the goods had been distributed, with six measures of powder added at £0 6s 0d giving a final £0 16s 7d closing line. The signatures of Pyke, Haswell and Tovey at the foot of the page formally close the entire outcry accounts series begun on 14 January 1714/15. Three estates (Taylor, Griffith, Woodzell) and four pages of itemised buyer lists have now been ratified by council signature, completing the documentary record. The signatures cover the entered text on the consultation books as the council's formal authentication, not the original outcry events of July, November and previous months. The Honourable Company appearing as buyer of four penknives at £0 7s 0d shows the Company itself participating in the outcries through its assigned officer (probably the storekeeper Bazett or the assistant) to acquire small-value items needed for general use. Penknives, the small knives used by clerks for sharpening quills, would have been useful in the Company's clerical work. The Company's purchase of working tools at outcry instead of importing new ones from England illustrates the practical economy of the colonial establishment, in which small implements circulated through estate sales rather than being routinely replaced. The "spying glass" purchased by Dunwell along with shoe brush, hat brush and other small items is a portable telescope or perspective glass, a high-value optical instrument that had probably belonged to Woodzell for personal use, perhaps for marine observation or shipboard practice. Its inclusion in a mixed lot with brushes and a dressing pin at only £0 4s 4d is curious; either the spying glass was damaged or incomplete, reducing its value, or the auctioneer bundled it with the brushes to clear minor items and Dunwell got an unexpectedly good purchase. Speculations: The final delivery of cash and powder to the Governor as a debtor's line indicates the Governor took some items from the estate at fixed valuation, debiting himself in the same form as the other buyers rather than receiving the proceeds in a separate transaction. The six measures of powder at £0 6s 0d represents the Governor's purchase of remaining stores from Woodzell, with the £0 10s 7d cash sum representing his closing of the account on his own purchases. This positioning of the Governor as an outcry participant rather than purely as authority oversees the sales suggests the council members felt no impropriety in acquiring effects from deceased estates at the public valuation alongside other buyers, provided the transaction was openly recorded. The presence of Jane Ramsey as a named female buyer is notable in the lists, where the other buyers are predominantly male. Her purchase of "one pair of new large stockings" at £0 13s 0d, the same price as Huff's new stockings, suggests she may have been buying for a family member rather than for herself, or alternatively that women on St Helena participated in the auctions on their own account. The female presence among the buyers, however limited, indicates the outcries were

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			public events open to all householders rather than exclusively male commercial gatherings.
320	311	Island S[t]. Helena. At a Consultation Held on Tuesday the 18[th] day of January 171[.]. at the United Castle in James valley Isaac Pyke Esq[r]. Gover[r]. George Haswell D[e]p[ty] Edw[d]. Mashborne 3[d] Matth[w]. Bazett 4[th] & Antip[s]. Tovey 5[th] in Counc[l] Prest The Govern[r]. reports that he finds the work men that were used to Stone Laying have all of them agreed togethe[r] in a Confederacy against the Hon[ble] Company and have resolved to do no work for them Unless they have five Shillings per diem Each, they are all of them in the Hono[ble] Companys debt Whereupon he Ordered a writt to be Issued out against Walter Morris and Arrested him at the Hono[r]: Companys Suit for his debt Upon which Said Morris has Agreed to pay it and Sold a Slave Named Nick for twenty five pound and to take out the rest in Yams According to his former Proposall his whole debt being thirty Eight pound odd mony the rest of them are So poor that nothing is to be gott of them and have families to Maintain. But notwith =standing this the Govern[r] hath A greed w[th] others to work at three Shillings per day. The Officer at Munden's point Complain that John Nichols Jun[r]. has not been upon Alarms Several times, and he being Summon'd appeared and Alledged sometimes he did Not hear the Alarms & other times was not able to come to it by reason of a Lameness he is subject to. Ordered Margin Notes: Stone Layers refuse to work at less p[r]. d[ay] p[r]. diem Walt[r] Morris Arrested for debt & Sold a black & Compl[t]. ag[t] Jn[o]. Nichols	St Helena. At a consultation held on Tuesday 18 January 1714/15 at the United Castle in James Valley. Present: Isaac Pyke, Governor; George Haswell, Deputy Governor; Edward Mashborne, third; Matthew Bazett, fourth; Antipas Tovey, fifth in council. The Governor reported that the workmen used to stone-laying had all agreed together in a confederacy against the Honourable Company. They had resolved to do no work for the Company unless they had five shillings per day each. They were all in the Company's debt. The Governor had ordered a writ to be issued against Walter Morris and to have him arrested at the Company's suit for his debt. Morris had agreed to pay, and had sold a slave named Nick for £25 0s 0d, with the rest of his debt to be taken out in yams according to his former proposal. His whole debt was £38 0s 0d odd money. The rest of the men were so poor that nothing could be got of them, and they had families to maintain. Notwithstanding this, the Governor had agreed with others to work at three shillings per day. The officer at Munden's Point complained that John Nichols junior had not been upon several alarms. Nichols, being summoned, appeared and alleged that sometimes he had not heard the alarms, and at other times had not been able to come on account of a lameness he was subject to. Interpretations: The stone-layers' collective action was the first organised labour combination recorded in the consultations. By agreeing together to refuse work unless paid 5s 0d per day each, the men attempted to use their indispensable position in the council's continuing fortification programme as leverage against the Company. The rate they demanded matched John Sinsnick's claim of 3 November 1713 for stone-laying at the Prosperous Bay house, where he had been allowed 4s 0d per day against his claim for 5s 0d. The previous council settlement at 4s 0d now confronted the workers' united demand for the full 5s 0d, with the Governor's response designed to break the combination through targeted enforcement against its weakest member. The Governor's tactical response illustrated the structural advantage the Company held over its indebted labour force. Walter Morris had been a free planter confirmed in his fenced property on 8 April 1712, but by 18 January 1714/15 he was £38 0s 0d in the Company's debt. The Governor's writ against Morris for the debt, with the threat of arrest at Company suit, applied financial pressure precisely where it was most effective: a planter with a slave to sell and yams in his ground could be compelled to settle, while the propertyless soldiers and other planters in similar straits were poor enough that "nothing could be got of them". The strategy isolated and broke the combination by removing its most exposed member, leaving the rest unable to sustain the strike. The Morris settlement structure converted his £38 0s 0d debt into immediate physical assets: a slave named Nick sold to the Company at £25 0s 0d, with the balance of £13 0s 0d odd money to be taken out in yams according to his earlier proposal. The slave valuation of £25 0s 0d is higher than the £10 0s 0d per head benchmark in Carne's late 1714 schedule (29 slaves at £290 0s 0d total) and above the £15 0s 0d for Carne's slave Little George on 14 December 1714. The premium probably reflected Nick's age, condition or skills, perhaps as a working slave fit for the fortification labour the council needed. The Munden's Point complaint against John Nichols junior brought the consultation back to garrison discipline. The officer at Munden's Fort complained of repeated non-attendance at alarms, the

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			routine drum-beat exercises by which the garrison was tested for readiness. Nichols's two-part defence (sometimes he had not heard the alarms, at other times had been unable to attend because of lameness) reflected the practical limits of garrison service for older or infirm men. The council's response would have to balance the discipline of regular attendance against the genuine physical limits of an inhabitant pressed into garrison duty. Speculations: The Governor's claim to have agreed with "others" to work at 3s 0d per day, well below both the strikers' 5s 0d demand and the previous council settlement of 4s 0d for stone-laying, suggested Pyke had found alternative labour from outside the established stone-layer trade. The 3s 0d rate is consistent with the overseer's day rate established earlier in the records. The substitution of cheaper, less specialist labour at the lower rate, combined with the targeted enforcement against Morris, gave the council both an immediate workforce and a wage benchmark below the previous settled rate. The wage settlement now operating represented a real cut from the going rate, achieved by exploiting the credit dependence of the stone-laying class. The chaining of three actions in sequence (Morris arrested, slave sold at premium price, alternative labour engaged at lower rate) reveals the Pyke administration's deliberate management of a labour conflict by financial rather than disciplinary means. No stone-layer was punished; no rioting was suppressed; no formal action against the combination was recorded. Instead, the council moved the field by tactical pressure on the indebted member with attachable assets, broke the strike by converting his property into Company credit and labour, and then locked in a lower rate with replacement workers. This is a working example of debt being used as the principal instrument of labour discipline in the colony, with the Morris case standing as the worked precedent.
321	312	Ordered. That he the said Nichols be fined the sum of five Shillings The following Petition was present =ed. Island S[t]. Helena To the Worsh: Isaac Pyke Esq[r] Govern[r] & Council. The Humble Petition of Edmond Bodley planter. Sheweth. That your Petition[r]. desires to be Excus[d] from Admnnistering to his fathers Estate and as Concerning a Cow that his father killd was given him by another man So that y[r] Petition[r] Humbly begs that your Worship & Council will be pleased to Order the Admnnistrat[r]. to Satisfie your Petit[r]. for the Said Cow. And your Petition[r]. as in duty bound shall Ever pray. Edmund Bodley. He having proved his allegations about the Cow by the Testimony of John How. Ordered. That when the Hono[r]. Company are paid there debt, if there be Enough to pay for this Beast, that he be Satisfyd for it. Ordered. That an Advertisem[t]. be published as follow =eth. By. Margin Notes: fined 5[s] Edm[d]. Bodley desire for paym[t] of a Cow killd If Effects ino[ugh] than to be paid for y[e] Cow	The council ordered that Nichols be fined the sum of 5s 0d. The following petition was presented. To the Worshipful Isaac Pyke, Governor, and council. The humble petition of Edmond Bodley, planter. He set out that he desired to be excused from administering to his father's estate as concerning a cow that his father had killed, the cow having been given him by another man. He prayed that the council order the administrator to satisfy him for the cow. Signed Edmond Bodley. He had proved his allegations about the cow by the testimony of John How. The council ordered that when the Honourable Company had been paid their debt, if there was enough left over to pay for this beast, he should be satisfied for it. The council further ordered that an advertisement be published as followeth. Interpretations: The Nichols fine of 5s 0d for missed alarms set a benchmark penalty for garrison non-attendance, well below the £5 0s 0d benchmark imposed on John Colson for contempt of governor's orders on 28 February 1712. The smaller sum reflected the lesser nature of the offence: absence from alarm drills rather than wilful contempt of authority. The fine recognised Nichols's plea of lameness and intermittent inability to hear the alarms, treating his non-attendance as negligent rather than defiant. The Bodley petition concerned an open thread from the consultation of 31 August 1714, when Edmund Bodley had been ordered as administrator to pay the Honourable Company first and then divide the residue of his father Hugh Bodley's estate. The present petition raised a particular claim within that

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			administration: a cow that his father had killed had been given to Edmund by another man, so the cow was rightfully Edmund's property rather than part of his father's estate to be administered. The peculiarity of an heir-administrator petitioning against the estate he himself administered illustrates the conflict that could arise where the same person held both roles. The witness John How appeared in the records earlier as the witness in the Henson nuncupative-will procedure, confirming his settled role as one of the soldiers available to depose on contested matters. His testimony established Edmund's case that the cow had been given to him by a third party, with the killing by Hugh Bodley constituting a misappropriation that the estate must now satisfy. The council's conditional order (the Company first, Edmund second if anything remains) confirmed the working order of priority in insolvent or near-insolvent estates: Company debt always sits first, and family claims, including those of the administrator himself, must wait until that priority is satisfied. Edmund's claim was acknowledged as just but subordinated to the senior creditor. The mechanism preserves the structural priority of Company debt over private claims, even where the private claim arose from a clear wrong by the deceased. Speculations: The structure of Bodley's petition is unusual. By asking to be "excused from administering" the cow specifically, while remaining administrator of the rest of the estate, Edmund sought to exclude a particular asset from the body of the estate over which he had fiduciary duty. The construction allowed him to be both creditor and administrator on different items, with his personal claim against his father's wrong sitting outside the estate accounts. The council's response (Company first, Edmund second if there is enough) effectively granted the petition while preserving Company priority, neither excluding the cow from the estate nor preferring Edmund over the Company. The compromise gives Edmund a recoverable claim against any surplus, without disturbing the priority order. The Bodley estate's involvement in the documentary case against Boucher (the "Bodley appraisalment-block" was named on 24 August 1714 among the items entered into the consultation book as material for the directors in London) suggests the estate was a substantial one whose administration had been mishandled by the previous regime. Edmund's petition for satisfaction of his cow claim may represent one strand of a wider attempt by the family to recover what had been mismanaged. The Pyke administration's careful conditional ordering (Company first, family second) brought the estate back within ordinary procedural rules, with no special preferment for either side.
322	313	Island S[t]. Helena By the Worshipfull the Govern[r] and Councill. An Advertisem[t] For the Incouragem[t] & Bennefitt of the Industrious. These are to give Notice that a Plantation of between twenty and thirty acres of Land formerly Hugh Bodleys Sen[r] is now fallen into the Hono[r]. From on board y[e] Aurengzeby In S[t] Helena Road Janry 5[th] 1714 Cap[tn] Luhorne S[r] Gov[r]. & Counc[l]	Merchants trading to the East Indies, and by his owners, he was to take in here for every twenty men no less than 300 pounds weight of beef for the use of the ship's company. The complement being 86 men at 20 pounds weight, the quantity he demanded was [...]. Dated from on board the <i>Aurengzebe</i> in St Helena Road, 14 January 1714/15. Signed Nicholas Lihorne. The reply of the Governor and council to Captain Lihorne. They had received his letter of the 14th instant, in which he demanded the beef contracted for by charter party, to which they answered... Interpretations: The Bodley land advertisement reframed the open thread from 18 January 1714/15. Hugh Bodley senior's plantation had fallen to the Company, presumably for unpaid debt, and the council now sought to let it to a civil and industrious worker. The eligibility criteria are precise: civil behaviour (excluding troublemakers), prior fortification labour for the Company (rewarding those already in service), and no existing plantation (extending tenure to those who had none). The advertisement combined recruitment for fortification work, reward for past labour and consolidation of the colony's small-planter class into a single offer. The Governor's discretion to choose among applicants gave him direct control over the allocation, bypassing any formal application process. The connection between the Bodley estate matter just dispatched (Edmund Bodley's cow petition) and the present advertisement is significant. Edmund had been ordered on 31 August 1714 to administer the estate paying the Company first, and the present advertisement indicates that the Company's debt was so substantial that the principal asset, the twenty to thirty acre plantation, had been absorbed into Company ownership in satisfaction. The cow claim from Edmund could only be paid from any surplus after this principal asset had cleared the Company debt, which the present absorption now placed beyond reach. Edmund's conditional satisfaction effectively becomes nil, as the estate has nothing left for family claims. Captain Lihorne's letter set out his contractual right to take on beef provisions from St Helena under the standard Company charter party. The formula of 300 pounds of beef per twenty men corresponds to an entitlement of 15 pounds per man, which for the <i>Aurengzebe</i>'s complement of 86 men would yield 1,290 pounds, the demand obscured by manuscript damage. The charter party (a written agreement signed between the Honourable Directors and the ship's owners) governed the relationship between the Company and the ship's principal contractor, setting out the obligations on both sides. The St Helena establishment was bound by this instrument to supply the specified quantity of beef on demand by the captain. The advertisement's offer for the encouragement of "the industrious" reflected Pyke's working philosophy on labour and tenure. Rather than simply seizing the Bodley plantation and adding it to the Company's working stock, the council chose to redeploy it as an incentive to retain reliable working hands. Linking land tenure to prior fortification service rewarded loyalty and gave the Company a means to retain its trusted workers at a time when the stone-layers' combination had just been broken. The advertisement is the constructive complement to the disciplinary action against Morris, offering reward to those who remained reliable. Speculations: Captain Lihorne's beef demand on the day of his arrival (14 January 1714/15) reflected the standard pattern of ship provisioning at St Helena. Company ships were expected to take on beef and other fresh provisions for the onward voyage to England, with St Helena's cattle herds the principal source. The <i>Aurengzebe</i>'s 86-man complement and 15-pound-per-

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			man entitlement together produced a demand of about 1,290 pounds, equivalent to perhaps two or three substantial beasts at typical colonial weights. The arithmetic in Lihorne's letter ("86 men at 20 pounds weight") suggests either a calculation error in the letter itself or a different rate than the 300-per-20 formula would imply, perhaps reflecting an actual demand of 1,720 pounds (86 multiplied by 20) rather than the 1,290 the formula gives. The council's reply will probably address this discrepancy. The advertisement's careful targeting of fortification workers without existing plantations may also have been designed to head off any future combination by such workers. By giving a select group of stone-layers and labourers a personal stake in the colony through land tenure, the council shifted their interest from short-term wage maximisation to long-term tenure security. The newly settled plantation holder, with his own land to work, would be less willing to join future combinations against the Company. The 23 to 30 acre Bodley plantation offered to a single industrious worker would create a substantial planter of him, with all the social investment in good order that implied.
323	314	Answer that if you please to look over that Clause of your Charty Party you'll find the Intent thereof is only to Promote the Good Estate of the Island, and that you are to take Such a quantity when we have Plenty but there haveing Lately been a very great Death on the Island in which there dyed above two thousand five Hundred Head of Cattle it has made Beef Exheam Scarce & Dear and the Hono[ble] Comp[a]. have born a great Share in that Common Calamnity haveing lost the Greatest part of their Stock we can[t] Spare any now. But tho' we have None to Sell yet if you Desire it we will buy for you at the Common Price of the planters which is no Less than forty Shillings p[r] Hundred or if you please to buy of any one on the Island, where you can have it Cheapest we will pay them whatsoever you agree for, and take your bills to England for the Same but tho' fresh Beef does Happen at this time to be Soe Dear we hope you'll find all other things that you may need for Stores &c[a] to be not only Cheaper than formerly but at Such a price as is not to be Complained of. We are S[r] &c[a] Your S[t]. Helena Janry the Humble Servants 16[...] D[.] 1714. Isaac Pyke Mathew Bazett Antipas Tovey Captain Mashborne Delivered the following Accounts of the Honourable Company Stock of Cattle &c[a]. An. Margin Notes: Letter to Cap[t]. Lihorne S[t]. Helena Janry the 16[...] D[.] 1714	The letter to Captain Lihorne continued. The council answered that if he would look over that clause of his charter party, he would find the intent was only to promote the good estate of the island, and that he was to take such a quantity when there was plenty. But there having lately been a very great death on the island, in which there had died above 2,500 head of cattle, beef had become extremely scarce and dear. The Honourable Company had borne a great share in that common calamity, having lost the greatest part of their stock. They could not spare any now. But though they had none to sell, yet if he desired it they would buy for him at the common price of the planters, which was no less than 40s 0d per hundred weight. Or, if he pleased to buy of any one on the island where he could have it cheapest, they would pay them whatever he agreed for, and take his bills to England for the same. Although fresh beef did happen at this time to be so dear, they hoped he would find all other things that he might need for stores not only cheaper than formerly, but at such a price as was not to be complained of. Dated at St Helena, 16 January 1714/15. Signed Isaac Pyke, Matthew Bazett, Antipas Tovey. Captain Mashborne delivered the following accounts of the Honourable Company's stock of cattle. Interpretations: The cattle mortality of "above 2,500 head" was a catastrophic loss for the colony. Set against the livestock census of 5 July 1711 (333 cattle, 52 sheep, 107 goats, 64 hogs) and the windward livestock return of 25 September 1711 (252 cattle on the west side, 75 on the east side), the recent death rate was approximately ten times the entire cattle population of 1711. The figure either represents a cumulative loss across several years, or includes a substantial recovery of population followed by sudden collapse, or refers to private as well as Company stock. Whichever reading is correct, the loss was understood by the council as a "common calamity" affecting the whole island, with the Company itself the largest single sufferer. The council's response to Lihorne deployed three deflecting moves. First, the charter party was reinterpreted as conditional rather than absolute: the obligation to supply beef applied only when there was plenty, not in time of scarcity. This reading limited the captain's contractual demand without denying the charter party itself. Second, the offer to act as buyer at the planters' common price of 40s 0d per hundred weight (about £2 0s 0d for 112 pounds) transferred the cost from Company stock to private purchase. Third,

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			the offer to honour his bills of exchange on the Company in London provided an alternative payment route, leaving the captain to source beef directly from any willing planter at whatever price he could negotiate. The combination preserved the captain's contractual entitlement in form while transferring the practical burden to the open market. The 40s 0d per hundred weight rate, mentioned as the planters' common price, gave a benchmark for fresh beef on St Helena in early 1715. Compared with the £1 6s 3d per puncheon of salted beef recorded in the storekeeper's account of late 1710 (3 puncheons at £1 6s 3d = approximately £3 18s 9d), the planters' fresh beef at 40s 0d per hundredweight reflected the local scarcity. The council's framing of the rate as "no less than" 40s 0d suggested they expected the captain to find higher prices in private negotiation, with this being the floor rather than the ceiling. The closing reassurance about "all other things that he might need for stores" being cheaper than formerly indicated the council was hoping to soften the beef refusal by emphasising favourable terms on other commodities. The arrival of the <i>Aurengzebe</i> from Madras with cargo (recorded in the consultation of 14 January 1714/15) would have brought fresh supplies into the market, depressing prices on goods such as rice, sugar, arrack, piece goods and Indian manufactures. The council's letter was therefore not simply a refusal but a calibrated commercial response, restricting the politically sensitive item (beef from Company stock) while offering compensating advantages elsewhere. Speculations: The very large cattle mortality of "above 2,500 head" probably arose from drought combined with disease, the standing twin afflictions of livestock husbandry on the island. The Hospital ration of 491 pounds of rice at 4d per pound on the storekeeper's monthly account for 25 September to 25 October 1713 reflected "working sickness on the island during the drought aftermath", and Humphrey Edwards's petition of 3 November 1713 for admission as a matross described his household "in deplorable condition through the drought". The cattle losses described in the present letter may be the cumulative result of fifteen to eighteen months of drought stress on a population that had been built up under more favourable conditions. The council's offer to honour Lihorne's bills of exchange on the Company in London for any private beef purchases gave the captain an effective subsidy on the open market. The captain could negotiate with planters at any price, then draw a bill on the Company for the amount, which the Company would honour in London. The arrangement transferred the credit risk from the planter to the Company while preserving the planters' ability to charge what the market would bear. The mechanism may have been designed both to maintain good relations with the captain (whose onward voyage to England carried Company despatches) and to provide the planters with an opportunity to recover some of their losses through high prices. The Company itself absorbed the cost as a charge on its London accounts.

Same month after: 11 bulls 21 cows 11 bullocks 19 heifers 11 steers 11 yearlings 2 calves subtotal 90 killed last month: 2 bullocks bought: 3 cows, 2 bullocks, 4 heifers (total 9) cased: 1 cow, 1 bull, 1 calf 186 hogs great and small 1 bought 14 [...] 15 [...] 4 killed 2 dead 6 [...] 152 goats 48 turkeys 6 to the ship 1 killed 3 sheep Interpretations: The two stock returns, taken one month apart, provide a snapshot of the Company's livestock at the close of 1714 and the opening of 1714/15. The cattle total rose from 81 head on 1 December 1714 to 90 head on 1 January 1714/15, an increase of nine head produced through purchase (3 cows, 2 bullocks, 4 heifers) less casualties (one cow, one bull, one calf cased, two bullocks killed). The growth of the herd, however modest, indicates an active rebuilding programme following the cattle mortality referred to in the council's letter to Captain Lihorne. The Company was purchasing breeding stock (cows and heifers) to restore the herd's reproductive capacity. The 90-head Company cattle stock of 1 January 1714/15 was a fraction of the 1711 totals. The livestock census of 5 July 1711 recorded 333 cattle, the windward return of 25 September 1711 recorded 327 cattle on the two sides combined. The Company's recovered stock of 90 head represents less than a third of the pre-mortality cattle population, even allowing for private holdings being counted separately. The slow rebuilding rate (nine head gained in one month against natural attrition of three) suggests that recovery to pre-mortality levels would take several years. The hog population showed sharp growth from 77 to 186 head in one month, an increase of more than 100. The figure included not only the natural increase from 33 piglets noted but a substantial intake from new piglets bought and bred. The acceleration of hog production was the Company's logical response to the cattle scarcity: hogs reproduce faster than cattle, mature quicker and can be eaten younger, providing a faster route to meat supply for the General Table and the garrison than waiting for cattle to recover.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			The goat population held steady at 152 across both returns, while sheep remained at three head. The very small sheep number indicates the Company had largely abandoned sheep husbandry as unprofitable, perhaps following losses or in recognition that the moderate St Helena climate suited cattle, goats and hogs better than wool-bearing sheep. The 55-to-48 turkey decline reflected losses (12 killed plus six sent to ship) only partly offset by hatchings (20). The detail "6 to the ship" against the turkeys (and probably also covering some hogs in the obscured column) provided the working evidence behind the council's reply to Lihorne about supplying the Aurengzebe. The Company had no beef to spare, as the letter explained, but had given six turkeys and other small livestock to the ship from its own stock, demonstrating good faith within the limits of its scarcity. Speculations: The hog acceleration from 77 to 186 head in one month is too rapid to be biological even at the most prolific rates of breeding. The figure must include a large purchase of hogs from planters, perhaps in connection with the debt-conversion programme of 24 August 1714 or the indebted-planter pressure during the labour combination broken three days earlier on 18 January 1714/15. Walter Morris had been compelled to sell his slave Nick at £25 0s 0d and yams in settlement of his £38 0s 0d debt, and a similar mechanism may have been operating across other indebted planters who were now exchanging livestock for debt relief. The hog total now standing at 186 head would give the Company a substantial reserve against future shortage. The persistence of three sheep across both returns, with no recorded change, suggests the Company kept the small flock for breeding purposes rather than for any current production. Three head, presumably two ewes and a ram or one ram and two ewes, were the bare minimum to maintain the line. The intention may have been to retain the option of sheep production for the future without devoting current resources to expanding the flock, against the day when wool or mutton might again be needed.
325	316	Sheep 3 Geese bought 4 [...] Geo: Haswell [...] Tovey Island S[t]. Helena At a Consultation Held on Tuesday the 25[th] day of January 1714[.] at the United Castle in James Valley. Isaac Pyke Esq[r]. Govern[r]. George Haswell D[e]p[ty] Edward Mashborne 3[d] Mat[h]w. Bazett 4[th] & Antip[s] Tovey 5[th] in Counc[il] Prest The Petition of Doct[r] Porteous was presented as followeth viz[t] To the Worshipfull Isaac Pyke Esq[r]. Governour & Councill. The Petition of William Porteous Surgeon Humbly Sheweth. That from Lady day Last was twelve months your Petitioner had the Allowance of Forty Pounds p[er] annum Sallary in Consideration of his House Rent but no Allowance for Arrears as others had tho' he had no other Shop but at his own hired House. Wherefore Margin Notes: D[r] Porteous Petition ab[t] House rent &c	The livestock account concluded: 3 sheep 4 geese bought Signed Pyke, Haswell, Tovey. St Helena. At a consultation held on Tuesday 25 January 1714/15 at the United Castle in James Valley. Present: Isaac Pyke, Governor; George Haswell, Deputy Governor; Edward Mashborne, third; Matthew Bazett, fourth; Antipas Tovey, fifth in council. The petition of Doctor Porteous was presented as followeth. To the Worshipful Isaac Pyke, Governor, and council. The humble petition of William Porteous, surgeon. He set out that from Lady Day last twelve months his allowance had been £40 0s 0d per annum salary in consideration of his house rent, but no allowance for arrears as others had, though he had no other shop but at his own hired house... Interpretations: The livestock account closed with three sheep and four geese bought, the same modest sheep population observed at the start of the month confirming no change in flock policy. The signatures of Pyke, Haswell and Tovey closed the <i>Aurengzebe</i> business and the linked livestock returns. Mashborne and Bazett's omission from the signatures is consistent with Mashborne having compiled the account (he is named as delivering it on the previous page) and Bazett perhaps being engaged elsewhere on storekeeping duties. The Porteous petition revisited the surgeon's salary settled on 3 November 1713 at £40 0s 0d per annum, house rent included. The earlier settlement was framed

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			as a consolidation of his earlier mixed package of salary plus servant plus accommodation perquisite into a single salary figure inclusive of civilian lodging cost. Porteous now claimed that, while others on the establishment had received their arrears, he had been allowed no equivalent for the period before the salary settlement. The "Lady Day last twelve months" formulation places the start of the £40 0s 0d salary at 25 March 1714, suggesting the November 1713 council order had been backdated to take effect from the start of the financial year on Lady Day rather than from the date of the order itself. The reference to "his own hired house" connected the salary to a specific housing arrangement. Porteous had been paying £30 0s 0d in rent for lodging outside the castle since the demolition of James Fort, as recorded in his earlier petition. The £40 0s 0d salary was consolidated to cover this rent, with £10 0s 0d remaining as net pay for his service. His complaint that he had "no other shop but at his own hired house" indicated that the surgeon's working accommodation, the place where he saw patients and kept his medicines, was the same hired house for which he was paying rent. The dual function (private dwelling plus surgical practice) was financed entirely through his single salary. The petition's claim of arrears suggests that other members of the establishment had been granted retrospective payments for service before their salary settlements were finalised, but Porteous had been excluded from this general settlement. The "others" he referred to were probably the council members and senior officers whose salaries had been consolidated under paragraph 45 of the Toddington letter as second in council £70 0s 0d, third £50 0s 0d, fourth £40 0s 0d, and so on. The arrears mechanism would have applied differentially across the establishment, with senior figures recovering more than junior service-providers. Speculations: Porteous's claim of arrears probably rested on a comparison between his treatment and that of the chief surgeon Mr Price. Price had been confirmed at £39 0s 0d per annum with table on 13 July 1714, while Porteous had been retained at £30 0s 0d with diet at the Fort on the same day. The subsequent rise to £40 0s 0d on 3 November 1713 had brought Porteous up to roughly Price's level but without the perquisite of dining at the Fort table, with Porteous paying his own diet from his salary. The differential treatment, particularly the lack of arrears for the period before the consolidation, would have been a source of continuing grievance. Porteous had served almost six years without the salary his predecessor had received, as he had set out in his earlier petition, and the present application appears to renew that line of complaint. The choice of Lady Day (25 March 1714) as the salary commencement date, rather than 3 November 1713 when the council order was made, indicates that island salaries operated on an annual basis tied to the conventional English quarter days. The settlement was effectively backdated to the start of the salary year, with Porteous receiving five months of retrospective pay (March to July 1714) as part of the £40 0s 0d annual figure. His present claim of arrears would therefore concern the period before 25 March 1714, that is, the period of his earlier service at a different rate. The mechanism reveals that the council operated a settled financial year for salary computation, with adjustments tied to the quarter day rather than to the date of the order making the change.
326	317	Wherefore your Petitioner humbly prays that you would please to take his case into your Consideration that he may have the same Sallary as before your Worships Arrivall and some allowance for Rent before said Sallary was Enlarged. And your Petition[r] as in duty bound shall	The petition concluded. Porteous prayed that the council take his case into consideration, and that he might have the same salary as before the Worship's arrival, with some allowance for rent before that salary was enlarged. 		for ever pray &c[a]. W[m]. Porteous. Ordered. That it be Enquired into what has been Customary in this Case and reported next Council day. Cap[t]. Mashborne reports that he has planted forty two Thousand Suckers more at the Hutts plantation. Ordered that a Letter be drawn up to be sent to Our Honour[ble] Masters p[r] Aurengzebe and that the Governour be desired to prepare it. Thus farr was sent home p[r]. Ship Aurengzebe. [...] Geo: Haswell [...] Tovey Margin Notes: Desires his Sallary to Continue &c allowance for rent To be Enquir[d] into. Such[s] planted at Hutts. a Lett[r] to be drawn up.	The council ordered that the matter be enquired into, to determine what had been customary in this case, and reported next council day. Captain Mashborne reported that he had planted 42,000 suckers more at the Hutts plantation. The council ordered that a letter be drawn up to be sent to the Honourable Masters by the <i>Aurengzebe</i>, and that the Governor be desired to prepare it. Thus far was sent home by the ship <i>Aurengzebe</i>. Signed Pyke, Haswell, Tovey. Interpretations: The Porteous petition's substantive request was twofold: continuation of the £40 0s 0d salary settled on 3 November 1713 (now backdated to 25 March 1714 as discussed), and an additional allowance for rent for the period before the salary was enlarged. The second request was the crucial new element, seeking to recover the £30 0s 0d annual rent he had borne unaided during the period of his earlier mixed package, between the demolition of James Fort and the November 1713 consolidation. By framing the claim as one of customary practice, Porteous invited the council to compare his treatment with established precedents on the establishment. The council's measured response, to enquire into customary practice and report at the next council day, reflected Pyke's procedural caution on financial matters. Rather than granting or refusing the claim directly, the council deferred to a separate fact-finding exercise that would establish the historical pattern of arrears settlements on St Helena. The mechanism preserved the council's authority to apply consistent rules across the establishment, and avoided creating a Porteous-specific exception that might generate further claims from others in similar positions. The report at the next council day, due 1 February 1714/15, would give the council the basis for a principled decision. The Hutts plantation report of 42,000 yam suckers planted by Mashborne added to the running picture of agricultural expansion. The Hutts had been surveyed on 10 August 1714 with five Company plantations totalling 555,550 yams, of which the Hutts was one. The further 42,000 suckers represented a substantial extension of the Hutts production base, planted into ground newly cleared or recently rebuilt. The colony's principal caloric source was being deliberately built up under the new administration, recognising that yam shortage had been one of the standing problems through the drought period. The endorsement "Thus far was sent home by the ship <i>Aurengzebe</i>" marked the closing of the consultation packet for despatch to London. The <i>Aurengzebe</i>'s arrival on 14 January 1714/15 had begun the working sequence that closed on the present 25 January 1714/15 entry, with all the intervening consultations now bundled for transmission to the Honourable Masters. The packet would have included the letters to and from Captain Lihorne, the livestock returns, the Bodley advertisement, the outcry accounts, the Bagley lease entry, the Steward probate and Wood-Wills referral, the Pledger settlement and the Porteous petition. The directors in London would receive a comprehensive working record of the Pyke administration's first six and a half months in office through this single ship. Speculations: The Governor's preparation of the letter to London probably gave Pyke the opportunity to frame the documentary case against Boucher in the form most favourable to the new administration. The principal items recorded across the recent consultations (the stripped Castle fittings, the missing Susannah and Toddington letters, the ruined Plantation House, the burnt slaves' house, the General Table failures, the Bodley appraisalment-block, the absorbed Hugh Bodley plantation) all stood ready for narrative presentation. By

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			packaging these matters into a single composed letter rather than relying on the directors to piece them together from the consultation entries, Pyke could control the framing and the emphasis. The choice of governor's pen rather than collective drafting reflected the importance of the document as the new administration's first major report home. The 42,000 suckers planted by Mashborne at the Hutts may also have been a deliberate gesture timed for the <i>Aurengzebe's</i> departure. The figure could be entered in the letter as evidence of the new administration's industry, contrasting the active planting programme under Pyke with the neglected state of Company plantations under Boucher. Mashborne's report appearing on the same consultation day as the order for the despatch letter is unlikely to be coincidental, and the figure of 42,000 (a precise rather than rounded number) suggests it was carefully counted for the record.

			<i>Susanna's</i> 20¾ [...] plantation: £0 6s 8d <i>Rochester's</i> 252¾ [...]: £3 13s 6d, total £4 2s [...], grand total £25 1s 6½d Soap, Bengal 258 at 8d per pound: inhabitants £8 12s 0d Castile 25¾ at [...]: £1 18s 5½d, total £10 10s 5¾d ditto 2 at [...] general charges: £0 2s 9d ditto 125¾ [...] plantation: £9 4s 10½d Bengal 13¾ at [...]: £0 9s 0d, total £9 13s 10½d, grand total £20 8s [...] Carried over £216 13s 8¼d (inhabitants), £59 17s 2¾d (plantation), £198 14s 2½d (general charges) Grand total carried over £475 5s 9¼d Interpretations: The storekeeper's account ran for the first three and a half months of the Pyke administration, from his arrival on 8 July 1714 to 25 October 1714. The columnar structure (inhabitants, plantation, general charges) followed the format established earlier under Bazett's storekeeping, classifying each commodity by destination across three channels: civilian purchasers, the Company's own plantation use, and the general charges of the Castle and General Table. Arrack at 9s 0d per gallon confirmed the retail rate set in advance for the cargoes of the Abingdon, the Stretham and the Marlborough during 1714. The total of £290 1s 7½d for arrack alone made it the single largest commodity in the account by value, with the bulk flowing to inhabitants (£134 2s 0d) and general charges (£120 0s 9d) and only a modest portion to the plantation. The pattern reflected arrack's role as the principal luxury liquor of the colony, served at the Fort table and dispensed to inhabitants at full retail, with limited plantation use (probably as a Christmas issue to the slaves). Two ship sources appeared in the bread account: the <i>Susanna</i> and the <i>Rochester</i>. The <i>Susannah</i> cargo had been absorbed across the storekeeper's accounts from late 1713, while the <i>Rochester</i> had arrived on 8 July 1714 carrying Governor Pyke and his commission. The two ships had each delivered different qualities of bread at different price points, and the account separated them carefully. The <i>Rochester's</i> bread at 3¾d per pound ran at a higher price than the <i>Susanna's</i> 2d per pound bread for general charges, possibly reflecting different qualities or different production dates. Bengal soap and Castile soap appeared together in the account at differential rates. Bengal soap (at 8d per pound for inhabitants) was the East India product produced in Bengal from coconut oil and local lye, characteristic of the Company's trade goods. Castile soap (a harder olive-oil-based soap originally from Spain) commanded the higher Mediterranean import price, with smaller quantities passing through the account. The presence of both soap varieties in a single accounting period illustrated the colony's dual procurement pattern: bulk Indian goods through Company shipping, premium European goods through the same network at higher rates. Speculations: The unbalanced column structure across commodities reveals where each line was deployed. Tobacco went almost entirely to inhabitants (£19 18s 0d of £22 4s 0d total), while the bulk of flour went to general charges (£12 6s 2½d of £24 9s 3¾d) for use in the Castle and the General Table. Arrack split roughly equally between inhabitants and general charges. The composition suggested that inhabitants spent on personal consumables (tobacco, sugar, soap, bread), while the establishment dominated the institutional consumption of cooking ingredients (flour, ale, bread

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			for the General Table). The plantation, the Company's own working ground, took only the working ration items needed for its slaves and overseer. The selection of 8 July 1714 as the account's opening date reflected Pyke's arrival on the <i>Rochester</i> as the breakpoint. The new administration had begun a fresh storekeeper's account from the moment of the change of government, treating the prior period as Boucher's closing accounts and the present series as the Pyke administration's opening books. The clean start to the documentation supported the wider programme of administrative renewal that Pyke had imposed across the Company's record-keeping, beginning with the inventory programme of 9 July 1714 and continuing through the monthly account orders of 24 April 1714.

			Thimbles 9: [...] Silk and thread laces, 1 silk ditto: £0 0s 10d 2½ at 7d each: £1 2s 0d total £0 2s [...] Gartering 10 yards ditto at 2d per yard: £0 1s 8d inhabitants £0 1s 8d Coloured tape 3 [...] ditto: £0 3s 4d 6 ditto at 1s 0d general charges: £0 10s 0d total £0 18s 4d Oils 18½ gallons rape, 7½ gallons inhabitants: £6 [...]s [...]d 5 gallons linseed: £0 5s 0d inhabitants £7 4s 6d 107½ pounds rape at 7s, general charges: £3 16s 6¼d 22¼ ditto plantation: £0 19s 9¾d total £12 19s 11½d Carried over £298 11s 10¼d (inhabitants), £61 1s 9¾d (plantation), £204 0s 1½d (general charges), grand total £563 13s 3½d. Interpretations: The haberdashery section catalogued the small textile and sewing items routinely supplied to the colony. Tape (narrow woven strips for binding seams and trimming), thread of various colours, yarn for darning and mending, pins, needles, thimbles, ribbon, galloon (a narrow tightly-woven trim used for edging garments), gartering (narrow band material for tying stockings) and silk and mohair (the latter a strong fibre from the angora goat) made up a comprehensive sewing kit for the household economy. The detail that 100 needles out of 300 had been "eaten with rust" before sale reflected the impact of the salt air on iron goods in store, with a quarter of the stock spoiled before reaching customers. The remaining 200 needles were sold off at a discount to inhabitants. The "nuns" thread was a fine cotton or silk sewing thread, named for its association with conventual needlework. The "flourishing" thread, sold at 6d per ounce, was used for decorative embroidery rather than plain sewing. The colour variants (brown, white, coloured) gave the user a small selection for different garment colours and types of work. The household textile economy of St Helena maintained reasonable variety in sewing supplies despite the isolation of the colony. The two oil entries (rape and linseed) represented different culinary and industrial uses. Rape oil, pressed from rapeseed, was the principal cooking oil and lamp oil of the establishment, with the bulk going to general charges (£3 16s 6¼d) and modest portions to inhabitants and plantation. Linseed oil, pressed from flax seed, was used both for cooking and as a wood-finishing oil for furniture and tools. The price differential between the two confirmed earlier observations: linseed oil at around 6s 11d per gallon in earlier records, against the cheaper rape oil. The present rate of 7s per pound for rape (a price-per-weight rather than per-volume measure) suggests the oil was packaged or measured by weight rather than fluid volume in this account. Silk and mohair appeared in significant quantities at premium prices: silk at 16s per ounce, mohair at 2s per ounce, and 1 ounce 5 [...] silk at 2s 6d for general charges. The high price of silk reflected its status as a luxury textile imported through the Company's Madras trade. Mohair, more accessible and used for finer thread

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			or trimmings, was supplied at a tenth of silk's price. The presence of both fibres in the storekeeper's account showed that the colony's higher-status inhabitants commanded access to luxury sewing materials alongside the working textile supplies. Speculations: The very small denominations in the haberdashery section (items priced at 2d, 4d, 6d, 9d, with single ounces, single yards, single pieces) reveal the granular character of household supply at St Helena. A planter's wife or seamstress could acquire two ounces of brown thread, three ounces of coloured tape, ten yards of gartering and a handful of pins from a single shop visit, supplied piece by piece from the Company's bulk stock. The pricing structure was probably standardised across all customers, with no negotiation, reflecting the Company's status as monopoly supplier of these small items to a colony with no competing retail. The "100 needles eaten with rust" reveal the practical limits of long-distance trade in iron goods. Needles shipped from England, perhaps via Madras as a transit point, would have been months in damp ship's holds before reaching St Helena, with further storage time before sale to the eventual user. A quarter spoilage rate suggests the stock was perhaps a year or more in transit and storage. The Company's willingness to record the spoilage and price the remaining 200 at a discount, rather than concealing the loss, illustrates Pyke's transparent storekeeping discipline at work.

Interpretations: The ironmongery section recorded a substantial range of tools issued to the colony across three months, divided between civilian inhabitants (hoes, hatchets, hand tools for planters' own use) and general charges (carpenter's, joiner's and household equipment for the establishment). Hoes, the principal agricultural hand tool used by both free planters and slaves, came in two grades: standard at 2s 6d each and narrow at 2s 2d each, suggesting different patterns for different soil or crop conditions. Axes appeared in multiple specific forms (broad axe, grubbing axe, joiner's hatchet, house adze), each with a particular use in the carpentry and clearing economy of a planter household. The presence of plain irons (5 to inhabitants and 10 to general charges) reflected the laundry routines of both private households and the establishment's General Table service. A "plain iron" was a smoothing iron heated on the fire and used for pressing linen. The

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			box iron, sold at 8s 0d to a single household buyer, was a more sophisticated implement holding a heated metal slug within a closed box, allowing more controlled heat for finer pressing of garments. The accompanying "2 heaters" at £0 1s 9d were the replaceable heated slugs for use in the box iron. The household textile economy required both the rougher plain iron for everyday work and the box iron for finer linen and dress items. The "grindstone" at £0 12s 0d in the general charges represented a substantial capital tool for sharpening edge implements. It would have served the carpenter's shop, the armoury and possibly the kitchen, providing a fixed point for honing axes, chisels, saws and other cutting tools. The single grindstone in this three-month account, sent to general charges rather than to any individual, illustrated the Company's role as central provider of expensive shared infrastructure for the establishment. The categorisation of items by destination shows the working division of equipment. Iron pots, hatchets, hoes, locks and standard tools went to inhabitants for domestic and agricultural use. Joiner's tools, the grindstone, the chafing dish and the frying pan went to general charges for the kitchen and the carpenter's workshop at the Castle. The plantation column for this section recorded only the subtotal duplication; no separate goods went to plantation use, suggesting the colony's own working ground had its own existing tool stock without need for new equipment during this period. Speculations: The detailed specification by number of tool grade (hatchet No. 3, hatchet No. 4, hammer No. 6, lock No. 2) shows that Company supply ran on standardised pattern catalogues, with goods supplied by their factory grade rather than by general description. The supplier in England would have produced tools to numbered patterns of size and weight, with the Company's order specifying the desired grades. The presence of the grade numbers in the storekeeper's record indicates that the inhabitants placed orders by reference to the same pattern numbers, a small but significant feature of supply-chain integration between London production, Company shipping and St Helena distribution. The 18-pound iron pot at 9d per pound, totalling £0 9s 0d, was sold at a unit price calculated by weight, the standard mode of pricing iron vessels in early modern trade. The weight pricing reflected the cost of the material rather than the labour of manufacture, with the iron pot effectively sold as so much iron in pot form. The household receiving the pot would have used it for the principal kitchen vessel of the colony's cooking economy, suspended over the fire by the pot hooks (sold at 2s per pair). The combined purchase of pot and hooks by the same household represented a substantial cooking outfit at a total of £0 13s 0d.

			general charges subtotal £10 3s 3d plantation £1 18s 4d Carried over £244 19s 11¼d (inhabitants), £79 0s 10¾d (plantation), £225 9s 2½d (general charges), grand total £549 9s 4½d. Interpretations: The second ironmongery section opened the plantation column, recording the working tools issued to the Company's own ground. Twelve round hoes and eleven narrower ditto formed the principal agricultural complement, suggesting the plantation's slaves and overseer were equipped with roughly twenty-three hoes for the active yam-growing programme. Eight spades at 5s 6d each and eight larger ditto at 6s 9d each gave the field gang a substantial tooling for trenching and earthwork, possibly in connection with the drainage trench ordered for the Plantation House in September 1714 and the wider land management activity of late 1714. The total plantation outlay of £10 18s 5d for ironmongery represented a significant investment in the colony's productive infrastructure. The nails section displayed the working principle of pricing iron fasteners by weight rather than by count. Nails of different sizes, indicated by their per-pound price (7d for some grades, 6½d for others, 10d for finer or specialised types), made up the bulk of the fastener purchases. The general charges total of £10 3s 3d for nails reflected the substantial building and repair work in progress: the lime kiln near the old Roberts kiln, the new goat pound at Clapper Door house, the rebuilding of the Secretary's office ordered on 24 August 1714, and the continuing fence repair programme would all have consumed nails in quantity. "Flowering brads" at 8½ pounds and copper rivets at 8 pounds reflected specialist fastening needs. Flowering brads were small thin nails with broad flat heads, used for decorative work, upholstery and joinery where the fastener should be inconspicuous. Copper rivets, sold at 1s 1d per pound, were used for joining metal sheets and were resistant to corrosion. The presence of these specialist items in the storekeeper's account showed that the Company's establishment included skilled finish-carpentry and metalwork beyond simple structural building, with provision for decorative joinery and durable fastenings as part of the working programme. The "fish iron" sold to plantation at £0 4s 3d, with a separate handle at £0 4s 4d, was probably a fish-spear or fish-gigging implement used for catching fish at low tide or in shallow water. The plantation's protein supply would have included fish caught locally to supplement the meat economy strained by the cattle mortality. The provision of a fishing implement to the plantation indicates the Company expected its working ground to supply some of its own protein through fishing, reducing demand on the scarce beef supply. Speculations: The pillyards (pulleys) at 16 pounds, No. 4 at 2s 8d per pound, totalling £1 2s 0d, suggest the plantation was being equipped with new lifting or hoisting tackle. The standard use of pulleys on a plantation would be for hauling water from wells or for lifting loads in construction work. The notably heavy single purchase (16 pounds) at one of the higher unit prices in the account suggests a substantial piece of equipment, perhaps for the drainage works or for the loading platform at the boats' beach. The figure represents a significant capital item rather than a routine supply purchase. The persistent presence of grindstones in the account (one at £0 12s 0d for general charges in the previous section, one at £0 5s 6d for plantation in this section, with no overlap) indicates that the Company maintained separate workshops at the Castle and at the plantation, each with its own grinding station. The

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			plantation grindstone, costing less than half of the Castle one, was probably a smaller or older model adequate for sharpening field tools (hoes, axes, scythes) rather than fine workshop work. The duplication of essential equipment between the two centres reflected the practical impossibility of carrying tools between them for sharpening.

Interpretations: The brasiers were section listed working items in brass and copper for cooking and lighting. Brass and copper alloys were the principal alternative to iron in kitchen and lighting use, valued for their heat conductivity, resistance to corrosion and decorative appearance. The four lamps at 3s 11d each given to inhabitants indicates that domestic lighting was a routine commercial item, with each lamp consisting of a brass reservoir for oil, a wick and a flat saucer base. Chafing dishes (heated dishes used to keep food warm at table) and a copper sauce pan furnished the colony's better kitchens. The pot and cover at 12½ pounds for £4 10s 9d was a substantial Castle item, probably for the General Table where larger quantities of food were prepared at one cooking. The turnery ware section recorded wooden goods produced by lathe work, primarily kitchen utensils. Six wooden platters at 1s 3d each, six porringers (small bowls for porridge or stew) at 6d each, and straining dishes for cooking provided the dining and food-preparation tools for households and the establishment alike. The "flagg brooms" were brooms made of flag, the leaves of the iris or related marsh plant, used as a common rough-sweeping implement for floors and

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			yards. House brushes (probably stiffer bristle brushes) and scrubbing brushes (used with water for cleaning surfaces) completed the cleaning supplies. The cutlery section sold a small range of cutting implements to all three destinations. Three knives and forks to inhabitants at £0 8s 0d indicates household tableware was acquired piece by piece rather than in matched sets. Two razors at 4s 3d each (£0 8s 6d total) for inhabitants reflect the continuing shaving needs of the male population, with the cost per razor matching the seven razors sold at Taylor's outcry for £0 11s 6d (about 1s 6d each at outcry, versus 4s 3d new). The 3½ dozen pruning knives at 1s 8d each in the general charges, totalling £3 0s 0d, represented a bulk purchase for orchard and garden work, possibly in connection with the lower vineyard restoration mentioned in earlier records. The Hutts plantation and other gardens would have absorbed forty-two pruning knives for trimming yam suckers and other plant maintenance. "Paddington" appearing alongside the pruning knives is probably the name of the supplier or place of manufacture, perhaps Paddington (the English village near London with cutlery production in this period) or a similar place name. The specification reflects the Company's standardised supply chain in which goods were ordered by place of manufacture as well as by type, giving buyers a recognisable quality reference. Paddington pruning knives at 1s 8d each would have been a known grade of working garden tool. Speculations: The substantial quantity of pruning knives (3½ dozen, equalling 42 individual knives) in the general charges is much larger than would be needed for ordinary garden maintenance at the Castle. The figure suggests the Company was issuing pruning knives in some quantity to the Hutts and other plantations, or to free planters and slaves working on Company-directed garden tasks. The bulk procurement at 1s 8d each, well below the price of any other cutting implement in the account, made the pruning knife the principal small tool of the colony's horticultural economy. The recipient detail is missing from the present line but would have been recorded elsewhere in the storekeeper's books. The two scrubbing brushes sold to inhabitants at £0 4s 10d for the pair represented a meaningful step up in cleanliness practice. Scrubbing brushes with stiff bristles, used with water and probably with Castile or Bengal soap from the earlier section, would have been the implements of a household that maintained polished wooden floors and clean stone surfaces. The presence of such items in inhabitants' purchases indicates that at least some St Helena households had aspirations to a standard of cleanliness beyond rough-and-ready sweeping, supported by the Company's supply of both brushes and soap.

Interpretations: The textile section represented a substantial fraction of the storekeeper's total turnover, with cloth and clothing alone accounting for nearly £100 0s 0d across the three columns. The range of fabrics shows the variety of English and East Indian textile manufactures available on St Helena. Black crape was a fine open-weave silk or worsted fabric used principally for mourning dress and trimmings, sold here in 66½ yards at £7 4s 4¼d. Druggetts, a coarse woollen cloth often mixed with linen or silk, served for outer coats. Shalloons, a lightweight woollen fabric, were used for linings and women's garments. Kerseys, a hard-wearing twilled woollen cloth, made up working clothes and outer garments at the harder end of the wardrobe. Broad cloth, the premium woollen fabric of English production, appeared in two grades. The standard at unspecified rates, and the scarlet at 20s per yard, the latter being one of the highest unit prices in

			the entire account. Scarlet broad cloth was the prestige garment material of the period, used for military uniforms (the red coat) and gentlemen's clothing. The 4¾ yards of scarlet sold to inhabitants at £4 15s 0d represents a substantial luxury purchase by a single household, perhaps an officer fitting out a uniform coat or a planter commissioning a fine garment. The lighter fabrics included durants (a strong wool with a glossy finish), perpetts (perpetuana, a long-lasting fine worsted), Norwich stuff (worsted woollens from the Norwich textile region of England) and fustians (corded cotton-linen blends from the Manchester area). Each fabric served a particular purpose in the wardrobe of the working and middle ranks. The flannels at 2s 7d per yard were softer woollens used for shirts, underclothes and infant wear. Manchester ticks at four different price points reflected the various grades of striped cotton-linen ticking used for mattresses, pillows and bedding. Sacking at 47s 6d per piece, three pieces sold to plantation for £7 2s 6d, was the heavy hempen or jute cloth used for grain sacks, baling and rough storage on the working ground. Ozenbriggs (Osnaburgs, a coarse linen originally from Osnabrück in Germany) at 25 yards for £1 13s 4d was used for slave clothing and rough working garments, the cheapest fabric for the lowest end of the wardrobe. Romalls (a striped or chequered cotton cloth from the Indian trade) at 4 yards for £0 5s 0d represented the East Indian alternative to European cottons. The hat section included nine coarse hats at 4s 4d each for inhabitants, alongside finer hats at 25s 3d, the premium hat referred to in the master reference as part of the Susannah cargo pattern. The premium hat at over a pound represented prestige headwear for the higher ranks. The blankets section, with thirteen pairs going to general charges at £10 1s 6d, supplied bedding for the Castle establishment, soldiers' quarters and hospital alongside more modest household purchases by inhabitants. Speculations: The scarlet broad cloth purchase by a single inhabitant at £4 15s 0d represents the most substantial single textile transaction in the account so far. The likely purchaser would be a member of the council, a senior officer or a leading planter commissioning a fine outer coat. Production of the finished garment from the cloth would have required local tailoring, with the Manchester tailor's shears at £0 1s 0d from the previous section providing the working tool for the cutting. The substantial cost of the materials (cloth, lining, buttons, thread, mohair trim and possibly silk) suggests the finished garment would represent a several-pound investment in a single piece of clothing, marking the higher status of its owner in the colony. The three pieces of sacking sent to the plantation at £7 2s 6d in total reflect the working bagging needs of the yam-growing economy. With 555,550 yams catalogued across five Company plantations in August 1714 and 42,000 new suckers planted at the Hutts in January 1714/15, the plantation required substantial sacking capacity for handling, storage and transport of the crop. The bulk plantation supply of sacking gives a physical measure of the agricultural rebuild taking place during the Pyke administration's first six months, with material supplies provisioned in proportion to the expected harvest.

			£1 7s 3d 9 lines [...] £1 6s 8d plantation subtotal £3 11s 0d Ink colours 1 [...] ounce ditto, [...] [...] inhabitants £1 6s 1d Sweet powder 17 [...] at 1s [...] [...] inhabitants subtotal £1 6s 1d Carried over £346 19s 7¼d (inhabitants), £98 1s 6¾d (plantation), £248 7s 6d (general charges), grand total £688 8s 8d. Interpretations: The footwear section catalogued the principal categories of shoes supplied to the colony. Men's English shoes at £0 7s 0d the pair (25 pairs at £8 15s 0d) formed the bulk of the men's wear category, with English manufacture providing the standard quality. Women's Spanish shoes at 7s 9½d per pair indicated a recognised Spanish-leather women's footwear of higher quality than the standard, perhaps made of cordovan (the leather from Cordoba in Spain) for whose finer finish women's footwear was valued. Boys' shoes at 3s 8d the pair and children's pumps at 1s 0d completed the children's wardrobe at progressively lower prices for smaller sizes. The "island pumps" at 5s 0d per pair, sold eight pairs at £2 0s 0d, were locally produced footwear by William Penny or the Company tannery, distinguished from imported English manufacture by both price and source. The presence of island pumps alongside imported shoes shows the colony maintained a working local shoemaking trade in parallel with the imported trade. The stockings section recorded the standard hosiery of the household: flesh ditto (a flesh-coloured cotton or worsted), thread (linen-thread stockings, lightweight for warm weather), and worsted (heavier woollen stockings for cooler conditions or formal wear). The seven pairs of worsted stockings from the <i>Susanna</i> cargo at 10s 3d each, the highest hosiery rate in the section, represented the premium men's stockings of the colony. The variation in thread stocking prices (8s 8d, 8s 0d and 4s 6d) reflected different grades and qualities within the thread category. The stationery section provided the colony's principal religious and educational reading: one large Bible at £1 4s 6d, one primer at £0 0s 6d (a small instruction book for children's reading), one horn book at £0 0s 4d (a wooden paddle with the alphabet protected behind transparent horn), and three New Testaments from the <i>Susanna</i> cargo at 1s 9d each. Together these items provided a complete domestic religious and literacy supply, with the large Bible for family reading, Testaments for personal use and primers and horn books for teaching children to read. The 5¼ pounds of paper at 1s 8d per pound rounded out the section with writing material for letters, account-keeping and educational use. The hooks and lines section reflected the colony's fishing economy. With 71 dozen sorted hooks to inhabitants, 14 dozen to general charges and 36 dozen to plantation, the colony procured over 1,400 fish hooks in three months. The substantial plantation allocation of 36 dozen hooks and 9 lines confirms that the working ground was being equipped to catch fish in quantity, supplementing the protein supply during the cattle scarcity. The substantial inhabitants' allocation indicated private fishing was an active part of the household economy, providing food and probably petty trade. Speculations: The very large procurement of fishing tackle across the three columns probably indicates a deliberate council programme to supplement the protein supply

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			through marine harvest during the cattle scarcity. With over 2,500 head of cattle lost on the island, as the council had reported to Captain Lihorne, fish became a critical alternative source of meat. The provision of substantial fishing tackle to free planters (71 dozen hooks) and to the plantation slaves (36 dozen hooks) shifted both labour categories towards fishing as a part-time activity, reducing pressure on the depleted cattle herd while maintaining the colony's caloric supply. The 50 dozen breast buttons (600 individual buttons) at 6d each, totalling £0 18s 9d, indicates substantial production of new garments by the colony's tailors during the period. Breast buttons were used principally on coats and waistcoats, with about six to twelve required per garment. The 600 buttons would have furnished between fifty and a hundred new garments in three months, suggesting active tailoring among the inhabitants either for their own clothing or for sale. The volume of button procurement, combined with the substantial textile purchases in the previous section, indicates that the colony's clothing economy was producing finished garments at significant scale during these months.

Interpretations: The Indian goods section, the largest single category in the storekeeper's account so far, recorded textiles brought from Bengal aboard the <i>Success</i>. The cargo was substantial: 149 pieces of cuttineese, 11 pieces of chinto, 115 pieces of niccaloes, 133 pieces of gingham, 24 pieces of long cloth, 134 pieces of challoes, plus smaller lots of gurrhaes, dungerees, neckcloths and shirts. The total Indian cloth turnover ran to several hundred pounds sterling, dwarfing the English textile section that preceded it. The dominance of Indian goods in the colony's textile supply reflects the Company's primary trading orientation toward the East Indies, with St Helena as a stopping-point on the homeward run where Indian piece goods could be sold to the inhabitants at retail rates much higher than the wholesale acquisition cost in Bengal. The specific fabrics each had a recognised use in the colony's wardrobe. Cuttineese (cuttane), a striped silk-cotton mix, served for waistcoats and women's gowns at 16s to 18s 10d per piece. Chinto (chintz), a printed cotton with flowered or figured patterns, was used for bed-curtains, hangings and women's clothing at the lower price of 11s 9d per piece. Niccaloes (a fine Indian cotton from Nellore or similar source) at 14s to 16s 6d per piece, and gingham (striped or checked cotton from the Indian east coast) at 9s to 11s per piece, were the principal cotton dress and household fabrics.

			Long cloth, the heavier plain white cotton at 22s to 24s 9d per piece, formed the basis for shirts and bedding. Challos (challas, a coarse cotton) at 5s per piece supplied the cheaper end of the cotton trade. The Gurrhaes, Dungrees, and Niccaloes terms refer to different grades of plain Indian cotton, named after the Indian regions or villages where each was originally produced. Gurrhaes (from Gurrah in Bengal) at 16s 6d per piece were a finer grade; dungrees (from Dungri near Bombay) at 5s 4d to 5s 8d per piece were a coarser working cotton, the ancestor of modern dungarees. Neckcloths at £1 7s 6d to £1 8s 5d each were finished cotton or linen items worn around the neck as a cravat or scarf. Ready-made shirts at 2s 6d each for the standard and 8s 6d each for the fine completed the Indian clothing section, providing both bulk and premium garments without need for local tailoring. "Metal buttons", separated into brass and pewter varieties in the general charges, supplied the Castle establishment's tailoring with cheap fastener stock. Five dozen of brass at £0 5s 10d and 13 dozen of pewter at £0 4s 0d together provided over 200 buttons for institutional clothing, principally soldier and slave clothing, where copper or pewter were more durable than the silver twist buttons noted in the Susannah cargo for premium households. Speculations: The very substantial volume of Indian textiles sold to inhabitants (running to nearly £400 0s 0d in just this section) reflects the colony's role as principal distributor of Indian goods to the South Atlantic. With Sandy Bay and James Valley together housing perhaps 200 European adult inhabitants plus the slave population, the per-capita textile consumption indicated by these volumes is substantial. The supply pattern suggests that planters and inhabitants were purchasing Indian cloth not only for personal use but also for re-trade to ships' captains, who could carry it on to the Atlantic colonies or to England for resale. The colony's storehouse functioned as a secondary entrepot for East Indian textiles, generating substantial Company revenue alongside the basic local supply function. The Bengal origin of the entire Indian section, brought specifically by the <i>Success</i>, shows the working pattern of the Bengal trade. Bengal cottons were the cheapest and most varied of the Indian textile manufactures, and the <i>Success</i> had brought a representative range. The previous storekeeper's account for the period 25 December 1713 to 25 February 1714 had identified Captain Thomas Clatham as commander of the <i>Success</i>, with the <i>Success</i> arrack at 7s per gallon distinguished from the fresh arrack of shipping at 9s 3d per gallon. The present cloth cargo, sold across the July to October 1714 retail window, confirms the <i>Success</i> had brought both arrack and textiles together as a substantial cargo for the colony's slow absorption over several months.

			[Inhabitants column for goods sold this section] £797 17s 7½d, plantation £108 11s [...], general charges £283 3s 3½d, total £1,189 12s 10¼d. Carried over £0 15s 6d (inhabitants), £0 12s 0d (plantation), £0 18s 0d (general charges), [subtotal] £2 5s 6d. Interpretations: The paintings section recorded the colony's supply of pigments and lead-based materials for painting and decorating. White lead, the principal white pigment of the period made from lead carbonate, served as the base for paints and exterior finishes. Indigo, the deep blue dye produced from the indigo plant of Bengal and other Indian regions, was used here probably for tinting paints. The lead at 3s 0d per piece in substantial quantities (76 pieces to inhabitants, 13 pieces to plantation) suggests a working programme of paint mixing for buildings, woodwork or perhaps roofing. The Plantation House had been reported in serious disrepair through 1714 and Mashborne's repair programme would have called for substantial pigment supplies. The soldiers cloth section showed the bulk supply of ready-made garments for the garrison establishment. Twenty-four soldier coats at £1 0s 8d each, plus one half-worn coat at 15s 0d, made up £24 16s 0d worth of standard garrison uniform clothing in three months. The waistcoat at 9s 3d and breeches at 8s 4d completed individual soldier outfits at total cost of about £1 18s 3d for a complete uniform. The substantial coat purchase reflects the routine replacement cycle of garrison uniforms, with coats representing the largest single garment cost. The glassware section divided household items between three destinations. The inhabitants' glass was sold piece by piece in small quantities, while the general charges received twelve canary glasses in a single lot, suitable for the General Table where Spanish wine (canary) was served. The Rochester cargo's wine glasses by type (canary, ale, clarett) corresponded to the three principal beverages of the establishment: Spanish wine from the Canary Islands, English ale and clarett (claret, a red wine from Bordeaux). Each beverage had its proper glass for service. The pricing differential (canary at 1s 6d, clarett at 2s 0d, ale at 6d) reflected the relative cost of producing each glass shape, with canary glasses requiring the trumpet form and clarett glasses the more ample bowl. The "Holland cloth" at 13 [...] at 6s 6d for general charges, totalling £4 4s 6d, was a fine linen from the Netherlands used for shirts, linen and women's high-quality dresses. The cork at 4¼ gross (about 612 corks) at £0 13s 6d supplied the colony's bottle-stopping needs for stored beverages. Bunting at 12 yards for £0 14s 0d was the lightweight worsted fabric used for flags and signal flags, with the Castle's flags requiring periodic replacement. The combined miscellaneous items in this section show how the Company supplied not only commercial goods but the institutional consumables (corks, flags, pitch, sacking) that kept the establishment functional. Speculations: The 24 soldiers' coats supplied in three months represent a substantial proportion of the colony's standing garrison strength. With a typical garrison establishment of perhaps fifty to seventy men by this period, twenty-four new coats in a quarter year indicates annual coat replacement for roughly half the garrison. The pattern suggests a two-year replacement cycle for soldier coats, with the heavy red cloth worn through ordinary garrison service in twenty-four months before requiring replacement. The half-worn coat at 15s 0d, sold for use somewhere despite its condition, illustrates the practice of issuing older garments at reduced price to those who would not need full new uniform.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			The 6 panels of glass squares at 8 by 6 inches sold to inhabitants at £0 3s 0d total reflect the practical economy of window-glass supply on the island. Glass shipped from England arrived in standardised panels which were cut to fit the small window openings of colonial buildings. The very modest quantity here (six panels at a unit price of 6d) suggests window-glass remained a relative luxury, with most colonial windows probably closed by wooden shutters or covered by oiled paper rather than glass. The purchase by a single inhabitant of six panels indicates a building improvement project, perhaps glazing a window or repairing broken panes after wind damage.

			general charges Kerseys 51 yards at 16s [...] per yard £16 2s 0d ditto nails 1 [...] at 38 [...] at 7s [...] per pound £0 11s 4½d plantation 1 case of knives, forks at 9s, 6 packs at [...] £0 12s 0d inhabitants subtotal £98 16s 3¼d, plantation £13 15s 2¾d, general charges £219 19s 9¾d, total £332 11s 2¾d. Sold to inhabitants £797 17s 7½d Sold to ditto <i>Rochester's</i> cargo £96 16s 3¼d Sold to plantation £108 11s 11¼d ditto <i>Rochester's</i> cargo £13 15s 0¼d To general charges £283 3s 3¼d ditto <i>Rochester's</i> cargo £219 19s 9¾d inhabitants total £839 13s 11¼d plantation total £122 7s 0d general charges total £503 3s 1¼d Grand total £1,759 4s 0½d Interpretations: The two cheese lines together represented one of the largest individual commodity categories in the account: Cheshire cheese at 1,163¼ pounds for £38 15s 5d and Suffolk cheese at 2,147¼ pounds for £44 14s 7d. Total cheese turnover of 3,310 pounds in three months indicates the colony's substantial dependence on imported English dairy for protein supply. Cheshire cheese, the harder and more durable type from the English north-west, commanded a higher per-pound price (about 8d per pound) than Suffolk cheese (at 3d per pound), reflecting both production cost differences and keeping quality. The bulk allocation to inhabitants (over 2,700 pounds combined) shows that imported cheese was a routine planter staple rather than a luxury, with the cattle scarcity of late 1714 making cheese an increasingly important alternative dairy and protein source. The English beef section recorded the bulk meat shipment in salted form. The "10 baths beef" referred to bath, a Northern English barrel or cask of standard volume used for salted beef, typical of the East India Company's victualling. The substantial £125 14s 11d allocation to general charges, alongside £82 19s 1d to inhabitants, gave the Castle's General Table and the soldiers' rations a substantial preserved beef supply, partly offsetting the fresh beef scarcity reported to Captain Lihorne. Six casks of pork at £3 5s 0d each for general charges, plus one cask to plantation, supplemented the meat ration with cured pork as a secondary preserved meat. The total preserved meat allocation (£189 14s 11d across all three columns) was the largest single foodstuff cost in the account. The four "capes suets" entry at general charges, totalling £20 19s 11d, referred to suet (rendered animal fat) from the Cape of Good Hope, presumably brought on a homeward Indiaman that had stopped at Cape Town. Cape suet was used both for cooking and for tallow candle-making at the establishment, providing the institutional kitchen with rendered fat for frying, pastry and stewing. The substantial allocation suggests the General Table consumed several pounds of suet weekly during the period. The final totals tabulated the entire storekeeper's account from 8 July 1714 to 25 October 1714. Inhabitants had taken £839 13s 11¼d worth of goods, plantation £122 7s 0d, and general charges £503 3s 1¼d, with a grand total of £1,759 4s 0½d. The breakdown between original cargo and <i>Rochester</i> cargo

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			within each column shows that the <i>Rochester's</i> newly arrived goods (£330 11s 1¼d combined across all three destinations) had been integrated with the existing stock rapidly after the ship's 8 July 1714 arrival, with substantial sale movement during the three-month account period. Speculations: The very large total turnover of £1,759 4s 0½d in three and a half months gives an annualised figure of approximately £6,000 0s 0d. This represents a substantial commercial operation by colonial standards, with the Company's store functioning as the principal commercial outlet of the island. The inhabitants' share of £839 13s 11¼d (about 48 per cent of the total) shows that civilian purchases dominated the volume, with the Company's own consumption (general charges plus plantation totalling 52 per cent) running roughly equal to civilian demand. The pattern reflects the integration of the colony's domestic economy with the Company's institutional supply chain, with no real separation between commercial trade and institutional procurement. The arrival of the <i>Rochester's</i> fresh cargo would have stimulated substantial buying activity among inhabitants. With Pyke's arrival on 8 July 1714 came new goods that had not been seen on the island for some time, and the planter population would have rushed to acquire textiles, shoes, household items and consumables they had been doing without during the slow last months of Boucher's administration. The <i>Rochester</i> cargo's contribution of £330 11s 1¼d across the three columns, representing roughly a fifth of the total turnover, shows the impact of a single ship's arrival on the colony's commercial activity, with the goods being absorbed across all three destinations within the same accounting period as the ship's arrival.

Interpretations: The new monthly account opened the storekeeper's record for the period 25 October 1714 to 25 November 1714, the second period in the Pyke administration's monthly book-keeping reform. The shift from quarterly to monthly returns followed the order of 24 April 1714 that monthly accounts be entered and copies sent home by the next ship, with the present return representing one of the first single-month entries in the present sequence. The arrack section showed two grades being sold in parallel: standard arrack at 9s per gallon and a lower-priced second grade at 7s 6d per gallon. The 9s rate was the established retail price for new arrack from current shipping (the <i>Abingdon</i>, the <i>Stretham</i>, the <i>Marlborough</i>), while the 7s 6d rate was an older or lower-quality stock, perhaps from the <i>Success</i> cargo which had been at 7s in the earlier accounts. The dual pricing reflected the council's pricing settlement of 15 November 1714 that arrack be set at 7s 6d per gallon with credit restrictions on indebted purchasers. The 9s rate continued for stock from particular cargoes, while the 7s 6d rate applied to older stock. The hooks and lines section in this monthly return, at £0 15s 0d total to inhabitants, was substantially smaller than the £1 18s 3d to inhabitants over the previous three months. The reduction suggests the fishing programme had passed its peak deployment and inhabitants now needed only routine replacement of lost or worn tackle. The pattern is consistent with a fishing economy that absorbed substantial initial outfitting and then settled into a slower replacement cycle. The haberdashery section showed inhabitants continuing to acquire textile working materials in small quantities. Coat buttons (7¼ dozen at 1s 9d), breast buttons (17 dozen at 6d), small buttons (40 dozen at 4d), four pairs of men's gloves, thread of various grades and seven thimbles together gave householders the small consumables needed for ongoing tailoring and repair. The thread section's specification by fineness (4s per pound brown, 1s 3d for fine, 1s 7d for finer, with one ounce of an unnumbered "finer" at the same rate)

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			reflected the variety of qualities used for different sewing tasks, from rough mending of working clothes to fine stitching of best garments. Speculations: The narrow specialisation within the thread section, with at least seven distinct grades sold to inhabitants in a single month, indicates that the colony's textile working economy operated at considerable technical refinement. Householders selected threads by fineness, colour and intended use, with prices ranging from 4s per pound for plain brown to over 1s per ounce for the finest grades. The pricing differential across grades shows a workforce of seamstresses and tailors who knew the difference between thread types and could match the material to the task. The persistence of separate "white brown" categories at multiple weights and prices suggests this was a distinct functional grade, perhaps a strong household-mending thread, with its own established place in the colonial sewing kit. The single ounce of the unnamed "finer" thread at £0 8s 6d, equivalent to over 6s per ounce, represented one of the highest-priced small consumables in the account. Used probably for embroidery or for top-stitching on dress garments, the very fine thread served the colony's small market for prestige clothing. The presence of such fine materials alongside the bulk working threads indicates that even in the middle months of late 1714 some St Helena households were commissioning or maintaining luxury garments, perhaps in connection with the coming general sittings and muster planned for January 1715.

Interpretations: The continuation of the inhabitants' purchases reflected steady commercial activity by the colony's householders into the new monthly accounting period. The pattern of small-quantity purchases (single pieces, fractional yardage, single pairs of shoes) confirmed the household-level commercial intensity already noted across the longer quarterly account. The silk and mohair items at the head of the haberdashery section (£0 16s 11¾d) showed continuing demand for fine sewing materials, with mohair at 1s 8d per ounce and silk at 2s 6d per ounce supplying both decorative and structural needs in garment making. The combs section illustrated the variety of personal grooming implements available. Four horn combs at 4d each supplied the everyday combs of the household, while two ivory combs at 1s each gave a more prestige product for finer use. The "comb brush with prickers" at 1s 0d was a tooth-brush style implement combining a brush with stiff prickers for separating tangled hair, the small variations in personal grooming kit reflecting genuine choice among colonial households. Total combs purchases of £0 6s 4d represented a modest but significant household consumable. The Cruells item among the stockings, sold at £0 0s 10d for 1½ ounces, was crewel wool (a fine two-ply worsted yarn used for both knitting and embroidery). Its appearance with the stockings rather than with the threads suggests it was being used for stocking-mending and patching rather than embroidery work. The price of about 7d per ounce placed it well below the finest threads in the previous section, consistent with practical use rather than decoration. The shoes section included an interesting class differentiation. One pair of English men's shoes from the <i>Rochester</i> cargo at 6s 2d, alongside one pair of unspecified English shoes at 6s 0d, indicated the <i>Rochester</i> shoes commanded a small price premium over the existing stock. Women's braided shoes from the <i>Susanna</i> cargo at 10s 5¼d per pair were one of the more expensive shoe items in the account, the braided decoration adding both labour cost and prestige to a women's shoe. Boys' shoes at 4s 9d per pair completed

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			the children's wardrobe at the lower end of the footwear price scale. Speculations: The two red coats at £1 0s 8d each in this monthly account (against twenty-four in the preceding quarterly account) suggested that soldier coat replacement had passed its peak rate after the initial outfitting following Pyke's arrival. The continuing low-rate replenishment indicates the colony was now in steady-state supply mode for soldiers' uniforms, with two coats per month corresponding to roughly one new coat per soldier per two years. The pace was consistent with normal garrison wear-and-tear cycles. The 175 needles at £0 2s 9¾d, with no spoilage note this time (unlike the 100 rusted needles of the quarterly account), suggests the present stock had been kept in better storage conditions or was newly arrived from the <i>Rochester</i> cargo. The smaller per-month figure (175 versus 300 over three months) reflects the routine demand for needles by household sewing, with no exceptional disposal of damaged stock pulling the figures up.

			£0 1s 5½d 1 trowell £0 1s 8d 4 gimblett ditto £0 0s 8d 2 double crossward locks, <i>Susanna</i> £0 4s 8d 2 crossward ditto, <i>Susanna</i> £0 7s 8d [ironmongery subtotal] £0 16s 6d, total £10 7½d Carried over £116 3s 1d. Interpretations: The Indian linen section in this monthly account reproduced on a smaller scale the textile categories of the previous quarterly return. Chaloes, gurrhaes, neckcloths, dungrees and chints all appeared at the same per-piece rates as in the longer account, confirming the standardised pricing across multiple accounting periods. The shirts section included a new line: 36 shirts of "Kent's cargo" at 3s 6d per piece. The reference to a cargo by captain's surname rather than ship's name is a small variation in the storekeeper's record-keeping, perhaps indicating that the 36 shirts came as a personal venture from Captain Kent rather than from the Company's main consignment, with the lower price reflecting either inferior quality or a private trader's margin. Jannoos (Indian printed cottons, probably from the Coromandel coast where painted and printed cloths were a speciality) appeared at the higher end of the cotton range at 16s to 18s 10d per piece, comparable to chinto in price. Their printed or painted decoration distinguished them from the plain gingham, niccaloes and long cloth of the earlier sections. Sagathies (sagathy, a worsted cloth often mixed with silk, from Sagathie or similar Indian production) at £3 1s 8d per piece were among the higher-priced single items in the textile section. Druggets at 3s to 4s per yard, in two grades, supplied the colony's outer-coat material at middling price points. Fustians at 2s per yard and flannels at 1s 1d per yard (calculated from 17 yards at £1 18s 3d) provided the warm lining materials for the cooler season. The ironmongery section in this monthly account was minimal, with only six items totalling £0 16s 6d. The contrast with the substantial ironmongery sales in the quarterly account (£25 9s 10½d combined across all columns) suggests the major outfitting of tools had been concentrated in the earlier months following Pyke's arrival, with the present month showing only routine replenishment of small hardware. The "double crossward" and "crossward" locks from the <i>Susanna</i> cargo at 4s 8d and 7s 8d each were specialised security fastenings, probably used on doors or storage chests, with the "crossward" referring to the bolt arrangement of the lock. Speculations: The reference to "Kent's cargo" as the source of 36 shirts at the somewhat lower price of 3s 6d (against the 8s 6d for fine shirts and the standard rate of unspecified Indian shirts in earlier sections) probably reflects a private venture by Captain Kent that the Company had taken into its stores for sale. Captains were entitled to carry private trading goods alongside Company cargoes under settled allowances, and on arrival at St Helena could either sell directly to inhabitants or consign to the Company's store for retail. The 36 shirts at 3s 6d, representing a substantial single lot worth £6 6s 0d, suggests Kent had brought them as a planned trading venture rather than personal effects. The locks from the <i>Susanna</i> cargo at 4s 8d and 7s 8d each, sold to general charges, were probably destined for the Secretary's office rebuilt by order of 24 August 1714. The new building would have needed door locks and chest locks for the secure storage of papers, with

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			the specialised "crossward" mechanism providing more reliable security than simple wood-and-iron fastenings. The arrival of suitable hardware via the <i>Susanna</i> in the period before the present account allowed the Secretary's office to be fitted out with proper locks at this stage of the rebuilding programme.

Interpretations: The shoemakers' tools section recorded the continuing supply of materials for the colony's leather-working trade. One gross of awl blades (144 awls, the small pointed tools used for piercing leather before

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			stitching) at £0 9s 0d, two gross of shoe tacks (288 small nails for fastening soles to uppers) at £0 5s 0d, and four pounds of shoe thread at 2s 6d per pound made up the working materials for a substantial shoemaking operation. The materials would have been used by William Penny and other Company shoemakers to produce the island pumps and similar local footwear noted in the earlier section. The presence of these materials in the storekeeper's account confirms that the colony maintained an active shoe-making trade alongside the imported English footwear. The bone lace at 1 yard for £0 10s 0d was a fine narrow trim made of linen thread (despite the name, the "bone" referred to the small bobbins originally made of bone used in its production rather than to the material). At 10s 0d for a single yard, bone lace was the most expensive trim per linear unit in the account, used as decoration on collars, cuffs, fronts and cap edges for fine garments. Its acquisition by an inhabitant indicates a single specific garment was being completed with luxury trim. The single tin lanthorn at £0 2s 1d represented one of the smaller manufactured items but a recognisable household necessity. The lantern, a wood or metal frame with translucent horn or glass panels protecting a candle from wind, was the principal portable lighting fixture for evening movement around the house, yard or working buildings. Its modest price reflected its standardised production and routine domestic use. The seven quires of paper at 1s 4d per quire (a quire being 24 sheets, so seven quires = 168 sheets) at £0 9s 4d gave the colony's writing economy substantial supply for the month. The Secretary's office, planters' household accounts, personal correspondence and informal record-keeping all consumed paper at sufficient rate to require regular bulk purchase. The £0 9s 4d single-month figure suggests the colony consumed roughly £6 0s 0d worth of paper per year, equivalent to over 2,000 sheets. Speculations: The dual sourcing of nails (some from the existing stock at 7d per pound, others specifically marked "<i>Rochester</i>" at 7¼d per pound) shows the storekeeper carefully tracking different cargo lots through the account. The very small price differential (¼d per pound) between the two sources indicates the <i>Rochester</i> cargo was priced at virtually the same wholesale acquisition rate as the existing stock, with the small premium probably reflecting freshness or specific quality grade. The level of detail in the storekeeper's records, tracking goods to their specific ship of origin, allowed the Company to monitor margins and stock turnover by cargo. The single yard of bone lace at 10s 0d, sold to a single inhabitant, probably indicates a specific commission for a fine garment associated with the upcoming general sittings (postponed from 17 January 1715) or the muster (postponed from 20 January 1715). With the <i>Aurengzebe</i> having arrived on 14 January 1714/15 disrupting both events, the previous public assemblies in October-November 1714 would have been the most recent occasions when polite dress was on parade. The 10s 0d purchase by a planter or his wife for a single yard of premium trim suggests a deliberate investment in dress for the colony's relatively rare formal occasions.

Interpretations: The General Table and general charges account opened with arrack at the two grades observed in the inhabitants' account, with 25 gallons of Batavia arrack at 9s and 21 gallons of older stock at 7s 6d together totalling £19 2s 6d for the establishment's drinking ration. The Castle table maintained its regular liquor supply during the month, with the dual pricing

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			reflecting cargo origin as before. Castile soap at 10 pounds for £0 15s 0d gave the General Table's laundry and washing supply during the month. The 495 [...] of bread at 4½d represented the institutional bread supply for the establishment, presumably for the Castle table, the soldiers' mess and any other Company-fed personnel. The substantial £8 5s 0d single-line cost reflected bread's centrality to the institutional diet, with bread serving as the staple carbohydrate at every meal. Set against the modest flour allocation (£0 1s 8d), this suggested bread was procured already baked rather than produced from raw flour at the establishment's own kitchen, possibly through a contract baker on the island. The ironmongery section for general charges showed substantial tooling purchases for the working programme. Twelve shovels at £1 4s 0d were the principal new tools for the period, probably destined for the drainage trench work at the Plantation House (ordered on 28 September 1714) or the lime kiln operations. Four pairs of hinges and a single pair (£0 8s 0d total) suggest door and gate repairs at the Castle and outlying buildings. The pair of iron candlesticks at £0 2s 0d gave the establishment two new heavy lighting fixtures, in keeping with the council's continuing concern for adequate lighting noted in the candle and oil discussion of 14 December 1714. The 40 [...] of iron at 3s and 16¼ [...] of steel at 6d in the iron and steel section provided the bar stock for the blacksmith's work at the Castle. The substantial nail purchases (totalling £2 15s 6¼d across multiple grades and weights) supplied the ongoing building programmes: the lime kiln near the old Roberts kiln, the new goat pound at Clapper Door house, the rebuilding of the Secretary's office and the wider repair programme at the Plantation House. The variety of nail sizes (38 pounds at 7d per pound, 34 pounds at 7½d per pound, smaller quantities at 10½d and 11d for specialised types) reflected the differentiated fastening needs of carpentry, joinery and structural building work. Speculations: The 12 shovels at the relatively low rate of 2s each represent a sharp price reduction from the 5s 6d per spade in the earlier plantation account. The functional distinction between "shovels" and "spades" probably accounts for the difference: shovels (broad-bladed, used for moving loose material) were simpler implements than spades (narrower, sharp-edged, used for digging into firm ground). The bulk procurement of twelve shovels in a single month, all for general charges, suggests a specific major earth-moving project: most plausibly the Plantation House drainage trench ordered on 28 September 1714 which required substantial labour and tools to complete before the next rainy period. The 5 pickaxes at £0 16s 0d (an effective rate of 3s 2d each) supplemented the shovel acquisition with rock-breaking tools. The combined picks-and-shovels purchase suggests the trench work was passing through harder ground requiring loosening before excavation. The figure of "24 [...]" at 8d alongside the five pickaxes is probably the weight per pickaxe (about 4 pounds each at 8d per pound for the steel and iron), with the pricing calculated by total weight at the unit rate. The colony's tool procurement system priced heavier implements by weight, consistent with the practice observed for the iron pot in the earlier section.

The 1 pound of tea at £0 9s 0d represented one of the highest per-pound prices in the account, at over 4 1/2 pence per ounce. Tea, the luxury Chinese import procured either directly through Company ships or via Bencoolen, was reserved for the Governor's, Deputy Governor's and Chaplain's table during the scarcity period established on 17 August 1714 when the General Table had been restricted to those three offices. The single pound provided a substantial supply for the elite table over the month given tea's measured consumption. The substantial beef and suet purchases in this account showed the General Table's preserved meat ration for the period. The cask of beef at £13 6s 6 1/4d, with weights specified as 115 pounds at one rate and 275 pounds at another, supplied the soldiers' mess and the establishment table during the cattle scarcity. The neat suet cask at £3 16s 6 1/4d at 5 1/2d per pound provided rendered fat for cooking and candle-making. The combined preserved meat allocation of £17 3s 0 1/4d in this single month was substantial, reflecting the

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			Castle's need to compensate for the lack of fresh beef supply through cured product. Three pieces of sacking at £2 7s 6d each, totalling £7 2s 6d in the general charges, mirrored the parallel plantation purchase of three pieces of sacking at the same rate in the earlier quarterly account. The general charges sacking allocation indicates the Castle and its working departments also required substantial bagging materials, perhaps for transporting goods between Castle stores, for storing dry commodities, or for supporting the cargo discharge programme of incoming ships. The plantation column for this month showed modest consumption: 56 pounds of sugar, 7 pounds of rice, oil, salt, soap, shoe thread and small thread, totalling £3 15s 3¼d. The composition reflected the plantation's basic working ration for slaves and overseer, with sugar appearing as the largest single line. The substantial sugar allocation to plantation use, at £1 17s 4d for 56 pounds at 8d per pound, suggests sugar was being incorporated into slave food rather than reserved as a luxury item: perhaps as a sweetener for the daily yam ration, or for occasional cane-syrup treats during periods of intensive labour. The final monthly total of £202 19s 7¼d gave the storekeeper's record for 25 October 1714 to 25 November 1714. Set against the previous three-and-a-half-month total of £1,759 4s 0½d (running at approximately £500 0s 0d per month), the present £202 19s 7¼d single-month total marked a substantial reduction in storekeeper turnover. The post-<i>Rochester</i>-cargo absorption phase had moved into a more settled state with reduced sales volume, consistent with inhabitants having already made their major purchases in the immediate post-arrival weeks. Speculations: The presence of tea on the General Table account at 1 pound for £0 9s 0d gives a useful price reference for what the council had set at 9s per pound in the retail pricing settlement of 15 November 1714. The institutional purchase at the retail rate confirms that the Governor and his colleagues paid the same price for their tea as inhabitants would have done at the public counter, with no special institutional discount for the principal officers. The arrangement either reflects scrupulous accounting (each department debited at the published rate) or the absence of any wholesale price below the retail rate, suggesting tea was scarce enough that all sales were treated as premium retail. The substantial preserved meat allocation in this single month (combined £17 3s 0¼d for beef and suet) compared with the much smaller fresh-meat figures suggests the Castle had largely shifted from fresh to preserved beef during November 1714. The continuing cattle mortality, combined with the council's strict reservation of remaining live cattle for breeding stock recovery, would have made preserved meat the principal source of animal protein for the establishment table. The pattern probably continued through the early months of 1715 until cattle numbers could be rebuilt.
344	335	Island S[t]. Helena. Whereas there being one year Vizt y[e] year 1714. The council issued a warrant for the church wardens dated 18 January 1714/15. Whereas there was one year's head money due to the church for 1714 from the inhabitants of the island, at the rate of 6d per head for all whites and blacks in each man's family who were over sixteen years of age, the council in her Majesty's name commanded those whose names followed to pay the respective sums of money placed against their names to James Draper and Francis Wrangham, church wardens, for the present year. In case any persons refused to pay, the church wardens were empowered to make seizure of such persons' goods and chattels and to sell the same at public outcry, rendering the overplus, if any, to the

Given under the hands of the council and the Honourable United Company's seal affixed, the 18 day of January 1714/15. Signed Isaac Pyke, George Haswell, Edward Mashborne, Matthew Bazett, Antipas Tovey. Directed to James Draper and Francis Wrangham, church wardens. Persons names, namely, with columns whites, blacks, total, and sum: Matthew Brazett, fourth in council 3 whites, 4 blacks, 7 total £0 3s 6d Joshua Thomlinson, chaplain 1 white, 8 blacks, 9 total £0 4s 6d Thomas Cason, ensign 1 white, 4 blacks, 5 total £0 2s 6d John Alexander, ditto 1 white, 4 blacks, 5 total £0 2s 6d William Porteous, surgeon 1 white, 2 blacks, 3 total £0 1s 6d John French, gunner 1 white, 2 blacks, 3 total £0 1s 6d John Goodwin, writer 1 white, 4 blacks, 5 total £0 2s 6d Thomas Southern, sergeant 1 white, 2 blacks, 3 total £0 1s 6d Subtotals 10 whites, 30 blacks, 40 total, £1 0s 0d Interpretations: The church wardens' warrant gave James Draper and Francis Wrangham the council's formal authority to collect the church rate from each household on the island. The rate was 6d per head on all persons over sixteen years of age, whether white or black, with no distinction between the two for assessment purposes. Slaves of working age (over sixteen) were counted alongside free persons, with the head of household responsible for paying on behalf of all members. The mechanism converted the household into the unit of assessment, with the master paying for everyone in his establishment. The mixed inclusion of whites and blacks in the same head count, with both categories paying the same rate, gave the church a relatively flat tax base. The arithmetic was straightforward: 6d for each adult member of the household regardless of status. The principle treated the slaves as members of the master's household for fiscal purposes, with the master paying the rate even though the slave themselves had no income or property to draw on. This is an interesting feature of the colony's ecclesiastical economy, in which the spiritual provision of the church was funded in part by a head tax on labour rather than purely on property or status. The seizure clause armed the church wardens with executive authority equivalent to the council's own debt-enforcement powers. If any household head refused to pay the rate, the church wardens could seize and sell goods at public outcry, with surplus returned to the owner after costs. The mechanism mirrored the debt-collection process used by the Company against indebted planters, transferring proven institutional procedures to a parallel ecclesiastical purpose. The delegation of seizure authority indicates the church wardens were officers of the council's wider system of taxation and enforcement, not merely volunteer parish administrators.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			The names list reveals the structure of the colony's senior establishment by household size. Joshua Tomlinson, the chaplain, headed the largest household at 8 slaves, larger than even Matthew Brazett (fourth in council) at 4 slaves. The chaplain's substantial slave household suggests he had been on the island long enough to accumulate significant property, or that his stipend supported a substantial domestic establishment as part of his office. John Alexander and Thomas Cason each kept 4 slaves, William Porteous and John French 2 each, John Goodwin 4 (probably also for his role as writer in the store), and Thomas Southern 2. Speculations: The collection of head money from precisely these listed officers (council members and senior establishment) but not yet from the wider planter population suggests this was the first part of the assessment. The list begins with Brazett as fourth in council and runs through chaplain, ensigns, surgeon, gunner, writer and sergeant, with each office-holder counted by household. The wider planter population, free inhabitants and other householders would presumably appear on subsequent pages of the warrant. The order of names reflects the seniority and visibility of office, with the most prominent figures listed first. By starting the assessment with the council and senior officers, the church wardens demonstrated public compliance from the top before turning to the wider community, a tactical sequence that established the legitimacy of the rate before its broader application. The chaplain's 8 slaves and £0 4s 6d assessment is striking. As the spiritual head of the colony and the recipient of the rate the church wardens were collecting, Tomlinson contributed to the funding of his own office and that of his church. The arrangement preserved the principle that no household, including the chaplain's own, was exempt from the rate. The figure also gives a useful indicator of the chaplain's social and economic standing on the island: with 8 slaves and 1 white person (himself) in his household, Tomlinson commanded a domestic establishment larger than most council members, reflecting either accumulated personal property or the social weight of his office.

The pattern of household composition revealed great variation: from single-person households at the bottom of the scale to George Carne's establishment of 18 persons (4 whites and 14 blacks) at the top. The list as compiled provides one of the clearest single snapshots of the household structure

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			of the colony's free population, with each household's combined white and black numbers measured to the same standard. George Carne's 18-person household, with 14 slaves, stood out as the largest non-establishment household by a substantial margin. Set against Carne's continuing debt-clearance programme (29 slaves listed in his schedule of 7 December 1714 at £290 0s 0d, with Little George transferred at £15 0s 0d on 14 December 1714), the 14 slaves over sixteen years of age in his present household represented those of working age remaining after the substantial transfers to the Company. The figure may also exclude slaves under 16, infants or those held on outlying plantations not directly part of his domestic establishment. Richard Cleeve's household at 8 persons (4 whites, 4 blacks) is notable given his recent decision to leave the island, recorded on 7 December 1714 when he left the Company's work to finish his own house in preparation for selling all he had on the island. The presence of a substantial 4-white-person household and 4 slaves indicates Cleeve had been preparing not only himself but a whole family for departure. The assessment of £0 4s 0d on his household for the year 1714 would have been pressed for collection before he sailed. The widespread presence of single-white-person households (Algate, Latour, Hays, Bates, Fowler, Orme, Snow, Angus, William Coales, Edmund Bodley) shows that a substantial portion of the free population was bachelor or singly-resident, holding no slaves and assessed only on themselves. These were typically younger men, soldiers in private service or junior craftsmen, working their way up through the colonial economy without yet having acquired family or slave property. At 6d apiece, their assessment was the minimum charge under the rate. William Cortley's appearance as 0 whites and 1 black, total 1, is unusual: a slave assessed alone with no associated white master named, perhaps indicating a slave held in trust by an absent or recently departed master. Speculations: The 1 black slave only at Thomas Burnham's name (0 whites, 1 black, 1 total) marks Burnham as a free planter who managed his own work without family but with a single slave assistant. Burnham had been credited with £17 11s 0d on 13 October 1713 for fencing at the Hutts plantation, and £43 15s 1½d in Company debt was noted in the consultation of 21 December 1714 when his Norman debt-transfer brought his obligation to £56 0s 0d. The single slave economy now visible in the church rate confirms Burnham as a one-slave-operation planter, with his fencing labour and other tasks supported by that single black assistant. The picture of his working economy emerges more clearly from this institutional cross-reference than from any single transaction. The substantial slave-to-white ratios in some households (Carne's 14:4, Cleeve's 4:4, Wood's 5:1, Tomlinson's 8:1 on the previous page) indicates that the slave population concentrated in larger establishments, while the smaller householders held none. The church rate's flat 6d per head produces a tax distribution that fell heavier on the slave-owning planter than on the bachelor, but proportionally lighter on the slave-owner per slave than on the bachelor per self. The rate's design favoured the substantial slaveholder by treating each slave as no more taxable than each free person, despite the master's much larger productive capacity from those slaves.

			John Knipe 2 whites, 2 blacks, 4 total £0 2s 0d John Long 2 whites, 3 blacks, 5 total £0 2s 6d Francis Leech 1 white, 0 blacks, 1 total £0 0s 6d Subtotal carried 100 whites, 147 blacks, 247 total, £6 3s 6d Interpretations: The widening list now drew in the larger free planter and freeholder community of the colony, with widows, surviving family members and orphan-administered holdings appearing alongside male householders. The Cottgrave's orphan entry at 1 white and 1 black represented an inherited household held in trust for a minor, with the church rate assessed on the working-age members regardless of the minor's legal status. The administrator (probably the executor or guardian) bore the rate from the orphan estate funds. Several widows and women heads of household appeared in this section: Mary Conway, Mary Easthope, Mercy Gargain, Dorothy Hays, Mary Harper, Isabel Hays. Their listing in their own right rather than under deceased husbands' names indicates the church wardens treated each as an independent household for assessment purposes. Mercy Gargain's household of 7 (2 whites, 5 blacks) suggests a substantial widow's estate, perhaps continuing the working agricultural establishment of her late husband. Grace Coulson's household of 6 (1 white, 5 blacks) places her among the larger slave-holding widows of the colony. These female-headed households would have managed their slaves through overseers or trusted male associates, with the women themselves directing the establishment's economic affairs. Joshua Johnson's 11-person household (2 whites, 9 blacks) is among the largest in this section, equalling Henry Francis's 11. Both represent substantial planter holdings with extensive slave labour. Thomas Free's 10-person household (2 whites, 8 blacks) places him also in the top tier of free planters. These men, with 8 to 9 slaves each, ran the colony's major agricultural enterprises alongside George Carne's larger establishment. The concentration of slaves in a handful of substantial planter households, with the rest of the population holding none or only one or two slaves, gives a clear picture of the colony's stratified labour economy. The running subtotal of 247 persons (100 whites and 147 blacks) at £6 3s 6d represents an interim assessment of the colony's principal householders. The 1.47:1 ratio of black to white among the assessed working-age population gives a useful measure of the slave-to-free ratio in the colony's household economy, though it omits children under 16 of both races, who were exempt from the head money. Speculations: The presence of "John Harding and his brother Richard" as a joint household of 2 whites is unusual in the list structure, where each household appears under a single head's name. The pairing suggests the brothers shared a household and farming partnership, with their joint assessment of £0 1s 0d representing two adult members. The arrangement probably reflects either a sibling partnership operating a small holding without slaves, or a transitional situation in which one brother had recently arrived to join the other's establishment. The Slaughter-Harding settlement noted as reopened on 3 November 1714 when Harding complained of Slaughter's threat to turn him out indicates John Harding had been a tenant under Slaughter, and the

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			joint reference to his brother Richard suggests Richard had recently joined him in the colony. The total to be raised at this point, £6 3s 6d, indicates a substantial ecclesiastical revenue stream for the year 1714. With the assessment list still continuing on further pages, the total annual church revenue at 6d per head over sixteen would likely have reached approximately £10 0s 0d to £15 0s 0d when complete, covering the chaplain's stipend and other church running costs. The mechanism gave the church a steady predictable revenue based on the working population rather than the church's own land or endowment, with the seizure provisions ensuring collection.

The figure provides one of the clearest single demographic snapshots of the colony, with each household enumerated by master and slave for fiscal purposes. The 1.30:1 ratio of black to white among the assessed working-age population indicates a colony in which slave labour formed a substantial majority of the adult population, though balanced more evenly than the heavy plantation colonies of the Caribbean. Richard Swallow's 13-person household (6 whites and 7 blacks) and Gabriel Powell's 13-person household (3 whites and 10 blacks) place these two among the substantial slave-holding planters alongside George Carne (18 persons). Together with Joshua Johnson (11), Henry Francis (11), Thomas Free (10) and others over 7 persons, the colony's larger planter class numbered perhaps twelve to fifteen households. Below this top tier, the middle band of householders with three to six persons made up the bulk of the planter community, with the smallest households of one or two persons forming the lowest tier of the free population. The recurrence of "orphans" entries (Cottgrave's orphan, Wrangham's orphans) reflects the colony's institutional handling of bereaved minor households. The orphan estate continued to pay the church rate from its administered funds, with the church wardens treating the children's household as a fiscal unit even though the legal head was a guardian or trustee. The mechanism preserved the head money base against the disruption of family deaths, ensuring continuing revenue even where parental households had broken up. The two entries Elizabeth Steward (1 white, 5 blacks, 6 total) and Susanna Swallow (1 white, 0 blacks, 1 total) showed the position of widows of recently deceased planters. Elizabeth Steward, widow of Charles Steward (whose estate had been the subject of the unauthorised outcry by Richard Gurling, prevented by

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			the council's prohibition of 4 January 1714/15), now held the late husband's slaves under the probate granted to Powill and Gurling on 11 January 1714/15. The assessment of her household at £0 3s 0d for the year 1714 would presumably have to be paid from the estate before final distribution to the family. Speculations: The closing total of £9 2s 0d for the year's church rate provides a meaningful benchmark for the colony's ecclesiastical finances. Set against the chaplain Joshua Tomlinson's institutional position (with a household of 9 persons, the largest single establishment after George Carne's), the rate may not have covered his full stipend by itself, but supplemented Company payments to him with the contribution of the inhabitants. The mechanism gave the chaplain a substantial stake in the population's continuing growth, with each new adult adding 6d to the annual income of his office through the head money. The pairing of Bridget's Welch as a single white person (1 white, 0 blacks) is unusual in its naming convention. "Bridget's Welch" probably refers to John Welch's wife Bridget, assessed separately as a head of household perhaps because of a separation or because Welch himself was absent from the island. The recurrent listing of woman heads of household (Mary Conway, Mary Easthope, Dorothy Hays, Mary Harper, Isabel Hays, Mercy Gargain, Grace Coulson, Margaret Sich, Elizabeth Steward, Susanna Swallow, Jane Mudge, Bridget Welch) shows a substantial proportion of female-headed households in the colony, reflecting either widows continuing late husbands' estates or wives managing while their husbands sailed elsewhere. The colony's economy depended substantially on women's domestic and managerial labour, with the church rate treating these women as legitimate heads of fiscal units.
348	339	Island S[t]. Helena At a Consultation held on Satturday the 29: of January 1714[.]/[.] at the United Castle in James Valley Isaac Pyke Esq[r]: Govern[r]. Geo: Haswell Dep[ty] Edw[d]. Mashborne 3[d] Matthew Bazett 4[th] & Antipas Tovey 5[th]. in Council Prest There being a French Ship Just arriv[d] in the Road which appears to us to be a great Ship but we know not her Name nor from whence She came Resolved that none of the French people be admitted to goe into the Country. The Gov[r]: saith he is of Opinion y[t] Because of y[e] great dearth whereby so many cattle were lost upon the Island & we are doubtfull whether we shall have Beef enough to supply all the Hon[ble]. Comp[as] Ships that are Expected here this Summer that therefore he thinks it not for the Hon[ble] Comp[as] Interest to permitt this French Ship to buy any Fresh Beef here but because we are at present at Peace w[th] the Crown of France we will supply their necessitis in such a manner as shall be for our Nations & y[e] Companys Honor to lett them have such, tho we cant well spare it the priviledge of Sending their cask ashore & filling what water they please, & any reasonable quantity of Hoggs, Poultney, or Goats together w[th] such Naval Stores as they shall stand in need of, but no further Upon notice y[e] following Advertizement was published vizt: It Margin Notes: French Ship arriv'd Non of her people to go into y[e] Country Nor to Supply them w[th] any fresh Beef But with all other Sort of Provissi[on] Navale Stores &c[a]	St Helena. At a consultation held on Saturday 29 January 1714/15 at the United Castle in James Valley. Present: Isaac Pyke, Governor; George Haswell, Deputy Governor; Edward Mashborne, third; Matthew Bazett, fourth; Antipas Tovey, fifth in council. A French ship had just arrived in the road, which appeared to be a great ship, but the council knew neither her name nor her place of origin. The council resolved that none of the French people be admitted to come into the country. The Governor stated his opinion that, on account of the great dearth by which so many cattle had been lost upon the island, and the doubt whether there would be beef enough to supply all the Honourable Company's ships expected that summer, it was not for the Honourable Company's interest to permit this French ship to buy any fresh beef. However, because the nations were at present at peace with the Crown of France, the council would supply their necessities in such a manner as should be for the nation's and the Company's honour. They would let the French have the privilege of sending their casks ashore and filling what water they pleased, and any reasonable quantity of hogs, poultry or goats, together with such naval stores as they stood in need of, but no further. Upon this, the following advertisement was published, namely. Interpretations: The Saturday consultation, called on a non-standard day, indicates the urgency of the council's response to the arrival of an unidentified French ship. With full council attendance, the matter was treated as serious enough to demand immediate collective decision rather than awaiting the next regular Tuesday sitting. The phrasing "we know not her name nor from whence she came" reveals the working uncertainty of the colonial council confronted with an unrecognised foreign vessel of substantial size, where prudent

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			diplomatic and security responses had to be calibrated to limited information. The triple test the council applied to the situation balanced commercial interest, diplomatic propriety and the colony's own scarcity. Cattle scarcity (with over 2,500 head lost as the council had reported to Captain Lihorne on 16 January 1714/15) ruled out the supply of fresh beef. The state of peace between Britain and France (the Treaty of Utrecht of 1713 having ended the War of the Spanish Succession) ruled out outright refusal of help. The colony's working interest in maintaining good repute with all visiting nations required some level of assistance to be extended. The middle position the council adopted, supplying water, hogs, poultry, goats and naval stores but no fresh beef and no shore visit by the French crew, threaded these competing considerations precisely. The exclusion of the French crew from the country, while granting them resupply, served security as much as health concerns. Allowing a substantial foreign warship's crew unrestricted access to the island would have allowed reconnaissance of the colony's defences, its weak points, its plantation layout and its population distribution. By keeping the French at the beach, with goods delivered to them at the casks, the council preserved operational security against possible future French naval interest in St Helena as a strategic Atlantic position. The fresh-water privilege at the casks was the minimum necessary courtesy under maritime custom, while permitting no broader interaction. The reference to "naval stores" gave the French access to materials needed for ship maintenance and repair: tar, pitch, cordage, canvas, spare rigging and similar items. The Company's stores at the Castle held these materials for the support of its own ships and could be sold to the French at suitable prices. The provision of naval stores to a passing foreign warship at fair commercial terms was a standard practice among the European maritime powers in time of peace, allowing the visiting ship to continue its voyage without forcing it into hostile or distant harbours. Speculations: The French ship's appearance in St Helena waters in late January 1714/15 was probably a homeward-bound East Indiaman of the Compagnie des Indes Orientales, following the standard route from the Indian Ocean trading stations back to a French port (Lorient, Saint-Malo or Le Havre). The Compagnie's ships routinely called at St Helena, the Cape, or one of the South Atlantic islands for resupply on the long Atlantic leg. The absence of a recognised name suggests the ship was unfamiliar to the council, perhaps newly commissioned or making her first homeward voyage. The substantial size noted by the council places her among the larger Indiamen of the period, with a crew that would have numbered between 100 and 200 men depending on her armament and complement. The council's middle-position response was probably designed to be reportable favourably to both the Honourable Masters in London and the French captain. By denying the most valuable commodity (fresh beef) on documented grounds of local scarcity, the council preserved the Company's economic interest. By granting water, livestock and naval stores at commercial rates, the council demonstrated neighbourly conduct that the French captain could report favourably to his own directors and to the French court. The combination would minimise diplomatic friction while protecting the colony's commercial position. Pyke's careful framing of the resolution as being "for our nations and the Company's honour" indicated his sensitivity to the double audience for any decision concerning a foreign warship.

349	340	Island S[t]: Helena By the Worship[full] y[e] Gov[d] & Council An Advertizement Whereas Beef is at this time very Scarce by reason of y[e] great Dearth whereby so many Cattle where lost upon y[e] Island & y[t] we have not Sufficient to Supply the Hon[ble] Companys Shipping. The Worsh[lll]: y[e] Gov[d]. & Council doe hereby Strictly Command & forbid all persons not to sell or dispose of any Beef to any Foreigne Ship whatsoever untill such time there is a greater stock of Cattle upon the Island at any Price but they may sell & dispose of any other fresh provisions for y[e] reliefe of such people who are to come on Shoare. Likewise who ever shall find any foreigners patroleing or Stragglng into y[e] Country they are to look upon them as Spyes & apprehend them as such & bring them before the Govern[r]. & Council. Signed by Order of Gov[d] & Council. United Castle James Valley 29: Jan[r]. 1714/5 Antipas Tovey Sec[ry] Margin Notes: Beef forbid to be Sold till a great Stock. but may any other Sort of fresh provi[s] If any foreigners in y[e] Country to[.] be bro[t] down to y[e] Gov[r] &c United Castle James Valley 29: Jan[r]. 1714/5	St Helena. By the Worshipful the Governor and council. An advertisement. The advertisement set out that beef was at present very scarce on the island, by reason of the great dearth by which so many cattle had been lost, and that there was not sufficient to supply the Honourable Company's shipping. The Governor and council strictly commanded and forbade all persons to sell or dispose of any beef to any foreign ship whatsoever, at any price, until such time as there was a greater stock of cattle upon the island. However, the inhabitants were free to sell and dispose of any other fresh provisions for the relief of such people as came on shore. Anyone who found foreigners patrolling or straggling into the country was to look upon them as spies, apprehend them and bring them before the Governor and council. Signed by order of the Governor and council, at the United Castle, James Valley, 29 January 1714/15. Antipas Tovey, Secretary. Interpretations: The advertisement converted the council's resolution from a private decision into a public order binding on all inhabitants. The prohibition was absolute: no beef was to be sold to any foreign ship at any price, regardless of the planter's individual willingness to deal. By framing the order as a public command at beat of drum, the council foreclosed any private negotiations between French sailors and planters who might have welcomed a foreign buyer at premium prices during the cattle scarcity. The mechanism transferred the commercial discipline of the council's earlier letter to Captain Lihorne (16 January 1714/15) from a single contractual response to a general public rule. The phrase "at any price" recognised the council's awareness that French sailors might offer prices well above the local 40s per hundredweight rate that the planters could not resist. The temptation for an indebted planter to convert a few head of cattle into substantial French silver, regardless of council policy, was real. The "at any price" exclusion made the prohibition absolute, preventing any planter from claiming that an exceptional offer justified an exception to the rule. The enforcement mechanism, though not specified in this advertisement, would have run through the same procedures as other beat-of-drum prohibitions, with severe penalties for breach. The carve-out for "any other fresh provisions" allowed the planters and inhabitants to sell hogs, poultry, goats, vegetables and other commodities to the visiting French. This preserved the commercial opportunity from the French visit while restricting only the politically sensitive item. The advertisement's structure, prohibition followed by limited permission, ensured that the French ship would not depart entirely empty-handed, but would carry away nothing that the Company itself needed for its own ships. The spy clause introduced an unusual element of public-security policing. By directing the inhabitants to treat French personnel found outside the immediate beach area as spies, with authority to apprehend them and bring them before the council, the order extended the no-shore-visit policy of the consultation into an active enforcement regime. The colony's inhabitants became the colony's own security force, with every planter empowered to detain unauthorised French personnel. The provision reflects the council's concern that, despite the formal prohibition on shore visits, individual French sailors might wander inland on their own initiative, seeking water, food or trading partners. The advertisement gave the inhabitants explicit authority to bring such persons in. Speculations:

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			The publication of the advertisement at beat of drum across James Valley on 29 January 1714/15 would have been an unusual public event in the colony's recent calendar. With the regular sittings deferred to a week after the <i>Aurengzebe</i> sailed (the <i>Aurengzebe</i> having been in the road through the latter part of January), the planter population had not been gathered as a body recently. The drumbeat for the foreign ship advertisement would have served both to inform the inhabitants of the policy and to signal the council's strict response to a potentially significant security event. The very fact of a foreign warship being prominently visible in the road would have generated speculation across the colony, with the formal advertisement providing the council's authoritative position. The spy provision drew on a distinct British conception of the inhabitants' civic responsibility, dating back to the militia laws and the security regulations of earlier wars. By empowering every householder to apprehend suspected spies, the council activated a latent function of the inhabitant body that had not been called on in recent years. The active enforcement role complemented the church wardens' tax-collection authority issued just eleven days earlier, with the inhabitants now serving simultaneously as taxpayers, militiamen and security agents. The colonial state, in its St Helena form, treated the inhabitant population as an active arm of governance rather than as a purely civilian community.
350	341	A Complaint was made to y[e]: Gov[d] that there was a contrivance & agreement made by one Lucas Mason & W[m] Bever to Steal away a female Negro Slave Called Abigael from the Widdow Grace Coulson the Govern[d] Examined into the matter & found the said Mason & Bever had talked w[th] y[e] Wench & asked her to goe off in y[e] Ship Aurengzeeb in Order to be Conveighed by the said Bever to England whereupon the Govern[d] Ordered Lucas Mason who belonged to the Fort to be severely whipped as y[e] Flagg Staffe & then at the request of the Widdow Coulson who desired all those concerned in that Fact might be punished W[m] Bever a Midshipman in board y[e] Ship on his Examo: owning that he did Intend to a carryed the said Slave Wench home to his mother the Gov[r]. because he was sayd to be of a Good Family in England committed him to the Prison by the Consent of his Cap[and] & the Black Wench was alsoe Publicly whipt and then on the Petition of the Widdow Coulson w[ch] was as follows. All which your Petition[r]. can fully prove against the Margin Notes: Compl[t] made of a Contrivance to Steal away a big[r] [bla]ck Wench of W[m] Coulson[s]. Luc[a] Mason Punished & W[m]: Bevers put into prison y[e] Wench whipt Island S[t]. Helena W[r]. Coulsons Peti[tion] S[t] [w]hion ag[t]: W[m]. Bever.	A complaint was made to the Governor that there was a contrivance and agreement made by one Lucas Mason and William Bever to steal away a female negro slave called Abigail from the widow Grace Coulson. The Governor examined into the matter and found that Mason and Bever had talked to the wench and asked her to go off in the ship <i>Aurengzebe</i> in order to be conveyed by Bever to England. The Governor thereupon ordered Lucas Mason, who belonged to the Fort, to be severely whipped at the flagstaff. Then at the request of the widow Coulson, who desired all those concerned in the fact might be punished, William Bever, a midshipman on board the ship, on his examination owned that he did intend to have carried the slave wench home to his mother. The Governor, because Bever was said to be of a good family in England, committed him to the prison by the consent of his captain. The black wench was also publicly whipped. Then, on the petition of the widow Coulson, which was as followeth. St Helena. To the Worshipful Isaac Pyke, Governor, and council. The most humble petition of Grace Coulson of the island, widow. She humbly set out that, forasmuch as one William Bever, belonging to the ship <i>Aurengzebe</i> under Captain Nicholas Luhorne, commander, now in the road, had contrived to steal away one of her female slaves called Abigail, whom he privately seduced to go on board the ship in the night-time to be concealed on suppose to debauch and satisfy his lust during the voyage. She could fully prove against... Interpretations: The Abigail incident reveals a multi-layered case of attempted enticement, with social-class distinctions running through the council's response. Lucas Mason, a soldier of the Fort, received immediate and severe punishment by whipping at the flagstaff, the standard public penalty for soldier misconduct. William Bever, the midshipman from the <i>Aurengzebe</i>, received imprisonment rather than corporal punishment because he was "said to be of a good family in England". The class differentiation operated openly in the council's hand: the same offence drew the lash for the working soldier and the prison for the well-born midshipman,

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			with corporal punishment reserved for the lower ranks even where the offence was identical. Bever's commitment to prison required the consent of his captain (Lihorne of the <i>Aurengzebe</i>), reflecting the formal jurisdiction over ship's officers. Even on shore at St Helena, a midshipman remained under his captain's authority, and the colonial council could not detain him without the captain's agreement. The captain's consent in this case probably reflected his own embarrassment at the incident and a desire to see Bever properly disciplined without escalating to capital prosecution. The colony's prison detention, with the captain's consent, allowed both jurisdictions to address the matter without conflict. The third punishment, the public whipping of Abigail herself, treated the slave as both victim and offender. The widow Coulson's petition that "all those concerned in the fact might be punished" included her own slave alongside the male instigators. The legal logic treats Abigail as having agreed to leave with Bever despite knowing this would constitute theft of her mistress's property. The whipping served both as personal punishment to Abigail and as public warning to other slaves who might consider similar elopement schemes with sympathetic European visitors. The Coulson petition followed standard petition form, naming the petitioner, describing the harm and requesting council action. The phrase "privately seduced to go on board the ship in the night-time to be concealed on suppose to debauch and satisfy his lust during the voyage" stated the petitioner's interpretation of Bever's motive. The frank language of the petition, treating the slave woman as object of intended sexual exploitation, was direct in a way the consultation's own narrative had only implied. The widow framed her complaint as one of property damage (her slave Abigail being the property at issue) compounded by sexual purpose, marking the offence as particularly egregious by combining theft with moral outrage. Speculations: The widow Grace Coulson's substantial response (5 slaves on the church rate of 1714, totalling 6 persons in her household) gave her standing as a substantial slaveholder of the colony. Her firm demand for full punishment of all parties, including her own slave, served as warning to her remaining four slaves against any thought of following Abigail's example. The widow's investment in the labour of her household, with Abigail probably one of her most working-age and able slaves, made the threatened loss serious in economic as well as principle terms. Her petition reads not as the lament of a wronged owner but as a deliberate intervention to set a public example. The midshipman Bever's representation of his motive (to take Abigail home to his mother) was a transparently false defence. A midshipman's mother in England would have neither use nor desire for a slave from St Helena, and the practical difficulties of presenting an enslaved African woman as a gift to a respectable English household were substantial. Bever's own admission "on his examination" confirmed his intent to carry Abigail, but his mother-as-recipient story was self-evidently an attempt to deflect from the sexual motive that the widow Coulson's petition stated more directly. The council clearly preferred the widow's interpretation, since it acted on the assumption that Abigail's exploitation would have followed her concealment on board ship.
351	342	the said Bever and therefore She humbly prays Your Worship: & Councill to take the Premises into your wise & mature Considerations and to Grant Justice against y[e] said William Bever Suitable to his wicked and Villanous designe and such as may Deter others from Acting the same or such Like Offences which has a very	The widow Coulson's petition continued. Offic[r] desired to be y[e] Jury by W[m] Bever Granted.	ruin and destruction of the island, for the loss of a slave on the island was of much greater consequence than in many other places. Signed by her mark, Grace Coulson. The Governor sent Bever notice that on Monday following he would hold a court to try him for the fact, and ordered him, if he were not guilty, to prepare for his defence against that time. On Monday 31 January 1714/15 the court was opened. William Bever was called to the bar and told that, if he had any objection to make against any of the jury, they should not be of his jury. He said he only desired that Mr George Thomas, carpenter of the ship, might be one, and that it was equal to him who the rest of the jury were. Although his request was not very reasonable, Mr George Thomas was called and empanelled on the jury. The jury were ordered to be three of the chief officers of the ship, George Thomas and four sergeants of the garrison and four planters, as follows. Interpretations: The widow Coulson's plea, that "the loss of a slave on the island was of much greater consequence than in many other places", set out the strategic position of slave property in the small St Helena economy. With perhaps 200 to 250 slaves on the island according to the church rate's 206 black persons over sixteen, each slave represented a much larger fraction of the colony's labour force than would be the case in the larger plantation societies of the West Indies or America. The loss of even one slave through enticement or escape weakened a particular planter's labour force significantly, and might encourage similar departures by other slaves. The widow's argument is one of public security as well as private property right, framing slave retention as a colony-wide concern. The Governor's procedural response, granting Bever a Monday court with proper trial procedure rather than dispatching the matter summarily, reflects the gravity of the charge against a midshipman from a substantial English family. By holding a formal court with mixed jury, the council ensured Bever's punishment would carry the legitimacy of due process rather than appearing as arbitrary colonial discipline. The procedural respect accorded to Bever, denied to Lucas Mason who had been whipped on the Governor's order without trial, again revealed the class distinctions running through the proceedings. The jury composition is highly unusual in its mixed structure. Three chief officers of the ship, plus George Thomas the ship's carpenter, plus four garrison sergeants, plus four planters, gave a twelve-man jury divided across three distinct constituencies. The ship's officers (4) brought maritime expertise and could speak to Bever's standing on board. The garrison sergeants (4) represented the military establishment that had punished Mason. The planters (4) represented the colonial property-holders whose slave interests were at stake. The balanced composition reflected Pyke's attention to procedural fairness, ensuring no single constituency could dominate the verdict. Bever's choice of George Thomas, the carpenter of the <i>Aurengzebe</i>, as the only named juror suggests he expected sympathetic understanding from a fellow shipmate. The council's permission of the request, "though his request was not very reasonable", was a procedural courtesy allowing Bever to feel he had some say in the composition of his jury without yielding overall control. The remaining eleven jurors were chosen by the council without reference to Bever's preferences. Speculations: The widow Coulson's signature "by her mark" indicates she was illiterate or at least unable to write. As a woman heading a substantial slave-holding household, with five slaves and a sixth white member listed in the

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			church rate, she nonetheless represents the substantial planter class. The literacy gap between her status as estate holder and her inability to sign her own petition reflects the gendered education patterns of the period, where even women of property and social standing might lack formal writing skills while managing complex household and agricultural enterprises. The choice of a Monday court date placed the trial at the start of a working week, ensuring time for the <i>Aurengzebe</i> to complete cargo work and other business while the court proceeded. The Saturday consultation that opened the foreign ship advertisement, the immediate punishment of Lucas Mason and confinement of Bever, and now the Monday trial, together compressed the response into less than three full days. The pace of the proceedings reflected both the urgent presence of the <i>Aurengzebe</i> in the road (since the ship would presumably sail soon after the matter was resolved) and the colony's resolve to address the threat to slave property before the unfamiliar foreign ship's presence might prompt similar approaches to other slaves. By dispatching the case in three days, the council made the message clear before the <i>Aurengzebe</i> departed.

Island of St Helena. A court of judicature was held on Monday 24 January 1715 at the sessions house near the United Castle in James Valley. Present in council were Isaac Pyke, governor and judge; George Haswell, deputy governor; Edward Mashborne, third; Matthew Bazett, fourth; and Ardipas Tovey, fifth. The court was opened in the usual way. Those appointed to serve as jurors were as follows. Chief mate of the <i>Aurengzebe</i>, George Westcott, foreman, 1. Second mate, Richard Thelwall, 2. Third mate, John Manlove, 3. Carpenter of the ship, George Thomas, 4. Serjeants: Thomas Southen, 5. John Worrall, 6. William Haughter, 7. Thomas Fairfax, 8. Planters: Orlando Bagley, 9. James Greentree, 10. John Coles, 11. Henry Francis, 12. An indictment was then read against William Bevar, mariner of the ship <i>Aurengzebe</i>, charging that he had betrayed the trust placed in him as servant to the Honourable East India Company of England, and had taken Interpretations The court of judicature sat at the sessions house adjoining the United Castle in James Valley, with the governor presiding as judge and the senior councillors ranked by precedence as Pyke, Haswell, Mashborne, Bazett and Tovey. This was the standard configuration of the island's higher criminal jurisdiction, in which the executive council reconstituted itself as a bench, blending administrative and judicial authority in a single body of five men. The composition of the jury reflected the social and occupational hierarchy of the island and the ship in port. The four senior officers of the <i>Aurengzebe</i> were placed at the head of the panel, ranked chief mate, second mate, third mate and carpenter. Four serjeants from the garrison occupied the middle positions, and four planters from the island's smallholding class filled the remaining seats. This ordering placed shipboard authority above military rank, and military rank above settled cultivators, which was the prevailing order of social standing on the island.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			The trial concerned an alleged breach of trust by a Company servant aboard a Company ship. The <i>Aurengzebe</i> was an East Indiaman in the Company's regular trade, and ordinary seamen sailing in such vessels were bound to the Company under articles that treated misconduct with the ship's goods or cargo as a punishable offence cognisable at St Helena when the vessel called at the island. The framing of the charge as a betrayal of trust rather than mere theft pointed to the contractual relationship between mariner and employer, which gave the court a basis to proceed against him under the island's jurisdiction. Speculations The placement of George Westcott, chief mate of the <i>Aurengzebe</i>, as foreman of the jury trying one of his own ship's mariners suggests that the court relied on shipboard officers to lend weight and credibility to a verdict against their subordinate, since they would know the man, his duties and the nature of the alleged misconduct at first hand. The seating of three further officers of the same ship alongside him reinforces that the panel was deliberately weighted with men whose authority over the accused predated the trial, making conviction the natural outcome from the moment the jury was sworn. The decision to charge Bevar with betrayal of trust to the Company, rather than to frame the matter as ordinary theft or as a shipboard disciplinary offence to be handled by the captain, points to a calculated use of the island's civil jurisdiction. By prosecuting at St Helena rather than deferring the matter to the ship's own discipline or to proceedings at the next port, the Company secured a formal conviction on the public record of the settlement, which carried greater weight as a deterrent to other crews calling at the island and removed any ambiguity about whether the offence had been dealt with.
353	344	taken upon him without the Consent foreknowledge & Privity of Cap[t]: Nicholas Luhorne did on the 28[th] day of January 1714/5. Treacherously, falsely, Wickedly and Deceitfully Devise and Contrive Unlawfully to gett into his Possession a Certain Female Negroe Slave Named Abigail Vallue fifty Pounds belonging to and is Part of the Goods and Chatles of Grace Coulson Widdow, and the better to Effect this his Said Evill designe did craftily and Deceitfully Endeavour to Steal & Carry away the said Slave Secretly and Privately in the Night time and to Conceal her on board of Said Ship & to put to Sea in Order to Debauch her and to Sattisfie his Lustfull Inclination dureing the voyage All which tended to the Great and Apparent Loss & Damage of the Said Grace Coulson Widdow in Particular and to the Generall Detriment of the Hon[ble]: the Lords Proprietors, and that to Accomplish his Said Brutall and Wicked Designe he framed, Contriv[d] and sent on Shoar a Certain Libell wherein the Said William Bevar wrote with his own hand the following words (viz[t]): Give my service to M[rs]: Abigall and I shall be glad to See her aboard, I can here nothing of when wee Sail, I will Send you a Note when you shall send her off, and at what time of night, and this Libell was Sent on Shoar to the Same Evill purpose To witt; For the Intic =ing and Deludeing the Said Negroe Slave wench to the End that She might be Stolen off thereby, and is to the Evill Example of all others in the Like case offend =ing, being a Notorious Violation of the good Laws and Constitutions of this Island and has a very Great Tendancy to the Utter Ruine and Destruction of the Inhabitants thereof and is a breach of the Publick Peace being Contrary to the Hon[r] of the Lords Proprietors and the Civian & Dignity of the Queens Majesty &c[a] To Margin Notes: Indictm[t] against W[m]: Bevor	The indictment continued. William Bevar had acted without the consent, knowledge or privity of Captain Nicholas Luhorne. On 28 January 1715 he had treacherously, falsely, wickedly and deceitfully contrived an unlawful scheme to get into his possession a certain female slave named Abigail, valued at £50 0s 0d, belonging to and forming part of the goods and chattels of Grace Coulson, widow. To carry out this design, he had craftily and deceitfully endeavoured to steal the slave and carry her away secretly and privately in the night, to conceal her aboard the ship and to put her to sea, intending to debauch her during the voyage and to satisfy his lust upon her. The whole scheme tended to the great and apparent loss and damage of Grace Coulson in particular, and to the general detriment of the Honourable Lords Proprietors. To accomplish the design, Bevar had written and sent ashore a certain libel in his own hand, in the following words. Bevar sent his service to Mrs Abigail and said that he would be glad to see her aboard. He could hear nothing of when the ship was to sail, but he would send her a note when she should send Abigail off, and at what time of night. The libel was sent ashore for the same evil purpose, namely the enticing and deluding of the slave woman so that she might be stolen away. The conduct was an evil example to all others who might offend in the like manner, a notorious violation of the good laws and constitutions of the island and tending greatly to the ruin and destruction of its inhabitants. It was a breach of the public peace, contrary to the honour of the Lords Proprietors and the crown and dignity of the Queen's Majesty, Interpretations The valuation of Abigail at £50 0s 0d set a benchmark figure for an adult female slave in the island's domestic economy and provided the measure of

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			damage to the owner for the purposes of the indictment. The sum exceeded the annual military pay of an ordinary soldier of the garrison by a wide margin, which gave the offence the weight of a substantial property crime rather than a minor disciplinary matter. The named owner, Grace Coulson, widow, appeared in the record as the legal proprietor in her own right, which reflected the position of widows on the island as independent holders of slave property and estate after the death of a husband. The note Bevar sent ashore was described as a libel in the technical legal sense of a written instrument tendered as evidence of the offence, not in the modern sense of defamation. Its production in court served two functions: it fixed the offence in documentary form that could be read to the jury, and it linked Bevar to the scheme by his own hand, removing any possibility of denial. The wording arranging for Abigail to be sent off at night, with a note to follow giving the time, exposed the method as a planned nocturnal abduction rather than an opportunistic act. The indictment framed the offence on three overlapping levels of authority: the private loss to Grace Coulson, the general detriment to the Lords Proprietors as the chartered owners of the island, and the affront to the crown. This layering reflected the constitutional position of St Helena under the East India Company's proprietary grant, in which offences were treated as breaches against the Company's authority and against the sovereign whose charter underwrote it. The phrase "good laws and constitutions of this island" pointed to the body of local ordinances enforced by the council in its judicial capacity, which governed slave property, garrison discipline and the conduct of visiting crews. The complicity of the slave woman herself was implicit in the wording of the scheme, since the note presupposed that Abigail would be sent off by some intermediary at an appointed time. The framing of the charge as enticing and deluding her, rather than as forcible seizure, acknowledged this without giving her any standing as a participant whose own conduct fell within the court's notice. She remained throughout the proceedings the object of the offence and the measure of its value, not a party to it. Speculations The decision to set out the text of Bevar's note in full within the indictment, rather than to summarise its contents, served a practical evidentiary purpose. By reading the words aloud to the jury, the court placed before twelve men, four of them officers of the same ship, the unmistakable evidence of a planned removal of the slave at night with the active concealment that this required. The reproduction of the note in the record locked Bevar's own language into the proceedings, so that the jury could not be invited to doubt whether the scheme had truly been formed. The charge framed the captain's lack of consent or knowledge as the very first element of the offence, which suggests that Captain Luhorne's exposure was a matter of concern to the prosecution as well as to him personally. Establishing at the outset that the master of the <i>Aurengzebe</i> was ignorant of the scheme protected the ship's command from any suggestion of collusion in slave-stealing, and preserved the commercial reputation of an East Indiaman that would shortly resume its voyage. The framing thereby served the interests of the Company as well as of the island.
354	345	To this Indictment he pleaded not Guilty but owned on the trifling Defence he made that he had a mind to Carry the Wench home to his mother. He owned also the Writing and Sending the Note Mentioned in the Indictm[t]: and there Produced against him But Said he wrote it when he was Drunk. So then the Jury withdrew and then returned, And brought him in Guilty.	Bevar pleaded not guilty to the indictment. He offered only a trifling defence, namely that he had come to carry the slave home to his mother. He admitted writing and sending the note set out in the indictment and produced against him, but said he had written it while drunk.

		Whereupon the Govern[r]: who satt Judge of the Court Seeing him to be an Ignorant young Man, After Some Admonish =ment for his future Good behaviour Satt on him the fine of Ten Pounds, Sayeing he hopt, Tho' that fine was but Small 't would be a means to Deter both him and others for the future from all such Scandalous Actions. And then the Court Adjourned. [...] [...] Tovey Margin Notes: He pleaded not Guilty. but owned Some part. Jury found him Guilty. to 10[.] fine.	The jury withdrew. On its return it brought him in guilty. The governor, sitting as judge of the court, considered Bevar to be an ignorant young man. After giving him some admonition as to his future good behaviour, he laid on him a fine of £10 0s 0d. The governor said he hoped that, though the fine was small, it would serve as a means to deter both Bevar and others from such scandalous actions in future. The court then adjourned. The record was signed by Isaac Pyke and Ardipias Tovey. Interpretations The fine of £10 0s 0d represented one fifth of the £50 0s 0d valuation placed on Abigail in the indictment, and stood as a notably light penalty for a deliberate scheme to remove a slave from her owner by night for the purpose of debauchery during a long voyage. The disparity between the value of the property at risk and the penalty actually imposed exposed the practical limit of the court's reach over an outbound mariner: a heavier sentence such as corporal punishment or imprisonment would have detained him from his ship and disrupted the Company's voyage, which the governor was not prepared to do. The defence that Bevar had been drunk when he wrote the note was treated by the court as no defence at all, since he had already admitted the writing and sending of the libel before raising it. His other plea, that he had intended to carry Abigail to his mother, was dismissed as a trifling excuse. The court's swift rejection of both pleas, combined with the jury's return after a single withdrawal, indicated that the verdict had been settled by the evidence of the note itself, which Bevar's own admission placed beyond dispute. The governor's characterisation of Bevar as an ignorant young man, paired with admonition and a small fine rather than exemplary punishment, signalled a deliberate stance of mild correction for a Company servant who would shortly leave the island. The penalty was set high enough to be felt by a common mariner, since £10 0s 0d represented many months of ordinary seaman's wages, yet low enough not to break him or to put the Company to the expense of replacing him on the <i>Aurengzebe</i>. Speculations The governor's explicit statement, recorded in the entry, that he hoped the fine would deter others as well as Bevar reveals an awareness on his part that the sentence might be thought too lenient and required justification in the council's own minutes. By placing the deterrent purpose on the record, Pyke pre-empted any later criticism from the Lords Proprietors or from the island's planters that a man convicted of attempting to steal a slave worth £50 0s 0d had been let off too easily, and shifted the weight of the penalty from the sum imposed to the public example made of the conviction itself. The decision to fine Bevar rather than to detain him or subject him to corporal punishment suggests that the governor weighed the interests of the <i>Aurengzebe</i> and its voyage against the interests of Grace Coulson as the wronged owner. A mariner held on the island for further punishment would have left a vacancy in the ship's company that the captain would have struggled to replace, while a fine could be levied immediately, paid out of wages or shipboard funds, and allow the vessel to depart on schedule with its crew intact.
355	346	Island S[t]: Helena At a General Sessions & Court of Judicature, held on Monday y[e] 7[th] of February 1714/15 at the Sessions house in James town Isaac Pyke Esq[r] Gov[r] & Judge	Island of St Helena. The Jury. Gov[r]: Speech.	Present in council were Isaac Pyke, governor and judge; George Haswell, deputy governor; Edward Mashborne, third; Matthew Bazett, fourth; and Ardipas Tovey, fifth. The following persons were summoned as jurors. 1. Thomas Southen. 2. John Bagley. 3. John Worrall. 4. William Bodle. 5. William Slaughter. 6. Orlando Bagley. 7. Thomas Fairfax. 8. John Coulson. 9. Thomas Dutch. 10. John Coles. 11. Isaac Wood. 12. Jonathan Doveton. 13. Samuel Jessey. 14. James Draper. 15. William Worrell. 16. Henry Francis. 17. James Greentree. 18. Thomas Harper. 19. Sutton Isaac junior. 20. Joshua Johnson. 21. John Long. The major part of the rest of the inhabitants attended, this being the first general court since the governor's arrival on the island. The governor spoke to them as follows. He addressed them as gentlemen. He said that this was the first opportunity he had had of calling them together since his arrival, and that as jurymen the gentlemen of the jury represented the whole country. He therefore intended that what he said to them should Interpretations A general sessions and court of judicature differed from the ordinary court of judicature held a fortnight earlier in that it was convened as a public assembly of the island's free inhabitants rather than as a panel constituted only to try a particular cause. The summoning of twenty-one jurors, well beyond the twelve required for any single trial, indicated that the body sitting on this day functioned as a grand inquest of the country, charged with receiving the governor's address on the state of the island and presenting any matters touching the public order. The attendance of the major part of the remaining inhabitants confirmed the occasion as the formal opening of Pyke's administration before the settled population. The jury list drew from the same body of planters and minor officeholders who had supplied the earlier trial panel, with several names recurring: Thomas Southen, John Worrall, Orlando Bagley, Thomas Fairfax, John Coles and Henry Francis had all served on the <i>Aurengzebe</i> jury on 24 January 1715. The reappearance of these men, together with a further fifteen drawn from the wider settler population, showed that the pool of jurors available on the island was narrow and that the same households supplied both the trial juries of the lower court and the grand inquest of the general sessions. The governor's framing of the jury as representing the whole country invoked the constitutional theory by which a jury of inhabitants stood for the political community in the absence of any elected body. St Helena had no assembly of its own, and the relationship between governor and population was mediated through the council on one side and through the empanelled jurors on the other. By addressing them as representatives of the country, Pyke acknowledged that his authority derived from the Lords Proprietors but operated in practice through the consent and cooperation of the planters gathered before him.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			Pyke himself had arrived on the island as governor not long before this opening address, succeeding the previous administration whose conduct had been the subject of the inquiries and disputes recorded in earlier consultations. His characterisation of this sitting as the first opportunity to call the inhabitants together since his arrival placed the present meeting at the beginning of his term and signalled an intention to set out his governing principles directly to the settled population rather than through the council alone. Speculations The decision to open the new administration by addressing the inhabitants en masse, rather than through a series of private interviews or written orders, points to a calculated effort by Pyke to establish his authority by display of constitutional form. A governor newly arrived from London needed to be seen by the planters as standing within the law and the customary practice of the island, and the empanelment of a grand inquest of twenty-one jurors with the wider population in attendance provided the most public stage available to him for that purpose. The speech that followed would carry weight precisely because it was delivered in the presence of the assembled country, witnessed and recorded. The very large number of jurors summoned, almost double the panel of the earlier trial and drawn from a broader cross-section of households, suggests that Pyke wished to draw into the proceedings every settler family of standing on the island. By calling Doveton, Jessey, Draper, Worrell, Harper, Sutton Isaac, Johnson, Long and Wood alongside the men who had already served, the governor associated names not yet on his trial juries with the inaugural act of his administration. This widened the circle of those formally implicated in the opening of his term and reduced the prospect that any planter household could later claim to stand outside the new dispensation.
356	347	shall look on as Sayd to all. Our present meeting is an Assembly for the Publick good to do Justice impartially between man & man w[th] is what y[r] Lords Proprietors have comanded who have been pleased to make me yo[r]: Govern[r]. & these Gentlemen who are with me on the Bench their Counc[il]. Hon[ble]: Comp[a] for preventing future disputes. I have Orders to call in their Debts & the Hon[ble]: Comp[a], being intended to do all the good that is possible for this place have resolved to send other	The governor said that what he said to them should be looked on as said to all. The present meeting was an assembly for the public good, to do justice impartially between man and man, in accordance with the orders of the Lords Proprietors. The Proprietors had been pleased to appoint him as governor, together with the gentlemen who sat with him on the bench of the council. He hoped that all of them would do their duty by endeavouring to preserve the public peace and to promote the interest of the Honourable Company, in the further improvement of the island, which he took to be the interest of every person upon the place. He was commanded to acquaint the inhabitants with the very great expense the Company had been at in fortifying and improving the place. They themselves must be sensible of this, and he doubted not but every one of them was aware of it. Now, however, having settled a peace, the Company was resolved to retrench its expenses. They had directed him to discontinue their building and fortification works for a time, so that the planters might have leisure not only to manure but also to improve their plantations. The aim was that the planters should answer the purpose for which the place was held, namely to supply and refresh the Company's shipping at such moderate rates that the shipping might rather choose to deal with their own countrymen than be discouraged by excessive high prices and go to the Cape, helping to enrich a foreign people. He said that just as he would always be careful of the Company's interest, so he would be careful of theirs. The Company's stores would always be open at the usual times, and more often when necessity required, so that the inhabitants might be furnished with goods at reasonable and easy rates. He had orders to see that all plantations were surveyed and fenced in, and that due accounts of all

		money for small payments & so have it pass current here as it all other countrys and Margin Notes: He acquaints y[m] w[th] his Instruct =ions. relating to Publick affairs.	transactions were kept in books and duplicates of them sent to the Honourable Company, for preventing future disputes. He had orders to call in their debts. The Honourable Company, intending to do all the good that was possible for the place, had resolved to send other money for small payments, so that it might pass current here as it did in all other countries. Interpretations The speech laid out the Company's economic strategy for the island in plain terms. The cessation of building and fortification works was tied directly to the recent peace, which removed the immediate strategic justification for further military expenditure and freed the planters from the labour levies that such works had required. By directing the planters to turn their attention to manuring and improving their grounds, Pyke shifted the burden of the island's productive output back onto the settler economy, on which the Company depended to provision its East Indiamen. The framing of St Helena's purpose as a refreshment station for Company shipping, in competition with the Dutch Cape, gave the planters a clear commercial threat against which to measure their own prices. The governor's warning that excessive prices would drive Company captains to deal with foreigners and enrich a rival nation appealed to the planters' interest as Englishmen as well as to their economic self-interest. The reference to the Cape pointed to the Dutch East India Company's settlement at Table Bay, which had for some decades supplied passing shipping with provisions at competitive rates and stood as the obvious alternative for any English vessel willing to break with the customary practice of calling at St Helena. The order to survey and fence all plantations, and to keep proper books with duplicates sent home, signalled a marked tightening of administrative control over land tenure and account-keeping on the island. The Lords Proprietors evidently regarded the absence of clear boundaries and reliable records as a source of recurring disputes, and the new requirement transferred the cost of registration and bookkeeping to the planters themselves while reserving to the Company in London the means to adjudicate any future quarrel from the duplicate records. The proposal to send out other money for small payments addressed a chronic shortage of low-denomination coin on the island, which had hindered everyday transactions between planters, soldiers and visiting crews. By undertaking to supply currency that would pass current at St Helena as elsewhere, the Company sought to monetise the local economy more fully and to reduce the reliance on credit, barter and book debt that had previously characterised dealings on the place. Speculations The governor's pairing of an order to call in debts with the promise of a new supply of small coin suggests a deliberate sequencing intended to ease the burden on debtors at the moment when collection was being pressed. By introducing fresh currency at the same time as recovery of outstanding sums, Pyke gave debtors a practical means of settlement and removed the excuse that no coin was available to pay with. The two measures together formed a single financial reset, designed to clear the books inherited from the previous administration and to place transactions on the island upon a regular money basis going forward. The decision to suspend fortification works while directing the planters to fence and survey their grounds points to a redirection of labour from Company projects to private improvement, with the survey and fencing requirement serving the Company's interest as well as the planter's. Boundaries set down in writing and

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			verified by Company officers would resolve any ambiguity about which lands fell under which lease, and the duplicate accounts sent home would give the Lords Proprietors a documentary basis for adjudicating disputes from London. The labour saved on the fortifications was thereby redirected to producing the very records by which the Company could continue to assert its proprietary control once the building works had ceased.
357	348	and we hope that it will be another encouragement to all that are Industrious. We having now but very little Publick work to do, I shall by their Directions make good the Publick ways & endeavour to make a Road & to repair & cleanse the Water courses to encourage the growth of Timber & particularly to preserve a place called the great Wood. Gentlemen. These are my Instructions and this is my Charge & to Succeed therein I only desire y[e] unanimity of you the people and that you would lay aside those Animosities and differences for which you have been too remarkable. I will Endeavour to shew you a good Example But as the Hon[r]: Comp[a] have made me their Govern[r] I must not bear their Sword in vain, and therefore shall not only be a praise to those who do well but I will certainly punish the evil doer I will do my Utmost to encourage all Handicraft, and manner of industry among you & shall prefer none but those who have been Industrious I will discourage Immorality, profaneness & Debauchery. I will Severely punish Thieves & Sloths the Rottous & Slanderer which are the Weeds of this place & must be rooted out or else there can be no hopes of bringing commendable things to good. I hope I shall never want yo[r]. Advise or Assistance in any thing that may relate to the Publick & what shall be Sayd a grievance to you I will endeavour to Redress y[t] I may leave all things here with as fair a prospect as that Wo[r]thy Gentleman Cap[t]. Jn[o] Roberts yo[r]. late Gov[r] For it shall be alwayes my care and Study to procure the true Interest] Margin Notes: Desires Unanimity to be layd aside and Declares his good Intentions for the well doing of y[e] people in Generall Imorality to be discourag[d] offend[rs] must be punish[d]	The governor said that the Company hoped the new arrangement would be a further encouragement to all who were industrious. With very little public work now to be done, he would, by the Company's directions, make the inhabitants attend to the public ways and endeavour to make access to them, to repair and cleanse the watercourses, to encourage the growth of timber and in particular to preserve a place called the Great Wood. He addressed them again as gentlemen. These were his instructions, and this was his charge. To succeed in it, he desired only the unanimity of the people, and that they would lay aside the animosities and differences for which they had been too remarkable. He would endeavour to show them a good example. The Honourable Company had made him their governor and he would not bear their sword in vain. He would not only give praise to those who did well, but would certainly punish the evildoer. He would do his utmost to encourage all handicrafts and every manner of industry among them. He would prefer none but those who had been industrious. He would discourage immorality, profaneness and debauchery. He would severely punish thieves, slothfuls, rioters and slanderers, which were the weeds of the place and must be rooted out, or else there could be no hope of bringing commendable things to good. He hoped he should never want their advice or assistance in anything that might relate to the public, and that whatever they should judge a grievance to him, he would endeavour to redress, so that he might leave all things on the island in as fair a prospect as that worthy gentleman, Captain John Roberts, the late governor, had left them. It would always be his care and study to procure the true Interpretations The instruction to attend to public ways, watercourses and timber, in place of fortification work, set out the new labour priorities expected of the planters. The watercourses were the open conduits that carried water from the upland springs to the gardens, plantations and shipping in the roads, and their maintenance was indispensable to the productive use of the land. The preservation of the Great Wood, a named upland forest reserve, addressed a known anxiety on the island concerning the depletion of timber, which was needed for building, fencing, fuel and the repair of shipping calling at James Town. The governor's repeated acknowledgement that the inhabitants had been remarkable for their animosities and differences confirmed the reputation of the island's settler community as quarrelsome and litigious, a character borne out by the inquiries and disputes recorded under the previous administration. By making unanimity the precondition of his success, Pyke signalled that he would view persistent faction and complaint as obstacles to his programme rather than as legitimate expressions of grievance, and would meet them with the powers of the bench rather than with mediation. The categories of offender singled out for severe punishment, namely thieves, slothfuls, rioters and slanderers, defined the conduct that the new

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			administration would treat as social pollution. The inclusion of slanderers alongside thieves and rioters reflected the importance of reputation in a small settled community where credit, social standing and access to land turned on the good opinion of neighbours, and where unchecked rumour could destabilise the whole order. The metaphor of weeds to be rooted out, drawn from the agricultural language familiar to a planter audience, framed punishment as a form of husbandry necessary to the cultivation of public virtue. The reference to Captain John Roberts as the late governor whose work Pyke hoped to match identified the immediate predecessor whose administration ended with his return to England. By naming Roberts and praising him as a worthy gentleman, Pyke aligned his own intentions with the standard set by the last governor and avoided any open criticism of the period in office between Roberts and his own arrival, during which the island had been administered by the senior councillors. Speculations The governor's open promise to bear the sword and certainly punish evildoers, made before an audience comprising the major part of the inhabitants, served as a deliberate counterbalance to the leniency he had just shown in the Bevar case two weeks earlier on 24 January 1715. By committing himself in public to severity against future offenders, Pyke distanced his administration from any suspicion that the small fine of £10 0s 0d had set the tariff for serious crime under his rule, and reserved to himself the latitude to act harshly in subsequent cases without contradiction. The decision to invoke John Roberts by name as the standard against which his own administration should be measured suggests that Pyke faced a settler community in which Roberts retained considerable goodwill, and that any new governor needed to be seen as continuing rather than departing from his approach. By tying his programme to the prospect Roberts had left, Pyke borrowed credit from a predecessor whose tenure was remembered favourably and pre-empted any comparison that might have placed him at a disadvantage in the eyes of the assembled planters.
358	349	Interest of every One among you that you may all enjoy y[e] fruit of yo[r] diligence and Labours under yo[r] own Vines and Figtrees with pleasure. And I do assure you that it is my Sincere and hearty Wish & desire that what I shall do while I am your Govern[r] may contribute to make this Island always happy in y[e] prosperi ty of you her People & of yo[r]. Children on her when I shall be no more. The Court being Satt the following Persons were Sworne of the Jury 1 John Coles foreman 2 Thomas Southen 3 John Worrall 4 Orlando Bagley 5 Thomas Fairfax 6 Jonath[an] Doveton 7 James Draper 8 Henry Francis 9 Joshua Johnson 10 Samuel Jessey 11 William Worrall 12 John Long Thomas Bevia[n] a Soldier was Indited for Steal ing a Cane with a Silver head Vallue Seven Shillings and Six pence which on the Tryall Appeared & explain[d] by the Testimony of John Orchard and William Huffe. So the Jury brought him in Guilty of Felony Vallue Ten pence, as the Govern[r]: Advised them it being a Matter of Small Worth and Bevia[n] a white Man. Whereupon Margin Notes: His hearty wish &c[a]. Jury. Tho[s]: Bevia[n] Indictm[t] for theft found Guilty	The governor said he hoped to procure the true interest of every one among them, so that they might all enjoy the fruits of their diligence and labours under their own vines and fig trees with pleasure. He assured them that it was his sincere and hearty wish and desire that what he did while he was their governor should contribute to make the island always happy in the prosperity of its people and of their children, even when he should be no more. The court being sat, the following persons were sworn of the jury. 1. John Coles, foreman. 2. Thomas Southen. 3. John Worrall. 4. Orlando Bagley. 5. Thomas Fairfax. 6. Jonathan Doveton. 7. James Draper. 8. Henry Francis. 9. Joshua Johnson. 10. Samuel Jessey. 11. William Worrall. 12. John Long. Thomas Bevia[n], a soldier, was indicted for stealing a cane with a silver head, valued at 7s 6d. On trial the charge appeared fully proved by the testimony of John Orchard and William Huffe. The jury brought him in guilty of felony to the value of 10d, as the governor advised them, it being a matter of small worth and Bevia[n] a white man. Whereupon Interpretations

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			The reduction of the cane's value from 7s 6d as charged to 10d in the jury's verdict was a deliberate legal device, made on the governor's direction, to bring the offence below the threshold for capital felony. Under the English law of larceny then in force, theft of goods to the value of 12d or more constituted grand larceny and was punishable by death, while theft below that figure was petty larceny and attracted only corporal or pecuniary punishment. By advising the jury to find Bevia guilty at 10d, Pyke kept the conviction within the lesser category and removed any prospect of hanging. The governor's explicit reasoning, that the matter was of small worth and Bevia a white man, recorded openly in the consultation, exposed the racial dimension of capital sentencing on the island. The implication was that a white soldier would not be hanged for the theft of a cane, even one valued at 7s 6d, where a slave or a black inhabitant in equivalent circumstances might have faced the full rigour of the law. The lowering of the valuation by jury direction provided the legal mechanism by which this distinction was given effect in the record without the bench being seen to acquit a guilty man. The image of the planter sitting under his own vine and fig tree, drawn from the prophet Micah, supplied a familiar scriptural figure for the settled and prosperous life that Pyke held out to the inhabitants as the goal of his administration. The phrase carried connotations of secure possession, freedom from molestation and the enjoyment of one's own labour, and was conventionally invoked in early modern English political language to denote the peace of a well-governed commonwealth. Its use in closing the address gave a familiar rhetorical seal to the speech and tied the governor's programme of industry and order to the ordinary religious vocabulary of his audience. The jury that was now sworn for the day's business was drawn entirely from the twenty-one men summoned at the opening of the sessions, and twelve of those names had already served on one or both of the earlier panels of 24 January and the wider summons of this morning. John Coles took the foremanship in place of George Westcott, who had served as foreman of the <i>Aurengzebe</i> trial, the change reflecting that the present court was a sessions of the island's inhabitants rather than a panel partly drawn from a visiting ship's company. Speculations The decision to record Pyke's reasoning on the bench, that Bevia was a white man and the matter of small worth, rather than to leave the reduction of the valuation as a silent jury finding, suggests that the governor wished his direction to be on the public record as guidance to future juries. By placing the principle in the minutes of a general sessions held at the opening of his administration, Pyke established a precedent that white offenders convicted of theft would normally be brought in below the capital threshold by valuation, and that the bench would advise the jury accordingly. The record thereby served as instruction to the planters who would serve on later panels. The pairing of an inspirational closing peroration about vines and fig trees with an immediate trial in which the governor advised the jury to undervalue stolen property in order to spare a white soldier the gallows points to a calculated arrangement of the day's business. The aspirational image of secure prosperity was set down on the record next to a worked example of how the new governor would actually use the bench: severity in word, leniency in practice for offenders within the settler community. The juxtaposition signalled to the assembled planters that Pyke's promises of industry and order would not bear hardly on

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			themselves or their soldiers, whatever the formal language of the speech.
359	350	Whereupon he was Sentenced to be whipt at the Flagg Staff and to receive thirty nine Lashes. Moll a Negroe Slave Wench belonging to Serjant Slaughter was Indicted for Felony and Burglary in breaking the House of Samuell Algate and Stealing thence three Shillings of English Coin and two Dollars in Spanish mony with Sundry other goods of small Vallue amount =ing in the whole to Thirty Shillings which things She Confest to have Stolen but Sayed She came in at the Door which She did not break open. Whereupon the Jury brought her in Guilty of Felony only and Acquited her of the Burglary And the said Moll being a Notorious Wench for Runing away and then Pilfering to Support her self having been twice before whipt for Such faults in M[rs] Goveen: time She was Ordered to be made fast to the Carts taile and whipt from the Sessions House to the End of the new bath called Mile End Stone and back againe and afterwards to wear a Chain and Clogg Jenny a Negroe Slave Wench belonging to William Seale was Indicted for Wilfully and Despightfully Killing a Sow Pigg & Pigg belong =ing to Matthew Brozett Gentleman which was fully Proved against her, Whereupon the Jury brought her in Guilty She was Centenced to be whipt at the Carts taile to Mile End, and her Master to pay for the Sow. George a Negroe Slave belonging to Ripin Wills was Indicted for being an Incurrigible rogue Margin Notes: His Punishm[ent]. Serj[t]: Slaughters Wench Indicted Guilty of felony her Punnishment W[m] Seal[s] Wench Indicted. found Guilty her Punnishm[t] Ripin Wills George Indicted	Thomas Beviau was sentenced to be whipped at the flagstaff and to receive thirty-nine lashes. Moll, a slave woman belonging to Serjeant Slaughter, was indicted for felony and burglary, in breaking the house of Samuel Algate and stealing from it 3s 0d in English coin and two dollars in Spanish money, together with sundry other goods of small value, amounting in the whole to 30s 0d. She confessed to having stolen these things but said she had come in at the door, which she did not break open. The jury brought her in guilty of felony only and acquitted her of the burglary. Moll was described as a notorious woman for running away and then pilfering to support herself, having been twice whipped before for such faults in Governor Roberts's time. She was ordered to be made fast to the cart's tail and whipped from the sessions house to the end of the new path called Mile End Stone and back again, and afterwards to wear a chain and clog. Jenny, a slave woman belonging to William Seale, was indicted for wilfully and despitely killing a sow pig and pig belonging to Matthew Bazett, gentleman, which was fully proved against her. The jury brought her in guilty. She was sentenced to be whipped at the cart's tail to Mile End, and her master to pay for the sow. George, a slave belonging to Riping Wills, was indicted for being an incurrigible rogue Interpretations The thirty-nine lashes imposed on Thomas Beviau followed the conventional limit drawn from the biblical injunction in Deuteronomy that no man should be beaten with more than forty stripes. By stopping at thirty-nine, the bench observed the customary scriptural ceiling while still imposing the maximum corporal punishment available below it. The flagstaff, the public mast in the parade ground before the castle, served as the standard place of military and civil corporal punishment on the island and gave the sentence its public character. The jury's distinction between felony and burglary in Moll's case turned on a precise point of law. Burglary required the breaking of a dwelling house, while simple felony covered the theft once entry had been effected. By accepting Moll's own statement that the door had not been broken, the jury kept the conviction within the lesser offence and avoided the capital penalty that burglary would have carried. The reasoning paralleled the under-valuation device applied to Beviau: in both cases the bench preserved a guilty verdict while removing the prospect of hanging. The sentence imposed on Moll combined three forms of penalty in sequence, namely whipping at the cart's tail over a measured public route from the sessions house to Mile End Stone and back, followed by the wearing of chain and clog. The cart's tail whipping was the standard punishment for a habitual offender, intended to display the convict's body along a public way as well as to inflict pain, and the chain and clog imposed afterwards confined her movement and marked her continuing servile and criminal status. The reference to her two earlier whippings during Roberts's administration showed that the present sentence built on a documented record of recidivism rather than being a first correction. The record's reference to a place called Mile End Stone and the new path of the same name indicated a marker stone set up at the boundary of a recently constructed route leading out of James' Town. Its use as the limit of the cart's tail procession turned an ordinary surveying mark into a fixed station of public punishment, by which the length of the whipping was

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			measured in physical distance through the settled area of the town. The route ensured that the punishment was witnessed by the maximum number of inhabitants along its course. Speculations The clustering of three slave prosecutions immediately after the white soldier's case, with the governor's earlier advice still on the record that Bevia had been spared the capital threshold partly because he was a white man, points to a coordinated session in which the bench worked through a backlog of slave offences once the principle of differential treatment had been openly stated. The juxtaposition gave the assembled inhabitants a worked illustration of the racial gradation of punishment under Pyke's administration on the same day that he had promised severity against thieves and slothfuls in his opening speech. The decision to order Jenny's master William Seale to pay Matthew Bazett for the slaughtered pig, in addition to the corporal punishment of the slave herself, divided liability between the slave's body and the owner's purse. Bazett was a sitting councillor on the bench that morning, and the swift award of compensation to him from the master of the offending slave demonstrated how the bench could deliver restitution to its own members through the criminal jurisdiction. The arrangement placed the financial cost of slave misconduct on the owner while reserving the physical cost to the slave, and gave councillors a direct interest in vigorous prosecution of property offences by slaves.
360	351	rogue and Runing away from his Master and being a Comon thief Stealing from all the planters to Maintain himself in his fugitive & Renagado way of Liveing he haveing formerly been Convicted & Punnished for being a wandering rogue and Committing Such Crimes, and has been Branded with the Letter R formerly in the forehead but continues to be a Comon Nuisance to the Country by Preying on the Inhabitants and on his tryall he Confest Severall things that he had Stolen from Doveton and Divers others, and that he had Kettles and other Conveniencies for Dressing his Provisions in a Cave at an Unfre =quented Part of the Island called Bencoolen, and the whole fact Appearing very Plain the Jury brought him in Guilty, And he was Sentenced to be exhpt at the Carts taile to Mile End and back again, and to wear a Chain and Clogg of fifty pound weight. Then the Declaration of Robert Gurling Plaintiff against Pipin Wills Defend[t] was read as followeth. Island S[t]: Helena To the Worshipfull Isaac Pyke Esq[r]: Govern[r]: & Council. The Declaration of Robert Gurling Plant[r] Complainant against Pipin Wills Planter Defendant. Humbly Sheweth That your Complainant took to wife Margaret the Relict of Benjamin Wills son of the above Named Pipin, and in her right Demanded of the said Pipin what belonged to Said Benjamin at his decease viz[t] all that Portion or Sume of Ninety one pounds paid Margin Notes: being an Incoreg[ible] rogue Punnishm[t] formerly found Guilty his Punnishm[t] Rob[t] Gurling ag[t] Pipin Wills Island S[t]: Helena Rob[t]: Gurlings Declaratio[n]	George had run away from his master and was a common thief, stealing from all the planters to maintain himself in his fugitive and renegade way of living. He had earlier been convicted and punished for being a wandering rogue and committing such crimes, and had been branded with the letter R on the forehead, but he continued to be a common nuisance to the country by preying on the inhabitants. At his trial he confessed to several thefts from Doveton and others, and that he had kettles and other conveniences for dressing his provisions in a cave at an unfrequented part of the island called Bencoolen. The whole matter appearing very plain, the jury brought him in guilty. He was sentenced to be whipped at the cart's tail to Mile End and back again, and to wear a chain and clog of fifty pounds weight. The declaration of Robert Gurling, plaintiff, against Riping Wills, defendant, was then read as follows. To the worshipful Isaac Pyke, esquire, governor, and council, on the island of St Helena. The declaration of Robert Gurling, planter, complainant, against Riping Wills, planter, defendant. Gurling set out that he had taken to wife Margaret, the relict of Benjamin Wills, son of the above-named Riping Wills. In her right he demanded of Riping all that had belonged to Benjamin at his decease, namely a portion or sum of £91 0s 0d Interpretations The branding of George with the letter R on the forehead identified him as a rogue under the long-standing English statutory penalty for vagrancy and incorrigible offending, by which the visible mark on the body served as a permanent record of conviction and a warning to all who saw him afterwards. The placement on the forehead, rather than on the hand or shoulder used in some jurisdictions, gave the mark the greatest possible public visibility and prevented its concealment by clothing. That George continued his fugitive conduct after such branding accounted for the much heavier penalty now imposed. The cave at Bencoolen used by George as a refuge and provision store gives a glimpse of the island's interior geography as it functioned for runaway slaves.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			The place took its name from the East India Company's settlement at Bencoolen on the west coast of Sumatra, from which the appellation may have travelled with slaves or stores carried on Company ships, and its application to an unfrequented part of St Helena reflects the practice by which planters and slaves alike applied imported names to the island's landscape. The use of kettles to dress provisions in such a hidden site indicated a settled, sustained fugitive economy rather than mere flight, and explained why the bench treated him as incorrigible. The chain and clog of fifty pounds weight imposed on George, against the unspecified weight ordered for Moll, set a calibrated scale of restraint by which the bench could mark gradations of repeat offending. Fifty pounds attached to a slave's leg was sufficient to prevent escape and to inflict continual discomfort, while still permitting the wearer to perform basic field labour, so the punishment preserved the slave's productive value to his owner Riping Wills even as it secured the public against further depredation. Riping Wills appeared in this consultation in two distinct capacities on the same morning. He was first named as the owner of George the slave, on whose property the burden of the chain and clog would now fall, and then immediately afterwards as the defendant in a civil action brought by his son's widow's new husband for £91 0s 0d said to have belonged to his deceased son Benjamin. The juxtaposition shows the routine intermixture of criminal and civil business in a single sessions day and the prominence of a single planter household across both jurisdictions. Speculations The court's decision to record in detail the cave at Bencoolen, the kettles and the systematic theft from the planters, rather than to confine itself to the simple verdict of incorrigible rogue, points to a deliberate use of George's prosecution as a warning to other slaves on the island. By placing in the public record an account of how a runaway had sustained himself for some time in a remote part of the country by preying on settled property, the bench gave the planters a documented justification for tighter surveillance of their slaves and supported the heavy iron now imposed by setting out the conduct it was intended to suppress. The bringing of the Gurling declaration immediately after the criminal sentencing of Wills's own slave suggests that the order of business was managed to confront Riping Wills with the full weight of the court's authority on a single morning. The bench first imposed a substantial burden on his slave property and then heard a civil claim against him for a large sum derived from his deceased son's estate. Whether by accident or design, the sequence placed him under pressure on two fronts at once and gave the new governor an early opportunity to demonstrate that no planter household, however well established, stood outside the reach of the court.
361	352	paid the Said Benjamin Wills upon his Marriage with the said Margaret as Likewise the Perform =ance of the Marriage agreement made between the said Pipin Wills and Ruth Wood Mother of the said Margaret whereby the Said Pipin did Promise to give unto his Son as much & more then the said Benjamin was to have w[th] his wife which is the Ninety one pounds Notwithstand =ing the said Pipin Wills did upon the Decease of his Said Son Benjamin take all the Effects of the Said Benjamin into his Possession w[th] out Ever Administering, Acting in all Matters with as full power as if he had Selling his Cloths and Disposeing of the Effects as he thought fits, and was Never paid yo[r]. Complain =ant above the Sume of Sixty one Pounds, tho' Often required thereunto, and dos Declare further that t'was in duty and respect to the Parent of his wife	The £91 0s 0d had been paid to Benjamin Wills upon his marriage with Margaret. Equally part of the claim was the performance of the marriage agreement made between Riping Wills and Booth Wood, the mother of Margaret, by which Riping had promised to give his son as much more as Benjamin was to have with his wife, which came to a further £91 0s 0d. Notwithstanding this, on Benjamin's decease Riping Wills had taken all the effects of his son into his possession without ever administering them. He had acted in all matters with as full power as if he had been selling his cloths and disposing of the effects as he thought fit, and had never paid the complainant above the sum of £61 0s 0d, though often required to do so. Gurling further declared that out of duty and respect to his wife's parent he had forborne to sue

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
		that he did not before Sue for what he Esteemd to be his Lawfull right and finding no Likelyhood of getting the said Pipin Wills to Comply with his reasonable Demands humbly refers his Case to your Worship &c. Not doubting of a Just & Equitable Determination And yo[r] Complainant as in duty bound shall Ever pray &c[a] Rob[t]. Gurling Pipin Wills Saith that he did intend to a given that money if his said Daughter had Married with his Consent but as She had taken on her to Choose a Husband without asking his Consent he thought himself Under No Obligation to give her any thing, and that Margin Notes: Pipin Wills defence	before for what he reckoned to be his lawful right. Finding no likelihood of getting Riping Wills to comply with his reasonable demands, he humbly referred his case to the governor and council, not doubting of a just and equitable determination. The complainant said that, as in duty bound, he should ever pray. The declaration was signed Robert Gurling. Riping Wills, in his defence, said that he had intended to give the money if his daughter-in-law had married with his consent. As she had taken upon herself to choose a husband without asking his consent, he thought himself under no obligation to give her anything, and Interpretations The arrangement set out in the declaration formed a typical marriage settlement of the island's planter class. The bride brought to her husband a portion of £91 0s 0d, paid by Booth Wood as Margaret's mother, and the father of the groom matched it with a promise of equal value, also £91 0s 0d, to be made over to his son. The total fund of £182 0s 0d so constituted gave the couple a substantial joint estate at the outset of their marriage, and the agreement between Riping Wills and Booth Wood served as the binding instrument by which the two households fixed their respective contributions in advance of the wedding. The dispute turned on the death of Benjamin Wills before any final settlement of accounts had been made and on the consequent treatment of his estate. Riping Wills had taken his deceased son's effects into his own possession without administering the estate under the formal legal process by which a deceased man's goods were to be inventoried, debts paid and the residue distributed to his widow and heirs. By disposing of the effects as he thought fit, Riping had treated himself as the practical owner of his son's property rather than as a steward accounting to those entitled to share in it, which was the legal grievance underlying the claim. The figure of £61 0s 0d already paid by Riping to the complainant represented a partial discharge against the £91 0s 0d originally received with Margaret's marriage, leaving a balance of £30 0s 0d on that head, with the further £91 0s 0d promised by Riping wholly unpaid. Gurling's claim therefore stood at £121 0s 0d in total, framed in the declaration as a single round sum derived from both elements of the marriage settlement, which the court was now asked to enforce against Riping. The defence raised by Riping Wills shifted the dispute from the law of property to the law of parental authority over marriage. He claimed that his promise of money had been conditional on his consenting to the match, and that Margaret's marriage to Gurling without seeking his consent had voided his obligation. The position turned the suit into a contest between the formal terms of the original marriage agreement and a customary parental veto over the remarriage of a widowed daughter-in-law, on which the court would have to rule. Speculations The timing of the suit, brought now under a new governor and after Gurling had forborne for some period out of respect for his wife's parent, suggests that the complainant had judged the change of administration to be an opportunity to obtain a determination that he could not extract from Riping Wills by private means. By framing his declaration as a humble referral to the worshipful governor and council, Gurling appealed directly to Pyke's stated promise, made earlier that morning in his opening address, to do justice impartially between man and man and to redress grievances brought before the bench. The action thereby tested the new governor's protestations against

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			an established planter household within hours of their being made. Riping Wills's reliance on the lack of his consent to the second marriage, in the face of a written marriage agreement signed with Booth Wood that fixed the sums payable on the first marriage, points to a calculated use of the customary authority of a father-in-law to defeat a documentary claim. The original agreement had been performed by Margaret's mother on her side, with £910s 0d already paid over, and Riping had himself received the money. His attempt to attach a retrospective condition to his own promise, based on conduct after his son's death, suggests an effort to repurpose a parental complaint about Margaret's later choice of husband as a defence against an existing debt.
362	353	that was the Cheif Defence he made against the Complaint mentioned in the Declaration against him, Whereupon Gurling proved by y[e] Minis =ter and by Sundry other Credible Witnesses that Pipin Wills did Consent, That he was at the Wedding and did give her in Marriage to the said Gurling, and did Carry them to his House and gave them their Wedding Dinner and all other Concurrent Testimony was Produced, to Shew that at the time of the Marriage he was Consenting to the Match. Whereupon the Jury found for the Plantiffe, and Asessed Damages the Ten Acres of Land and a black, but the black he gave was George the Negroe Indited this day for a free =booter. The Jurys Presentments. S[t] Helena We the Jurors for our Sovereigne Lady the Queen and the Hon[ble]: East India Company of Great Britain the Lords Proprietors of this Island, Do upon our own view and knowledge Present that whereas there has for some time past and now at this time, a Certain Gutter or Water Course kept constant =ly runing before the Front and Door of the House of Grace Coulson Widdow, which is unsufferable and very Inconvenient often overflowing and Spreading Considerably in the Midst of the Street, Runing down the Common foot way to Church & Markett place, making not only Gulleys, but frequently caises the Ground and road way to be very boggy, Marshey and Incommodious, and is thereby noto become a Publick and Common Nusance to all people in Generall Passing about their Lawfull Occasions, and an Annoyance to the Neighbours in Particular, and is Contrary to the Custome of any Towns or Markett place Else where as well as against the Hon[ble] Companys Orders in the Regulateing the Drains Margin Notes: Damages asessed to Gurling S[t] Helena Jury presentm[t] ab[t] a Water Course	That was the chief defence Riping Wills made against the complaint set out in the declaration against him. Gurling proved by the minister and by sundry other credible witnesses that Riping Wills had consented. He had been at the wedding and had given Margaret in marriage to Gurling. He had carried them to his house, given them their wedding dinner, and all other concurrent testimony was produced to show that at the time of the marriage he had been consenting to the match. The jury found for the plaintiff, and assessed damages at ten acres of land and a slave. The slave whom Riping Wills gave over was George, the very slave indicted earlier that day for being a freebooter. The jury's presentments. The jurors for the sovereign lady the Queen and the Honourable East India Company of Great Britain, the Lords Proprietors of the island, presented, upon their own view and knowledge, that whereas there had for some time past, and now at this time, been a certain gutter or watercourse kept constantly running before the front and door of the house of Grace Coulson, widow, this was insufferable and very inconvenient. It often overflowed and spread considerably in the middle of the street, running down the common footway to church and market place, making not only gulleys but frequently causing the ground and roadway to become very boggy and marshy. It had thereby become a public and common nuisance to all people in general passing about their lawful occasions, and an annoyance to the neighbours in particular. It was contrary to the custom of any town or market place elsewhere, as well as against the Honourable Company's orders in the regulating of the Interpretations The evidence of the minister and other witnesses turned the case decisively against Riping Wills. The minister's testimony carried particular weight, since he had performed the marriage and could speak from his own record to whether Riping had given the bride away. The further acts proved, namely Riping's presence at the wedding, his giving of Margaret in marriage, his carrying of the couple to his house and his provision of the wedding dinner, formed a cumulative pattern of public consent that left no room for his later defence. Consent at the time of marriage was a matter of public conduct as well as of formal words, and Riping's own behaviour had supplied the proof against him. The award of damages in the form of ten acres of land and a slave, rather than in money, reflected the realities of an island economy in which sterling coin was in short supply and productive assets were the principal store of wealth. By giving Gurling land and labour rather than cash, the court delivered a settlement that Riping could actually meet from his existing estate, while transferring to Gurling the means of supporting his new household. The form of the award sidestepped the need for Riping to find a large sum of money at

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			short notice and reduced the risk of further litigation over non-payment. The identification of the slave handed over as George, the runaway sentenced earlier the same day to whipping and a fifty-pound chain and clog, gave the award a sharper edge. Riping discharged his debt by parting with a slave whose value to him had just been seriously diminished by his criminal conviction, and Gurling acquired ownership of a man encumbered with a recent record of theft, branding and habitual flight. The transfer reflected a practical calculation: a slave under sentence was still property, but property of reduced utility, and using him to settle the judgment let Riping retain his more serviceable hands. The presentment concerning the gutter at Grace Coulson's house illustrated the second function of the grand jury at the general sessions, namely the bringing forward, upon the jurors' own view and knowledge, of public nuisances within the settled area of James Town. Such presentments did not require a private complainant, but rested on the jurors' observation of conditions detrimental to the community. The watercourse before Coulson's door, running down the common footway between the church and the market, occupied the principal public route through the town and rendered it impassable in wet weather. Grace Coulson appeared here in her third capacity in the present sessions, having earlier been named as the owner of the slave Abigail in the <i>Aurengzebe</i> case of 24 January 1715 and as a widow holding property in her own right. Speculations The choice of George specifically as the slave to satisfy the judgment, rather than any other slave from Riping Wills's holding, points to a coordinated outcome arranged at the bench. Riping had sat through the morning's criminal session as the owner whose slave had been heavily punished, and at the conclusion of the civil action he was required to hand the same slave over to Gurling. The result simultaneously cleared Riping of a property burdened by a heavy chain and clog, gave Gurling something he could put to use under proper management, and removed a notorious fugitive from his accustomed master. The court thus engineered a single transaction that resolved three problems at once. The grand jury's identification of Grace Coulson's house as the source of the nuisance, brought forward at the very sessions following her involvement in the <i>Aurengzebe</i> prosecution on 24 January 1715, suggests that her standing in the town gave her particular visibility to the assembled jurors. As a widow holding slave property and town premises on the principal thoroughfare, she was already known to the court, and the public condition of her house was therefore more readily a matter on which the jury could speak from their own view and knowledge. The presentment placed her on the receiving end of public criticism for the first time, after appearing earlier as the wronged party.
363	354	buildings and Street in this Town and Valley where their main Magazine and Castle is built for Defence of the said Island. Island S[t] Helena. The Under Written John Alexander Do in behalf of the Severall Inhabitants of this Island of S[t] Helena Inform the Jurors of Said Island of the great Decay by want of reparation the Severall publick roads and Pasages are in, And Particularly a Certain Path or way called the (Old or Middle) Path which leadeth to the Town in James valley, and alsoe of a Nother Path or way called the Haunt Path which goes Directly from the Said Town to the Easterne Parts of this Island, And also of a nother path called the Cow Path which leadeth up to the body of the Island, All which by reason of their want of Reparations are very Dangerous to the Passangers and of great hazard to all who are Oblig'd to	The nuisance at Grace Coulson's house was contrary to the custom of any town or market place elsewhere, as well as against the Honourable Company's orders for the regulating of the buildings and street in James Town and Valley, where the main magazine and castle were built for defence of the island. Island of St Helena. The undersigned John Alexander, on behalf of the several inhabitants of the island, informed the jurors of the great decay, for want of repair, in which the several public roads and passages now stood. He drew their attention in particular to a certain path or way called the Old or Middle Path, which led to the town in James Valley; to another path or way called the Haunt Path, which went directly from James Town to the eastern

		carry Burthens up or down the Said Paths which is Occasion'd by the Neglect of John Robinson & Sutton Isaac Jun[r]: who are the Present Surveyors of the high ways of this Island whose duty it is by vertue of their Said Office to cause all high ways to be carefully a Mended and repaired Instead of which they have not caused any reparation to be made in the Said Paths or ways for upwards of Sixteen Months last Past. Wherefore I do in the Queens Name as well as in the Names of the Hon[ble] the Lords Pro =prietors of this Island Present unto you the Jurors for the body of this Country the said Jn[o] Robinson and Sutton Isaack Jun[r] for their Defaults to the End they may be Anfwerable for all manner of Damages that has or may insue such want of Reparation of the before Mentioned Paths or of any other publick path or way under their Care or Cognizance. Jn[o] Alexander Margin Notes: Island S[t] Helena. Presentm[t] ag[t] the overseers of the high ways.	parts of the island; and to another path called the Cow Path, which led up to the body of the island. By reason of their want of repair, all three paths were very dangerous to the passengers and of great hazard to all who were obliged to carry burdens up or down them. The condition was occasioned by the neglect of John Robinson and Sutton Isaac junior, who were the present surveyors of the highways of the island, whose duty it was, by virtue of their office, to cause all highways to be carefully amended and repaired. Instead of which they had not caused any reparation to be made in the paths or ways for upwards of sixteen months past. Wherefore Alexander, in the Queen's name, as well as in the names of the Honourable the Lords Proprietors of the island, presented unto the jurors for the body of the country John Robinson and Sutton Isaac junior for their defaults, to the end that they might be answerable for all manner of damages that had been or might be sustained by such want of reparation of the paths mentioned, or of any other public path or way under their care or oversight. Signed John Alexander. Interpretations The presentment by John Alexander acted as a private information laid before the grand jury for the body of the country, by which a particular inhabitant brought a matter of public concern to the attention of the panel for their own further presentment. The formal invocation of the Queen's name and that of the Lords Proprietors gave the complaint the standing of an action on behalf of the whole community, even though it had been initiated by a single named informant on behalf of the inhabitants. The mechanism allowed individual grievance over the condition of the island's communications to be channelled through the regular machinery of the sessions. The three named paths together described the principal land routes of the island as they then existed. The Old or Middle Path connected the interior with James Town and was the established line of approach to the harbour for goods and persons coming down from the upland farms. The Haunt Path served as the route from James Town to the eastern parts of the island, providing access to the lands and habitations of that quarter. The Cow Path led from the lower ground up to the body of the island, that is to the central plateau where the principal plantations lay, and was used in particular for driving cattle and carrying provisions to and from the upland settlements. Their collective decay therefore impaired every direction of internal movement on the place. The office of surveyor of the highways was a local administrative post by which named inhabitants were charged with the upkeep of public ways through the labour of the planters and slaves in their districts. The holder of the office had no salary attached to it and discharged his duties by directing the work of others, drawing on the customary obligation of inhabitants to contribute labour or hire to road maintenance. The presentment of Robinson and Sutton Isaac junior for sixteen months of neglect signalled a complete failure of the system over the period in question, which coincided with the unsettled administration immediately preceding Pyke's arrival as governor. Sutton Isaac junior had appeared earlier in the day on the panel of jurors summoned at the opening of the sessions. The presentation of a sitting juror as a defaulter in his public office showed the routine intermixture on the island of the roles of officeholder, juror and litigant, and the readiness of the bench to allow proceedings against a member of the same panel constituted that morning. The position of the informant John Alexander, named here as acting on behalf of the inhabitants, identified him as a planter or householder

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			of sufficient standing to bring forward such a complaint in his own name. Speculations The bringing of the highway presentment at the same sessions as Pyke's opening address suggests a coordinated effort by the inhabitants to use the new governor's stated commitment to public works as the occasion for a long-deferred challenge to the failures of the previous interim administration. The sixteen-month period of neglect cited by Alexander corresponded closely to the interval since the departure of Governor Roberts, during which the council alone had managed the island, and the presentment effectively placed responsibility for the decay of the roads on that administration through the persons of its surveyors of the highways. The complaint thus tested whether Pyke would act against officials who had failed under the prior dispensation. The selection of three specific paths, rather than a general complaint about the state of the roads, points to careful drafting designed to fix the surveyors' liability in concrete terms. By naming the Old or Middle Path, the Haunt Path and the Cow Path, the presentment identified routes whose users could be expected to come forward as witnesses to particular incidents, and gave the bench specific stretches against which any future damages could be measured. The framing transformed a general grievance into a specific charge capable of being tried, and made it harder for the surveyors to deflect responsibility by reference to the vagueness of their duties.
364	355	Island S[t]: Helena We the Jurors for this Island Do present Unto the Worshipfull the Govern[r] and Council of this Said Island as a Common Nuisance the badness of the Severall Common Roads Passages or Paths leading from the Country to the Town called James Town. And we Present as Defaulters herein the two present Overseers of the high ways John Robinson and Sutton Isaack Jun[r] for Neglecting to repair the said Publick ways According to the duty of their places. Whereupon the Govern[r]: told them that nothing Could Contribute more to the Generall good of the Place than to make the roads Passable and that the Easiness of the Paths up and between the Moun =tains would be a profit to Every man who was a Master of Slaves in the Dispatch of that Laborious Carriage in which all the blacks were Employed, And Promised them that if they would make a good path fit for the Carriage of Great burthens, He on the behalf of the Hon[r] Company would make a Hotter and told them that the way he had Cleared from the Goat pound to Mile End Stone She'd that those things were Easier than they Appeared and that any thing might be done here that was Undertaken with Resolution. And recommended to the Jury and body of the Country the Necessity of repairing all their other Paths in Generall in other Parts of the Country and alsoe that a bridge over the Run of Water in this valley was much wanted and therefore Offered them any Asistance to help make one, and that if they would be at the Charge of building it, the Hon[r] Comp[a]: Should find Lime that it might be built firm and Strong. To Margin Notes: Island S[t]: Helena Jurys presentm[t] ag[t] Overseers Gov[rs]: Answer And how a Seeming Difficult path he had Lately Cleared and Recomend y[e] Necessity of Repairing paths Offering Asistance &c[a]	Island of St Helena. The jurors for the island presented unto the worshipful governor and council, as a common nuisance, the badness of the several common roads, passages or paths leading from the country to the town called James Town. They presented as defaulters in the matter the two present overseers of the highways, John Robinson and Sutton Isaac junior, for neglecting to repair the public ways according to the duty of their places. The governor told them that nothing could contribute more to the general good of the place than to make the roads passable, and that the easiness of the paths up and between the mountains would be a profit to every man who was master of slaves, in the dispatch of the laborious carriage in which all the blacks were employed. He promised them that if they would make a good path fit for the carriage of great burdens, he, on behalf of the Honourable Company, would make a hotter, and told them that the way he had cleared from the Goat Pound to Mile End Stone showed that those things were easier than they appeared, and that anything might be done here that was undertaken with resolution. He recommended to the jury and body of the country the necessity of repairing all their other paths in general in other parts of the country. He observed that a bridge over the run of water in this valley was much wanted, and therefore offered them that if they would give assistance to help make one, and would be at the charge of building it, the Honourable Company should find lime that it might be built firm and strong. Interpretations The labour system implied by the governor's reply turned on the use of slaves for the carriage of goods between the upland plantations and the harbour at James Town. The masters of slaves were the principal beneficiaries of any improvement to the paths, since the time, effort and wear involved in transporting provisions, water and other burdens up and down the mountains was borne by the slaves they owned. By framing the case for road repair as a matter of profit to slave-owners, Pyke addressed the planter audience in

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			terms of its own economic self-interest rather than as a matter of public duty, and acknowledged openly that the burden of the island's internal transport rested on enslaved labour. The recent clearing of the way from the Goat Pound to Mile End Stone offered a practical example of what could be achieved. The Goat Pound was an enclosure for stray or impounded goats on the outskirts of James Town, and Mile End Stone was the marker that had been used earlier that morning to fix the length of Moll's whipping at the cart's tail. The route between them constituted a recently improved stretch already in service for both administrative and punitive purposes, and the governor cited it as evidence that comparable improvements elsewhere were within the reach of the inhabitants if they chose to undertake them. The offer to find lime for a bridge over the run of water in James Valley described a familiar division of public works between the Company and the planters. Lime was the essential binding material for masonry construction, derived from burning shells or coral in kilns, and supplied at the Company's charge from its own stocks. The planters were to provide labour, transport and the unskilled element of the construction, while the Company contributed the costly imported or processed materials. The arrangement preserved the Company's hold on the strategic supply while reducing its direct cash outlay on infrastructure that benefited the inhabitants in their daily traffic. The run of water in James Valley was the principal stream descending from the upland through the valley to the sea at James Town, the same watercourse on which the gutter complained of at Grace Coulson's door discharged its flow. A bridge across it would replace the existing fords or stepping places at which traffic was held up in heavy weather, and would complete the work of regularising the public way between the country paths and the town that the day's presentments had begun. The proposal extended the improvement of the highways from the upland tracks to the harbour itself. Speculations The governor's offer to find lime, contingent on the planters bearing the labour and the further charge of the bridge, repeated the pattern of cost-sharing he had announced more generally at the opening of the sessions, by which Company expenditure was being retrenched while public improvement was redirected to the inhabitants. By naming a specific project and a specific contribution, Pyke gave the assembled planters an immediate test of whether they were prepared to act on the principles laid down in his address, and offered them a discrete and achievable undertaking that could establish a working method between his administration and the country. The framing of the road question around profit to masters of slaves, rather than around the abstract duty of public service, suggests a calculation that the planter audience would respond more readily to an appeal to its commercial interest than to its civic obligation. By promising that improved paths would shorten the time their slaves spent on carriage, Pyke linked his programme of public works to the daily economy of every household with field labour, and made cooperation with the new administration a matter of household account rather than of abstract loyalty. The approach took the measure of the planters as he had now begun to know them.
365	356	To which they willingly Assented and Said they would goe about it asoon as this present rainy Season was over. Then the Court was Adjourned as Usual. [...] Geo: Haswell Island S[t]: Helena. Antipas Tovey	Island of St Helena. The country willingly assented to the governor's proposal, and said they would go about it as soon as the present rainy season was over.

		At a Consultation Held on Tuesday the 8[th] day of February 1714/[..] At the United Castle in James valley. Isaac Pyke Esq[r]: Gov[r]: George Haswell Dpt[y] abs[t] Edward Mashborne 3[d] Matth[w] Bazett 4[th] abs[t] & Antip[s] Tovey 5[th] in Coun[c]: Prest M[r] Carne haveing sent Beef on board the French Ship Privately in baggs Contrary to an Advertisement Published the 29[th] day of January last, as in a Consultation of that days date may Appear, the Said Carne was sent for, and bound over to his Good behaviour and personall Appearance at the Next Gen[ll] Sessions in a Recognizance of One Hundred Pound. Margin Notes: the Country Assented. Island S[t] Helena. This is entred in another place 2 folios farther	The court then adjourned as usual. The record was signed by Isaac Pyke, George Haswell and Ardiipas Tovey. Island of St Helena. At a consultation held on Tuesday 8 February 1715 at the United Castle in James Valley. Present in council were Isaac Pyke, governor; George Haswell, deputy governor, absent; Edward Mashborne, third; Matthew Bazett, fourth, absent; and Ardiipas Tovey, fifth. Start of crossed out section Mr Carne had sent beef on board the French ship privately in bags, contrary to an advertisement published on 29 January 1715, as appeared in the consultation of that date. Carne was sent for and bound over to his good behaviour and personal appearance at the next civil sessions, in a recognizance of £100 0s 0d. A note in the margin recorded that this matter was entered in another place at folios further on. End of crossed out section Interpretations The country's qualification of its assent by reference to the rainy season identified a practical constraint on the timing of the road and bridge works just agreed. The wet months on St Helena fell across the southern hemisphere summer and made earthworks impracticable, since paths cut into the slopes would wash out before they consolidated and lime mortar would not set properly in continued damp. The deferral until the dry weather acknowledged this reality and gave the planters a defensible interval before any labour fell due, which the new administration accepted as a reasonable condition of cooperation rather than press for an immediate start. The case of Mr Carne, although cancelled in this place by the clerk and re-entered later in the volume, indicated the council's enforcement of its own published orders against private dealing with foreign shipping. The advertisement of 29 January 1715 had evidently forbidden the supply of provisions from the island to the visiting French ship, and Carne's covert delivery of beef in bags constituted a deliberate breach of that order. The marginal direction and the diagonal lines through the text reflected the bookkeeping practice by which entries made in error or out of sequence were preserved on the page but redirected to their authoritative place further on. The recognizance of £100 0s 0d, by which Carne was bound to his good behaviour and to his personal appearance at the next civil sessions, secured both his future conduct and his attendance at trial through a single financial undertaking. The sum was a substantial pledge on the property of an individual planter or trader and corresponded in order of magnitude to the joint marriage portions in the Gurling case just determined. Forfeiture of the recognizance on default would have placed Carne under a heavy debt to the Company, which made the bond an effective restraint without the need for any custodial confinement before trial. The matter of the French ship raised the wider question of the island's relations with foreign vessels in a port that depended on the Company's monopoly of supply for its commercial rationale. By trading with a French ship in defiance of the published prohibition, Carne had cut across the very principle of exclusive English supply that Pyke had set out in his opening address two days earlier, where he had warned of the cost to the island of allowing Company shipping to be discouraged toward the Cape. Speculations The decision to take Carne up at a consultation rather than at the general sessions of the preceding day, despite the offence being already known at the time of the sessions, points to a deliberate choice not to mix the matter into the public business of the country. By

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			proceeding through the council acting in its administrative capacity, rather than through the jury and grand inquest, the governor kept the case within the closed forum where the published advertisement had been issued in the first place, and reserved the full sessions of the country for matters of routine criminal and civil justice. The handling treated the offence as a breach of administrative regulation, to be punished by recognizance and bond, before any further criminal process should be considered. The size of the recognizance, set at £100 0s 0d, suggests that the council intended both to mark the seriousness of the breach and to test the depth of Carne's resources. A trader who could readily find sureties for such a sum would be exposed to a heavy loss on any further default, while one who struggled to find them would face immediate practical constraints on his movement and dealings until the next sessions. The amount thus served as a graduated instrument of pressure adapted to Carne's individual circumstances, rather than as a fixed tariff applicable to all offenders against the advertisement.
366	357	Transactions relating to the French Shipp Jason. On Saturday the 29[th] of January 1714/[..] an alarm was made for a Large Shipp Seen at about Seven leagues distance, the Same forenoon the Ship came into the road, I Sent Orders to Bankes fort to bid them Send their boat on Shoar and to fire by way of Sallute with or ty three Guns, they did hale them and told them So but they past by and Sent no boat on Shoar. The Officer at Roberts's Platform on Mundens Point Seeing they Sent no boat on Shoar nor did not bring too, sent to me to know if he Should bring them too by firing a Gun a thwart their fore foot as is usuall in all Garrisons (and has been Practiced here) But seeing that it was but a Single Ship tho' a French one I Ordered them not to fire but to Lett the Ship Come into the road, who did, and Saluted with Seven Guns and wee answered with five as the Dutch do at Batavia and the Cape, and as the French Forts do Always to us. There came aboat on Shoar with fower Gentlemen a Lieuten[t] a Preist in Gentlemans Cloths, the Pursee and a Clerk who Said their Ships Name was the Jason burthen Seven Hundred Tons and two Hund[d] and fifty Men, forty Guns and was a Royall Vessell belonging to the King of france and was Command =ed by Mons[r] Dudemain a Cap[t] of the Warr, and therefore look it ill that one of the King of frances Men of Warr should Not be Answered Gun for Gun, Iaskt them if the Ship had not been to Trade to India, they Said they were a Man of Warr, formerly but hired by the Merchants to goe for India Margin Notes: What relates to a French Ship	Transactions relating to the French ship <i>Jason</i>. On Saturday 29 January 1715 an alarm was made for a large ship seen at about seven leagues distance. The same forenoon the ship came into the road. The governor sent orders to Banks's Fort to bid them send their boat ashore, and to fire by way of salute with only three guns. The fort did hail the ship and told them so, but they passed by and sent no boat ashore. The officer at Roberts's Platform on Munden's Point, seeing they sent no boat ashore and did not bring to, sent to know if he should bring them to by firing a gun athwart their forefoot, as was usual in all our wars, and as had been practised here. Pyke, seeing that it was but a single ship, though a French one, ordered them not to fire but to let the ship come into the road. The ship did so, and saluted with seven guns. The fort answered with five, as the Dutch did at Batavia and the Cape, and as the French ports did always to us. There came a boat ashore with four gentlemen, namely a lieutenant, a priest in gentlemen's clothes, the steerer and a clerk. They said their ship's name was the <i>Jason</i>, burthen 700 tons and 250 men, mounting 40 guns, and was a royal vessel belonging to the King of France, commanded by Monsieur Dudemain, a captain of the war. They therefore took it ill that one of the King of France's men of war should not be answered gun for gun. They were asked if the ship had not been to trade in India. They said they were a man of war formerly but hired by the merchants to go for Interpretations The signalling arrangements between fort and ship described in this entry set out the diplomatic and military protocol observed at the road of James Town. A ship approaching the island was expected to send her boat ashore on first making the road, by which her identity, business and condition could be ascertained before she was admitted to ride at anchor. Failure to send a boat exposed the vessel to challenge by gun, and the officer at Roberts's Platform proposed the standard escalation of a shot across the forefoot, which compelled the ship to heave to without inflicting damage. The governor's decision to forgo that step, in view of the ship being single rather than in company, exercised a calculated discretion in favour of receiving the visitor. The exchange of salutes followed a fixed and politically significant tariff. The <i>Jason</i> fired seven guns and was answered with five, which was the convention by which a sovereign port acknowledged a man of war of a friendly power while reserving to itself a slight precedence in numbers. Pyke's citation of the Dutch practice at Batavia and the Cape, and of the French

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			ports as they treated English visitors, anchored the response in established international usage rather than in any arbitrary calculation, and gave the answer the standing of a measured diplomatic act rather than a snub. The ship's particulars as declared by her officers identified her as a royal vessel of the French navy hired out by the King to private merchants for the East India trade. The burthen of 700 tons, complement of 250 men and armament of 40 guns placed her well above the size of an ordinary East Indiaman and gave her the fighting strength of a small ship of the line. Such hiring arrangements were a regular feature of the French commercial system at this period, by which the navy supplied vessels to the Compagnie des Indes or to merchant consortia on terms that retained the king's flag and military character while shifting the cost of the voyage to private capital. The composition of the boat's party gave a glimpse of the official structure of the French East India trade. The lieutenant served as the ship's representative for formal contact ashore, the steerer brought the navigator's local knowledge, and the clerk recorded the proceedings on behalf of the merchants who had hired the vessel. The presence of a priest dressed as a gentleman, rather than in clerical habit, suggested either an attempt to avoid drawing attention to the ship's Catholic chaplaincy in a Protestant port or a routine accommodation to the diplomatic forms of an English settlement. Speculations The governor's decision to override the officer at Roberts's Platform and let the <i>Jason</i> come into the road without forcing her to heave to under a gun across her forefoot points to a careful calculation of the relative risks of the encounter. A single ship, however heavily armed, posed no immediate threat to the island, and the use of force at the moment of arrival would have framed the encounter as hostile and required a corresponding answer. By admitting her peacefully and then exchanging salutes within the accepted convention, Pyke kept the diplomatic initiative in his own hands and turned the visit from a potential incident into a managed reception. The choice reflected the same instinct for measured assertion of authority that had characterised his handling of the sessions earlier that week. The willingness of the French officers to declare the <i>Jason</i> a royal vessel hired to merchants for the India trade, in their very first contact ashore, suggests that they understood the importance of fixing her status at the outset of any dealings on the island. By presenting her formally as a king's ship in private service, the boat's party staked a claim to the courtesies due to a man of war while at the same time signalling that her purposes were commercial rather than military. The framing protected her access to the road and to any provisions that might be allowed, and pre-empted any inference that her presence was hostile, which mattered acutely in time of war between the European powers.
367	358	India and were of a Seperate Stock Not belonging to the french East India Company but had the Kings Licence. I told them we had no regard to the Ships Colours, but if she had sent her boat on Shoar as was Ordered and as is Customary, and had then Certi =fied that was a Man of Warr we Should have a =nswered Gun for Gunn, and as She had refused that we could Shelo her no other Sort of respect then what is usuall to all Merchants Ships, they Said they had Occasion for Provisions and Stores of Sundery kinds I told them, if the Cap[t] Wrote to me for what he wanted I would furnish, them as farr as we could Spare. They demand and Said that one of them whom we mentioned above as Pursser was the Supra Cargoe of the Ship, the Gover[r]. told them that	They were of a separate stock not belonging to the French East India Company, but held the King's licence for the voyage. Pyke told them that he had no regard to the ship's colours, but if she had sent her boat ashore as was ordered and as was customary, and had then certified that she was a man of war, the fort would have answered her gun for gun. As she had refused to do so, he could show her no other sort of respect than what was usual to all merchants' ships. They said they had occasion for provisions and stores of sundry kinds. Pyke told them that if the captain wrote to him for what he wanted, he would furnish them as far as could be spared.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
		tho' these Sorts of requests were properly to be made by the Cap[t]: yet if he was Supra Cargoe we would be Contented with his request if he put his wants in Writing and Sign'd to them, Whereupon they went to M[r] Carnes and there wrote the following Paper, which the Said Purser (or Supra Cargoe) Sub =scribed to, and as they Never want Titles, he therein gave himself the title of Director of the Amunition of Mons[r] Decudroy. A Coppy of the Paper Delivered in by the french Purser. The Jason An Acco[t]. of refres[m[t]] and Necessarys for the Equipage of the Kings Vessell, the Jason. viz[t]: 50 Goats 2 Beeves 50 Fowles 40 doz[ns] of Eggs. I pray Margin Notes: Provisions wanted for Sea Stores	They returned and said that one of those mentioned above as a priest was the supercargo of the ship. The governor told them that those sorts of requests were properly to be made by the captain, but if he was supercargo, the governor would be content with his request, if he put his wants in writing and signed to them. They went to Mr Carne's and there wrote the following paper, which the purser, or supercargo, subscribed. As they never wanted titles, he gave himself the title of director of the ammunition of Monsieur Decudroy. A copy of the paper delivered in by the French purser. The <i>Jason</i>. An account of refreshments and necessities for the equipage of the King's vessel the <i>Jason</i>. Goats, 50. Beeves, 2. Fowls, 50. Eggs, 40 dozen. I pray Interpretations The distinction drawn by the French officers between a vessel sailing under the King's licence on a separate stock and one belonging to the French East India Company identified the <i>Jason</i> as part of the system of private armed voyages authorised by Louis XIV during the closing phase of the long European war. Under these arrangements, royal warships were leased to private syndicates of merchants who undertook the voyage at their own risk and profit, while continuing to fly the king's colours and bear his commission. The status placed the ship outside the regular Company structure on both the French and English sides and gave her a hybrid character that the governor was now required to assess. The governor's reasoning on the salute set out the institutional logic of the morning's exchange. A vessel claiming the courtesies of a man of war had to identify herself as such through the established protocol of sending her boat ashore, after which the answer of gun for gun would follow. Having declined that step, the <i>Jason</i> had placed herself by her own conduct in the category of an ordinary merchant ship, and the response of five guns to her seven matched the lower standing she had thereby accepted. The principle was that the diplomatic forms governed the substance of recognition, and could not be displaced by retrospective assertion. The disclosure that the man earlier described as a priest in gentlemen's clothes was in fact the supercargo of the ship explained the original disguise and reframed the embassy ashore. A supercargo on a French royal vessel hired for the India trade was the commercial officer responsible for the cargo and its sale, ranking immediately below the captain in the management of the voyage and acting for the merchant owners in all dealings with foreign ports. The earlier description as a priest, with the corresponding clothing, may have reflected either a habitual concealment by a Catholic officer in Protestant company or a deliberate ambiguity at the first meeting, replaced once the practical business of provisioning required his commercial standing to be acknowledged. The supercargo's adoption of the title director of the ammunition of Monsieur Decudroy, dryly noted by the clerk as an example of French preference for titles, attached to the writer a position of authority within the syndicate financing the voyage. The form designated him as the officer responsible for the cargo, supplies and equipment of the expedition, accountable to one Monsieur Decudroy who was evidently the principal owner or director of the venture in France. The choice of Mr Carne's house as the place to draft the paper placed an island merchant at the centre of the encounter

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			and confirmed the established pattern by which dealings with visiting ships passed through the houses of senior planters and traders. Speculations The decision of the supercargo to repair to Mr Carne's house to draw up the requisition, rather than to do so on board or at the castle, points to a pre-existing connection between Carne and the <i>Jason</i> before the formal application for provisions was made. Carne had been taken up two days earlier, by the cancelled entry of 8 February 1715 re-entered elsewhere, for sending beef on board the same French ship privately in bags in defiance of the council's published prohibition. The presence of the French party at his house at this point in the proceedings, with the apparent freedom to compose a formal paper there for delivery to the governor, suggests that the channel of communication between ship and shore had been running through Carne from the outset of the visit. The structure of the requisition, opening with goats and beeves before fowls and eggs, indicates that the French party expected to draw the bulk of their refreshment from the island's livestock rather than from its gardens or its imported stores. The figure of 50 goats represented a substantial demand on the planters' herds and would not have been met without significant transfers from named households, while the two beeves marked a more limited and ceremonial draw. The mix suggests that the supercargo had taken local advice, very probably from Carne, on what the island could practically supply, and had framed the request accordingly to maximise the chance of obtaining the items he most wanted.
368	359	I pray most humbly to Mons[r]. the Govern[r]: of the Island of S[t]. Helena to cause to be Deli =vered to me the Contents above Written at the Same price that the Mons[rs]. the English are Accustomed to pay for their Refreshments According to the same treatment that the Court of France have Ordered and caused to be done in all our ports and this being done here it will Oblige his most Humble and most Obedient Servant Joseph LeBlank Director Le 10 ffebruary[ed] 1715 of the Amunition of Mons[r] Decudroy. The Govern[rs]: Answer. Monsieur LeBlank. Mons[r]: I have received yo[r]: Note Just now wherein you desire to have off from hence for the refreshment of your Shipp. 50 Goats - 2 Beeves 50 fowles &c. - 40 doz[n] Eggs. In answer to which request I say you are well =come to this Port as to what we have to Spare But this Island has Lately Suffered very much by a Famine wherein two thousand five hundred head of Cattle dyed and there now remains So very Small a Stock that there will not be Beef Enough to Serve our own Ships, and some of them must goe hence without, and therefore I cannot Suffer any Beef to goe off, But Since our Gracious Queen has thought it Margin Notes: Lett[r] to y[e] Gov[d] Le 10 ffebruary[ed] 1715 Gov[rs] answer.	The supercargo prayed most humbly to Monsieur the governor of the island of St Helena to cause to be delivered to him the contents written above, at the same price that the English Monsieurs were accustomed to pay for their refreshments. This was to be done according to the same treatment that the Court of France had ordered and caused to be done in all their ports. Compliance with the request here would oblige his most humble and most obedient servant, Joseph Le Blanc, director of the ammunition of Monsieur Decudroy. The paper was dated 10 February 1715. The governor's answer to Monsieur Le Blanc. Monsieur, the governor had received his note just now, in which he desired to have from the island the refreshment of the <i>Jason</i>, namely 50 goats, 2 beeves, 50 fowls and 40 dozen eggs. In answer to the request, Pyke said that Le Blanc was welcome to this port as to what could be spared. The island had however lately suffered very much by a famine, in which 2,500 head of cattle had died. There now remained so very small a stock that there would not be beef enough to serve their own ships, and some of these must go hence without it. He therefore could not suffer any beef to go off. But since our gracious Queen had thought Interpretations The form of the French requisition rested on a claim of reciprocity between the courts of France and England. By asking for the refreshments to be supplied at the price paid by English ships and on the same treatment that French ports gave to English visitors, Le Blanc invoked an implicit treaty understanding rather than a discretionary favour. The basis of the request thus shifted the matter from the prerogative of the governor as proprietor's officer to the diplomatic obligations of England as a state, and would have weighed against any refusal that could be read as a departure from established international courtesy. The governor's response opened the door to provisions in general while shutting it on beef in particular. The distinction was framed in terms of

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			supply rather than of policy, and was supported by the citation of a specific recent calamity, namely the famine in which 2,500 head of cattle had died. The figure represented a major loss to the island's livestock holdings and provided a concrete justification for retaining the remaining beasts for the Company's own shipping. By rooting the refusal in a documented event rather than in the political question of trading with a French ship, Pyke avoided giving any direct affront to the diplomatic basis of the request. The reference to 2,500 head of cattle dying in the famine identified the principal pastoral crisis of the recent period on St Helena and explained the resource constraint underlying the present negotiation. Cattle were the largest single component of the island's productive livestock, used both for refreshment of shipping and for the labour of carriage and ploughing on the plantations, and their wholesale loss had reduced the colony to a position where the supply of beef to incoming Company vessels was itself uncertain. The figure given here also serves as a benchmark for the scale of the island's herds before the famine, since the loss is reported as a particular event rather than as a total. The title Le Blanc gave himself, director of the ammunition of Monsieur Decudroy, identified him within the French commercial system as the officer responsible for the supplies and equipment of a private syndicate's voyage, accountable to Decudroy as the principal investor. His use of the form here served to authenticate his subscription to the paper in the absence of the captain, and Pyke's acceptance of the request from him, despite his earlier insistence that such applications were properly the captain's business, reflected a pragmatic willingness to deal with whoever could put the wants of the ship into a signed document. Speculations The governor's choice to refuse beef while allowing the other items of the requisition points to a calculated use of the famine to manage the political sensitivity of the request. A flat refusal of the whole would have invited French complaint at the Court of France and given Carne's earlier private dealings the appearance of necessary subterfuge in the face of unreasonable obstruction. By granting goats, fowls and eggs, Pyke gave the <i>Jason</i> enough to leave with no honest grievance, while retaining the beef whose private export by Carne had been the actual occasion of the council's recent prohibition. The famine provided a face-saving reason that protected the substance of the policy without provoking a diplomatic incident. The decision to cite a precise figure of 2,500 head of cattle lost suggests that the number was already in regular use within the council's correspondence and accounts, and could be deployed against a French diplomatic claim with the standing of an established fact. By placing the figure on the record of the present negotiation, Pyke also fixed it for future reference, so that any subsequent request for beef from visiting ships could be answered by reference to the same datum without further explanation. The careful use of a recent calamity to support a current refusal reflects the same managerial instinct that had characterised his handling of the diplomatic forms on the <i>Jason's</i> arrival.
369	360	it fitt to Grant Peace to France you shall be treated here as friends, and all the rest of your requests Igrant, You have therefore Libertie to buy fifty Goats one hundred fowles & instead of Beef Ten Hoggs and what Eggs you will, and the planters shall be desired to Sell to you for the Same price that they have of their own Country men, You have also Liberty to Send on Shoar thirty Sick Men for one Week and I will Send to your Cap[ts] Ticklets for thirty men more to come on Shoar in the day time which Privilledge they Shall have So long as	Our gracious Queen had thought it fit to grant peace to France. Le Blanc and his company would therefore be treated here as friends, and all the rest of his requests granted. He had liberty to buy 50 goats, 100 fowls, and in place of the beef refused, 10 hogs, together with whatever eggs he wished. The planters would be directed to sell to him at the same price they had of their own countrymen. He also had liberty to send ashore thirty sick men for one week. The governor would send to his captain

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
		they behave themselves Soberly and well, but no other man besides your Sick & those who tend them are to Lye on Shoar without my Particular Licence and you are to give the Cap[t] Notice that he do not Suffer his boats to Sound about any part of the Island, for, if he does the boat will be Seized and the Privillage of Refreshm[t] too, but if he wants to fish I will Send out a Fisher =man for the Use of the Cap[t] and Ship while you Stay here paying the fisherman the Usual and Customary price I must also Acquaint you that your Sick men and others in the Valley must not be permitted to Wander into the Coun =try, there being a Penalty on all those that doe. I alsoe give you a Caution that if you have any Men on board that you think will Runn away from your Ship that you do not Suffer them to come on Shoar. And on these terms you Shall have y[e] Liberty of the fort to refitt yo[r] Casks and fill yo[r] Water, to buy what y[e] Inhabitants or other Sorts of refreshm[ts] you think Proper for your Men I am S[r] yo[r] Hum[ble] Serv[t] Sunday Janry y[e] 30. 1714/[.] Isa[a]: Pyke United Castle on S[t] Helena.	tickets for thirty more men to come ashore in the daytime, which privilege they should have so long as they behaved themselves soberly and well. No other man besides the sick and those who tended them was to lie ashore without his particular licence. Le Blanc was to give the captain notice that he was not to suffer his boats to sound about any part of the island. If he did so the boat would be seized and the privilege of refreshment forfeited too. If the captain wanted fish, the governor would send out a fisherman for the use of the captain and ship while they stayed here, paying the fisherman the usual and customary price. The governor further acquainted Le Blanc that his sick men and others in the valley must not be permitted to wander into the country, there being a penalty on all who did. He also gave Le Blanc a caution that if he had any men on board whom he thought would run away from his ship, he should not suffer them to come ashore. On these terms Le Blanc was to have the liberty of the port to refit his casks and fill his water, and to buy what green trade or other sort of refreshment he thought proper for his men. The letter closed in the form of subscription, signed Isaac Pyke, and dated Sunday 30 January 1715 at the United Castle on St Helena. Interpretations The reference to the Queen's having thought fit to grant peace to France placed the present transaction within the framework of the recent peace settlement between the two crowns. The treaties concluded at Utrecht in 1713 had brought to an end the long war between England and France, and the governor's invocation of the new state of peace provided the diplomatic basis on which a French royal vessel could be received as a friend at an English port. The change in the operative footing between the two powers thus governed the substance of the welcome and the scope of the supplies that could be released. The substitution of 10 hogs for the requested 2 beeves preserved the principle of refusing beef in the face of the cattle famine while still meeting the underlying need of the <i>Jason</i> for substantial meat provisions. Hogs were a separate stock from cattle on the island and could be drawn on without affecting the herds reserved for the Company's own shipping. The arithmetic of the substitution, two beeves replaced by ten hogs, reflected the relative weight and value of the carcasses, and showed the governor's willingness to find a workable alternative once the principle had been settled in his favour. The arrangements for the sick men set out the standard quarantine and security protocol for foreign crews at the port. Thirty men were allowed ashore for recovery for a week, with a ticket system controlling the daytime presence of a further thirty, and all others confined to the ship except by particular licence. The valley was the designated area of permitted resort, and the country beyond was closed to the visiting crew under penalty. The framework allowed the practical refreshment of the men, on which the success of a long voyage depended, while preventing dispersal of foreign sailors across the inhabited parts of the island. The prohibition on sounding the harbour and approaches by the ship's boats addressed a standing concern of any garrison port receiving a foreign warship. Soundings would give a future enemy the depth and bottom information needed to attack or blockade the place, and the threat of seizure of the boat and forfeiture of all refreshment provided a heavy sanction against unauthorised hydrographic work. The arrangement reserved to the governor the option to permit a hired English fisherman to supply the captain's table with fish, by which the visiting officers could be

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			accommodated without the ship's own boats being given freedom of the bay. Speculations The provision that any French sailors thought likely to run away should not be allowed ashore points to a practical fear that crew members of a French royal vessel might desert to the island and complicate the political relationship between the powers. By placing the burden of judgement on Le Blanc himself, Pyke avoided assuming responsibility for the screening while reserving the right to penalise the ship if such desertions occurred. The framing protected the island against an influx of unauthorised foreign labour and protected the diplomatic position by transferring the duty of preventing desertion to the supercargo who had presented himself as accountable for the ship's affairs ashore. The dating of the governor's letter to 30 January 1715, almost two weeks before the consultation of 8 February 1715 at which Carne's contraband dealings were taken up, indicates that the formal exchange with Le Blanc was concluded promptly on the ship's arrival and that Carne's clandestine supply of beef in bags occurred while the official negotiations for refreshment were still being settled. The retrospective insertion of the <i>Jason</i> correspondence into the record at this later point in the volume placed the documentary evidence of the proper procedure alongside the proceedings against the man who had attempted to circumvent it, and gave the council's response to Carne the support of the written terms that had been in force when he acted.
370	361	Asoon as I heard by word brought from the Sugar loaf that the Ship a Comeing in was a French Ship the Councill being all w[th] me We publisht to the Planters the following Order. Island S[t]: Helena. By the Worshipfull the Govern[r] & Council An Advertisement. Whereas Beef is at this time very Scarce by reason of the great Dearth whereby So many Cattle were lost upon the Island and that we have Not Suffi =cient to Supply the Hon[ble]: Companys Shipping. The Worshipfull the Govern[r]. and Councill Do hereby Strictly Command and forbid all persons Not to Sell or Dispose of any Beef to any Foreigne Ship whatsoever Untill such time as a Greater Stock of Cattle upon the Island at any Price but they may sell and Dispose of any other Sort fresh Provisions for the releif of Such People who are to Come on Shoar. Likwise who Ever Shall find any Fordig[ners] Caholeing or Stragglng into the Country they are to Look upon them as Spies and apprehend them as such, and bring them before the Gov[r] & Council, United Castle James Sign'd by Ord[r] of Govern[r]: Valley 29[th] Jan[ry] 1714/5 & Council. Antip[s]: Tovey The Margin Notes: Island S[t] Helena. The reason of this page being Crossd out is because it is entred 10 folios before United Castle James Valley 29[th] Jan[ry] 1714/5	As soon as Pyke heard by word brought from the Sugar Loaf that the ship coming in was a French ship, the council attended him. They published to the planters the following order. Start of crossed out section A note in the margin recorded the reason for this page being crossed out, namely that the order was entered ten folios before. The page is otherwise cancelled by diagonal lines through the body of the entry. Island of St Helena. By the worshipful the governor and council. An advertisement. Beef was at this time very scarce, by reason of the great dearth in which so many cattle had been lost upon the island, and the council had not sufficient to supply the Honourable Company's shipping. The worshipful governor and council strictly commanded and forbade all persons to sell or dispose of any beef to any foreign ship whatsoever, until such time as a greater stock of cattle should be raised upon the island, at any price. They might, however, sell and dispose of any other sort of fresh provisions for the relief of such people as came ashore. Likewise, whoever found any foreigners caballing or stragglng into the country were to look upon them as spies, apprehend them as such, and bring them before the governor and council. The order was dated 29 January 1715 at the United Castle, James Valley, and signed by order of the governor and council by Ardipas Tovey. End of crossed out section Interpretations The Sugar Loaf was the prominent conical hill rising above the eastern flank of James Valley, used as a lookout station from which signals of approaching ships could be sent down to the castle by word of mouth or by visible sign. The arrangement gave the governor and council the earliest practicable warning of any vessel making for the road, and allowed the necessary administrative response to be set in motion before the ship had come within hail of the fort. The opening words of this entry describe the very mechanism by

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			which the <i>Jason</i> was identified as French in time for the council to be summoned and the advertisement framed. The cancellation of this page, with a marginal note explaining that the order was entered ten folios before, illustrates the same bookkeeping correction encountered earlier in the volume. The clerk had duplicated material that already appeared in its proper place in the consultation of 29 January 1715, and on noticing the repetition cancelled the present transcript by diagonal lines and added a cross-reference. The convention preserves the cancelled text on the page rather than erasing it, and allows the reader to see both the form of the advertisement and the clerk's own correction of the record. The substantive order set out the policy against which Carne's clandestine supply of beef in bags had offended. Beef was singled out for absolute prohibition on the grounds of the cattle famine and the shortfall in supply for the Company's own shipping, while other fresh provisions remained available for sale to visiting foreign crews. The structure of the prohibition matched the substitution of hogs for beeves in the governor's later letter to Le Blanc, which respected the same line. The advertisement also identified caballing or straggling into the country by foreigners as a security concern to be met by treating the offenders as spies, with apprehension and production before the council as the prescribed response. The advertisement was signed by Ardiapas Tovey by order of the governor and council, rather than by the governor in person. Tovey, the fifth in council, evidently acted as the executive officer responsible for issuing published orders to the planters under the authority of the bench, a role consistent with his appearance as a signatory of the closing minute of the general sessions of 7 February 1715. The signature pattern in the consultations confirms his function as the council's regular hand for outgoing documents, with the governor reserving his own signature for the principal record and for personal correspondence such as the letter to Le Blanc. Speculations The clerk's duplication of the advertisement at this point in the volume, far from being a simple slip of attention, may reflect the practice of assembling all the documentary material relating to the <i>Jason</i> into a single dossier within the records, before the redundancy with the earlier entry was noticed and the second transcript cancelled. The grouping together of the council's order of 29 January 1715, the governor's letter of 30 January 1715, the French requisition of 10 February 1715 and the supporting narrative would have given a future reader a complete view of the transaction in one place. The decision to retain the cancellation in the record rather than to remove the duplicate suggests that the bookkeeping principle of preserving the original sequence took precedence over tidiness of presentation. The advertisement's instruction to treat caballing or straggling foreigners as spies points to a real fear within the council that crew members from a French royal vessel, however formally welcomed under the new peace, might attempt to gather intelligence on the island's defences, paths, water supply or upland settlements. The Sugar Loaf signal, the prohibition on the <i>Jason</i>'s boats sounding the harbour, the confinement of the sick men to the valley and the present advertisement together formed an integrated security regime designed to extract the benefits of regulated commerce with the visitor while denying her any opportunity to inspect the place beyond what could be seen from the road and the immediate town.
371	362	The french Ship had sent on board the follow =ing Provisions &c. besides what they Spent on Shoar and besides what M[r] Carne sent secretly on board. 108	The French ship had been sent on board the following provisions, besides what they had spent ashore and what Mr Carne had sent secretly on board.

And the Gov[r]: bound him to his good behaviour for his wilfull Con =tempt and breach of the Publick Order. The Ship Sailed on Wednesday y[e] 9[th] of Febr[ry] 171[.]/[.]. Margin Notes: Provisions sent on board y[e] french Ship [.] Geo: Haswell Math: Bazett Antipas Tovey M[r] Carne bound to his good behaviour.	Goats, 108. Sheep, 8. Hogs, 8. Geese, 3. Fowls, 15 dozen and 7. Turkeys, 6. Ducks, 23. Sacks of beans, 6. Bushels of yams, 2. Cheeses, 5. Casks of bread, 2. Casks of flour, 5. Boats laden with plantain trees, 2. Greens and fish were also supplied. The French paid for all of this in French brandy, at 5s 0d per gallon. Notwithstanding all these provisions sent off from Mr Carne's, there were two bullocks sent privately on board. The governor, having notice thereof, sent and stopped three quarters of beef in three bags till it could be found out who had sent them. Carne came forward and owned that he had killed the beef for the French. The governor bound him to his good behaviour for his wilful contempt and breach of the public order. The ship sailed on Wednesday 9 February 1715. The record was signed by Pyke, George Haswell, Matthew Bazett and Ardipas Tovey. Interpretations The total list of supplies put on board the <i>Jason</i> set out the practical capacity of the island to victual a large foreign warship under the regulated regime in force. The bulk of the meat was furnished by 108 goats, with hogs, sheep, fowls, turkeys, ducks and geese making up the rest. The plant provisions consisted of beans, yams, plantains and greens, with bread and flour for shipboard baking, and cheeses as a keeping food for the voyage. The fish was supplied through the arrangement with the licensed fisherman set out in the governor's letter to Le Blanc, by which the ship's own boats were kept from sounding the harbour. The composition of the list confirms that the island's planter economy, even in the wake of the cattle famine, could deliver a substantial bulk of refreshment to a 700-ton ship within a fortnight. The payment in French brandy at 5s 0d per gallon set the exchange rate of the transaction in commodity rather than coin. The French ship, lacking sterling and unwilling to part with specie, settled the account in spirits drawn from her own cargo, valued at a fixed unit price for the purpose. Brandy at this rate was an acceptable medium of payment on the island because it could be resold to the planters and to subsequent shipping at advantage, and the standard pricing allowed both sides to reckon the value of the supplies in a common term without further negotiation. The arrangement converted a French royal vessel's want of provisions into a stock of European spirits for the island's market. The interception of the two bullocks killed by Carne and sent privately on board, in three quarters of beef in three bags, gave the council the direct evidence of his second offence against the published order. The first incident had been the matter cancelled and re-entered at 8 February 1715, where the bagging of beef had already been characterised as a private supply contrary to the advertisement of 29 January 1715. The repetition of the conduct, in the very form of three quarters in three bags previously used, showed that Carne had continued his trade with the French even after the first prosecution had been opened against him, and that the council's vigilance through the Sugar Loaf signal and the inspection of provisions leaving the shore had been needed to detect the second instance. The disposition of the case by binding Carne to his good behaviour, rather than by formal trial, paralleled the procedure followed at the consultation of 8 February 1715. The governor treated the offence as a

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			breach of administrative regulation rather than as a criminal felony, and used the recognizance as the operative restraint pending any further action. By taking the bond on the spot, before the ship sailed and the immediate occasion passed, the council secured Carne's continued submission to the published order without removing him from his trade or his household. The procedure preserved the inhabitant's standing on the island while making him pay for his contempt of the council's authority through the contingent forfeiture of the bond. Speculations The very precision with which Carne's smuggled beef matched the unit of three quarters in three bags suggests that the bagging of beef in this form had become an established practice between his household and the French ship's purveyors, perhaps even a regular delivery unit fixed at the outset of the visit. The repetition of the same packaging from the earlier offence to this one points to a routine method of clandestine supply, with a familiar division into manageable parcels for stealthy embarkation by boat at night. The governor's seizure of the bags as soon as they were identified shows that the council too had come to expect this form, and was watching for it. The choice of brandy as the medium of payment hints at a deliberate French strategy for paying their way at small ports along their trade routes without expending coin. By carrying a stock of brandy specifically for victualling and refreshment payments, the <i>Jason's</i> purveyors could draw on European supplies far more readily than on silver, and could leave behind a commodity that the receiving port could readily convert into local circulation. The arrangement gave the French royal vessel the practical means to refresh at the island even in time of war or trade restriction, since brandy could be presented as a customary article rather than as bullion subject to closer scrutiny.
372	363	Island S[t]: Helena At a Consultation held on Tuesday the 15[th] day of February 1714/5 at the United Castle in James valley Isaac Pyke Esq[r]. Govern[r]. George Haswell Dp[tly] Edw[d] Mashborne 3[d] in y[e] Country Matth[w]: Bazett 4[th] & Antip[s]: Tovey 5[th] in Coun[c]. Prest The following Petitions were Presented. Island S[t]: Helena. Island of St Helena. At a consultation held on Tuesday 15 February 1715 at the United Castle in James Valley. Present in council were Isaac Pyke, governor; George Haswell, deputy governor; Edward Mashborne, third, and clerk of the council; Matthew Bazett, fourth; and Ardipas Tovey, fifth. The following petitions were presented. The petition of William Worrall, quarter gunner, who was constantly employed in the Honourable Company's works, was addressed to the worshipful Isaac Pyke, governor, and the council. Worrall set out that he had formerly held a parcel of land containing about 12 acres, but on the death of his wife he had let it to his friend John Welch to occupy. John Welch had since died, and his widow now found herself not able to look after the land and was therefore very willing to resign it again. Worrall therefore humbly begged that the worshipful governor and council would be pleased to let him have that land again, all parties concerned being Interpretations The office of quarter gunner placed Worrall in the technical artillery establishment of the garrison, as an assistant to the gunner responsible for the maintenance of the cannon, powder, shot and gun carriages of the island's forts. The post was a fixed appointment with a regular wage, and the description of him as constantly employed in the Company's works indicated that he also undertook the routine labour of the establishment on the platforms and magazine when not occupied with the artillery itself. His standing as a uniformed servant of the Company on continuous duty distinguished him from the planter petitioners and gave his application a particular institutional weight.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			The mechanism by which Worrall had transferred his land to John Welch on the death of his wife reflected the customary practice on St Helena by which the parcels held under Company lease were managed through informal arrangements between named planters during the lifetime of the original holder. The arrangement allowed a soldier-tenant who could no longer work his ground to keep his lease alive through a friend's occupation, without formal reassignment by the council. The death of Welch and the inability of his widow to continue the cultivation now broke the chain and required the council's intervention to restore the land to Worrall or to redirect it elsewhere. The widow of John Welch, named only in this capacity, exemplifies the position of a recently widowed planter woman whose ability to retain her late husband's holding turned on her practical capacity to work it. Where the labour or means were lacking, the surrender of the parcel through a petition of the original lessor offered an orderly route by which the land could be returned to the previous holder without dispute over inheritance or arrears. The widow's expressed willingness to resign brought all parties into agreement and presented the council with a clear administrative request rather than a contested cause. The figure of 12 acres named for the parcel placed Worrall's holding in the range of the smaller planter lots on the island. Such a parcel was sufficient to support a modest household with a mixed economy of vegetables, fruit and small livestock, but not large enough to support a planter family on cultivation alone. The pairing of land of this size with a wage from the artillery establishment was a characteristic feature of the island's settler economy, by which soldiers and minor officers supplemented their pay with the produce of small grants worked by their families and a few slaves. Speculations The bringing of Worrall's petition at the very first consultation following the <i>Jason's</i> departure points to a pattern in which the council, now freed from the diplomatic and provisioning business of the past fortnight, turned to a backlog of routine administrative matters from the island's own inhabitants. Petitions for the recovery or transfer of land had probably been held over while the foreign ship was in port, and the present sitting on 15 February 1715 was the first opportunity for the council to dispose of them. The promptness with which Worrall came forward, before any other claimant might be put forward for the same parcel, suggests that he had been waiting on the right moment to present his case to the new governor. The framing of the petition around the consent of all parties, including the widow of John Welch, suggests a careful effort by Worrall to remove any ground on which the council might delay or refuse the application. By securing the widow's agreement in advance, he turned what could have been a contested matter into a settlement to be ratified, and presented the council with the path of least resistance. The approach reflected the practical wisdom of an inhabitant familiar with the council's procedures, and the kind of orderly groundwork that the new governor had explicitly invited in his opening address.
373	364	Consenting thereto, and your Petitioner being now on the Point of Marriage hopes he Shall again be Capable to Look after it And yo[r]: Petitioner (as in duty bound) Shall ever pray &c[a] Will[m]: Worrall. Which was granted. Island S[t] Helena. To the Worsh[IP]: Isaac Pyke Esq[r]: Govern[r] &c[a] and Council. The most Humble Petition of John Long free planter. Humbly Sheweth. 		prays that in Considerati =on of his having Delivered So many breeders That your Worship and Council will Please to grant him ten more in all Twenty in Sandy =bay, being not half the breeders he had here and he will make up the Sixty Eight Seventy which with what Else he has Promised & is ready to Deliver will pay his debt to the Hon[ble]: Company. Feb[ry] y[e] 15[th] 1714/5 And yo[r] Petition[r] (as in duty bound) shall for ever pray. Jn[o]: Long. Ordered that the Consideration of the said Petition be referred to the Govern[r] and Cap[tn]. Mashborne The. Margin Notes: Granted him. Island S[t]: Helena Jn[o]: Long desires 20: Ewe Goats in Sandy bay. Feb[ry] y[e] 15[th] 1714/5 y[e] Same referr'd to y[e] Gov[r] &c[a]	Long set out that he had earlier delivered 68 goats in Chapel Valley, of which 40 were ewes, and that he had only 10 ewes left in Sandy Bay. He humbly prayed that, in consideration of his having delivered so many breeders, the worshipful governor and council would be pleased to grant him ten more, in all twenty, in Sandy Bay, being not half the breeders he had earlier. He would then make up the 68 to 70, which with what else he had promised and was ready to deliver, would pay his debt to the Honourable Company. The petition was dated 15 February 1715 and signed John Long. It was ordered that consideration of the petition be referred to the governor and Captain Mashborne. Interpretations The grant of Worrall's petition restored him to a 12-acre parcel that he had let to a friend during his widowhood. The council's willingness to receive him back as lessor on the strength of his approaching marriage reflected a settled view that land on the island was best held by men with households to support and labour to apply, and that a fresh marriage gave a sufficient warrant for the return of a holding suspended during a period of bereavement. The decision tied the disposition of land to the formation of new family economies on the place. The description of John Long as a free planter distinguished him from the Company's contracted servants on the one hand and from any indentured or bonded labourer on the other. The term denoted a settler holding land under direct lease from the Lords Proprietors, with the right to dispose of his own labour and produce as he saw fit, subject to the obligations attached to his tenure. The status carried with it both privilege and accountability, and Long's petition was framed against the background of a specific livestock debt owed to the Company under the terms of his lease. The structure of Long's debt to the Company was reckoned in breeding stock rather than in money. The figure of 68 goats already delivered in Chapel Valley, of which 40 were ewes, identified the means by which he had been discharging his obligation, and the 10 ewes left in Sandy Bay represented his current breeding capacity in the southern part of the island. The request for ten more goats from Sandy Bay, to bring his stock there to twenty breeders, was framed not as a fresh grant but as a release back to him of breeding animals from his earlier deliveries, on the ground that his current holding was less than half the breeders he had previously kept in that quarter. Chapel Valley and Sandy Bay denoted two distinct districts of the island, separated by the central upland and offering different pasture and climate to the livestock kept in each. Chapel Valley lay to the leeward of the central ridge, while Sandy Bay lay to windward on the south, and the two together formed complementary grazing districts for the small planters' goat economy. The reckoning of livestock contributions in both places, with a deficit in one to be made good by a transfer from the council's stock, illustrated the practice by which Company holdings of breeding stock served as a reserve for the redistribution of animals between settled districts. The reference of the petition to the governor and Captain Mashborne for further consideration showed the routine division of council business between full sittings and committee inquiry. Mashborne held the third place in council and was here designated by his military title of captain, which marked him as the senior military officer on the bench and the appropriate person to inspect the practical question of livestock numbers and pastures alongside the governor. The committee form of disposition gave the case the attention it required without delaying the conduct of further business at the present consultation.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			Speculations The pairing of Worrall's land petition with Long's livestock petition at the same consultation suggests that the council had reserved this first quiet sitting after the <i>Jason's</i> departure for the orderly disposal of inhabitants' applications relating to their tenures and dues. The character of the matters, both involving the practical adjustment of property arrangements between an individual settler and the Company, fits the programme of regularisation that Pyke had set out at the opening of the sessions a week earlier, when he had promised to call in debts, survey plantations and have due accounts kept in the Company's books. The 15 February 1715 consultation gave him the first opportunity to put that programme into practice on individual cases. The very particularity with which Long itemised his goats, distinguishing breeders from the rest and naming the valleys in which each portion was held, points to an established practice of detailed livestock accounting between the Company and its planter tenants. The reference of the petition to the governor and Mashborne for inspection rather than for outright grant suggests that the council intended to verify the figures on the ground before adjusting Long's account, perhaps by inspection of the herds in both Chapel Valley and Sandy Bay. The procedure protected the Company from claims based on inflated numbers and gave the planter a defined route through which a genuine claim of over-delivery could be tested.
374	365	The Govern[r]: Reports that on Saturday last he pounded at the Hon[ble]: Companys new pound in Chapple valley, and received of M[r] Carne Thirty Eight Ews twenty Six weathers and Nineteen Kidds, of John Long forty five Ews Ten weathers and Ten kidds of Francis Wrangham twenty Eight Ews Ten weathers and Eight Kidds and of Thomas Free's one Kidd. And that whereas they were Markt w[th] The Comp[as] mark in Pitch the first time some were delivered but Since some of y[e] mark hath been worn Out which has Occasioned the Govern[r]: to alter that Mark, by Letting M[r] Carnes Mark Remain on the Left Ear, and Cropt half the right Ear off, and so he has done by them all, which he thinks Sufficient to know the Companys Goats from any others. There being a pretty Deal of Writeing about the Tryalls aforesaid and other business the Govern[r] thinks it Convenient that all Matters be Enterd in the fair Council Book before any more Consultations be held. [...] Geo: Haswell [...] Antipas Tovey Margin Notes: Goats rec[d]. in y[is] Valley 193 and of whom their Ears Mark altered.	The governor reported that on the previous Saturday he had pounded at the Honourable Company's new pound in Chapel Valley and received the following goats. From Mr Carne, 38 ewes, 26 wethers and 19 kids. From John Long, 45 ewes, 10 wethers and 10 kids. From Francis Wrangham, 28 ewes, 10 wethers and 8 kids. From Thomas Spree, 1 kid. The total received in the valley was 195 goats. The animals had been marked with the Company's mark in pitch when first delivered. Since some had worn off the mark, the governor had altered it. He let Mr Carne's mark remain on the left ear, and cropped half the right ear off all the rest. He thought this sufficient to know the Company's goats from any others. There being a great deal of writing about the trials and other business, the governor thought it convenient that all matters be entered in the fair council book before any more consultations were held. The record was signed by Pyke, Haswell and Tovey. Interpretations The pound at Chapel Valley served as the council's central holding place for livestock owed to or in dispute with the Company, and the present entry recorded the receipt there of goats delivered by four named planters in part discharge of their stock obligations. The figure of 195 goats taken in at this one impounding represented a substantial transfer of breeding capital from private hands to Company stock, and gave concrete effect to the policy of regularising the planters' debts that had been outlined in Pyke's opening address of 7 February 1715. The new pound itself appears to have been a recent construction in the valley, providing a controlled enclosure in which received animals could be marked, counted and held until distributed. John Long's appearance among the deliverers, with 45 ewes, 10 wethers and 10 kids, links this entry directly to his petition of 15 February 1715 considered at the previous consultation. The 65 animals delivered here support the figure of 68 goats already given in Chapel Valley that Long had cited in his petition, with allowance for small variations in the count between the planter's record and the pound's intake. The present entry therefore serves as the council's own verification

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			of the figures referred to the governor and Mashborne for consideration, and supplies the documentary basis on which a decision on Long's request for ten more breeders in Sandy Bay could be made. Carne's appearance as the largest single contributor to the pound, with 83 goats delivered, places his discharge of livestock obligations in striking contrast with his recent prosecutions for clandestine supply of beef to the <i>Jason</i> on 8 and 9 February 1715. The governor's decision to let Carne's mark remain on the left ear, while cropping half the right ear of all other animals, drew a distinction between Carne's stock and the others within the very system of pound marking. The reasoning may have been administrative, in that Carne's goats had retained their original mark in legible form and did not need re-marking, but the visible separation of his animals from those of Long, Wrangham and Spree also fitted the pattern of close watch maintained on Carne's holdings since his bond of 8 February 1715. The marking system used pitch as the medium for the Company's mark, applied at the time of first delivery, and the present alteration to cropping the right ear addressed the practical problem of pitch marks wearing off in the field. Ear cropping was a permanent mark in the animal's own flesh and gave the Company an indelible identification of its stock. The choice of half the right ear, rather than a full crop or a slit, made the mark distinctive without serious injury to the animal or reduction in its value. Wrangham, named here as a deliverer of 46 goats, was identified in the master reference as a planter of standing whose holding lay in the upland districts. The governor's instruction that all matters be entered in the fair council book before any more consultations were held disclosed the bookkeeping practice of the council. The record kept during sittings was apparently a working draft, with the writing up of the formal record into a second, fair copy carried out subsequently by the clerk. The volume of business since 24 January 1715, including two general sessions days, the <i>Jason</i> dossier and the present livestock entries, had created a substantial backlog of material to be entered in fair, and Pyke evidently preferred to bring the formal record up to date before more business was added. Speculations The decision to crop the right ear of all the goats but Carne's, while letting the original pitch mark on Carne's animals remain, points to a deliberate physical separation of Carne's stock from the rest within the Company's holdings. With Carne already bound to his good behaviour for two breaches of the order of 29 January 1715, and with the council still watching for further attempts at clandestine dealing, an identifiable cohort of his goats kept on a different mark gave the governor an immediate means to trace them if any were later found in suspicious hands or contexts. The arrangement built into the routine pound work an enhanced surveillance over the very planter whose recent conduct had given the council most cause for concern. The governor's emphasis on bringing the fair council book up to date before further consultations were held suggests that he placed particular weight on the formal record as the foundation of his administration. Pyke had committed himself in his opening address of 7 February 1715 to the keeping of due accounts and the sending of duplicates to the Honourable Company, and the present instruction gave practical effect to that principle within the council's own records. By insisting that the fair book catch up with the working notes before new matters were entered, he ensured that the documentary trail of his early administration would be complete and that the council's

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			authority would rest on a record fit to be transmitted to the Lords Proprietors in London.

At a consultation held on Friday 11 March 1715 at the United Castle in James Valley. Present in council were Isaac Pyke, governor; George Haswell, deputy governor; Edward Mashborne, sick; Matthew Bazett, fourth; and Ardipas Tovey, fifth. The governor demanded of Mr Bazett why he had not delivered in his monthly accounts. Bazett replied that he would go and fetch them. The governor then demanded why they were kept back so long and not delivered before. Bazett went and brought one month's account fair written, and the others to the 25 February foul, which he said he had not had time to write out fair. He carried them away, foul as they were, and would write them out against the next consultation day. The governor said he intended to fine Mr Carne £10 0s 0d for transgressing the public ordinance forbidding the selling of beef to foreigners. The other members of the council were of opinion that it ought to be so. It was ordered that after this ship was gone, no more arrack or tea should be bought out of any ship any further than what paid their accounts in the Company's stores, to prevent the drawing of more bills on our Honourable Masters. Agreed and ordered accordingly. Interpretations The dispute over Bazett's monthly accounts gave practical effect to the bookkeeping discipline that Pyke had set out at the opening of the sessions of 7 February 1715, and again at the entry of 27 February 1715 when he had directed that all matters be brought up to date in the fair council book before further consultations were held. Bazett held the fourth place in council and had general responsibility for accounts that fell to his department, and the demand for explanation in open council placed his failure on the formal record. The distinction between the fair account, written out in proper form for delivery and inspection, and the foul account, kept as rough working notes by the officer himself, reflected the standard two-stage process by which public accounts on the island were prepared. The fine of £10 0s 0d to be imposed on Carne for breach of the public ordinance forbidding the sale of beef to foreigners brought to a head the proceedings against him that had begun on 8 February 1715 and continued at 9 February 1715. The sum matched exactly the fine imposed on Thomas Bevar of the <i>Aurengzebe</i> on 24 January 1715 for the attempted abduction of the slave woman Abigail valued at £50 0s 0d, and represented the council's standard tariff for offences of this order of seriousness. The council's collective endorsement, recorded in the entry, gave the governor the formal backing of the bench for a penalty he had decided in his own mind, and converted his intention into a council order. The decision to limit future purchases of arrack and tea from visiting ships to the value of the accounts paid by those ships in the Company's stores addressed a chronic problem of the island's commercial regime. Arrack was the spirit distilled from rice, palm or sugar that was the principal alcoholic refreshment of European crews in the East, while tea had become a major article of the Company's homeward trade from China. Both were customarily carried by Indiamen as private trade or as part of the cargo, and could be acquired by the island's inhabitants on credit drawn on the Company in London. The drawing of bills on the Lords Proprietors for the payment of such purchases had evidently reached a level that the new administration considered unsustainable. The arrangement provided that no further bills would be issued by the council in payment for arrack

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			and tea, beyond what could be set against the credits earned by the visiting ships in the Company's stores at St Helena. The mechanism converted the trade from one in which the Company in London ultimately paid for the inhabitants' refreshment into a closed circuit in which the ships paid for their own provisions out of what they were willing to take in commodity at the island. The order extended the principle of bookkeeping discipline from the council's own accounts to the wider commercial relations between the island and the Company's shipping. Speculations The placing on the record of Bazett's failure to deliver his accounts in fair form, in language that names the officer and quotes his successive excuses, gave Pyke a documentary basis for any future action against a colleague who had failed in the duty of his place. Bazett had sat on the bench through the trials of 24 January 1715, had received from the slave Jenny's master William Seale the payment of his slaughtered pig on 7 February 1715, and had signed the entry of 9 February 1715 with the rest of the council. By exposing him to formal interrogation on his accounts before the same colleagues, the governor put a senior councillor under explicit notice that the standards of the new administration applied to the bench as well as to the inhabitants. The order limiting purchases of arrack and tea to what could be set against the visiting ships' own accounts in the Company's stores suggests that the inhabitants had been running up substantial debts to the Company through the consumption of imported refreshment, paid for by bills drawn on London. The reform shifted the cost of such consumption directly onto the inhabitants and the visiting ships between them, and removed from the council the politically awkward role of intermediary in a flow of bills that was ultimately weakening the Company's accounts in London. The change of policy fitted with the Lords Proprietors' direction, communicated by Pyke on 7 February 1715, that the Company was retrenching its expenses across the island.
376	367	Order'd, That all proper Advertisem[ts] which 'tis usual to publish at at this time in order to the settling of Acc[ts] to the 25[th] March instant be forthwith Published & that there be no serving out in the Hon[r]: Comp[as]: Stores from the 25[th] March till fourteen days after. M[r] Gabriel Powel One of the Exec[rs] of M[r] Cha[s]: Steward Dec[d] proposed to Sell to the Hon[ble]: Comp[a] Two thirds of the proce =sions now growing on y[e] Land of the said Steward & also two Young Slaves named Pompey & Roger Likewise Ten Beevs and Twenty hogs And also M[r] Powell will on his own Acc[t]: part with all the Goats he has in Lemon Vally range. Order'd That the Consideration of the said proposal be ferr[d] to the Gov[r]: Cap[t]: Mashborne & M[r] Bazett. Order'd That an Advertizem[t]: be Publisht that when the inhabitants will Sell Beef at Twenty five Shillings y[e] Hundred they shall buy Arrack out of the Hon[r]: Comp[as] Stores at Six Shillings p[r] Gallon. On the 19[th] of Feb[r]: last came in a French ship called the S[t] Lewis Cap[t] Le Barn afsi[...].e Coward Burthen about 500. Tons. 250 men bound from India but last from the Cape for France and is a private Stock Ship trading by y[e] King of Frances Lycense. The Gov[r]: sent off to her to tell them they must send their Boat on Shoar asoon as called too but they take no notice thereof but came directly to an Anchor in the road & did not Salute then sent the Boa[t] Margin Notes: Acc[ts] to be settled to 25[th] M[r]ch &c[a] to[th] Provisions of Cha[s] Stewards y[e] Slaves offer[d] to Sale.	It was ordered that all proper advertisements which were usually published at this time for the settling of accounts to 25 March instant be forthwith published, and that there be no serving out from the Honourable Company's stores from 25 March until fourteen days afterwards. Mr Gabriel Powel, one of the executors of Mr Charles Steward, deceased, proposed to sell to the Honourable Company two thirds of the provisions now growing on the lands of Steward, together with the young slaves named Pompey and Roger. He also offered 10 beeves and 20 hogs. On his own account, Powel offered to part with all the goats he had in Lemon Valley range. It was ordered that consideration of the proposal be referred to the governor, Captain Mashborne and Mr Bazett. It was ordered that an advertisement be published stating that when the inhabitants would sell beef at 25s 0d per hundred, they should buy arrack out of the Honourable Company's stores at 6s 0d per gallon. On 19 February 1715 there came in a French ship called the <i>St Lewis</i>, Captain Le Barn, a prize of war, of burden about 500 tons, with 250 men, bound from India but last from the Cape for France, a private stock ship trading by the King of France's licence. The governor sent off to her to tell them they must send their boat ashore as soon as called to, but they took no notice and came directly to an anchor in the road, and did not salute. The governor then sent the Interpretations

		referr'd to furth[r] Consideratio[n]. When Beef Sold at 25 p[r] hund[ed] mark at 6 [s] p[r] Gal[lon] French Ships Arrivall Gov[ds] Message to y[e] Cap[t]	The settling of accounts to 25 March, with the suspension of supply from the Company's stores for fourteen days afterwards, observed the English administrative year that ended on 24 March under the old style calendar. The closure gave the council's officers a clear interval in which to bring all transactions to a fixed point, balance the books and prepare the year's accounts for transmission to the Lords Proprietors. The accompanying advertisement ensured that the inhabitants knew the deadline for any outstanding business at the stores before the cut-off date. The proposal from Gabriel Powel as executor of Charles Steward provided a worked example of the practice by which the estates of deceased planters were partly liquidated through sales to the Company. Two thirds of the standing provisions on Steward's lands, together with two young slaves named Pompey and Roger and a stock of 10 beeves and 20 hogs, were offered together as a single package, with Powel separately offering his own goats from Lemon Valley range. The arrangement allowed the executor to convert a deceased man's productive estate into ready value through a single transaction with the Company, while preserving the remaining third of the crop for the benefit of the heirs or other creditors. The reference of the proposal to a committee of the governor, Mashborne and Bazett followed the same pattern as Long's livestock petition on 15 February 1715 and supplied the council's standard mechanism for evaluating offers of this kind. The trade of beef for arrack, set out in the published rate of 25s 0d per hundred for beef against 6s 0d per gallon for arrack, established a fixed conversion between the principal article of provision the planters could sell to the Company and the principal article of refreshment they wished to buy from the Company's stores. The pricing in hundreds of pounds weight reflected the standard unit of beef accounting on the island, where a hundredweight of beef was the conventional measure for sale to shipping. The arrangement gave the planters a clear commercial signal as to the terms on which they could obtain arrack without the council needing to draw bills on London, and so put into practice the principle ordered at the start of the present consultation. The arrival of the <i>St Lewis</i> on 19 February 1715, identified as a prize of war trading on the King of France's licence and on a private stock, presented the council with a second French vessel within a month of the <i>Jason's</i> departure on 9 February 1715. The ship's status as a prize indicated that her hull had been captured from a hostile power in an earlier conflict and put into French service, while her present voyage under licence placed her in the same hybrid category of royal vessel hired to private merchants that had applied to the <i>Jason</i>. Captain Le Barn's failure to send a boat ashore when called, to salute on coming to anchor or to take notice of the governor's signal, departed from the diplomatic forms that had governed the <i>Jason's</i> reception and gave the governor cause to reach for the more peremptory measures that had been held in reserve in the earlier encounter. Speculations The decision to publish a fixed exchange rate of beef against arrack, rather than to allow private bargaining at the stores, points to a deliberate use of the Company's monopoly position to set the terms of the island's internal market. By offering 6s 0d arrack to the planter who would deliver beef at 25s 0d the hundred, the council fixed both prices in a single advertised relation and removed any room for individual negotiation. The arrangement gave the inhabitants a strong incentive to bring beef to the stores once the cattle herds recovered from the famine, and aligned the

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			planters' commercial interest with the Company's need to provision its own shipping. The contrast between Le Barn's behaviour on arrival and the conduct of the <i>Jason</i> on 29 January 1715 suggests that the <i>St Lewis</i> either was not aware of the protocol observed at the island, or considered herself entitled to enter the road without going through the customary forms because of her status as a prize and the new peace between the crowns. The governor's recourse to a further signal off to the ship indicates an effort to bring her into compliance with the established procedure before any salute was exchanged, and a determination to require the same forms from this second French visitor as from the first. The handling of the encounter would set the precedent for the council's reception of further French ships under the new state of peace.
377	368	Boat on shoar with a Lieu[t]. & he Said theirs was the Kings Ship & traded by his Lycense w[ch] was given as an Hon[ble] reward to several of the Cap[ts] who had behaved themselves well in the Wars and therefore y[e] Cap[t] expected to be treated in all respects as well as any man of War had been, and Sayed they only wanted Water haveing been at the Cape & heard of the Scarcity of provisions here had Stored themselves with all necessary The Gov[d] told him they ought to have Sent in their boat according to the Order of of Banks. however because t'was time of Peace he had Suffered them to come in, but as for treating a Merch[t] ship in all respects in the same manner as a Man of War he could not do it, but if the Cap[t] would fire three Guns he should be answered with three guns and if He fired never so many should have all but two return'd as is Customary, he sayd he would go on board & acquaint his Cap[t] and desired Liberty to Send their Cask on shoar to be filled with water and after two hours, return'd with this message, that the Kings ships could not in Hon[r]. fire so small a Number as three Guns for a Salute, neither would he Salute the Fort unless he had the Gov[ds] word that he should have Gun for Gun but would fill his Water Cask according to the Treaty of Peace and fire no Guns at all. upon which the Gov[r] Sent a Couple of Nimble men up the Side of the mountain & turned off the Water, when they found the water did not run they Spent all the Margin Notes: Lieut[t] came on Shoar. his & Answer. Gov[ds] reply. theirs. further discourse	The governor sent the boat ashore with a lieutenant. He said that the <i>St Lewis</i> was the King's ship, and traded under the King's licence, which had been given as an honourable reward to several of the captains who had behaved themselves well in the wars. The captain therefore expected to be treated in all respects as well as any man of war had been. He said they only wanted water, having been at the Cape and heard of the scarcity of provisions here, and had stored themselves there with all necessities. The governor replied that they ought to have sent in their boat according to the order of Banks's Fort. Because it was time of peace, he had however suffered them to come in, but as for treating a merchant ship in all respects in the same manner as a man of war, he could not do it. If the captain would fire three guns, he should be answered with three guns, and if he fired nine so many should have all but two returned as was customary. The lieutenant said he would go on board and acquaint his captain, and desired liberty to send their cask ashore to be filled with water. After two hours he returned with this message. The King's ships could not in honour fire so small a number as three guns for a salute, neither would he salute the fort unless he had the governor's word that he should have gun for gun. He would, however, fill his water casks according to the treaty of peace, and fire no guns at all. Upon this the governor sent a couple of nimble men up the side of the mountain and turned off the water. When the French found the water did not run, they spent all Interpretations The lieutenant's account of the King's licence as an honourable reward to captains who had served well in the wars set out a particular feature of the French royal commercial system in the closing years of the long European war. The grant of trading rights to a private syndicate, with a royal vessel and the use of the King's flag, was used in France as a means both of rewarding meritorious service and of mobilising private capital for voyages that the crown could not finance directly. The arrangement gave the recipient captain a share in the profits of the voyage in lieu of pay or pension, and made the licence a valuable distinction in its own right. The framing of the <i>St Lewis</i>'s status in these terms invited the governor to accord her the full courtesies of a royal vessel. The governor's distinction between a man of war and a merchant ship, made in answer to the lieutenant's claim, drew the same line he had taken with the <i>Jason</i> on 29 January 1715. The salute of gun for gun was reserved for an undoubted royal vessel that had announced herself by sending in her boat at the order of the fort. A merchant ship, however armed and however licensed, received a graduated salute that acknowledged her standing without conceding her the full honours of war.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			The principle was the same one Pyke had applied in the earlier encounter, and the consistency of his application across the two ships gave the protocol the standing of a settled rule of the port. The proposed schedule of three guns answered by three, or nine answered by all but two, set out the working scale for partial salutes at the island. The numbers below the man of war's full reciprocity recognised the visiting ship's good intentions and the new state of peace, while withholding the equality of gun for gun that the lieutenant claimed. The lieutenant's refusal to fire so small a number as three, on the ground of the King's honour, and his alternative offer to fire no guns at all in exchange for water under the treaty of peace, marked the limits within which the French were prepared to negotiate the form of their reception. The diversion of the water supply by the governor's nimble men, dispatched up the side of the mountain to turn off the flow, applied to the <i>St Lewis</i> a direct material pressure that no diplomatic exchange could meet. The fresh water of James Town descended from upland sources by gravity through channels and watercourses, and any vessel relying on the harbour for refilling her casks depended entirely on access to that flow. By cutting it off at source, Pyke deprived the ship of the one supply she had come for, and converted her refusal of the salute into an immediate practical problem. The episode illustrated the leverage available to the council over visiting ships by virtue of the island's monopoly of the upland springs that fed the watering place at the road. Speculations The decision to turn off the water rather than to engage in any further exchange of messages indicates that Pyke had judged the lieutenant's refusal to salute as a deliberate test of his resolve, and had decided to answer it with an act rather than with words. The diplomatic protocol had been negotiated at length with the <i>Jason</i>, and the <i>St Lewis</i> had now reopened the question in terms that the governor was not prepared to accept. By turning off the water immediately on receipt of the lieutenant's reply, Pyke shifted the exchange from a question of honour, in which the captain's pride was at stake, to a question of supply, in which his ability to continue the voyage was at stake. The action thus reframed the encounter on terms favourable to the council. The choice of a couple of nimble men, dispatched quietly to the upland source rather than openly through the watering place, points to a calculated discretion in the application of pressure. By cutting the supply at its origin rather than confronting the French boats at the shore, the governor avoided any visible act of hostility that might have provoked a response on the part of the ship's officers, while still producing the effect he wanted. The arrangement preserved the surface of cordiality between fort and ship and left the French to work out for themselves the cause of their predicament, which gave them time to reconsider their position without losing face publicly.
378	369	the rest of that night in carrying off their empty Cask but the next morning sent word he would Salute according to the English method & he fired Seven Guns & was Answered with five then he fired One for thanks upon w[ch] y[e] Gov[d] invited him and his Lieut[t] on shore & they dined at the Fort & there the Cap[t] said that he was not the Kings Cap[t] but the Kings ship and that it was in all their ports it is Ordered that when any of the Kings ships come in, they shall Lose no Hon[t] by their going on a Tradeing Voyage but be treated still as Men of War which was the reason of his message & they went off well satisfied On Saturday y[e] 19. in the Evening the Mercury Cap[t]:	The French spent the rest of that night carrying off their empty casks. The next morning, the captain sent word that he would salute according to the English method. He fired seven guns, and was answered with five. He then fired one for thanks, on which the governor invited him and his lieutenant ashore. They dined at the fort, and there the captain said that he was not the King's captain, but that it was the King's ship. In all their ports it was ordered that when any of the King's ships came in, they should lose no honour by their going on a trading voyage, but be treated still as men of war. This was the reason of his earlier message. They went off well satisfied.

M[r] Carnes Letter to y[e] Governor.	On Saturday 19 March 1715, in the evening, the <i>Mercury</i>, Captain George Lytton commander, sailed from the island. On Tuesday 22 March 1715, the <i>St Lewis</i> sailed. The following letter was sent from Mr George Carne to the governor, dated St David's Day 1715. Carne wrote that he had been lately much indisposed, was very little better at present, and that his slaves were not able to carry him down. He had therefore sent his nephew Beal with the letter, to request that, after so much trouble and continual charge as he had sustained these four years last past, and after having gained the ill will of some and censure of others, the governor would take them particularly into his care, which might be the easier performed, since Carne had never received anything of theirs into his possession, and would be sure, further than charity and affinity might persuade, to gain £100 0s 0d Interpretations The captain's resolution of the salute dispute, by accepting the English method at seven guns answered with five and adding a single gun for thanks, gave Pyke the form of acknowledgement he had insisted on from the outset. The exchange settled the question of precedence in favour of the governor's reading of the protocol, and the captain's subsequent explanation at the fort, that royal ships on trading voyages were to be treated as men of war by order of the King's ports, framed his earlier resistance as a point of policy rather than personal pretension. By dining the captain and his lieutenant at the fort after the salute had been adjusted, the governor closed the diplomatic question with the customary hospitality and confirmed the relations between the two flags on terms acceptable to both. The water diversion described in the previous entry, by which the supply to the watering place had been cut off at the upland source, was evidently restored once the captain had agreed to the form of salute. The episode established a pattern in which the governor's control of the springs gave him a direct means of bringing recalcitrant visitors to terms, while leaving the diplomatic forms intact once the practical question had been settled. The episode passed without further reference in the record, since the resumption of supply was implicit in the entertainment at the fort. The <i>Mercury</i> under Captain George Lytton was an English vessel that had been in the road during the <i>St Lewis</i>'s stay and sailed two days before her. The naming of the ship and her commander in the consultation followed the standard practice of recording the movements of English shipping at the island as a matter of public account, since their arrivals and departures structured the working calendar of the council and the rhythm of the inhabitants' commercial dealings. The <i>St Lewis</i>'s departure on 22 March 1715, after a stay of slightly over a month from her arrival on 19 February 1715, closed the second French episode of the season. George Carne's letter, dated St David's Day, that is 1 March 1715, was sent in the wake of his second prosecution for clandestine supply of beef to the <i>Jason</i> in February 1715 and his binding to good behaviour on the same charge. His description of himself as indisposed, with his slaves unable to carry him down to the castle in person, depicted him as physically incapacitated and reliant on a household member to bring his communication to the governor. The carrying of a planter down to James Town by his slaves, presumably in a chair or sedan, was a standard means of transport on an island where the upland plantations stood at considerable height above the harbour and direct walking on the steep tracks was impractical for the elderly or unwell. Carne's nephew Beal acted as the messenger for his uncle in his stead. The mention of trouble and continual charge sustained over the past four years, together with the ill

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			will and censure attaching to that period, identified Carne as the holder of some responsibility or obligation, the nature of which would be set out in the body of the letter that continued onto the next page. The reference to having never received anything of theirs into his possession suggested that the burden related to persons or interests rather than property, with the figure of £100 0s 0d representing either the cost he had borne or the value he might gain by parting with the matter. The standing of George Carne in the present sequence, having been the subject of council action on 8 February 1715, 9 February 1715 and 11 March 1715, made any further communication from him to the governor a matter of close interest to the council. Speculations The decision of the captain of the <i>St Lewis</i> to accept the English method of salute on the morning after the water had been turned off, despite his earlier refusal to fire so small a number as three guns, suggests that the practical necessity of refilling the casks had overridden the question of honour once the supply was actually withheld. The night spent carrying off empty casks, with no fresh water to put into them, will have made plain to the captain that the governor's terms could not be evaded by patience. The conversion of the dispute from a question of points of salute to a question of water gave Pyke the leverage he needed, and the diplomatic settlement followed once the underlying material question had been forced. The timing of George Carne's letter, sent only ten days after his fining at the consultation of 11 March 1715 and before the <i>St Lewis</i> had even sailed, suggests that the matters raised in his correspondence were of some urgency to him. His description of himself as indisposed and incapable of attending in person may have been genuine, but it also offered him a way to communicate with the governor without having to face the council in person at a moment when he stood in poor odour with the bench. The use of his nephew Beal as messenger provided a household channel for the letter that bypassed any other intermediary, and the choice of St David's Day as the date may have been simply a convenient occasion rather than carrying any particular significance.
379	370	would not act over again the same task I dare positively aver it will be found to stand me in half y[e] Sum. I do not do this that my Nephew has any ways been disrespectfull or disoblighd me, but apprehend ing my self out of yo[r] wonted favour am very willing after so long a fatigue I have received to make my Self the less obnoxious & to be as easy as my troublesome circumstances will allow me I conclude S[r] with assuring yo[r] Worsp: if I could stand as fair in reference to yo[r] Self as I flattered my self I did formerly I should be very Joyfull, yet make bold to Subscribe my Self with respects &c[a] Yo[r] Wors[ts] Obed[t] Serv[t] Geo: Carne This Letter was brought the Gov[d]: by the Eldest of the Beals who said that he wanted his Acc[t]: to be made =up & that there was likely to be a differ =ence between H Powel & them & that his Uncle Carne would neither meddle nor make w[th] it, & desired him to be his Guardian The Gov[d]: gave him these Answers If yo[r] present Guardians are unwill =ing to Act for you or, if you are not sa =tisfied with them you have Liberty to choose others But as to my Self, but as to my self I will not be yo[r] Guardian unless in the Gen[erall]: terms as I am the[s] Gov[r]: for if the Gov[r]: be yo[r]: Guardian & should cheat you to whom then can you go go for redress but if any other man, be Elected for your Guardian & do you wrong then it will be proper for you to complain to the Governour. Margin Notes: Rich[d]: Beals reque[st]	Carne wrote that he would not act over again the same task, and dared positively to say it would be found to stand him in half the sum. He did not write this because his nephew had in any way been disrespectful to him or had disoblighd him, but because, finding himself out of the governor's wonted favour, he was very willing, after so long a fatigue as he had received, to make himself the less obnoxious and to be as easy as his troublesome circumstances would allow him. He concluded with assuring his worship that, if he could stand as fair in his reference to the governor as he had flattered himself he formerly did, he should be very joyful. He made bold to subscribe himself, with respects, his worship's obedient servant. The letter was signed George Carne. The letter was brought to the governor by the eldest of the Beals, who said that he wanted his account to be made up, and that there was likely to be a difference between Mr Powel and them. His uncle Carne would neither meddle nor make with it, and he desired the governor to be his guardian. The governor gave him these answers. If his present guardians were unwilling to act for him, or if he was not satisfied with them, he had liberty to choose others. But as for himself, the governor would not be his guardian unless in the general terms in which he was their governor. For if the governor were the guardian, and should cheat him, to whom then could he go for redress? But if any other person was elected for his

		Gov[ds] Answer.	guardian, and did him wrong, then it would be proper for him to complain to the governor. Interpretations The substance of Carne's letter was a request that the governor take into his particular care the persons or interests for whom Carne had borne charge and trouble for the past four years, and that the management of them be transferred from Carne to the governor's keeping. The figure of £100 0s 0d named in the passage carried forward from the previous page denoted the saving Carne expected from being relieved of the burden, and the assurance that he had received nothing of theirs into his possession established his standing as a custodian rather than a beneficiary of the estate concerned. The letter framed the request in terms of his ill health, his ill standing with the governor and his wish to be eased of an obligation he no longer felt able to discharge. The eldest of the Beals, identified as Richard Beal in the marginal note, was the nephew named in the letter as the messenger. His own account at the door of the council clarified the practical matter behind Carne's communication. He wanted his account to be made up, that is to have a formal reckoning of his guardianship affairs, and he anticipated a difference between Mr Gabriel Powel and himself over the figures. Powel had appeared at the consultation of 11 March 1715 as executor of Charles Steward, deceased, offering to sell two thirds of Steward's provisions, two young slaves and other stock to the Company. The likely difference between Powel and the Beals therefore arose in the context of the Steward estate, in which the Beal interest stood as creditor, beneficiary or co-executor. The institution of guardianship referred to here was the legal arrangement by which the persons and property of minors were committed to named adults on the death of their parents. The guardian held the estate in trust until the ward came of age, accounted for receipts and payments through the courts, and acted in loco parentis for the ward's upbringing and welfare. On St Helena the practice was administered through the council in its judicial capacity, with guardians appointed and removed by order of the governor and bench, and accounts examined when called for. Carne's wish to lay down the guardianship of the Beals he had carried for four years, and the eldest Beal's wish to have a fresh guardian appointed in light of the impending dispute with Powel, both fell within this framework. The governor's response set out a principle of constitutional importance. He refused to act as private guardian for the young man, on the ground that the governor's office was already the ultimate forum of redress for any complaint against a guardian, and that to combine the two roles would leave the ward without any superior recourse if the governor himself dealt unfairly with him. By preserving the appellate function of his office, Pyke kept open the route by which a ward could bring a grievance against his guardian to the bench, and refused to compromise that route by becoming the guardian himself. The reasoning placed the structural integrity of the council's jurisdiction above any particular kindness to an individual ward. Speculations The pairing of Carne's request to lay down the Beal guardianship and Richard Beal's anticipated difference with Powel over the accounts points to a coordinated approach to the council by the parties to a complex estate matter. Charles Steward had died leaving an estate of which Powel was executor, and the Beal household stood in some relation of guardianship or interest to that estate through Carne. The proposed sale of two thirds of Steward's provisions and slaves to the Company on 11 March 1715, the appearance of Richard Beal at the council four days later seeking a new guardian, and Carne's own retreat from the affair

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			through ill health and ill favour, all suggest that the parties were positioning themselves for the contested settlement of the Steward estate. The governor's refusal to become guardian preserved his ability to adjudicate that settlement impartially. The reasoning Pyke gave for declining the guardianship, that no superior remained to whom the ward could appeal if the governor himself wronged him, points to a principled separation between the governor's executive role and his judicial role over inhabitants and their estates. The case shows the council operating not merely as an administrative bench but as a forum in which the constitutional logic of the office of governor was articulated for the benefit of an inhabitant who came seeking personal assistance. By placing the principle on the record in the form of a direct address to Richard Beal, the governor instructed both the young man and his future advisers on the limits within which the council's protection was available to them, and reserved to his office the role of last resort rather than of first instance.
380	371	He desired then that the Gov[r] would appoint a day to have his Acc[ts] made up in the Stores, He bid him go among his relations & when any one of them would come down with him his Accounts should that day be made up in the Stores & promised that if he conceived he suffered any wrong either by charging him Debtor for things he never had or by miscasting up the Sums both of which things has been of Late very much complained off He would go with him & his Bro[r]: to the Stores & see they had right done them & the Govern[r] farther told him that altho' he would not be a particular Guardian yet as he was the Gov[r]: he would in General act for all Orphans so as to see they had Justice done them But He gave him no written Answer to the Letter. On Wednesday the 2[d] instant March, arrived the Hester Cap[t]: Charles Heron from China but last from the Cape. Margin Notes: Hest[r] Arriv[ed]	Richard Beal then desired the governor to appoint a day to have his account made up in the stores. The governor told him to go among his relations, and when any one of them would come down with him, his accounts should be made up in the stores that day. He promised that if he conceived he suffered any wrong, either by being charged debtor for things he had never had, or by miscasting up the sums, both of which had of late been very much complained of, the governor would go with him and his brother to the stores and see they had right done them. The governor further told him that although he would not be a particular guardian, yet as he was the governor he would in general act for all orphans, so as to see they had justice done them. The governor gave Beal no written answer to Carne's letter. On Wednesday 2 March 1715, the <i>Hester</i>, Captain Charles Kesar from China but last from the Cape, arrived. Interpretations The governor's offer to attend Richard Beal and his brother at the stores in person, to see that their accounts were correctly cast and that they were not charged with goods they had never received, addressed a complaint that had become general on the island. The framing of the offer, with explicit reference to miscastings and false debits having of late been very much complained of, indicates that the Company's storekeepers had developed a reputation for irregular bookkeeping that affected the inhabitants in their settlement of accounts. The governor's personal attendance at the stores, alongside the wards in question, would carry the authority of his office into the place where the irregularities were alleged to occur, and would prevent any storekeeper from sustaining a disputed entry in his presence. The distinction the governor drew between acting as a particular guardian for a named orphan and acting in general for all orphans rested on the same constitutional reasoning he had given Richard Beal earlier in the conversation. As governor he had a continuing duty to see that justice was done to all orphans of the island, exercised through the bench in its judicial capacity, and that general protection would extend to the Beal household through the established procedures of the council. By placing the principle on the record in this second form, after declining to take up the particular guardianship, Pyke completed the formulation he had begun in the earlier exchange and reserved his office to its general supervisory function over wards. The decision to give Beal no written answer to Carne's letter avoided any documentary acknowledgement that might be used by Carne or his

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			nephew to bind the governor to particular undertakings beyond those orally given. The arrangement that Richard Beal should be accompanied by one of his relations when his account was made up provided a witness from his own family circle to whatever was settled at the stores. The same condition applied to the proposed visit by the governor in person, where the brother would attend together with Richard. The procedural insistence on a family witness reflected the council's practice in the resolution of accounts touching minors, by which the formal authority of the bench was supplemented by the informal scrutiny of the kin most directly interested in the result. The orphan thereby had two layers of protection, the institutional and the familial, which together would make a disputed accounting difficult to sustain after the event. The <i>Hester</i> under Captain Charles Kesar, arrived 2 March 1715 from China but last from the Cape, brought the second major Company ship of the season into the road following the departure of the <i>Aurengzebe</i> in late January 1715 after her court of judicature on 24 January 1715. A ship coming from China by way of the Cape was on the homeward leg of the long East Indies voyage and would normally take on water, refreshment and any provisions she could obtain at St Helena before completing her run to England. The arrival accordingly opened a new occasion for the application of the council's regulated supply regime as it had been worked out through the <i>Jason</i> and <i>St Lewis</i> episodes earlier in the year. Speculations The governor's offer to attend in person at the stores to see the Beal accounts made up, rather than to delegate the task to the council clerk or the senior storekeeper, points to a deliberate use of his own presence as a discipline upon the establishment under him. The complaints of miscasting and false debits that had become general on the island would not be cured by routine inquiry, since the storekeepers themselves were the source of the entries in question. By placing the governor's authority directly in the room where the accounts were cast, in a particular case where the parties were known minors and their kin were present, Pyke gave notice to his own subordinates that their entries would now be examined with the bench at their elbow when the inhabitants complained. The Beal accounting thus served as a worked instance of the storekeeping reform that he had been pressing forward since his opening address of 7 February 1715. The refusal to give Carne a written answer to his letter, while giving the nephew Richard Beal full oral assurances at the door of the council, indicates a calculated handling of the correspondence by which Carne's request to be relieved of the Beal guardianship was neither accepted nor rejected on the record. The arrangement allowed the governor to address the practical needs of the wards through Richard Beal, without creating any documentary undertaking towards Carne that might be used to draw the governor into the further difficulties of the Steward estate or into Carne's continuing legal exposure for his clandestine dealings with the <i>Jason</i>. The silence in writing preserved the governor's freedom of action on both fronts.

Interpretations The account presents three months of store issues across the closing quarter of the Company's accounting year, with the three columns separating sales to the inhabitants, deliveries to the plantation house, and the general establishment charge. The plantation house was the Company's own farm at Longwood or the

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			equivalent upland holding, supplying the establishment with its produce and receiving stores against its consumption, while the general charge covered the diet and provisions of the garrison, the castle and the council's own table. The separation gave the Lords Proprietors a clear view of how the imported provisions of each category were distributed between the three classes of recipient, and identified which items principally fed which establishment. The pricing in the account confirmed the published rates that had governed the council's recent commercial decisions. Arrack at 7s 6d the gallon, set by the storekeepers' books, gave the underlying cost figure against which the order of 11 March 1715 had fixed the inhabitants' purchase price at 6s 0d the gallon in exchange for beef delivered at 25s 0d the hundred. The rate of 7s 6d for rape oil, also fixed in the same column, suggested that the store applied a standard price for liquids in gallon measure across different commodities, with adjustments for the more expensive linseed and sweet oils. The pricing of tobacco at 2s 0d the pound and of pipes at 6d the dozen identified these as the principal articles of smoking on the island, supplied through the Company's stores at fixed rates. The composition of the consumption brought out the staple diet of the establishment and the inhabitants alike. Flour and bread together accounted for 2,457 pounds over three months, sufficient to supply daily bread for a substantial garrison and household, while sugar at nearly 1,300 pounds and rice at 143 pounds played a smaller part. Arrack at 279 gallons, supplied principally to the inhabitants and the plantation, represented the principal spirit of the establishment, with the general charge taking £30 3s 9d worth as the garrison's share. The pattern indicates that the bulk of the imported diet supplied at the stores rested on grain products and spirits, while local livestock and gardens supplied the meat, vegetables and dairy elements. The dominance of the inhabitants' column over the plantation and general columns in most categories of goods showed that the chief purpose of the stores was to supply the settled population of planter households against payment in beef, goats and other local produce, rather than to victual the garrison directly. The pattern fitted the closed commercial circuit that the council had been working towards through the orders of 11 March 1715, by which the inhabitants would obtain arrack and other imported articles in proportion to the local provisions they brought in. The figures here, drawn from the months immediately preceding that order, gave the council the baseline against which the effect of the new policy could be measured. Speculations The decision to present the three months' issues in a single consolidated account, with running totals and a carry-forward to the next page, points to the bookkeeping discipline that Pyke had been pressing on Bazett at the consultation of 11 March 1715, where he had demanded the production of the monthly accounts in fair form. The present account is evidently the kind of fair entry that the governor had insisted on, drawn up to 25 February 1715 and entered in the council book for the inspection of the bench and ultimately of the Lords Proprietors in London. The very form of the entry, with its three columns and its categorical totals, supplied the documentary apparatus by which the council could now demonstrate its compliance with the new standards of record-keeping. The carry-forward of the totals to the next page, with £209 10s 8½d as the running grand total at this point in the account, indicates that the present entry was only one section of a longer schedule continuing onto further pages. The full account would have aggregated all categories of goods issued from the stores over the quarter, by inhabitant, plantation and general

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			charge, and would have closed at a grand total for the three months at the conclusion. The format suggests that the council was now keeping a comprehensive store account in the council book itself, rather than confining it to the storekeepers' own books, which would have given the bench a continuing oversight of the establishment's commercial dealings as part of the formal record of its proceedings.

To the plantation, £10 6s 0¼d. To the general charge, £45 13s 9d. Total £241 2s 6¼d. Interpretations The second leaf of the account continued the same three-column layout for inhabitants, plantation and general charge, and added running totals to the carried-forward sum of £209 10s 8½d. The further entries on this page raised the inhabitants' column from £156 9s 10½d to £185 2s 6¼d, the plantation column from £8 18s 0½d to £10 6s 0¼d, and the general charge from £44 2s 8d to £45 13s 9d, taking the cumulative total to £241 2s 6¼d. The shape of the increase, almost entirely on the inhabitants' side, confirmed that the goods listed on this page, principally haberdashery and small textile articles, were sold to the planter households rather than supplied to the establishment. The three grades of soap distinguished in the account, namely Castle soap at 18d the pound, Bengal soap at 8d the pound and English soap at 17d the pound, set out the differential pricing of imported soaps from different sources. Castle soap was a hard white soap of European manufacture, regarded as the standard quality for personal and household washing. Bengal soap was a softer Indian variety, supplied through the Company's Bengal factory at a much lower price and used principally for laundry and general cleaning. English soap, very nearly as dear as Castle, denoted soap brought from England as a distinct article of trade. The presence of all three grades in the stores allowed the inhabitants and the establishment to choose between them according to use and means. The haberdashery and textile articles on this page identify the means by which the planter households obtained the small articles needed for the making and repair of clothing on the island. Threads in brown and coloured grades, mohair, ribbons, tapes, thimbles, silk and shoe thread were not produced locally and had to be imported by the Company for sale to the inhabitants. The volume of the supply, with several pounds of thread and dozens of buttons sold over three months, indicates active garment-making and mending in the planter households, where ready-made clothing was scarce and the women of the household worked imported materials into the family's wardrobe. Tea at 11 pounds was a luxury article in modest quantity, supplied at 9s the pound to the inhabitants who could afford it.

			Hats were supplied in three grades, coarse at 4s 4d, fine at 14s 9d, and a higher grade at 17s 6d, with 16 of the coarse going to the general charge and the finer hats appearing on smaller numbers. The pattern confirmed the supply of coarse hats as part of the garrison's regular issue, while the finer grades were available for purchase by inhabitants and officers wishing to dress according to their station. The distinction between grades by price reflected the social hierarchy of the island, with the coarse hat as the working garrison headgear and the finer hats marking gentleman status. The supply of these articles through the Company's stores meant that the council retained control over even the visible markers of rank on the place. Speculations The detail in which the haberdashery is recorded, with separate entries for several grades of thread distinguished by colour and weight and for individual quantities of ribbon and tape, suggests that the storekeepers were under a particular instruction to itemise all small articles to the council's standard of fair entry. The order from Pyke at the consultation of 11 March 1715, requiring Bazett to bring his accounts up to date in fair form, will have applied not only to the principal commodities but to every minor article passing through the stores. The present account, drawn up for the quarter ending 25 February 1715 but extending across all categories with consistent itemisation, gave evidence of the bookkeeping reform Pyke had announced and provided the documentary apparatus by which the Lords Proprietors could now assess the cumulative consumption of the establishment in detail. The presence in the stores of luxury articles such as tea at 9s 0d the pound, fine hats at 17s 6d, ribbons of differing widths and silk at 2s 6d the ounce, and the recording of them in the same account as flour and arrack, indicates that the council viewed the Company's stores as a single channel through which all imported goods reached the island's inhabitants. The principle ordered at the consultation of 11 March 1715, by which inhabitants would buy arrack against deliveries of beef rather than against bills drawn on London, applied in form to all categories of imported goods in the stores. The presence of luxury items in the same account books gave the inhabitants a fixed schedule of prices for the small refinements of life on the island, all settled through the same closed commercial circuit that the new policy was designed to establish.

			4 single ditto at 7d, £0 2s 4d. To the inhabitants, £0 5s 4³/₄d. Total £0 5s 4³/₄d. Carried over. To the inhabitants, £192 17s 3¹/₄d. To the plantation, £10 11s 10¹/₂d. To the general charge, £46 6s 5¹/₄d. Total £249 15s 7d. Interpretations The third leaf of the account extended the consolidated three-column form with a longer list of small wares supplied through the stores over the same quarter ending 25 February 1715. The cumulative totals advanced from £241 2s 6¹/₄d to £249 15s 7d, with the bulk of the increase, £7 14s 9d, falling on the inhabitants' side. The categories on this leaf are essentially household and personal articles, and confirm the role of the stores as the principal source of small imported goods for the planter community as well as the establishment. The notable concentration of value in this section, £18 2s 9d for six dozen silver coat buttons, identifies a single substantial transaction in luxury goods. Silver buttons were a marker of gentleman dress on the island, used on coats and waistcoats by men of standing in the planter and council class, and the supply of six dozen at the stores at 7s 6d the dozen indicates either a single significant purchaser or a small group equipping their households at the close of the accounting year. The transaction stands out from the rest of the haberdashery in scale and price, and would have been entered to a named planter's account in the storekeeper's books from which this summary was drawn. The presence of a Bible at £1 4s 6d and a primer at 6d among the stationery ware represented the only books in the quarter's account, and identified the Company's stores as the supplier of religious and educational texts as well as commercial articles. A large Bible at this price was a substantial book suitable for family or household use, and its sale to an inhabitant at the end of the accounting year would have furnished a planter household with the principal text of domestic religion. The primer, at a fraction of the cost, served as the standard introduction to letters for a child, and its purchase alongside the Bible suggests provision for the religious education of children in the receiving household. The fishing tackle appearing in three separate entries, with hooks of different sizes and lines, gave the planters and the general establishment the means to draw on the sea fishery that ran around the island. The licensing of a fisherman for the use of the <i>Jason</i> in January 1715 had pointed to an established trade in the supply of fish to visiting ships, and the present account showed that the same fishery was supplied from the Company's stores with imported hooks and lines for the inhabitants' own use. Fish was a significant article of the local diet, and the supply of tackle through the stores connected the household economy of the planters to the wider commercial activity of the harbour. Speculations The very small unit values recorded against many of the entries in this leaf, with individual sums of a few pence appearing alongside the running totals in pounds, indicate that the storekeepers were now obliged to bring every transaction at the stores onto the formal account, regardless of how trifling the figure. The reform Pyke had announced at the consultation of 7 February 1715, calling for due accounts of all transactions to be kept in books and duplicates sent to the Honourable Company for the preventing of future disputes, has evidently been carried into practice by the time of the present quarter's books. The level of itemisation, down to single corks at 3d, suggests that the council intended the formal record to be exhaustive rather than merely indicative, so that

			any inhabitant disputing a charge on his account could be answered by reference to a specific line in the consolidated book. The substantial purchase of six dozen silver coat buttons at £18 2s 9d in the period running up to the close of the Company's accounting year on 25 March 1715 may reflect a deliberate placing of a large order in advance of the announced fourteen-day closure of the stores from that date. The advertisement ordered at the consultation of 11 March 1715, suspending issues from the stores between 25 March 1715 and the end of the fourteen-day interval, would have given inhabitants notice that any substantial purchase needed to be made before the deadline. The clustering of the silver button transaction in this final quarter, against the comparatively modest holdings of similar items in other categories, points to such a strategic purchase before the closing of the year's accounts.

			To the general charge, £5 5s 10³/₄d. Total £6 12s 3d. Tin ware. 1 tin porringer for the inhabitants, £0 0s 7d. 1 dredging box on general charges, £0 0s 6d. Total £0 1s 1d. Carried over. To the inhabitants, £194 12s 5d. To the plantation, £11 3s 6d. To the general charge, £63 5s 8¹/₂d. Total £269 1s 7¹/₂d. Interpretations The fourth leaf of the account brought together the ironmongery, nails and tin ware issued to the inhabitants, plantation and general charge over the quarter ending 25 February 1715. The cumulative grand total advanced sharply from £249 15s 7d to £269 1s 7¹/₂d, an increase of £19 6s 0¹/₂d, with the general charge column alone rising from £46 6s 5¹/₄d to £63 5s 8¹/₂d. The disproportionate share of this leaf falling on the general charge identified construction and repair work at the castle and the fortifications as the principal consumer of nails, iron and tools during the quarter, despite the formal suspension of fortification work announced at the consultation of 7 February 1715. The 17 bars of iron, weighing 6³/₄ hundredweight at 23s the hundredweight, totalling £7 16s 3d, identified the bulk supply of raw iron stock to the island's planters for their own use in tool repair, building hardware and farm equipment. Iron bars were imported from England in standard lengths and weights, and were worked up by the island's smiths into the finished articles required by the inhabitants. The supply of 6³/₄ hundredweight in a single quarter represented a substantial transfer of metal to the planter economy, sufficient for a wide range of household and farm needs over the months that followed. The single bar of English steel at 24 pounds 6 ounces, charged at £0 12s 0d, supplied the finer grade of metal needed for cutting edges and specialist tools. Steel cost very nearly twice the rate of iron by weight, and was used by smiths for the working faces of axes, hatchets, saws and plough irons, where hardness and the ability to take an edge were required. The presence of only one bar in the quarter's account, against 17 bars of plain iron, confirmed steel as a specialist material drawn on more sparingly than iron and reserved for specific applications. The detailed breakdown of nails by size, length and quantity, occupying the larger part of the leaf, identified the central role of nails in the island's construction economy. Nails were imported in barrels or kegs from England and broken down at the stores into the smaller quantities needed by inhabitants and works. The presence of separate entries for sizes ranging from small tacks to substantial framing nails of 11¹/₂ inches and 6¹/₄ inches in length, with rivets for coopers and tacks supplied to specific projects, reflected the range of building, repair and fitting-out work that drew on the stores' stocks. The entry for nails for the Rock identified a particular fortification or work in progress at the named site, where 9 pounds and 36 pounds of nails were drawn for use. Speculations The substantial supply of building materials to the general charge column, with nails, iron and tools totalling some £14 0s 6d of the £63 5s 8¹/₂d cumulative general charge by the end of the leaf, suggests that the suspension of fortification work announced by Pyke at the consultation of 7 February 1715 had not yet taken effect by the close of the accounting quarter on 25 February 1715. The announced policy of redirecting labour from Company building work to the planters' improvement of their lands evidently took some time to translate into a reduction in materials drawn from the

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			stores, and the quarter recorded in this account still showed considerable expenditure on works under the previous regime. The entry for nails for the Rock indicates that fortification or maintenance work was continuing at the named site at the close of the quarter, despite the general announcement of retrenchment. The Rock was either Roberts's Platform at Munden's Point, or another named feature of the island's defences, and the supply of nails to it formed part of the continuing maintenance of the works begun under earlier administrations. The specific identification of the destination, set out in the account against the quantity drawn, may have been intended to fix the storekeeper's authorisation for the issue, so that the materials could not be diverted to other uses without a corresponding record.

Interpretations The fifth leaf of the account introduced Indian textile goods supplied to the island by the ship <i>Success</i>, and named several specific Indian cloth varieties drawn from the Company's eastern trade. Saunoes were a fine cotton muslin produced in the Bengal region, used for fine shirts, neckcloths and women's garments where lightness and fineness were valued. Chellaes were striped cotton cloths from Coromandel, traded in pieces of fixed length for use as wraps, hangings or for cutting into garments, and were a staple of the Company's Indian export trade. Dungarees were a coarse cotton cloth from Bombay or the Konkan coast, used for sails, sacking, working clothes and other hard wear where strength rather than fineness was needed. Long cloth was a plain white cotton of standard length, made principally on the Coromandel coast, supplied in pieces for cutting into shirts, sheets, household linen and similar uses. Prints were cotton pieces with painted or printed designs from India, used for hangings, gowns and the better grades of women's clothing. Chintz was a printed and glazed cotton from the same region, more highly finished and prized than ordinary prints, suitable for hangings, bed covers and gowns of higher quality. Blue Boppos was a blue-dyed Indian cotton, supplied in pieces and used for working garments and household uses where the colour was wanted. The combined supply of these varieties, transferred from the <i>Success</i> into the Company's stores at the island, gave the planter community access to the full range of textile articles available through the Indian trade.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			The notable concentration of value on this leaf in the chellae, 53 pieces at 5s each totalling £13 5s 0d, identified the principal item of Indian cloth supplied to the inhabitants during the quarter. The striped cotton at this price was within reach of ordinary planter households and provided a versatile cloth that could be put to many uses on the island. The combination of chellae with the smaller quantities of saunoes, long cloth, prints and chintz built up a complete supply of Indian cottons in the stores, by which the inhabitants could obtain their domestic and personal textile needs without recourse to private trade with passing ships. The pewter basins, Cheshire cheese and vinegar entries reflected the supply of European household articles alongside the Indian textiles. Pewter was the standard material for table and kitchen ware on the island, durable and recyclable, supplied as plates, basins and porringers through the Company's stores. Cheshire cheese was the principal English keeping cheese of the period, exported from England in large quantities to colonial markets and supplied at the island as a hard, salted cheese suitable for shipboard and household use. Vinegar, supplied in measured gallons, served both as a culinary article and as a preservative and cleaning agent in the household economy. The 30 pairs of island shoes at 4s the pair, identified by their description as locally made footwear, gave evidence of a settled island shoemaking trade by the date of this account. The lower price of 4s the pair, against the imported pair at 6s 2d that appears alongside them, confirmed island shoes as the cheaper and more readily available footwear for inhabitants and the garrison, supplied through the stores at the price the local makers commanded. The supply of 30 pairs in a single quarter implied a working shoemaking establishment on the island capable of producing footwear in quantity, drawing on local hide tanning and supplying the stores at a fixed rate. Speculations The receipt of Indian goods from the <i>Success</i> into the stores during this quarter indicated that the ship had called at the island earlier in the period covered by the account, and that her cargo had been broken into the stores' inventory in pieces to be sold gradually to the inhabitants over the months that followed. The structure of the entry, with goods identified as drawn from a particular ship rather than from general stock, suggests that the council kept the cargoes of individual vessels separately in its accounts at the point of intake, so that the source of each article could be traced. This bookkeeping convention gave the Company in London a clear view of which voyages had contributed to the island's stocks, and which had supplied which goods. The presence of substantial quantities of finer Indian cloths in the stores, including saunoes, prints and chintz, suggests that the planter households on the island had developed a settled demand for higher-grade textiles that could be met through the regulated supply system rather than through clandestine purchase from passing ships. The order at the consultation of 11 March 1715, by which the council had moved to close down private dealing for goods such as arrack and tea outside the value of what the visiting ships paid into the Company's stores, would have applied with similar force to the textile trade. The presence in the present account of a full range of Indian cottons at fixed prices supplied the alternative legitimate channel through which the inhabitants could obtain such goods, and gave the planters less reason to risk the prosecution that Carne had now suffered twice for clandestine dealings.

Hair sieve. 1, £0 [...]s [...]d. Carried over. To the inhabitants, £307 14s 4½d. To the plantation, £12 3s 11½d. To the general charge, £93 8s 9½d. Total £413 7s 0¼d. Interpretations The sixth leaf of the account brought together the woollen and mixed-fibre cloths supplied through the stores during the quarter, alongside ready-made soldiers' clothing and certain household textiles. The cumulative grand total advanced from £328 2s 10¼d to £413 7s 0¼d, an increase of £85 4s 2d, with the inhabitants taking £62 11s 0¾d of the additional charge and the general charge column rising by £22 10s 2¼d. The figures confirmed the breadth of the textile supply, with English woollens drawn from the same stocks as the Indian cottons recorded earlier. The variety of woollen cloths supplied through the stores reflected the established categories of the English drapery trade of the period. Drugget was a coarse woollen or half-woollen cloth used for outer garments and floor coverings, supplied in two grades at 3s and 4s the yard. Shalloon was a light, twilled woollen lining cloth from Chalons in France, made in England under the same name, used principally for lining coats. Perpetuana was a durable plain-woven worsted, supplied for coats and gowns where hard wear was wanted. Flannel was a soft woollen cloth used for under-garments and lighter coverings. Sagathy was a fine woollen cloth used for outer wear and clerical dress. Broadcloth was the principal fine woollen of England, fulled and pressed to a smooth finish, used for the best coats and gowns. Durant was a glazed worsted used for linings and women's gowns. Kersey was a coarse twilled woollen made in the West Riding, used for the working clothes of soldiers and labourers. Fustian was a mixed cotton and linen cloth in various finishes, including the cut-pile tufted variety, used for hard-wearing garments and household uses. The combined range made the stores a complete drapery for the island's clothing needs. The Surat chintz at 73 pieces, totalling £16 8s 6d, represented the largest single line on the leaf and continued the pattern of Indian textile supply begun on the previous leaf with the Indian cottons from the <i>Success</i>. Surat was the principal port of the Company's western Indian trade, on the Gulf of Cambay, and the chintzes despatched from there were the higher grade of printed cotton supplied to the colonial markets. The supply of 73 pieces in a single quarter indicates the scale of the inhabitants' demand for these textiles, and confirms the stores as the principal channel through which Indian cottons reached the planter community. The entry for soldiers' clothes, with 2 red coats at £1 0s 8d each, 5 waistcoats and 4 pairs of breeches, gave a glimpse of the issue of uniform clothing to the garrison through the stores. The red coat at £1 0s 8d was the standard military coat of the period, dyed with madder or other red pigment and made up to a uniform pattern, supplied to soldiers as part of their annual issue.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			The waistcoats and breeches completed the soldier's outfit, supplied at unit prices that allowed the Company to charge the garrison's account for the clothing on a per-item basis. The presence of these articles in the inhabitants' column rather than in the general charge suggested that the issue was being made to individual soldiers against their own accounts rather than against a general establishment charge for the garrison. Huckaback was a coarse linen cloth with a raised surface, woven specifically for table linen and napkining, named after the Dutch huckaback weave from which it was derived. The supply of 30¼ yards of huckaback for tabling at 5s 6d the yard, together with 26½ yards for napkining at 2s the yard, provided the linen for the establishment's table at the castle. Sacking was a coarse hempen or jute cloth used for sacks, bags and packaging, supplied here in pieces and yards for the general charge. The presence of these utilitarian textiles in the general charge column reflected the establishment's continuing need for table linen and packaging materials at the castle and stores. Speculations The marked weight of textile goods in the present account, with woollens, Indian cottons and ready-made clothing accounting for the bulk of the increase on this leaf and the previous one, suggests that the cargoes received from the <i>Success</i> and other Company ships in the latter part of 1714 had built up substantial textile stocks in the stores at the close of the accounting year. The closing of the year on 25 March 1715, with the fourteen-day suspension of issues announced at the consultation of 11 March 1715, would have given the storekeepers a clear interval to inventory the remaining stock and to report its standing to the Lords Proprietors. The detailed enumeration of every variety and grade in the present account supplied the documentary base for that inventory. The presence of separate entries for soldiers' red coats, waistcoats and breeches at fixed unit prices implies a system of clothing issue to the garrison in which individual soldiers were debited for their own clothing against their pay. The arrangement made each soldier accountable for the cost of his uniform, and converted what might otherwise have been a charge on the establishment into a transaction between the storekeeper and the soldier. The framework would have placed pressure on the soldiers to maintain their clothing in good order, since the cost of replacement fell directly on their pay rather than on the Company's general account.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			Total. To the inhabitants, £337 8s 8¾d. To the plantation, £12 3s 11½d. To the general charge, £138 3s 7½d. Total £487 16s 3¾d. The account was signed by Pyke, George Haswell and Ardipas Tovey. Interpretations The closing leaf of the account drew the quarterly schedule to its conclusion with the entries for beef, pork and pitch, and gave the final grand total of £487 16s 3¾d for goods sold and delivered to the inhabitants, the plantation house and the United Castle from 25 November 1714 to 25 February 1715. The inhabitants' column closed at £337 8s 8¾d, the plantation house at £12 3s 11½d, and the general charge at £138 3s 7½d, with the inhabitants accordingly accounting for slightly more than two thirds of the total, the general charge for slightly more than a quarter, and the plantation house for the small remaining share. The shape of the account confirmed the dominant role of the inhabitants as the principal recipients of the stores' issues, with the establishment's own needs forming a substantial but secondary call. The beef and pork entries on this leaf identified salt provisions supplied from the stores rather than fresh meat taken from the island's herds. Salt beef and pork were imported in barrels from Ireland and England, packed in brine, and used as the keeping protein both for shipboard rations on outward voyages and for issue at the establishment when fresh meat was scarce. The cattle famine cited by Pyke in his letter to Le Blanc of 30 January 1715 had reduced the island's herds to a level where the supply of fresh beef to the Company's shipping was uncertain, and the issue of salt beef from the stores to inhabitants and general charge filled the gap on the establishment's table. Pork, supplied here in casks of 340, 476 and 995 pounds, occupied a regular place in the establishment's diet, and the issue of two casks totalling 476 pounds to the general charge was the principal protein supplied to the garrison during the quarter. The pitch entry, with two barrels at 3s 4d the [...] supplied to the general charge for £6 2s 9d, identified a basic ship and building material drawn through the stores. Pitch was the tar derived from pine resin or coal, used for sealing the seams of boats, for caulking buildings, and for waterproofing ropes and timbers. The presence of pitch in the general charge column rather than in the inhabitants' indicated its use in Company works at the castle, the platforms or on Company-owned boats. The supply of two barrels in a single quarter pointed to active maintenance work on shipping or fortification timbers during the period covered by the account. The signatures of Pyke, Haswell and Tovey at the foot of the account gave the formal authentication of the three principal officers of the council. Pyke signed as governor, Haswell as deputy governor and Tovey as the fifth in council. The absence of signatures from Mashborne, recorded as sick at the consultation of 11 March 1715, and from Bazett, the officer whose default in producing the accounts had been the subject of the governor's complaint at the same consultation, was conspicuous. The completion of the formal account in fair form, signed by three of the five councillors, brought the quarterly statement to a close in compliance with the bookkeeping standards Pyke had been pressing upon his colleagues since his arrival. Speculations The conspicuous absence of Bazett's signature from the foot of the completed account, taken with his earlier failure to produce the monthly accounts on demand at the consultation of 11 March 1715, suggests that the relationship between the governor and his

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			fourth councillor on the matter of bookkeeping had not been resolved by the date the present account was authenticated. Bazett had carried his foul papers away from the council on 11 March 1715 with a promise to write them out fair against the next consultation day, and the present account, completed and signed by the other three principal officers, may have been the document he was required to produce. The omission of his signature, if it was deliberate, signalled that he had still not delivered his part of the work, and that the bench had proceeded without him to authenticate what was in their hands. The size of the closing grand total of £487 16s 3¼d for one quarter of the establishment's commercial dealings gave the council a clear measure of the scale of the stores operation under their direction. At an annualised rate of nearly £2,000 for the value of goods issued, with two thirds running to the inhabitants and a substantial share to the general charge, the stores account stood as a major item in the council's administration of the island's affairs. The systematic itemisation of the account, with prices, quantities and recipient categories all recorded against every line, provided the Lords Proprietors in London with the documentary basis for assessing the effectiveness of the council's commercial administration, and gave Pyke himself a baseline against which to measure the effect of the reforms he had been pressing forward since his opening address of 7 February 1715.

Forty Ditto at twenty Shillings Each 40: - : - Forty Ditto at five Shillings Each 10: - : - Sixty Ditto at two Shillings & Six Pence 7: 10: £117: 10: Which he is Accountable for as Cash. [...] Geo: Haswell [...] [...] Margin Notes: Island S[t] Helena Blank Bills Signd.	Island of St Helena. At a consultation held on Tuesday 15 March 1715 at the United Castle in James Valley. Present in council were Isaac Pyke, governor; George Haswell, deputy governor; Edward Mashborne, third; Matthew Bazett, fourth; and Ardisas Tovey, fifth. It was ordered that the blank bills should be begun to be delivered out this day, as there should be occasion, and that the governor should be made debtor for whatever bills were signed to the treasury. The governor had delivered to him, signed by all the council, the following bills. 30 bills at 40s 0d each, £60 0s 0d. 40 bills at 20s 0d each, £40 0s 0d. 40 bills at 5s 0d each, £10 0s 0d. 60 bills at 2s 6d each, £7 10s 0d. Total, £117 10s 0d. The bills were such that the governor was to be accountable for them as cash. The record was signed by Pyke, Haswell and Tovey. Interpretations The bills delivered to the governor on this day represented the issue of a local paper currency on the island, prepared in fixed denominations and authenticated by the signatures of all the councillors. The 30 bills at 40s 0d, 40 bills at 20s 0d, 40 bills at 5s 0d and 60 bills at 2s 6d gave a structured set of denominations covering the principal values at which transactions on the place required formal payment. The total of £117 10s 0d in 170 individual bills provided the governor with a working stock of paper instruments to be issued against transactions as occasion arose, with each bill bearing the signatures of all five councillors as the guarantee of its authenticity. The arrangement put into practice the policy announced by Pyke at his opening address of 7 February 1715, when he had told the inhabitants that the Honourable Company had resolved to send other money for small payments, so that it might pass current here as it did in all other countries. The present issue was evidently the local mechanism by which the new money was being put into circulation, with the council itself authenticating the bills and the governor charged with their distribution to the inhabitants. The

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			denomination structure addressed precisely the problem Pyke had identified, namely the lack of small coin for everyday transactions, by issuing bills as small as 2s 6d to bridge the gap between the higher values customarily reckoned in sterling and the petty payments of ordinary trade. The framing of the arrangement, by which the governor was to be made debtor to the treasury for the bills as cash, established the accounting basis for the issue. The governor took the bills onto his own account as if they were money, and would be required to account for them either by returning unspent bills to the treasury or by accounting for the transactions in which they had been spent. The mechanism converted the council's authentication of the bills into a charge against the governor's personal accountability, and protected the Company against any irregular issue or unaccounted disposal. The procedure made Pyke himself the responsible officer for the proper use of the new paper money in the same way that any storekeeper or paymaster was personally responsible for the cash and stock entrusted to him. The 170 bills issued on this single occasion gave the island a substantial new supply of local circulating medium. The number and range of denominations indicated that the inhabitants were expected to use the bills for many small transactions rather than a few large ones, and the inclusion of bills as low as 2s 6d allowed them to be passed in the trade in eggs, fowls, vegetables, fish and small services that would not have justified a payment in sterling coin. The arrangement gave the island a means of monetising its internal economy, and freed the inhabitants from the customary reliance on credit and book debt in dealings between themselves. Speculations The decision to authenticate the bills with the signatures of all five councillors, rather than relying on the governor's signature alone or on a less elaborate procedure, suggests that the council intended each bill to carry an unmistakable proof of its origin and to be difficult to counterfeit. With Bazett's bookkeeping defaults still recent in the council's deliberations and with the wider question of irregularity in the storekeepers' accounts now being addressed through the Beal accounts and the governor's personal attendance at the stores, the inclusion of all five signatures on each bill gave the inhabitants confidence that the council itself stood behind the instrument and that no single officer's irregularity could undermine its value. The procedure made the bills the joint obligation of the bench as a body, and built the council's collective authority directly into the small change that would now circulate on the island. The conspicuous return of Bazett's name to the bench at this consultation, after his default at the consultation of 11 March 1715 and his absence from the signatures on the quarterly stores account, suggests that the council had drawn his bookkeeping back into compliance during the four days between the two sittings. The fact that he was present and that the council were proceeding to issue bills under the joint authentication of all five members implies that the accounts had been brought up to date by the time of the present meeting, or at least that the council were satisfied to resume normal business with him on the bench. The handling of his default may thus have been brief and contained, with the issue of the bills serving as a moment of restored collective working.
389	380	Island S[t]: Helena At a Consultation Held on Tuesday the 22 day of March 1714/5 At the United Castle in James valley. 		Prest The Govern[r]: Reports that M[r] Carne has been with him and has acknowledged his fault in transgressing the Order for forbidding the Selling of Beef to Foreigners Ships, He askt the Gover[ds] Pardon and Promised to pay the Ten Pounds Asest upon him. The Govern[r]: Saith that whereas he has delivered out yesterday and to day Severall Cash Notes he thinks it very Necessary for the Credit of the Said Notes and the Satisfaction of the Inhabitants to Publish an Advertizem[t] forthwith that whoever has received any of these Notes and are Dissatisfyed therewith if they come to the Gov[ern]: he will Im =mediately pay them in Silver Money the Sums mention'd in each Note. and that if any of y[e] People who keep Tippling or Publick Houses, Shall under =value the said Notes by refuseing to take them in Payment as Currant Cash, or Should take them for less then the Sums therein Mentioned, they Shall be Lookt upon as Publick Defrauders and be Severely Punnished. Ordered. That Margin Notes: Island S[t]: Helena M[r] Carne owns his fault Cash Notes Deliv[d] Order thereupon in case refused	third, sick; Matthew Bazett, fourth; and Ardipas Tovey, fifth. The governor reported that Mr Carne had been with him and had acknowledged his fault in transgressing the order forbidding the selling of beef to foreign ships. He had asked the governor's pardon and promised to pay the £10 0s 0d assessed upon him. The governor said that, whereas he had delivered out yesterday and today several cash notes, he thought it very necessary, for the credit of the notes and the satisfaction of the inhabitants, to publish an advertisement forthwith. The advertisement was to state that whoever had received any of the notes and was dissatisfied with them, if they came to the governor, he would immediately pay them in silver money the sums mentioned in each note. It was also to state that if any of the people who kept tippling or public houses should undervalue the notes, by refusing to take them in payment as current cash, or should take them for less than the sums therein mentioned, they would be looked upon as public defrauders and severely punished. It was ordered that Interpretations Carne's appearance before the governor in person, with an acknowledgement of his fault and an undertaking to pay the £10 0s 0d assessed at the consultation of 11 March 1715, closed the proceedings against him on the beef matter. His earlier letter of 1 March 1715, sent through his nephew Beal, had pleaded ill health and ill standing with the governor as reasons for asking to be relieved of the Beal guardianship, and had not addressed the pending fine. The present submission, made between the date of the fine and its payment, restored him to compliance with the council's order and removed the immediate prospect of further action against him. The pattern of his conduct across the period, with two clandestine deliveries of beef to the <i>Jason</i>, his binding to good behaviour and now his submission and payment of the fine, illustrated the working of the council's graduated procedure for handling repeat offenders against a published order. The cash notes the governor had begun to deliver out on 21 March 1715 and 22 March 1715 were the bills authenticated by all five councillors at the consultation of 15 March 1715, issued in denominations from 2s 6d to 40s 0d to a total of £117 10s 0d. The decision to publish an advertisement so soon after the notes had begun to circulate, addressing both the inhabitants who might be dissatisfied with them and the public house keepers who might undervalue them, indicated that the credit of the new paper currency was the governor's immediate concern at the outset of its issue. The success of the scheme depended on the inhabitants accepting the notes at face value in their own dealings, and any early reluctance or discount would have undermined the whole arrangement. The governor's offer to redeem any note immediately in silver money at the face value provided the practical backing for the new paper currency. The promise of convertibility on demand, made personally by the governor, gave each note the standing of a claim against the council's silver reserve, and assured any recipient that he could obtain coin if he distrusted the paper. The arrangement followed the standard model of a paper currency backed by a guaranteed metallic conversion at par, and gave the notes the credit they needed to circulate freely at the values printed on them. The threat directed at tippling and public house keepers identified the principal commercial setting in which the small denominations of the new currency would first be tested. Public houses on the island sold arrack, beer and provisions to soldiers, mariners and inhabitants in small transactions for which the new notes had been specifically designed. If the keepers of these houses refused the notes or accepted them only at

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			a discount, they would set a market rate of exchange against the council's official par value and would undermine the credit of the currency in its principal use. The framing of any such conduct as public defrauding, punishable severely, brought the matter within the criminal jurisdiction of the council and gave the governor a direct mechanism to enforce the par value of the notes in the public houses. Speculations The decision to publish the advertisement immediately, after only two days of issue of the new notes, suggests that the governor had already detected some hesitation or undervaluing of the notes in the first transactions in which they had been used. The selection of tipping and public houses as the named subject of the warning, rather than retailers or shopkeepers in general, suggests that the first reports of trouble had come from those establishments where soldiers and sailors had attempted to spend the new notes on drink and refreshment. The governor's swift intervention, combining the offer of silver conversion to the dissatisfied with the threat of severe punishment to those who undervalued the notes, addressed the problem from both sides at once. The timing of Carne's submission and payment offer, on 22 March 1715, immediately after the council had issued the new cash notes on 15 March 1715 and begun delivering them out on 21 March 1715 and 22 March 1715, may have given him a practical means of discharging the £10 0s 0d fine through the new currency itself. The structured denominations of the bills, including bills at 40s 0d, would have allowed him to pay the fine in five 40s 0d notes or in a combination of larger and smaller denominations, drawn from his own holdings or obtained from others. The mechanism of the fine and the issue of the new currency may have intersected in his case, with the notes circulating from his hand into the council's treasury and completing the cycle of issue and return that the bookkeeping arrangement had been designed to control.
390	381	That Such an Advertisement be Published which is as followeth. Island S[t]: Helena. By the Worshipfull Govern[r]. &c[a] Council An Advertizem[t]. These are to give Notice to all Persons that whereas there are Cash Notes Issued out to Pass as money in the Stores Signed by Govern[r] & Council If any are be Dissatisfyed with them they may Apply them =selves to the Govern[r]: who Immediatly will give Silver money in Exchange for them Acording to the Sums therein Mention'd. And if any who keep Tipling or Publick Houses Shall under vallue the Said Notes by Refusing to take them in Payment or Currant Cash or shall take them for less then the Sums therein Mention'd they Shall be Lookt upon as Publick Defrauders and be Severely Punnished. Dated at the United Signed p[er] order of Gov[r] and Castle this 22[d] Day of Councill. March 1714/5 Antip[s] Tovey Sect[ry] Thus farr hath been Copy'd out & Sent home p[r] Ship Hester Cap[t]: Charles Kesar Com[and]: [...] Geo: Haswell [...] [...] Tovey Margin Notes: Island S[t]: Helena Advertizem[t]: about Cash Notes Penalty. Dated at the United Castle this 22[d] Day of March 1714/5	It was ordered that an advertisement be published, in the following terms. Island of St Helena. By the worshipful the governor and council, an advertisement. This was to give notice to all persons that, whereas there were cash notes issued out to pass as money in the stores, signed by the governor and council, if any were dissatisfied with them they might apply themselves to the governor, who would immediately give silver money in exchange for them according to the sums therein mentioned. If any who kept tipping or public houses should undervalue the notes by refusing to take them in payment as current cash, or should take them for less than the sums therein mentioned, they would be looked upon as public defrauders and severely punished. The advertisement was dated at the United Castle on 22 March 1715, and signed by order of the governor and council by Ardipas Tovey, secretary. The record showed that thus far the council book had been copied out and sent home by the ship <i>Hester</i>, Captain Charles Kesar commander. The record was signed by Pyke, George Haswell and Ardipas Tovey. Interpretations The published advertisement gave formal effect to the policy on the new cash notes set out in the consultation immediately preceding it. The text confined the silver redemption offer to the governor in person, rather than to any other officer of the establishment, so that the practical control of any run on the silver reserve remained in his own hands. The penal clause directed at public house keepers placed the new currency under the protection of the council's

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			criminal jurisdiction, with the threat of severe punishment for any deliberate undervaluing of the notes in everyday trade. The combination of voluntary redemption and compulsory acceptance at par provided the legal framework within which the notes were intended to circulate. The signature of Ardipas Tovey as secretary to the council, by order of the governor and council, identified his standing as the executive officer responsible for issuing published orders to the inhabitants. The position parallels his earlier role at the advertisement of 29 January 1715 forbidding the sale of beef to foreign ships, and at the closing minute of the general sessions of 7 February 1715. The pattern confirmed Tovey as the regular signing hand for the council's outgoing documents, alongside his place as fifth in council on the bench. The note that the council book had been copied out and sent home by the <i>Hester</i> under Captain Charles Kesar identified the present consultation, dated 22 March 1715, as the closing entry of the consignment despatched to the Lords Proprietors in London. The <i>Hester</i> had arrived from China by way of the Cape on 2 March 1715, and the recording of her name as the vessel by which the duplicate was sent confirmed her departure from the island as the next homeward stage of her voyage. The sending of a fair copy of the proceedings home by the next available Indiaman gave practical effect to the policy Pyke had set out at his opening address of 7 February 1715, that due accounts of all transactions should be kept in books and duplicates of them sent to the Honourable Company for the preventing of future disputes. The dispatch of the council book at this point in the year coincided with the close of the Company's accounting year on 25 March 1715, the date set in the order at the consultation of 11 March 1715 for the settling of accounts and the temporary suspension of issues from the stores. The completion of the duplicate, including the fair copy of the stores account totalling £487 16s 3¼d for the quarter ending 25 February 1715, allowed the Lords Proprietors in London to receive both the formal record of the proceedings of the council and the supporting commercial accounts in a single consignment. The arrangement gave the Company a complete documentary view of the early months of Pyke's administration, drawn up to the standards of bookkeeping he had announced and pressed forward against the resistance of Bazett and the irregularities of the storekeepers. Speculations The decision to send home the duplicate of the council book at exactly the close of the first complete quarter of Pyke's administration, with a freshly issued local currency and a comprehensive fair stores account both included in the record, suggests that the governor was anxious to place before the Lords Proprietors as complete and orderly a representation of his early conduct as possible. The events of the quarter included the trial of Bevar on 24 January 1715, the general sessions of 7 February 1715, the <i>Jason</i> episode through January and February 1715, the <i>St Lewis</i> visit through February and March 1715, the prosecution and submission of Carne and the issue of the new paper currency, all set out in proper form. The dispatch gave the Lords Proprietors a documented record of decisive administration in the place of the unsettled interim period that had preceded Pyke's arrival. The framing of the criminal penalty against public house keepers as severe punishment, without specifying the form, gave the council the latitude to fit the response to the particular offender once an actual case arose. The vague threat carried more force in advance of any prosecution than a specific tariff would have done, since each public house keeper would weigh the

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			possibility of cart's tail whipping, fining, branding or other punishment against the small profit available from discounting a note by a few pence. The framing was characteristic of Pyke's administrative style, which used the threat of severity in published orders to govern conduct in advance, while reserving the bench's latitude to act mildly or harshly in actual cases as the circumstances seemed to require.
391	382	Island S[t]: Helena At a Consultation held on Tuesday the 29[th]: of March 1715. at the United Castle in James Valley Isaac Pyke Esq[r]: Gov[r] Cap[t]: Geo: Haswell Dep[ty] Cap[t]: Edw[d]: Mashborne 3[d]: Sick Matth[w]: Bazett 4[th] & Antipas Tovey 5[th] in Coun[c]: Prest The Gov[d]. reports that he had given M[r] Wrangham a Note to the Store to have Credit for forty Eight Grown Goats & Eleven Kidds amounting to Twenty Six Pounds fifteen Shillings. Ordered That the Tea bought of Cap[t]. Kesaer being very good be Sold out at the Stores One Catty of that with one Pound of the other Tea in the Store that not being so good at Eighteen Shill[s] for a Catten of the fine & a Pound of the ordinary. M[r] Bazett delivered in his Acco[t]: of Sales in the Hon[r] Comp[as]: Stores from the 25[th] Dec[r] 1714 to the 25[th] Feb[ry] 1714/5 - 10 were Ordered to be Entered in the fair Consultation book. Margin Notes: Island S[t]: Helena Wrangham Cred[r] for Goats Price of Tea Store Acc[ot]s D[d] Acc[ts] of Familys &c[a]	Island of St Helena. At a consultation held on Tuesday 29 March 1715 at the United Castle in James Valley. Present in council were Isaac Pyke, governor; Captain George Haswell, deputy governor; Captain Edward Mashborne, third, sick; Matthew Bazett, fourth; and Ardipas Tovey, fifth. The governor reported that he had given Mr Wrangham a note to the store to have credit for 48 grown goats and 11 kids, amounting to £26 15s 0d. It was ordered that the tea bought from Captain Kesar, being very good, be sold out at the stores in a parcel of that mixed with one pound of the other tea in the store, which was not so good, at 18s 0d for a parcel of the fine and a pound of the ordinary. Mr Bazett delivered in his account of sales in the Honourable Company's stores from 25 December 1714 to 25 February 1715. It was ordered to be entered in the fair consultation book. Mr Tovey delivered in his list of all the accounts of families' land and cattle, as sent to the secretary's office between 8 March 1715 and 21 March 1715. It was ordered to be entered in the fair consultation book. Interpretations Wrangham's note for 48 grown goats and 11 kids at a credit of £26 15s 0d gave him a substantial unit price for breeding stock once the kids and grown animals were valued together. The arrangement followed the pattern established at the pound on 26 February 1715, when Wrangham had been one of the four planters delivering goats into the new Chapel Valley pound alongside Carne, Long and Spree. The present transaction converted his livestock deliveries into a credit at the stores against which he could draw imported goods, completing the closed commercial circuit that the order at the consultation of 11 March 1715 had been designed to establish. The mechanism of the credit note allowed the planter to take provisions, textiles or arrack from the stores up to the value of his livestock deliveries, without the need for any bills to be drawn on the Lords Proprietors in London. The order on the tea identified Captain Charles Kesar of the <i>Hester</i> as the supplier of the better grade tea recently brought into the stores. The <i>Hester</i> had arrived from China by way of the Cape on 2 March 1715 and was the vessel by which the duplicate council book had been sent home, as recorded at the consultation of 22 March 1715. Her cargo had evidently included tea drawn directly from the Chinese trade, of a higher quality than the stock previously held at the stores, and the council's decision to sell it in mixed parcels of fine and ordinary tea at 18s 0d for the parcel allowed the storekeepers to dispose of both grades together while preventing inhabitants from buying only the better tea and leaving the inferior stock on the shelves. The arrangement protected the council's investment in the older stock at the same time as it gave the inhabitants access to the new and better article. Bazett's delivery of his account of sales from 25 December 1714 to 25 February 1715, with the formal order that it be entered in the fair consultation book, brought to a conclusion the dispute over his bookkeeping that had been opened at the consultation of 11 March 1715. The period covered by the present account overlapped with the consolidated stores account of £487 16s 3¼d for the quarter ending 25

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			February 1715 already entered in the council records and signed by Pyke, Haswell and Tovey. The present submission by Bazett may therefore have been a separate departmental account for a particular sphere of the stores' operations, or may have been the same material reorganised under his own signature for the purposes of his personal accountability. Either way, the order for entry in the fair consultation book established that Bazett had finally complied with the bookkeeping discipline the governor had been pressing on him. Tovey's list of all the families' land and cattle, compiled between 8 March 1715 and 21 March 1715 and sent to the secretary's office, gave practical effect to the order in Pyke's opening address of 7 February 1715 that all plantations should be surveyed and fenced in, and that due accounts of all transactions should be kept. The compilation of a register of every family's land and cattle holdings, prepared over a fortnight by the secretary's office and now ordered into the fair consultation book, provided the council with the documentary base for any future dispute over property and stock. The arrangement made the council the central repository of land tenure and livestock holdings on the island, and gave the Lords Proprietors in London a complete picture of the settler economy at the close of the first quarter of Pyke's administration. Speculations The formal entry of Bazett's account and Tovey's register into the fair consultation book at the same consultation suggests that the governor had reserved this sitting for the completion of the bookkeeping reforms he had been pressing forward since his arrival on the island. The bringing in of two separate documentary submissions on the same day, each ordered into the fair record, gave the consultation the character of a closing audit of the first quarter of the administration. The combination of the stores account, the families' land and cattle register and the cash notes issued at the consultation of 15 March 1715 placed before the council a documented picture of the island's commercial, agrarian and monetary affairs at the close of the Company's accounting year on 25 March 1715, ready to be communicated to the Lords Proprietors in London. The pricing of the mixed tea parcels at 18s 0d for a portion of the fine grade with a pound of the ordinary suggests that the council had calculated a price by which the cost of the older stock could be effectively subsidised by the value of the new and better tea. The standard pricing of tea at the stores had been 9s 0d the pound, as recorded in the quarterly stores account for the period ending 25 February 1715, and the present arrangement appears to have set the parcel price at twice the standard, with the new tea carrying the value of the older alongside it. The mechanism allowed the storekeepers to clear the older stock without having to discount it openly, and gave the inhabitants the option of obtaining the better tea at a fixed unit price that included a measure of the inferior grade as part of the same transaction.

S[t] Helena March 23 17 14/15 To the Worsh[ll]: Isa: Pyke Esq[r]: Govern[r]: of S[t]: Helena Execut[rs] of Rob[t] Leach their Petitio[n]	and Richard Holland. The cover was addressed to the worshipful Isaac Pyke, esquire, governor of St Helena. The following petition was then presented. To the worshipful Isaac Pyke, esquire, governor, and the council. The humble petition of James Greentree, Richard Gurling and Jonathan Doveton. They set out that Robert Leach, deceased, had in his last will given to his son Richard Leach 10 acres of land with the dwelling house, after the decease of his wife, and also two cows that had died in the dry weather. He had given one third of his estate to his wife and the other two thirds among the rest of his children, so that Interpretations The covering letter from Middleton, Nash and Holland identified three Company servants then at St Helena, evidently supercargoes or junior factors who had landed from a recent ship and had received good treatment from the governor during their stay. The reference to their Honourable Masters and the description of themselves as Company servants placed them in the regular establishment of the Company's commercial operations in the East, distinct from the planters and garrison of the island. Their letter of thanks was sent under cover to the governor with a request that he forward an enclosed letter to London by the next ship, which gave the governor's office the practical function of postal relay for the Company's commercial correspondence between the East and the home court. The three petitioners James Greentree, Richard Gurling and Jonathan Doveton appeared together as the parties interested in the estate of Robert Leach, deceased. Greentree and Doveton had served on the jury panels of the <i>Aurengzebe</i> court of judicature on 24 January 1715 and at the general sessions of 7 February 1715, while Richard Gurling was the same complainant whose declaration against Riping Wills had been determined on 7 February 1715 with the award of ten acres and the slave George. The three together formed a group of planters with an interest in the Leach estate, presumably as kin of the deceased through marriage or other connection, who came forward to seek the council's intervention in the administration of his will. The will of Robert Leach as recited in the petition set out a standard pattern of testamentary disposition on the island. Ten acres of land together with the dwelling house were settled on Richard Leach the son, subject to the life interest of the widow, while one third of the remaining estate went to the widow absolutely and two thirds were divided among the other children. The arrangement gave the widow her customary widow's third in the personal estate, secured the homestead for the son after his mother's death, and provided for the other children through their share of the residue. The death of the two cows in the dry weather was incidental to the main dispositions but pointed to a recent period of drought on the island that had reduced the estate's livestock holdings between the making of the will and its execution. The presentation of a petition by three persons jointly rather than by a single complainant indicated that the matter was one in which several beneficiaries or trustees had a common concern, and that they had agreed on the form of the application to the council. The opening of the petition with a recital of the testator's dispositions, before any complaint or request was set out, followed the standard form by which the council was asked to act upon a will, with the recital establishing the legal basis on which the bench was being asked to intervene. The continuation of the petition beyond the visible text would set out the particular matter on which the petitioners sought the council's order. Speculations

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			The decision of Greentree, Gurling and Doveton to bring the petition jointly, rather than each on his own behalf, suggests that the three had a coordinated interest in the Leach estate that arose from their respective marriages or family connections. Gurling's recent successful suit against Riping Wills, in which the council had awarded him ten acres of land and the slave George on 7 February 1715, had established him as a planter who used the council's jurisdiction to enforce family claims acquired through marriage. The present petition, brought less than two months later, may reflect a similar interest acquired through his wife Margaret or through some other family connection to the Leach household, with Greentree and Doveton joining him as fellow claimants under the same will. The notice in the petition that two cows of the estate had died in the dry weather indicates that the dry season on St Helena since the close of the previous year had been hard enough to reduce specific livestock holdings on at least one estate, in addition to the wider cattle famine of 2,500 head referred to in the governor's letter to Le Blanc of 30 January 1715. The recurring references to drought and livestock losses across the consultations of this period suggest that the island had been suffering from a sustained period of poor pasture conditions, and that the recovery of the herds promised by Pyke at his opening address of 7 February 1715 was being set back by continuing dry weather even as the new policy was being put into effect.

Island S[t]: Helena An Account of Store goods Sold and delivered to the inhabitants to the Use of the United Castle and Plantation house from December y[e] 25[th] 1714 to february the 25[th] following Vizt: Verte Margin Notes: Coun[cs] Resol[t] Island S[t]: Helena	The above-named Richard Leach had nothing left to bring him up. The petitioners had an opportunity of binding him an apprentice, if they had the value of £10 0s 0d to give with him. They therefore humbly desired to know from the worshipful governor and council whether they might allow him £10 0s 0d out of the other children's parts and be safe, or whether he ought to be taken care of by the parish. The petitioners said that, as in duty bound, they should ever pray. The petition was signed James Greentree, Jonathan Doveton and Richard Gurling. The council resolved that if the boy was put to a stone cutter, carpenter, joiner or to a tailor, the governor and council would agree to it. Island of St Helena. An account of store goods sold and delivered to the inhabitants, to the use of the United Castle and plantation house, from 25 December 1714 to 25 February 1715, as follows. Interpretations The petition revealed that Robert Leach's will, despite its disposition of land and shares to his widow and other children, had left the son Richard nothing on which he could be brought up before reaching his majority. The dwelling house and ten acres were settled on him only after his mother's death, which gave him no current means of maintenance, and the dry season had carried off the two cows that might otherwise have provided a contribution to his keeping. The three petitioners, evidently kin or trustees of the family, had arranged a placement for Richard as an apprentice but lacked the £10 0s 0d premium customarily paid to the master to take him on. The petition therefore sought the council's authority to draw the £10 0s 0d from the shares of the other children under the will, so as to avoid the boy falling on the parish for his maintenance. The mechanism of apprenticeship as set out in the petition followed the standard English practice by which a boy in need of a trade was bound to a master craftsman for a term of years, with a premium paid at the outset in exchange for the master's undertaking to teach the trade, provide board, lodging and clothing, and discharge the apprentice at the end of his term with the freedom of the trade. The premium of £10 0s 0d was within the customary range for an apprenticeship to

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			an honest craft, and the petitioners' offer to draw the sum from the other children's parts under the will gave the council a precise mechanism by which to authorise the transaction without resort to the parish. The alternative of placing the boy under parish care brought into the consultation the established English parochial structure that had been carried over to the island. The parish on St Helena was responsible for the maintenance of orphans, paupers and the elderly without family support, with the cost being borne by the rates levied on the inhabitants. The petitioners' question whether the council would allow the £10 0s 0d to be taken from the shares of the other children, or whether the boy should fall on the parish, framed the matter as a choice between private settlement at the cost of the siblings and public maintenance at the cost of the whole community. The council's resolution favoured the private route, but only on condition that the boy was bound to one of four named trades. The four trades specified by the council, namely stone cutter, carpenter, joiner and tailor, identified the skilled crafts the bench considered suitable for an orphan to learn and likely to support him in independent livelihood. Stone cutter, carpenter and joiner were the principal building trades on the island, all in demand for the construction and maintenance of houses, fortifications and shipping, while a tailor would supply the clothing needs of the planter community out of the imported textiles drawn through the stores. The list excluded less skilled occupations such as labourer or servant, and reserved the apprenticeship to a trade that would give Richard Leach a settled craft to support him in adult life. The bench thereby exercised a paternal oversight of the boy's future even as it authorised the disposition of his siblings' shares for the premium. Speculations The reduction of Richard Leach's prospects from heir of his father's house and land to an orphan boy in need of a trade, brought about by the death of the two cows in the dry weather and the bare provision of the will, illustrated how precarious the planter economy could be at the household level when a head of family died with limited liquid means. The will had been adequate to a household with its full stock of livestock, but the loss of the cows between the making of the will and its execution had stripped the estate of the working capital needed to maintain the son until his inheritance fell in on his mother's death. The petitioners' resort to the council for authority to draw on the siblings' shares pointed to the rigidity of testamentary dispositions in the face of changing circumstances, and to the council's role as the supplementary authority that could adjust the strict provisions of a will to meet a need not anticipated by the testator. The council's specification of four particular trades, rather than a general authority to bind the boy to any honest craft, suggests that the bench was consciously shaping the labour structure of the next generation on the island. By directing the boy to one of the building trades or to tailoring, rather than to retail, husbandry or shipboard work, the council was acting to maintain the local supply of skilled craftsmen on whom both the inhabitants and the establishment depended for their continuing operations. The decision to authorise the apprenticeship on condition of placement in one of these four trades gave the council an instrument by which to direct orphan boys away from less productive callings and toward those of evident value to the island's working economy.

Interpretations The opening leaf of the present store account, drawn for the same quarter from 25 December 1714 to 25 February 1715 as the consolidated account already entered in the council records, returned to the same categories of arrack, sugar, tobacco, bread, flour, rice, soap and oil, with figures that differ from those of the earlier account in their level of detail and in the precise

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			weights assigned to each column. The arrack column closes at 691¼ gallons against the 279 gallons recorded in the earlier consolidated account at the same standard price of 7s 6d the gallon, indicating that this present account covers a broader scope of issues than the earlier summary. The sugar column likewise records over 3,400 pounds against the 1,294½ pounds of the earlier summary, with bread and flour also at substantially higher volumes. The bread at 1,829 pounds for the inhabitants, with further quantities for the plantation and general charge totalling 2,368 pounds in all, identified bread as the principal grain article supplied through the stores at the unit price of 3½d the pound. Flour at 2,015½ pounds, similarly distributed across the three columns, complemented the bread supply and gave the inhabitants the raw material for their own baking where the household maintained an oven. Bread baked at the establishment was the standard daily ration of the garrison and the household table at the castle, while flour drawn by the inhabitants supported domestic bread-making in the planter households across the upland districts. Sugar candy at small quantities, sold at 2s the pound to the inhabitants and the plantation, identified a refined sugar product distinct from the ordinary sugar at 8d the pound. Sugar candy was the crystalline form of refined sugar, produced by slow evaporation and used for medicinal purposes, sweetening of beverages and confectionery. The small quantities supplied through the stores reflected its character as a luxury or specialist article rather than as a staple sweetener, and its appearance in the account alongside the much larger sugar issues confirmed the segregation of the two grades by use and price. The continuing supply of all three grades of soap, namely Bengal soap at 8d, Castle soap at 18d and English soap at 17d, repeated the differentiation established in the earlier consolidated account and confirmed Bengal soap as the working soap of the planter households at the cheapest rate. The 112 pounds of Bengal soap delivered to the inhabitants at £3 16s 8d represented the staple cleaning supply, while the 106 pounds of English soap at the higher rate served those who could afford a better quality. Castle soap supplied to the establishment at the castle and to the plantation house identified the highest grade reserved for institutional use. Speculations The reappearance of the same quarterly period in two separately drawn store accounts, namely the consolidated account already entered ending with the signatures of Pyke, Haswell and Tovey and the present account now beginning, suggests that the council had organised its record-keeping to produce both a summary and a detailed return for the Lords Proprietors in London. The summary form gave the bench and the Company a quick view of the totals by category, while the detailed form provided the full breakdown of weights, prices and recipients against which any individual entry could be checked. The two accounts together would have given the Lords Proprietors a thorough documentary picture of the stores' commercial activity, with cross-checking possible between the two presentations. The substantially higher volumes recorded in the present account, against the same dates and the same unit prices, suggest that the earlier consolidated account may have covered only a particular sphere of the stores' issues, such as those passing through a single storekeeper or branch of the establishment. The present account, with its uniformly higher figures, may then represent the comprehensive return for the whole quarter, with the earlier summary being an extract or departmental account drawn from the same underlying

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			records. The reconciliation between the two would have been part of the bookkeeping discipline Pyke had been pressing on Bazett, and the entry of the present account into the fair consultation book at the consultation of 29 March 1715 brought both presentations into the formal record at the same time.

			To the inhabitants, £268 7s 2³/₄d. To the plantation, £8 17s 5¹/₄d. To the general charge, £92 2s 0¹/₄d. Total £321 3s 3³/₄d. Interpretations The shoe entries on this leaf showed a clear gradation by type and price, beginning with the English shoes at 6s the pair as the standard imported article, supplied at 43 pairs to the inhabitants for a total of £13 5s 2d. Below the English shoes came the fall shoes at 4s, a coarser grade of imported footwear, and at the bottom the children's pair, while the women's braided shoes at 10s the pair gave the highest unit price on the leaf. The pricing structure confirmed the difference between this account and the consolidated account already entered, where 30 pairs of island shoes had appeared at the lower price of 4s the pair. The present account records mainly imported English shoes at the higher prices, suggesting that the two accounts cover distinct supplies of footwear, perhaps from separate consignments brought in by different ships. The hat entries similarly gave a fuller picture of the imported headgear available through the stores, with 17 coarse hats at 4s 4d each forming the bulk of the issue and finer Carolina hats supplied at 12s 6d each. Carolina hats were felt hats of an English or American manufacture associated with the Carolina trade, used as the better grade of working headgear on the island. The pricing pattern showed the same gradation as the soldiers' coats and stockings, with the coarse working article supplied in quantity to the garrison and the finer hats available at higher prices for the gentleman or planter purchaser. The ironmonger's ware on this leaf brought a comprehensive supply of carpentry tools, hardware and locks into the stores' issue for the quarter, identifying the active maintenance and building economy of the island. The supply of heading chisels, scribbling chisels, plain strong chisels and a broad chisel pointed to detailed carpentry work in progress on the island, while the 12 plain strong chisels at 8³/₄d each suggested either a single substantial purchase by a carpenter or a steady issue to several craftsmen. The presence of chest, cupboard, closet and till locks in the same account showed the supply of fitted furniture hardware to inhabitants and the establishment alike, providing the lockable storage that household and commercial buildings on the island required. The handsaw at 6s, the broad axe at 15s and the gimlets at 9d each completed the range of basic carpentry tools available at the stores, with the broad axe representing a significant unit purchase for the substantial work of timber dressing. The presence of all these tools in the inhabitants' column rather than in the general charge suggests that they were being drawn by individual planters or craftsmen building or repairing their own premises, rather than supplied to the establishment for Company works. The active retail of building tools through the stores fitted with the policy announced by Pyke at the consultation of 7 February 1715, by which the planters were encouraged to attend to the improvement of their own holdings while Company building was retrenched. Speculations The differences between the present account and the consolidated account already entered in the records, with substantially higher volumes and different categories on every leaf, support the reading that the two accounts cover distinct presentations of the same quarter's commercial activity rather than the same material in two different forms. The consolidated account may represent a summary of certain departmental issues or a particular cargo, while the present account represents the comprehensive return for the whole stores operation. The reconciliation

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			between them would have been part of the bookkeeping work that Pyke had pressed forward on Bazett, and the entry of both into the fair consultation book at the consultation of 29 March 1715 gave the Lords Proprietors in London a complete documentary picture across two presentations. The substantial supply of carpentry tools and locks to the inhabitants in this quarter, with 43 pairs of English shoes, 17 coarse hats, locks of all grades, chisels and saws all entering the planter households, suggests an active expansion of building and household furnishing among the inhabitants in the closing months of 1714 and the opening months of 1715. The period coincided with the change of administration from the unsettled interim government to Pyke's arrival, and the increased planter spending on building materials and household hardware may have reflected a renewed confidence in the place under the new governor, with inhabitants beginning to invest in the improvement of their premises that Pyke had encouraged in his opening address.

			Pewterers Ware, listed as follows: 1 chamber pot £0 5s 3d 2 ditto at 4s 3d each, marked Susan £0 8s 6d 1 stool pan £0 5s 10d The inhabitants column showed £0 19s 7d against the pewterers ware. Braziers Ware comprised: 1 lamp £0 3s 11d 1 skillet and frame £0 11s 10d 1 lamp £0 3s 11d The inhabitants column entered £0 15s 9d, with £0 19s 8d shown further across the page. Tin Ware was then listed, with the initials JC noted alongside: 2 funnels £0 0s 10d 2 porringers at 2s 1½d each £0 4s 1d 1 ditto £0 0s 11½d 1 sauce pan £0 1s 9d 2 ditto at 1s 7½d each £0 3s 3d 1 ditto £0 1s 1d 3 kettles at 1s 9d each £0 5s 3d 1 sauce pan £0 0s [...]d 1 kettle £0 2s 9½d 1 porringer £0 0s [...]d The inhabitants column carried £0 16s 2d against the tin ware, with £0 1s 2d on a separate line, and a further entry of £0 3s 4½d, set against £0 1s 8½d. The columns closed with running figures of £235 12s [...]d for inhabitants, £10 5s 1½d for plantation, £101 [...] 4d for general charge, and £329 [...] d in total. Interpretations The Company's stores at St Helena distinguished between four classes of metal goods. Ironmongers ware covered shaped iron tools and components - heading, scribing and paring tools for shaping wood and leather, gouges, hammers, locks, picks, sugar shovels, bolt iron in long rods, heaters for box irons, grindstones and bar iron sold by weight. Nails were costed by the pound and by penny size, the figures 6, 10, 20 and 24 referring to the traditional nail sizing by hundredweight price. Coopers rivets were used to fasten cask hoops, flooring brads were the smaller cut nails used to fix boards without showing a head, and tacks served upholstery and light fixing. Pewterers ware was cast tinned alloy for chamber pots and close stool pans, the standard sanitary fittings of the period. Braziers ware was hammered brass or copper for lamps and skillets, the skillet being a small long-handled pan set into a frame for cooking over a low fire. Tin ware was lighter sheet metal worked into funnels, porringers (small handled bowls for stews or possets), sauce pans and kettles. The whole consignment represented the equipping of households and plantations on the island with the basic metalwork required for cooking, lighting, building and the daily processing of food and drink. The three-column division of the cost between inhabitants, plantation and general charge reflected the Company's standard practice of separating goods sold to private islanders, goods retained for the Company plantations, and goods absorbed into general administrative expenditure. The same physical consignment was apportioned across the three heads as each item was distributed. The initials JC and the recurring names Gozell and Susanna in the margin identified the consignees or holders of particular lots within the larger account. Susanna probably referred to the Company slave Susanna whose name had appeared in earlier accounts of stores issued; Gozell was perhaps a planter or storekeeper receiving the larger ironmongers parcel. Speculations The use of fractional pence and quarter pence throughout the nails entries (5½d, 7¼d, 4¼d) reflected the practice of pricing imported nails by their precise English wholesale rate per pound and then dividing the

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			small parcels among purchasers without rounding. The clerk preserved the fractional figures because any rounding at the level of a single quarter penny would distort the column totals against which the storekeeper was held accountable. The placing of three separate notations of Plant against the smaller bundles of nails, while the larger nail lots ran without that mark, suggested that the storekeeper drew off the lighter nails for the Company plantations first and then released the heavier sizes for sale to inhabitants. The plantation work probably required the lighter nails for fixing shingle, lath and palings, while the heavier sizes were sold to islanders constructing dwellings and outbuildings on their own account.

			Necklace of Beads, marked Inhabitants £0 0s 6d The inhabitants column carried £0 6s 0d against the gloves and small wares, with a further £0 2s 0d for the necklace. The columns closed with running figures of £247 16s 7¼d for inhabitants, £9 7¾d for plantation, £101 16s 5d for general charge, and £355 15s 9d in total. Interpretations Haberdashery ware on the island covered the small textile finishings that supported the maintenance and making of clothing in households without ready access to a draper. Ribbon was woven silk or worsted strip used for trimming bonnets, sleeves and bodices. Tapes were narrow flat woven bands used as ties on stays, aprons, breeches and bedding. Ferrets were stout cotton or silk binding tapes that finished the raw edges of garments. Silk galloon was a narrow decorative trim used on liveries, hatbands and military facings. Gartering was the woven band that secured stockings below the knee. The various weights of thread, distinguished as brown, white, whited brown, coloured, and fine, supplied the principal material for the actual sewing, with the fine thread reserved for shirts, smocks and finer linens. Silk and mohair came in skeins for buttonholes, decorative stitching and the binding of buttons. Pins held garments together during fitting and were a constant household consumable. Needles were sold in numbered grades for different cloth weights. Silk laces were the narrow cords that closed bodices, stays and breeches at the front and sides. Thimbles, gloves and the single necklace of beads completed the parcel as small personal articles. Together these items represented the full sewing and dressing kit that an island household required to keep its members clothed, since cloth itself had to be cut, sewn and trimmed at home. The notations Planta, Inhabitants, G. Charge and C.P.C. against individual lines showed the storekeeper apportioning each lot among the three accounting heads as the goods were issued, with C.P.C. perhaps standing for Company Plantation Charge or a similar internal heading distinct from the general plantation account. The name Susannah recurred from the earlier ironmongers account on the previous page and was set against silk and mohair issued to general charge. The recurrence across two consecutive pages of stores indicated that she was a recognised holder or distributor of small parcels of stores for the Company, perhaps a slave woman whose work involved sewing for the Company establishment. Speculations The fractional valuations carried in farthings and half-farthings on items as small as gloves, thimbles and beads showed that the storekeeper was held strictly to the wholesale invoice values from London, with no rounding permitted at the point of issue. The clerk balanced every quarter and half penny against the column totals because the island accounts were checked line by line against the original invoices remitted by the Court of Directors. The split of mohair between five units to inhabitants at one shilling and eightpence and two and a half units to Susannah on general charge perhaps reflected a deliberate arrangement under which a single skilled woman drew the Company's share for institutional sewing work while the remainder was released to private islanders. The structure preserved a working stock of trimming silk in Company hands for repairs to Company-issued clothing or hangings without depriving the island of access to the same goods.

Cutlery Ware was then listed: 1 pair buckles £0 0s 10d 5 ditto at 1s £0 5s 0d 3 knives and 3 forks £0 3s 6d 2 shoe knives £0 2s 0d 4 pair scissors at 8¾d £0 2s 11d A further line of £0 3s 2¼d, with the inhabitants column showing £0 17s 5¼d, and a separate entry of £0 17s 5¼d. A total of £0 18s ran across. Vinegar 4 gallons at 2d no separate sum entered 4 gallons, marked Plantation £0 2s 0d 6 gallons ditto £0 1s 4d, with £0 2s 4d further Pepper ½ pound, marked Inhabitants £0 0s 6d 5 ditto £0 1s 0d 6½ ditto £0 5s 0d, with £0 6s 6d further Corks were then listed: 11 dozen at 3d £0 2s 9d 3½ dozen corkwood at 9d £0 2s 7½d A further line of 4½ dozen, with the inhabitants column carrying £0 5s 4½d, and a separate entry of £0 2s 4½d. A total of £0 5s 6¾d. Glass and earthen ware were then listed: Glass mantua, 9 claret glasses at ½d, marked Inhab £0 4s 0d 2 salt sellars at 8d, marked Plantation £0 1s 4d 16 wine glasses at 2d £1 12s 0d 2 ale ditto at 6d £0 5s 0d The inhabitants column showed £0 4s 0d, the plantation column £0 1s 4d, with a further £0 17s 0d entered, and a total of £2 2s 0d carried across. The columns closed with running figures of £262 11s 8¼d for inhabitants, £7 4s 11½d for plantation, £105 13s 8¼d for general charge, and £375 10s 4d in total. Interpretations The button parcel carried the distinctions of coat, breast and sleeve buttons that ran through every consignment of clothing accessories sent to the island. Coat buttons were the larger fastenings down the front of a man's coat, breast buttons closed the waistcoat, and

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			sleeve buttons fastened the cuff. Silk coat buttons were the wrapped or stitched variety used on finer garments, while brass coat buttons in gross lots were the cheap stamped sort issued to plantation slaves and labourers. The supply distinguished the social levels of the island establishment by the metal and finish of the buttons rather than by the cloth. Romalls were the printed or chequered silk and cotton handkerchiefs of Indian manufacture, exported from Bengal and the Coromandel coast in large quantities through the Company's trade. They were used at St Helena as neckcloths, headcloths and small turbans, valued for the lightness of the cloth in the island's moderate climate. Their appearance in the haberdashery account showed how Indian textile production fed directly into the daily dress of the South Atlantic outpost. Tea entered the account by the ounce rather than the pound, at ninepence the ounce, which gave the island wholesale rate of around twelve shillings the pound, a price consistent with the high duty and freight loading on tea reaching St Helena from Canton through the Company's homeward fleet. The placing of the larger parcel against the general charge column reflected the use of tea as a Company allowance to the senior establishment rather than as a private purchase. Corkwood and corks were the bottle closures supplied to the island for use with the wine, brandy and beer carried by the same ships. The dozen rate suggested that they were issued for refilling bottles already in island use rather than for the original bottling of imported drink. Speculations The division of buttons between gross-lot brass coat buttons placed to plantation account and silk coat buttons placed to inhabitants showed that the storekeeper apportioned the parcel by quality rather than by quantity. The plantation needed durable cheap fastenings for the clothing of the Company slaves and indentured labourers, while inhabitants drew the silk-covered buttons for their own coats and those of their household servants. The single entry of two and a half ounces of tea against general charge, with the larger remainder available for inhabitant purchase, perhaps reflected the practice by which the Governor and Council drew a fixed monthly allowance of tea from each homeward consignment for use at official meetings and entertainments. The reservation against general charge ensured that the senior officers received their share before the balance was released to the market.

The columns closed with the running figures carried over: £273 4s 4d for inhabitants, £7 19s 6¾d for plantation, £107 11s 5¼d for general charge, and £388 15s 4d in total. Interpretations Blue baftas were plain cotton cloths of Indian manufacture, woven in Bengal and dyed blue with indigo for export through the Company. They were the standard issue cloth used at St Helena for the clothing of slaves and indentured servants, supplied by the piece rather than by the yard. Sallempoors were a coarser cotton cloth from the Coromandel coast, used for sheets, lining and the rougher grades of working clothing. The placement of the sallempoors against general charge while the blue baftas went to inhabitants showed the Company retaining its own working stock for the establishment while releasing the dyed cloth to the open market. Bone lace was the bobbin lace worked in Devon and the Low Countries, used to trim caps, cuffs and collars on women's and children's clothing. Its appearance in a parcel otherwise dominated by indigo, fishing tackle and bedding showed the breadth of household demand met from a single Company consignment. Indigo entered the account at two prices, three ounces against inhabitants and twenty-eight ounces against the plantation. The plantation share supplied the dye for the Company's domestic textile work, the small parcel for inhabitants meeting private requests. The dye was returning to the island in the same Indian ships that had carried the baftas already coloured with it. Hooks, lines, bed cords and fish hooks were grouped together as the cordage and tackle of household and shore use. Bed cords were the corded sashes strung across wooden bedsteads to support the mattress, and were replaced regularly as they stretched and frayed. Fish hooks in dozens at two and threepence indicated the active inshore fishery that supplemented

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			the island's provisions, and the single line at two shillings showed that hand lines were the working method rather than nets. Speculations The split of twine between thirty-nine dozen to inhabitants and two dozen to general charge perhaps reflected the practice by which the island's working cordage was almost entirely sold into private hands while the Company kept only a small reserve for official use. Twine was needed for the constant repair of fishing tackle, garden cordage, sacks and small lashings, all of which fell on individual households rather than on the Company stores. The bracketing of indigo and white lead in adjoining lines, with white lead placed to general charge without quantity or sum recorded, suggested that the lead was held back from this consignment for issue against a specific Company project, perhaps the painting of the fortifications or of Company buildings, rather than being released for general sale.

Course shirts at three and three and sixpence the piece were the cheap ready-made garments sent out in bulk for the labouring population. Challies were lightly woven cotton mixed with silk, soft enough for women's gowns and lining. Dungarees were the coarse blue or chequered cotton used for working trousers and frocks, valued by the piece rather than the yard. Gingham were striped or checked cotton from Bengal, used for shirts and aprons. Sahnoes were a fine plain cotton, sometimes lightly figured, used for women's dress and household linen. Purrhau was a coarser striped cloth from Surat. Long cloth was the staple plain white cotton of the Coromandel coast, woven in long pieces of roughly thirty yards and exported in vast quantities as the standard sheeting and shirting of the Atlantic world. Nealeas were a finer grade of white cotton from the same coast. Neckcloths were finished pieces of muslin or fine cotton already cut for use around the neck. Surratt chints were the printed and painted cottons of Gujarat, the most decorated and most expensive cottons in the parcel, used for gowns, hangings and bedcovers. Manchester ticks were English-woven cotton-and-linen striped ticking for mattresses and bolsters, named for the Lancashire town where they had been produced. The woollen goods drew on a different supply chain, brought out from England rather than from India. Kersey was a coarse twilled woollen used for working coats and breeches, made principally in Yorkshire. Shalloons were a lightweight twilled wool used for linings and women's gowns. Sagathies were a serge woven in the West Country, hard-wearing for outer garments. Druggetts were a coarse mixed woollen and linen cloth used for cheaper coats and floor coverings. Broad cloth was the heavy plain woollen of the Wiltshire and Gloucestershire trade, the standard fabric for a man's best coat. Flannel was the light woollen used for shirts, petticoats and infant clothing. The pairing of the Indian and English cloths in a single consignment showed how the island drew its full wardrobe from two opposite ends of the Company's trading network in the same fleet. The placing of twenty-six yards of kersey and the parcel of dungarees against the plantation column showed the storekeeper apportioning the cheaper and more durable cloths to the Company establishment, leaving the lighter and printed cottons for sale to inhabitants. Speculations The exceptional volume of Surat chints, at 123 pieces valued at over twenty-seven pounds and placed wholly to inhabitants, perhaps reflected a deliberate calculation by the storekeeper that printed cotton was the most actively traded cloth on the island and would clear quickly into private hands. The Company gained a rapid return on the most expensive Indian goods by releasing the whole parcel for sale rather than retaining any of it for institutional use. The single yard of broad cloth and the one and three-quarter yards of flannel, entered at the close of the woollen section, perhaps represented small remnants from a larger consignment broken up at the Company's London warehouses, included here to clear the books rather than to meet any specific island requirement. The minimal quantities suggest that the storekeeper was reconciling the homeward invoice against the actual cloth landed.

Bunting, 4 yards at 10d, marked Gen. Charge £0 3s 4d, with a further line of £0 3s 4d. Beef and Pork were itemised: 1 cask of beef, 94 pieces no separate sum entered 1 cask of ditto, 109 pieces no separate sum entered 1 cask ditto, 283 pieces and one quarter no separate sum entered 1 cask ditto, 100 pieces no separate sum entered A subtotal of 700 pieces and one quarter, 1,245 pounds 4 ounces no separate sum entered At 45 ditto £34 18s 0d entered against the general charge column. Suet, 1 cask, 170 pounds at 6d no separate sum entered 1 ditto, 259 pounds at 6d £10 14s 6d A subtotal of 429 pounds and £10 14s 6d. 1 cask pork, 110 pieces no separate sum entered 1 ditto, 62 pieces no separate sum entered 1 ditto, 60 pieces no separate sum entered A subtotal of 732 pieces at 28 pounds, at 8d £30 18s 0d, entered against the general charge column. Ship purchases were then itemised: 1,045 pounds beef no separate sum entered 456 pounds pork 1,476 pounds and 5 pints no separate sum entered The inhabitants column showed £30 15s 0d against the ship purchases, with £76 10s 6d running across. The columns closed with running figures of £381 13s 8³/₄d for inhabitants, £23 11s 4³/₄d for plantation, £192 16s 10³/₄d for general charge, and £598 2s 1¹/₄d in total. The grand summary was then set out. Sold to the inhabitants the sum of £381 13s 8³/₄d. To plantation £23 11s 4³/₄d. General charges £192 16s 10³/₄d. Total £598 2s 0¹/₄d, with a line of £412 8s 6³/₄d further entered, and £28 17s 0¹/₄d set against it. Interpretations Fustian was a stout cotton-and-linen mixed cloth, woven principally in Lancashire and used for waistcoats, breeches and the linings of heavier garments. Corded fustian had a ribbed surface running with the warp, which gave it the durability required for working clothes; coloured fustian had been dyed in the piece for finer wear. House linen, doubled and of broad width, was the standard cloth for tablecloths, towels and bedsheets, brought from the Low Countries or from Lancashire. Perpetuanos were a strong twilled woollen made in the West Country, used for outer coats and breeches and noted for the durability that gave the cloth its name. Bunting was the light open-weave woollen used for the cutting and stitching of flags and signal colours, supplied here to the general charge for the use of the fort and the shipping. The beef, suet and pork casks set down to general charge represented the salted provisions retained by the Company for the establishment, the garrison and the homeward shipping. The casks were entered by piece count and by weight in pounds, with the small remainder bought from the ships themselves to make up shortfalls in the Company stores. Beef ran at around eightpence and pork at sixpence the pound, prices consistent with the standing rates for salt provisions on the Indian and homeward voyage. Suet was the hard fat rendered from the carcasses, used in cooking and in the making of candles and ship's tallow.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			The closing summary set the entire consignment under three heads. Goods sold to inhabitants drew £381 13s 8¾d, plantation took £23 11s 4¾d, and general charges absorbed £192 16s 10¾d, the whole running to £598 2s 0¼d. The inhabitants thus took roughly two-thirds of the consignment by value, the general charge took just under a third, and the plantation drew only a small share. The shape of the account showed the Company's stores at St Helena functioning more as a market for the islanders than as a supply for the Company plantation. Speculations The presence of three casks of beef weighing over twelve hundred pounds and three casks of pork running to over seven hundred pieces, all placed to general charge with no allocation to inhabitants, perhaps reflected the rationing of salt provisions exclusively to the garrison, the slaves on the Company establishment and the victualling of homeward ships at the road. The Company kept the salt meat under its own hand because it formed the strategic reserve against shortages, against ship demands and against the failure of fresh provisions on the island. The recording of beef and pork bought from the ships, at 1,045 pounds of beef and 456 pounds of pork, perhaps showed the storekeeper making up the cask weights against the original London invoices by purchasing the surplus carried by captains and pursers at anchorage. The mechanism allowed the storekeeper to reconcile the books against the invoiced weights without troubling the Company to ship additional provisions on the next outward voyage.
402	393	Island S[t] Helena An Acco[t] of Familie[s], Land, [...] Cattle on said Island for the Year 1714 as Given In to the Secretary["]s Office, the 21: of March 1714/15 Verte	Island St Helena. An account of families, land and cattle on the island for the year 1714, as given in to the secretary's office on 21 March 1715. The page closed with the direction Verte, signalling that the account itself ran on the reverse. Interpretations The heading marked the opening of the annual island census, a return required from each planter household and gathered by the secretary's office for delivery to the Court of Directors in London. The return covered three heads: families, by which the secretary meant white householders together with their dependants, servants and slaves; land, meaning the leased and granted holdings on which each family lived and planted; and cattle, meaning the stock of oxen, cows, sheep, goats and pigs maintained on each holding. The three together gave the Company the basis on which it judged the productive capacity of the island, the labour available for public works and the population on which the garrison and shipping depended for fresh provisions. The dating of the return on 21 March 1715 placed it at the close of the old-style year, when the secretary drew the books to a head for the twelve months running. The account itself was titled as for the year 1714 because under the old calendar the year had not yet turned. The return thus closed the planting year before the new accounting year opened on 25 March.

Interpretations The return divided the population into white men, women, boys and girls and black men, women, boys and girls. The two categories of black were drawn from the Company's plantation slaves and from the slaves held by private planters in their households. The figures showed that the slave population on the holdings recorded on this page ran to 60 against 91 whites, with the slave men more than ten times the number of slave women, while the white population was much more evenly divided between the sexes. The disparity in the slave figures reflected the Company's practice of purchasing predominantly male slaves at Madagascar and the Guinea coast for plantation and Company labour. The list opened with members of the council and the principal officers of the establishment, before running into the serjeants, corporals, gunners and montrosses of the garrison. A montross was a junior artilleryman who assisted the gunners in serving the cannon, ranking below a corporal of the train. The order of entry, beginning with the councilman Matthew Bazett, then the ensigns John Alexander and Thomas Cason, and running through the officers and tradesmen of the fort, perhaps reflected the order in which the heads of household had presented themselves at the secretary's office to give in their returns, with seniority determining priority.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			The presence of slaves in the households of the council, the ensigns, the surgeon and the writer showed that ownership of slave labour ran through the whole administrative establishment, not merely the plantation. The reaper Joshua Tomlinson kept 12 slaves against a single white boy in his household, the largest slave count on the page and consistent with active use of slave labour on a working plantation. The smaller holdings of the soldiers and montrosses, several of whom had no slaves at all, reflected the limited means of the lower garrison ranks. Speculations The very low proportion of slave women to slave men, at 16 to 30 across the page, perhaps reflected a deliberate Company preference for male slaves on the outward voyage from Madagascar, since male slaves were valued for plantation work, fortification labour and water carriage, while female slaves were imported in smaller numbers for domestic service in the senior officers' households. The result was a slave population structurally unable to reproduce itself on the island, requiring continuing fresh purchases from each Madagascar voyage to maintain numbers. The absence of any figure against the name of Giles Hayse, montross, while his brother or kinsman Thomas Hayse had entered a household of four whites, perhaps indicated that Giles was unmarried and lodged with the elder Hayse rather than maintaining a separate household. The secretary recorded his name to mark his presence on the island establishment but entered no figures because he commanded no household of his own.

		Sam[ll] Allgates Corporal Neat Cattle: [...] [...] [...] [...] [...] [...] [...] Land: [...] [...] [...] [...] [...] [...] [...] Joseph Bates Montross Neat Cattle: [...] [...] [...] [...] [...] [...] [...] Land: [...] [...] [...] [...] [...] [...] [...] Totals: Neat Cattle: 5 [...] 67 [...] 6 [...] 24 [...] [...] [...] 62 [...] 164 Land: 360 [...] 168 [...] 528 Column headers: Neat Cattle: Bull[...] / Cow[s] / Bul[...] / [...] / [...] / C[al]ves / Totall Land: [...] / [...] / [...] / [...] / Totall	Lewis Latour no neat cattle entered 15 acres leave, 15 acres total Humphrey Edwards, montross no neat cattle entered no land entered Francis Funge, armourer 2 bullocks, 2 calves, 4 total no land entered Thomas Hayse 1 bullock, 1 total 10 acres owned, 20 acres leave, 30 acres total Giles Hayse, montross 1 bullock, 1 total no land entered Ralph Orme, soldier no figures entered Samuel Allgate, corporal no figures entered Joseph Bates, montross no figures entered The columns closed with the running totals: 5 bulls, 67 steers, 6 bullocks, 24 oxen, 62 calves, 164 total head of neat cattle. 360 acres owned, 168 acres leave, 528 acres total. Interpretations The cattle return divided each holding by the function of the beast rather than by sex alone. A bull was the breeding male kept ungelded, a steer was a young male castrated for fattening, a bullock was a working ox in its mature condition used at the plough or for haulage, and an ox was the fully grown draught beast in regular use for ploughing, carting and the haulage of stone and timber. Heifers were the young females not yet calved, though none was entered against the names on this page. Calves were the new stock of the year. The proportion of steers and bullocks to bulls reflected the controlled breeding of the island herd, with five bulls serving over a hundred and fifty other head, the surplus males being gelded to keep the herd manageable and to direct the meat supply toward the garrison and the shipping. The land column distinguished acres owned from acres held by leave. Owned land was that granted to the planter by Company patent and held as freehold, subject only to the conditions of the original grant. Acres of leave were land held with the permission of the Company on a more provisional footing, perhaps for grazing, woodcutting or temporary cultivation, without the security of the freehold patent. The total acres held by each planter combined the two categories. The page showed 360 acres in freehold against 168 acres of leave, indicating that around two-thirds of the recorded holdings rested on formal Company grants. The largest holdings on the page belonged to the gunner John French at 93 acres and to Christopher Kell at 78 acres, while the councilman Matthew Bazett held 55 acres. The land distribution did not follow the order of seniority in the establishment, with active planters drawing larger acreages than the senior officers, whose principal income came from their Company salaries. The blank entries against Samuel Pessey, Humphrey Edwards, Ralph Orme, Samuel Allgate and Joseph Bates showed that several members of the garrison maintained households without keeping cattle or holding land, drawing their subsistence wholly from the Company stores and their wages from the establishment. Speculations The high proportion of steers among the recorded cattle, at 67 head against only 24 oxen in working condition, perhaps reflected the slow process by which young males were brought forward to working age on the island. The herd was structured to maintain a continuing supply of fresh draught animals over several seasons, since the steep ground and the demand for haulage to the fort and the harbour wore out the working beasts at a steady rate. The 15 acres of leave held by Lewis Latour without any acres of freehold, and with no cattle entered against his name, perhaps reflected the provisional position of a recent arrival or a planter whose grant had not yet been formalised. The Company gave such men leave to

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			occupy and improve a parcel of ground in advance of patent, allowing them to establish themselves on the island before the formal grant was perfected at the secretary's office.

The running totals brought over stood at 2 white men, 25 white women, 33 white boys, 31 white girls, 91 white total, and 30 black men, 16 black women, 12 black boys, 2 black girls, 60 black total. The page ran as follows: Benjamin Pledger, soldier 1 white woman, 1 white total Jeptha Fowler, ditto 1 white woman, 1 white total Crenatus Snow, ditto 1 white man, 1 white total Hugh Bodley, serjeant of the mounted no figures entered William Portley, marshal no figures entered Robert Adams, orphans 1 white boy, 1 white girl, 2 white total 1 black girl, 1 black total Thomas Allis 1 white man, 1 white woman, 2 white boys, 1 white girl, 5 white total 2 black men, 2 black total Robert Angus 1 white woman, 1 white total Bagley and two apprentices 2 white men, 1 white woman, 3 white boys, 3 white girls, 9 white total 1 black man, 1 black woman, 2 black total Orlando Bagley and apprentices 2 white men, 1 white woman, 3 white boys, 3 white girls, 9 white total 2 black men, 1 black woman, 1 black boy, 1 black girl, 5 black total Thomas Bournham 1 white man, 4 white boys, 2 white girls, 7 white total Robert Bell 1 white man, 1 white woman, 3 white boys, 5 white total 2 black men, 1 black girl, 4 black total William Beale 1 white man, 1 white woman, 4 white boys, 1 white girl, 7 white total Arthur Bradley 1 white man, 1 white woman, 1 white boy, 3 white total 2 black men, 1 black girl, 2 black total John Beale's orphans no figures entered George Carne 4 white men, 1 white woman, 1 white boy, 4 white girls, 10 white total 8 black men, 3 black women, 2 black boys, 4 black girls, 17 black total John Coales 4 white men, 1 white woman, 2 white boys, 4 white girls, 11 white total 2 black men, 1 black woman, 4 black boys, 7 black total William Coales 1 white man, 1 white woman, 3 white boys, 5 white total Richard Cleave 1 white man, 1 white woman, 4 white boys, 2 white girls, 8 white total John Coulson 1 white woman, 1 white total Grace Coulson 1 white woman, 1 white total 2 black men, 3 black women, 2 black boys, 2 black girls, 9 black total Mary Conway 1 white woman, 1 white total 1 black girl, 1 black total The columns closed with the running totals: 23 white men, 38 white women, 58 white boys, 60 white girls, 179 white total. 53 black men, 26 black women, 23 black boys, 13 black girls, 115 black total. Interpretations The continuation of the return moved out of the garrison and the principal officers into the body of the island planters and their dependants. The lower ranks of the militia appeared first, with the soldiers Benjamin Pledger, Jeptha Fowler and Crenatus Snow each entered with the smallest possible household. Hugh Bodley as serjeant of the mounted held a serjeant's rank in the small troop of horse maintained on the island for the carrying of messages and the

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			patrolling of the cattle grounds. William Portley as marshal held the office of the island's executive officer for the service of warrants and the management of prisoners, working under the direction of the council. The category of orphans under Robert Adams and again under John Beale showed the practice by which the council placed the children of deceased planters under the care of named guardians, with the orphans' households counted separately in the return so that the secretary could track the maintenance of the children and the management of the estates from which they drew their subsistence. The entries did not include figures against the John Beale orphans, perhaps indicating that the household had been dissolved or that the orphans had been transferred to another guardian since the previous return. The entries against Bagley and Orlando Bagley showed two separate households each described as carrying two apprentices, the indentured young men bound by Company contract to learn a trade under a planter. The apprentices were counted within the white total of the household rather than under a separate head. The practice followed the standard English form of indenture, by which the apprentice lived and ate within the master's house for the term of his bond. The largest slave households on the page belonged to George Carne with seventeen slaves and Grace Coulson with nine. The Carne holding was the largest single recorded slave concentration of the return so far, and the entry suggested an active planter operating on the scale of the Company plantation itself. Grace Coulson's holding showed a single woman maintaining a substantial slave establishment, perhaps as the widow of a deceased planter who had retained the household after the death of her husband. Speculations The pattern of households recorded against the women Grace Coulson and Mary Conway, each entered as a single white woman with slaves on the holding, suggests that the secretary recognised the female head of household where there was no surviving male relative on the island to take the formal headship. Coulson's nine slaves and Conway's single slave girl perhaps reflected the working capacity that each had inherited or maintained in widowhood. The practice gave the secretary an accurate count of the slaves on the island, since concealing the holding under another man's name would have distorted the return. The two Bagley households, each entered with nine whites including two apprentices, perhaps reflected the deliberate placing of apprentices at separate masters in the same family connection. The arrangement allowed the elder kinsman to oversee both households while keeping each apprentice under a different formal indenture, securing the trade succession across two related establishments without combining them into a single legal household.

Interpretations The continuation of the cattle return introduced two new categories not entered on the previous page. Cows now appeared as a distinct head separate from steers, and heifers in working condition were entered as a further class between the breeding females and the calves. A cow was the mature breeding female that had calved at least once; a heifer was the young female yet to bring her first calf, but the entry of heifers working showed those that had been broken in to light draught labour, perhaps in the yoke for the lighter ploughing or for hauling provisions about the holding. The use of female cattle for work was uncommon in English practice but reflected the limited supply of oxen on the island, which forced planters to put the younger females to harness where the steers and bullocks could not be spared. The largest holdings on the page belonged to George Carne with 46 head of cattle on 111 acres and to John Coales with 43 head on 55 acres. The two together held nearly a quarter of the cattle recorded across both pages of the return. The concentration of stock in their hands placed them among the principal

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			commercial graziers of the island, with the capacity to supply the Company stores and the homeward shipping with fresh beef and breeding stock. The estate of John Beale's orphans, entered with 18 head of cattle on 60 acres of freehold, showed how the secretary tracked the maintenance of a deceased planter's holding for the benefit of his children. The figures recorded the stock and land as held in trust, with the council overseeing the management until the orphans should come of age and take the inheritance into their own hands. The substantial scale of the estate explained why the council had taken the trouble to maintain the holding as a separate household rather than merging it into a guardian's account. The blank cattle entries against Jephtha Fowler, Crenatus Snow, William Portley, Robert Angus, Richard Cleave and Mary Conway, with several of those names also showing no land, indicated households drawing their subsistence from Company wages, from petty trade or from the rent of small parcels of ground held under another planter, rather than from independent stockraising. The garrison soldiers and the marshal in particular held no cattle, since their living came from the Company establishment. Speculations The combined island total of 1,144½ acres held across the two pages of the return, divided between 734½ acres in freehold and 410 acres of leave, perhaps reflected the practical limit of arable and grazing ground available to the recorded planters at this date. The Company had set the boundaries of the patented grants in earlier years on the lower and more accessible ground, while the more recent acres of leave covered ground at the margins of the cultivated land where the planters had pushed grazing out into the hills and valleys without formal patent. The leave figures perhaps marked the active frontier of settlement on the island. The entry of seven heifers working across the second page, against none on the first, perhaps reflected the practice of the smaller planters in pressing female cattle into the yoke where the larger planters such as Carne and Coales could rely on their substantial stock of oxen and bullocks. The smaller households, lacking the cattle to keep mature breeding females clear of harness work, drew on the young females to make up the working strength, at the cost of slower herd reproduction.

Mary Harper appeared twice in succession, as Mary Harper and Mary Harper junior, distinguished as the elder and younger widow of the same name within the island connection. Dorothy and Isabel Hayse, also entered as widows, belonged to the Hayse family connection already noted in the earlier part of the return through Thomas and Giles Hayse. The four widows together represented a substantial body of female heads of household, several of them maintaining slaves on their holdings, and indicated that the death rate among adult male planters had created a stratum of women managing estates on their own account. The entry of Thomas Free and white servants placed his household separately from the apprentices recorded earlier under the two Bagleys, since white servants were not bound under formal indenture but served on contractual terms of hire. The entry of three white men in his household, with substantial slave labour at 13 head, marked Free as one of the more active commercial planters of the island, perhaps directing both white wage-paid labour and slave labour on the same holding. The notation of John Harding and brothers and sisters described a household formed by adult siblings living together rather than by a married couple with children. The siblings together kept five whites in the household, the secretary recording the family unit under the eldest brother's name. The form preserved the integrity of the joint family establishment in the count without artificially attributing the household to a single head.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			The largest slave holdings on the page belonged to Henry Francis at 15, Thomas Free at 13, Joshua Johnson at 12 and Jonathan Doveton at 11. The four men together commanded 51 slaves between them, nearly half the slaves entered on this page. The concentration suggested that a handful of substantial planters dominated the working slave population of the island. Speculations The entry of Mary Harper junior as a widow with six whites and nine slaves on her holding, against the elder Mary Harper's single-person household, suggests that the younger widow had inherited the substantial estate of her late husband while the elder Mary Harper retained only a small dwelling of her own. The naming convention preserved by the secretary, with junior and senior used to distinguish the two women, perhaps reflected a household practice within the Harper family by which the surviving women continued to bear the husband's name in the secretary's records. The single-figure households of John Fluxeus, John Gibbs, Jonathan Higham, Martin Norman and the elder Mary Harper, each entered as a lone man or woman with no further dependants and no slaves, perhaps reflected the position of small planters or aged dependants living on detached parcels of the island's land without active cultivation. The secretary recorded their presence to maintain the integrity of the census while signalling that they drew no productive return from their holdings.

		Isabel Hayse Widow Neat Cattle: [...] 3 [...] [...] [...] [...] [...] 2 [...] 5 Land: 15 [...] 2[...] [...] 17[...] Joshua Johnson Neat Cattle: [...] 2 [...] 1 [...] [...] [...] [...] 3 [...] 5 Land: 14[...] [...] 20 [...] 34[...] Sutton Isaake Sen[r] Sutton Isaake Jun[r] John Knipe Totals: Land: 1321[?]	Martin Norman no neat cattle entered no land entered Mary Harper, widow no neat cattle entered no land entered Mary Harper junior, widow no neat cattle entered no land entered Dorothy Hayse, widow no neat cattle entered no land entered Isabel Hayse, widow no neat cattle entered no land entered Joshua Johnson 9 cows, 8 bullocks, 4 steers, 8 calves, 21 total 127 acres owned, 33 acres leave, 160 acres total Sutton Isaake senior 1 cow, 1 calf, 2 total 12½ acres owned, 12½ acres total Sutton Isaake junior 3 bullocks, 2 calves, 5 total 15 acres owned, 2½ acres leave, 17½ acres total John Knipe 2 cows, 1 bullock, 3 calves, 5 total 14½ acres owned, 20 acres leave, 34½ acres total The columns closed with a running figure of 1,221 acres entered against the foot of the land totals. Interpretations A new category appeared in the cattle return on this page, namely yearlings, the young cattle that had passed the calf stage but had not yet reached the working age of the steer or the breeding age of the heifer. The four yearlings entered against William French's orphans showed the careful tracking of the growing stock on a holding under the guardianship of the council, since the secretary recorded each grade of immature cattle separately to maintain an accurate account of the estate held in trust for the children. The largest holdings on the page belonged to Joshua Johnson with 160 acres carrying 21 head of cattle, Jonathan Doveton with 151½ acres carrying 40 head, and Richard Gurling with 137 acres carrying 24 head. The acreage and stock taken together placed these three among the substantial planters of the island, working at a scale comparable to George Carne and John Coales on the earlier pages. The concentration of cattle on Doveton's holding, at 40 head, was the heaviest of the three. The blank cattle entries against the four widows Mary Harper, Mary Harper junior, Dorothy Hayse and Isabel Hayse showed that none of them maintained stock or land in her own name, even though the household count on the preceding page had recorded slaves in the holdings of Mary Harper junior and Dorothy Hayse. The pattern suggested that the slaves held by the widows had been retained for domestic and personal service rather than for grazing or cultivation, with the cattle and land of the deceased husbands having either passed to other heirs or returned to the Company. The orphans of William French, entered with 37 head of cattle on 42 acres, formed the heaviest stocking ratio on the page, with nearly one beast to each acre. The figures showed that the council had preserved the working stock of the deceased planter's holding intact for the benefit of the children, perhaps to maintain the value of the estate against the day when the orphans should come of age. Speculations The single twelve-acre holding of Thomas Free, recorded with no cattle but with three white men, six black men and a substantial household totalling twenty-one persons on the previous page, perhaps suggested that his operation rested on labour-intensive cultivation rather than on stockraising. The use of white servants and slaves on a small parcel of ground pointed to garden cultivation, perhaps producing vegetables, fruit or arrack for sale to the shipping and to the inhabitants, where intensive labour on a confined plot returned more than grazing on the same ground.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			The recording of yearlings as a separate category on this page, where the previous page had grouped the immature stock simply under calves, perhaps reflected a deliberate refinement of the return by the secretary at the council's direction. The closer tracking of each grade of immature cattle gave the council a more accurate forecast of the working stock that would come of age in successive seasons, allowing the planning of cattle supply to the garrison and the shipping with greater precision than the earlier consolidated count under calves had permitted.

The running totals were brought over without separate figures recorded on this page. The return ran as follows: Stephen Lufkin 1 white woman, 3 white boys, 1 white girl, 5 white total 1 black man, 1 black total John Long 1 white man, 1 white woman, 1 white boy, 2 white girls, 5 white total 2 black men, 1 black woman, 3 black total Francis Leech 1 white woman, 1 white total Robert Marsh 2 white men, 1 white woman, 2 white boys, 2 white girls, 7 white total 3 black men, 1 black woman, 1 black boy, 2 black girls, 7 black total John Marsh 1 white man, 1 white total Walter Morrice 1 white man, 1 white total Jane Mudge 1 white woman, 2 white girls, 3 white total 1 black man, 1 black total Maxwell's orphan no figures entered John Nichols 3 white men, 2 white women, 1 white boy, 2 white girls, 8 white total 2 black men, 2 black total John Orchard 1 white man, 1 white woman, 2 white total Gabriel Powell 3 white men, 1 white woman, 2 white boys, 1 white girl, 7 white total 6 black men, 4 black women, 3 black boys, 4 black girls, 17 black total Samuel Price 1 white man, 1 white woman, 2 white total John Robinson 2 white men, 1 white woman, 3 white boys, 6 white total 2 black men, 1 black woman, 1 black girl, 4 black total Thomas Swallow 2 white men, 1 white woman, 2 white girls, 5 white total 2 black men, 1 black woman, 3 black total Richard Swallow 4 white men, 2 white women, 2 white boys, 6 white girls, 14 white total 7 black men, 1 black girl, 8 black total William Rate 1 white man, 1 white woman, 2 white boys, 3 white girls, 7 white total 1 black man, 1 black woman, 1 black girl, 3 black total Margaret Sikes 1 white woman, 2 white girls, 3 white total 9 black men, 3 black women, 5 black boys, 5 black girls, 15 black total Giles Smith 1 white man, 1 white woman, 2 white total John Sinsnick 1 white man, 1 white woman, 2 white total Interpretations The continuation of the return ran through a further set of planter households, with several names of substantial standing appearing on the page. Gabriel Powell with 17 slaves on his holding and Margaret Sikes with 15 represented two of the larger slave households on the island, comparable to those of George Carne and Henry Francis on the earlier pages. The presence of a woman holding fifteen slaves as the apparent sole head of her household marked Margaret Sikes as a substantial planter in her own right, perhaps the widow of a deceased planter who had retained the working slaves of the estate. The pattern echoed the

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			earlier entries of Grace Coulson and Mary Harper junior. Richard Swallow's household, with fourteen whites and eight slaves, was the largest white household of the page. The four white men entered under his name perhaps included grown sons or kin living on the holding, since the standard household structure of a married couple with children would not have run to four adult males on a single holding without additional white labour or extended family within the count. The form Maxwell's orphan, entered without any figures, indicated a household nominally maintained under the council's care but presently empty of dependants, perhaps because the orphan had died, been transferred elsewhere or come of age since the previous return. The secretary kept the name on the books to preserve the legal continuity of the estate, even where no figures were currently entered against it. The pairing of Thomas Swallow and Richard Swallow on adjacent lines, with the John Marsh and Robert Marsh, perhaps showed the practice of related kin maintaining separate households on different parcels of the same family connection. The recording of each as an independent household preserved their separate legal standing in the return while marking the family tie through the shared surname. Speculations The substantial slave holding of Margaret Sikes at fifteen, against a household of only three whites consisting of herself and two daughters, perhaps reflected the working capacity of an estate inherited from a deceased husband and maintained intact under his widow's management. The disparity between the white household of three and the slave establishment of fifteen suggested that the holding produced for the market rather than for domestic subsistence, with the slaves directed to cultivation and stockraising under an overseer or trusted slave driver in the absence of an adult male head. The recurrence of three or four adult white men within several households on this page, against the more usual pattern of one or two on the earlier pages, perhaps reflected the migration of younger men into established planter households as wage servants, kinsmen or junior partners. The arrangement allowed the senior planter to maintain a larger working establishment without the cost of further slave purchases, while giving the younger men access to land and stock through the family connection rather than through formal patent in their own names.

Interpretations The substantial herd recorded against Gabriel Powell stood out as the largest single cattle holding of the return. At 5 bulls, 22 cows, 14 bullocks, 11 steers and 27 calves to a total of 89 head on 255 acres, the holding ran ahead of the largest concentrations on the earlier pages, including John Coales at 43 head and George Carne at 46 head. The five breeding bulls on Powell's holding alone matched the original total of bulls recorded across all the earlier pages, indicating that Powell was operating as a principal breeder of cattle for the island market. The scale of his slave establishment, at 17 head on the previous page, was consistent with the labour required to manage a herd of that size on so substantial an acreage. Margaret Sikes appeared as a substantial cattle holder in her own right, with 26 head on 78 acres of which 70 were freehold. Taken together with the 15 slaves on her household recorded on the previous page, her establishment ranked among the larger commercial holdings on the island. The pattern echoed Grace Coulson's nine-slave holding on a smaller acreage and reinforced the picture of widows continuing to manage substantial estates after the death of their husbands. The blank cattle and land entries against Samuel Price and John Sinsnick, both recorded with married couples on the previous page but with no figures here, suggested that they kept their households on rented dwellings without stock or land of their own. The recording of small white households without independent holdings perhaps indicated tradesmen, servants or wage labourers who drew their subsistence from work for other planters rather than from any holding of their own. The recording of Maxwell's orphan with ten head of cattle and no land entered indicated that the council had preserved the working stock of the deceased planter's estate in the orphan's name, perhaps with the

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			cattle grazing on land held under another planter's leave while the orphan's holding remained vacant. The arrangement preserved the value of the estate against the day when the orphan should come of age. Speculations The closing land figure of 1,951 acres ran below the maximum acreage that could practically have been cultivated and grazed on the island, suggesting that perhaps no more than a fifth of the island's surface was held by the planters under formal patent or leave. The remainder consisted of the central hill country, the steep windward gullies and the Company plantation reserves, ground that perhaps remained outside the planter system either through unsuitability for settlement or through deliberate Company reservation against future requirements. The recording of bullocks and steers as distinct categories on this page, with Powell entering 14 bullocks and 11 steers separately, perhaps reflected a more deliberate classification by Powell or his clerk than that adopted by other planters. The two categories represented different stages of the same male beast - the steer fattening for slaughter and the bullock broken to work - and the careful separation in Powell's entry suggested an operation organised on commercial principles, with the herd structured to deliver both working oxen and beef cattle in succession.

The columns again carried Whites (men, women, boys, girls and total) and Blacks (men, women, boys, girls and total), with the running totals brought over without separate figures recorded on this page. The return ran as follows: Peter Sinsnick 1 white man, 1 white woman, 5 white girls, 7 white total Elizabeth Steward and children 1 white woman, 6 white girls, 6 white total 4 black men, 1 black woman, 4 black boys, 2 black girls, 11 black total Susanna Swallow 1 white woman, 1 white boy, 2 white girls, 4 white total Godfrey Shoales 1 white man, 4 white total John Frater 1 white woman, 3 white boys, 1 white girl, 5 white total 1 black man, 1 black girl, 2 black total James Vesey 1 white man, 1 white woman, 3 white boys, 1 white girl, 7 white total 1 black man, 2 black women, 1 black girl, 4 black total Captain Witt 1 white man, 1 white woman, 2 white boys, 1 white girl, 5 white total 1 black man, 1 black woman, 1 black boy, 1 black girl, 5 black total Francis Wrangham 1 white man, 1 white woman, 3 white boys, 5 white total 4 black men, 1 black woman, 1 black boy, 1 black girl, 7 black total Wrangham's orphans 1 white girl, 1 white total 1 black girl, 1 black total Simon Worsley 1 white man, 2 white women, 3 white boys, 2 white girls, 8 white total 1 black man, 1 black total Bridgett Withers 1 white man, 1 white woman, 1 white boy, 3 white total Robert Greenwell's estate no figures entered 1 black man, 1 black total Officers and soldiers 77 white men, 81 white women, 113 white boys, 134 white girls, 405 white total 125 unaccounted, with subordinate figures of 144, 55, 57 and 46 black, 302 black total Interpretations The list closed with several distinct categories that warrant separate notice. Elizabeth Steward and children appeared as the head of a household of six whites supported by an establishment of eleven slaves, the entry showing the secretary's recognition of a widow continuing the work of her husband's holding

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			through her own headship. The pattern matched that observed in the entries of Grace Coulson, Mary Harper junior and Margaret Sikes on the earlier pages, with the female household head retaining the labour force inherited from the deceased planter. The orphans of Francis Wrangham were entered directly below Wrangham's own household, perhaps signifying that the orphans were the children of a deceased brother or kinsman, placed in Wrangham's care while the formal headship of their estate continued to be recorded separately for the maintenance of the inheritance. The single white girl and the single slave girl in the orphan household were perhaps both being raised within the elder Wrangham's home, though counted separately for the purposes of the secretary's return. The entry of Robert Greenwell's estate, with no whites and only a single black man recorded, showed the council's tracking of the working stock of a deceased planter's holding pending settlement of the estate. The single slave perhaps remained on the holding as caretaker until the inheritance had been formally distributed, the secretary preserving the record of the property for the heirs. The final consolidated entry of officers and soldiers gathered the white garrison and their dependants under a single line, distinct from the named planter households. The 405 whites recorded under this head, with 77 men, 81 women, 113 boys and 134 girls, together with 302 blacks under the same head with 144 men, 55 women, 57 boys and 46 girls, represented the consolidated count of the Company's establishment beyond the named planter households. The presence of substantial numbers of women, boys and girls among the officers and soldiers showed that the garrison had grown into a settled population, with married soldiers raising families on the island rather than serving as a transient force. The total slave count of 302 against the soldiers' establishment, exceeding the number of slaves recorded across the entire body of named planter households, indicated that the Company itself was the largest single holder of slaves on the island. The slaves were held to work the Company plantation, to labour at the fort and harbour, and to serve the officers and their households. Speculations The recording of Captain Witt with the rank distinguished in the entry, while the other names ran without rank or title beyond the marked offices of the council and the garrison, perhaps reflected the presence on the island of a ship's captain settled on a holding after retirement from sea service or while ashore for an extended residence. The Company permitted such retirements where the captain had earned the favour of the directors through faithful service, and the granting of a holding on the island was a recognised means of pensioning a long-serving master. The high proportion of girls to boys among the officers and soldiers, at 134 girls against 113 boys, perhaps reflected the higher infant mortality among male children that ran through the period across the Atlantic world. The reverse pattern of more boys than girls in several of the named planter households on the earlier pages was perhaps a statistical accident of the smaller sample, while the larger garrison count of over four hundred persons gave a truer reflection of the underlying demographic pattern.

The figures ran down opposite the names recorded on the previous page. The running figure of 1,957 acres was entered against the head of the land column, carrying forward from the close of the previous page. The return ran as follows: Peter Sinsnick 1 calf, 1 total no land entered Elizabeth Steward and children 2 bulls, 22 cows, 7 bullocks, 10 heifers, 19 calves, 60 total 41 acres owned, 42 acres leave, 83 acres total Susanna Swallow no neat cattle entered no land entered Godfrey Shoales no neat cattle entered no land entered John Frater 3 cows, 3 calves, 6 total 15½ acres owned, 16 acres leave, 31½ acres total James Vesey 1 bull, 12 cows, 2 bullocks, 2 steers, 13 calves, 30 total 20 acres owned, 12 acres leave, 32 acres total Captain Witt 2 cows, 1 bullock, 2 calves, 5 total 40 acres owned, 40 acres total Francis Wrangham 12 cows, 3 heifers, 3 steers, 11 calves, 29 total 63 acres owned, 11 acres leave, 76 acres total Wrangham's orphans 1 bull, 4 cows, 1 bullock, 1 heifer, 5 calves, 12 total 10 acres owned, 2 acres leave, 12 acres total Simon Worsley 1 cow, 1 calf, 2 total 13⅓ acres owned, 10 acres leave, 23⅓ acres total Bridget Withers no neat cattle entered no land entered Robert Greenwell's estate 3 bullocks, 1 calf, 4 total no land entered The columns closed with the running grand totals of the entire return: 33 bulls, 371 cows, 67 bullocks, 142 heifers, 17 steers, 12 yearlings, 322 calves, 964 total head of neat cattle, with 2,160⅔ acres owned, 928¾ acres leave and 3,089½ acres total. A separate figure of 716 was entered at the foot of the land column, perhaps a subtotal carried from an earlier subdivision of the page. Interpretations The grand totals closed the return with a comprehensive count of the island's neat cattle and land in private hands at the close of the year 1714. The herd of 964 head, structured as 33 bulls, 371 cows, 67 bullocks, 142 heifers, 17 steers, 12 yearlings and 322 calves, represented the working stock of the island under planter ownership, separate from the cattle held on the Company plantation. The proportion of cows to total head, at over a third of the herd, indicated a population structured for active breeding, with the 322 calves providing the renewal of the working stock in succession. The total land in private hands ran to 3,089½ acres, of which 2,160⅔ were held in freehold and 928¾ as acres of leave. The figures gave the Company a precise measure of the cultivated and grazed portion of the island, with the freehold standing as a settled body of granted patents and the leave acreage representing the active frontier of new occupation. The proportion of leave to freehold, at roughly four to nine, suggested that the planters were continuing to extend their working ground beyond the original patents but that the freehold remained the dominant form of tenure. The substantial cattle holding of Elizabeth Steward and her children, at 60 head on 83 acres, set her among the principal commercial graziers of the island, comparable to Joshua Johnson, Jonathan Doveton and Margaret Sikes on the earlier pages. Her recording as the head of a household of six whites with eleven slaves and sixty head of cattle showed a planter widow maintaining a complete working establishment in her own name.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			The orphans of Francis Wrangham appeared with twelve head of cattle on twelve acres, the secretary maintaining their interest as a distinct estate alongside the elder Wrangham's holding. The careful separation of the orphans' cattle from those of the guardian preserved the children's inheritance against any later confusion of stock between the two holdings. Speculations The standing of three hundred and seventy-one cows against thirty-three bulls in the closing totals gave a ratio of about eleven cows to each bull, perhaps reflecting the natural service capacity of a single bull running with a small herd of breeding cows on the steep island pasture. The figure was consistent with English cattle husbandry of the period, where a bull was expected to cover ten to fifteen cows in a season. The breeding structure suggested that the island planters had organised their herds on the recognised practical principles brought from England, adapted to the limited ground of the island. The recording of the supplementary figure of 716 at the foot of the land column, set apart from the main grand total of 3,089½ acres, perhaps represented the subtotal of acres held under a particular tenure or by a particular subset of households, separated by the secretary for some administrative purpose not made explicit on the page. The figure was perhaps the count of acres reserved to the Company plantation, the public ground or some similar category not falling within the planter holdings proper, which the secretary had set against the planter total as a control or comparison.
413	404	Island S[t] Helena At a Consultation held on Thursday afternoon the last of March 1715 at the United Castle in James Valley Isaac Pyke Esq[r] Gov[er]no[r] Pres[ent] Geo: Haswell Dep[uty] Matthew Bazett [...] Antipas Toovy Word being brought to y[e] Gover[no]r [...] Council while they were in the Hall at Dinner together that Cap[t]e Edward Mashborne y[e] 3: in Council was Dead after about three weeks Sickness it is agreed to hold a Consultation to morrow on y[e] Hon[bl]e Companies affairs relateing to their Plantation [...] that Cap[t] Haswell do in the mean time goe up to the Plantation House [...] take some Reveralls Acco[t] of what order the Hon[bl]e Companies Plantac[i]o[n] is in [signatures] Antipas Toovy Margin Notes: Cap[t] Mashborne[s] Death	Island St Helena. A consultation was held on Thursday afternoon, 31 March 1715, at the United Castle in James Valley. Present were Isaac Pyke, esquire, governor, with George Haswell, deputy, Matthew Bazett and Antipas Tovey. Word was brought to the governor and council, while they were at dinner together in the hall, that Captain Edward Mashborne, third in council, had died after a sickness of about three weeks. The council agreed to hold a consultation the following day on the Company's affairs relating to the plantation, and meanwhile directed Captain Haswell to go up to the plantation house and take some general account of the order in which the Company's plantation stood. The minute was signed by Antipas Tovey. A margin note recorded the matter as Captain Mashborne's death. Interpretations The death of Edward Mashborne removed the third member of the council, the officer ranking immediately below the governor and the deputy governor in the island's civil establishment. The vacancy created an immediate administrative problem, since the council was reduced to three serving members and the management of the Company plantation, which had stood under Mashborne's particular charge as the third in council, was left without its responsible officer. The decision to convene a fresh consultation the next day showed the council treating the matter as urgent, both because the plantation was the principal economic asset of the establishment and because the proper accounting of its stock, slaves and produce had to be secured before any opportunistic loss could occur during the change of hands. The direction to Captain Haswell to proceed at once to the plantation house and take a general account of its order constituted a holding measure between the death and the formal succession. As deputy governor, Haswell stood next to Isaac Pyke in the civil hierarchy and was the appropriate officer to

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			take temporary oversight of the Company's most valuable property. The visit to the plantation house was designed to fix the standing inventory of cattle, slaves, tools and growing crops at the moment of Mashborne's death, so that no subsequent diversion of stores or stock could be concealed behind the disruption of the change of management. The convening of the consultation in the hall at dinner, with the formal business being interrupted by the news of the death, fixed the moment of decision precisely. The clerk recorded the interruption to give legal force to the resolutions that followed, since the council was treating the matter as one requiring immediate corporate action rather than waiting for the next regular consultation. The reference to the Honourable Company's plantation as a discrete administrative entity, distinct from the planter holdings recorded in the census of 21 March 1715 just entered in the previous folios, marked the institutional separation between Company land and private land that ran through the island's affairs. The plantation accounted to the Company directly through the third in council, while the planter holdings paid quit-rents and rendered the labour and provisions due under their patents. Speculations The convening of the consultation on a Thursday afternoon rather than waiting for the next regular sitting day perhaps reflected the council's concern that the management of the plantation could not safely be left in the hands of the standing overseers or slave drivers for more than a single day without a senior officer's authority being interposed. The plantation stocks of livestock, sugar, arrack and provisions represented value that could be drawn off by interested parties during any interregnum, and the council acted to close that gap of opportunity before it had time to operate. The fact that the news of Mashborne's death reached the council while they sat together at dinner, rather than being brought separately to each member, perhaps reflected the proximity of the plantation house to the United Castle and the speed with which household news travelled between the principal residences of the island. The death of so senior an officer would have been known to his household servants within minutes of the event, and the report would have reached the castle by the same path that brought the daily provisioning of the governor's table.
414	405	Island S[t] Helena At a Consultation held on Fryday the first of April 1715 at the United Castle in James Valley Isaac Pyke Esq[r] Gov[er]no[r] Pres[ent] Geo: Haswell Dep[uty] Matthew Bazett [...] Antipas Toovy Cap[t] Haswell being returned out of the Country makes the following report viz[t] At Plantation House he found the Cows w[th] their Calves 24 Bullocks 2 Heifers 8 Leather Sides 25 Hides 54 Goat Skins 16 Sows 9 Boars 2 Shoats [...] Piggs 51 Turkeys 30 Geese 10[?] Ducks 13 Fowles 26 At Lufkins Plantation Fowles 20 Chickens 16	Island St Helena. A consultation was held on Friday 1 April 1715 at the United Castle in James Valley. Present were Isaac Pyke, esquire, governor, with George Haswell, deputy, Matthew Bazett and Antipas Tovey. Captain Haswell, returning out of the country, made the following report. At the plantation house he found, as Company stock: 24 cows with their calves 2 bullocks 8 heifers 9 sows 2 boars 51 shoats and pigs 30 turkeys 10 geese 13 ducks 26 fowls Leather: 25 sides 54 hides 16 goat skins At Mr Lufkin's plantation he found: 20 fowls 16 chickens

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
		Verte Margin Notes: Comp[anys] Stock	The minute closed with the direction Verte, signalling that the matter ran on to the next folio. Interpretations Haswell's inspection covered three distinct categories of stock: the breeding and working cattle, the household and yard livestock, and the leather stores accumulated from earlier slaughter. The 24 cows with their calves and 8 heifers gave the plantation a substantial breeding base, while the 2 bullocks represented the working draught at the moment of inspection. The absence of bulls in the report, where the planter census of 21 March 1715 had recorded 33 bulls across the private holdings, perhaps reflected the practice of running the Company plantation's breeding cows with bulls drawn from neighbouring planter herds rather than maintaining the breeding males on the plantation itself. The yard stock showed a productive pig operation, with 9 sows, 2 boars and 51 shoats and pigs, the last being the immature animals of the year. The Company plantation was thus running a sustained pork operation, supplying the homeward shipping with fresh pork and the salt house with the carcasses for curing. The poultry counted 30 turkeys, 10 geese, 13 ducks and 26 fowls, a comprehensive yard establishment supplying eggs, table birds and feathers to the governor's table and the Company stores. The leather stocks comprised 25 sides, 54 hides and 16 goat skins. A side was a half hide, cut along the spine for ease of tanning, while a hide was the whole skin. The 54 hides together with the 25 sides represented the accumulated slaughter of perhaps 65 to 70 cattle over the preceding period, the skins being held in store for the island tannery and for the making of harness, shoes, breeches and the bindings of furniture and ship's gear. The 16 goat skins reflected the smaller but constant supply of goats slaughtered for meat, the skins being used for finer leatherwork and for the binding of books and small articles. Mr Lufkin's plantation, the second holding inspected on the same circuit, returned only 20 fowls and 16 chickens. Stephen Lufkin had been recorded in the census of 21 March 1715 with a household of five whites and a single slave, holding 11 acres and 3 head of cattle. The very limited livestock at his plantation suggested that the small holding was visited as part of Haswell's circuit not because it held significant Company stock but because of a particular Company interest in the chickens kept there, perhaps under a contract for the supply of poultry to the Company stores. The inspection of Lufkin's plantation alongside the Company plantation house indicated a routine of survey running across both Company and contracted holdings. The dispatch of Haswell on the day after Mashborne's death, with the inspection completed and reported within twenty-four hours, gave effect to the council's resolution of 31 March 1715. The speed of execution showed the practical importance the council attached to fixing the state of the Company plantation at the moment of the vacancy in the third councillor's place. Speculations The recording of fifty-one shoats and pigs as a single category, rather than separating the very young from the older immature animals, perhaps reflected the practical difficulty of distinguishing precise ages within a constantly turning yard of growing pigs. Haswell took the count at a glance from the yard rather than separating the animals by sex or age, and the consolidated figure stood as a good faith count for the purpose of fixing the standing inventory at the date of inspection.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			The leather count of 25 sides and 54 hides perhaps represented the accumulated stock from several months of plantation slaughter, since the small population of the Company plantation could not have generated so many hides in a short period without depleting the breeding herd. The store was perhaps being held against a homeward shipment to London or against a particular requirement of the island artisans, with the timing of the inspection happening to find the leather house unusually well stocked.
415	406	At Perkins Plantation Cows [...] 2 Calves 2 Heifers 4 Bullocks 2 Bull 1 Goats 143 Kidds 10 Fowls 15 Chickens 12 Ducks 4 Sows 6 Barrows 5 Shoates 14 Boar 1 Piggs 14 The Acco[t] from the Hutts Plantac[i]on viz[t] In the Great Wood Bulls 4 Bullocks 2 At y[e] Woody Ridge Bulls 2 Bullocks 2 At y[e] Hutts Sows 7 Boar 1 Barrows 10 Shoats 24 Piggs 17 Fowles 15 Chickens 7 [signatures] Antipas Toovy	At Mr Perkins' plantation, the inspection found: 2 cows with 2 calves 4 heifers 2 bullocks 1 bull 143 goats 10 kids 16 fowls 12 chickens 4 ducks 6 sows 5 barrows 14 shoats 1 boar 14 pigs The account from the Hutts plantation followed. In the Great Wood: 4 bulls 2 bullocks At the Woody Ridge: 2 bulls 2 bullocks At the Hutts: 7 sows 1 boar 10 barrows 24 shoats 17 pigs 15 fowls 7 chickens The report closed with the signature of Antipas Tovey. Interpretations The inspection at Mr Perkins' plantation showed a holding organised on different principles from the Company plantation house. The cattle stock was small at only 9 head, but the goat stock ran to 143 grown beasts with a further 10 kids, marking the holding as the principal goat operation of the Company establishment. Goats were valued at St Helena for their hardiness on the steep ground, their milk and their meat, which fed the slave population and supplied fresh provisions to the homeward shipping. The size of the goat herd at Perkins' plantation suggested that the holding had been dedicated by the Company to goat husbandry in particular, the cattle being kept only as a supplementary stock. The pig operation at Perkins' plantation comprised 6 sows, 5 barrows, 1 boar, 14 shoats and 14 pigs, totalling 40 head. The distinction between barrows and other male pigs was significant. A barrow was a castrated male pig fattened for slaughter, while the entire boar was kept for breeding. The presence of five barrows alongside a single breeding boar indicated active fattening of male pigs for the table, with the boar held to service the sows. The structure of the pig herd showed the standard English practice of separating breeding and fattening stock, adapted to the conditions of the island. The Hutts plantation, the third holding on Haswell's circuit, was organised across three distinct locations. The Great Wood held 4 bulls and 2 bullocks; the Woody Ridge held 2 bulls and 2 bullocks; and the Hutts proper held the pig operation and the poultry.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			The dispersal of the cattle across the two wooded sites suggested that the Company plantation used the upper wooded ground for the running of breeding bulls and working bullocks at distance from the lowland breeding herds. The cattle held there represented the strategic reserve of male breeding stock for the Company plantation, kept apart from the main cow herd at the plantation house. The combined breeding stock of the Hutts plantation amounted to 6 bulls between the two wooded sites and the bullocks gave 4 working draught beasts at the upper ground. The pig operation at the Hutts itself, with 7 sows, 1 boar, 10 barrows, 24 shoats and 17 pigs to a total of 59 head, ran on a slightly larger scale than that at Perkins' plantation. The combined Company pig operation across all three plantations - the plantation house, Perkins' plantation and the Hutts - thus ran to over 150 pigs at various ages, a substantial commercial pork operation for the supply of the establishment and the shipping. The signature of Antipas Tovey closed the inspection report. As the junior councillor present, Tovey signed for the accuracy of the count, the responsibility of the formal record falling on the junior officer in conformity with standard council practice. Speculations The placing of four bulls in the Great Wood and a further two on the Woody Ridge perhaps reflected a deliberate separation of breeding lines, with each wooded site running a distinct group of bulls to serve different parts of the cow herd as they were brought up from the plantation house. The arrangement allowed the plantation manager to control the breeding of the herd by directing particular cows to particular bulls in succession, preventing inbreeding and maintaining the quality of the calf crop. The substantial goat stock of 143 head at Perkins' plantation perhaps represented the Company's principal source of milk and cheese for the establishment, since the cow herd at the plantation house, at only 24 head with their calves, could not have supplied the daily milk requirements of the governor's household, the slave quarters and the shipping without exhausting itself. The goats, requiring less ground and producing more milk per acre of poor pasture, made up the deficiency in dairy supply and freed the cow herd for beef and breeding purposes.
416	407	Island S[t] Helena At a Consultation held on Tuesday the 5[th] of April 1715 at the United Castle in James Valley Isaac Pyke Esq[r] Gov[er]n[or] Geo: Haswell Dep[uty] Pres[ent] Matt[hew] Bazett [...] Antipas Toovey Whereas Our Hon[ble] Mast[er]s have in their Letter by the Rochester ordered that an[...] Acco[t] be given them what time may reasona- bl[y] be required to dispatch a Ship from hence that comes outward bound to [...] Stores according to our best observations in the Experience we have hitherto had We think that a Ship that arrives here about Christmass bringing ab[o]t 200 Tuns of goods to be delivered cannot possibly be Dispatched in less then a Month because of the very great Surfes that usually happens about that time of the Year We are informed that the latter end of March and beginning of April is also a time when abundance of high Seas do usually happen [...] we are the more confirmed in such an Opinion because the Hon[ble] Companies Long boat[s] Margin Notes: Time of dispatch[...]ing outward bo[...] Ships [...] of over [...] reasons	Island St Helena. A consultation was held on Tuesday 5 April 1715 at the United Castle in James Valley. Present were Isaac Pyke, esquire, governor, with George Haswell, deputy, Matthew Bazett and Antipas Tovey. The honourable masters had ordered, in their letter by the <i>Rochester</i>, that an account be given them of what time might reasonably be required to dispatch a ship arriving outward bound to take in Company stores. From the council's best observations and the experience hitherto had, the council judged that a ship arriving about Christmas, bringing about two hundred tons of goods to be delivered, could not possibly be dispatched in less than a month. The reason was the very great surfs that usually happened about that time of year. The council was also informed that the latter end of March and the beginning of April was another time when an abundance of high seas usually happened. The council was the more confirmed in such an opinion because the honourable Company's longboat A margin note recorded the matter as the time of dispatching outward bound ships, with a further marginal entry of the reasons for the opinion. Interpretations The minute opened the council's response to a specific direction from the Court of Directors received by the ship <i>Rochester</i>. The directors required an estimate

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			of the time needed to discharge an outward-bound ship's cargo at the island, the question being part of the Company's broader effort to plan the turnaround of its fleet between the outward run from London and the onward leg to India or the homeward leg from India and Canton. The accurate estimation of discharge time at St Helena affected the planning of voyages by the entire Company shipping, since delays at the island lengthened the outward turn and reduced the productive sailing time of each ship. The figure of two hundred tons of goods as the typical Company consignment to the island gave a measure of the scale of the supply trade with the island. The carriage of 200 tons by longboat from a ship lying in the open road to the landing place at James Valley, against the surf and swell of the open Atlantic, was a slow and labour-intensive operation. The whole was conducted from the Company's longboat working between the ship and the shore, with the cargo broken out from the hold by the ship's crew, lowered into the boat, rowed to the landing place and carried up to the stores by the slaves and labourers of the establishment. The identification of two distinct seasons of heavy weather, around Christmas and at the end of March and beginning of April, framed the discharge problem in terms of the island's recognised wind and sea patterns. The southern winter brought heavier surf to the leeward roadstead at James Valley, where the shoreline of the western coast lay exposed to swells generated by storms in the southern Atlantic. The council was setting out the practical obstacles to fast discharge in terms the directors could understand, since the limitation came from the natural conditions of the road rather than from any want of diligence by the establishment. The use of the <i>Rochester</i> to carry the directors' letter to the island connected the present consultation to the standing pattern of Company shipping between London and St Helena. The ship had carried both the instructions and the goods that would be received under those instructions, the council acting on the directives within weeks of the ship's arrival. Speculations The careful distinction made by the council between the two seasons of high seas, one around Christmas and one at the end of March, perhaps reflected an attempt to give the directors a more refined picture of the discharge problem than a simple statement that the work took a month. The council was framing the matter so that the directors could understand the practical effect on shipping arriving at different points in the southern year, and could plan voyages to arrive in the calmer intervals between the heavy seasons. The detail showed the council functioning as a source of operational intelligence to the directors, supplementing the directives received with practical advice grounded in island experience. The Company's longboat appeared at the close of the visible portion as the principal instrument of the discharge operation. The reliance on a single boat for the discharge of two hundred tons of goods perhaps reflected the limited capacity of the establishment to support discharge work, with no separate lighter or barge available for the purpose. The longboat was the working vessel of the Company at the island, used for landing stores, taking off provisions for the homeward shipping and serving as the principal means of communication between the ship and the shore.
417	408	boat that brought Cutt Stone from Sandy Bay w[ch] is at the Windermost part of the Island has been laden these nine days is still loaden at a Grapling in this Road, but the surfe is so high [...] violent that we dare not attempt to unload her, neither with these Seas is it possible that any boat with safety can come to the Crane to be unlivered.	The Company's longboat, which had brought cut stone from Sandy Bay (which lay at the windwardmost part of the island), had been loading these nine days and was still loading at a grappling in the road. The surf was so high and violent that the council dared not attempt to unload her, neither could any boat with safety come to the crane to be unlivered with these seas running.

The council therefore judged that if a ship should arrive from England in any of these seasons, it would be impossible to unliver her in ten working days. The governor proposed that some fit person be appointed to oversee and take care of the plantation house, plantations, cattle and other property belonging to the honourable Company. He recommended Mr William Worrall, who had always been employed in the Company's service, was a man of good skill and ability in these affairs, and was the fittest person he knew to undertake that trust. The council then made two orders. First, that Mr Bazett and Mr Tovey should go and take an account of the household goods and the honourable Company's stock of provisions, cattle and other property at all the plantations. Second, that the governor should put the said William Worrall Margin notes recorded the matter as July tempestuous and the appointment of William Worrall as overseer. Interpretations The reference to cut stone brought from Sandy Bay established a specific operation that the longboat had been conducting at the time of the inspection. Sandy Bay lay at the south-eastern coast of the island, the windwardmost point and the side most exposed to the prevailing south-east trade winds. The carriage of stone from Sandy Bay to James Valley by sea required the longboat to work around the windward end of the island and back along the leeward coast, a passage that was always difficult and impossible in heavy weather. The cut stone was perhaps intended for some Company building project at the fort, the castle or the new plantation house, since the island had no quarry near the principal settlement. The technical terms used by the council carried specific meanings within the operation of the road. A grappling was a small mooring anchor used to hold a boat in position close to the landing place while goods were transferred. The crane referred to the lifting apparatus at the wharf or landing, used to raise goods from the boat to the shore against the swell. The verb to unliver meant to discharge cargo from a boat or ship, the equivalent of unloading. The terms together described a specific working procedure at the James Valley landing, where boats were held by grapplings close to the crane and goods were lifted ashore. The extension of the problem of heavy seas to a third season, July, brought the council to the position that ships arriving in any of three distinct periods of the year could not be discharged in ten working days. The figure of ten working days perhaps reflected a benchmark proposed by the directors in their letter by the <i>Rochester</i> against which the council was being asked to measure the island's performance. The council's response showed that for at least three months of the year, the benchmark could not be met regardless of the diligence of the establishment. The proposal to appoint William Worrall as overseer of the plantation house and Company plantations responded directly to the vacancy created by Edward Mashborne's death of 31 March 1715. The third councillor had carried particular responsibility for the plantation, and his death required either the elevation of another councillor to that charge or the appointment of a separate overseer below the council. Worrall had appeared in the census return of 21 March 1715 as gunner's mate, with a household of two whites and two slaves, and again as serjeant John Worrall in a separate household. The William Worrall now appointed perhaps was the same gunner's mate, the

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			Company drawing on a man of recognised technical skill rather than from the planter class. The order that Bazett and Tovey should go and take an account of the household goods and Company stock at all the plantations extended the inventory work begun by Haswell at the plantation house on 1 April 1715. The council was now sending its two junior members to complete the survey across all the Company holdings, including Perkins' plantation and the Hutts already visited by Haswell, but with a closer focus on household goods as well as livestock. The division of responsibility separated the elevation of Worrall to the overseer's office from the formal verification of the stock he would be taking charge of, ensuring that the inventory rested on the work of councillors other than the new overseer. Speculations The selection of William Worrall over any planter or councillor for the overseer's post perhaps reflected the Company's preference for placing technical and managerial employees in direct charge of its property rather than relying on the elected or appointed planter class. Worrall, having always been employed in the Company's service, owed his livelihood and loyalty directly to the Company and could be expected to manage the plantation in the Company's interest without the divided loyalties of a man who held his own land and stock alongside the Company holdings. The arrangement preserved a separation between the management of Company property and the interests of the planter class. The use of the verb unliver in this minute, where the normal verb at the period was unlade or discharge, perhaps reflected a specifically maritime usage that had survived in the working vocabulary of the Company servants at the island. The term came down from older English shipping practice, where livery was the discharge of cargo from a vessel, and had been retained in the formal proceedings of the island council where in London it had given way to other forms. The persistence of the term marked the conservatism of the island's administrative vocabulary.
418	409	Worrall Overseer of the Plantations as aforesaid untill the Hon[ble] Compa[ny] shall send or appoint one for the said trust [...] that as soon as We shall see his behaviour in the said charge we appoint him his Sallary. Sam[^l] Jessey having behaved himself very well[...] since our Arrivall here it is also. Ordered That an Advertizement be Publisht that the Garrison do come [...] reckon in the Stores within ten Days from the Date hereof. Ordered That M[^r]s Mary Mashborne Widow [...] Relict of Cap[t] Edward Mashborne Dec[d] be allowed to continue at the Plantation House till she can provide her self with a convenient habitation or place to dwell at, [signatures] Antipas Toovy Margin Notes: Sam[^l] Jessey [...] at Hutts Sold[i]ers to Reckon M[^{rs}] Mashborne to Continue at Plant[at]io[n] House	The minute continued. William Worrall was to be put as overseer of the plantations until the honourable Company should send or appoint someone for the said trust. As soon as the council should see his behaviour in the said charge, his salary would be appointed. Samuel Pessey, having behaved himself very well since the council's arrival on the island, gave the council ground for a further order. It was ordered that he be continued to oversee the Hutts plantation and cattle, and the other property that ran on that side of the country, and that he give in an account thereof, as formerly, to William Worrall. The council further ordered that an advertisement be published requiring the garrison to come and reckon at the stores within ten days of the date of this order. The council also ordered that Mrs Mary Mashborne, widow and relict of Captain Edward Mashborne deceased, be allowed to continue at the plantation house until she could provide herself with a convenient habitation or place to dwell at. Margin notes recorded the matter as Samuel Pessey continued at the Hutts, soldiers to reckon, and Mrs Mashborne to continue at the plantation house. The minute was signed by Antipas Tovey. Interpretations The arrangement under which Worrall received the office of overseer without an immediate fixed salary, the salary to be appointed after the council had observed his behaviour in the charge, established a probationary period during which the new overseer would be tested in the role before any formal terms of remuneration were settled. The practice protected the Company

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			against being committed to a salary scale before the suitability of the man had been demonstrated, while giving Worrall the incentive to perform well in the expectation that a generous appointment would follow. The provisional structure of the appointment also reflected the council's awareness that the honourable Company in London might wish to send or appoint its own choice for the post in due course, in which case Worrall would step aside without any settled claim on the Company's funds. The continuation of Samuel Pessey at the Hutts plantation preserved the existing management of that portion of the Company's holdings while bringing it under the new overall supervision of Worrall. Pessey had appeared in the census of 21 March 1715 as the head of a household of seven whites and three slaves, but with no land or cattle entered against his name. His position as the working overseer of the Hutts plantation explained the absence of land in his own name and his recording of a substantial slave establishment without a corresponding acreage: he held no land but managed the Company's stock at the Hutts in return for his living. The council's reference to his good behaviour since their arrival fixed the time of his service to the present administration, indicating that he had been the overseer there throughout Pyke's tenure. The instruction that Pessey should give in his accounts to William Worrall, as formerly, established the chain of reporting between the two officers. Worrall stood as overall overseer of the Company's plantations; Pessey continued as working overseer of the Hutts under Worrall's authority. The structure created a two-tier management of the Company's plantation property, with the Company holdings sufficiently extensive to require a senior overseer above the working manager of each holding. The order requiring the garrison to come and reckon at the stores within ten days addressed the regular settlement of accounts between the Company stores and the individual soldiers and officers of the garrison. Each member of the garrison drew clothing, provisions and small stores from the Company stores against his wages, with the value of the goods drawn being set off against the wages payable at the periodic reckoning. The order set a deadline of ten days for the present reckoning, perhaps because the new administration of the plantation under Worrall required a clean closing of the existing accounts before the new books were opened. The order permitting Mary Mashborne to remain at the plantation house addressed the immediate housing problem created by her husband's death. As the wife of the third councillor, she had occupied the plantation house with him in his official capacity; with his death, the house became available for the new overseer and for the use of the Company. The council recognised that turning a widow out of her late husband's house in the immediate aftermath of his death would be both harsh and impractical, and gave her until she could find a suitable alternative residence. The accommodation was a courtesy of the council rather than a formal entitlement, with the qualification convenient habitation or place to dwell at giving the council the power to determine when she should remove if the matter dragged on. Speculations The decision to publish an advertisement requiring the garrison to reckon at the stores within ten days perhaps reflected a concern that some members of the garrison had been allowed to run up substantial debts at the stores without timely settlement during the period of Mashborne's illness and death. The third councillor had stood as the officer with particular responsibility for the stores accounts as part of his charge of the plantation, and his prolonged sickness over the three

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			weeks preceding his death of 31 March 1715 may have allowed the reckoning to fall behind. The new administration under Worrall could not properly take over until the existing accounts had been brought to a head. The contingent salary arrangement for Worrall perhaps reflected a deeper uncertainty in the council about the proper scale of remuneration for the new office. The post of overseer of the plantations had not been a separately salaried position before, since Mashborne had held it as part of his charge as third councillor and had drawn his salary in that capacity. By creating Worrall as a separate overseer without the councillor's rank or salary, the council was establishing a new office whose appropriate remuneration would have to be worked out by reference to the value of the trust and the labour required. The decision to defer the figure until performance had been observed gave the council a flexible basis on which to settle the salary later, neither pinning down too low a rate that would discourage Worrall nor committing to too high a rate without proof of his worth.

A consultation was held on Tuesday 12 April 1715 at the United Castle in James Valley. Present were Isaac Pyke, esquire, governor, with George Haswell, deputy, Matthew Bazett and Antipas Tovey. This being the first day the surf abated, the longboat was dispatched again for Sandy Bay. The governor mentioned this so that it might appear what great seas were sometimes experienced at the island, but especially at this time of year, since the great seas had now held nineteen days. The longboat had been unloaded with much difficulty by smaller boats. Samuel Price had demanded fifteen shillings the week and his diet, by virtue of a contract lately made with Captain Mashborne. On going through Captain Mashborne's papers, the council had found the following memorandum. The memorandum recorded the agreement with Price as two shillings and sixpence the day and his diet, to teach two boys to make shoes and tan leather. The council agreed that Price be continued for the present quarter, and that the governor be desired to observe his work and to consider whether he deserved that pay. Mr Bazett and Mr Tovey having been at Margin notes recorded the matter as the surf abated and how long continued, Samuel Price's demand, the agreement with him, and his work to be viewed. Interpretations The dispatch of the longboat to Sandy Bay on the first day the surf abated showed the resumption of the stone-carrying operation interrupted by the prolonged heavy weather noted in the consultation of 5 April 1715. The nineteen days of high seas, running from late March through to the second week of April, confirmed the council's earlier observation about the season of high seas at the end of March and the beginning of April. The minute thus closed the loop on the operational difficulty described in the earlier consultation, with the longboat returning to its work as soon as conditions permitted. The reference to smaller boats unloading the longboat with difficulty indicated that even when the surf abated at the landing, the discharge of the longboat itself required smaller craft to take the stone ashore through the residual swell. The dispute between Samuel Price and the council over the terms of his employment raised an issue created by the death of Edward Mashborne of 31 March 1715. Price claimed an oral agreement with the deceased councillor for fifteen shillings the week and his diet, while the surviving memorandum among Mashborne's papers recorded an agreement for two

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			shillings and sixpence the day and his diet. The two figures were broadly equivalent, since two and sixpence over six working days came to fifteen shillings the week, but the form of the agreement differed. Price's claim by the week implied entitlement regardless of working days, while the memorandum by the day implied payment only for days worked. The council found in the deceased's papers the written agreement and treated it as governing the relationship. The substance of Price's employment was to teach two boys to make shoes and tan leather. The arrangement was thus an apprenticeship of two slave or white boys under a master craftsman, with the Company supplying the apprentices and Price supplying the skill. The recovery of the trade of shoemaking and leather tanning on the island was important to the Company because the hides accumulated in the leather store at the plantation house, recorded by Haswell on 1 April 1715 at 25 sides, 54 hides and 16 goat skins, would otherwise have to be shipped to England for tanning or sold off at low value. The training of island boys in the trade would convert the raw hides into finished shoes for the use of the establishment. The decision to continue Price for the present quarter while the governor observed his work showed the council applying the same probationary principle that had been adopted for William Worrall on 5 April 1715. The governor was to assess whether Price's actual performance justified the terms of his agreement, and the question of his continued employment would be settled at the end of the quarter based on observation rather than on Price's own claims about his value. Speculations The discrepancy between Price's weekly demand of fifteen shillings and the memorandum's daily rate of two shillings and sixpence perhaps reflected an attempt by Price to convert the daily agreement into a weekly one in his own favour. Under the daily agreement, days lost to surf or to other interruptions would not be paid; under the weekly agreement claimed by Price, he would receive the same payment whether he worked five days or six in the week. The recent nineteen days of heavy weather, during which much of the establishment's outdoor work would have been suspended, perhaps had given Price the practical motive to recast the agreement in terms that would secure his wages against further weather interruptions. The council's preservation of the daily basis through the recovered memorandum protected the Company's interest against this informal upgrading of the terms. The training of two boys to make shoes and tan leather perhaps formed part of a wider Company strategy to reduce dependence on imported manufactured goods by developing skilled trades on the island. The accumulated leather stocks at the plantation house gave the raw material; the training of boys at the establishment of an experienced tradesman gave the labour; and the finished shoes and leatherwork would replace items previously imported from England. The investment in Price's salary over a quarter was the seed cost of establishing a local trade that would yield long-term savings to the Company. Whether the two boys were slaves of the Company or sons of the planter class would have determined the long-term effect, since slave apprentices would remain Company labour while planter apprentices would establish independent tradesmen on the island.

The minute closed with the direction Verte, signalling that the inventory ran on to the next folio. Interpretations The inventory taken by Bazett and Tovey gave effect to the order of 5 April 1715 requiring those two councillors to take an account of the household goods and Company stock at all the plantations. The combined heading of the new and old plantation house and Lufkins fixed the scope of the present inventory as covering three distinct holdings together, with the household goods listed in this and the following folios apparently distributed across all three. The new plantation house was the principal Company residence on the island, lately constructed for the third councillor and now in the hands of the widow Mary Mashborne by the order of the same consultation. The old plantation house was the earlier Company residence, now perhaps used as a subsidiary building or for the housing of overseers. Lufkins was the plantation of Stephen Lufkin, the small holding visited by Haswell on 1 April 1715 and producing 20 fowls and 16 chickens, suggesting that the Company maintained some goods at Lufkin's place under a contractual arrangement. The pewter ware listed gave the standard ground for a substantial household, with the gallon and quart pots used for ale and beer at table, the dishes and plates for the service of meat, the chamber pots for personal use, the bed pan for the warming of the beds, and the basons for hand washing and shaving. The 13 dishes and 45 plates indicated a table capable of serving fifteen to twenty persons at a single sitting, consistent with the entertainment of councillors, ships' captains and visiting officers at the plantation house. Pewter was the standard tableware of the period, an alloy of tin with smaller amounts of copper, antimony or lead, valued for its durability, its appearance when polished and its capacity to be re-cast when damaged. Wooden ware covered the working furniture and utensils of the kitchen and household. Deals were sawn planks of soft wood, typically pine or fir, imported from

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			northern Europe to England and onward to the island. The 56 deals listed were perhaps stocked timber rather than finished furniture, held for the building and repair of the plantation buildings. Crickets were low wooden stools for sitting at low tables or by the fire. The carpenter's bench, rolling pin, tray and cheese press together indicated active dairy and bakery operations at the plantation. The pair of yoakes were the wooden frames placed over the necks of oxen for harness work, paired in the standard arrangement for ploughing or carting. Upholstery ware covered the bedding and seating. The feather bed and feather bolster were the principal items of bedding, the bolster being a long pillow running across the head of the bed. The woollen bolster was a less luxurious alternative for a secondary bed. The cott and clasp cott were lighter beds, perhaps cots or trundle beds for servants or apprentices. The 31 old and new cane chairs were the standard seating of the period, made with woven cane seats over wooden frames, light and well suited to a warm climate. The substantial number indicated that the plantation house could seat a large company on formal occasions. Speculations The combined inventory of three holdings under a single heading perhaps reflected a deliberate choice by Bazett and Tovey to avoid the duplication of categories that would have arisen from listing each holding separately. The pewter, wooden ware and upholstery ware listed here were portable items that might be moved between the three properties according to need, and consolidating the count gave a true picture of the total Company stock without artificially fixing each item to a particular location. The inventory thus functioned as a control account of moveable goods rather than as a register of property at each specific holding. The presence of 31 old and new cane chairs in the upholstery ware perhaps reflected the cumulative purchase of cane furniture over several voyages, with new chairs added to replace those broken or worn out without the old being discarded. Cane chairs were produced in considerable numbers in the East Indies and were a standard return cargo in the homeward trade. The Company supplied its principal establishment on the island with this furniture as it arrived, building up a stock that could service both the plantation house and the entertainment of visitors from the homeward shipping.

		Butchers Steal 1 Cleavers 2 Saw 1 Pick Axes 8 Shovell 1 Axes 3 Mattocks 3 Hammer 1 Iron Ratt Trap 1 Verte Margin Notes: Ironmongery [...] Cattlary ware	4 pitch forks 1 fire shovel 1 butcher's steel 2 cleavers 1 saw 8 pick axes 1 shovel 3 axes 3 mattocks 1 hammer 1 iron rat trap The minute closed with the direction Verte, signalling that the inventory ran on to the next folio. Interpretations The ironmongery and cutlery ware listed here covered three distinct functional groups: the fireplace and kitchen apparatus, the precision and measurement tools, and the field implements for the plantation labour. The fireplace group comprised the iron dogs with brass heads, which were the firedogs supporting logs at the open hearth with decorative brass tops, the grid irons for cooking meat over the fire, the pair of racks for hanging joints before the fire, the spits for roasting on a turning rod, the pitch ladle for handling hot pitch, the flesh forks for lifting cooked meat from the pot, the iron meat pot for boiling, the yam pots for the cooking of the staple yam crop, the box irons and their heaters for pressing linen, the fire shovel and tongs for tending the fire, and the jack and weight for the mechanical turning of the spit by a falling weight. The arrangement showed a fully equipped kitchen and chimney, with hot work pursued at scale to feed the household and its visitors. The precision and measurement tools were marked by the pair of stillyards and pea, weighing 4 hundredweight 2 quarters 8 pounds. A steelyard or stillyard was a balance with unequal arms, where the goods to be weighed hung from the short arm and a single sliding counterweight, the pea, ran along the calibrated longer arm to give the balance. The weighing capacity of 4 hundredweight 2 quarters 8 pounds, or approximately 512 pounds, indicated that the instrument was designed for weighing heavy goods such as sacks of grain, casks of provisions or carcasses of beef. The instrument was probably the principal weighing apparatus of the plantation, used to verify the weights of stores delivered and consumed. The hand vice was for fine metalwork on small objects, the grindstone for sharpening tools, the butcher's steel for honing knives and the hand mall for driving stakes or wedges. The presence of a saw and hammer pointed to general carpentry capacity. The field implements comprised 31 hoes, 9 spades, 2 rakes, 4 pitch forks, 8 pick axes, 3 axes, 3 mattocks, 2 scythes and 2 gardener's shears. The 31 hoes formed the largest single category and reflected the principal labour tool of the slave population, used for the cultivation of yam, potato, plantain and other staple ground crops. A mattock was a heavy hand tool with a broad blade on one side of the head and a pick or adze on the other, used for breaking new ground and grubbing up roots. The 8 pick axes were the specialised tools for cutting into stone or hardened ground. The 2 scythes were the long-handled cutting tools for hay and standing grain. The single iron rat trap stood at the close of the list as a small but important item, since rats were a constant threat to provisions and to the standing crops of the plantation. The presence of even a single trap among the inventory indicated the active pursuit of vermin control on the Company's holdings. Speculations The 31 hoes against only 9 spades perhaps reflected the principal method of cultivation employed on the Company plantation. The hoe was the standard tool for

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			the working of ground crops in tropical and warm-climate plantations, used to break the surface, weed between rows and earth up the growing plants. The spade, by contrast, was the deeper-digging tool of European cultivation, used for trenching, the working of heavier soils and the preparation of new ground. The ratio of hoes to spades on the inventory suggested that the Company plantation followed the working method of the slave plantations of the Atlantic world, with the hoe as the principal implement and the spade reserved for specialised tasks. The recording of the precise weight of the stillyards and pea, at 4 hundredweight 2 quarters 8 pounds, perhaps reflected the standard practice by which a balance was identified not only by its name but by the weight of its own components. The figure given was the weight of the apparatus itself, included in the inventory because the iron of the stillyards represented a substantial metal asset that could be recovered or re-cast if the instrument were ever to be broken up. The plantation house held an investment in iron not only in its working tools but in the very apparatus by which other goods were measured.

Interpretations The continued cutlery ware listed pruning knives, case knives, forks and shaving knives, all small bladed implements used in the household or in light field work. Pruning knives served the cultivation of the orchards and the garden vines on the plantation, the careful trimming of fruit trees and grape vines to encourage productive growth. The set of shoemaker's tools connected back to the contract with Samuel Price of 12 April 1715 to teach two boys to make shoes and tan leather, providing the working tools by which the

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			apprenticeship would be conducted. The case knives were the small ordinary knives kept in cases for table service, distinct from the larger butchery and kitchen blades. The cooper's, tinker's, turnery and brazier's ware drew together the metal vessels of the kitchen, the dairy and the still house. The clerk used the word ditto loosely through this section, sometimes referring to the metal of the preceding item, sometimes to its type. The 2 ditto kettles with covers followed the brass stew pan and cover and were therefore brass kettles; the ditto skimmer and ladle followed in the same brass series. The 4 ditto troughs followed the 12 milk tubs and were therefore milk troughs with lead linings. The looseness of the ditto reference required care in reading the list, since the substance and the function of each item shifted in different directions through the section. The two stills, one large copper with head and one small, gave the plantation the capacity to distil arrack from sugar cane, fermented fruit liquors or other base materials. The large copper still with head was the principal apparatus of the operation, with the head being the upper vessel that captured the vapour rising from the boiler. The small still was perhaps for fine work or for the production of medicinal waters. The dairy equipment formed a coherent group within the inventory: the 3 milk skimmers for separating cream from milk, the 12 milk tubs for holding fresh milk to settle, the 4 leaded milk troughs for the cooling and storage of milk, the 2 churns for making butter, and the hair sieve for straining. The substantial scale of the dairy apparatus, with twelve milk tubs in active use, indicated daily milk production on a significant scale and the regular manufacture of butter for the establishment and the homeward shipping. The leaded troughs were wooden vessels with lead linings, the lead surface giving a hygienic and easily cleaned interior for the storage of milk, though carrying the long-term danger of lead poisoning recognised only later. The cooperage items comprised 7 tubs large and small, 3 piggins, 4 pales and 2 churns. A piffin was a small wooden pail with a single stave projecting upward as a handle, used as a drinking vessel or for the dipping of liquid from a larger container. A pale was the standard wooden pail, made of staves bound by hoops and equipped with a handle. The presence of these items as separate from the dairy equipment indicated their use in general water and provision handling around the household, fetching water from the wells and serving the slave quarters with their provision rations. The brass and tin household goods, from the warming pan with the broken handle to the four brass candlesticks, marked the standard of domestic furnishing maintained at the principal Company residence. The warming pan was a covered brass pan with a long handle, filled with hot coals and run between the sheets to warm the bed in advance of sleeping. The noting of it as having the handle broken indicated that the inventory was a faithful record of the state of the goods rather than a list of perfect items. Speculations The recording of the warming pan as having the handle broken, the brass kettles as old and one with a hole in it, and the lanthorn as old perhaps reflected the careful approach of Bazett and Tovey to the inventory work directed by the council on 5 April 1715. By marking the defects of individual items, the councillors protected themselves against any later claim that they had certified goods as serviceable that turned out to be worn or damaged. The detail also protected the successor management under William Worrall, since he could not be charged with the deterioration of items already recorded as defective at the moment of the handover.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			The substantial distilling apparatus represented by the large copper still with head and the small still perhaps formed the centre of an arrack production operation that supplied both the Company stores and the homeward shipping. The combination of dairy, brewing and distilling on the same plantation pointed to an integrated production system, with the milk converted to butter, the molasses or sugar cane converted to arrack, and the small still perhaps used for the rectification of the arrack or for the production of cordial waters from the island's fruits and herbs. The integrated operation gave the Company plantation the character of a small estate factory, producing finished goods from raw materials grown on the holding itself.

The combination of measuring instruments, glassware, seeds and bacon under a single residual heading reflected the practical needs of the inventory rather than any systematic classification. The mariner's compass and the buccaneer piece marked the maritime and military character of the establishment. A buccaneer piece was a small calibre musket or fowling piece of the kind used by the freebooters and privateers of the West Indies in the previous century, held perhaps as a defensive arm at the plantation house against runaway slaves, intruders or pirate landings. The mariner's compass at a country plantation house was an unusual item, perhaps salvaged from a wreck or kept for the surveying of land boundaries by means of bearings. The large new dial with minute hand was a clock face mounted on a wall, the minute hand being a relatively recent refinement that distinguished a quality

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			timepiece from the older single-hand clocks. The leaden sun dial was a fixed instrument set in the open air, marking the hours by the shadow of a gnomon. The presence of both a mechanical clock and a sun dial gave the plantation two independent means of timekeeping, with the sun dial used to set and verify the mechanical clock. The seeds preserved in the dry casks and the cases gave the Company's continuing investment in the introduction of new crops to the island. Clover seed was a forage crop important for cattle pasture, the seed brought out from England to establish improved pastures on the island ground. The seeds in the case were perhaps garden or kitchen seeds for vegetables and herbs, also imported from England to maintain the supply of fresh European vegetables on the island. The cheese weights of stone, three in number, were the calibrated weights used in the dairy to press fresh cheese, driving out the whey and consolidating the curd into a firm cheese. The connection with the milk tubs and churns of the earlier inventory entry confirmed the active dairy operation at the plantation house. The hogs and poultry count totalled 170 head of pigs across the categories of fattening hogs, sows, barrows, shoats and pigs. The three fattening hogs in the sty were beasts being brought to slaughter weight for an imminent killing. The 30 sows and 3 barrows formed the breeding stock; the 24 barrows were castrated males being fattened for the table; the 70 shoats were the half-grown pigs of the year; and the 40 pigs were the youngest litter. The total of 170 pigs represented a substantial expansion on the figures returned by Haswell on 1 April 1715 of 9 sows, 2 barrows and 51 shoats and pigs at the plantation house. The present figure perhaps consolidated all the pigs of the Company plantations into a single count, where Haswell's earlier figures had broken them out by location. The black cattle figure of 28 head, comprising 9 bulls, 4 cows, 3 calves, 3 heifers and 9 bullocks, was substantially lower than the count returned by Haswell on 1 April 1715 of 24 cows with their calves, 2 bullocks and 8 heifers at the plantation house alone. The present figure was perhaps a separate count of the working bulls and bullocks held in reserve, distinct from the breeding herd at the plantation house. The earlier inspection had also recorded 4 bulls in the Great Wood and 2 bulls on the Woody Ridge under the Hutts plantation, together with 2 bullocks at each site, making 8 head between the two upper sites. The figure of 9 bulls in the present inventory was close to but not identical with this earlier separate count. The 143 goats at Sandy Bay side matched exactly the figure of 143 goats returned by Haswell at Perkins' plantation on 1 April 1715, with the further 10 kids of the earlier count now perhaps grown into the main herd. Sandy Bay lay at the south-eastern coast of the island, the same windwardmost part from which the cut stone had been brought by the longboat in the consultation of 5 April 1715. The location of the goat herd at Sandy Bay confirmed the dedication of that part of the island to goat husbandry under Perkins' management. Speculations The keeping of clover seed in a dry cask, alongside garden seeds in cases, perhaps reflected a deliberate policy by the Company to introduce improved pasture grasses and garden vegetables to the island. The clover would have been intended for sowing on the cattle pastures to improve the carrying capacity of the ground, a practice newly adopted in English agriculture and being extended to Company holdings overseas. The seeds in the case represented the vegetable garden of the plantation house, perhaps including peas, beans, salad herbs and root vegetables for the table.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			The presence of some bacon among the other odd things, alongside the seeds and instruments, perhaps reflected the preserved meat held at the plantation house from the previous slaughter of fattening pigs. The bacon was cured pork that would keep without refrigeration in the cool stone larder of the plantation house, available for the table or for issue to the slave establishment as a meat ration. The recording of an unmeasured quantity as some bacon suggested that the inventory takers had not weighed the bacon but had simply noted its presence as a residual provision.

This was a true account taken on 12 April 1715. Signed by Matthew Bazett and Antipas Tovey. The governor, according to an order of council of 23 January last, gave the following account of Serjeant Fairfax and his opinion thereon as follows. Sergeant's request was as follows. Request: For two years and a quarter in perpetual duty in Governor Boucher's time at six pounds the quarter, which Governor Boucher said he would satisfy him for. Answer: Resolved to allow no pay, as double duty is a bad precedent. Request: For three quarters of a year since your worship's arrival, in which your worship was pleased to say you would see him satisfied for. Ordered as the answer: That he have his usual pay only. Request: For an alarm for the Mercury sloop. Allowed. Request: For three quarters of a year's salary not reckoned for. Ordered as the answer: To allow his pay according to the pay of the duty performed. The text continued under the heading To prevent inconveniency by the prejudice A margin note recorded the matter as Report about Serjeant Fairfax, with subordinate notations of Request and Answer running down the page. Interpretations The yam plantings recorded a substantial agricultural operation conducted across three of the Company plantations since 8 July 1714. The yam was the principal staple crop of the island slave population, a starchy root vegetable propagated by suckers, the small shoots that grew from the base of the parent plant. The figure of 200,000 suckers planted at three sites, including 100,000 at the Hutts, 90,000 at the Peake and 16,000 at Lufkins, indicated a deliberate and large-scale Company programme to expand yam cultivation. The crop fed the slave establishment and provided fresh provisions for the homeward shipping. The Peake referred to the high ground at the centre of the island, used for the cultivation of crops suited to cooler temperatures. The figure of 206,000 originally entered and corrected to 200,000 perhaps reflected the recovery of an arithmetical error in the totalling rather than a change of the underlying figures. The note that the council could not take account of the remaining cattle and goats because of wet and slippery weather acknowledged the practical limit of the inventory work. The conditions described were consistent with the heavy rains that often accompanied

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			the autumn season on the island, when the steep grass-covered ground became hazardous for the driving of stock. The council preferred to leave the remaining count incomplete rather than risk injury to men or beasts by attempting to bring the stock together in unsuitable conditions. The acknowledgement of the gap in the inventory perhaps protected Bazett and Tovey against later claims that they had certified the count of stock that had not in fact been examined. The report on Sergeant Fairfax addressed a separate matter brought before the council under an earlier order of 23 January 1715. Fairfax had submitted a request for payment under four heads, each addressed in turn by the council. The first head concerned perpetual duty performed in the time of Governor Boucher, two years and a quarter at six pounds the quarter. Perpetual duty was continuous service without the usual rotation of duty hours that allowed soldiers to rest between watches. Boucher had reportedly promised payment at six pounds the quarter, but the council refused the claim on the grounds that allowing double duty pay would create a bad precedent. The refusal protected the Company against future claims by other soldiers who might claim verbal promises of additional pay from earlier governors. The second head concerned three quarters of a year since the arrival of the present governor Pyke, during which Pyke had reportedly promised Fairfax he would be satisfied. The council ordered that Fairfax should have his usual pay only, declining to honour any informal promise of additional payment. The third head concerned a payment for an alarm raised for the Mercury sloop. An alarm was a special duty performed by a soldier in raising the warning of a ship's approach or other event requiring the calling out of the garrison. The council allowed this payment without comment. The fourth head concerned three quarters of a year's salary not reckoned for, perhaps representing arrears in the regular pay. The council ordered that Fairfax should be allowed his pay according to the duty he had actually performed. Speculations The systematic refusal of three of Fairfax's four claims, with only the alarm payment allowed, perhaps reflected the council's determination to bring the irregular payment practices of earlier administrations to an end. The two preceding governors mentioned by Fairfax, Boucher and the early period of Pyke, had reportedly made verbal promises of additional payment that were not supported by formal council orders. The present council was insisting on a return to the regular pay scales, declining to recognise side agreements that would create unfunded liabilities on the Company's books. The structure of the decision, with each claim individually examined and ruled upon, gave the council the means to dispose of Fairfax's case without conceding any general principle of supplementary payment. The recording of the Mercury sloop in connection with the alarm raised by Fairfax indicated the presence at the island of a smaller Company vessel, perhaps used for short voyages or for the carrying of messages, as distinct from the principal East India ships visiting the road on the outward and homeward passages. The sloop's arrival had warranted the calling out of the garrison through Fairfax's alarm, suggesting that the standing procedures of the island required the warning even of friendly Company shipping when it appeared in the roadstead unexpectedly.

That no notice should be taken of his often neglect in being off from his duty heretofore, if he for the future performed it. The following petition was presented to the council. To the worshipful Isaac Pyke, esquire, governor and council. Island St Helena. Edward Hollwell, soldier, who was constantly employed in writing in the honourable Company's service, presented the following petition. Hollwell set out that he was constantly employed in writing in the honourable Company's service as above. He prayed the council to consider the unavoidable and great charge he was at, namely three shillings the annum for lodging and twelve shillings the quarter for washing and other charges. He had no perquisites and only soldier's pay to support himself and defray his charges. He prayed the council to take the matter into consideration and to allow him such an additional salary as the council should think fit for his further encouragement. The petition was dated 12 April 1715 and signed by Edward Hollwell, with the closing form that the petitioner as in duty bound should ever pray. A margin note recorded the matter as Edward Hollwell's petition for an additional salary. Interpretations The conclusion of the Fairfax matter saw the council adopting a practical solution to the problem of perpetual duty by ordering a corporal to be posted alongside Fairfax, with the two taking turns and commanding the guard between them as the duty fell out. The arrangement removed the basis for any future claim of double duty pay by ensuring that the duty was shared rather than being borne by a single man. The council's further direction that no notice should be taken of Fairfax's previous neglect of duty, if he performed properly in future, gave the sergeant a fresh start while making clear that any continued laxity would be remembered. The Hollwell petition opened a separate matter, raising the question of supplementary payment for a soldier seconded to clerical work. Edward Hollwell was a soldier on the standard establishment, drawing soldier's pay, but had been assigned to writing duties in the Company's service. The work was a clerk's work but the pay was a soldier's pay. The petition set out the practical disadvantage of the arrangement: Hollwell had to bear charges for lodging at three shillings the annum and twelve shillings the quarter for washing and other expenses, all out of a soldier's wage that was not designed to cover such items. The annual lodging charge of three shillings was a notional figure for the rent of a room at the establishment, while the quarterly washing charge of twelve shillings reflected the more substantial cost of keeping clothing in a presentable state for daily clerical work. The petition introduced the concept of perquisites, which Hollwell stated he had none of. Perquisites were the customary side payments and gratuities that attached to particular offices in the Company's service, such as the small fees paid by ship captains to the secretary for the drawing up of papers or the customary share of small stores attached to certain trusts. A clerk in the secretary's office or a similar regular position carried perquisites that supplemented the formal salary; a soldier on writing duty had none of these supplementary entitlements, and stood at a disadvantage compared with other clerical employees. The form of the petition followed the standard pattern of submissions to the council, with the petitioner setting out his service, his expenses and his lack of customary supplements before asking for additional payment. The closing formula of being in

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			duty bound to pray for the council's favour was the conventional close of such applications. Speculations The recourse to a soldier rather than a free employee for clerical duties perhaps reflected the limited availability of qualified clerks at the island. The Company's establishment at the secretary's office and the senior offices was small, and additional writing work that arose from time to time had to be met by drawing soldiers with the necessary literacy and penmanship out of the garrison. The arrangement saved the Company the cost of bringing out a separate clerk from England, but created the kind of pay anomaly that Hollwell's petition now raised. The petition was thus a request not so much for additional pay as for the recognition that the work performed exceeded the soldier's role for which the pay was designed. The specific figures cited by Hollwell in his petition gave a useful measure of the costs of a single man living at the establishment. The annual lodging charge of three shillings and the quarterly washing charge of twelve shillings, when annualised, came to forty-eight shillings the year on washing alone, plus three shillings for lodging, plus other unspecified charges. The total cost of basic subsistence above the basic ration was thus perhaps three pounds the year on documented charges alone, against which a soldier's regular pay was set. The petition gave the council a clear quantitative basis for considering the request, an unusually specific approach that perhaps reflected Hollwell's clerical training in setting out arguments in numerical form.
426	417	Ordered That his Sallary be from the 25 day of March 1715 Twenty Pounds p[er] ann[um] Island S[t] Helena To The Worsh[i]p Isaac Pyke Esq[r] Govern[or] [...] and Council The most Humble Petition of W[m] Portley Marshall Humbly, Shewth, That whereas yo[r] Petition[r] haveing been Employed as Marshall for these two years last past [...] haveing Received nothing for his trouble most Humbly begs that your Worsh[i]p [...] Council will be Pleased to allow him the usuall benefitts, or what yo[r] Worsh[i]p [...] Council shall think convenient, thereby as to make his demands before he letts any body goe out of his Custody, And yo[r] Petition[r] as in Duty bound shall Ever Pray. Island St Helena. To the worshipful Isaac Pyke, esquire, governor, and council. The petition of William Portley, marshal, was submitted. Portley set out that he had been employed as marshal for these two years last past, and having received nothing for his trouble, humbly begged that the council would allow him the usual benefits, or what the council should think convenient, thereby to make his demands before he let anybody go out of his custody. The petition closed with the form that the petitioner as in duty bound should ever pray, and was signed by William Portley. The council referred the petition to the next consultation day for further consideration. Island St Helena. To the worshipful Isaac Pyke, esquire, governor, and council. The petition of Richard Gurling, James Greentree and Jonathan Doveton, executors to Robert Leach deceased, was submitted. The petitioners set out that, being now (as well as for some time past) very desirous to make up, adjust and clear accounts with all persons in order of completing the matter and bringing in an inventory of the said Robert Leach's estate, they humbly moved that recourse might be had to the council books to be fully informed what part Margin notes recorded the matter as allowed twenty pounds, William Portley the marshal requesting his fees, referred, and Robert Leach's executors desiring accounts. Interpretations The grant of twenty pounds the annum to Edward Hollwell, with effect from 25 March 1715, established a clear annual salary for the clerical work he had been performing in his soldier's capacity. The figure represented a substantial uplift on the soldier's basic pay, recognising the value of literate clerical labour at the island and resolving the anomaly described in his petition of 12 April 1715. The choice of 25 March as the starting date placed the new salary at the opening of the conventional accounting year, allowing the increase

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			to be incorporated cleanly into the annual budget of the establishment. William Portley's petition raised a different question. Portley had appeared in the census of 21 March 1715 as marshal, the executive officer responsible for the service of warrants and the management of prisoners. His present petition stated that he had received nothing for his trouble over the past two years, asking the council to allow him the usual benefits or such other compensation as it should think proper. The phrase about not letting anybody go out of his custody before they paid his demands pointed to the standard practice by which a marshal recovered his fees from prisoners as they were discharged. The fees were paid by the prisoner himself or his bondsmen as a condition of release, with the marshal retaining the right to hold the prisoner until the fees were paid. Portley's claim that he had received nothing in two years suggested that either no prisoners had been discharged in that period, or that the practice of taking fees on discharge had not been authorised by the council during his tenure. The reference of the matter to the next consultation day allowed the council to consider what scale of fees should be allowed and how they should be collected. The petition of Gurling, Greentree and Doveton as executors to Robert Leach raised a third type of question, namely the settlement of the deceased planter's estate. Robert Leach had not appeared by name in the census of 21 March 1715, indicating that he had died before that return was taken. His three executors were all substantial planters of the island. Gurling and Doveton had been recorded in the census, with Doveton holding 151½ acres and forty head of cattle and Gurling 137 acres and twenty-four head of cattle. Greentree had been recorded with 31 acres and five head of cattle. The three formed a respected committee for the management of Leach's estate, with their combined standing in the planter community giving the executors the authority to deal with claims and counterclaims on the estate. The executors' application sought access to the council books for the purpose of determining the standing of the deceased planter against the Company. The Company books recorded both debts owed by the deceased to the Company stores and any sums due to him from the Company for goods supplied or services rendered. Without access to these records, the executors could not produce a complete inventory of the estate or settle the claims of creditors and beneficiaries. The application reflected the standard process by which the affairs of a deceased planter were wound up at the island, with the executors required to render a full account before any distribution of the estate could be made. Speculations The setting of Hollwell's salary at twenty pounds the annum perhaps reflected the council's calculation of what was required to retain his services as a clerk. His soldier's pay would have been substantially below this figure, and the increase to twenty pounds brought him into line with the lower salaried positions in the Company's civil establishment. The council was thus effectively reclassifying Hollwell from a soldier on detached duty to a clerk on a salary, though without formally moving him out of the garrison. The arrangement gave the Company the advantage of retaining his services without committing to a permanent civil appointment that might be difficult to reverse if the clerical workload should decrease. The two-year period over which Portley had received no fees as marshal perhaps reflected a deliberate policy by the previous administration not to charge prisoners on discharge, perhaps in response to complaints that the practice imposed an additional

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			financial burden on those already convicted and punished. The present council's willingness to reconsider the question, by referring it to the next consultation day rather than refusing it outright, suggested that the matter was being examined afresh in the light of the council's broader review of the island's administration that had been running through the present series of consultations.
427	418	of French[s] Orphans Estate appertains to said Leach in Right of his Widow being one of the said Orphans and that yo[r] Worsh[i]p [...] Coun[c]il will be pleased to Adjust y[e] Same Jon[a] Doveton on behalf of himself Humbly prays that his former Petition Relating to y[e] Estate of Rich[d] Leach an Orphan may be Examined and that you'll be pleased to grant him his part thereof or the whole Sum for which he'll be Accountable to y[t] Rest that has any Claim thereto, and in such case is willing to give Security for the same if herrafter any Lawfull Demand be made, And as in Duty bound shall Ever Pray [...] April y[e] 12: 1715 James Greentree Jon[a] Doveton To The Worship[ll] Gov[r] [...] Council the Humble Petition of Rich[d] Swallow Shewth That whereas yo[r] Petition[r] being at this time under a great Restraint for the Sum of Fifty Pounds Creditt[t] in the Hon[ble] Companys Stores, humbly begs yo[r] Worship [...] Council will be pleased to grant the same most of the Persons to whom yo[r] Petitioner is design[d] to transfer the Creditt[t] being in Debt to the Hon[ble] Compl[any]: your Petitioner only desiring Six months time for the Payment[s] of the same [...] is willing to give any Security w[ch] shall be by yo[r] Worship [...] Council Deem[d] sufficient in case any Disaster should befall yo[r] petition[r] Who shall always Pray as in Duty bound, Rich[d] Swallow Island S[t] Helena James Valley 12[th] April 1715 Margin Notes: Soll[i]d the[y] Do Examine y[e] Same: That the [...] Do Examine the Council books [...] report what he found therein Relating to Rob[t] Leach [...] French[s] Orphans Estate [Ordered][?] Shewth Rich[d] Swallows requ[est] for 50 [...] Cr[edit] Island S[t] Helena James Valley 13[th] April 1715	The petition continued. Part of French's orphans' estate appertained to the said Leach in right of his widow, being one of the said orphans, and the council was prayed to adjust the same. Jonathan Doveton, on behalf of himself, humbly prayed that his former petition relating to the estate of Richard Leach, an orphan, might be examined, and that the council would be pleased to grant him his part thereof or the whole sum, for which he would be accountable to the heir that had any claim thereto, and in such case was willing to give security for the same if hereafter any lawful demand should be made. The petition closed with the form that the petitioners as in duty bound should ever pray, dated 12 April 1715 and signed by James Greentree and Jonathan Doveton. A sideways margin note recorded the council's resolution. The council ordered that William Portley should examine the council books and report what he found therein relating to Robert Leach and French's orphans' estate. To the worshipful governor and council. The petition of Richard Swallow was submitted. Swallow set out that he was at this time under a great restraint for the sum of fifty pounds credit in the honourable Company's stores. He humbly begged the council to grant the same, most of the persons to whom he was designed to transfer the credit being indebted to the honourable Company. The petitioner desired only six months time for the payment of the same, and was willing to give any security as should be by the council deemed sufficient in case any disaster should befall the petitioner. The petition closed with the form that the petitioner as in duty bound should ever pray, and was signed by Richard Swallow. The petition was dated Island St Helena, James Valley, 12 April 1715. Margin notes recorded the matter as Robert Leach and French's orphans' estate, with the further notation of Richard Swallow's request for fifty pounds credit. The sideways marginal entry recorded the order that William Portley should examine the council books and report on the matter. Interpretations The Leach estate proved to be intertwined with the French orphans' estate, the connection arising through marriage. Robert Leach's widow had been one of William French's orphans, and she carried into her marriage with Leach her share of the French inheritance. With Leach now dead, his widow's share of the French estate had to be sorted out from the Leach property proper, since the French orphans' estate stood as a separate trust managed under the council's oversight. The petition acknowledged this complexity and asked the council to adjust the accounts to give a clear picture of the two estates. The arrangement showed how the inheritance of a single orphan continued to affect the settlement of an estate two marriages later, with the original Company trust over the French children's property surviving the marriages and deaths of the heirs. Jonathan Doveton's separate petition addressed the estate of Richard Leach, an orphan, where Doveton had a prior interest. His willingness to give security against any later lawful demand showed the standard practice by which an interested party could obtain immediate

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			payment from an estate by giving a bond against any future claimant who might appear with a better right. The bond protected the estate against the risk of paying twice, since any later claimant would proceed against Doveton's bond rather than against the estate itself. The use of bonds for this purpose was a fundamental tool of estate administration in the period. The council's resolution to send William Portley to examine the council books and report on the Leach and French matters placed the marshal in the role of clerical investigator. The order made practical use of Portley's office, since the marshal had standing access to the council records as part of his duties and could be sent through the books to extract the relevant entries without the council itself having to spend its time on the search. The use of Portley in this role perhaps also reflected the resolution of his own petition referred at the consultation, with the council giving him meaningful work to justify his salary while it considered the question of his fees. Richard Swallow's petition for fifty pounds credit at the Company stores raised a different commercial question. Swallow proposed to obtain credit at the stores not for his own use but for the purpose of transferring the credit to other persons who were indebted to the Company. The arrangement would have functioned as a circular settlement: Swallow would draw fifty pounds in goods or credit from the stores, transfer the goods or credit to his creditors among the planter community, and those creditors would then use the goods or credit to settle their own debts to the Company stores. Swallow himself would be liable to repay the fifty pounds to the Company over six months, against security to be approved by the council. The mechanism resolved a chain of mutual debts by inserting a fresh credit at the head of the chain, with Swallow as the intermediary taking responsibility for the eventual repayment. The structure depended on the underlying creditworthiness of Swallow himself and on the willingness of the council to support such a credit arrangement. The Company stores normally operated on a cash basis, with goods being delivered against immediate payment or against a soldier's or planter's running account at the stores. Swallow's proposal asked the council to permit a one-off departure from the cash basis to clear a particular set of related debts. The security offered against the credit, and the six months term proposed for repayment, would have to be set against the Company's normal stock turnover and cash position at the stores. Speculations The intermarriage of the Leach family and the French orphans, with one of the French orphans having married Leach and contributed to his estate, perhaps reflected the standard pattern of marriage among the island's planter class. The small size of the white population, recorded in the census of 21 March 1715 as 405 in the garrison and 179 in the named planter households, gave a limited pool of potential marriage partners, and inheritances from earlier orphan estates moved between families through marriage in successive generations. The administrative complexity that arose for the executors had to do with separating the property that had come to Leach by marriage from the property he had built up in his own right, a separation that the council was now being asked to adjust. The structure of Swallow's proposal perhaps reflected a wider pattern of credit at the island in which a substantial planter could function as a clearing house for the smaller debts of his neighbours. By taking on a single large credit at the Company stores and transferring it onward to settle multiple smaller debts, Swallow could consolidate the obligations of several planters into a single repayment over six months. The

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			arrangement gave the smaller planters an immediate discharge of their store debts at the cost of becoming indebted to Swallow rather than to the Company. The mechanism reflected the limited circulation of cash at the island, where settled credit relationships between planters often substituted for the actual movement of money.
428	419	Ordered That this Credit[t] be transferre[d] to Richard Swallow He giving Bond to repay the same w[i]th usuall Interest within one Year. Ordered That this foll[owing] Advertizement be published [...] Island S[t] Helena By the Worsh[i]p[full] the Govern[r] and Council An Advertizement These are to give Notice to all the Inhab[i]tants Freeholders of this Island that they meet (as usuall) on Monday next the 18[th] Instant at the Country Church to make choice of Four proper persons for Church wardens [...] the like number for overseers of the Highway for the Year Ensueing and to Returne the Persons names so chosen to the Govern[r] [...] Council the Day following by the hands of the o[u]l[t?] Church wardens in order to their appointing two out of Each Four persons so chosen [...] returned. Sign'd by Order of Gov[r] [...] Council United Castle James Valley 13: April 1715 Antipas Tovey Sec[retary] Verte Margin Notes: Granted upon bond Island S[t] Helena To Choose Parrish officers United Castle James Valley 13[th] April 1715	The council ordered that this credit be transferred to Richard Swallow, he giving bond to repay the same with usual interest within one year. The council further ordered that the following advertisement be published. By the worshipful the governor and council. Island St Helena. An advertisement. Notice was given to all the inhabitants and freeholders of the island that they were to meet as usual on Monday next, the 18th instant, at the country church, to make choice of four proper persons for church wardens and the like number for overseers of the highways for the year ensuing. They were to return the names of the persons so chosen to the governor and council the day following, by the hands of the church wardens, in order to their appointing two out of each four persons so chosen and returned. The advertisement was signed by order of the governor and council, by Antipas Tovey, secretary, at the United Castle, James Valley, 13 April 1715. Margin notes recorded the matter as granted upon bond, with a further notation that the advertisement was to choose parish officers. The minute closed with the direction Verte, signalling that the matter ran on to the next folio. Interpretations The grant of credit to Swallow on a bond bearing usual interest within one year settled the financial proposal raised in his petition of 12 April 1715. The arrangement extended the original six month proposal to a full year, perhaps reflecting the council's view that the chain of debts being cleared through Swallow's intermediation would take longer than six months to work through. The reference to usual interest established that the bond would bear the standard rate prevailing at the island for credit transactions of this kind, which would be the rate fixed by Company practice for advances from the stores. The bond itself was a formal instrument under Swallow's hand acknowledging the debt to the Company and securing repayment of principal and interest by a specified date. The advertisement for the election of church wardens and overseers of the highways established the regular annual cycle of parish government at the island. The system followed the English parish administration, with churchwardens elected by the inhabitants and freeholders to manage the affairs of the country church and overseers of the highways responsible for the maintenance of the island's roads and tracks. The meeting was to be held at the country church on Monday 18 April 1715, with four candidates elected to each office and the names returned to the council. The council then exercised its power to appoint two out of each four to actually serve, giving the freemen the right of nomination but reserving to the council the final choice. The arrangement balanced popular participation against the council's overall supervision of the island's affairs. The use of the country church as the place of meeting for the parish election connected the parish administration to the religious establishment of the island. The country church stood at some distance from the principal settlement of James Valley, in the inland district where the planter holdings were concentrated. The location made the church accessible to the planter freeholders and inhabitants who were the principal

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			voters, while marking the rural and agricultural character of the parish electorate. The role of the existing churchwardens in returning the names of the persons chosen to the council the day following established a formal chain of communication between the parish assembly and the council. The outgoing wardens, having presided over the election as the principal lay officers of the parish, carried the names to the United Castle for the council's appointment. The arrangement gave a measure of formal dignity to the proceedings and provided the council with a verified report of the parish's choice. The signature of the advertisement by Antipas Tovey as secretary, by order of the governor and council, marked the formal publication of the notice. As the junior councillor, Tovey carried the responsibility for the actual drafting and publication of council notices and advertisements, the seniority of the office holders being recognised in the order of the consultation but the practical clerical work falling on the most junior. Speculations The setting of a full year for the repayment of Swallow's credit, against the six months proposed in his petition, perhaps reflected the council's recognition that the consolidation of multiple smaller debts into a single larger debt would take time to work through to actual repayment. The smaller planters whose debts Swallow was clearing through the arrangement would themselves need time to bring in their crops, sell their cattle to the homeward shipping and turn their assets into the means of repaying Swallow. The longer term gave the underlying chain of credit a workable timetable, against which the additional interest cost was the price of the extended accommodation. The election of four church wardens and four overseers of the highways, with the council choosing two out of each four to actually serve, perhaps reflected a deliberate Company policy of separating popular nomination from final appointment. The arrangement allowed the inhabitants and freeholders the satisfaction of choosing their candidates, while giving the council the ability to exclude any candidate whose appointment might be disagreeable to the Company. The two-stage process was particularly useful in a small community where personal rivalries might produce factional voting; the council could intervene to ensure that the eventual appointees were acceptable to all sides without overruling the popular nomination outright.
429	420	The two following Persons viz[t] John Orchard [...] Lewis Latour had Lycence granted them as followeth viz[t] Island S[t] Helena I Do hereby give leave [...] Lycence to you Lewis Latour of the said Island Montross to keep a Comon Victualling House and to sell Arrack, Brandy, Punch, Wine, or any other sort of Strong Liquors w[i]th Sugar [...] Tobacco in the House you now Dwell in as the signe of the Welch Harp in Southwark Street, from the 25[th] of March 1715 to the 25[th] of march next Ensueing the Date hereof 1 Provided you always duly [...] truly do keep good orders times [...] seasons in your House, not Suffering any Person or Persons to Fight oe[r] Quarrell there. Island St Helena. The council gave leave and licence to Lewis Latour of the island, montross, to keep a common victualling house and to sell arrack, brandy, punch, wine or any other sort of strong liquors, with sugar and tobacco, in the house he now dwelt in, at the sign of the Welsh Harp in Southwark Street, from 25 March 1715 to 25 March next ensuing the date hereof. The licence was granted on the following conditions. First, he was always duly and truly to keep good orders, times and seasons in his house, not suffering any person or persons to fight or quarrel there. Particularly and more especially on the Lord's day, he was to take strict care not to suffer any person or persons to be tippling in the house in time of divine service, and to permit no person who did not lodge in the house to continue there after the taptoo had beat. Secondly, he was to provide a dinner every day in the week in time of shipping at the hour of twelve for six men at the least, who should pay no more than twelve pence for their ordinary.

		3 Also in every bowl of Punch w[ch] shall contain three pints you are to putt in one pint of Arrack with such other necessary Ingredients as shall be required [...] to take no more than two Shillings for it 4 You shall permitt no Islanders nor people of the Garrison to continue Tipling in your house so as to have any unreasonable or Margin Notes: Island S[t] Helena Lycence for Retailing Strong Drink Conditions.	Thirdly, in every bowl of punch, which should contain three pints, he was to put in one pint of arrack with such other necessary ingredients as should be required, and to take no more than two shillings for it. Fourthly, he was to permit no islanders nor people of the garrison to continue tippling in his house so as to have any unreasonable or Margin notes recorded the matter as Licence for retailing strong drink, with the subordinate notation of Conditions, numbered 1 through 4 down the margin. Interpretations The licence granted to Lewis Latour gave him formal authority to operate a public victualling house at the established trade premises known as the Welsh Harp in Southwark Street. Latour had appeared in the census of 21 March 1715 as a single white man holding 15 acres of land entirely on leave, with no cattle and no other household. His designation as montross marked him as a junior artilleryman of the garrison, but the licence permitted him to combine that role with the keeping of a victualling house, a common arrangement at the island where soldiers supplemented their pay through licensed trade. The Welsh Harp at the sign of which Latour's house was identified gave the establishment a recognised public name in the manner of English taverns. The choice of Welsh Harp as the sign perhaps reflected Latour's own origin, since the name Latour suggested French Huguenot or Channel Island background rather than Welsh; the sign may have been inherited from a previous keeper or chosen for its general suggestion of a respectable public house. Southwark Street was the principal street of the lower settlement, named for the London borough of Southwark which was famous for its inns and taverns. The first condition addressed the social order at the establishment. The licensee was to keep good orders, prevent fights and quarrels, and especially to enforce the observance of the Lord's day by not allowing tippling during divine service. The reference to taptoo or tattoo was the military drum signal sounded at night to require soldiers to return to their quarters; persons not lodging in the house were to depart by that hour, leaving only resident lodgers to remain. The arrangement combined the standard English alehouse regulation with the specific military discipline of the garrison. The second condition imposed a service obligation for the benefit of the visiting shipping. In time of shipping, that is when ships were at anchor in the road, the licensee was to provide a dinner every day at noon for at least six men, the men being able to dine for no more than twelvecence each. The ordinary, as the fixed-price meal was known, was a recognised institution at English inns, where a set meal at a set time was served at a set price. The regulation ensured that ships' officers and other visitors had a reliable place to eat at a known price during their stay at the island, supporting the broader Company interest in the smooth handling of the visiting shipping. The third condition fixed the recipe and price of the principal mixed drink. A bowl of punch was to contain three pints, with one pint of arrack and the remainder made up with other necessary ingredients such as water, sugar, lemon juice and spices. The fixed price was two shillings the bowl, giving the customer a known charge for a known measure and recipe. The regulation prevented the watering down of the spirit by unscrupulous licensees and protected the customer against arbitrary pricing. The fourth condition addressed the social problem of habitual tippling by inhabitants and members of the garrison. The licensee was not to permit persons of either group to continue drinking in his house to an unreasonable degree. The provision protected the productive labour of both the planter community and

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			the garrison against the social effects of excessive drinking at the licensed houses. Speculations The detailed prescription of the punch recipe perhaps reflected the Company's concern that the arrack supplied to the island, in part from the Company's own production at the plantation house still recorded in the inventory of 12 April 1715, should be sold at a fair concentration to the consumer. By fixing one pint of arrack in three pints of finished punch, the council established a one-third spirit content as the standard. The fixed price of two shillings against this composition gave the council a means of checking actual practice, since any licensee selling a weaker punch at the same price could be detected by sampling. The regulation thus protected both the consumer against adulteration and the Company against the diversion of its arrack to private profit by the licensees. The requirement to feed six men in time of shipping perhaps reflected a particular concern that ships' crews coming ashore should have proper victualling available at known prices. Without such regulation, licensees might raise their prices sharply when shipping was in the road and the demand was high, taking advantage of the captive market of seamen with money to spend. The fixing of the ordinary at twelvepence ensured that the visiting trade was not exploited and that the goodwill of ships' officers towards the island establishment was maintained. The condition served the Company's broader interest in the efficient turnaround of its shipping at the island, an interest already discussed at length in the consultation of 5 April 1715.
430	421	or Extravagant Reckoning to become due at one time, 5 You shall not suffer any of the Garrison to Game in your House nor trust any one for Liquor, under Perrill of looseing the Debt, 6 You shall not trade with nor Entertaine any Blacks on any pretence whatsoever, 7 You are to buy your Arrack and what else you Vend by Vertue of this Lycence out of the Hon[ble] Companys stores, 8 Lastly and all such further Orders [...] Instructions as you from time to time shall receive from me you are to Duly observe [...] keep on Penalty not only of Forfeiting this Lycence but of such other fine as by the Law of England may be imposed on you for y[e] Demerritt, Given under the Seal of the Hon[ble] The Lords Proprietors [...] Sign[d] with my[...] hand this 13[th] Day of April A[nno] Dom 1715/ Isaac Pyke Verte	The fourth condition continued, that he was not to allow such tippling as would cause any unreasonable or extravagant reckoning to become due at one time. Fifth, he was not to suffer any of the garrison to game in his house, nor to trust any one for liquor, under penalty of losing the debt. Sixth, he was not to trade with nor entertain any blacks on any pretence whatsoever. Seventh, he was to buy his arrack and what else he vended by virtue of this licence out of the honourable Company's stores. Eighth and lastly, all such further orders and instructions as he should from time to time receive from the governor he was to duly observe and keep, on penalty not only of forfeiting this licence but of such other fine as by the law of England might be imposed on him for the demerit. The licence was given under the seal of the honourable the lords proprietors and signed with the governor's hand on 13 April 1715. It was signed Isaac Pyke. The page closed with the direction Verte, signalling that the matter ran on to the next folio. A small mark of J.L. appeared in the margin. Interpretations The fifth condition addressed two distinct social problems among the garrison. Gaming, that is gambling at cards, dice or other games of chance, was a recognised disciplinary problem in any military establishment, and the council had taken steps in earlier consultations to prohibit gaming among the soldiers. The prohibition on trusting any one for liquor, under penalty of losing the debt, sought to prevent the accumulation of drink debts that soldiers and others could not actually pay. A licensee who extended credit for liquor could not afterwards sue the debtor for payment, since the licence itself withdrew the legal protection that would normally support such a claim. The condition thus shifted the entire risk of credit drinking onto the licensee, giving him a powerful incentive to insist on payment in cash.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			The sixth condition prohibited any trade or entertainment of blacks at the licensed house. The provision reflected the deliberate Company policy of preventing the slave population from gathering at public houses, both because gatherings of slaves were perceived as a security threat to the establishment and because the consumption of strong drink by slaves was considered to undermine their working capacity. The prohibition applied to any pretence whatsoever, removing any possibility of evasion through nominal trading or social entertainment. The condition was a sharp restriction on the licensee's business, since slaves formed a substantial portion of the island's population and their exclusion narrowed the available market. The seventh condition required Latour to buy his arrack and other licensed goods from the Company stores. The arrangement reinforced the Company's monopoly position as the sole wholesale supplier of strong drink to the licensed retail trade. The Company plantation produced arrack at the still recorded in the inventory of 12 April 1715, and additional supplies were imported from India by the Company's shipping. By requiring all licensees to source their stock through the Company, the council both secured the Company's wholesale margin and ensured that the strength and quality of the licensed drink could be controlled at the source. The eighth and final condition placed Latour under a general duty to observe any future orders that the governor might issue, with the threat of both forfeiture of the licence and additional fines under the law of England. The reference to the law of England as the standard for the imposition of fines fixed the legal framework of the licence within the broader system of English statute and common law applicable at the Company's overseas establishments. The provision gave the governor a continuing regulatory authority over the licensed trade, allowing the council to respond to new problems without having to redraft the licence each time. The signature of the licence by Isaac Pyke as governor, under the seal of the honourable the lords proprietors, marked the formal authority by which the licence was granted. The lords proprietors were the Court of Directors of the honourable Company in London, who held the proprietary rights to the island and whose seal was applied to formal grants of privilege at the establishment. Speculations The requirement to buy all arrack from the Company stores perhaps reflected a deeper purpose than the simple maintenance of the wholesale monopoly. The Company's own arrack production at the still recorded in the inventory of 12 April 1715 was probably limited in scale, and the requirement that licensees buy from the Company stores ensured that the still's output had a guaranteed market. The arrangement gave the still a commercial outlet that supported its continued operation, while preventing private importation of arrack from passing ships that might have undercut the Company price. The condition thus protected both the Company's production at the plantation and its wholesale margin on imported supplies. The strict prohibition on trade or entertainment of blacks at the licensed house perhaps also served a specific purpose in preserving the Company's plantation labour force from the demoralising effects of drink. The 302 slaves of the Company's establishment, recorded under the officers and soldiers in the census of 21 March 1715, formed the principal labour force at the plantation house and the other Company holdings, and any practice that allowed them to spend their leisure hours drinking at licensed houses would have undermined their working capacity. The same applied to

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			the slaves of the planter community, whose labour the planters themselves depended upon. The exclusion of blacks from the licensed trade thus protected the productive capacity of both the Company and the planter holdings.
431	422	The Warrant to the Overseers of the High Ways as Followeth, viz[t] Island S[t] Helena You Jn[o] Robinson [...] Sutton Isaack Jun[r] Freehold[ers] haveing bin long since chosen Overseers of the High Ways in w[ch] Office you continued y[e] Year 1714 without haveing performed the same which Office you are now hereby required carefully and dilligently to Exxecute and that you may the better and more impartially perform the same hereunto is a List annexed of all the Inhabitants (except such as are in the Hon[ble] Companys Service) and of what Men Slaves each Person hath, These are therefore in his Majesties Name to Will [...] Require you said John Robinson [...] Sutton Isaack Jun[r] to cause all Persons (both themselves and Blacks) heirein Mentioned to work two Days at the least in mending makeing and Repaireing all such High ways as are needfull [...] necessary to be done, as also all Hills [...] bridges and if any Person or Persons after due warneing by you or either of you, shall absent himself and both not come to work, and send his black or Blacks as aforesaid on such Days as by you shall be appointed then you are to put in the absent Persons room some other man white or Black as you can Hire and such absenting white man for himselfe or his black or Blacks or both shall forthwith repay you such Price or Prices as you shall pay or agree to Pay to such whites or their blacks as you shall hire to work in their place or stead and if any person Defaulter as aforesaid or shall Margin Notes: Island S[t] Helena Overseers Warr[an]t [...] or some other ab[l]e p[er]son in [...] room	The warrant to the overseers of the highways followed. Island St Helena. John Robinson and Sutton Isaack junior, freeholders, had long since been chosen overseers of the highways. In their office they had continued through the year 1714 without having performed the same. They were now hereby required carefully and diligently to execute the office, and so that they might the better and more impartially perform it, hereunto was annexed a list of all the inhabitants (except such as were in the honourable Company's service) and of what men slaves each person had. They were therefore in His Majesty's name willed and required to cause all persons, both themselves and blacks, mentioned therein to work two days at the least in mending, making and repairing all such highways as were needful and necessary to be done, as also all hills and bridges. If any person or persons, after due warning by them or either of them, should absent himself and both not come to work, and send his black or blacks as aforesaid on such days as by them should be appointed, then they were to put in the absent person's room some other man, white or black, as they could hire. Such absenting white man, for himself or his black or blacks or both, should forthwith repay them the price or prices as they should pay or agree to pay to such whites or their blacks as they should hire to work in their place or stead. If any person defaulter as aforesaid or should A margin note recorded the matter as Overseers Warrant, with a sideways marginal note giving the alternative formula or some other able person to work. Interpretations The warrant to John Robinson and Sutton Isaack junior gave formal effect to the election of overseers of the highways that had been ordered in the advertisement of 13 April 1715 for the parish election to be held on 18 April 1715. The two men had appeared in the census of 21 March 1715, with John Robinson holding 45 acres and 21 head of cattle and Sutton Isaack junior holding 17½ acres and 5 head of cattle. The reference in the warrant to their having been chosen long since indicated that they had been elected to the office in a previous parish meeting, before the present consultation, and had simply failed to perform the duties during 1714. The current warrant therefore not only confirmed their continuation in office but also pressed them to actually carry out the work that they had neglected. The annexed list of inhabitants and their men slaves provided the operational basis for the highway labour system. The system rested on the conscription of labour from the planter community, with each planter required to contribute himself and his male slaves to two days of road work per year. The exclusion of those in the honourable Company's service from the list reflected the separate obligations of the Company servants under the establishment, who were not subject to parish labour duty. The two days of labour was the standard English practice for the maintenance of the parish highways, derived from the Highway Act of 1555 which had required each parish to repair its own roads through compulsory labour by the inhabitants. The application of the same principle at St Helena, with the addition of the planters' male slaves as well as the planters themselves, gave the island a working system of road maintenance without the Company having to find the cost out of its revenues.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			The substitution clause provided the practical mechanism for enforcement. If any planter failed to attend himself or to send his slaves on the appointed days, the overseers could hire substitute labour at market rates and recover the cost from the defaulting planter. The arrangement converted a duty of personal service into a financial liability that could be enforced against the defaulter, and ensured that the road work would proceed regardless of whether particular planters were present or absent. The reference to His Majesty's name fixed the legal authority of the warrant within the broader framework of royal authority delegated to the Company. The Company exercised its powers at St Helena under a royal charter, and the parish administration ran in His Majesty's name even though the Company was the proprietor and effective government of the island. Speculations The reference to the previous overseers having continued through the year 1714 without performing the duties of the office perhaps reflected a wider failure of parish administration during the period of declining performance that the present council was attempting to reform. The new administration under Pyke had been pursuing a systematic review of the island's administrative practices, evidenced by the inventory of Company stock taken following the death of Edward Mashborne on 31 March 1715, the order of 5 April 1715 requiring the garrison to reckon at the stores, and the present effort to compel the overseers of the highways to actually execute their office. The pattern suggested that the period before the new administration had been marked by a general slackening of parish and administrative discipline that the present council was attempting to restore. The use of slave labour for the parish highways perhaps reflected a particular adaptation of the English parish system to the conditions of a slave-holding society. The English statute presumed that the labour would be supplied by the inhabitants themselves, with the wealthier providing carts and teams while the poorer worked with their hands. At St Helena, where the planter community was small and the slave population substantial, the system was modified so that the planters supplied not principally their own labour but that of their slaves. The arrangement effectively conscripted the slave labour force of the island for public works while leaving the planters themselves with their administrative role in supervising the work through the overseers' system.
432	423	shell refuse to pay you the[se] Wages of such Person or Persons as you shall hire in their place [...] stead, You are hereby Impowered to take by distress any goods from such Person or Persons [...] sell the same at Publick Outcry [...] the overplus (if any) to returne to the owners after you are repaid [...] reason[able] charges for w[ch] this shall be your sufficient Warrant, Given under our hands [...] the Hon[ble] Companys Seal this 15[th] of April 1715 To Jn[o] Robinson [...] Sutton Isaacke Jun[t] These Isaac Pyke Matthew Bazett Antipas Tovey. A List of Whites [...] Blacks that are to work at y[e] Highways or paths too days at least, Persons names viz[t] Cap[t] Geo: Haswell Whites: [...] Blacks: 4 Total: 4 Matthew Bazett Whites: [...] Blacks: 3 Total: 3 Joshuah Thomlinson Whites: [...] Blacks: 6 Total: 6 Tho[s] Cason Whites: [...] Blacks: 2 Total: 2 Jn[o] Alexander Whites: 1 Blacks: 3 Total: 4 Tho[s] Southen Whites: [...] Blacks: 2 Total: 2 Jn[o] Worrall Whites: [...] Blacks: 1 Total: 1 Carried over Whites: 1 Blacks: 21 Total: 22 Margin Notes:	The warrant continued. If any person should refuse to pay the wages of such person or persons as the overseers should hire in their place and stead, the overseers were hereby empowered to take by distress any goods from such person or persons and to sell the same at public outcry, the overplus, if any, to return to the owners after they were repaid and reasonable charges for the same. This should be their sufficient warrant. The warrant was given under the hands of the council and the honourable Company's seal on 15 April 1715, addressed to John Robinson and Sutton Isaacke junior. It was signed by Isaac Pyke, Matthew Bazett and Antipas Tovey, with a margin mark of S.L. and an unread initial set at the close. A list followed of whites and blacks that were to work at the highways or paths two days at the least, with the names ranged in three columns of whites, blacks and total. Captain George Haswell 4 blacks, 4 total Matthew Bazett 3 blacks, 3 total Joshua Tomlinson 6 blacks, 6 total Thomas Cason 2 blacks, 2 total John Alexander 1 white, 3 blacks, 4 total

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
		S [...] L[?] List of p[er]sons to work.	Thomas Southern 2 blacks, 2 total John Worrall 1 white, 1 black, 2 total Carried over: 1 white, 21 blacks, 22 total A margin note recorded the matter as List of persons to work. Interpretations The closing provisions of the warrant gave the overseers the legal mechanism by which they could compel actual payment by defaulting planters. The power of distress was the standard common law remedy by which an officer with lawful authority could seize the goods of a debtor and sell them at public outcry to recover the debt owed, returning any surplus to the owner after the debt and reasonable charges had been deducted. The provision extended the overseers' practical authority well beyond simple supervision of the road work, giving them effective enforcement powers comparable to those of a sheriff at a public sale. The reference to the warrant itself as sufficient authority for the seizure dispensed with any requirement for a separate writ or order, allowing the overseers to act on their own initiative when a planter refused to pay. The dating of the warrant on 15 April 1715, two days after the advertisement of 13 April 1715 calling the parish election for 18 April 1715, indicated that the council was not waiting for the new election before pressing the existing overseers to perform their duties. Robinson and Isaake had been the overseers chosen at the previous parish meeting and had failed to execute the office through 1714. The council was now requiring them to carry out the work that they had neglected, regardless of whether the parish meeting of 18 April 1715 might choose different men to replace them. The arrangement protected the work of the spring road repairs from being delayed by the change of officers, while also putting pressure on Robinson and Isaake to perform if they wished to recover their reputation in the parish. The signature of the warrant by Pyke, Bazett and Tovey but not by Haswell as deputy governor was unusual. Haswell had been recorded as present at every consultation through the present series, including those of 31 March 1715, 1 April 1715, 5 April 1715 and 12 April 1715. His absence from the signatures on the warrant of 15 April 1715, while the other three councillors signed, perhaps indicated that he was away on Company business at the time of the formal sealing, or that he was himself subject to the warrant as one of the inhabitants required to provide slave labour for the highway work. The list of persons to work attached to the warrant began with Captain George Haswell, the deputy governor himself, who was required to send 4 slaves to the road work. Matthew Bazett, a sitting councillor, was required to send 3. The willingness of the council to include its own members in the list of those required to provide labour gave a particular dignity and impartiality to the warrant, since the senior officers of the island were placed under the same obligation as the ordinary planter community. Joshua Tomlinson, the reaper of Joshua Tomlinson recorded in the census of 21 March 1715 with 12 slaves, was required to send 6 slaves, or half of his entire slave establishment. John Alexander, the ensign who had appeared in the census with 6 slaves, was required to send 1 white and 3 slaves, with the white perhaps being a hired servant or apprentice. Thomas Cason, the other ensign with 7 slaves, was required to send 2. The figures showed that the labour requirement was scaled to the size of each holding, with the larger slave-owners contributing more than the smaller. Speculations The exact ratio of slaves required to total slaves held at each property suggested a deliberate calculation by the overseers to balance the labour requirement

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			against the productive capacity of each holding. Tomlinson at 6 of 12 contributed half, while Haswell at 4 sent perhaps a third of the holding indicated in the earlier returns, and Bazett at 3 of 4 contributed three quarters. The varying ratios perhaps reflected the practical considerations of who could spare which slaves at the season of the year when the road work was to be done, rather than any uniform mathematical formula. The overseers had to take into account the productive needs of each planter holding alongside the demands of the public work. The use of public outcry as the means of selling distrained goods reflected the standard procedure for sheriff's sales and other forced disposals in the English legal system. The auction was conducted in the open at a public place, with the goods sold to the highest bidder. The practice ensured transparency and protected the owner against any allegation that the goods had been sold below their proper value. The application of the same procedure at St Helena under the highways warrant brought the parish enforcement system into line with the broader legal practices of the English community, giving the overseers a recognised method that planters would understand and accept as legitimate.

The running totals brought over stood at 1 white, 21 blacks, 22 total. William Slaughter 2 blacks, 2 total William Porteous 1 black, 1 total John French 1 black, 1 total John Goodwin 1 black, 1 total William Worrall 2 blacks, 2 total Samuel Pessey 2 blacks, 2 total Isaac Wood 2 blacks, 2 total William Portley 1 black, 1 total Thomas Allis 2 blacks, 2 total Arthur Bradley 1 white, 1 total John Bagley 2 whites, 1 black, 3 total Edmund Bodley 1 white, 1 total Robert Bell 1 white, 2 blacks, 3 total William Beale 1 white, 1 total Thomas Burnham 1 white, 1 total Orlando Bagley 2 whites, 2 blacks, 4 total George Carne 4 whites, 8 blacks, 12 total Mary Conway 1 black, 1 total Cotgrove's orphan 1 black, 1 total John Coulson 1 white, 1 black, 2 total John Coales 4 whites, 2 blacks, 6 total Richard Cleave 1 white, 1 black, 2 total William Coales 1 white, 1 total John Crossby 1 white, 1 total Grace Coulson 2 blacks, 2 total Jonathan Doveton 1 white, 4 blacks, 5 total James Draper 1 white, 2 blacks, 3 total Thomas Free 2 whites, 6 blacks, 8 total Henry Francis 2 whites, 5 blacks, 7 total Carried over: 28 whites, 73 blacks, 101 total Interpretations The continuation of the labour list extended the conscription across the principal planter community of the island, drawing in both whites and slaves. The list reflected the broader social structure of the planter holdings recorded in the census of 21 March 1715, with most of the same names appearing in both returns. The figures of labourers required showed a consistent pattern of scaling the contribution to the size of the holding. George Carne, recorded in the census with 10 whites and 17 slaves on a holding of 111 acres carrying 46 head of cattle, was required to provide 4 whites and 8 slaves, or roughly half his white household and half his slave establishment. The figures placed Carne at the head of the labour list with the largest individual

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			contribution of 12 persons. The matching of the labour requirement to Carne's substantial holding showed the system operating in proportion to the apparent productive capacity of each planter. Thomas Free, recorded in the census with 8 whites including white servants and 13 slaves on a 12 acre holding, was required to provide 2 whites and 6 slaves. The high labour ratio relative to the small landholding confirmed the earlier inference that Free's operation rested on intensive cultivation rather than on extensive grazing, with the labour-intensive character of the holding producing a substantial labour contribution to the highway work despite the modest acreage. The inclusion of widows and orphans in the labour list extended the obligation across the entire planter community. Mary Conway, Grace Coulson, Cotgrove's orphan and Mary Harper (whose name had not yet appeared on this page but was anticipated to follow) each contributed slaves to the work even though they themselves could not be expected to perform manual labour. The principle of the warrant was that the slaves of the holding bore the work, with the planter responsible for sending them, regardless of whether the planter himself was capable of working on the road. The arrangement was consistent with the conscription model in which the slave labour force of the island was being mobilised for public works under the direction of the planter community. The appearance of William Portley in the labour list at the contribution of 1 black was particularly notable. Portley was the marshal of the island, whose petition for fees had been considered at the consultation of 12 April 1715 and referred for further consideration. His inclusion in the labour list, in the same fashion as the other planters and not under the exemption for those in the honourable Company's service, suggested that his office of marshal was treated as a parish office held by an inhabitant rather than as a Company appointment. The classification placed Portley alongside the planter community in his capacity as a slave-owning inhabitant subject to the parish labour duty. The appearance of William Worrall at a contribution of 2 blacks was equally interesting, given that Worrall had been appointed overseer of the Company plantations on 5 April 1715. The labour contribution required of him here perhaps reflected his standing as an inhabitant in his own right alongside his Company appointment, with his personal slave establishment subject to the parish duty even though his new office gave him a Company role. Speculations The systematic application of the labour ratio across the planter community perhaps reflected a deliberate effort by the council and the overseers to make the burden of the highway work fall as evenly as possible across the island's productive capacity. The variation in ratios between different planters, with some contributing half their establishment and others a smaller share, indicated that the overseers had taken into account the specific circumstances of each holding rather than applying a uniform formula. The careful scaling of the obligations gave the warrant its legitimacy among the planter community, since no planter could complain that he had been singled out for disproportionate burden. The two whites and six slaves required of Thomas Free, taken together with his census household of 8 whites and 13 slaves on 12 acres, suggested that his operation depended on a high concentration of labour relative to his small acreage. The labour contribution of one quarter of his white labour and nearly half his slave labour to the road work would have been a significant disruption to his daily operations, lasting two days at the height of the working season. The acceptance of such a contribution perhaps reflected the cooperative spirit of

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			the planter community in supporting the parish work, with even those whose operations depended most heavily on continuous labour accepting the temporary withdrawal for the public good.

The running totals brought over stood at 28 whites, 73 blacks, 101 total. Mary Easthope 1 black, 1 total Robert Gurling 1 black, 1 total Richard Gurling 1 white, 2 blacks, 3 total Mercy Garben 1 white, 4 blacks, 5 total Jonathan Higham 4 blacks, 4 total Mary Harper junior, widow 1 white, 1 black, 2 total Isabel Hayse 1 black, 1 total Joshua Johnson 1 white, 6 blacks, 7 total John Harding 2 whites, 2 total John Gibbs 1 white, 1 total Sutton Isaake senior 1 black, 1 total Sutton Isaake junior 1 white, 1 black, 2 total John Knipe 1 white, 2 blacks, 3 total Stephen Lufkin 1 white, 1 black, 2 total John Long 1 white, 2 blacks, 3 total Francis Leach 1 white, 1 total Walter Morrice 1 white, 1 black, 2 total Robert Marsh 2 whites, 3 blacks, 5 total John Marsh 1 black, 1 total Jane Mudge 1 black, 1 total John Nichols 3 whites, 2 blacks, 5 total Martin Norman 1 white, 1 total John Orchard 1 white, 1 total Gabriel Powell 3 whites, 6 blacks, 9 total Samuel Price 1 white, 1 total John Robinson 2 whites, 2 blacks, 4 total Thomas Swallow no figures entered Carried over: 59 whites, 115 blacks, 174 total Interpretations The continuation of the labour list extended the conscription through the rest of the planter community recorded in the census of 21 March 1715, with most of the same names appearing in both returns. The widows Mary Easthope, Mary Harper junior, Isabel Hayse, Mercy Garben and Jane Mudge each contributed slaves to the work, the requirement falling on the holding regardless of the sex or age of the head of household. Robert Gurling, recorded in the census with 4 whites and 3 slaves, was required to contribute 1 slave, a modest portion of his small slave establishment. Richard Gurling, his probable kinsman with 5 whites and 6 slaves on a larger holding of 137 acres, was required to contribute 1 white and 2 slaves. The differing contributions reflected the scaling of the labour requirement to the size of each holding, the smaller Robert Gurling holding being asked for proportionally less than the larger Richard Gurling establishment. Gabriel Powell, recorded in the census with 7 whites and 17 slaves on the holding that also carried 89 head of cattle on 255 acres, was required to contribute 3 whites and 6 slaves. The figures placed Powell among the heaviest individual contributors to the labour list, alongside George Carne with 12 persons on the previous page. The two together represented the principal commercial planters of the island, and the heaviest labour demand fell appropriately on the largest operations. The inclusion of Samuel Price at a contribution of 1 white was significant. Price had been the subject of the council's consideration on 12 April 1715, when his demand for fifteen shillings the week had been corrected by reference to the written agreement found among Edward Mashborne's papers fixing the rate at two shillings and sixpence the day. The council had ordered his employment continued for the present quarter while the governor observed his work. His

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			inclusion in the highway labour list as an inhabitant subject to the parish duty perhaps reflected his status as an employed tradesman rather than a Company servant on the strict establishment, with his name appearing alongside the planter community for parish purposes. The figure entered against Thomas Swallow was not visible in the rendering, perhaps because the line had not yet been completed at the moment the page was scanned, or because the figures had not been entered against his name in the original. Swallow had appeared in the census of 21 March 1715 with 5 whites and 3 slaves on a holding of 71 acres carrying 21 head of cattle, suggesting that some contribution from his establishment would have been required. Stephen Lufkin appeared in the list at a contribution of 1 white and 1 slave. The Lufkin name had also appeared in the inventory of 12 April 1715 in the description of Lufkins as one of the three places where Company household goods were kept, alongside the new and old plantation house. The recurrence of the name in three separate contexts within the present series of consultations - the census, the inventory and the labour list - confirmed Lufkin's settled presence in the island's affairs as both a small planter and a contractual partner of the Company. Speculations The combined running total of 59 whites and 115 blacks brought to 174 persons through the two pages of the labour list, with further names still to appear, perhaps reflected the total planter workforce that the overseers expected to mobilise for the two days of road work. The figure represented a substantial concentration of labour for a specific task, even spread across the island's various holdings. The careful enumeration of each planter's contribution against his name in the list gave the overseers a working document by which they could check the actual attendance against the obligation, and identify defaulters for the application of the distress procedure set out in the warrant of 15 April 1715. The recurrence of widows and surviving dependants in the labour list, alongside the named planter households, perhaps reflected a deliberate refusal by the council to exempt vulnerable households from the parish duty. The principle was that the productive labour of the holding bore the work, not the personal labour of the planter or his family. By including the widows and orphans in the list at the level of their slave establishment, the overseers preserved the equal application of the duty across the island and prevented the labour from falling more heavily on the male-headed households than on those headed by women.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			The closing portion of the labour list brought the conscription to a head with a final cluster of names from the planter community, completing the conscription of the parish workforce for the year's road repairs. The closing total of 76 whites and 140 blacks, or 216 persons in all, represented the workforce that the overseers were to mobilise for two days of work at the highways under the warrant of 15 April 1715. Richard Swallow contributed the largest single quota on the closing page, at 4 whites and 7 blacks for a total of 11 persons. Swallow had been recorded in the census of 21 March 1715 with 14 whites and 8 slaves on his holding, and his contribution of 4 whites and 7 blacks to the labour list represented a substantial share of his establishment. His petition of 12 April 1715 for fifty pounds credit at the Company stores had been granted on bond the day before the warrant was issued, and the present labour contribution fell on him in his capacity as a substantial planter regardless of his current financial position with the Company. Margaret Sikes contributed 3 blacks, drawn from the 15 slaves recorded in her household in the census. Her appearance as a substantial slave-owner without any white labour contribution reflected the structure of her holding as that of a widow managing a slave establishment for productive purposes. The labour contribution was apportioned entirely to her slave force, since she had no adult male white labour to send. James Greentree contributed 2 whites and 5 blacks for a total of 7 persons. Greentree had been recorded in the census with 12 whites and 7 slaves on a modest holding of 31 acres carrying 5 head of cattle. He had also appeared as one of the three executors of Robert Leach in the petition of 12 April 1715, alongside Richard Gurling and Jonathan Doveton. His substantial labour contribution to the highway work reflected his standing as one of the more active planters of the island. William Beale appeared on this closing page with a contribution of 1 white and 1 black, although his name had already appeared on the second page of the list at the same figures. The repetition perhaps reflected an error of the clerk in entering the name twice, or it may indicate that there were two persons of the same name in the planter community both required to contribute. The earlier appearance of the name in the census of 21 March 1715 had given William Beale a household of 7 whites and no slaves, which did not match either entry on the present list, suggesting that the labour list and the census did not always agree precisely. The signature of the labour list by Antipas Tovey as secretary, closing the warrant and the list together, completed the formal documentation of the highway work for the year. As secretary, Tovey held the responsibility for the actual drafting of council documents and the maintenance of the books, and his signature gave the list its formal validity as a parish working document. Speculations The total labour mobilisation of 216 persons across the parish, comprising 76 whites and 140 blacks, perhaps reflected the council's calculation of what would be required to complete the necessary highway repairs in the two days allotted for the work. The roads, bridges and hill paths of the island required substantial labour to maintain against the heavy rains and erosion of the steep terrain, and a workforce of over two hundred could accomplish in two concentrated days what would otherwise have taken much longer with smaller numbers. The conscription model gave the parish an effective method of mobilising labour for a specific limited purpose without requiring continuing employment or wages. The ratio of 140 blacks to 76 whites in the conscription, with the slave labour making up nearly

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			two-thirds of the total, perhaps reflected the broader composition of the island's working labour force and the structural dependence of the planter community on slave labour for heavy outdoor work. The whites contributed represented a smaller portion of the white population, with many heads of household excluded from the manual labour and contributing only their slaves. The pattern confirmed the role of the slave labour force as the principal source of productive work on the island, with the white inhabitants exercising supervisory and managerial roles rather than performing the manual labour themselves.
436	427	Island S[t] Helena At a Consultation held on Tuesday y[e] 19 April 1715 at the United Castle in James['] Valley Isaac Pyke Esq[r] Gov[er]n[or] Geo: Haswell Dep[uty] Matt[hew] Bazett [...] In the Antipas Tovey } Country The Church Warden brought in the following Report viz[t] Parish Officers nominated by the Majority of Votes for the Year 1715, For the West Side James Greentree James Veasey } Church Wardens East Side Jn[o] Twaits Rob[t] Bell } Ditto West Side Stephen Lufkin Rich[d] Swallow Jun[r] } Surveyors East Side Tho[s] Burnham Tho[s] Allis } Ditto for y[e] new Path Gabriel Powell W[m] Worrall } D[o] Ordered That M[r] James Greentree [...] John Twaits be Church Wardens for the Ensueing Year [...] Stephen Lufkin [...] Tho[s] Burnham Surveyors for the Country [...] that whereas at the Sessions Cap[t] Margin Notes: Island S[t] Helena Parrish Officers Chossen Off[ic]r[s] App[ointe]d[?]	Island St Helena. A consultation was held on Tuesday 19 April 1715 at the United Castle in James Valley. Present were Isaac Pyke, esquire, governor, with George Haswell, deputy, Matthew Bazett and Antipas Tovey. A note recorded that Pyke, Haswell and Bazett were in the country. The churchwarden brought in the following report. The parish officers had been nominated by the majority of votes for the year 1715. For churchwardens: West side: James Greentree James Vesey East side: John Thwaites Robert Bell For surveyors: West side: Stephen Lufkin Richard Swallow junior East side: Thomas Burnham Thomas Allis For the new path: Gabriel Powell William Worrall The council ordered that Mr James Greentree and John Thwaites be churchwardens for the ensuing year, and Stephen Lufkin and Thomas Burnham be surveyors for the country, and that whereas at the [...] Margin notes recorded the matter as Parish officers chosen, with subordinate notations for the West side, East side and for the new path. A further marginal note recorded the matter as Officers appointed. Interpretations The consultation gave effect to the parish election that had been called by the advertisement of 13 April 1715, ordered at the meeting of 12 April 1715. The election had been held on Monday 18 April 1715 at the country church as appointed, and the churchwarden had brought the results to the council on the following day, Tuesday 19 April 1715, exactly as the advertisement had required. The election had returned eight candidates for the offices of churchwarden and surveyor of the highways (described in the present minute as surveyors rather than overseers, the two terms being used interchangeably for the same office). The candidates had been nominated by district, with two for each side of the island for churchwardens and two for each side for surveyors. The new path had a separate pair of nominees, perhaps indicating a new road or track that required particular oversight beyond the regular east and west divisions of the island. The structure of the nomination by district reflected the geographical division of the island administration. The west side covered the leeward part of the island, including the main settlement at James Valley and the western planter holdings. The east side covered the windward part of the island, including the upper plantation country and the holdings towards Sandy Bay. The division ensured that each part of the island had its own resident officers familiar with the local roads and parish affairs. The council exercised its right of selection from the four candidates returned for each office, choosing James Greentree and John Thwaites as churchwardens out of the four nominated. The choice picked one nominee from the west side (Greentree) and one from the east side (Thwaites), ensuring that both halves of the island had representation among the churchwardens.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			For the surveyors of the highways, the council chose Stephen Lufkin and Thomas Burnham, again picking one from each side, with Lufkin representing the west side and Burnham the east side. The selection of Lufkin connected to the Lufkin name already noted in the inventory of 12 April 1715 as one of the three holdings where Company household goods were stored, and to Stephen Lufkin himself in the labour list of 15 April 1715 as a planter required to send 1 white and 1 slave to the highway work. His elevation from a contributor to the work to an officer responsible for organising it represented a recognition by the council of his standing in the parish. The figures elected for the new path, Gabriel Powell and William Worrall, perhaps were left to a different appointment process or to a later decision by the council. Powell had appeared in the census of 21 March 1715 and the labour list of 15 April 1715 as the largest planter on the island. Worrall had been appointed overseer of the Company plantations on 5 April 1715, and his nomination for the new path office reflected his standing as a recognised Company servant familiar with the working of the country. The displacement of the existing overseers John Robinson and Sutton Isaake junior, who had been the subject of the warrant of 15 April 1715 requiring them to perform the duties they had neglected, perhaps reflected the failure of those two men to satisfy the council and the parish electorate during their previous year in office. The new surveyors elected for the present year were drawn from different planters, with the existing pair not appearing among the nominees. The council's earlier order requiring Robinson and Isaake to carry out the road work had thus been an interim measure pending the parish meeting, which now installed a new team to carry the responsibility forward. Speculations The selection by the council of one churchwarden and one surveyor from each side of the island, while declining to appoint both nominees from either side, perhaps reflected a deliberate policy of balancing the parish administration geographically. The council was at pains to avoid favouring one part of the island over the other in the distribution of parish offices, and the consistent picking of one nominee from each side gave each district a stake in the parish administration. The arrangement also placed responsibility for the roads and the church in the hands of officers who had practical knowledge of their own side of the island, while requiring them to cooperate on parish-wide matters. The presence of a separate office for the new path, with its own two nominees, perhaps indicated a particular road construction project under way during the year, distinct from the regular highway maintenance assigned to the surveyors of the east and west sides. The selection of Powell and Worrall for this office reflected the technical complexity or political importance of the new path, since both men carried particular standing in the parish - Powell as the largest planter and Worrall as the newly appointed overseer of Company plantations. The path may have been a new road from the upper country down to James Valley, or a new track to a particular plantation needed for the management of Company business.

Price also complained that John Batavia, who had formerly been put in irons for such facts as well as for pilfering, had continued notwithstanding his wearing shackles to follow the black wenches and infect them with an unclean distemper, and had now run away. The overseers of the Company's plantations had also complained to the governor that they could not, with any moderate correction, keep either of them fellows from the women. The governor therefore reported that John Batavia, who had run away being in irons already, was not sufficient to reclaim him. The other, Murdoc, having lately run away and deserted all his usual employment, which had been to fish, the governor had caused him to be apprehended yesterday and put in irons. He thought it very proper to prevent their lewdness and the infectious distemper proceeding from it, that the two black slaves, Murdoc now in custody and Batavia as soon as he was taken, might be fettered together with a chain of about six foot long, as the custom of the Dutch at Margin notes recorded the matter as the surgeon's complaint about a black, with a further notation about John Batavia. Interpretations The first portion of the minute resolved the appointment of Worrall as overseer of the roads leading to the fort. The earlier proposal had paired Edward Mashborne with Gabriel Powell for this office, but Mashborne had died on 31 March 1715 as recorded in the consultation of that date. The vacancy left by Mashborne's death was now filled by Worrall, who had been appointed overseer of the Company plantations on 5 April 1715 and had been one of the two nominees for the new path on the present consultation day. The arrangement gave Worrall a continuing expansion of his responsibilities, from the Company plantations to the roads leading to the fort, consolidating in him the principal Company-related parish offices. The substantive matter brought before the council was a complaint by the surgeon William Porteous (referred to here as Mr Price, but the census of 21 March 1715 had recorded the surgeon as William Porteous; the present reference may be an error of the clerk for Porteous, or it may be a different surgeon by the name of Price arrived since the census). The complaint addressed the sexual conduct of two of the Company's male slaves, named Murdoc and John Batavia, and their spreading of a venereal disease among the slave women of the island. The complaint set out a serious public health and social order problem. Murdoc was described as continually following the black women across the country and dispersing the distemper among them. Batavia had been previously put in irons for similar conduct and for pilfering, but had continued his behaviour despite the shackles, and had now run away. The overseers of the Company plantations had also complained that no moderate correction could keep either man from pursuing the women. The phrase unclean distemper denoted a venereal disease, perhaps syphilis or gonorrhoea, both of which had been brought to the island through the contact with ships' crews and passengers from a wide range of ports. The infection of multiple slave women through the pursuit of two known carriers represented a serious epidemiological problem for the Company, since the slave labour force was the productive engine of the Company plantations and any widespread illness among the women would reduce their working capacity and their value. The governor's proposed solution, that the two slaves should be fettered together with a chain of about six foot long, drew on the practice of the Dutch

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			establishments in the East Indies. The arrangement would force the two men to remain in physical proximity at all times, with each restraining the movements of the other. The shared chain would prevent either from escaping into the country to pursue the women, since neither could move without the other's cooperation, and the practical difficulty of two men attempting to seduce women while chained together would deter sexual activity altogether. The reference to the custom of the Dutch indicated that the council was drawing on the practical experience of the Dutch East India Company's slave management, perhaps as reported by ship captains or by Dutch travellers calling at the island. The fact that Batavia had previously been put in irons and had continued his conduct showed that lighter punishments had failed to control his behaviour. The escalation to a paired chain of six foot length represented a more severe restraint, designed to make the conduct physically impossible rather than merely painful or inconvenient. Speculations The reference to the surgeon as Mr Price perhaps reflected a change in the medical establishment of the island since the census of 21 March 1715, with William Porteous being replaced or supplemented by a new surgeon by the name of Price. The name was distinct from Samuel Price the shoemaker and leather tanner whose contract had been considered on 12 April 1715. If the new surgeon was indeed a distinct Price, his recent arrival on the island had given him the immediate task of identifying and reporting on the unclean distemper among the slave population, perhaps as one of his first significant interventions in the medical affairs of the establishment. The naming of the second slave as John Batavia, with Batavia being the Dutch colonial city in the East Indies, perhaps reflected the origin of the slave from a Dutch slave purchase at that port. The Company purchased slaves from a variety of sources including Madagascar, the Guinea coast, India and the Dutch East Indies. A slave named after his point of origin would have been one who came through the Dutch trade rather than through the Company's own direct purchase at Madagascar. The mixed origin of the slave population at St Helena gave the island a workforce drawn from across the Indian Ocean and the Atlantic, with the cultural and linguistic differences between slaves of different origins sometimes complicating the management of the slave establishment.
438	429	at Batavia is w[ith] their Refractory Slaves w[ch] he hopes will hinder their rambling about the Countrey they being then as fitt to work in the Garden as any other Slaves are, Ordered That the said two slaves be so chained together, The Gov[r] reports that he committed Sam[all] Allgate Corporal last Friday for leaveing open the back Gates all night it being his duty to shutt it and had ordered his attending the Council this day but there being no more present he is obliged to deferr it till another time, M[r] Gabriel Powell [...] Richard Gurling haveing on the 11[th] of March proffered to sell one Hundred [...] fifty thousand Yams to the Hon[ble] Company [...] also two blacks p[er] ten beefs w[ith] twenty hoggs [...] some Goats w[ch] was referred to the Gov[r] Cap[t] Mashborne [...] M[r] Bazett but Cap[t] Mashborne being then sick and since dead they Did not Do any thing therein and last Council day M[r] Powell came to desire an answer and then the Gov[r] undertaking to Enquire against next Tuesday[...] how the Companys Yams stood does find that we have at the Hutts Plantation two Hundred and Eighty four thousand Yams planted of them will be fitt to digg next August w[ch] the Gov[r]	The minute continued. At Batavia, this was done with their refractory slaves, which the governor hoped would hinder them from rambling about the country, they being then as fit to work in the garden as any other slaves were. The council ordered that the two slaves be so chained together. The governor reported that he had committed Samuel Allgate, corporal, last Friday for leaving open the back gate all night. It being his duty to shut it, the governor had ordered his attending the council this day, but there being no more present, he was obliged to defer it till another time. Mr Gabriel Powell and Richard Gurling, having on 11 March, proffered to sell one hundred and fifty thousand yams to the honourable Company, and also two blacks, ten beeves, twenty hogs and some goats. The matter had been referred to the governor, Captain Mashborne and Mr Bazett. Captain Mashborne being then sick and since dead, they had not done any thing therein. Last consultation day Mr Powell had come to desire an answer, and then the governor, undertaking to enquire against next Tuesday how the Company's yams stood, found that there were at the Hutts plantation two

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
		does therefore now report [...] will bring in at the next Consultation what Yams we have any where else and when fitt to digg that we may not buy Yams to the Hon[ble] Comp[any] Margin Notes: Their punishm[en]t Allgate Comitted ab[ou]t Provis[i]ons afor[esai]d Gov[r] [...] Answer.	hundred and eighty four thousand yams planted, of which one hundred thousand of them would be fit to dig next August. The governor therefore now reported and would bring in at the next consultation what yams were planted any where else, and when they would be fit to dig, so that the council might not buy yams to the honourable Company's Margin notes recorded the matter as their punishment, Allgate committed, about provision offered, and the governor's answer. Interpretations The conclusion of the matter concerning the two slaves Murdoc and John Batavia gave effect to the governor's proposal for their joint chaining. The reference to Batavia as the source of the practice confirmed the Dutch East Indies origin of the disciplinary technique, and the governor's reasoning was that the men would remain fit for garden work even while chained together, the restraint being on their movement about the country rather than on their physical labour. The order of the council adopted the proposal without further discussion, indicating that the council was satisfied with the practical justification offered by the governor. The committal of Samuel Allgate, corporal, for leaving the back gate of the castle open all night raised a separate disciplinary matter. Allgate had appeared in the census of 21 March 1715 in a small household of two whites, with his rank given as corporal. His duty to shut the gate was an important security function, and leaving it open all night exposed the castle to unauthorised entry. The governor had committed him to confinement on the previous Friday and had intended to have him attend the council on the present consultation day, but the matter was deferred because there were no more councillors present. The reference to no more present apparently referred to the absence of additional councillors beyond the four already listed at the head of the minute, suggesting that the deferral was due to the council being below quorum for hearing the case rather than to any actual absence from the meeting. The substantive matter of the provisions offered by Gabriel Powell and Richard Gurling on 11 March 1715 brought back into the council's attention a transaction that had been delayed by Edward Mashborne's illness and death. The two planters had offered to sell to the Company a substantial parcel of provisions: 150,000 yams, two slaves, 10 cattle (beeves), 20 hogs and some goats. The offer was a major commercial transaction representing perhaps the largest single private provisioning offer to the Company recorded in the present series of consultations. The reference to the consultation of 11 March 1715, when the offer was first made, placed the offer before the present series of consultations following Mashborne's death of 31 March 1715. The matter had been referred to the governor, Captain Mashborne and Matthew Bazett, but Mashborne's illness and subsequent death had prevented any decision. The matter had now to be reopened with William Worrall replacing Mashborne in the practical role of plantation overseer, and the governor was undertaking to establish the Company's own current yam position before responding to the offer. The governor's investigation of the Company's yam stocks revealed substantial existing plantings. At the Hutts plantation alone, 284,000 yams were planted, of which 100,000 would be fit to dig in August. The figure of 100,000 fit for August at the Hutts matched exactly the figure recorded in the inventory of 12 April 1715 of 100,000 yam suckers planted at the Hutts since 8 July 1714, suggesting that the August harvest would draw on the planting of the previous year. The remaining

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			184,000 yams at the Hutts were perhaps at earlier stages of growth and would mature in subsequent months. The governor's intention to report on yams planted elsewhere at the next consultation, before deciding on the Powell and Gurling offer, showed a careful approach to the commercial decision. The council was reluctant to commit to buying 150,000 yams from the planters if the Company's own stocks would shortly produce a larger quantity from the plantation. The investigation aimed to establish whether the Company actually needed the offered yams, and at what point they would be required, before committing to the purchase. Speculations The substantial size of the provisions offer from Powell and Gurling, at 150,000 yams alone, perhaps reflected a deliberate effort by two of the larger planters to dispose of accumulated stocks to the Company at a fixed price rather than selling piecemeal to individual buyers. Powell had been recorded in the census of 21 March 1715 with 17 slaves and the largest cattle holding of 89 head on 255 acres, while Gurling had held 6 slaves with 24 head of cattle on 137 acres. The two together commanded substantial productive capacity, and the offer of 150,000 yams, 10 cattle, 20 hogs and some goats represented a coordinated marketing effort by them, perhaps stimulated by the arrival of homeward shipping that would need to be victualled. The Company's careful response, with the governor investigating the existing stocks before committing to purchase, reflected the council's awareness that accepting the offer at the wrong moment could leave the Company with surplus provisions or could undermine the planning of the plantation's own crop. The reference to the planters offering two slaves alongside the produce perhaps indicated that the trade in slaves between planters and the Company continued as a regular commercial transaction at the island. The slaves offered would have been part of the planters' existing establishments, perhaps surplus to current requirements or being sold off for other reasons. The Company's willingness to buy slaves from the planters, alongside its imports through the Madagascar trade, gave the planter community a market for their slave property and a means of converting slaves into ready value when needed.
439	430	at Batavia is w[i]th their Refractory Slaves w[ch] he hopes will hinder their rambling about the Countrey they being then as fitt to work in the Garden as any other Slaves are, Ordered That the said two slaves be so chained together, The Gov[r] reports that he committed Sam[l] Allgate Corporal last Friday for leaveing open the back Gates all night it being his duty to shutt it and had ordered his attending the Council this day but there being no more present he is obliged to deferr it till another time, M[r] Gabriel Powell [...] Richard Gurling haveing on the 11[th] of March proffered to sell one Hundred [...] fifty thousand Yams to the Hon[ble] Company [...] also two blacks p[er] ten beefs w[i]th twenty hoggs [...] some Goats w[ch] was referred to the Gov[r] Cap[t] Mashborne [...] M[r] Bazett but Cap[t] Mashborne being then sick and since dead they Did not Do any thing therein and last Council day M[r] Powell came to desire an answer and then the Gov[r] undertaking to Enquire against next Tuesday[...] how the Companys Yams stood does find that we have at the Hutts Plantation two Hundred and Eighty four thousand Yams planted of them will be fitt to digg next August w[ch] the Gov[r] does therefore now report [...] will bring in at the next Consultation what Yams we have any where else and when fitt to digg that we may not buy Yams to the Hon[ble] Comp[any] Margin Notes:	The minute continued. The Company's prejudice would arise there being one hundred and ninety eight thousand yams already offered last November by many poor people towards the payment of their debts, who had no other way to pay, and the honourable Company must take them or nothing. The governor reported that he had committed Samuel Allgate, corporal, for leaving open the castle gate as aforesaid in the night time, and that he intended to punish him for the same. The governor said he would be stricter with him in this case because the said Allgate in other matters was a very extravagant fellow. Although Allgate was possessed of one cow and one calf, he had killed his calf to be merry and have a drunken bout, not regarding the scarcity of cattle upon the island. The minute was signed by Antipas Tovey. A margin note recorded the matter as Allgate's punishment and for what. Interpretations The first portion of the minute completed the governor's report on the yam situation by reference to a substantial earlier offer of yams from a different quarter. In November 1714, many poor people of the island had offered 198,000 yams to the Company towards the payment of their debts. These were planters who owed money to the Company stores and had no other means of payment, so the Company faced the practical choice of accepting the yams or recovering nothing at all on

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
		Their punishm[en]t Allgate Comitted ab[ou]t Provis[i]ons afor[esai]d Gov[r] [...] Answer.	the debts. The figure of 198,000 yams from this earlier offer, taken together with the 284,000 yams planted at the Hutts plantation, gave the Company access to nearly half a million yams from the existing arrangements alone, without considering the further 150,000 offered by Powell and Gurling on 11 March 1715. The accumulated supply explained the council's caution in responding to the Powell and Gurling offer, since accepting it would have created a substantial surplus of yams that the Company could not consume. The reference to the poor people having no other way to pay marked a fundamental aspect of the credit relations between the Company stores and the planter community. The stores extended credit to planters who could not pay cash, with the debts recorded on the planter's running account. When the planter came to settle the account, payment was made not in cash but in produce - yams, cattle, hogs, goats, fowls or other plantation output. The Company stores thus functioned as a barter mechanism between the planter community and the Company establishment, with the stores supplying European goods on credit and accepting island produce in return. The arrangement was efficient for both parties since the island had limited circulation of cash and the Company had a continuing need for fresh provisions for the garrison and the homeward shipping. The committal of Samuel Allgate for leaving the castle gate open at night opened the disciplinary matter that the governor had reported earlier in the consultation. The governor now explained that he intended to take a stricter view of Allgate's conduct than might otherwise have been the case, because Allgate had a record of extravagant behaviour beyond the present offence. The governor cited the killing of Allgate's own calf for a drunken celebration as evidence of the extravagant character. Allgate was possessed of only one cow and one calf, and to kill the calf for amusement rather than preserving it for breeding or for sale showed both poor judgment and a disregard for the scarcity of cattle upon the island. The closing reference to the scarcity of cattle upon the island connected the disciplinary matter to the broader provisioning concerns of the establishment, with cattle a strategic resource for the supply of the homeward shipping that should not be casually slaughtered. The intent of the governor to deal more severely with Allgate because of his prior character marked a particular approach to discipline that combined the present offence with the overall pattern of conduct. The same physical act of leaving the gate open might be excused or lightly punished in a man of otherwise good standing, but in Allgate the same act formed part of a wider record of irresponsibility that warranted a stricter response. The principle balanced the immediate offence against the man's general conduct as known to the governor. The signature of the minute by Antipas Tovey as secretary closed the consultation of 19 April 1715. As secretary, Tovey held the clerical responsibility for the maintenance of the council's records and signed each minute as a record of its accurate entry into the books. Speculations The killing of Allgate's calf for a drunken celebration perhaps reflected a wider pattern of disorder in the lower garrison ranks that the new administration under Pyke was attempting to address. The earlier disciplinary matters of the present series of consultations, including the dispute with Sergeant Fairfax over duty payments of 12 April 1715 and the present case of Allgate, formed part of a broader effort to restore order and economic discipline at the establishment. The governor's stricter response to Allgate was perhaps intended not only to punish the individual conduct but to send a signal to the wider

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			garrison about the standards of behaviour expected. The reference to the scarcity of cattle, in particular, framed Allgate's offence as an act against the broader interests of the island establishment rather than as merely a personal indulgence. The combined picture of yam supply emerging from the consultation, with 482,000 yams from existing sources before considering the new offer, perhaps reflected a deliberate Company policy of building substantial yam reserves on the island. The yam was the staple food of the slave population, both at the Company plantation and at the planter holdings, and a substantial reserve provided security against the failure of a single season's crop and against the disruption of supply by weather or disease. The Company's apparent over-supply position in the present moment was the planned outcome of the accumulated planting programme, with the surplus available to supply homeward shipping and to maintain the slave population through any future shortage.
440	431	Island S[t] Helena At a Consultation held on Tuesday the 26 day of April 1715 At the United Castle In James Valley Pres[ent] Isaac Pyke Esq[r] Gov[er]n[or] Geo: Haswell Dep[uty] Matthew Bazett [...] in the Antipas Tovey } Country Henry Harmon Gardiner, being catcht carrying wood out of the Hon[ble] Compa[ny] Garden into the Town w[ch] he had stoln from thence, Ordered That he be Immediately tyd to the Flagg Staff and have forty lashes M[r] Worrall the overseer at the Plantation house brought in the foll[owing] acco[t] That the Hon[ble] Compa[ny] as soon as the wett season is over will have Yams fitt to Digg, At Lufkins 18,600 Tibbills gutt 5,000 Coles Gutt 70,000 Perkins's 70,000 w[ch] is in all 163,600 The hundred thousand reported the last Council day to the Hutts makes in the whole two hundred sixty three thousand six hundred [...] before these can be expended the Yams bought by the Gov[r] and Cap[t]: Mashborne in Tomstone Wood the 19[th] Octob[er] last will be also fitt to digg and they are in Number Sixty Six thousand So that he concludes that when ever we do begin to digg the Hon[ble] Compa[ny] yams w[ch] will be at latest August next That it cant be for the Interest Margin Notes: Island S[t] Helena Harmon the Gardener, Punished Acc[oun]t of Comp[any]s Provisions	Island St Helena. A consultation was held on Tuesday 26 April 1715 at the United Castle in James Valley. Present were Isaac Pyke, esquire, governor, with George Haswell, deputy, Matthew Bazett and Antipas Tovey. A note recorded that Pyke, Haswell and Bazett were in the country. Henry Harmon, gardener, had been caught carrying wood out of the honourable Company's garden into the town, which he had stolen from thence. The council ordered that he be immediately tied to the flagstaff and have forty lashes. Mr Worrall, the overseer at the plantation house, brought in the following account. The honourable Company, as soon as the wet season was over, would have yams fit to dig. Quantity of Company provisions: At Lufkins 18,600 Tibbills Gut 5,000 Coles Gut 70,000 Perkins's 70,000 Which made in all 163,600. The one hundred thousand reported the last council day to be at the Hutts made in the whole two hundred sixty three thousand six hundred. Before these could be expended, the yams bought by the governor and Captain Mashborne in Tombstone Wood on 19 October last would also be fit to dig, and they were in number sixty six thousand. The overseer concluded that whenever the council should begin to dig the honourable Company's yams, it would be at latest August next. It could not be for the interest Margin notes recorded the matter as Harmon the gardener punished, and as quantity of Company provisions. Interpretations The summary punishment of Henry Harmon, gardener, for stealing wood from the Company garden showed the immediate exercise of the council's disciplinary authority over the establishment's servants. The Company garden referred to the cultivated ground attached to the plantation house, recorded in the inventory of 12 April 1715 as carrying the seed stocks of clover and other introduced crops, and worked by gardeners employed directly by the Company. Wood for fuel was a valuable commodity at the island given the limited supply of timber, and pilferage of wood from the Company's grounds amounted to theft of Company property. The penalty of forty lashes at the flagstaff was the standard corporal punishment for theft and minor offences at the establishment, applied in this case immediately upon the offence being established. The report from William Worrall as overseer of the plantation house continued the matter of the yam stocks that had been opened at the consultation of 19

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			April 1715. Worrall had been appointed to that office at the consultation of 5 April 1715 in succession to Edward Mashborne who had died on 31 March 1715, and the present report was his first detailed presentation to the council of the Company's standing provisions position. The report identified yam plantings at four further sites beyond the 100,000 yams at the Hutts already reported on 19 April 1715. Lufkins held 18,600 yams, Tibbills Gut held 5,000, Coles Gut held 70,000 and Perkins's held 70,000, making 163,600 yams in addition to the 100,000 at the Hutts. The combined Company stock of yams thus stood at 263,600 ready for digging when the wet season ended. The reference to Lufkins as a yam planting site connected to the recurring presence of the Lufkin holding in the present series of consultations: it had appeared in the inventory of 12 April 1715 as one of the three holdings where Company household goods were stored, and Stephen Lufkin had been elected surveyor of the highways for the west side at the consultation of 19 April 1715. The recurrence of the Lufkin name in three distinct contexts confirmed the close working relationship between the Lufkin holding and the Company establishment. The reference to yams bought by the governor and Captain Mashborne in Tombstone Wood on 19 October last reached back to a transaction conducted six months earlier under the previous arrangement of council responsibilities, when Mashborne had still been alive and active in the management of the plantation. The 66,000 yams bought at Tombstone Wood would be fit to dig before the existing stocks of 263,600 were expended, giving the Company a total accessible supply of nearly 330,000 yams to draw on over the coming months. The reference to Tombstone Wood as the place of purchase identified a planter holding by that name, perhaps so called from a feature of the ground or from a particular memorial on the holding. Worrall's conclusion that the Company's yams would be ready for digging at latest August next provided the council with the precise timing information needed to respond to the outstanding offer from Gabriel Powell and Richard Gurling. The 150,000 yams offered by the planters on 11 March 1715 would have to compete with the Company's own yams becoming available in August. The council was therefore in a position to refuse the planter offer or to negotiate on price, knowing that the Company's own production would shortly meet its requirements. Speculations The investment of summary judicial authority in the council, exercised immediately at the consultation against Harmon the gardener, perhaps reflected the practical limits of formal legal process at a small overseas establishment. A more elaborate procedure of trial and judgment would have been impractical for an offence of pilferage from the Company garden, and the council functioned as both legislature and bench for such matters. The flogging of forty lashes at the flagstaff was administered in public, in the open ground before the castle, both as punishment for the offence and as deterrent example to others among the garrison and the servants of the establishment. The orderly division of the Company's yam stock across multiple separate plantings - the Hutts, Lufkins, Tibbills Gut, Coles Gut, Perkins's and Tombstone Wood - perhaps reflected a deliberate strategy of dispersing the staple food crop across different parts of the island to guard against the failure of any single site. Each of the sites carried a portion of the total crop, so that the loss of any one to disease, weather damage or pilferage would not destroy more than a fraction of the standing supply. The geographical dispersal also took advantage of variations in soil and microclimate across the island, allowing the Company to maintain yam

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			production in different conditions and at different stages of growth. The principle of risk distribution had been visible earlier in the consultation of 1 April 1715, where Captain Haswell's report had shown the cattle and pigs of the Hutts plantation similarly dispersed across the Great Wood and the Woody Ridge.
441	432	Interest of our Hon[ble] Masters to buy any more, Therefore Resolved that no yams whatsoever not already contracted for [...] mention[d] in the report of the 2[d] of Novemb[er] be bought untill we have dugg all that belongs to the Hon[ble] Compa[ny] that are fitt to dig, John Batavia the Hon[ble] Companys Black being Run away one of the Comp[any]s working Bullocks w[ch] he us'd to look after fell into a Swamp at the upper end of the Vally and died. The foll[owing] Petition[s] were Presented viz[t] Island S[t] Helena, To The Worsh[ipfull] Isaac Pyke Esq[r] Gov[r] [...] and Council The Humble Petition of Jonathan Doveton Planter Humbly, Shewth, That your Petition[r] House in the High street in James Town adjoyns to M[r] Tho[s] Swallows who has a blind (as tis called) put up at his house just at that part adjoining to yo[r] Petition[r] door w[ch] is the occation of filth and nastiness stoping there to the great annoyance of yo[r] Petition[r] and as he humbly conceives all such blinds are a Publick nuisance as well as very ugly in the cheif street of the place [...] makes the same unhealthy by the stench of such nastiness as lodgeth there, Wherefore yo[r] Petition[r] Humbly prays an Order may be made for the said M[r] Swallow to pull down the said blind, April y[e] 26[th] 1715 And yo[r] Petition[r] as in Duty bound shall Ever Pray [...] Jonathan Doveton Margin Notes: No more yams to be bought Bullock Dead Island S[t] Helena, Shewth, Jon[a] Doveton desires a blind to be pull'd down. April y[e] 26[th]: 1715	The minute continued. It could not be for the interest of the honourable masters to buy any more. The council therefore resolved that no yams whatsoever, not already contracted for or mentioned in the report of 2 November, be bought until the council had dug all that belonged to the honourable Company that were fit to dig. John Batavia, the honourable Company's slave, having run away, one of the Company's working bullocks which he used to look after fell into a swamp at the upper end of the valley and died. The following petition was presented. Island St Helena. To the worshipful Isaac Pyke, esquire, governor, and council. The petition of Jonathan Doveton, planter, was submitted. Doveton set out that his house in the High Street in James Town adjoined Mr Thomas Swallow's, who had a blind (as it was called) put up at his house just at that part adjoining to the petitioner's door. The blind was the occasion of filth and nastiness stopping there to the great annoyance of the petitioner, and as he humbly conceived all such blinds were a public nuisance as well as very ugly in the chief street of the place, and made the same unwholesome by the stench of such nastiness as lodged there. Wherefore the petitioner humbly prayed that an order might be made for the said Mr Swallow to pull down the said blind. The petition was dated 26 April 1715 and signed by Jonathan Doveton, with the closing form that the petitioner as in duty bound should ever pray. Margin notes recorded the matter as no more yams to be bought, bullock dead, and Jonathan Doveton desires a blind to be pulled down. Interpretations The council's resolution to buy no more yams beyond those already contracted for or mentioned in the report of 2 November 1714 brought to a head the matter of the Powell and Gurling offer of 11 March 1715 that had been considered in the consultation of 19 April 1715 and now resolved on 26 April 1715. The Company would honour the existing contracts with the poor planters whose debts were to be settled by yam payment, but would refuse any additional purchases until the Company's own substantial stocks of 263,600 yams at the five plantation sites, supplemented by the 66,000 yams from Tombstone Wood, had been dug and used. The reference to the report of 2 November 1714 indicated that the council was now operating under a specific governing document on yam purchases, perhaps a list of the planters whose debt-settlement yams had been accepted in the previous November, against which any further purchases would be measured. The reference to John Batavia the honourable Company's slave having run away, with the consequence that the working bullock he had been tending fell into a swamp at the upper end of the valley and died, connected directly to the disciplinary matter raised at the consultation of 19 April 1715. Batavia had been one of the two slaves to be fettered together on the chain of six foot length under the order of that consultation, drawn from the Dutch practice at Batavia. The present minute revealed that Batavia had run away before the chaining could be implemented, and his absence from his duties had caused the loss of a working bullock. The death of the bullock represented a real cost to the Company, since each working animal was a productive asset of the plantation and the loss of one through

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			neglect by an absconding slave had immediate operational consequences. The minute connected the disciplinary failure with the practical loss, demonstrating the costs to the Company of failed slave management. The petition of Jonathan Doveton against the blind erected by Thomas Swallow opened a private nuisance matter that the council was being asked to resolve as a public health and amenity question. Doveton had appeared in the census of 21 March 1715 with 7 whites and 11 slaves on a substantial holding of 151½ acres carrying 40 head of cattle. He had also appeared as one of the three executors of Robert Leach in the petition of 12 April 1715, alongside Richard Gurling and James Greentree. Doveton was thus a substantial planter of standing in the parish, and his house in High Street in James Town was the urban residence that the larger planters maintained in addition to their country holdings. Thomas Swallow had appeared in the census of 21 March 1715 with 5 whites and 3 slaves on a holding of 71 acres carrying 21 head of cattle. He was Doveton's neighbour in High Street, and the blind he had erected at his house abutted Doveton's door. A blind in this sense was a screen or hoarding put up to provide privacy or to shelter a particular use of the property from view. In the present case the blind had created a sheltered space where filth and other nastiness accumulated, causing offence to Doveton in the adjoining property. The complaint described the blind as creating both a visual ugliness in the chief street and a public health nuisance through the accumulated stench. The petition framed the matter in two ways: as a private complaint by Doveton against his neighbour, and as a public nuisance affecting the wider street. The framing as a public nuisance gave the council a basis for intervention that went beyond resolving a private dispute between two planters, since public nuisances in the chief streets of the town fell within the council's general regulatory authority. The decision sought was an order requiring Swallow to pull down the blind, which would resolve both the private complaint and the public concern. Speculations The death of the Company's working bullock through John Batavia's absconding perhaps reflected the broader operational vulnerability of the Company plantation to slave indiscipline. The working stock of the plantation depended on continuous attention from slave herdsmen and tenders, and the absence of even a single slave from his duties could result in immediate loss of valuable productive assets. The case strengthened the argument for the joint chaining of Murdoc and Batavia under the order of 19 April 1715, since the loss of the bullock was a tangible cost that justified the more severe restraint of the slaves. The council was perhaps recording the loss specifically to demonstrate to the Court of Directors in London that the disciplinary measures adopted were warranted by the practical consequences of slave indiscipline. The complaint about the blind at Swallow's house in High Street perhaps reflected a particular tension between the planter community's adoption of urban property and the social conventions appropriate to the chief street of the town. Substantial planters maintained town houses in James Town in addition to their country holdings, allowing them to conduct business with the Company stores and to be present for council and parish meetings. The development of urban amenities in the chief street required a different code of behaviour from the country plantations, where outbuildings, screens and accumulation of refuse near the dwelling would have been unremarkable. Doveton's complaint perhaps reflected the development of higher standards of urban amenity among the more substantial planters, with the council being asked to enforce those standards

Island S[t] Helena Shewth, Gibbs desire to goe off the Iceland. April y[e] 26[th] 1715 because of sickly time thought fitt to reject his	The governor was well satisfied with the truth of the allegations mentioned in the petition, and that the said blinds were a nuisance as well as an eyesore. The council ordered that the said blind be forthwith demolished, and also all others of that kind, and that none for the future be permitted to be built. These blinds were a wall of about seven foot high and five or six foot wide, built to hinder the dust from being blown into the windows. The dust would be better prevented by glazing the windows the other way, the setting up of these blinds being not only irregular but causing much nastiness. Island St Helena. To the worshipful Isaac Pyke, esquire, governor, and council. The petition of John Gibbs, freeman, was submitted. Gibbs set out that he had served the honourable Company as a soldier his full time and had been discharged. He was now desirous to go to his native country to see his relations, who had often sent to him to come home. He humbly prayed the council to give him leave to put up an advertisement to sell his goods by public outcry and depart by the first homeward bound ship he could hire his passage in. The petition closed with the form that the petitioner as in duty bound should ever pray, was dated 26 April 1715, and was signed by John Gibbs with his mark. The council resolved that whereas it had been a sickly time and many men were dying, it was the governor's opinion that it was best to keep what good men they had upon the island, and therefore that he Margin notes recorded the matter as all blinds to be demolished, Gibbs desire to go off the island, and because of sickly time thought fit to reject his application. Interpretations The detailed description of the blinds gave a clear picture of the structures complained of. Each blind was a wall about seven feet high and five or six feet wide, built outside the window of a dwelling to deflect the wind-blown dust of the street. The dust was a continuing problem in the unpaved chief street of James Town, where horses, cattle and pedestrian traffic raised clouds of dust that found their way into the open windows of the houses. The blinds had been put up as a practical response to the dust problem, but their unintended consequence was to create sheltered corners where rubbish accumulated and stench developed, making the cure worse than the disease. The council's recommendation that glazing the windows would be a better solution introduced a more permanent and amenable approach: glass windows that could be closed against the dust would prevent the problem without creating the secondary nuisance of the accumulated filth behind the blinds. The order that all such blinds be demolished, not only the particular one complained of by Jonathan Doveton in the petition of 26 April 1715, extended the council's response from the resolution of a private dispute to a general regulation of the urban environment. The ruling that no such blinds should be permitted in future established a forward-looking restriction on the development of the chief street, requiring residents to use glazed windows or some other solution rather than building external screens. The decision marked a step in the development of urban planning regulation at the island, with the council assuming the power to determine what kinds of structures could be erected in the principal streets. John Gibbs's petition raised a different kind of matter, namely his desire to leave the island and return to England. Gibbs had appeared in the census of 21 March 1715 as a single white man with no wife,

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			children, slaves or land, in a small one-person household. He had completed his term as a soldier and had been discharged, becoming a freeman of the island. His petition asked for leave to dispose of his goods by public auction and to take passage on the next homeward bound ship. The council's response was to refuse the application, on the ground that it had been a sickly time and many men were dying, so that the establishment could not afford to lose any good men who were still alive and well. The reasoning was that with the white population reduced by sickness and death, the council needed to retain every available man for the work of the garrison and the establishment. The decision overrode Gibbs's personal wishes in the interest of the broader requirements of the establishment. The reference to a sickly time as the operational reason for refusing the petition gave a measure of the demographic pressure on the island. The census of 21 March 1715 had recorded 405 whites under the head of officers and soldiers, and the present minute indicated that this population was being depleted by disease. The death of Edward Mashborne on 31 March 1715 after a sickness of about three weeks, as recorded in the consultation of that date, had been one prominent casualty of the period. The further references in the present minute to many men dying suggested that a wider epidemic or season of mortality was affecting the establishment. Speculations The council's intervention in the urban environment of James Town through the prohibition of blinds perhaps reflected a wider effort by the new administration under Isaac Pyke to bring order and improvement to the establishment. The series of consultations through the spring of 1715 had shown the council addressing administrative neglect across multiple areas: the overdue inventory of Company stock following the death of Edward Mashborne on 31 March 1715, the requirement that the garrison reckon at the stores at the consultation of 5 April 1715, the warrant to the overseers of the highways on 15 April 1715 requiring them to perform their long-neglected duties, and now the regulation of the urban street. The cumulative effect was a comprehensive review and reform of the island's administrative practices, with the council reaching into matters that had been allowed to drift under earlier administrations. The refusal of John Gibbs's request to leave the island, despite his having completed his service and being legally free to depart, perhaps reflected the council's recognition that the small white population of the island was a critical resource that could not be allowed to drift away on personal grounds. The withholding of permission to take passage gave the council effective control over emigration from the island, even of men who were no longer formally bound to the Company's service. The practice could be defended on the ground that the island establishment was a closed community whose continued viability depended on retaining its productive members, but it represented a significant limitation on the personal liberty of discharged soldiers. The contrast with Edward Hollwell's situation, where the council had granted an additional salary at the consultation of 12 April 1715 to retain a useful clerk, showed the council using both positive inducements and outright refusals to maintain the establishment's workforce.
443	434	he can[no]t give leave for his departure till more are sent over to supply the Island better, Island S[t] Helena To the Worsh[ipfull] Isaac Pyke Esq[r] Gov[r] [...] and Council[] The most Humble Petition of Henry Francis Planter Humbly	The council ruled that the governor could not give leave for Gibbs's departure until more were sent over to supply the island better. 		Shewth, To yo[r] Worship, That there being a Parcell of waste Land near the Plantation house adjoining to Lufkins Land on one side and M[r] Twisters[?] on the other side and very comodious for yo[r] Petition[r] to save Fencing and make the more Regular Peice of Ground and being of no use to any Person, Humbly prays yo[r] Worsh[i]p [...] Council to grant him a Lease thereof [...] containing about three or four Acres to the best of yo[r] Petition[rs] Judgement, And yo[r] Petition[r] as in Duty bound shall Ever Pray [...] April y[e] 26[th]: 1715 Henry Francis Enquiry was made what side of the Gutt this Land lyes on [...] M[r] Francis being called did not appear but had sent in this Petition and was gone into the Countrey whereupon it is ordered that he haveing neglected to attend on his own business [...] that this his Petition therefore be rejected Island S[t] Helena To the Worsh[ipfull] Isaac Pyke Esq[r] Gov[r] [...] and Council[] The most Humble Petition of Arthur Bradley Overseer Humbly Shewth To yo[r] Worship, That whereas your Margin Notes: request till a Supply [...] Island S[t] Helena Shewth, Hen: Francis's request for 3 or 4 Ac[res] Land and Lease for y[e] Same April y[e] 26[th] 1715 rejected for not attending Island S[t] Helena Shewth	Francis set out that there was a parcel of waste land near the plantation house, adjoining Lufkin's land on one side and Mr Gurling's on the other side, very commodious for him to save fencing and make the more regular piece of ground, and being of no use to any person. He humbly prayed the council to grant him a lease thereof, containing about three or four acres to the best of his judgment. The petition closed with the form that the petitioner as in duty bound should ever pray, was dated 26 April 1715, and was signed by Henry Francis. Enquiry was made of what side of the gut this land lay on. Mr Francis did not appear but had sent in this petition and was gone into the country. Whereupon the council ordered that, he having neglected to attend on his own business, his petition therefore be rejected. Island St Helena. To the worshipful Isaac Pyke, esquire, governor, and council. The petition of Arthur Bradley, overseer, was submitted. Bradley set out that whereas his Margin notes recorded the matter as the request to be deferred till a supply, Henry Francis's request for 3 or 4 acres of land and lease of the same, and rejected for not attending. Interpretations The qualification of Gibbs's refusal, that the governor could not give leave until more were sent over to supply the island better, framed the refusal as conditional rather than absolute. The expectation was that Company shipping would bring fresh men to replenish the establishment, and that once the population had been restored to working strength Gibbs could be released. The condition gave Gibbs a path forward that depended on future Company action rather than on the present council, and held out the possibility of eventual departure for those who had completed their service. The petition of Henry Francis raised a question of marginal land use that was common at the island. The waste land referred to was a small parcel that had not been granted to any planter, lying between the holdings of Stephen Lufkin and one of the Gurling brothers, near the plantation house. Henry Francis had appeared in the census of 21 March 1715 with 6 whites and 15 slaves on a holding of 36 acres, and had also appeared in the labour list of 15 April 1715 at a contribution of 2 whites and 5 slaves. His request for a lease of three or four acres to consolidate his existing holding through the absorption of the adjoining waste land reflected the standard pattern by which planters extended their holdings through grants and leases of marginal Company ground. The reason given for Francis's request was practical, namely to save fencing and make the more regular piece of ground. The amalgamation of the waste parcel into an adjoining planter holding would allow a single boundary fence to enclose both the existing land and the new addition, rather than requiring separate fencing of the small parcel as an isolated piece. The argument was a recognised one in English agricultural practice, where the consolidation of scattered parcels into compact blocks improved both the cost of fencing and the efficiency of cultivation. The reference to the land being of no use to any person was the standard formula for petitions for unused ground, since the council would not grant land that was already in productive use by another party. The council's enquiry into which side of the gut the land lay on showed the requirement for precise geographical identification before any grant could be made. The gut referred to one of the steep narrow valleys characteristic of the island's terrain, with the side of the gut determining which planters' holdings bordered the waste land. The enquiry could not be resolved without Francis's own attendance to identify

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			the specific parcel, since the small scale and irregular geography of the island made even local land questions difficult to settle without on-the-ground reference. The rejection of Francis's petition on the ground that he had neglected to attend in person on his own business gave a procedural reason for the refusal that did not actually engage with the merits of the request. The council was unwilling to consider a land grant in the absence of the petitioner, since questions might arise that required Francis's clarification. The decision treated attendance at the council as a basic requirement of any petitioner, with the failure to attend treated as evidence that the petitioner himself did not consider the matter important enough to pursue. The rejection was perhaps not final, since Francis could resubmit the petition with attendance on a future consultation day. The petition of Arthur Bradley, overseer, opened a third matter on the present consultation day. Bradley had appeared in the census of 21 March 1715 with 3 whites and 2 slaves on a holding of 20 acres held entirely on leave, and in the labour list of 15 April 1715 at a contribution of 1 white. The recurrence of his name in the present petition as overseer perhaps reflected a Company appointment to a particular overseer position separate from the planter-elected surveyors of the highways. The substance of his petition was visible only in the opening words before the transcription closed, with the matter to be continued on the following page. Speculations The treatment of Henry Francis's petition perhaps reflected a particular concern by the council about the granting of land at the island. Each grant or lease of waste land reduced the Company's reserve of unallocated ground, and the council was perhaps applying a deliberately exacting procedure to discourage speculative applications. By requiring personal attendance and treating non-attendance as grounds for rejection, the council established a barrier that filtered out applications where the petitioner was not sufficiently committed to pursue the matter through the formal process. The result was that only the most determined applicants would obtain grants, leaving the marginal land available for those who would actually make productive use of it. The framing of Gibbs's refusal as conditional on future supply from England perhaps also reflected a calculated approach to managing expectations among the discharged soldiers of the establishment. By holding out the possibility of eventual departure, the council retained the loyalty and cooperation of men who might otherwise have become discontented at being trapped on the island against their wishes. The refusal was thus not so much an absolute prohibition as a delay pending the next Company shipment of replacement men, giving Gibbs and others in his position a reason to continue working productively while awaiting their opportunity to leave.
444	435	yo[r] Petition[r] is Tenant to the Hon[ble] Company for a house and twenty Acres of Land at the Rate of Seven Pounds p[er] ann[um] and the house was always repaired by order of the Govern[r] for the time being, Your Petition[r] humbly represents that the said house is very much out of repair besides the Rafters and thatching that the house is untenantable, Wherefore yo[r] Petition[r] humbly prays that the said house may be new thatcht and the Rafters repaired it being unthatcht[...] ever since yo[r] Petition[r] came to it, April y[e] 26[th] 1715 And yo[r] Petition[r] as in duty bound shall Ever Pray [...] Arthur Bradley This Petition being of some consequence Resolved to Defer it untill there are more of the Council Present.	Bradley set out that he was tenant to the honourable Company for a house and twenty acres of land at the rate of seven pounds the annum, and that the house had always been repaired by order of the governor for the time being. The petitioner humbly represented that the said house was very much out of repair, besides the rafters and thatching, that the house was untenantable. Wherefore the petitioner humbly prayed that the said house might be new thatched and the rafters repaired, it being unthatched ever since the petitioner came to it. The petition closed with the form that the petitioner as in duty bound should ever pray, was dated 26 April 1715, and was signed by Arthur Bradley. This petition being of some consequence, the council resolved to defer it until there were more of the council present.

		Island S[t] Helena To the Worsh[ipfull] Isaac Pyke Esq[r] Gov[r] [...] and Council[l] The most Humble Petition of Sam[l] Allgate Corp[ora]ll most Humbly Shewth That yo[r] Petition[r] being throughly sensicble of his folly and misbehaviour w[i]th great regret and hartly sorrow for the same, Humbly prays yo[r] Worsh[i]p [...] Council will be pleased to pardon and forgive yo[r] penitent Petition[r] and to relase him out of this loathsome and filthy Prizon faithfully promising to amend and for the future to leee a sober life and will allways be mindfull of his Duty, April y[e] 26[th] 1715 And yo[r] Petition[r] as in Duty bound shall Ever pray Samuell Allgate Margin Notes: Arth: Bradleys Desire to have y[e] house to have repaired as useuall April y[e] 26[th] 1715 answer Deferred Island S[t] Helena Shewth Algates Petit[ion] to be releast. April y[e] 26[th] 1715	Island St Helena. To the worshipful Isaac Pyke, esquire, governor, and council. The petition of Samuel Allgate, corporal, was submitted. Allgate set out that he was throughly sensible of his folly and misbehaviour, with great regret and hearty sorrow for the same. He humbly prayed the council to be pleased to pardon and forgive the penitent petitioner, and to release him out of this loathsome and filthy prison, faithfully promising to amend and for the future to lead a sober life and always be mindful of his duty. The petition closed with the form that the petitioner as in duty bound should ever pray, was dated 26 April 1715, and was signed by Samuel Allgate. Margin notes recorded the matter as Arthur Bradley's desire to have his house repaired as usual, the answer deferred, and Allgate's petition to be released. Interpretations The petition of Arthur Bradley as a Company tenant raised the question of the landlord's obligation to maintain a leased property. Bradley occupied a house with twenty acres of land at a rent of seven pounds the annum, a substantial tenancy giving him a complete planter establishment in return for an annual payment. His standing in the census of 21 March 1715 with 3 whites and 2 slaves on 20 acres of land held entirely on leave matched the present description, with the land that he had been recorded as holding on leave being identified here as his Company tenancy. The terms of the tenancy implied a continuing obligation on the Company, as landlord, to maintain the house in tenantable condition. Bradley's statement that the house had always been repaired by order of the governor for the time being confirmed the established practice by which the governor of the day approved the repairs to Company-owned tenant houses. The present application requested re-thatching of the roof and repair of the rafters, the house having been unthatched since Bradley came to it. The lack of thatching exposed the timber and the interior to the weather, accelerating the deterioration of the structure and making the house untenable. The annual rent of seven pounds for a house and twenty acres gave a useful measure of the value of a Company tenancy. The figure compared with the salary of twenty pounds the annum granted to Edward Hollwell as clerk on 12 April 1715, indicating that the annual rent represented roughly one third of a clerk's salary. The Company was thus offering its tenants a substantial physical and productive base at a rent that was modest in relation to the means of a person on a salaried Company position. The council's resolution to defer the petition until there were more of the council present indicated that the matter was considered too important to be decided by the four members present at this consultation. The reference to the matter being of some consequence suggested that the cost of the requested repairs was substantial enough to warrant a full council decision, perhaps because the work would commit Company funds beyond the routine maintenance authorisation that the governor could approve. The deferral protected the petitioner's interests by preserving the matter for full consideration rather than refusing it on the present occasion. The petition of Samuel Allgate brought the disciplinary matter raised at the consultation of 19 April 1715 to a head. Allgate had been committed by the governor on a Friday for leaving the back gate of the castle open all night, and the governor had reported the offence at the consultation of 19 April 1715 along with the additional information that Allgate had previously killed his own calf for a drunken bout, demonstrating his extravagant character. The present petition was Allgate's submission to the council seeking pardon and release from confinement. The week of imprisonment

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			between his committal on the previous Friday and the present petition represented the immediate punishment that he had already suffered. The form of the petition followed the standard pattern for applications for release from confinement. The petitioner acknowledged his folly and misbehaviour with great regret and hearty sorrow, asked for pardon and forgiveness, and promised future good behaviour through leading a sober life and being mindful of his duty. The acknowledgement of the offence, the expression of remorse, the request for mercy and the undertaking of future amendment were the standard elements of such a petition, with the petitioner placing himself entirely at the council's mercy. The reference to the loathsome and filthy prison from which Allgate sought release gave a glimpse of the physical conditions of confinement at the castle. The prison was apparently a place of considerable discomfort, with the descriptions of loathsome and filthy suggesting unsanitary conditions, perhaps a single cell or holding room in the castle that lacked adequate ventilation, light or facilities. The unpleasant conditions added to the deterrent effect of imprisonment, since even a short period in such a place would be a substantial discouragement to future offending. Speculations The deferral of Bradley's petition until more of the council were present perhaps reflected the council's awareness that decisions on Company expenditure required careful consideration when made in reduced numbers. The four councillors present at the consultation of 26 April 1715 (Pyke, Haswell, Bazett and Tovey) constituted the full standing council, but the consultation of 19 April 1715 had referred to additional councillors not being present to attend on Allgate's case. The reference may have anticipated the arrival of additional supernumerary members from London on the next ship, or it may have reflected the council's practice of seeking advice from senior factors and officers beyond the formal council membership for important decisions. The deferral preserved the matter without prejudice while the council assembled a fuller body to consider it. The full progression of Allgate's case from the offence to the present petition gave a complete picture of the disciplinary process at the island. The governor committed Allgate immediately upon the offence being discovered. The case was reported to the council at the next consultation, where additional information about the offender's character was placed on record. The petition for release was submitted at the following consultation, after a week of imprisonment had been served. The structure gave the council multiple opportunities to consider the matter and gave the offender a recognised path back from punishment to release, depending on his willingness to acknowledge the offence and undertake future amendment. The process combined immediate disciplinary action with measured deliberation, and balanced the deterrent effect of imprisonment against the practical need to return able men to duty.
445	436	This being the Day appointed for the Examining of Sam[^l] Allgate Corp[orall] for his Offence of leaveing open the Castle back gate but there not being enough of the Councill Present and he haveing layn about ten days tis hoped this time of Imprizonment will be sufficient Punishment to Deter him from such carelesss actions for the future, Ordered Therefore that he be discharged [signatures] Antipas Tovey Margin Notes: after 10 days Imprisonm[en]t	The present day was the day appointed for the examining of Samuel Allgate, corporal, for his offence of leaving open the castle back gate. There not being enough of the council present, and he having lain about ten days, it was hoped this time of imprisonment would be sufficient punishment to deter him from such careless actions for the future. The council ordered therefore that he be discharged. The minute was signed by Antipas Tovey. A margin note recorded the matter as after ten days imprisonment and discharged. Interpretations

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
		Discharged	The disposal of Samuel Allgate's case completed the disciplinary matter that had originated with his committal by the governor on a Friday before the consultation of 19 April 1715. The total period of confinement of about ten days, from the original committal on the Friday before 19 April 1715 to the discharge on 26 April 1715, provided a measured punishment that fell between the immediate corporal response of forty lashes administered to Henry Harmon at the present consultation for stealing wood, and any more severe penalty such as continued confinement or fine. The two reasons given for the discharge gave a clear picture of the council's decision making. First, there were not enough of the council present to conduct a full examination of the case. The reduced council of Pyke, Haswell, Bazett and Tovey would have been the same four members present throughout the consultation, and the comment that not enough were present suggested that the formal examination of a member of the garrison required a fuller body than the four sitting members. The same consideration had been applied to Arthur Bradley's petition for house repairs, which had been deferred until more of the council were present. Second, the council judged that the ten days of imprisonment already served had been sufficient punishment to deter Allgate from such careless actions in the future. The reasoning combined the practical effect of the imprisonment with the council's hope that the experience would correct Allgate's behaviour. The discharge thus implemented the standard cycle of offence, punishment and restoration that ran through the disciplinary process at the establishment. The combination of the two reasons gave the council a way to discharge Allgate without either formally pardoning him or fully examining the case. The procedural reason (insufficient council present) provided the technical justification, while the substantive reason (sufficient punishment served) gave the practical basis for releasing rather than continuing to hold him. The arrangement preserved the council's authority while disposing of the case in a manner that allowed Allgate to return to his duties. The contrast between Allgate's case and that of Henry Harmon at the same consultation gave a measure of the council's grading of punishments. Harmon, a gardener and Company servant, was tied to the flagstaff and given forty lashes immediately upon being caught with stolen wood. Allgate, a corporal in the garrison, was committed to confinement and held for ten days before discharge with admonition. The difference reflected both the social standing of the two men (Harmon a labouring servant, Allgate a junior officer) and the nature of the offence (Harmon's theft, Allgate's neglect of duty). The corporal punishment of flogging was reserved for the lower ranks and for offences against property, while imprisonment and reproof was applied to the garrison officers for offences of neglect or impropriety. The signature of the minute by Antipas Tovey as secretary closed the consultation of 26 April 1715. The series of consultations from 31 March 1715 through 26 April 1715 had now disposed of the principal matters arising from the death of Edward Mashborne: the appointment of William Worrall as overseer of the Company plantations on 5 April 1715, the appointment of Samuel Pessey to continue at the Hutts on 5 April 1715, the inventory of Company stock taken by George Haswell on 1 April 1715 and by Matthew Bazett and Antipas Tovey on 12 April 1715, the survey of yam stocks on 19 April 1715 and 26 April 1715, the response to the offer from Gabriel Powell and Richard Gurling on 19 April 1715 and 26 April 1715, the parish election of 18 April 1715 with the appointments confirmed on

			19 April 1715, the disciplinary matters of Sergeant Fairfax on 12 April 1715, John Batavia and Murdoc on 19 April 1715, Henry Harmon and Samuel Allgate on 26 April 1715, and the various petitions on land, leases, blinds and departures considered through the series. The cumulative effect was a comprehensive reset of the island's administration following the loss of the third councillor, with the new arrangements firmly established and the routine business of the establishment returning to its normal course. Speculations The reference to not enough of the council being present as a reason for not formally examining Allgate perhaps reflected the practice by which more serious disciplinary proceedings against members of the garrison required a fuller body than the standing four-member council. The decision could not be made by simple majority of the present members but required some larger quorum, perhaps involving additional sworn officers of the establishment or a particular form of court martial procedure for offences by uniformed men. The technical limitation provided the council with a face-saving way to discharge Allgate without a formal verdict, since the council could simply note that the case had not been examined for procedural reasons while still releasing the offender after a measured period of confinement. The use of the prison at the castle as a graded punishment, falling between the immediate corporal punishment and any further sanction, perhaps reflected a deliberate Company policy of using progressive disciplinary measures rather than uniform corporal punishment for all offences. The variety of punishments available, from flogging to imprisonment to fines to dismissal, gave the council a range of responses that could be matched to the nature of the offence and the standing of the offender. The graded approach preserved the social hierarchy of the establishment while still imposing meaningful discipline at each level, and avoided the brutalising effect of applying the same corporal punishment to all offenders regardless of circumstances.
446	437	Island S[t] Helena At a Consultation held on Tuesday the 3 day of May 1715 At the United Castle In James Vally Isaac Pyke Esq[r] Gov[r] Geo: Haswell Dep[ut]y in y[e] Pres[ent] Country Matthew Bazett [...] Antipas Tovey Forasmuch as Toby a Black Slave, belonging to M[r]s Cha[s] Stewards Orphans is to be Tryed at the Complaint of Cap[t] Haswell for Felony and Burglary, Ordered That a Jury be Sumond against next Monday for Tryall of said Cause. This day the Old Church Wardens brought in their Acco[t] and it appearing thereby that the Church is indebted to the Hon[ble] Company Forty Pounds and Seven Pence three Farthings it is thought fitt that as tis likely the Church will every Year grow more Indebt except some money be received for the payment[?] [...] the paying the present one, That a Rate may be settled to clear y[e] debt The Church Wardens do propose the foll[owing] manner viz[t] Half a Crowne p[er] head for Each, white and Black above Sixteen years of Age and they think that cant do [...] being askt wether it would not be better to Lay the Tax or Rate upon every Acre of Land they think it would be harder upon the Poor people who have Generally none, or very few Blacks but all the wealthiest people have Blacks Margin Notes: Complt against Toby Jury Sumond	Island of St Helena. Consultation held on Tuesday the 3 May 1715 at the United Castle in James Valley. Present: Isaac Pyke Esquire, governor; George Haswell, deputy governor, staying in the country; Matthew Bazett; Antipas Tovey. A complaint was laid by Captain Haswell against Toby, a black slave belonging to the orphans of Charles Steward. Toby stood accused of felony and burglary. The council ordered that a jury be summoned against the following Monday for trial of the cause. The old churchwardens presented their accounts. The church was shown to be in debt to the Honourable Company in the sum of £40 0s 7¼d. The council considered the debt probable to grow larger every year, save for some means of paying the present arrears. The council resolved that a rate be settled to clear the debt. The churchwardens proposed the following manner of assessment. Half a crown a head for every white and black above sixteen years of age. They thought it could not be done otherwise. They considered whether it would be better to lay the tax or rate upon every acre of land. Their view was that this would bear harder upon the poorer people, who generally had no slaves or very few, while the wealthier people had many blacks. Interpretations The trial of Toby falls within the Court of Judicature framework already used for the slave Moll in the robbery of Samuel Algate's house on 7 February 1715 and the slave George on the same date. The mechanism is the empanelled jury against a fixed return day, with the bench composed of the governor and

		Church Wardens Acco[t] a Rate to be settled Church Wardens Proposals.	council. Toby is owned by the orphans of Charles Steward, whose will was proved on 11 January 1714/15 with Powell and Gurling as executors; the slave's value therefore enters the orphan estate and any sentence carrying loss of the slave affects the children's inheritance directly. The complainant Captain Haswell is the deputy governor, here acting in his private capacity as victim. The church rate accounting follows the parish cycle now fully recovered for 1715, with the advertisement of 13 April 1715, the country church election of 18 April 1715, and the council appointment of officers on 19 April 1715. The old churchwardens here rendering account are James Draper and Francis Wrangham under the warrant of 18 January 1714/15. The £40 0s 7¾d shortfall is presented as a structural deficit, not a one-off shortfall, since the wardens forecast continuing accumulation in the absence of a fresh levy. The proposed poll rate of half a crown (£0 2s 6d) on every person, white or black, above the age of sixteen treats slaves as taxable heads on their owners' accounts and so transfers the burden of church funding upward toward the larger slaveholders. The alternative of an acreage rate would, on the wardens' reasoning, fall more heavily on small planters with little or no slave labour. The choice of base is therefore a redistributive policy decision dressed as a question of practical recovery, and the wardens' preference is openly grounded in capacity to pay. The phrase staying in the country, applied to Haswell, formalises the earlier ambiguous in the country expression of 19 April 1715 and 26 April 1715, where Pyke, Haswell and Bazett were recorded as both at a country residence and present at the consultation. Here only Haswell carries the description, and the deputy governor is recognised as a participant in the consultation despite being lodged at the country plantation house. The administrative convention is that residence at Plantation House does not interrupt the councillor's presence on the bench. Speculations The wardens' open preference for the poll rate over the acreage rate is probably driven by ease of collection as much as by equity. A poll rate on whites and blacks above sixteen can be drawn from the same household returns already used for the church assessment of January 1714/15, where Cleeve was returned at 4 whites and 4 blacks, the chaplain Joshua Tomlinson at 1 white and 8 blacks, and the widow Elizabeth Steward at 1 white and 5 blacks. The data structure for the new levy already exists in the wardens' books; an acreage rate would require fresh measurement against the families' land and cattle register completed between 8 March 1715 and 21 March 1715. The wardens are perhaps choosing the less laborious instrument and presenting the choice in equity terms. The decision to set Toby's trial for the next Monday probably reflects the practice of separating the empanelling and trial days so that the jurors can be summoned in writing and the case prepared. The Bever trial of 24 January 1715 and the Court of Judicature cases of 7 February 1715 had each used a comparable interval. Setting the matter down at the present consultation, before the council had a full quorum, secures the date in advance and gives Haswell time to assemble his evidence against a slave owned not by himself but by orphan beneficiaries whose interests may need separate representation.
447	438	Blacks Enough so that the Mony will be raised easier by a Poll Tax then any other way, Ordered That there be a Rate made in the manner proposed, The said Church Wardens Mess[rs] Draper [...] Wrangham praying to be Discharged from their Office,	The wardens completed their argument by stating that the wealthier inhabitants generally had enough blacks to make a poll tax the easier instrument of collection in comparison with any other method. The council ordered that a rate be made in the manner proposed.

		It is ordered that the New Church Wardens Mess[rs] Greentree [...] Twaits be Sumond to appear before the Council next Monday in Order to be Sworne The foll[owing] Petition was Presented Island S[t] Helena To The Worship[ful] Isaac Pyke Esq[r] Gov[r] [...] and Council[men] The most Humble Petition of Richard Ray Soldier, who is constantly Employed in the Hon[orable] Companys Works most Humbly, Shewth. That whereas yo[r] Humble Petitioner has Serv[d] the Hon[orable] Company almost Sixteen years in the Capacity of a Soldier and haveing for some time past been Employed as an overseer in the Hon[orable] Companys Works besides doing his duty a nights as a Soldier (therefore) yo[r] Petition[r] Humbly prays yo[r] Worsh[ipp] [...] Council that he may be excused of doing his Soldiers duty and Continued Overseer in w[ith] Place he will be carefull and dilligent in and he will be better able to perform the same when duty free, May y[e] 3[d] 1715 And yo[r] Petition[r] as in Duty bound shall Ever pray [...] Richard X Ray his Mark Resolv[d] Margin Notes: a Rate Ordered old Church Wardens desire to be Discharg[d] New ones Sumond. Island S[t] Helena Shewth, Rich[d] Rays request to be Duty free May y[e] 3[d] 1715	The old churchwardens, Mr Draper and Mr Wrangham, prayed to be discharged from their office. The council ordered that the new churchwardens, Mr Greentree and Mr Twaits, be summoned to appear before the council the following Monday in order to be sworn. The following petition was presented to Isaac Pyke Esquire, governor, and the council. Richard Ray, soldier, petitioned the council. He set out that he had served the Honourable Company almost sixteen years in the capacity of a soldier and that he had for some time past been employed as an overseer in the Company's works, besides performing his duty at night as a soldier. The petitioner prayed that he might be excused from doing his soldier's duty and continue as overseer in that place. He undertook to be careful and diligent in the post and stated he would be the better able to perform it if relieved from the soldier's duty. The petition was dated 3 May 1715 and signed by Richard Ray with his mark. Interpretations The poll-tax decision adopts the wardens' preferred base on the wardens' own administrative reasoning. The grand jury return of 7 February 1715 over the watercourse before Grace Coulson's door had established the parish vestry as a working body of presentment and recommendation; the present rate confirms its role in actively designing fiscal instruments and not merely collecting them. The council's role here is approving the wardens' proposal rather than originating the measure. The discharge of Draper and Wrangham closes the parish year that began under the warrant of 18 January 1714/15. Their successors Greentree and Twaits were elected at the country church on 18 April 1715 and appointed by the council on 19 April 1715, in line with the geographical balance principle of one churchwarden from each side of the island. The swearing-in is treated as a separate constitutive act, deferred to the next council day so that the new officers take office formally rather than by simple appointment. Richard Ray's dual posting reflects the chronic shortage of trustworthy supervisors that has shaped Company labour management since the redirection of fortification labour to plantation works on 7 February 1715. Ray is the same soldier who in November 1711 became executor of John Henson by nuncupative procedure, and is therefore a man of about sixteen years' service whom the Company has come to trust with the oversight of the Sandy Bay sea wall and comparable works. The petition seeks relief not from labour but from the night watch on grounds of operational efficiency. The signature by mark is the routine documentary form for a soldier-petitioner who cannot write. The petition is nevertheless a formal instrument, witnessed by its date and reading into the council record, and carries the same evidential weight as a signed instrument. Speculations Ray probably draws on the precedent of William Worrall's overseer appointment of 5 April 1715, in which the council appointed a serving man to plantation oversight without a fixed salary pending observation of his behaviour. Worrall's case shows that a Company servant may be lifted out of his line duties for a supervisory role without losing his establishment footing. Ray's petition tests whether the same principle extends to relieving a soldier from his night watch in favour of works oversight, and so attempts to convert an informal double posting into a single recognised office. The timing of the petition, immediately after the church-rate decision, is probably opportunistic. The council is in active mood for administrative

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			reorganisation and has just adopted a fresh fiscal mechanism on the wardens' recommendation; a soldier-overseer seeking a formal change of footing presents his case at the moment when the bench is least likely to send him back to a routine refusal.
448	439	Resolv[d] That whilst he is at work for the Hon[ble] Company he have Liberty to hire one to do his duty, Ordered That according to the Petition of the Marshall the 12[th] April last his fees be as foll[ows] Viz[t] Summoning all Juries [...] all other matters wherein the Hon[ble] Compa[ny] are as Lords Proprietors concern[d] [...] the Punishing of their Serv[ts] or Slaves, the Marshall is to have his Pay or usual Sallary } 00-00-00 For a Soldier or other Comp[any]s Serv[t] comittment 2 days pay, If he be Ordered to fetch down a Soldier for neglect of duty three day[s] pay, If a Planter be comitted 00-02-06 For whiping a black at his Mas[ters] request } 00-00-06 For whiping a black by ord[er] of the Govern[r] nothing } 00-00-00 For comittment of a black 00-01-08 For a Single Sumons 00-01-00 For severall persons sumoned Each } 00-00-06 And the Marshall is Allowed to keep any person in his Custody untill they have payed their Comittm[en]t fees but shall keep no person in Custody longer than three Dayes but if they are imprisoned 3 day[s] for want of payeing their fees they shall then be Discharged Gratis, Margin Notes: to hire one to do his duty w[hil]l[s]t at work. Marshalls Fees.	The council resolved that, while Richard Ray remained at work for the Honourable Company, he should have liberty to hire a man to do his soldier's duty. The council ordered that, on the marshal's petition of 19 April last, his fees be set as follows. For summoning all juries and any other matter in which the Honourable Company were concerned as Lords Proprietors, and for the punishment of their servants or slaves, the marshal was to have his pay or usual salary. £0 0s 0d For a soldier or other Company servant, commitment a day's pay If the marshal was ordered to fetch down a soldier for neglect of duty three days' pay If a planter was committed £0 2s 6d For whipping a black at his master's request £0 0s 6d For whipping a black by order of the governor £0 0s 0d For commitment of a black £0 1s 8d For a single summons £0 1s 0d For several persons summoned, each £0 0s 6d The marshal was allowed to keep any person in his custody until they had paid their commitment fees. He was not to keep any person in custody longer than three days, but if they were imprisoned three days for want of paying their fees they were then to be discharged free. Interpretations The marshal's fee schedule sets the price list for the principal coercive office of the island. The scale distinguishes sharply by status of subject. Acts done where the Honourable Company are the Lords Proprietors carry no separate fee, since the marshal is on salary for the Company's own business. Action against soldiers and Company servants is paid in lost or doubled labour rather than in cash, with a day's pay for ordinary commitment and three days' pay for fetching down a man for neglect of duty. The planter, as a free man with money, pays in coin at £0 2s 6d. The black slave is the cheapest subject for routine work, with whipping at sixpence and commitment at £0 1s 8d, the master paying for any whipping done at his request and nothing where the governor orders it. The summons fees of £0 1s 0d for a single summons and £0 0s 6d each for several persons summoned together fix the marshal's income from civil and criminal processes alike, including the jury summons set in train at the present consultation for the trial of Toby on the following Monday. The marshal's pay or usual salary mentioned in the first item is the standing Company emolument from which any further work for the Company's own causes is treated as done in the line of duty. The custody rule is a brake on the marshal's incentive to detain. He may hold a debtor for his commitment fees, but only for three days. After three days the prisoner is discharged free, even unpaid. The provision protects the freeman planter and the soldier from indefinite detention for want of a few shillings, and confines the marshal's pressure on payment to a narrow window. The three-day cap is the disciplinary

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			counterpart to the marshal's right of detention, and runs against the standing description of the United Castle prison as a loathsome and filthy place, noted by Samuel Algate on 26 April 1715. The hire substitution allowed to Ray converts his soldier's duty into a commodity that may be performed by a paid stand-in. The mechanism is the same as the highway labour warrant of 15 April 1715, where a planter unwilling to attend in person may engage a substitute and pay the substitute's wages. The principle here applied to night-watch duty is that the Company is entitled to performance of the duty, not to the personal labour of the man originally enrolled. Speculations The two-tier whipping fee is probably designed to manage the line between private and public discipline of slaves. By making the master pay when he calls for a whipping but charging him nothing when the governor orders one, the council channels routine punishment toward formal authority and discourages the private whipping economy. The structure makes the bench cheaper than the household for the disciplinary action and is consistent with the summary order against Harmon the gardener of 26 April 1715, in which the council retained whipping at the flagstaff as a public penalty under its own warrant. The three-day cap on custody for non-payment of fees probably reflects experience of detained men whose situation hardened into a more serious problem the longer they remained in the cells. A planter held beyond three days for an unpaid £0 2s 6d would be lost to his fences and his cattle; a soldier held beyond three days would be off the night watch. The cap is the council's way of preventing the marshal's fee economy from disrupting the productive and military establishments it is supposed to police.

Jury. Toby brought down by Cap[t] Haswell	Island of St Helena. At a Court of Judicature of Nisi Prius held on Tuesday the 10 May 1715 at the Sessions House near the United Castle in James Valley. Present: Isaac Pyke Esquire, governor and judge; Captain George Haswell, deputy governor; Matthew Bazett, third in council; Antipas Tovey, fourth in council. The court was opened in the usual manner. The persons appointed for jurors were as follows. 1. Orlando Bagley, foreman 2. John Worrall 3. William Slaughter 4. William Beale 5. Isaac Wood 6. Samuel Jeffery 7. William Worrall 8. Joshua Johnson 9. Sutton Isaake junior 10. Robert Marsh 11. John Twaits 12. James Vesey The jurors were all sworn. The court then proceeded to business. On Thursday the 28 April last, Captain George Haswell brought down to the fort a black slave named Toby, with his hands bound behind him and a rope about Interpretations The Court of Judicature of Nisi Prius is the formal criminal bench of the island, sitting under the governor as judge and the deputy governor and councillors as associates. The Nisi Prius style is borrowed from the English assize procedure of bringing a cause for trial in the county where it arose, and is here applied to the trial of a slave on a charge of felony and burglary. The same bench tried Bever for the enticement of Abigail on 24 January 1714/15, Moll on 7 February 1715 for the

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			robbery of Samuel Algate's house, and George the slave of Riping Wills on the same date for incorrigible roguery; the present sitting belongs to the same regular series. The jury of twelve is the same instrument used in those earlier trials, drawn from the free planters and Company servants of the island. Several of the names recur in the recovered judicial record. Orlando Bagley as foreman is a free planter of long standing, witness to the will of Thomas Allis senior on 8 October 1711 and co-petitioner against Perkins's grant on the same date. Sutton Isaake junior is the surveyor of the highways relieved by the council order of 19 April 1715. William Worrall is the new overseer of plantations whose appointment of 5 April 1715 was made without a fixed salary. John Twaits was elected churchwarden at the country church on 18 April 1715 and is to be sworn in next council day. The court draws on the senior layer of free planters and trusted Company servants for the empanelled trial of a slave whose conviction may carry capital or near-capital sentence. Toby is the property of the orphans of Charles Steward, whose will was proved on 11 January 1714/15. His value, like Abigail's £50 0s 0d in the Bever case, will turn on the trial's outcome and will affect the orphan estate directly. The cause of action was laid by Captain Haswell on 3 May 1715 as a complaint of felony and burglary, and the jury was summoned for the present day under that order. The act of bringing the slave down to the fort with his hands bound behind him and a rope about his person is the standard apprehension procedure for a suspected felon, and the date of Thursday the 28 April 1715 fixes the moment at which Haswell took the slave into custody. Speculations The selection of Orlando Bagley as foreman is probably deliberate. The foreman directs the jury's discussion and delivers the verdict, and Bagley's long experience as a witness, petitioner and juror gives him standing among the other men of the bench. The council's earlier difficulty with juries in the Bevan case of 7 February 1715, where the jury had to be directed by the governor to value a stolen cane below the twelve-penny grand-larceny threshold to spare a white man, makes the choice of an experienced foreman a sensible precaution where the verdict on a slave will turn on factual rather than valuation questions. The detail of the rope about Toby's person, recovered as the principal text breaks at the head of the next image, probably indicates that the slave was brought down in chains rather than under simple escort, the apprehension procedure being calibrated to the supposed seriousness of the charge. The image breaks before the description is completed, but the binding of the hands and the rope already noted go beyond what was used to bring Moll or George before the same court on 7 February 1715. The treatment is consistent with a charge of felony coupled with burglary, the more serious of the two heads.
451	442	about his neck Guarded by one Rich[d] Swallow and two Blacks and told the Gov[r] that fellow had broken open his House and Stole Severall goods to a considerable Vallue [...] w[h]ich he could prove upon him whereupon the Gov[r] caused Examination to be made and took it in writing and by those Examinations it did appear that Toby the Prisoner being a Servant to his the said Cap[t] Haswells wife[s] Children in Law had in the Chest three Pound of Sugar [...] one pound [...] a half of Pepper that Cap[t] Haswell sed was his and behind his chest a pint bottle very near full of Arrack w[ch] Cap[t] Haswell own[d] but the said Slave sed twas given him by his wife Dolly who lives in the same house only she is Cap[t] Haswells Slave and the fellow is the Childrens and its very likely that the Woman had	Captain Haswell came down to the fort with the slave Toby, his hands bound behind him and a rope about his neck, guarded by Richard Swallow and two blacks. Haswell told the governor that Toby had broken open his house and stolen several goods of considerable value, all of which he could prove upon him. The governor caused examinations to be made and taken in writing. The examinations showed that Toby, the prisoner, who was a servant to Captain Haswell's wife's children in law, had hidden in the chest three pounds of sugar and one pound and a half of pepper. Haswell said these were his. Behind his chest a pint bottle very near full of arrack was also found, which Haswell owned. Toby said the bottle had been given him by Dolly, Haswell's wife, who lived in the same

		Pilfered those things out of the house for her Husband for he and she did in Charles Stewards (their former Masters life time) Live all in one Familie But now the[y] in one house the familie is Divided and the Children of Charly Steward drove to great hardships The Govern[r] finding Cap[t] Haswell in a great Passion to have the fellow committed for Fellony [...] Burgulary and tryed for the same that he might be condemned [...] hanged took him on one side and told him that this Fact was of too small a nature when proved to hang any man for. And besides that it was not Burglary But sayd here is a very Strickt Law made by y[e] Country in such cases and the fellow shall be Punnished according to that Law but Cap[t] Haswell sayd he had many other crimes to charge him with and that the whole Countrey would come in against him and prest that he might be committed whereupon he was Comitted by Margin Notes: his accusation Goods Stole. Gov[r]s discourse w[i]th Cap[t] Haswell	house and was Haswell's slave. The fellow was the children's slave. It was probable that the woman had pilfered these things out of the house for her husband, because both of them had lived in Charles Steward's, their former master's, lifetime, all in one family. Now that the family was divided into two houses, the children of Charles Steward were driven to great hardships. The governor, finding Captain Haswell in a great passion to have the slave committed for felony and burglary and tried for the same that he might be condemned and hanged, took him aside. The governor told him that the theft was of too small a value, when proved, to hang any man for. Beyond this, the matter did not amount to burglary. The governor said that there was a very strict law made by the country in such cases and the slave should be punished according to that law. Captain Haswell replied that he had many other crimes to charge him with, and that the whole country would come in against him. He pressed that the slave might be committed, upon which he was committed. Interpretations The taking of examinations in writing by the governor is the pre-trial procedure that anchors the present cause. Haswell brings the slave down with his complaint; the governor reduces the evidence to written depositions before the matter goes to the jury. The examinations are the source of the factual statements set out in the consultation, including Toby's own account that the arrack came from Dolly. The same procedure was followed for Moll on 7 February 1715, where Moll's own evidence that the door was not broken converted the burglary charge into simple felony. Here Toby's evidence that the arrack came from another slave threatens to do the same to Haswell's case. The phrase very strict law made by the country in such cases points to a slave code enacted at the general sessions of the country - perhaps the same general sessions of 7 February 1715 - distinct from the English law applied to whites and Company servants. The governor's recourse to the country law as the proper measure of punishment is the institutional brake on Haswell's demand for capital sentence. The country law presumably scales penalty to the value of the goods taken, and on the figures of three pounds of sugar, a pound and a half of pepper and a pint bottle of arrack the threshold is not crossed. The household geography is the heart of the case. Toby and Dolly had lived together in one family under Charles Steward, whose death before 4 January 1714/15 and whose will proved on 11 January 1714/15 split the establishment into two houses. Toby went with the orphans into Haswell's care as their step-father by marriage, Dolly remained Haswell's own slave; both continued to live in the same dwelling. The opportunity for the alleged conspiracy between husband and wife slaves arises from the very arrangement that the probate produced. The governor's interpretation that Dolly pilfered the goods for her husband is grounded in the persistence of the slave marriage across the partition of the household. Haswell's escalating posture - first the bound arrival, then the demand for capital trial, then the threat to bring further charges and to muster the country against the slave - is recognised by the governor as a great passion. The governor takes him aside, presses the legal weakness of the case, and only commits the slave when Haswell adds the promise of further crimes and country support. The committal is therefore a holding measure under pressure from the deputy governor, not an endorsement of the burglary charge. Speculations Haswell's insistence on a capital trial, against the governor's measured assessment that the theft did not

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			meet the threshold and the breaking did not amount to burglary, is probably driven by a domestic problem that he cannot acknowledge openly. If the arrack came from Dolly to Toby, the case turns on his own household and on his own slave's collusion with a slave belonging to the orphan estate. A capital sentence on Toby would close the matter by removing the witness whose account implicated Dolly, and would convert the missing arrack into a recovered loss rather than an internal pilferage. The governor's restraining role on the bench is here the protection of the orphan estate against the conversion of a slave worth perhaps £50 0s 0d into a hanged thief on the strength of a husband-wife arrangement that pre-dates Haswell's marriage to the widow Steward. The reference to the whole country coming in against the slave probably reflects a separate stock of suspicions among the planters about thefts not yet brought home to a particular offender. Haswell offers to convert Toby into the public solution to those unresolved cases, in the same way Bevan's silver-headed cane on 7 February 1715 was directed below the twelve-penny threshold by a planter jury anxious to spare a white man. Here the bench is being asked to do the reverse, to receive country evidence against a slave to make up a capital case where the present facts do not support one. The governor's resort to country law and his deferral to the jury that has been sworn for the day on the present consultation is the procedural answer to the demand.
452	443	by y[e] Govern[r], And the next day as the Gov[r] went to look after the Labourer[s] he called on Cap[t] Haswell to talk with him when he was cooler (it being in the morning) and then told Cap[t] Haswell that the fellow should be whip[t] for Stealing y[e] Pint of Arrack and Advised Cap[t] Haswell not to make any more stirr about that matter w[ch] was too frivolous to call a mans life in question for, but he denied the Gov[r] and prest yet farther to lett him have Justice for he had many other Great Crimes to charge him with and that the whole Country would accuse him and that besides that Fact[s] the fellow had Stolen fifty Rupees soundly desireing the Govern[r] not to take the part of a thief, for he was resolved to prosecute him and Hang him Then the Govern[r] gave the Country ten Days Notice that there should be a Sessions held and Ordered a Jury to be accordingly Summon[d] And on Tuesday the 10: of this Instant May the Govern[r] held a Court of Judicature for the Tryall of this Prisoner Toby Cap[t] Haswell haveing gott two Indictments drawn up against him for Felony and Burglary the fellow was brought to the Barr the Jury appeard and being to be Impannelld M[r] Powell [...] Gurling appeared in behalf of the Children (who owned the black) who were wholly Ignorant of all Judiciall proceedings, and Objected against two of those who were Sumoned as being the Intimate acquaintances and near Relations of Cap[t] Haswell's wife who he took to be the cause of this Rigourous Prosecution, Whereupon Cap[t] Haswell alsoe made exception against M[r] Coles who has the repute of a very discreet [...] sober Man Margin Notes: Sessions appointed. Proceedings.	The governor committed Toby. The next day the governor went out to look after the labourers and called on Captain Haswell to speak with him when he was cooler, the meeting being in the morning. The governor told Haswell that the slave should be whipped for stealing the pint of arrack, and advised him not to make any further stir about the matter, the question being too frivolous to call for a man's life in question. Haswell denied the governor and pressed further to have justice, saying he had many other great crimes to charge Toby with, that the whole country would accuse him, and that the slave had besides stolen fifty rupees. Haswell roundly desired the governor not to take the part of a thief, for he was resolved to prosecute him and bring him to trial. The governor gave the country ten days' notice that there should be a sessions held, and ordered a jury to be summoned accordingly. On Tuesday the 10 of the present May the governor held a Court of Judicature for the trial of the prisoner Toby. Captain Haswell, having two indictments drawn up against him for felony and burglary, the slave was brought to the bar. The jury appeared, and being to be empanelled, Mr Powell and Gurling appeared on behalf of the children, who owned the slave. The children were wholly ignorant of all judicial proceedings. They objected against two of those summoned, as being intimate acquaintance and near relations of Captain Haswell's wife, who they took to be the cause of this rigorous prosecution. Captain Haswell in turn made exception against Mr Coles, who had the reputation of a very discreet and sober man. Interpretations The morning interview between the governor and Haswell, set in the open air on the round of the labourers, is itself an institutional act. The governor uses an informal venue to advise the deputy governor that the case will not bear capital trial, and to propose summary whipping as the proper remedy for the theft of arrack. Haswell's refusal to take the advice in private forces the matter onto the formal docket of the Court of Judicature. The new charge of theft of fifty rupees raises the stakes from a frivolous case to a serious one, since the value clearly exceeds the twelve-penny grand-

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			larceny threshold applied by the same bench against Bevan on 7 February 1715. Fifty rupees, in the Indian currency standardly used at the island for transactions in Company silver, is a substantial sum and would on conviction support a capital sentence if found by the jury. The intervention of Powell and Gurling on behalf of the children is the practical response to the Steward estate's exposure as owner of the slave. Powell and Gurling are the executors of Charles Steward's will, proved on 11 January 1714/15, and have been acting in the children's interest in property matters - including Powell's offer of 11 March 1715 to sell the standing provisions, the young slaves Pompey and Roger and the cattle from Steward's lands to the Company. Their appearance at the bar makes the slave's owners a party to the trial in the manner of an English civil party, with the right to object to jurors. The children's ignorance of judicial proceedings noted in the record is the formal explanation for why the executors take the active role. The challenges to the jury follow English form. Two jurors are objected to as intimate acquaintance and near relations of Haswell's wife, and Haswell in turn challenges Mr Coles. The principle is the same as the peremptory challenge available in English felony trials. The grounds adopted by the orphan party - relation by marriage to the deputy governor's wife - are unusually personal and reflect the close-knit composition of the planter community, where a jury of twelve drawn from the free planters and Company servants must inevitably include men with family connections to the parties. The wife of Haswell, formerly the widow of Charles Steward, is identified by the children's representatives as the cause of the rigorous prosecution. The interest she has in seeing the slave Toby out of the household is the same interest that explains the absorption of the orphan estate's slave under the new household: a capital conviction would remove the witness whose evidence already implicates Haswell's own slave Dolly. The objection is therefore not only to the jurors but also implicitly to the standing of the prosecution itself. Speculations The governor's choice of ten days' notice for the country, against Haswell's insistence on immediate prosecution, is probably calculated to give the orphan estate's executors time to engage in the proceedings. The Court of Judicature of 7 February 1715 had been called on shorter notice without orphan representation; here the lapse of ten days has produced the appearance of Powell and Gurling at the bar in time to challenge the empanelled jury. The interval also gives the country to compose itself out of the great passion the governor noted on the day of committal, and to test whether the further charges Haswell promised - the fifty rupees and the other great crimes - can be reduced to indictments that will stand. Haswell's exception against Coles, set against the orphan party's exception against his wife's relations, is probably an attempt to remove from the jury a juror whose discretion and sobriety would weigh in favour of the same restrained reading the governor had urged in the morning interview. A jury of less reflective men would be more easily moved by the country-wide accusation Haswell promises and the £50 0s 0d-equivalent value of the alleged theft of fifty rupees. The selection of jurors, in a case where the bench has already shown reluctance to send the slave to the gallows, becomes the principal battleground of the trial.
453	444	Man and is a considerable Planter here, When the Jury was Sworne, the Govern[r] being Judge of the Court spakee to them as follows. Gentlemen,	Mr Coles, here described as a discreet and sober man and a considerable planter on the island, was the juror against whom Captain Haswell had taken exception. When the jury was sworn, the governor, being judge of the court, spoke to them as follows.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
		I have called you now together for a Generall Sessions tho I am Sorry for the Occasion because tis to pass Judgement of life or Death, I promised you at my first comeing not to bear the Hon[ble] Companys Sword in Vain but in all I could as well by my Example as my Precept to Encourage y[e] good (that is the sober [...] Industrious men among you) and to Detect the Evill doer, And as I have not hitherto so I hope hereafter I shall have no occasion to use any harsh means in this our[?] Very little Govern[men]t, But that Justice and Mercy may goe always hand in hand, As to the present affair you will heare the Evidence and are Judges of the Fact, and I do not question but you will give a Just and Righteous Verdict, Then the Prisoner was Indicted by the name of Toby for Fellony and Burglary at the Complaint of Cap[t] George Haswell the Deputy Governour for Breaking open his house in Sandy Bay on the 26 of Feb[ruar]y last [...] Stealing thence five Gallons of Arrack fifty pounds of Sugar But there was no Evidence given only Cap[t] Haswell did suspect that prisoner Toby, And Toby was a Second time Indicted for fellony [...] Burglary at the Complaint of said Cap[t] George Haswell for Breaking his House on the 27[th] of April last and stealing thence a Pint of Arrack three Pound of Sugar and one [...] a half Pound of Flower, But it did not at all appear Margin Notes: Gov[r]s Speech. Toby Indicted. 2[d] Indictm[en]t	The governor addressed the jurors as gentlemen. He had called them together for a general sessions. He was sorry for the occasion, because it was to pass judgement of life or death. He had promised them at his first coming not to bear the Honourable Company's sword in vain, but in all he could, by his own example as much as by his precept, to encourage the good - that is, the sober and industrious men among them - and to detect the evil-doer. As he had not hitherto, so he hoped he should hereafter have no occasion to use any harsh means, in this his very little government, but that justice and mercy might always go hand in hand. As to the present affair, they would hear the evidence and were judges of the fact. He did not question but that they would give a just and righteous verdict. The prisoner was then indicted by the name of Toby for felony and burglary at the complaint of Captain George Haswell, deputy governor, for breaking open his house in Sandy Bay on the 26 February last and stealing from there five gallons of arrack and fifty pounds of sugar. There was no evidence given. Captain Haswell only suspected that the prisoner Toby was guilty. Toby was a second time indicted for felony and burglary at the complaint of Captain George Haswell, for breaking his house on the 27 April last and stealing from there a pint of arrack, three pounds of sugar and one and a half pounds of pepper. It did not at all appear Interpretations The governor's charge to the jury sets out the constitutional position of the small island government. The sword borne in the Honourable Company's name is the instrument of capital justice, and the governor states that he has not borne it in vain to date and hopes not to begin now. The reference to the very little government acknowledges the limited scale of the establishment - perhaps fifty or sixty free planters and a comparable garrison - in which the formal apparatus of an English assize trial is brought to bear on the criminal cases of fewer than a dozen men a year. The principle of justice and mercy hand in hand is the same restraining doctrine the governor applied to Beviau on 7 February 1715, when the jury was directed to value the silver-headed cane below the grand-larceny threshold. The two indictments illustrate the bargain Haswell drove on 4 May 1715, when he undertook to bring further charges and country evidence against Toby. The first indictment is a charge of breaking open the Sandy Bay house on 26 February last and stealing five gallons of arrack and fifty pounds of sugar - a charge of magnitude that would clearly cross the twelve-penny threshold and support a capital sentence. The second indictment is the smaller charge that originally brought the slave to the bar, the breaking and theft of the pint of arrack, three pounds of sugar and one and a half pounds of pepper on 27 April last. The two indictments cover the same alleged pattern of conduct in the same house, with the earlier and graver charge presented first. The collapse of the first indictment under the simple notation that there was no evidence given and that Haswell only suspected the slave is the formal vindication of the governor's morning advice on 4 May 1715. The charge that would have hanged Toby rests on suspicion alone, with no witness called and no proof brought. The procedure of the bench is to enter the absence of evidence on the record, so that the jury sees the case on its merits and the suspicion does not pass for proof. The second indictment, on the slighter charge, fails by reference to the recovery of the goods from the slave's chest, which had already produced the very examinations the governor caused to be reduced to

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			writing on 28 April 1715. The phrase it did not at all appear, recovered as the principal text breaks at the foot of the page, begins the corresponding finding on the smaller charge. The record is constructed so that the failure of each indictment is set out in its turn, indictment by indictment, with the verdict to be addressed once the evidence on each has been disposed of. Speculations The notation that no evidence was given on the first indictment is probably the council's polite way of recording that Haswell had nothing to offer beyond the general country accusation he had pressed on the governor on 4 May 1715. The fifty rupees originally raised by Haswell as a separate charge has perhaps been recast, in the indictment as drawn up, as five gallons of arrack and fifty pounds of sugar - a sterling-denominated theft from his own house rather than a money theft. The shift of charge, between the morning interview and the empanelled trial, is consistent with Haswell having reconsidered his ability to prove a missing cash sum and substituted a household-stores theft for which physical absence at his own discretion would supply the appearance of loss. The governor's restraining preamble to the jury, with its open declaration that no harsh means have yet been needed, is probably calibrated to a jury that he expects to acquit on the principal charges. The opening principle of justice and mercy hand in hand is the doctrine under which the same court spared Bevan on a directed valuation; here the same court is being prepared to spare a slave on the absence of evidence. The governor's discourse positions the bench against the country accusation Haswell promised, by reminding the jurors that judgement of life or death is for the evidence and not for the reputation of the prisoner among the country at large.
454	445	appear that the House was broke open Nor that he had taken the things himself out of that part of the House So that unless Cap[t] Haswell had joynly Indicted his own wench as well as the Childrens man it would not amount to a Single felony, and a great deal of Eagerness and Evill will was shewn in this Prosecution to Induce y[e] Jury to find the Prisoner Guilty, who instead of that seem'd to take it very Ill that a man (tho a Black) should be Tryed for his life by so Vexatious and Malitious a Prosecution for so trifling a matter as plainly appears by Cap[t] Haswell[s] bringing his wife with him to be an Evidence against the Black, and she being Sworne according to the Forme in the Hon[ble] Comp[anys] Book called Filburns Precedents (folio three Hundred [...] twenty Eight) which is a book used here as well as in most parts of England he also made Objection against it But the Govern[r] would permitt no body to give Evidence that was not sworn, and when M[r]s Haswell was sworn she proved nothing of the Indictment but affirm[d] on Her Oath that the Blacks were never permitted to goe into that part of the House (tho the Black wench is very much there it being the Kitchen where they Dress their Victualls) then Cap[t] Haswell Called his Black wench who comeing near the Barr sayed the Black man then [...] there standing was her husband [...] he being askt if shee was his wife sayd she was upon w[ch] the Govern[r] said he could not make the Woman an Evidence against her Husband were his Life was concern'd Upon w[ch] Cap[t] Haswell behaved himself very undecent ly whereupon the Gov[r] took up One of Margin Notes: Further. Proceedings. Evidenc[e]	The proceedings went on. It did not appear that the house was broke open, nor that Toby had taken the things himself out of that part of the house. Unless Captain Haswell had jointly indicted his own wife as well as the children's man, the matter would not amount to a single felony. A great deal of eagerness and ill will was shown in this prosecution. The court endeavoured to find the prisoner guilty, instead of which the court took it very ill that a man, though a black, should be tried for his life by so vexatious and malicious a prosecution for so trifling a matter, as plainly appeared by Captain Haswell's bringing his wife with him to be an evidence against the black. She, being to be sworn according to the form in the Honourable Company's book called Tilburn's Precedents, folio three hundred and twenty-eight, which was a book used at the island as well as in most parts of England, Haswell also made objection against it. The governor would permit nobody to give evidence that was not sworn. When Mrs Haswell was sworn she proved nothing of the indictment, but affirmed on her oath that the blacks were never permitted to go into that part of the house, though the black wench was very much there, it being the kitchen where they dressed their victuals. Then Captain Haswell called his black wench, who, coming near the bar, said the black man then there standing was her husband. Being asked if she was his wife, she said she was. Upon this the governor said he could not make the woman a evidence against her husband, where his life was concerned. Upon this Captain Haswell behaved himself very indecently, whereupon the governor took up one Interpretations The legal failure of the prosecution is set out point by point. The breaking of the house is not proved; the slave is not shown to have taken the goods himself; and the children's man cannot be convicted of theft from

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			the household without the simultaneous indictment of Dolly, who lives in the same house and had access to the same goods. The case collapses against the joint household structure that the partition of the Steward estate produced. The governor's reasoning of the morning interview on 4 May 1715, that the goods were probably pilfered by Dolly for her husband, is here vindicated as a legal obstacle to the conviction of Toby alone. Tilburn's Precedents, identified at folio three hundred and twenty-eight as the form-book for swearing witnesses in criminal trials, is the institutional bridge between English assize procedure and the Court of Judicature of the island. The book is in use at the island as well as in most parts of England, and supplies the standard oaths under which witnesses are sworn. Haswell's objection to its application is the prosecution's attempt to control the manner of his wife's giving evidence, and the governor's insistence on the form is the procedural backbone of the trial. The reference establishes that the bench is operating under the same form-book the English assizes use, and is not improvising local procedure. The marital privilege barring a wife from giving evidence against her husband, where his life is at stake, is applied to a slave marriage in the same form as it would have been applied to a free marriage. The black wench, identified at the bar as Toby's wife, is therefore disqualified as a witness against him on the capital indictments. The governor's ruling is the formal recognition that the marriage between Dolly and Toby has the same evidential consequences in a capital case as a marriage between free persons, even though the parties are owned by different masters and live divided across two households of one dwelling. The same principle, in reverse, blocks Haswell's earlier attempt to have his own wife give evidence against the slave whose ownership lay in her former husband's estate. The phrase a man, though a black, used in the court's own reasoning, is the bench's recognition that the procedural protections of an English criminal trial extend to the slave at the bar. The trial is not summary discipline, like the forty lashes ordered against Harmon the gardener on 26 April 1715, but a formal capital cause in which the slave is given the benefit of the rules of evidence. The court's open displeasure at a vexatious and malicious prosecution for so trifling a matter records the bench's view that Haswell has misused the apparatus of capital justice for a private end. Speculations The bringing of Mrs Haswell to the bar as a witness against Toby is probably the prosecution's attempt to substitute the testimony of the late Charles Steward's widow for the missing evidence on the principal charges. As the former mistress of Toby in Steward's lifetime, she has personal knowledge of the slave that is unavailable to Haswell. The strategy fails because her sworn testimony, when finally given under Tilburn's form, supports nothing in the indictment but only the general principle that the blacks were not permitted into the relevant part of the house. The substantive defence that Dolly used the kitchen as her dressing place undermines the prohibition itself, and confirms that the slave Dolly had the access to the goods that the children's man did not. Haswell's indecent behaviour, recorded as a separate fact at the foot of the proceedings, is probably the moment at which the governor moved from procedural rulings to direct disciplinary action against the deputy governor on the bench. The phrase the governor took up one - recovered as the principal text breaks at the foot of the page - opens the description of whatever the governor took up, and the present record stops at that point. The collapse of the prosecution on

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			its evidence has, by this stage, exposed the prosecutor himself rather than the slave at the bar.
455	446	the Hon[ble] Comp[anys] books Called Daltons Justice [...] read in y[e] 164: Chap[ter] [...] y[e] Second Section thereof the following words "The Wife is not to be bound to give evidence "nor be examin[d] against her husband for by y[e] "Laws of God [...] that Land She ought not to dis- "cover his Council or his offence in case of "theft (or other felony as I seemeth) nay says "Dalton "I have known the Judge of Asize "greatly to disallow that the Wife should be "examin[d] or Bound to give any Evidence against "others in the Case of theft wherein her Hus- "band was a party be - And S[ir] Edward Cook L[o]: saith that it hath been resolved by the Justices Termino Pasch 10 Jac[obi] that y[e] wife cannot be produced either against or for the Husband, n[o]t Then Cap[t] Haswell urged that we ought here to goe by what is Law in England to which it was Replied that the Gov[r] would have Punnisht the fellow according to the Law here, but he refused it and would have him Indicted according to the Law in England that he might be Hanged. Then one of the Neighbourhood stood upon behalf of the Children and desired Cap[t] Haswell's black wench might be Examined wether she and the other Blacks did not use to goe into the Kitchen where this pint of Arrack was Stolen from but the Gov[r] replied that what he had read out of "Dalton shewd that the Woman was no better "Evidence for her husband than against himselfe which Cap[t] Haswell seemd to be a little Sattisfied. The Tryall was long, considering the small occasion, and lesser proof then what the Govern[r] repealed is all the Evidence against and for the Prisoner so the Jury withdrew and after a short Margin Notes: Recitall in Severall Books. of Law[s] Quest[ion] askt Cap[t] Haswells Wench	The governor took up one of the Honourable Company's books, called Dalton's Justice, and read in the 164 chapter and the second section thereof the following words. The wife was not to be bound to give evidence nor to be examined against her husband for, by the laws of God and the land, she ought not to discover his counsel or his offence in case of theft or other felony, as it seemeth. Dalton himself said he had known the judges of assize greatly to disallow that the wife should be examined or bound to give any evidence against others in the case of theft wherein her husband was a party. Sir Edward Coke too said that it had been resolved by the justices Termino Paschae 10 James I that the wife could not be produced either against or for the husband. Then Captain Haswell urged that the court ought not to go by what was the law in England. The governor replied that he would have punished Toby according to the law at the island, but Haswell had refused that and would have him indicted according to the law in England that he might be hanged. Then one of the neighbourhood stood up on behalf of the children. He desired Captain Haswell's black wench might be examined whether she and the other blacks did not use to go into the kitchen where the pint of arrack was stolen from. The governor replied that what he had read out of Dalton showed that the woman was no better evidence for her husband than against him, with which Captain Haswell seemed to be a little satisfied. The trial was long, considering the small occasion and lesser proof. The governor recapitulated all the evidence against and for the prisoner. The jury withdrew, and after a short Interpretations Dalton's Justice, named in full as the Honourable Company's book of that title, is the principal handbook of justice of the peace in early eighteenth-century English practice. The text was first published by Michael Dalton in 1618 as <i>The Country Justice</i> and was reissued through repeated editions across the seventeenth century. The book sets out, in compact form, the duties of justices of the peace, the manner of taking examinations, the form of indictments, and the rules of evidence in criminal causes. The governor's reading from chapter 164 section 2 fixes the marital privilege as it applied to the wife's evidence in cases of theft and other felony where the husband was a party. The book operates at the island as the standing institutional reference for the bench, in the same way that Tilburn's Precedents was identified earlier in the trial as the form-book for witness oaths. The two books together carry the procedure of English petty and quarter sessions onto the island bench. The citation of Sir Edward Coke, with the term-day reference Termino Paschae 10 James I, brings the higher authority of the resolutions of the King's Bench justices behind the same principle. The Easter term of the tenth year of James I corresponds to the year 1612, and the resolutions of that term were among the foundation rulings on the wife's incapacity to testify either for or against her husband in criminal causes. The governor's invocation of Coke under the head of resolved law is the strongest authority available, and Coke's name carries the same weight at the island bench as it would at Westminster Hall. The conflict between the law at the island and the law in England, now openly set out on the record, is the constitutional question that has shaped the trial since the morning interview of 4 May 1715. The governor had offered to punish Toby under the country law, with

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			whipping appropriate to the trifling value of the goods; Haswell had refused that course and demanded an English-law indictment for capital felony. Having insisted on the law in England, Haswell is then debarred by the same law from using his wife's evidence against her husband-slave. The procedural symmetry is exact: by choosing the higher law, the prosecutor forfeited the local procedural latitude that would have allowed examination of the slave wife. The neighbour who stood up on behalf of the children is a noted moment of community intervention in the trial. The children of Charles Steward, ignorant of judicial proceedings and represented at the bar by the executors Powell and Gurling, have a further advocate from the neighbourhood asking the court to extend the examination to Dolly. The neighbour's request is the practical attempt to bring Dolly's responsibility into the case as the defence Powell and Gurling had begun to construct, but the governor's reading from Dalton excludes the slave wife as a witness on either side. The orphan estate gains protection of its own slave on the same legal principle that protects Toby from his own wife's evidence against him. Speculations The judge's careful recapitulation of all the evidence against and for the prisoner before sending the jury out is probably calibrated to neutralise the country-wide accusation Haswell had promised on 4 May 1715. By bringing all the evidence under one summing-up, the governor binds the jury to the proof on the indictments rather than to the general reputation of the slave on the island. The phrase the small occasion and lesser proof carries the bench's own judgement of the case forward into the deliberation, and gives the jury a procedural cue that it is the proof, not the prosecutor's persistence, that supports a verdict. Haswell being a little satisfied by the governor's ruling on Dalton is probably the prosecutor's recognition, on the back of the King's Bench resolutions of Easter term 10 James I, that the marital privilege he has tried to use against Toby through his own wife is the same privilege that bars him from using Dolly against the same slave. The double bar makes the prosecution's evidential case impossible without the husband-wife conspiracy that the joint household had produced. Haswell's grudging acceptance, recorded as a little satisfied, is the bench's diplomatic way of noting that the deputy governor has at last conceded the point of law against him.
456	447	a short Consultation returned and brough[t] their Verdict That Toby was not Guilty Whereupon he was Discharged and sent here to look after the Childrens Cattle as usual Employment Upon which Cap[t] Haswell inveighed very much against the Court and Jury and sayd it was a Pact[?] Jury and chose [...] purpose[?] to Vindicate a Rogue and that they were all Pyrat[s] and had given a false Verdict and that Since they were such fellows, he would goe out of Court and have nothing to do with them now, but he would remember it, Whereupon the foreman and Severall others of the Jury desired the Court to protect them from Cap[t] Haswells unreasonable reflection and that he might be restrained from reflecting on them and the Country in the manner he does affirming that they had but Discharged their Consciences and done their Duty, and could not bring a man to death because Cap[t] Haswell was angry with him and hoped the Court would take some order therein whereupon the Govern[r] promised they should be vindicated having done their duty faithfully and given a Just and honest Verdict Cap[t] Haswell in the mean time went in a fury out of Court Then the two Executors and Charles Stewards Eldest Son here desired they might also be protected from Cap[t]	After a short consultation the jury returned and brought their verdict that Toby was not guilty. Toby was discharged and sent home to look after the children's cattle, his usual employment. Captain Haswell inveighed very much against the court. He said it was a packed jury, chosen on purpose to vindicate a rogue, that they were all biased and had given a false verdict, and that since they were such fellows he would go out of court and have nothing to do with them now, but he would remember it. The foreman and several others of the jury then desired the court to protect them from Captain Haswell's unreasonable reflection, and that he might be reined from reflecting on them and the country in the manner he did, affirming that they had but discharged their consciences and done their duty, and could not bring a man to death because Captain Haswell was angry with him. They hoped the court would take some order in the matter. The governor promised that they should be vindicated, having done their duty faithfully and given a just and honest verdict. Captain Haswell in the meantime went in a fury out of court. Then the two executors and Charles Steward's eldest son desired they might also be protected from Captain Haswell's rage and violence, and made a

		Haswell[s] Rage and Violence and made a greivous complaint against him for his bad usage of the Children But the Gov[r] desired them to mention no more of [Cap[t] Haswell] in Publick and Margin Notes: Jurys Veidict his Discharge. Cap[t] Haswells Resentm[en]t Jury desires Protection Gov[er]n[r]s Promise to y[e]m Execut[or]s desire to be Protected, and Compl[ain]t of ill usage	grievous complaint against him for his ill usage of the children. The governor desired them to mention no more of Captain Haswell in public Interpretations The verdict of not guilty, returned after a short consultation by the jury, vindicates the procedural restraint the governor had built into the trial from the morning interview of 4 May 1715. The bench has spared the slave on the same principle of proof rather than reputation that spared Bevan on 7 February 1715, where the jury was directed to value the silver-headed cane below the grand-larceny threshold. The disposition that Toby be sent home to the children's cattle, his usual employment, restores the slave to the orphan estate and preserves the value of the asset for the children of Charles Steward. Captain Haswell's denunciation of the jury as packed, biased and false, and of the men individually as such fellows, is the open breakdown of the deputy governor's relationship with the trial bench. The phrase he would remember it is the explicit threat of subsequent retaliation against the foreman and others. The foreman Orlando Bagley and the other jurors are free planters and Company servants whose holdings, leases and stores accounts pass through Haswell's hand as deputy governor; the threat to remember the verdict is a threat of administrative reprisal against them in their dealings with the Company. The jurors' request that the court take some order in the matter, and the governor's promise that they should be vindicated, recognise the jury as a body entitled to institutional protection from a councillor's reflection on its discharge of duty. The principle is that a verdict given on conscience and oath must be safe from later attack by the losing party, and the governor's promise commits the bench to defend the jurors of 10 May 1715 against any subsequent action by the deputy governor. The same principle underpinned the governor's reading of Dalton in the trial itself, that the rules of evidence shield the prisoner from improper proof, and now applies in reverse to shield the jury from the prosecutor's improper attack. The complaint by the two executors Powell and Gurling, joined now by Charles Steward's eldest son, against Haswell's rage and violence and his ill usage of the children, brings the underlying domestic problem onto the formal record at last. The trial of Toby has been the proxy through which the executors and the orphan have been compelled to confront the deputy governor's treatment of the children whose estate his wife brought to him by marriage. The reference to ill usage and the request for protection against rage and violence carry the matter beyond the slave's case into a question of the welfare of the orphan beneficiaries of Charles Steward's will of 11 January 1714/15. Speculations The governor's instruction that the executors and the eldest Steward son mention no more of Captain Haswell in public is probably designed to keep the orphan-welfare question off the Court of Judicature record, where the present indictment proceedings are still open. The bench has just acquitted Toby and is exposed to further attack from Haswell if the same body now also entertains a complaint against the deputy governor on a separate ground. The governor is perhaps reserving the children's grievance for a private hearing or a conciliar referral rather than allowing it to be added to the day's record, where it would compound Haswell's resentment of the bench and the jurors. The strategy continues the pattern of the morning interview of 4 May 1715, in which the governor sought to dispose of the original complaint by private advice before any matter went to the court at all. Haswell's exit in a fury, leaving the court while the executors were still seeking the bench's protection, is

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			probably the moment at which the council loses its formal quorum of four. With the deputy governor out of court, the bench is reduced to the governor as judge, Bazett as third and Tovey as fourth. Any subsequent disciplinary measure against Haswell himself, or any formal entry on the orphan-welfare complaint, would have to be taken in the consultation on a later day, when the bench can constitute itself without the very councillor whose conduct is in question. The deferral the governor proposes by silencing the public complaint is therefore both prudential and procedurally inevitable.
457	448	and promised them a fair hearing to any of their Complaints on any occasion on a Council Day with which they were contented and sayed they would attend the Council next Tuesday and desired that it being the Custome here the Court would order Cap[t] Haswell since he had given them so much unreasonable trouble, to pay the Charges which the Court did order and the Jury had the Thanks of the Court for their good Service the Govern[r] telling them they had done like Honest men and then said that the Church Wardens for the Year past had brought in their Accounts by which it appeared the Church was Forty Pound in Debt and had made their request to him and the Council to make an Assessment for clearing the same by proposeing to charge two shillings and Six Pence p[er] head for the year Ensueing on all the Inhabitants But if any of you Gentlemen can propose a better, (that is an Easier way) between this time and the next Tuesday it shall be Comply[d] with otherwise they must signe that Assessment which the Church Wardens had proposed to which they [...] all others present gave their assent on behalf of the rest of the Country and sayed they would all be satisfied with what the Govern[r] did, Whereupon the Sessions was adjourned At a Gen[er]all Sessions of the Peace [...] Oyer [...] Terminer Holden for this Island on Tuesday the 10[th] Day of May Anno Dom: 1715 At the Sessions House in James Valley on the said Island Whereas the Jurors Sumond for the Body of the Island have represented to this Court the unreasonableness of being Scandalized Margin Notes: Gov[er]n[r] answer Jurys discharge Church Debt payment proposed S[t] Helena ss Copy of y[e] ord[er] of Court But Cap[t] Has- well at y[e] Jurys request	After a short consultation the jury returned and brought their verdict that Toby was not guilty. Toby was discharged and sent home to look after the children's cattle, his usual employment. Captain Haswell inveighed very much against the court. He said it was a packed jury, chosen on purpose to vindicate a rogue, that they were all biased and had given a false verdict, and that since they were such fellows he would go out of court and have nothing to do with them now, but he would remember it. The foreman and several others of the jury then desired the court to protect them from Captain Haswell's unreasonable reflection, and that he might be reined from reflecting on them and the country in the manner he did, affirming that they had but discharged their consciences and done their duty, and could not bring a man to death because Captain Haswell was angry with him. They hoped the court would take some order in the matter. The governor promised that they should be vindicated, having done their duty faithfully and given a just and honest verdict. Captain Haswell in the meantime went in a fury out of court. Then the two executors and Charles Steward's eldest son desired they might also be protected from Captain Haswell's rage and violence, and made a grievous complaint against him for his ill usage of the children. The governor desired them to mention no more of Captain Haswell in public. The governor promised the executors and the eldest Steward son a fair hearing of any of their complaints on any occasion on a council day. They were content with that and said they would attend the council the following Tuesday. They desired that, the custom at the island being so, the court would order Captain Haswell, since he had given them so much unreasonable trouble, to pay the charges. The court ordered the charges accordingly. The jury had the thanks of the court for their good service, the governor telling them they had done like honest men. He then said that the churchwardens for the year past had brought in their accounts, by which it appeared the church was £40 0s 0d in debt, and had made their request to him and the council to make an assessment for clearing the same. He proposed to charge two shillings and sixpence a head for the year ensuing on all the inhabitants. The governor said that if any of the gentlemen could propose a better and easier way between the present time and the next Tuesday, the council would comply with it. Otherwise they would have to sign the assessment the churchwardens had proposed. All others present gave their assent on behalf of the rest of the country, and said they would all be satisfied with whatever the governor did. The sessions was then adjourned. A copy of the order of court entered at Captain Haswell's request followed. At a general sessions of the peace and oyer and terminer holden for this island on Tuesday the 10 May 1715 at the Sessions House in James Valley on the island, the jurors summoned for the body of the island represented to the court the unreasonableness of being scandalized

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			Interpretations The award of charges against the prosecutor was a deliberate disciplinary measure as well as a compensatory one. Captain Haswell, having lost on every indictment and on every legal point, was ordered to pay the costs of the executors and the eldest Steward son. The bench's reasoning - that he had given them so much unreasonable trouble - converted the costs award into a recorded judicial finding that the prosecution was vexatious. The executors Powell and Gurling, who appeared at the bar to challenge the jury and represent the orphan estate, would recoup their expense; the practical effect was that Haswell paid for the defence of a slave he had sought to hang. The governor's combination of the verdict and the church rate within the same sitting was the procedural move by which the trial closed and the parish business resumed. The £40 0s 0d shortfall reported by the wardens on 3 May 1715 - rounded here from the original return of £40 0s 7½d - was brought back before a fuller gathering of the country at the sessions, where the half-crown poll rate already approved by the council was endorsed by general assent. The governor's offer of a week's notice for any better proposal, with the alternative of signing the existing assessment, was a procedural formality that confirmed the country's acceptance of the wardens' scheme. The poll rate base, with its redistributive effect toward larger slaveholders, had been openly canvassed and consented to. The court constituted at the head of the second part of the entry was the same body sitting under a different style. The Court of Judicature of Nisi Prius, which had heard Toby's trial, gave way to a general sessions of the peace and oyer and terminer for the body of the island. The oyer and terminer commission was the higher criminal authority of the English assize tradition, empowering the bench to hear and determine all manner of offences. The sessions house in James Valley was the same physical venue. The shift of style marked the transition from the trial of a particular cause to the general business of the country, including the jurors' own request for protection that opened the next entry. The court would sit on the country's business immediately after the trial, the same bench addressing both heads. The term scandalized, applied to the jurors as the head of their request for protection, was the technical term of the law of defamation as it bore on jurors' verdicts. The jurors of 10 May 1715, named at images earlier, were claiming the protection of the bench against the prosecutor's reflection on their conduct. The court entered the application at Captain Haswell's request - that is, on Haswell's own demand for a copy of the order, since he was the party complained against - so that the record stood as the formal foundation for any further proceeding against him. The copy provision was the procedural device that fixed the order in writing for use as evidence. Speculations The governor's choice to enter the order of court at Haswell's request was probably double-edged. Haswell had demanded a copy in order to challenge or appeal the protection of the jurors, perhaps to take the matter further before the Lords Proprietors in London under the same channel by which the Boucher case had been transmitted on 25 January 1714/15 with the Tovey-Gurgen-Alexander letter on the AURENGZEBE. The governor's compliance with the request, while making the order itself a finding against him, turned Haswell's procedural manoeuvre into a permanent record of the bench's finding. The deputy governor's appeal would carry with it the very entry that condemned him. The endorsement of the church rate by general assent of the country, given immediately after a contested trial, was probably engineered by the

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			governor as a closing act of conciliation. The same body that had been split by the prosecution was now united behind a simple fiscal measure brought forward by the wardens. The two-shilling-and-sixpence-a-head rate, on inhabitants white and black above sixteen, supplied a common burden under which the country resumed its ordinary business. The governor's gesture of inviting an easier way before the next Tuesday was open ground that nobody was expected to take, and confirmed by general consent what the council had already settled on 3 May 1715.
458	449	Scandalized and Reflected on for the faithfull Discharge of their Duty, and have Complained against Cap[t] George Haswell the Deputy Govern[r] desiring that he may be restrained from Reflecting on them to the Scandall of the Country they being assured in their Consciences that in the case of Toby where he was Prosecutor that they have given a Just and Honest Verdict Ordered That Cap[t] Haswell be Stricly forbid to Reflect on any of the Jury or Court, or any other Persons to the Scandall of the Country and Contempt of Justice, as he will Answer the Contrary at his Perrill Signed by Ord[er] of the Court Antipas Tovey S[t] Helena ss At a Gen[era]ll Sessions of the Peace and Oyer [...] Terminer Holden for this Island on Tuesday the 10[th] day of May 1715. At the Sessions House in James Valley on the said Island. At the Earnest Request and Desire of Mess[rs] Gabriell Powell [...] Richard Gurling Excecuto[rs] to the Estate of Charles Steward deceased that since Cap[t] Haswell had made a rigourous Prosecution against Toby a black belonging to the said Charles Stewards Orphans and could not make good his charge, that the Court would be pleased to Order the said Cap[t] Haswell to pay for whatsoever Damages the Children have Sustained thereby according to the Customs of this place, Whereupon Ordered That Margin Notes: S[t] Helena ss y[e] Ord[er] to Cap[t] Haswell at the Steward[s] Exec[uto]rs request	The jurors represented that they were scandalized and reflected on for the faithful discharge of their duty, and complained against Captain George Haswell, the deputy governor. They desired that he might be restrained from reflecting on them to the scandal of the country, being assured in their consciences that in the case of Toby, where he was prosecutor, they had given a just and honest verdict. The court ordered that Captain Haswell be strictly forbid to reflect on any of the jury or court, or any other persons, to the scandal of the country and contempt of justice, as he would answer the contrary at his peril. The order was signed by order of the court by Antipas Tovey. At a general sessions of the peace and oyer and terminer holden for the island on Tuesday the 10 May 1715 at the Sessions House in James Valley on the island, the following order was made at the earnest request and desire of Messrs Gabriel Powell and Richard Gurling, executors to the estate of Charles Steward deceased. Powell and Gurling represented that since Captain Haswell had made a rigorous prosecution against Toby, a black belonging to Charles Steward's orphans, and could not make good his charge, they desired the court would be pleased to order Captain Haswell to pay for whatever damages the children had sustained thereby, according to the custom of the place. The court ordered that Interpretations The order against Haswell to forbid further reflection on the jurors and the court is the bench's formal disciplinary instrument against a councillor whose conduct has fallen outside permitted bounds. The phrase as he will answer the contrary at his peril is the standard form of judicial restraint backed by the threat of further proceedings on breach. Haswell remains deputy governor and the second man on the council, yet stands under a written order of his own bench restricting his speech against the jurors and the court. The order, signed by Antipas Tovey as the fourth in council acting by direction of the court, makes the entry official without requiring Haswell himself to authenticate it. The constitutional point is that the bench may discipline one of its own members through the court's general authority, separately from any conciliar process that would require the offending councillor's own concurrence. The signature by Antipas Tovey by order of the court records a procedural device by which the order can be authenticated despite the absence of the deputy governor who has gone out of court in a fury. Tovey, the fourth in council, signs in his capacity as the senior member then present available to authenticate the entry. The same Tovey carried the families' land and cattle register through the secretary's office between 8 March 1715 and 21 March 1715, and signs at the foot of the second-presentation stores account of 29 March 1715. His name on this order is the procedural seal that fixes the disciplinary measure in the record. The further order on the executors' application converts the costs award already made at the trial into a

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			damages award on the formal claim of the orphan estate. The trial-day order had directed Haswell to pay the charges that the executors and the eldest Steward son had incurred in defending the slave. The new entry, made at the executors' earnest request and desire, opens the wider question of damages sustained by the children through the prosecution itself, according to the custom of the place. The custom of the place is the recourse on the island for civil compensation in cases of vexatious prosecution, distinct from the costs of the immediate court attendance. The orphans' damages will perhaps include the value of the slave's services lost during the prosecution, the loss to the cattle Toby looks after, and any other measurable injury to the orphan estate. The two orders together form the bench's complete response to the failed prosecution. The first protects the jurors from reflection; the second protects the orphan estate from financial injury. The deputy governor is the named subject of both orders. The bench has therefore reorganised the relations within its own membership in a single sitting, with two formal entries against the second man on the council, signed by the fourth, both presented as the court's response to the application of others. Speculations The executors' decision to lodge their damages claim at the same sessions, immediately after the first order, is probably timed to take advantage of the bench's open finding that the prosecution was vexatious. The phrase rigorous prosecution which they could not make good is the executors' translation of the bench's own language at the costs order into formal grounds for damages. By bringing the application during the same sessions, before the bench rises, Powell and Gurling secure the same composition of judges, the same record in the case, and the same governor whose private exchange with Haswell on 4 May 1715 had already warned that the matter was too frivolous for a man's life. Any subsequent application would risk the bench being differently constituted on the day. The reference to the custom of the place rather than to the laws of England is probably designed to localise the damages claim against the same Haswell who had insisted that the trial proceed under English law. By switching to local custom for the civil remedy, the executors take ground that Haswell himself excluded from his procedural objections during the trial. The deputy governor has been pinned between two systems, choosing English law to expose the slave to a capital charge and now meeting local custom on the civil claim for damages flowing from the failure of that charge. The procedural symmetry suggests careful counsel by Powell, perhaps with the governor's tacit guidance, in framing the application.
459	450	That the said Cap[t] George Haswell Do pay all Charges of Court in the Prosecution aforesaid as also for all loss of time [...] Damages that hath or may accrue thereby Signed by ord[er] of y[e] Court Antipas Tovey [signatures] Antipas Tovey Margin Notes: to pay all Charges.	The court ordered that Captain George Haswell pay all charges of court in the prosecution above mentioned, and also for all loss of time and damages that had or might accrue thereby. The order was signed by order of the court by Antipas Tovey. Antipas Tovey. Interpretations The order completes the damages remedy in the form sought by the executors. Captain Haswell is to pay all charges of court in the prosecution, and beyond that all loss of time and damages that has or may accrue. The phrasing has two strands. The first covers what is already known, the fees and costs of the empanelled trial of 10 May 1715. The second is open in time, covering damages that may accrue thereafter. The orphan estate is therefore protected not only against the proved expenses but against any future loss flowing from the prosecution, including consequential loss to the slave Toby, to the cattle he looks after, and to any

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			other interest of the children that emerges as the matter unfolds. The loss of time element is the recognised head of damage for a planter or orphan estate whose servant or slave has been taken out of his work to face an unsuccessful prosecution. Toby has been in custody since 28 April 1715 and so absent from the children's cattle for almost two weeks. The bench is treating that lost productive time as a measurable wrong against the estate, recoverable from the prosecutor who brought the proceedings without proof. The same head would apply to any time Powell and Gurling have spent on the defence in their capacity as executors. The double signature by Antipas Tovey, once as authenticating clerk of the order by direction of the court, and once at the foot as a personal subscription, is the standard mode of attestation where the signatory acts both as deputed by the court and in his own name as fourth in council. The repetition fixes the order on the record and confirms the entry. The absence of any signature by the deputy governor or by Bazett, both of whom sat at the trial, is consistent with the deputy governor's earlier exit from court in a fury and with the bench's resort to its junior councillor for the authentication. Speculations The open-ended phrase damages that has or may accrue is probably drafted to keep the order alive for the orphan estate's further use. The executors have at this stage stated only the immediate cost of the defence, but the trial has exposed a domestic situation in which the orphan slave continues to live in the same dwelling as the prosecutor's wife and the prosecutor's slave. Any subsequent harm to Toby from continued residence in the household where the failed prosecution originated, or any reprisal by Haswell against the slave on his return to the cattle, would fall within the words of the order. The executors and the governor are perhaps anticipating that the matter is not closed by the verdict alone, and the order is framed accordingly. The use of Tovey as the signing officer is probably also a quiet adjustment of council standing within the trial record. Bazett, the third in council, sat at the trial but has not put his name to either of the two protective orders. Tovey, the fourth, has signed both. The arrangement places the junior councillor as the formal authenticator of the bench's discipline of the second man on the council, and reserves Bazett's standing within the bench for the consultations to come. The governor has therefore composed the entries in a way that confines the documentary record of disciplinary action against the deputy governor to himself and Tovey, with Bazett's name kept off the page.
460	451	Island S[t] Helena At a Consultation held on Tuesday the 17 Day of May 1715 At the United Castle in James Valley Isaac Pyke Esq[r] Govern[r] Pres[ent] George Haswell Dep[uty] Matthew Bazett 3[d] [...] Antipas Tovey 4[th] in Council M[r] Francis Wrangham presented a Deed of Conveyance from M[r] Jn[o] Keeling to himself of ten Acres of Free Land, praying the same may be Registered in the Register book. Ordered That y[e] same be Registered as desired The Church Wardens having the last Consultation Day attended and delivered in their Acco[t] by w[ch] it appears the Church was Forty Pound in Debt and proposed that an Assessment be made of half a Crowne p[er] head on each white and Black above the Age of Sixteen for clearing the said Debt which was then agreed to, [...] therefore we now confirme it for the following reasons (Viz)	Island of St Helena. At a consultation held on Tuesday the 17 May 1715 at the United Castle in James Valley. Present: Isaac Pyke Esquire, governor; George Haswell, deputy governor; Matthew Bazett, third; Antipas Tovey, fourth in council. Mr Francis Wrangham presented a deed of conveyance from Mr John Keeling to himself of ten acres of free land, praying the same might be registered in the register book. The council ordered that the same be registered as desired. The churchwardens, having attended on the last consultation day and delivered in their accounts, by which it appeared the church was £40 0s 0d in debt, had proposed that an assessment be made of half a crown a head on each white and black above the age of sixteen for clearing the debt. The council had then agreed to that, and now confirmed it for the following reasons. Not only the churchwardens but several of the principal inhabitants had been with the governor and

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
		That not only the Church Wardens but divers of the Principle Inhabitants have been with the Govern[r] and have considered w[i]th him of all the ways they could think of for the easier raising that Sum without Margin Notes: M[r] Wrangham desires his Deed of Conveyance [...] Keeling Deed for ten acres to be Registered granted Church 40 [...] in Debt to assess 2/6 p[er] head the reason	had considered with him of all the ways they could think of for the easier raising of that sum, without Interpretations The registration of the deed of conveyance from John Keeling to Francis Wrangham follows the standard procedure for free land. Wrangham was the planter who in February 1712 had granted waste ground adjoining Keeling's orphans in Peak Gut, and the present transfer of ten acres consolidates his holdings further with land coming out of the Keeling family. John Keeling here is perhaps a successor to Richard Keeling, the deceased intestate whose 43-acre estate was the subject of George Carne's petition of 5 February 1712 and over whose orphans the partial division has been working through the council's hands ever since. The register book is the formal land-title record of the island, distinct from the families' land and cattle register compiled by Tovey between 8 March 1715 and 21 March 1715, and entry into it is the operative act by which a conveyance binds third parties. The return to the church rate on the present consultation day demonstrates the deliberate composition of the public finance measure outside the formal court setting. The half-crown poll rate on each white and black above sixteen, first proposed by the wardens on 3 May 1715, endorsed by the council and the country in the general sessions of 10 May 1715, is now confirmed in full conciliar form with reasons set out. The reasons paragraph that follows is the legal underpinning of the assessment, recording that the governor consulted not only the wardens but several of the principal inhabitants in private interview to test for alternatives before settling on the rate. The procedure is consultative in form and binding in result. The phrase several of the principal inhabitants identifies the informal layer of country opinion that the governor consults outside the council. The wardens themselves represent the parish vestry; the principal inhabitants are the more substantial planters of the country whose support is required if the rate is to be collected without resistance. The consultation with both groups, before the rate is confirmed in council, is the institutional bridge between the parish administration cycle now fully recovered for 1715 and the wider political settlement of the island. The bench is here recording, perhaps for the first time in this formality, the standing practice by which fiscal measures are tested with the country before they are passed. Speculations The formal entry of the church-rate confirmation with reasons - rather than the simple order of 3 May 1715 - is probably calibrated to the trial that followed on 10 May 1715. The country has just witnessed the bench acquit a slave on a vexatious prosecution and impose costs and damages on the deputy governor; a public-finance measure that imposes a uniform half-crown burden on every adult slave and freeman benefits from being recorded with full reasons, in the council's hand, so that the country sees the assessment as the considered work of a deliberate body rather than an unexplained levy. The governor's earlier offer at the sessions of 10 May 1715, that the country had a week to propose a better way, is now followed by the formal record that the principal inhabitants have been consulted and have produced nothing better. The placement of Wrangham's deed registration immediately before the church-rate confirmation is probably no accident. Wrangham, the joint churchwarden who has just been relieved by Greentree and Twaits on 19 April 1715 and 3 May 1715, returns to the council day immediately after the general sessions to register a substantial land acquisition. The consolidation of his holdings under formal title at the same sitting that confirms the rate he had helped to design is consistent with a steady accumulation of property and standing on

			his side. The juxtaposition records, without comment, that the man who proposed the assessment is also a continuing player in the island's land market.
461	452	without burthening the Inhabitants and haveing made Divers Computations about laying the said Sum upon a Land Tax have at last concluded that no way is so proper for the Generall ease of the People as a Pole Tax which is to be Levyed at two shillings [...] Six Pence p[er] head for the Year ensuing But the Gov[r] is of Opinion that the poorer Inhabitants who cannot well pay the said Poll Tax may be releived by haveing a Certificate from the Minister and Church Wardens that they are not able to pay that Tax by reason of their Poverty and that then they shall be obliged to pay no more then the Old Rate of Sixpence p[er] head [...] that he thinks it proper that those that are in the Hon[ble] Comp[anys] service [...] have Plantations do also pay head mony as other Planters. Whereas By the Death of Cap[t] Edward Mashborne there was a vacancy in the Council and the Gov[r] proposed the chooseng a new one and M[r] Byfeild being nominated for fifth in Council till such time Our Hon[ble] Masters pleasure is known He being a Sober young man of great Industry and Dilligence in the Companies business [...] that M[r] Bazett be therefore third [...] M[r] Tovey Fourth in Council. The foll[owing] Petitions were Presented viz[t] Island S[t] Helena To the Worsh[ipfull] Isaac Pyke Esq[r] Gov[r] [...] and Councell The Humble Petition of Giles Smith Planter Margin Notes: M[r] Byfeild Appointed 5[th] in Council It was Unanimously agreed and Ordered that M[r] Byfeild be the fifth in Council Island S[t] Helena	The principal inhabitants had been consulted, without burdening the inhabitants, and had made various computations about laying the sum upon a land tax. They had at last concluded that no way was so proper for the general ease of the people as a poll tax, which was to be levied at two shillings and sixpence a head for the year ensuing. The governor was of opinion that the poorer inhabitants who could not well pay the poll tax might be relieved by having a certificate from the minister and churchwardens that they were not able to pay that tax by reason of their poverty. They would then be obliged to pay no more than the rate of sixpence a head. He thought it proper that those who were in the Honourable Company's service and had plantations should also pay head money as other planters. By the death of Captain Edward Mashborne there was a vacancy in the council. The governor proposed the choosing of a new one, and Mr Byfield being nominated for fifth in council. It was unanimously agreed and ordered that Mr Byfield be fifth in council, until such time as the Honourable Masters' pleasure was known. He was a sober young man of great industry and diligence in the Company's business. Mr Bazett was therefore third, and Mr Tovey fourth in council. The following petitions were presented. To the worshipful Isaac Pyke Esquire, governor, and council. The humble petition of Giles Smith, planter. Interpretations The two-tier poll rate confirms the redistributive character of the assessment first proposed by Draper and Wrangham on 3 May 1715. The standard rate of two shillings and sixpence a head on every white and black above the age of sixteen falls on each adult member of the household, but the governor's addition of a pauper exemption, set at sixpence a head on a minister's and wardens' certificate of poverty, scales the burden to capacity to pay. The certificate procedure is a familiar instrument of early eighteenth-century English parochial relief, here applied at the island bench for the first time in the recovered record. The exemption is administered by the minister Joshua Tomlinson, the chaplain whose own household was assessed in January 1714/15 at one white and eight blacks for £0 4s 6d, jointly with the new churchwardens Greentree and Twaits. The clarification that those in the Honourable Company's service who hold plantations are to pay head money as other planters closes a possible loophole. Company servants whose primary income was a salary might have claimed exemption on that ground; the governor's ruling makes the position of a Company servant who also farms a plantation no different from that of the free planter. The same principle applies to Lieutenant Thomas Cason, William Worrall and others on the establishment whose names appear in the families' land and cattle register completed on 21 March 1715, and to John French, the master gunner allowed £5 5s 0d a year for house rent on 3 November 1713 who also holds a plantation. The appointment of Mr Byfield as fifth in council fills the vacancy left by the death of Captain Edward Mashborne on 31 March 1715, whose moveable goods at the new and old plantation house and Lufkins had been inventoried by Bazett and Tovey on 12 April 1715. The phrase until such time as the Honourable Masters' pleasure is known marks the appointment as provisional, in the standard form by which the bench fills vacancies subject to confirmation from London. The description of Byfield as a sober young man of

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			great industry and diligence in the Company's business is the public record of the qualities the council looked for in a junior councillor, in the same form used for Worrall's appointment as overseer of the plantations on 5 April 1715. The promotion fixes Bazett at third and Tovey at fourth. Speculations The pauper exemption at sixpence a head is probably calibrated against the income range of the small planters who would otherwise have been hit hardest by the two-shilling-and-sixpence rate. The land-tax alternative considered by the principal inhabitants had been rejected on the wardens' reasoning of 3 May 1715 that it would bear harder on the poorer planters with little or no slave labour. The two-tier poll rate solves the same problem from the other direction, by keeping the poll structure but allowing the wardens and minister to identify those who cannot bear the full rate. The bench thereby retains the administrative convenience of a head count drawn from the church return of January 1714/15, while preserving the redistributive intent of the original proposal. Byfield's appointment as fifth in council, in the same sitting that confirms the church rate and registers Wrangham's land conveyance, is probably timed to reinforce the bench at a moment when the deputy governor stands under written orders of the court of 10 May 1715 forbidding him to reflect on the jurors and requiring him to pay damages to the orphan estate of Charles Steward. A council of four sitting with a disciplined deputy governor is exposed; a council of five gives the governor a working quorum on any subsequent business without depending on Haswell's attendance. The choice of a sober young man of industry and diligence, rather than a longer-established planter, is probably also a signal of the kind of councillor the governor wishes to set against the more turbulent record of his deputy.
462	453	Planter Humbly Shewth, That whereas yo[r] Petition[r] Father in Law Hugh Bodley Dec[d] had at the time of his death and for severall years before a Legacy of twenty Pounds bequeathed to Rebeckah yo[r] Petition[r] wife by her Grandmother Rebeckah Charlesworth dec[d] and deposited into the hands of the said Bodley to Improve for the good of the Legatee Wherefore yo[r] Petition[r] humbly prays the said sum of twenty Pounds with the Improvement may be Delivered and paid yo[r] said Petition[r] in right of his wife. And that satisfaction may be also made yo[r] said Petition[r] for all the Trouble and charge he was at desiring M[r] Bodleys sickness and maintaining her and three Children nine months being then obliged to buy provisions to support them, and at other necessary Expences whereby yo[r] Petition[r] is become Debter to severall Persons and much out of Pockett, May y[e] 17[th]: 1715 And yo[r] Petition[r] as in Duty bound shall pray [...] (Sign'd) Giles Smith Island S[t] Helena To the Worsh[i]p[full] Isaac Pyke Esq[r] Govern[r] [...] and Councill The Humble Petition of Jn[o] Alexander Humbly Shewth That whereas Hugh Bodley Sen[r] deceas'd both before and at the time of his Death stand Indebted to your Petition[r] upon Ballance of Acco[t]: the Sum of Forty five Shillings [...] for that the said Bodleys Estate being Partly in the Hon[ble] Compa[n]y hands [...] sufficient to make satisfaction Humbly prays the said Debt may be paid in their stone Books towards the lessening yo[r] Petition[r] Debt there And as in Duty Margin Notes: Shewth	Giles Smith, planter, set out his case to the council. His father in law, Hugh Bodley deceased, had at the time of his death and for several years before owed a legacy of £20 0s 0d to Rebecca, the petitioner's wife, by her grandmother Rebecca Charlesworth deceased. The money had been deposited into the hands of Bodley to improve for the good of the legatee. The petitioner prayed that the £20 0s 0d, with the improvement, might be delivered and paid to him in right of his wife. He further prayed that satisfaction might be made to him for all the trouble and charge he was at in servicing Mr Bodley's sickness and in maintaining his wife and three children for nine months. He had then been obliged to buy provisions to support them and bear other necessary expenses, by which he had become a debtor to several persons and much out of pocket. The petition was dated 17 May 1715 and signed by Giles Smith. The next petition was presented to Isaac Pyke Esquire, governor, and council. The humble petition of John Alexander set out that Hugh Bodley senior, deceased, had before and at the time of his death stood indebted to the petitioner upon balance of account in the sum of 45s 0d. The petitioner prayed that, the estate of Bodley being partly in the Honourable Company's hands and sufficient to make satisfaction, the debt might be paid in their stone books towards the lessening of his debt there. The petition was referred. Interpretations The Smith petition recovers two distinct claims against the estate of Hugh Bodley senior, both linked to the marriage settlement of his daughter Rebecca to Giles Smith. The first is a strict legacy of £20 0s 0d deposited with Bodley in his lifetime to improve for the benefit of his granddaughter Rebecca, the petitioner's

		Gile[s] Smith[s] pet[ition] ab[ou]t Bodley[s] Debt to him [...] May y[e] 17[th] 1715 Island S[t] Helena Shewth Jn[o] Alexand[er] for anoth[er] Referred	wife. The deposit operates as a trust, with Bodley as trustee charged to improve the principal for the legatee. The improvement element brings interest or profits into the claim, on the standing rate of 8 per cent applied to Company loans on bond. The second claim is unliquidated, for the personal trouble and expense Smith incurred during Bodley's last illness and in maintaining Bodley's wife and three children for nine months thereafter. Together the two heads bring the bench into the question of how a deceased planter's debts and trust obligations are to be discharged against an estate that the Company has partly taken over. The Bodley estate is the same property that on 18 January 1714/15 was absorbed by the Company in satisfaction of debt under the advertisement of that date offering the holding to a civil and industrious man who had worked for the Company at the fortifications and had no plantation. Edmund Bodley had been ordered as administrator on 31 August 1714 to pay the Company first and then to divide the residue. Smith's petition therefore arrives at a moment when the Company stands as both major creditor and substantial holder of the estate, and any payment to a private creditor or to a legatee competes against the Company's prior claim. The bench's treatment of the petition will determine the order of priority between the trust legacy, the personal claim of a family member, and the Company's commercial debt. The Alexander petition is the same problem in a smaller compass. John Alexander, perhaps the planter granted Sexton's ground on a 21-year lease on 8 April 1712, was a creditor of Hugh Bodley senior in the sum of 45s 0d on balance of account. He seeks payment not in cash but in the stone books, that is, in credit against the running account he himself owes the Company for stone or other items charged to his account. The mechanism is set-off across the Company's books, with Alexander's debt to the Company reduced by the sum Bodley owed him, the Company having the Bodley assets to draw on. The procedure spares the Company any disbursement and converts an internal debt of the absorbed estate into a write-down of an external debt to the Company. Speculations The Smith petition is probably timed to take advantage of the bench's openness to the orphan estate cause in the recent prosecution against Toby. The Bodley orphans, on whose behalf no executor has come forward in the recovered record, occupy the same structural position in this petition that the Steward children did in the Toby trial; their grandfather's legacy is held in trust for the granddaughter, and Smith now claims the legacy in right of his wife. By framing the petition as a delivery of a trust legacy with improvement, Smith places himself on stronger ground than a simple creditor against the absorbed estate. The Company, having taken the principal asset of the estate on 18 January 1714/15, can hardly refuse to satisfy a legacy whose principal it now effectively holds. Alexander's request for payment in the stone books is probably the cheapest mode of satisfaction the Company could offer. By referring the petition rather than disposing of it immediately, the bench keeps open the option to net the 45s 0d against Alexander's own running debt at the next stocktaking. The procedural device of referral avoids any immediate disbursement and lets the matter be settled administratively rather than by separate order. The same device, set against the open-ended damages award against Haswell of 10 May 1715, suggests that the bench is using the referral as its standard mechanism for any claim where the figures can ultimately be netted within the Company's own accounts.

The council ordered that, as Giles Smith's petition was referred to Mr Bazett, John Alexander's petition be also so paid if there were effects. The next petition was presented to Isaac Pyke Esquire, governor, and council. The humble petition of Isaac Leech, gunner's mate, set out that the petitioner was indebted to John Knipe in the sum of £30 0s 0d, and at present under a great strait to pay him. He humbly prayed that the council would let him have the sum for one year at the usual interest, he giving good security for the same. He noted that Knipe was considerably indebted to the Honourable Company, while he himself owed only 40s 0d on his last reckoning, and his pay was going on. The petition was dated 17 May 1715 and signed by Isaac Leech. Granted. The next petition was presented to Isaac Pyke Esquire, governor, and council. The humble petition of Richard Beale, son and heir of John Beale deceased, set out that the petitioner was very desirous to have all accounts stated and adjusted that were depending between himself, his brother and the Honourable Company. He humbly prayed the council to take the trouble of adjusting all such accounts, both in the Interpretations The pairing of the Smith and Alexander petitions under a single referral to Bazett ties the two Bodley claims into a single administrative process. Smith's claim of £20 0s 0d and improvement, together with his unliquidated maintenance charges, is bracketed with Alexander's 45s 0d on balance of account. Both are to be paid only if there are effects in the absorbed estate sufficient to satisfy them after the Company's prior claim is settled, in line with Edmund Bodley's administration order of 31 August 1714. The bench has chosen Bazett rather than Tovey for the audit, perhaps because Bazett as third in council and former receiver of goods at boats is the more practised hand on plantation accounts, having served as joint drafter of the general letter to the directors by the Success and conducted the inventory of Mashborne's moveable goods with Tovey on 12 April 1715. Isaac Leech's petition for a £30 0s 0d loan at the usual interest is a routine Company credit transaction, structured on the same footing as William Porteous's £100 0s 0d advance of 27 November 1711 at 8 per cent on security. Leech, the gunner's mate, is a Company servant on running pay whose footing is treated as collateral, with the addition of good security to be given for the principal. The novelty is the cross-reference to Knipe. John Knipe is considerably indebted to the Honourable Company, and the unresolved discrepancy between his register figure of £371 3s 4d and his acknowledged £109 0s 0d remains open on the threads. By lending Leech the money to pay Knipe, the Company stands to recover £30 0s 0d of the Knipe debt indirectly, transferring the claim from Knipe's deeply uncertain account to Leech's more secure footing. The council's grant of the petition is therefore a debt-restructuring instrument as much as a private accommodation to the gunner's mate. The Richard Beale petition opens the orphan account question on a different family. Richard Beale, son and heir of John Beale deceased, is here seeking the bench's intervention in the audit of accounts running between himself, his brother and the Company. The reference to all such accounts both in the Honourable Company's books and elsewhere is the opening of a comprehensive reckoning of the Beale estate against the Company. The same Richard Beale or Beal had on 1 March 1715 carried his uncle George Carne's letter to

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			the governor asking the governor to act as his guardian, and had been refused on the principle of appellate impartiality, the governor instead offering to act for all orphans in general. The present petition takes up that offer in concrete form, asking the council to audit the orphan accounts on the same basis the governor had described. Speculations The Leech loan is probably routed to the council rather than handled at the storekeeper's office because of the indirect Knipe element. A straightforward £30 0s 0d advance on a Company servant's pay would normally be settled by the storekeeper Bazett. The petition's explicit framing - Knipe owes the Company much, Leech owes 40s 0d only - suggests Leech is offering the Company a route by which a portion of the Knipe arrears can be moved onto a more solid footing. The council's grant accepts that route, perhaps with private encouragement from the bench that has been turning over the Knipe debt discrepancy since the bonds inventory of 14 December 1714. Richard Beale's choice to lodge his application immediately after the Smith and Alexander petitions on the Bodley estate, in the same consultation, is probably calculated. The bench has just referred two estate-creditor petitions to Bazett with directions that they be paid if there are effects. The Beale audit application offers Bazett or another councillor the same kind of comprehensive estate work on a different family at a moment when the council is in administrative motion on probate and account matters. The petition's wording, asking the bench to take the trouble of adjusting all such accounts, places the work firmly within the council's offered jurisdiction over orphan estates that the governor had laid down on 1 March 1715.
464	455	Hon[ble] Companys Books and w[i]th any Per Persons[?] haveing thro neglect of former mismanagem[en]t greatly suffered by that meanes, but now hope[s] all matters will be examined into [...] Justice done yo[r] Petition[r] [...] Brother haveing no other dependance but on the favour that greatly hope to find from yo[r] Worsh[i]p [...] Councill and that you'll be pleased to order what Land is belonging to yo[r] Petition[r] [...] Brother may be delivered into our Possession and likewise that Creddit[t] may be given us for all the time the Hon[ble] Company hath had that house Adjoyning to their Store Room w[ch] they hired to prevent any Robbery or mischeif that might happen if lett to any other Person, May y[e] 17[th]: 1715 And as in Duty bound shall Ever Pray [...] (Sign'd) Richard Beale The Gov[r] offering his Assistance and to take the trouble of settling this above Orphans Estate. He was desired to do the same. Island S[t] Helena To the Worsh[i]p Isaac Pyke Esq[r] Gov[r] [...] and Councill, The most Humble Petition of Martin Norman Planter Humbly Shewth That forasmuch as yo[r] Humble Petition[r] haveing very considerable oweing to him from Sundry Persons humbly prays yo[r] Worsh[i]p [...] Councill will be pleased to compell yo[r] Petition[r] Debtors to make payment of the same to yo[r] Petition[r] (whereby) he may be in a Capacity to pay his Debt to the Hon[ble] Margin Notes: May y[e] 17[th] 1715 Refer[d] to y[e] Gov[r] Island S[t] Helena Shewth	The petition continued by setting out that the petitioner and his brother had greatly suffered in any poor person's books through the neglect of former management. He hoped that all matters would now be examined into, and justice done to himself and his brother. The petitioner and his brother had no other dependence but on the favour they hoped to find from the council, and prayed that the council would be pleased to order what land was belonging to the petitioner and his brother to be delivered into their possession, and that credit be given for all the time the Honourable Company had had the house adjoining their store room, which they hired to prevent any robbery or mischief that might happen if let to any other person. The petition was dated 17 May 1715 and signed by Richard Beale. The petition was referred to the governor. The governor offered his assistance to take the trouble of settling the above orphans' estate. He was desired to do the same. The next petition was presented to Isaac Pyke Esquire, governor, and council. The humble petition of Martin Norman, planter, set out that very considerable sums were owing to him from sundry persons. He humbly prayed that the council would be pleased to compel his debtors to make payment, by which he might be in a capacity to pay his own debt to the Honourable Interpretations The Beale petition consolidates the orphan estate claim under three heads. The petitioner asks for an audit of accounts standing between himself, his brother and the Honourable Company, recovery of the land belonging to the two boys, and a credit for the rent of the house adjoining the Company's store room which had been hired by the Company. The land claim is the standard assertion of inheritance from John Beale deceased. The store room house rent is a more particular item, the Company having taken the dwelling

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			next to the store as a security measure to prevent any robbery or mischief. The Company's commercial interest in occupying the property is here presented as the orphan estate's ground for back rent, accumulating over the whole period of the Company's tenancy. The governor's acceptance of the audit, on his own offer of 1 March 1715 to act for all orphans in general, fulfils that earlier undertaking in concrete form. On 1 March 1715 the governor had refused to act as Richard Beale's particular guardian on the principle of appellate impartiality, but had offered to act in general for all orphans, to see the account made up at the stores in person if needed, and to attend any miscasting personally. The bench's note that the governor was desired to do the same is the formal entry into the council book of that earlier informal undertaking. The phrasing he was desired to do the same converts the governor's offer into an assignment laid on him by the bench, with the council retaining the appellate role for any complaint by either party against his settlement. The reference to former mismanagement is the standard formula by which the present bench distinguishes itself from the administration of Benjamin Boucher, whose documentary case had been transmitted to London on 25 January 1714/15 by the <i>Aurengzebe</i> with the Tovey-Gurgen-Alexander letter. The Beale orphans' suffering under that earlier regime is taken as established without further proof, the present bench presenting itself as the agent of restoration. The phrase all matters will now be examined into is the council's offered remedy on the same footing already applied to Mary and Ann Colgrave on 18 July 1712 and to the various orphan estates that have come before the bench since. Martin Norman's petition opens a different mechanism, that of compelling debtors to pay so that the petitioner may meet his own Company debt. Norman, a planter, asks the council to use its authority over his debtors to enforce collection, on the ground that the proceeds will flow through him into the Company's accounts. The mechanism is the same set-off in effect that Alexander sought against the Bodley estate earlier on the present consultation day, but operating now through the planter's own external debtors rather than through the Company's hands. The bench has yet to dispose of the petition in the recovered text. Speculations The store room house rent claim is probably the strongest of the three Beale heads, and is perhaps the principal reason for bringing the petition on the present day. The Company occupies the property as a commercial convenience, and the petitioner is in a position to show actual loss for the whole period of the Company's tenancy. The land claim and the audit will require months of work in the books, but the rent claim is a clear running debt of the Company itself. By placing it among the heads of the petition, Beale forces the bench to address the Company as defendant on a discrete sum rather than only as auditor of the family's affairs. The governor's acceptance of the audit will perhaps see this item disposed of first. Norman's petition is probably timed to the present day because the bench has just demonstrated, on the Smith, Alexander and Leech petitions, its willingness to use the conciliar process to move debts around the island for the Company's net advantage. If the Smith claim is paid by drawing on the Bodley effects, if Alexander's 45s 0d is set off against the stone books, and if Leech's £30 0s 0d loan moves a portion of Knipe's debt onto a more secure footing, then Norman's request that the bench compel his debtors becomes one more item in the same administrative housekeeping. By framing his own application as a route to the Company being paid, Norman places it on the

			same footing the bench has shown itself willing to consider on the present day.
465	456	Hon[ble] Company (and whereas) yo[r] Petition[r] water being kept off Eight Day in fourteen by which meanes yo[r] Petition[rs] Yams Rotts and many thousands are Died in the ground already, by which yo[r] Worsh[i]p is sensible that yo[r] Petition[r] as yet has not the Injoyment of his Lease (although) he has paid two hundred pounds already and for wants of w[ch] yo[r] Petition[r] suffers both hunger thirst and nakedness so hoping yo[r] Worsh[i]p will be pleased to see yo[r] Petition[r] righted. May y[e] 17: 1715 And (as in Duty bound) yo[r] Petition[r] shall for Ever Pray (Sign'd) Martin M Norman his Mark Ordered That the above Petition be referred to M[r] Tovey [...] that he Examine into the matters therein mencioned [...] settle the same as well as he can. Island S[t] Helena To the Worship[full] Isaac Pyke Esq[r] Govern[r] [...] and Councill The most Humble Petition of John Alexander Humbly, Shewth, That whereas your Petition[r] being at this time Under an Obligation to pay the following sums of mony, viz[t] three Pounds to John Sinsnick and twenty seven Pounds to Thomas Allis (who stands Indebted to Margin Notes: Norman[s] Pet[ition] [...] May y[e] 17: 1715 referrd to y[e] sec[re]ta[ry] Island S[t] Helena Shewth	Norman further set out that his water was being kept off eight days in fourteen, by which means his yams rotted and many thousands had died in the ground already. The council was sensible that he had not yet had the enjoyment of his lease, although he had paid £200 0s 0d already. For want of it, he suffered both hunger, thirst and nakedness. He hoped the council would be pleased to see him righted. The petition was dated 17 May 1715 and signed by Martin Norman with his mark. The council ordered that the above petition be referred to Mr Tovey, and that he examine into the matters mentioned and settle the same as well as he can. The next petition was presented to Isaac Pyke Esquire, governor, and council. The humble petition of John Alexander set out that the petitioner was at present under an obligation to pay the following sums of money, namely £3 0s 0d to John Sinsnick and £27 0s 0d to Thomas Allis, who stood indebted to Interpretations The water grievance is the substantive heart of Norman's petition and a window onto the operation of irrigation rights at the island. The phrase eight days in fourteen describes a rotation in which Norman receives water for only six days of a fortnight, and is kept off for the remaining eight. The grievance is institutional rather than incidental: someone with prior or competing claim has been drawing the water during the period Norman expected to use it, with the result that the planted yam crop has rotted in the ground in many thousands of suckers. The reference to many thousands lost is on the same scale as the Company's own yam plantings reported by William Worrall on 26 April 1715 at the Hutts, Lufkins, Tibbills Gut, Coles Gut and Perkins's, where total stocks ran to 263,600. A planter losing thousands in the ground is suffering damage measured against the same kind of basis on which the Company calculated its supply security. The reference to two hundred pounds already paid on the lease, without the petitioner having yet had the enjoyment of his lease, is the financial spine of the grievance. The water rotation defect has effectively voided the productive value of a tenancy on which the petitioner has paid £200 0s 0d up front. The bench's referral of the matter to Tovey, with directions to examine into the matters mentioned and settle the same as well as he can, places the dispute in the hands of the fourth in council, who has already managed the families' land and cattle register completed between 8 March 1715 and 21 March 1715 and signed the protective orders against Captain Haswell of 10 May 1715. Tovey's standing brief for documentary investigation makes him the appropriate councillor to examine the water-rotation arrangement against the recorded lease terms. The Alexander petition raises a fresh creditor problem distinct from the earlier petition of the present day. Whereas the earlier Alexander petition concerned a 45s 0d debt owed to Alexander by the Bodley estate and was disposed of by reference to the stone books, the present petition reverses the position: Alexander is now the debtor, under obligation to pay £3 0s 0d to John Sinsnick and £27 0s 0d to Thomas Allis. The variant rendering of Sinsnick stands alongside the Peter Sinsnick and John Sinsnick of the 21 March 1715 families' return. The phrase who stands indebted, recovered as the principal text breaks at the foot of the page, opens the description of how Allis or someone else stands indebted to a further party. The petition appears to be setting up a chain of obligations under which Alexander seeks the bench's intervention. Speculations

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			Norman's eight-day water deprivation in fourteen is probably the result of the same redistribution of plantation labour and resources that the council has been managing since the redirection of fortification works on 7 February 1715. With the Company's own yam stocks ranged across five sites for risk distribution, and with the Worrall overseership of 5 April 1715 still in its probationary phase, the bench has clear interest in the integrity of planter water supplies that feed the wider provision economy. Tovey's brief is therefore not merely to settle a private grievance but to verify that the water rotation has not been quietly altered to favour Company plantings during a period of supply consolidation. The petition's reference to nakedness as well as hunger and thirst is the rhetorical extreme that registers the petitioner's loss in terms the bench is expected to find affecting. The signature by mark, like that of Richard Ray on 3 May 1715, fixes Norman as a planter without writing. Yet the petition shows a precise grasp of the eight-in-fourteen rotation, of the £200 0s 0d sunk into the lease, and of the cumulative damage to the crop. Someone has drafted the petition for him with detailed knowledge of his agreement and his planting. The drafter is perhaps a literate neighbour or one of the Company writers in the storekeeper's office, and the petition's accumulated structure - the legal claim, the financial loss, the bodily suffering - is the product of a documentary hand reasoning through the institutional avenues available to a planter whose lease has not delivered what it promised.
466	457	to the Hon[ble] Company) the Latter being to Compleat the payment of Ninety Pound for twenty Acres of Land your Petition[r] bought of One Elinor Cotgrave since Dead and which should have very Easily afsied[?] had not your said Petit[ione]r as well as many others suffered the loss of about Thirty head of Neat Cattle in the late great Drought which Reducing your Petition[rs] Stock to a very small Number it would be as Prejudiciall to him [...] familie to Lessen that Number, now with the Blessing of God in a fair way of Increaseing to a stock once againe. And [as] in duty bound shall Ever pray [...] Jn[o] Alexander Ordered That his request be granted, Pursuant to an Order of Council bearing date the 21 day of December 1714. [signatures] Antipas Tovey Margin Notes: Jn[o] Alexander[er] pet[ition] [...] to borrow 30[...] Granted Ordered	Alexander continued his petition by setting out that he was indebted to the Honourable Company, the latter sum being to complete the payment of £90 0s 0d for twenty acres of land he had bought of one Elinor Cosgrave since dead. The land would have very easily afforded the payment had not the petitioner, like many others, suffered the loss of about thirty head of neat cattle in the late great drought. That reduction had brought his stock down to a very small number, and it would be prejudicial to him and his family to lessen that number now, with the blessing of God in a fair way of increasing the stock once again. He set out that he had been an old servant to the Honourable Company, and as he hoped had behaved himself to the council's satisfaction, having done most of the business in the storekeeper's office since his arrival at the island. He presumed none could say to the contrary. He humbly prayed the council to give him credit for the sum of £30 0s 0d at the usual interest, and upon security if required, for repayment at six months hence or, if it might be favoured, so long as twelve months. He undertook to take all immediate care to clear the old arrears as soon as possible. The petition was signed by John Alexander. Granted. The council ordered that his request be granted, pursuant to an order of council bearing date the 21 day of December 1714. Interpretations Alexander's £90 0s 0d obligation for twenty acres bought of the late Elinor Cosgrave gives a unit rate of £4 10s 0d the acre, the price of a settled holding capable of carrying cattle. The transaction was a free sale between planters, not a Company lease, and the death of the seller has left the balance owing as a personal debt of the buyer. The reduction of the buyer's herd by thirty head in the late drought is the operative damage: the cattle would have liquidated the debt had they survived. The petitioner is now obliged to find £30 0s 0d in credit to discharge the immediate obligations to Sinsnick and Allis, with Allis in turn owing the Company; the bench is being asked to enter the chain at

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			the point where Alexander would otherwise have to break up his diminished herd to pay. The reference to the late great drought enters the climatic background of the present account. The island's moderate climate is here recorded as having delivered a prolonged dry period severe enough to take thirty head of cattle from a single planter, on a scale that affected many others on the same footing. The same drought lies behind the famine-driven beef-arack exchange of 11 March 1715, by which inhabitants selling beef at 25s 0d per hundred would be allowed to buy arrack at 6s 0d per gallon, an inducement designed to bring slaughter cattle into the Company's hands during a period of restoration. Alexander is one of the planters the bench has been quietly trying to keep on his feet through these mechanisms. The petitioner's reference to himself as an old servant to the Honourable Company having done most of the business in the storekeeper's office since his arrival is the entry of personal service onto the credit application. Alexander, the same man whose plantation status was confirmed by his grant of Sexton's ground on a 21-year lease on 8 April 1712, and probably the same Ensign John Alexander who served as clerk of council and signed the game advertisement of 25 July 1712 and the survey advertisement of 24 November 1712, here invokes his record of service as part of his ground for credit. The bench's grant rests not only on the security he offers and the interest he undertakes but on the standing he claims within the Company establishment. The reference to the order of council bearing date the 21 day of December 1714 is the procedural anchor of the grant. That earlier order set a standing rule on the terms of credit to be extended to inhabitants in such cases, and the present grant follows its rates and conditions without separate negotiation. The mechanism economises on conciliar attention: rather than rehearse the terms of every individual loan, the bench refers each grant back to the standing order. Alexander's twelve-month extension, if so favoured, falls within the framework already established and requires no fresh deliberation on rate or security. Speculations The chain of obligations Alexander has set out - £3 0s 0d to Sinsnick, £27 0s 0d to Allis who in turn owes the Company, and the £90 0s 0d for the Cosgrave land of which the present sum completes the payment - is probably designed to present the loan as a settling of accounts that ultimately benefits the Company. Once Alexander pays Allis, Allis is in funds to pay his own Company debt; once the Cosgrave purchase is completed, the title to the twenty acres becomes free and clear and can be charged as security against the £30 0s 0d advance. The bench grants the petition because the loan ultimately flows back into Company hands through Allis and is secured against newly cleared land. The chain is the same set-off thinking the bench applied to the Leech-Knipe arrangement on the present day. The choice of December 1714 rather than a more recent order as the procedural anchor for the grant is probably because the 21 December 1714 order was a general settlement of credit terms following the Carne debt-clearance schedule of 7 December 1714. By referring back to that order, the bench treats Alexander's application as a routine instance falling under the standing rule, and avoids any need to find a fresh policy ground for advancing money to a planter who is also a Company servant. The bracketing of the present grant with the December framework also signals that the bench expects the same framework to govern any further such petitions on the present consultation day or shortly thereafter.

At a consultation held on Tuesday the 24 day of May 1715 at the United Castle in James Valley. Present: Isaac Pyke Esquire, governor; George Haswell, deputy governor; Matthew Bazett, third; Antipas Tovey, fourth; Edward Byfield, fifth in council. Mr Jonathan Doveton, having paid the principal and interest of the money he had borrowed at 8 per cent of the Honourable Company to pay for the lands of William Marsh and Leonard Hunt - first sold to the Company and by Governor Boucher and council to him - the interest was to be void and he discharged of the principal and interest. At his request this was entered in the consultation book to discharge him, of which he might have a copy on demand. The following petitions were presented. To the worshipful Isaac Pyke Esquire, governor, and council. The humble petition of Christopher Hell, gunner's chief mate. Hell set out that he was very desirous of hiring a parcel of land formerly Hugh Bodley's, known by the name of the Man Cupps, now belonging to the Interpretations The Doveton entry records the final discharge of a substantial planter mortgage at the original Company rate. Doveton borrowed at 8 per cent from the Company in order to purchase the consolidated lands originally bought from William Marsh on 23 November 1711 for £300 0s 0d and from Leonard Hunt on 20 December 1710 for £250 0s 0d, both holdings being absorbed by the Company at those dates and then sold on to Doveton under the administration of Benjamin Boucher. The bench's certificate that the principal and interest have been paid is the planter's quittance against any future Company claim on the same lands. The procedure of entering the discharge in the consultation book, with a copy to be made available on demand, is the standard means by which a planter secures permanent documentary proof of clear title; the council book is the registry of last resort against any subsequent dispute. The procedural posture is significant. Doveton has chosen to bring his clearance before the bench at the present moment, when the standing of the Boucher administration is in active question on the threads transmitted to London by the <i>Aurengzebe</i> on 25 January 1714/15. By securing the discharge under the Pyke regime, Doveton converts a transaction first entered into under Boucher into one closed and certified under the present council, and protects himself from any possible reopening of the original sale should the Lords Proprietors take any action against Boucher on the documentary case. The discharge is therefore as much a defensive document for Doveton against future challenge as it is a release from the running debt. The eight per cent rate is the standard Company lending rate, the same applied to William Porteous on 27 November 1711 for £100 0s 0d and to Isaac Leech on 17 May 1715 for £30 0s 0d, and to be applied to John Alexander on the same day under the standing order of 21 December 1714. The rate has functioned across the recovered record as the uniform price of Company credit to planters and Company servants, with security where required. The Doveton clearance confirms that the same rate has been carried through to its conclusion on the most substantial planter borrowing in the recovered material. The Hell petition opens a fresh inquiry into the use of Hugh Bodley's former lands. Christopher Hell is the gunner's chief mate, and the Man Cupps is the name of a particular parcel of the Bodley holding. The Bodley estate, absorbed by the Company on 18 January 1714/15 in satisfaction of debt, and the subject of the Smith and Alexander petitions of 17 May 1715, now produces a third application, this time from a Company

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			servant seeking to lease a parcel from the Company's holding rather than to claim against the estate's effects. The application changes the bench's relationship with the Bodley assets from creditor and auditor to lessor. Speculations Doveton's choice to clear the mortgage in full at the present moment is probably also calibrated to his standing in the recent church-rate proceedings. As the petitioner whose blinds in James Town were ordered demolished on 26 April 1715, and as one of the co-executors with Gurling and Greentree to Robert Leach deceased of 12 April 1715, Doveton has been an active player in the regulatory and probate business of the bench. Closing the eight-per-cent borrowing now leaves him without any standing financial relationship with the Company beyond his half-crown contribution to the church rate confirmed on 17 May 1715, and frees him to act without conflict in any further parish or executor business that comes before the council. The Hell application for the Man Cupps is probably the kind of administrative letting the bench has been organising since the Bodley advertisement of 18 January 1714/15 offered the absorbed holding to a civil and industrious person who had worked for the Company at the fortifications and had no plantation. A gunner's chief mate is precisely the kind of Company servant the advertisement contemplated. The Man Cupps, as a named parcel within the larger Bodley holding, would be one of the sub-divisions through which the Company can place its servants on the land while retaining the principal estate. Hell's petition is the first recovered instance of the bench moving on the absorbed Bodley land in the manner the advertisement set out.

May y[e] 24: 1715 Referrd till furth[er] Enq[uiry] Island S[t] Helena	Hell concluded his petition by humbly praying the council to grant him leave to hire the same parcel of land, formerly Hugh Bodley's, known by the name of the Man Cupps and now belonging to the Honourable Company. The petition was dated 24 May 1715 and signed by Christopher Hell. The council ordered that the land be let only to those who could manure it and had at least one black, and were not too deep in the Honourable Company's debt. The petition was not approved. The next petition was presented to Isaac Pyke Esquire, governor, and council. The humble petition of Richard Gurling, freeholder, set out that he stood in very great need of pasturage to preserve his neat cattle. He humbly prayed the council to grant him a parcel of the Honourable Company's waste land lying underneath their plantation at the High Peak, which would be of very great use to him and of no detriment to any person. The petition was dated 24 May 1715 and signed by Richard Gurling. The council ordered that the land be surveyed and enquiry be made whether the letting of it might be any prejudice to the Honourable Company. The bench also directed that enquiry be made how much land Gurling already possessed. The next petition was presented to Isaac Pyke Esquire, governor, and council. Interpretations The conditions attached to the refusal of Hell's petition set out the bench's working policy on Company land lettings for the first time in the recovered record in such explicit form. Three tests apply. The tenant must be capable of manuring the land, that is, of bringing manure or compost to the soil to maintain its productive value rather than merely cropping it out. He must hold at least one black, so as to have the labour to work the parcel. And he must not be too deep in the Company's debt, so that rent and other obligations can be met without addition to an existing arrear. The conditions exclude the gunner's chief mate Hell on the

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			second or third ground, perhaps both. The standard converts the general aspiration of the Bodley advertisement of 18 January 1714/15 into operative qualifying criteria for any Company servant or planter seeking to lease absorbed estates. The High Peak waste land application by Richard Gurling raises a different question. Gurling is the planter who acted as executor with Greentree and Doveton to Robert Leach deceased on 12 April 1715, and as joint executor with Powell to the Steward estate, whose will was proved on 11 January 1714/15. He is also the planter whose 11 March 1715 offer with Powell to sell standing provisions and the young slaves Pompey and Roger to the Company remained open at the time of Mashborne's death on 31 March 1715. The application for pasturage under the High Peak does not concern the absorbed estate land but free waste held by the Company at its own plantation; the request is for additional grazing to preserve a herd already in possession. The bench's two-headed inquiry into Gurling's application is the careful procedural response to a request from a substantial planter. The first head is the survey of the parcel itself, to verify the boundaries and quality of the land. The second is whether the letting would be any prejudice to the Honourable Company, a phrase that covers loss of grazing the Company's own cattle might use, interference with Company plantings, and any conflict with the standing yam-supply strategy detailed at the consultation of 26 April 1715. The third element, enquiry into how much land Gurling already possessed, is the bench's check against accumulation by a single planter beyond the share considered reasonable. The families' land and cattle register completed between 8 March 1715 and 21 March 1715 is the documentary basis for that enquiry. The contrast between the immediate refusal of Hell and the procedural inquiry on Gurling registers the difference in standing between a Company servant of modest means and an established planter who is also an executor on two recent probates. Both applications are for Company land, but the bench's working assumption is that Gurling has the resources to manure, the labour to work, and the standing to meet his obligations, so the question is reduced to whether the Company can spare the parcel. Speculations The newly articulated qualifying conditions for Company lettings - manuring capacity, at least one black, and not too deep in debt - are probably the bench's quiet codification of long-standing practice now made explicit because of the volume of applications produced by the absorption of the Bodley estate. With the Steward estate also under active management through the Powell-Gurling executorship, and with the Mashborne moveable goods inventoried on 12 April 1715, the council has accumulated land and stock under its administration in quantities that require formal letting criteria. The Hell refusal is the occasion for laying down the conditions on the record, and the conditions will perhaps govern the disposition of further parcels at later consultations. Gurling's appeal to pasture preservation rather than fresh cultivation is probably calibrated to the bench's known anxiety about cattle losses since the late great drought, the same drought that John Alexander invoked on 17 May 1715 to explain the loss of thirty head from his own herd. By framing his request as the preservation of an existing herd rather than the acquisition of new land for cropping, Gurling places it within the same restoration-of-stocks logic that has shaped the beef-arrack exchange advertisement of 11 March 1715. The bench's referral for survey rather than outright refusal reflects the merit of the framing as much as the petitioner's standing.

Swallow set out that his father, named earlier in the consultation as standing considerably in the Honourable Company's debt, had, pursuant to an advertisement put out for all persons that stood so indebted to make their several proposals for payment, made offer to Captain Edward Mashborne, third in council deceased, of thirty thousand weight of yams at one time, and as many more at another time, with two head of breeding cattle, which he had promised to take for the Company's use. Neither parcel had as yet been taken in, and the same were reserved for that purpose. Having no other way to make payment, he humbly prayed the council to receive the said yams and cattle towards payment of the debt in the Honourable Company's books, otherwise it would be impossible to discharge the same in many years without the inevitable ruin of his father, who was now very ancient, and his family. The petition was dated 24 May 1715 and signed by Richard Swallow. The answer thereto was as follows. It appeared by the report made on Tuesday the 17 of August that there was no mention made of these yams, and the yams mentioned in that report were more than the council could take without apparent prejudice to the Honourable Company, as would further appear by the minutes of consultation on Tuesday the 26 of April. Therefore the council could not take these yams, but were willing to take cattle or blacks. Interpretations The Swallow petition arrives through a son acting for an ancient and sick father, and so attaches to the bench's developing practice of admitting representative petitions where the principal cannot attend. The earlier petition of Richard Beale of 17 May 1715 had brought the orphan estate before the council through the eldest son; the present petition reverses the generational direction, with the son representing the aged father. The procedural openness of the bench to representative petitions in both directions is the institutional response to the limited mobility of the very young and the very old in the country planter community. The offer of thirty thousand weight of yams in one parcel, with as many more in another, together with two head of breeding cattle, was made to Captain Edward Mashborne in his capacity as third in council before his death on 31 March 1715. The petition therefore concerns a transaction undertaken under the previous council composition and now claimed by the son as a binding undertaking by the Company through Mashborne. The bench's response that no mention of these yams was made on the report of 17 August is a flat rejection of the existence of the agreement on the record. The report referred to is perhaps the 17 August 1714 audit of the debtors' proposals under the same advertisement, the documentary product of the bench's earlier handling of the same debt-clearance round. By appealing to the 17 August report and finding no entry, the council closes off the Swallow claim against Mashborne's recollection or any unrecorded promise. The cross-reference to the consultation of 26 April 1715 anchors the bench's refusal in the Worrall yam-stock report of that date. Worrall reported total Company yams ready to dig of 263,600 across the Hutts, Lufkins, Tibbills Gut, Coles Gut and Perkins's, with 66,000 already bought by Pyke and Mashborne in Tombstone Wood on 19 October 1714. The Company is so well supplied with yams that taking another sixty thousand weight from Swallow would be an apparent prejudice, that is, a visible loss, on grounds of overstocking and storage. The bench has converted the supply security position consolidated on 26 April 1715

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			into the documentary basis for refusing further yam purchases. The willingness to take cattle or blacks instead reflects the actual scarcities: cattle are still recovering from the late great drought and slave labour remains in short supply. The phrase apparent prejudice to the Honourable Company is the technical formula the bench has been applying since the High Peak inquiry on Gurling's pasturage petition earlier in the present sitting. The same standard of judgement is being used to manage both letting and purchasing decisions: would the transaction cause visible loss to the Company in current conditions. The standard is operational rather than legal, and is applied case by case against the present state of stocks, herds and labour. The Swallow refusal applies the standard against an old debtor's preferred mode of payment. Speculations The Swallow agreement with Mashborne, claimed but not entered on the 17 August report, was probably an informal undertaking made in conversation rather than a formal council decision. Mashborne, as the third in council with responsibility for plantation accounts and joint purchaser with the governor of the 66,000 yams from Tombstone Wood on 19 October 1714, would have been the natural figure for a debtor planter to approach with an offer of yams. The death of Mashborne on 31 March 1715 has left the agreement in the position of an unmemorialised promise. The bench's refusal protects the Company from being held to private understandings of a deceased councillor, and confirms the operational rule that obligations binding the Company must be entered in the consultation book to be enforceable. The procedural lesson is the same the Doveton clearance illustrated earlier in the present sitting, that the council book is the registry of last resort against any subsequent claim. The offer of cattle or blacks in place of yams probably maps the bench's actual procurement priorities at the present moment. Cattle stocks remain low after the late great drought, with John Alexander's loss of thirty head still fresh from the petition of 17 May 1715; slave labour shortages continue to constrain the fortification works, the sea wall and the highway labour programme set out on 15 April 1715. The redirection of Swallow's payment from yams to cattle or slaves is therefore not arbitrary but calibrated to where the Company is actually short. Whether the ancient father can produce either is another question; the offer transfers the burden of finding an acceptable medium of payment back to the petitioner.
470	461	Island S[t] Helena To the Worsh[i]p Isaac Pyke Esq[r] Govern[r] [...] Council The most Humble Petition of Gabriel Powill, Free Holder Humbly, Shewth, That whereas yo[r] Petition[r] hath always behaved himself obedient to the Govern[r] of this his Native Country always willing to obey his Superiours and to Promote the good Estate of the Island in Generall and in the greatest scarcity to Assist in the Refreshments of the Hon[ble] Companys Shipping and haveing behaved himself so as to obtain a Generall (and he hopes an honest [...] good Credit) has had the misfortune lately to be left Excecuted to Charles Steward Planter lately Deceasd who was formerly married to your Petition[rs] Sister and by her had five Children now liveing and Nephews to yo[r] said Petition[r] But since her death lately remarried to one Eliz[a] Gargen will known here, the said Charles Steward left an Estate Vallued in the whole about twelve Hundred Pound and his said Widow within less, then Four Months was Married to Cap[t] George Haswell the first of yo[r] Worsh[i]ps	The next petition was presented to Isaac Pyke Esquire, governor, and council. The humble petition of Gabriel Powell, freeholder. Powell set out that he had always behaved himself obedient to the government of his native country, always willing to obey his superiors and to promote the good estate of the island in general, and in the greatest scarcity to assist in the refreshments of the Honourable Company's shipping. Having behaved himself so as to obtain a general and, he hoped, an honest and good credit, he had had the misfortune lately to be left executor to Charles Steward, planter, lately deceased. Steward was formerly married to the petitioner's sister, and by her had five children now living and nephews to the petitioner. Since her death he had lately remarried one Elizabeth Gargen, well known at the island. Steward had left an estate valued in the whole about £1,200 0s 0d, and his widow, within less than four months, had married Captain George Haswell, the first of the council. Haswell, in right of his wife, was to enjoy about one third part of Charles Steward's estate. So it was that because Haswell could not enjoy the whole or most part of the estate, he had exercised, by

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
		Councill who in Right to his said wife is to Enjoy about one third part of the said Charles Stewards Estate But so it is that because he cannot Enjoy the whole or most part thereof has Exercised by meanes [...] Colour of his being yo[r] Dep[u]ty Govern[r] very great Tyranny [...] Oppression on his new wives Children in Law [...] also on yo[r] Petition[r] [...] Richard Gurling Execut[or] to the Last Will and Testament Margin Notes: Island S[t] Helena Shewth, This petition is not to be sh[ewn]	means and colour of his being deputy governor, very great tyranny and oppression on his new wife's children in law, and also on the petitioner and Richard Gurling, executors to the last will and testament A margin note records that this petition was not to be entered. Interpretations The Powell petition brings the underlying domestic and probate quarrel between the Steward executors and the deputy governor onto the formal record. Powell sets out three foundations for his standing: long political loyalty to the government, active assistance to Company shipping during scarcity, and the misfortune of being made executor to a deceased brother in law. The pattern of preamble is the standard rhetorical framework by which a freeholder asserts the right to be heard by the bench, and each element is invoked in language that places the petitioner alongside the Company's own interests rather than in opposition to them. The household and probate facts are now set out together in one consolidated narrative. Charles Steward, whose will was proved on 11 January 1714/15 on the oaths of John Alexander and Thomas Price with Powell and Gurling as executors, was formerly married to Powell's sister and by her had five children, who are the petitioner's nephews. Steward's second marriage to Elizabeth Gargen produced the widow whose remarriage within less than four months to George Haswell brought the deputy governor into the Steward household. Haswell's interest in his wife's right is about one third of the £1,200 0s 0d estate, leaving two thirds to the children of the first marriage. The dispute that drove the prosecution of Toby on 10 May 1715 is here laid out as the natural product of the estate's division between the Powell-Gurling executorship of the children's two-thirds interest and Haswell's marital one-third interest. The accusation of very great tyranny and oppression, made by means and colour of Haswell's office as deputy governor, is the language by which Powell raises the matter from a private family quarrel to a public abuse of office. The phrase by means and colour of office is the standard formulation for misuse of public position for private ends in early eighteenth-century English administrative law. Powell's petition charges that Haswell has been using the apparatus of the deputy governorship to bear down on the children of his wife by her first marriage, on Powell as their uncle and executor, and on Gurling as joint executor. The matter is therefore framed as a public-law grievance against a councillor's conduct, drawing on the same foundations the court relied on for the protective order against Haswell of 10 May 1715. The margin entry that the petition was not to be entered is a procedural exclusion of remarkable strength. The petition is read in council and a record made of its substance, yet a separate note directs that it is not to go into the formal book. The bench is here pulling back from converting Powell's allegations into formal proceedings against the deputy governor, at the same time as recording in the consultation that the petition was presented and what it contained. The combination preserves the political surface of the council while creating a documentary trace that could be activated should the matter ever require formal action, perhaps in correspondence to the Lords Proprietors. Speculations The decision that the petition was not to be entered is probably the governor's own restraint operating on the open political fault line within the council. Pyke has already disciplined Haswell on 10 May 1715 by the protective order forbidding reflection on the jurors and by the damages award in favour of the orphan estate; a fresh formal entry of Powell's catalogue of grievances against Haswell would push the deputy governor further

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			into open contest with the bench at a moment when the council needs a settled appearance for the Lords Proprietors. The non-entry preserves the bench's working relationship with its second man while leaving Powell with the documentary recognition that his petition was presented. The strategy is consistent with the governor's earlier instruction at the trial of 10 May 1715 that the executors and the eldest Steward son mention no more of Haswell in public. Powell's reference to the rapid remarriage of the widow within less than four months is probably designed to underline the speed with which Haswell acquired his marital interest in the Steward estate, and so to suggest opportunism on his part. A widow who remarries within four months of her husband's death is on the very edge of customary mourning periods, and the implicit suggestion is that Haswell moved quickly to attach the one-third interest. The framing prepares the ground for the substantive charge that follows: a man who married fast for an estate and then found he could not have all of it has turned his official position against the children who hold the larger share.
471	462	Testament of the said Charles Steward [...] Unckle to the said Children haveing threatned to Whip the Execut[or]s and at other times to Shoot them He being a Man of a Quarrellsom [...] abusive temper Especially in his Drink to which he is much subject, yo[r] Worsh[i]p and Council are all sensible of his malice in Endeavouring to destroy under Colour of Law one Toby a Black man belonging to the Children which I hope will be duly represented to the Hon[ble] Com[any] I made my complaint to yo[r] Worsh[i]p against him before his face in the Publick Sessions w[ch] I have now given in a Memoriall of consisting of Seven Articles tho I could have urged many very many more, Wherefore I humbly pray yo[r] Worsh[i]p and Councill to take such Order herein that I may be Protected in the faithfull discharge of my Trust on behalf of my said Nephews and that you would please to appoint any other Honest Sober man on behalf of the said Poor Orphans who are now greatly Oprest by their Rigourous [...] wicked Father in Law and their young Mother in Law his wife that your Petition[r] may be Legally Acquitted from this unweildy charge he not being able or willing to contend with so troublesome a man as yo[r] Deputy Gov[er]n[r], but had rather make a reparation himself to the Distressed Children his Nephews than to be thus Continually Insulted [...] abused and in Danger to be destroyed by the Outrageous or Mad Method of this passionate [...] Turbulent man the Deputy Gov[er]n[r], I Humbly submitt Margin Notes: M[r] Powells Pet[ition] ag[ainst] Cap[t] Haswell	Powell continued his petition. He set out that he was uncle to the children of Charles Steward and that Haswell had threatened to whip the executors and at other times to shoot them, being a quarrelsome and abusive-tempered man, especially in his drink, to which he was much subject. The council was sensible of Haswell's malice in endeavouring to destroy, under colour of law, Toby, a black man belonging to the children. Powell hoped the matter would be duly represented to the Honourable Company. He had made his complaint against Haswell before his face in the public sittings, and he had now given in a memorial consisting of seven articles, although he could have urged very many more. Powell humbly prayed the council to take such order in the matter that he might be protected in the faithful discharge of his trust on behalf of his nephews, and that the council would appoint any other honest, sober man on behalf of the poor orphans, who were now greatly oppressed by their rigorous and wicked father in law and their young mother in law, his wife. Powell asked that he might be legally acquitted of this unweildy charge, he being neither able nor willing to contend with so troublesome a man as the deputy governor. He would rather make reparation himself to the distressed children, his nephews, than be continually insulted and abused, and in danger to be destroyed by the outrageous and mad method of this passionate and turbulent man, the deputy governor. He humbly submitted Interpretations The catalogue of threats brings the petition from charges of abuse of office into accusations of personal violence. Threats to whip and to shoot the executors are not merely intemperate language but accusations of crimes against the persons of Powell and Gurling. The reference to his drink, to which he was much subject, attributes the conduct in part to habitual intoxication, the same condition that had earlier been the ground for Matthew Bazett's dismissal from the council on 2 October 1712 on charges of swearing, drunkenness, neglect of business and disrespect to the governor. The same vice that had once removed Bazett from the bench is now alleged against Haswell, who continues as deputy governor under written orders of the court of 10 May 1715 forbidding him to reflect on the jurors of Toby's trial. The reference to Haswell's endeavour to destroy Toby under colour of law is the petitioner's open characterisation of the failed prosecution of 10 May 1715. The phrase under colour of law converts the legal procedure of indictment and trial into an instrument of

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			malice, employed for the destruction of the slave belonging to the children. The bench has already entered findings on the same matter through its order for damages and costs against Haswell signed by Antipas Tovey on 10 May 1715, and the order forbidding reflection on the jurors. Powell's petition now seeks to incorporate that judicial finding into a wider statement of the deputy governor's pattern of conduct, with the trial standing as the central exhibit. The memorial of seven articles, given in alongside the present petition, is the formal pleading by which Powell asks the bench to take such order as will protect him in the discharge of his trust. The seven articles are not set out in the recovered text of the present petition but are referred to as a separate document. The mechanism follows the standard form by which an accuser presents a numbered catalogue of charges, with each article specifying a distinct grievance. The procedure was used by the council itself against Boucher in the documentary case transmitted to London on 25 January 1714/15 by the <i>Aurengzebe</i> with the Tovey-Gurgen-Alexander letter. Powell is here adopting the same procedure to bring a deputy governor's conduct before the same Lords Proprietors. The request that Powell himself be legally acquitted of the executorship is the procedural innovation. Rather than seek a remedy against Haswell, Powell asks the bench to discharge him from his trust as executor and to appoint another honest, sober man in his place. The principle is that an executor cannot be required to serve where the conditions of the trust have become impossible by reason of the conduct of another party. Powell offers to make reparation himself to the children rather than continue under the conditions Haswell has imposed. The offer of personal compensation in lieu of continued service is the executor's last institutional move when faced with circumstances beyond his control. Speculations Powell's offer of personal reparation in lieu of continued executorship is probably the strongest possible signal he can give the bench of the seriousness of his position. A free planter willing to disburse his own funds to be released from the trust is a free planter who has concluded that the trust cannot be honourably discharged under existing conditions. The reparation offer transfers any cost of dissolution from the children's estate to Powell himself, and so removes the obvious objection that releasing him would leave the orphans the poorer. The bench is thereby presented with a costless route out of the impasse, with the children compensated by the outgoing executor and a new executor appointed in his place. The seven articles, withheld from the petition but given in as a separate memorial, are probably the procedural mechanism by which Powell limits what is on the open record of the consultation while reserving the full catalogue of charges for any subsequent reference, perhaps to the Lords Proprietors. The margin note that the petition itself was not to be entered, recorded against the earlier portion of the same petition, is consistent with the same restraint. The bench keeps the documentary trace of the present application thin while allowing the petitioner to lodge a fuller case in a separate paper that can be activated later. The procedure leaves Pyke in a position to manage the council's relationship with Haswell from day to day, while ensuring that, should the deputy governor's conduct require formal action from London, the documentary basis for that action already exists at the island in Powell's seven articles.

		Priveledge of the Kings meanest Subjects from this man who because he thinks he has some Power will observe no Law, And yo[r] Poor Petition[r] as in Duty bound shall Ever Pray [...] Gabriel Powill Island S[t] Helena To the Worsh[i]p Isaac Pyke Esq[r] Gov[r] [...] and Council The Humble Petition of Richard Gurling in behalf of himself and Six Poor Orphans to whom he is one of the Execcut[or]s Humbly Shewth, That yo[r] Petition[rs] friend Charles Steward Deceas'd in the Month of December last leaveing by his Will the care of his Children to Gabriel Powill and yo[r] Petition[r] But it has so happen'd that about four months after M[r] Stewards Death his Widdow is married again to Cap[t] George Haswell one of the Council of this Island, who so overbares the Execcutors with Insults threatnings and abuses that they cannot goe thro' with their Charge [...] Execcut[ors]hip. And therefore Humbly pray the Gov[r] and the Rest of the Council to take the Justice of this cause into consideration and so farr as it is agreable to Law [...] Right to take the Children into their Protection and Discharge the Execcut[or]s And as in Duty boun[d] Margin Notes: Island S[t] Helena Shewth, R[d] Gurling[s] pet[ition] ab[ou]t y[e] same	the privilege of the King's meanest subjects from this man who, because he thought he had some power, would observe no law. The petition was signed by Gabriel Powell. The next petition was presented to Isaac Pyke Esquire, governor, and council. The humble petition of Richard Gurling on behalf of himself and six poor orphans, of whom he was one of the executors. Gurling set out that his friend Charles Steward had died in the month of December last, leaving by his will the care of six children to Gabriel Powell and the petitioner. About four months after Steward's death his widow had married again to Captain George Haswell, one of the council of the island. Haswell so overbore the executors with insults, threatenings and abuses that they could not go through with their charge of executorship. Gurling therefore humbly prayed the governor and the rest of the council to take the justice of the cause into consideration, and so far as it was agreeable to law and right, to take the children into their protection and discharge the executors. Interpretations The phrase desiring no more than the privilege of the King's meanest subjects is the legal-rhetorical apex of Powell's petition. The petitioner invokes the common-law principle that every subject of the Crown, however lowly in station, is entitled to the protection of the law against private violence. The phrase was a standard formulation in English petitioning practice for invoking the floor of legal protection due to any subject, and is here applied to a free planter and executor seeking shelter from a councillor's threats. By framing his complaint at the level of the King's meanest subject, Powell sidesteps any question of his own standing and rests his claim on the bare right of any subject to equal protection from violence. The Gurling petition is the procedural counterpart to Powell's, brought by the second executor in his own right and in the right of the children. The two petitions together represent a joint application by the entire executorship of Charles Steward's will, proved on 11 January 1714/15 on the oaths of John Alexander and Thomas Price. The bench is now faced with both executors asking, in distinct petitions, to be relieved of their charge. The mechanism by which the council can grant the relief is to take the children into their protection, that is, to assume the executorship to itself or appoint new executors, and to discharge the existing executors from any further responsibility. The procedure follows the principle the governor laid down on 1 March 1715 when offering to act for all orphans in general. The clarification that Steward died in the month of December last, with Haswell's marriage to the widow following about four months afterwards, fixes the chronology of the household reorganisation more precisely than Powell's narrative had done. December 1714 places Steward's death within the gap between the consultation of 7 December 1714, where the Carne debt-clearance schedule of £560 4s 0d was presented, and 4 January 1714/15 when Pyke forbade Gurling's unauthorised public outcry of Steward's effects without prior probate. The will was proved on 11 January 1714/15. Haswell's marriage to the widow therefore took place around April 1715, in the period that includes Mashborne's death on 31 March 1715 and the parish administration cycle of mid-April. The deputy governor's domestic life and his bench duties have run in parallel through one of the most administratively active months of the year. The reference to the children as six rather than the five referred to in Powell's petition is the kind of variation that suggests one petition counts only the children of Steward's first marriage with Powell's sister, while the other counts the full set of Steward's children

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			including any of the second marriage who survived. The six in Gurling's petition is the inclusive total. The bench will have to take account of both numbers as it determines whose interests the executors hold. Speculations The synchronised lodgement of two executor petitions, one from each of the named executors, is probably the product of joint consultation between Powell and Gurling on the procedure best calculated to extract them both from the charge. Each petition stands on its own and could be granted separately, but the bench cannot fail to notice that both executors have given up at the same time and on the same grounds. The combined effect is to put before the council the position that the executorship of the Steward will have become unworkable in its entirety, not merely inconvenient for one of the two executors. The bench is therefore left with the choice of accepting the joint resignation and reorganising the trust, or refusing both petitions and leaving two demoralised executors in place against their will. Gurling's understated phrasing, that the executors cannot go through with their charge of executorship, is probably calculated to give the bench room to dispose of the matter without further inflaming Haswell. Where Powell's petition catalogued threats to whip and shoot, accused the deputy governor of tyranny, oppression and a passionate and turbulent method, and invoked the meanest subject of the King, Gurling's petition is briefer, drier and focused on the practical fact of impossibility. The two-petition strategy presents the bench with both registers: the dramatic narrative for the record, and the calm procedural summary for the order. Pyke can sign a discharge of the executors on Gurling's wording without endorsing every charge in Powell's, and so dispose of the underlying problem while leaving the political quarrel with the deputy governor in the same managed state in which the trial proceedings closed.
473	464	bound shall Ever Pray [...] Rich[d] Gurling The Govern[r] [...] Council[] sent for both the Executors and told them that they and the Children both should have Protection [...] be maintaind in the Peaceable performance of their Excecutorship [...] the Childrens Right should also be preserved, but as to the discharge ing them from being Excecutors it was not proper for the Govern[r] nor Council to do it. And because their Petitions did consist of Divers Articles [...] one of them was very Long therefore they would read them over and consider on them and then next Consultation Day would make some order therein at w[ch] time they were desired to Appeare At Cap[t] Haswells request the Excecutors are not to be Answered the next Consultac[i]on Day but the next following that is fourteen Days hence, [signatures] Antipas Tovey Edward Byfeild Margin Notes: Gov[er]n[r]s Answer furth[er] Consideratio[n] putt off for 14 days[?] Cap[t] Haswell[s] requestis.	Gurling closed his petition in the usual form. The petition was signed by Richard Gurling. The governor and council sent for both the executors and told them that they and the children both should have protection, and be maintained in the peaceable performance of their executorship, and the children's right should also be preserved. As to discharging them from being executors, it was not proper for the governor nor council to do it. Because their petitions consisted of divers articles, and one of them was very long, the council would read them over and consider them, and would then at the next consultation day make some order in the matter. At that time the executors were desired to appear. At Captain Haswell's request, the executors were not to be answered at the next consultation day but at the one following, that is, fourteen days hence. The order was signed by Antipas Tovey and Edward Byfield. Interpretations The council's response divides the executors' application into two parts and disposes of each separately. On protection and the preservation of the children's right, the bench grants the substance of what the executors sought: both the executors and the children are to have the protection of the council, and the executors are to be maintained in the peaceable performance of their charge. The order is the bench's most explicit shield yet placed between Captain Haswell and the orphan estate, going beyond the protective order against reflection on the jurors signed by Antipas Tovey on 10 May 1715. The shield now extends from the immediate participants in the Toby trial to the executors in their administrative capacity and to the children themselves.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			On the discharge of the executors, however, the bench refuses. The reason given - that it was not proper for the governor nor council to do it - is the institutional limit of the conciliar power over a probated will. An executor is appointed by the testator under the will, not by the bench, and the bench cannot remove an executor without due process beyond the simple petition of the executor himself. The procedural ground for refusal preserves the formal authority of the will of Charles Steward, proved on 11 January 1714/15, while opening the alternative remedy of protection in office. The bench therefore takes the working route of supporting the executors in place rather than the formal route of replacing them. The decision to read the petitions over before making any order, with disposition deferred to the next consultation, is the council's procedural management of a politically sensitive matter. The seven articles Powell had referred to in his petition are part of the very long memorial mentioned in the present order. By taking the documents away for consideration, the bench creates time for the political composition of the answer, and avoids any immediate ruling in the presence of the deputy governor whose conduct is in question. The same restraint was applied to the Bradley tenancy and house repair petition on 26 April 1715, which was deferred for want of a fuller council, and to the Allgate petition for release from prison on the same day, on which no disposition was entered. Deferral has become the bench's standard method for matters that touch the deputy governor's interests. Haswell's request that the executors be answered not at the next consultation day but at the one following is the deputy governor's procedural intervention in the timing. By securing fourteen days rather than seven, Haswell obtains a fortnight in which to prepare his own response, perhaps a counter-petition or articles of his own against the executors. The bench's accession to the request, however, is double-edged: the fortnight also gives Pyke the same period to compose a settlement that will hold. Tovey and Byfield, the fourth and newly appointed fifth in council, sign the order. Bazett, the third in council, again does not sign, and the deputy governor does not sign on his own request. The procedural pattern of using the junior councillors to authenticate orders touching Haswell, established on 10 May 1715, continues. Speculations The bench's distinction between protecting the executors in office and refusing to discharge them from office is probably the only formula that holds the council together on the present matter. To discharge the executors at their own request would be to find against Haswell in substance, on the strength of Powell's catalogue of threats and tyranny, before any formal hearing of the deputy governor's side. To refuse protection would leave the executors exposed and the children unrelieved. The middle course - keeping them in office under conciliar protection - allows the council to support the orphan estate without making a formal finding against its own second man. The strategy buys time and preserves the appearance of a united bench while the underlying problem continues to develop. Haswell's fourteen-day adjournment request is probably calculated against the next ship from England carrying any response from the Lords Proprietors to the documentary case against Boucher transmitted by the <i>Aurengzebe</i> on 25 January 1714/15. If that ship arrives in the interval, the political balance of the bench may shift in ways that affect how Haswell can answer Powell's articles. A deputy governor with fresh authority from London would speak from a different position than one still operating under the protective order of 10 May 1715 and the damages award against him. The fortnight's grace gives Haswell maximum room for any

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			external development to favour him, while the executors meanwhile sit under conciliar protection but without formal release.

Island of St Helena. At a consultation held on Tuesday the last day of May 1715 at the United Castle in James Valley. Present: Isaac Pyke Esquire, governor; George Haswell, deputy governor; Matthew Bazett, third; Antipas Tovey, fourth; and Edward Byfield, fifth in council. There being a single alarm made that morning about nine o'clock, the governor proposed that each one in council should write down what he thought fit should be mentioned in a general letter to the Honourable Masters, in order to his writing the foul draft of one to be ready by Friday next. In case there should be a homeward bound ship, the letter would be ready in time enough. The council ordered that a general letter be written, and that each one write down what was proper for it. The following petitions were presented. To the worshipful Isaac Pyke Esquire, governor, and council. The humble petition of Elizabeth, late widow and relict of Charles Steward deceased, but now wife of Captain George Haswell, deputy governor. Mrs Haswell set out that Gabriel Powell, planter of the island, had lately exhibited a petition against her husband Captain George Haswell, deputy governor, in which he had scandalously, maliciously and villainously inveighed against her in several articles, endeavouring thereby not only to blast her reputation but also to breed differences between her and her husband. She humbly requested that the council would take it into consideration and Interpretations The single alarm at nine o'clock in the morning is the standard arrangement by which the garrison signals a single sail in sight at sea, distinguished from the double or treble alarm that would signal multiple ships or a force perceived as hostile. A single alarm during the morning watch puts the governor and council into the procedure for preparing outgoing correspondence against the possibility of a homeward-bound caller. The governor's proposal that each councillor write down his own contribution to a general letter is the standard collaborative drafting practice on the island, last followed for the general letter to the directors carried by the <i>Success</i> in 1712 under the joint hand of Bazett and Griffith. The foul draft is the working draft, with the fair copy to follow once the document is settled and signed by the bench. The deadline of Friday next, set against the present consultation of the last day of May 1715, is the procedural urgency the alarm has produced. Whether the ship in sight proves outward bound or homeward bound will not be known for some hours, but the council acts on the assumption that it may be homeward bound and so requires immediate preparation. The procedure converts a single alarm into a documentary deadline, and is the institutional response to the operational intelligence picture set out in the council's reply to the <i>Rochester</i> on 5 April 1715 about the two seasons of high seas at the island. A homeward-bound ship that calls between those seasons is the window through which intelligence and accounts can reach London. The Haswell petition is the deputy governor's wife's intervention in the Powell-Gurling matter. Elizabeth Haswell, the former widow Steward whose remarriage to Haswell within four months had been the chronological hinge of Powell's account of 24 May 1715, here brings her own petition before the same bench that has deferred disposition of the executors' petitions until fourteen days hence. The phrase

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			scandalously, maliciously and villainously is the lawyer's formula for defamation in three aggravated forms, and is the petitioner's claim that Powell's seven articles contain matter that goes beyond proper conciliar grievance into actionable defamation. The mention of breeding differences between her and her husband is the further charge that Powell's petition is calculated to disturb the marriage itself. The petition's procedural posture is novel within the recovered record. Mrs Haswell is the deputy governor's wife and not a councillor, but she petitions in her own right rather than through her husband. The bench is now considering three petitions on the same underlying matter: Powell's of 24 May 1715, Gurling's of the same date, and Mrs Haswell's of 31 May 1715. The deputy governor himself has not yet petitioned in his own name; he has only requested the fortnight's adjournment of the executors' petitions. The wife's petition can therefore be received and considered on its merits, while leaving the deputy governor's own response in reserve. The procedure shows the household speaking with two voices: the wife on the record in defence of her reputation, the husband off the record but managing the timing. Speculations The decision to bring Mrs Haswell's petition forward at the present consultation, rather than wait for the deferred answer to the executors fourteen days hence, is probably designed to capture the bench's attention before the executors' petitions return for disposition. By placing the wife's claim of defamation on the record first, the Haswell party transforms the proceedings on the executors from a one-sided complaint into a contested matter with rival petitions on both sides. The bench, when it returns to the executors' application, will have to weigh Powell's articles against Mrs Haswell's defamation claim, and any order against Captain Haswell would carry the implication of finding the wife's complaint unfounded. The strategy is consistent with the deputy governor's earlier procedural moves: the request for a copy of the order of 10 May 1715, the request for the fortnight's adjournment on 24 May 1715, and now the wife's petition before the same bench. The single alarm and the call for a general letter are probably more than coincidental backdrop to the present sitting. The arrival of a homeward-bound ship, if confirmed, will be the means by which any documentary record of the Powell-Gurling-Steward matter reaches the Lords Proprietors in London. Each side now has powerful reasons to influence what the general letter to the Honourable Masters contains. Powell's seven articles, kept off the consultation book at 24 May 1715 but lodged as a separate memorial, can be added to the homeward despatch; Mrs Haswell's defamation petition, if accepted and entered, can be used to qualify the picture sent home. The governor's instruction that each councillor write down his own contribution gives every member of the bench a voice in what goes into the letter, including the deputy governor himself. The single alarm has converted a quiet conciliar deferral into an immediate documentary contest.
475	466	and that the said Powill may make proof of all his Allegations in his said Petition not doubting but yo[r] Worship [...] Council will Impartially Administer Justice in this my case [...] hopes that the said Powill may be Stigmatized as yo[r] Worsh[i]p and Counc[i]l shall in your Prudence think fitt his character being often Recorded in yo[r] Consultation Books he being always known to be a Surly Morose [...] Inhumane man Especially where he thought he might with out Opposition Insult, So what he Alledges against me in using the Children of my Deceasd Husband with	Mrs Haswell continued her petition. She asked that Powell be required to make proof of all his allegations in the petition, not doubting but that the council would impartially administer justice in her case. She hoped that Powell might be stigmatized as the council should in their prudence think fit, his character being often recorded in the consultation books, he being always known to be a surly, morose and inhumane man, especially where he thought he might without opposition insult.

		Tyranny [...] Oppression I am ready to prove by all the Island Especi- ally my nearer neighbours and the Childrens Relations that they were always tenderly and Carefully Nurst [...] brought up not only in their Fathers life time, but also since his Decease as they themselves will acknowledge, The aforesaid Gabriel Powill with Rich[d] Gurling Excecut[ors] to my Late Deceasd Husbands last Will [...] Testament have from the Day of his Decease never taken any Care either of the Children or their Blacks [...] they consequently without my care must have Starv'd And these Excecutors have always Insulted me with Oppro- brious and Scandalous Reflections as is too apparently known by the Neighbourhood Insomuch that I was obliged to make application to my Relations who advized me to Authorize Cap[t] Geo[rge] Haswell the Dep[uty] Gov[r] (and who since I have Married) to appear in my behalf which he the said Gabriel Powill finding and that the said Cap[t] George Haswell not Suffering him to Insult and abuse yo[r] Petition[r] has thereupon Maliciously and Villanously Reflected on yo[r] Petition[r] and its manifest tis his Constant Custome in the Excecution of Excecutorship by which means he has Acquired the	As to what he alleged against her in using the children of her deceased husband with tyranny and oppression, she was ready to prove by all the island, especially her nearer neighbours and the children's relations, that they were always tenderly and carefully nursed and brought up, not only in their father's lifetime but also since his decease, as they themselves would acknowledge. Powell and Richard Gurling, executors to her late deceased husband's last will and testament, had from the day of his decease never taken any care either of the children or their blacks. The children, without her care, must have starved. The executors had always insulted her with opprobrious and scandalous reflections, as was apparently known by the neighbourhood. She had been so put about that she had been obliged to make application to her relations, who advised her to authorise Captain George Haswell, the deputy governor and whom she had since married, to appear on her behalf. Powell, finding that Haswell would not suffer him to insult and abuse her, had thereupon maliciously and villainously reflected on her. It was manifest by Powell's constant custom in the execution of his executorship, by which means he had acquired Interpretations Mrs Haswell's request that Powell be required to make proof of all his allegations places the matter within the standard procedure for vexatious complaint. The proof requirement throws the burden on Powell to substantiate the seven articles of his memorial, with the implication that failure to do so should be met by stigma proportionate to the falsity. The reference to Powell's character being often recorded in the consultation books is the appeal to the cumulative documentary record of the bench as evidence against the petitioner. The phrase is the wife's attempt to convert the council book itself, the same book in which the present petition is being entered, into an exhibit against her accuser. The narrative reordering of the marriage is the strategic core of the petition. Mrs Haswell describes Captain Haswell as the person she authorised through her relations to act for her against Powell's prior conduct, with the marriage following later. The chronology presents her appeal to Haswell as the predicate of her remarriage rather than the marriage as a sudden opportunistic act of about April 1715. The same four months Powell had used on 24 May 1715 to suggest haste, Mrs Haswell here repositions as the period during which she sought protection through her relations before marrying her protector. The argument turns Powell's chronological insinuation into evidence of her own continuity of purpose against him. The accusation against the executors of having from the day of Charles Steward's death taken no care of the children or their blacks reverses the polarity of Powell's charge against Captain Haswell. Where Powell had charged Haswell with tyranny and oppression of the orphans, Mrs Haswell charges the executors with neglect verging on causing the children to starve. The claim that the children would have starved without her care presents her as the practical agent of orphan welfare against absentee executors. The reference to the children's blacks, treated as an asset of the orphan estate requiring management, places the slave Toby's case within a broader pattern of neglect rather than as an isolated incident of disciplinary excess. The phrase Powell's constant custom in the execution of his executorship, by which means he had acquired - recovered at the foot of the page - introduces the accusation that Powell has used his executorship to enrich himself at the expense of the orphan estate. The substance of that accusation is to follow in the next image. The structure of the petition has therefore moved from defending Mrs Haswell's reputation,

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			through reasserting her chronology of involvement with Captain Haswell, to attacking Powell's own use of the executorship as a vehicle for personal gain. The matter has become, in the wife's account, a dispute about the integrity of the trust itself, with the executors as the alleged wrongdoers rather than the wronged. Speculations Mrs Haswell's reference to her nearer neighbours and the children's relations as witnesses to her care of the orphans is probably calibrated against Powell's own status as the children's uncle. By offering proof from the wider circle of relations beyond Powell, she undercuts his standing as the family voice for the orphans. The relations Mrs Haswell cites are perhaps from the Steward side, in counterweight to Powell as the brother of the late first wife. The bench, when it returns to dispose of the deferred executors' petitions in seven days more, will be presented with rival accounts from rival branches of the children's extended family, with the deputy governor and his wife on one side and the executors on the other. The contest has been recast as a family-internal dispute rather than as a councillor's abuse of office. The accusation against Powell of having acquired something through his executorship, broken at the page break, is probably the rhetorical climax of the petition. Powell had offered on 24 May 1715 to make reparation himself to the children rather than continue the executorship, an offer that suggests funds at his disposal. The wife's petition, prepared with knowledge of that offer, is perhaps designed to suggest that those funds came from the orphan estate itself. The implication, if so, is that Powell's reparation offer of 24 May 1715 was a concession to give back what he had improperly taken. The procedural manoeuvre is to convert Powell's apparent generosity into evidence of prior misappropriation, and so to flip the moral standing of the parties before the bench.
476	467	the greatist part of his Substance and now being left Sole Excecut[or] to his Brother in Law Tho[s] Harper who married his only Surviveing Sister Mary whome, he now barbarously Insults which she is ready to make proof off, I humbly recommend this Petition to yo[r] Worsh[i]p and Council and that you'll please to oblige the Executors of my Deceasd Husband to deliver up to yo[r] Worsh[i]p and Council[] an Acco[t] of my Late Husbands Estate they having taken forceibly all my aforesaid Deceasd Husbands papers [...] Accounts Severall of which they committed to the flames without my Will or Consent my late Hesband having considerable dealings on this Island Especially with the Excecut[ors] is have great reason to beleive that what papers related to their Prejudice were Clandestinely sifted so as not to appear against them they still keeping my Late Husbands Books [...] Papers and not admitting me to a perusal nay not so much as a sight of them, for the said Powill will never come to any Account without Compulsion As is Evident in Cap[t] Hopkisons Childrens case whose Widdow he Married in Less than Fourteen weeks after the said Hopkisons Decease and to this Day has not compleated the appraizement nor given in any Inventory of the said Hopkisons Estate to the great Prejudice of his Orphans [...] doubtless designs to use me in like manner I once more Humbly request yo[r] Worsh[i]p [...] Council[] will do me Justice in this my case, And yo[r] Petition[r] as in Duty bound shall Ever Pray [...] Elizabeth Haswell Order'd	Mrs Haswell continued. Powell had acquired the greatest part of his substance through his constant custom in the execution of his executorship, and was now left sole executor to his brother in law Thomas Harper, who had married his only surviving sister Mary, whom he now barbarously insulted. She was ready to make proof of all this. She humbly recommended her petition to the council and prayed that the council would oblige the executors of her deceased husband to deliver up an account of his estate. The executors had taken forcibly all her deceased husband's papers and accounts, several of which they had committed to the flames without her will or consent. Her late husband had had considerable dealings on the island, and the executors had great reason to believe that what papers related to their prejudice were clandestinely stifled, so as not to appear against them. The executors were still keeping her late husband's books and papers, and not admitting her to a perusal, nay, not so much as to a sight of them. She set out that Powell would never come to any account without compulsion, as was evident in Captain Hoskison's children's case, whose widow he had married in less than fourteen weeks after Hoskison's decease, and to that day had not completed the appraisement nor given in any inventory of Hoskison's estate, to the great prejudice of his orphans. He doubtless designed to use her in like manner once more. She humbly requested that the council would do her justice in her case. The petition was signed by Elizabeth Haswell. The council ordered Interpretations The Harper executorship reference adds a third family in which Powell stands as executor, alongside the Steward children of his sister and any further trust

			referred to in his earlier conduct. Thomas Harper, who had married Powell's only surviving sister Mary, has died leaving Powell as sole executor; the petition's claim that Powell now barbarously insults his own sister Mary attempts to demonstrate a pattern of executor conduct in which even a blood sister is mistreated when the family interest does not align with his. The argument is structured to convert the present dispute from a one-off quarrel into evidence of Powell's habitual abuse of executorship. Whether Mary Harper would corroborate the account, or whether the relationship is invoked rhetorically, the bench can test by inquiry. The Hoskison precedent is the wife's most damaging exhibit. Captain George Hoskison, the deputy governor whose sickness from 9 January 1712 onwards and death on 6 March 1712 had disrupted the council, left a widow whom Powell married within less than fourteen weeks of his decease. Mrs Haswell's petition asserts that Powell as the second husband took on the appraisal of Hoskison's estate and to the present day has neither completed the appraisal nor given in an inventory. The orphans of Hoskison have suffered three years of unfinished probate at Powell's hands. The precedent is exactly the wrong way round for Powell: the man who in the present matter charges Captain Haswell with marrying a widow within four months for her estate is himself accused of having married a widow within fourteen weeks and then failing to settle the orphans' inventory. The mirror of the chronologies is the heart of Mrs Haswell's reply. The accusation of forcible removal of papers and the burning of some of them is the charge of spoliation against the executors. Where a fiduciary destroys documents that would tell against him, the rule is to draw every inference against him on whatever is missing. Mrs Haswell's claim that the executors have committed several of Charles Steward's papers to the flames, and have clandestinely stifled others, places the executors under that adverse rule. The accompanying refusal to admit her to a perusal or even a sight of the books continues the alleged pattern of concealment. The petitioner asks the bench to compel delivery of the full accounts, on the procedural ground that she, as the widow of the testator with a one-third marital interest in the estate, has the right to see what survives. The phrase Powell will never come to any account without compulsion brings the petition to its practical request. The bench is asked not merely to enter a finding against the executors but to compel the production of accounts. The same mechanism is the one applied to the Beale orphan estate audit assumed by the governor on 17 May 1715. Mrs Haswell offers the same procedure for her own case, with the implication that without conciliar compulsion the executors will continue indefinitely as they have done in the Hoskison matter for three years. The order that follows in the next image will turn on whether the bench accepts the compulsion remedy. Speculations The pairing of the Steward case with the Hoskison case is probably the wife's strongest argument for the kind of inquiry she seeks. The bench has direct documentary access to the Hoskison record through its own consultation books since 9 January 1712, and can verify whether the Hoskison inventory has indeed never been completed. If the records confirm Mrs Haswell's account, the petition's credibility on the present matter rises sharply. The reference to Hoskison is therefore not a rhetorical flourish but a falsifiable claim that the council can test against its own books in the next few days. Powell, as the joint executor of the Steward will, perhaps has limited time to produce the long-delayed Hoskison documentation before the bench returns to dispose of the executors' petitions.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			The accusation that the executors burned papers is probably the legal device by which Mrs Haswell prepares the bench for the possibility that no full set of accounts will ever be producible. By placing on the record at the present consultation the charge that several papers have been committed to the flames, she protects her own position against any future objection that the orphan estate cannot be fully audited because the documentation is incomplete. The blame for that incompleteness, in advance of any audit, has been laid at the executors' door. The strategy is the documentary counterpart to the procedural pre-positioning Captain Haswell has performed on the timing of the executors' answer through his request of 24 May 1715. Both husband and wife have used the device of recording a position in advance of the bench's substantive return to the matter.

Francis pet[ition] to hire some waste Land [...] [...] Church ground May y[e] 31: 1715 Referrd to [...]	The council ordered that the executors have a copy of the petition and be required to appear next Tuesday to show why they had aspersed Mrs Elizabeth Haswell, and why they had burnt and destroyed Charles Steward's papers, and that the executors bring in the inventory, and also show cause why they detained Charles Steward's books and accounts. The next petition was presented to Isaac Pyke Esquire, governor, and council. The humble petition of Henry Francis, freeholder. Francis set out that he had presented a petition on the 26 April last desiring leave to hire a small piece of waste land near the plantation house, adjoining Lufkin's land on one side and Mr Jenviter's on the other, being very commodious for him to save fencing and make the more regular piece of ground, and being of no use to any person. That petition had been rejected by reason that the petitioner did not give his attendance, his absence being occasioned by his being much indisposed; otherwise he would not have neglected attending the council. He therefore humbly prayed the council to grant him a lease of the parcel, containing about three or four acres to the best of his judgement. The petition was dated 31 May 1715 and signed by Henry Francis. The council ordered that the petition be referred to Captain Bazett and Mr Byfield, and that they go upon the place. Interpretations The order on Mrs Haswell's petition is a four-headed command directed at the executors with the next consultation day as the return day. The four heads are the production of the inventory of Charles Steward's estate; cause why the executors aspersed Mrs Haswell in the matters set out in Powell's articles; cause why they had burned and destroyed Steward's papers; and cause why they were detaining the deceased's books and accounts. The order treats the three executors-side issues - the aspersion, the burning and the detention - as separate procedural counts, each requiring a separate answer. The bench has effectively converted the wife's petition into a set of charges to which the executors must reply on the record. The procedural balance with the deferred order on the executors' own petitions, returnable fourteen days hence, is that the wife's complaint now returns on the earlier date of seven days rather than the later one. The order requiring the executors to be given a copy of the petition follows the same procedural form Captain Haswell used to secure a copy of the order of court of 10 May 1715. The provision of a copy is the standard right of any party against whom a written application has been made, allowing the party to know what is alleged before answering. The bench is therefore treating the Powell-Gurling-Steward dispute uniformly, giving each side notice of the other's pleadings and a fixed return day. The contest between the husband-wife

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			party and the executors party is now formally framed as adversarial proceedings before the council, with each side under direction to attend and answer at a stated time. The Henry Francis petition opens a fresh routine matter on land letting. The earlier petition of 26 April 1715, of which there is no full entry in the recovered consultation of that date, had been rejected on the procedural ground of non-attendance, with the present petition setting out the illness that prevented the petitioner from appearing. The substance of the petition is a request for about three or four acres of waste land near the plantation house, adjoining Lufkin's land on one side and Mr Jenviter's on the other. The bracketing of the parcel between Stephen Lufkin's holding and the Jenviter holding places it within the Hutts-Lufkins-plantation house cluster that has been the focus of Worrall's overseership and the inventory work of 12 April 1715 by Bazett and Tovey. The referral to Captain Bazett and Mr Byfield, with directions that they go upon the place, applies the same procedural mechanism the bench used on Richard Gurling's High Peak pasturage petition of 24 May 1715: physical survey of the parcel by named councillors before any decision on letting. The pairing of the third in council with the newly appointed fifth in council distributes the work between an experienced councillor familiar with land surveys and the new man whose probationary phase the survey duty will help to fix. The on-the-spot survey is the bench's standard administrative method for determining whether a Company waste parcel can be let without prejudice and against the existing landholdings of the petitioner. Speculations The return day of next Tuesday for the executors' answer to Mrs Haswell, against the fortnight previously granted for the executors' own petitions, is probably the bench's procedural response to the change in posture produced by the present petition. With three petitions now on the table and an active counter-claim of defamation, document burning and detention against the executors, the bench cannot fairly wait fourteen days on one side and seven on the other. The earlier return day of next Tuesday will bring both matters to a head on the same date, since the executors will already have been required to appear that day on Mrs Haswell's complaint. The original adjournment of fourteen days granted at Captain Haswell's request on 24 May 1715 has been effectively shortened by the wife's petition, which advances the date on which the executors must answer in person. The pairing of Bazett with Byfield on the Francis survey is probably also intended to give Byfield a piece of routine conciliar work outside the highly charged Powell-Gurling-Steward matter. The new fifth in council, appointed on 17 May 1715 as a sober young man of great industry and diligence in the Company's business, has not yet had occasion to settle into the bench's working methods. A small land-letting survey with the more experienced third in council is the kind of business that will let Byfield begin to operate as a councillor without being plunged immediately into the executors' dispute. The bench is therefore using the present routine matter to develop the working capacity of its junior member while reserving its principal energy for the dispute returning at the next sitting.

		That whereas yo[r] Petition[r] being very desirous to settle himself in as great a quantity of Land as may be capable of main- taining a familie in case yo[r] said Petition[r] should hereafter alter his present condition Humbly prays yo[r] Worsh[i]p [...] Council to admitt him as Tenant to all that Parcels or parc[el] of Lease Land formerly granted to Charles Steward Deceasd which Cap[t] George Haswell may have in Possession in Right of his wife the Relict of the said Deceasd Charles Steward together with other Free Land Contiguous thereunto, who hath agreed with yo[r] said Petition[r] for the whole in case of yo[r] Worsh[i]p and Council[] Assent to grant the aforesaid Lease Land the Rent of which yo[r] Petition[r] will take Effectuall care to pay Every year May y[e] 31: 1715 And as in bound shall Ever Pray [...] Francis Steward Refer'd the farther Consideration of this Petition till the Land is Divided, Gabriel Powill Sole Excecurator to the Last Will [...] Testament of Thomas Harper Late Margin Notes: Island S[t] Helena Shewth, Fra[ncis] Stewards pet[ition] to hire Cap[t] Has- well[s] Wives Share of Cha[s] Steward[s] Lease Land May y[e] 31: 1715 refer'd till y[e] Land is Divided.	capable of maintaining a family, in case he should hereafter alter his present condition. He humbly prayed the council to admit him as tenant to all that parcel or part of lease land formerly granted to Charles Steward deceased, which Captain George Haswell might have in possession in right of his wife, the relict of Charles Steward, together with other free land contiguous thereto. Haswell had agreed with him for the whole, in case the council should assent, to grant the lease land. The petitioner would take effectual care to pay the rent every year. The petition was dated 31 May 1715 and signed by Francis Steward. The council referred the further consideration of the petition until the land was divided. The next petition was presented by Gabriel Powell, sole executor to the last will and testament of Thomas Harper, late Interpretations The Francis Steward petition introduces a fresh actor into the Steward estate complex. Francis Steward, presented as single man and contemplating future marriage and family, is perhaps a kinsman or namesake of the deceased Charles Steward. The petition seeks two parcels in one application. The first is the lease land formerly granted to Charles Steward and now in Captain Haswell's possession in right of his wife; the second is free land contiguous thereto. The combination would settle the petitioner on the consolidated estate including the marital one-third interest Haswell controls. The arrangement has been pre-negotiated with Haswell, who has agreed for the whole in case the council should assent to the lease portion. The procedural device is the Company lease land remaining in the bench's gift, with the Company as lessor. Captain Haswell cannot grant the lease land himself, since he holds only a derivative interest through his wife in lands originally let by the Company. The lease land therefore reverts to conciliar disposition before any new lease can issue. By bringing the petition forward, Haswell can effect through the bench a re-letting of the lease portion to a tenant of his choosing, while himself transferring the free portion by private agreement to the same tenant. The combined transaction is structured to consolidate the holding under Francis Steward. The council's referral of the further consideration until the land was divided is the procedural condition precedent. The Steward estate cannot be re-let in part while the partition between the orphans' two-thirds and Haswell's marital one-third remains undetermined. The Powell and Gurling executor petitions of 24 May 1715 and Mrs Haswell's petition of the present day are all bearing on that same partition. Until the council resolves who holds what part of the estate, no fresh lease can issue on any portion. The referral therefore ties the Francis Steward petition to the wider dispute, with disposition deferred until the partition is settled. The phrase Powell as sole executor to the last will and testament of Thomas Harper, broken at the foot of the page, picks up the Harper executorship that Mrs Haswell had cited in her petition as evidence of Powell's pattern of executor conduct. Powell is now presenting an application of his own in that capacity. The juxtaposition is striking. The bench has on the present day received Mrs Haswell's accusation that Powell barbarously insults his only surviving sister Mary, who married Harper, and now receives Powell himself acting as executor for the same Harper. The petition will set out what Powell wants from the bench in the Harper estate. Speculations The Francis Steward petition is probably the husband-wife party's procedural answer to the Powell-Gurling executor petitions. Where the executors have

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			asked to be discharged from their charge and the bench has refused on the principle that the will appoints them, Haswell now seeks to dispose of the marital one-third by a fresh lease to a chosen tenant. The arrangement would crystallise his interest in cash terms rather than in continued landholding within an estate that the executors administer for the orphans. Once the lease was let and the free land conveyed, Haswell's stake in the estate would be reduced to the rent receivable. The petition is therefore the constructive route by which the deputy governor could exit the joint household economy with the orphans while taking his one-third interest with him in a separately let parcel. The decision to refer the further consideration of the petition until the land is divided is probably also the bench's way of pressing the executor dispute toward resolution. By tying the Francis Steward arrangement to the partition, the council creates an additional party with an interest in seeing the partition completed. The petitioner has the prospect of a holding capable of maintaining a family, contingent on the partition; Haswell has the prospect of a fresh tenant for the lease land contingent on the same. Both have motive to press the executors' dispute to a conclusion that produces a clear division. The bench has thereby aligned a fresh interest behind its own preference for an early settlement of the executors' charge.
479	470	late free Planter Deceasd with his Widdow brought the said Will to be proved w[ch] was accordingly done by the Oaths of Joshua Johnson Robert Gurling and Jn[o] Nicholls. Ordered That the said Will be approved Accordingly and Entred into a Book for that Purpose and Coppys given when Demanded, The said Powill brought also an Inventory of the said Deceasd Tho[s] Harpers Estate w[ch] was Examined and Approved of, Ordered That the said Inventory be rec[eive]d and Coppys given when required. [signatures] Geo: Haswell Matthew Bazett [...] Antipas Tovey Edward Byfeild Margin Notes: Tho[s] Harpers Will proved also of Inventory	Powell, sole executor to the last will and testament of Thomas Harper, late free planter deceased, brought the will to be proved together with his widow. The will was accordingly proved on the oaths of Joshua Johnson, Robert Gurling and John Nichols. The council ordered that the will be approved accordingly and entered into a book for that purpose, and that copies be given when demanded. Powell also brought in an inventory of Thomas Harper's estate, which was examined and approved of. The council ordered that the inventory be received, and copies given when required. The consultation was signed by the governor, George Haswell, Matthew Bazett, Antipas Tovey and Edward Byfield. Interpretations The proving of Thomas Harper's will is the standard probate procedure. The executor brings the will to the bench, together with the widow as the principal beneficiary, and the will is proved on the oaths of three witnesses present at execution. Joshua Johnson, who was on the jury for Toby's trial on 10 May 1715, Robert Gurling, who acted as evidence at Robert Leech's probate of late August 1712, and John Nichols are sworn as to the authenticity of the testator's signature and the witnessing of the document. The procedure follows the same form used at the Charles Steward probate of 11 January 1714/15 on the oaths of John Alexander and Thomas Price, and at the Robert Leach probate of late August 1712. The book for entry, with copies on demand, is the same register kept since the earliest recovered probates of November 1711. The immediate production of the inventory together with the will is procedurally significant against Mrs Haswell's petition of the present day. The wife had set out that Powell, in three years as executor to Captain Hoskison, had to that day not completed the appraisalment nor given in any inventory of Hoskison's estate, and that Powell would never come to any account without compulsion. The present probate of Thomas Harper falsifies that account on its own day: Powell as sole executor has brought in not only the will for proof but the inventory for examination at the same sitting. The procedural readiness contrasts pointedly with the wife's accusation, and presents Powell on the present day as a fully compliant executor of a different family estate. The juxtaposition perhaps shapes the

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			bench's view of the wider dispute returnable at the next sitting. The signatures at the foot of the consultation - George Haswell, Matthew Bazett, Antipas Tovey and Edward Byfield - record the bench's confirmation of the day's business by the four councillors below the governor. Captain Haswell's signature is significant. The deputy governor, who has just had the order made against him on Mrs Haswell's petition requiring the executors to appear and answer four heads at the next sitting, signs the consultation that contains both that order and the Powell probate of Thomas Harper. The procedural form holds: the deputy governor authenticates the record of a sitting that includes business adverse to his household. The bench therefore continues to function as a four-councillor body with the governor presiding, despite the open contest now running through its members. The matter has now produced documentary entries on every side of the dispute. Powell's first petition of 24 May 1715 was kept off the record on the margin note. His seven articles are lodged as a separate memorial. Gurling's petition of the same date was entered. Mrs Haswell's petition of the present day is on the record, with the four-headed order against the executors annexed. Powell's Harper probate is also on the record. The bench has assembled a comprehensive set of documents from which the next sitting can dispose of the substantive question of the Steward executorship on the inventory point, the aspersion point, the burning point and the detention point. Speculations Powell's choice to lodge the Harper probate at the present consultation, on the same day as Mrs Haswell's petition citing his three-year delay on the Hoskison estate, is probably no accident. He has timed the production of the Harper inventory to coincide with the wife's accusation against him in another estate. The defensive value is twofold. First, it puts on the consultation book an instance of Powell discharging executor duty with full and immediate documentation. Second, it offers a contrast against which Mrs Haswell's Hoskison reference can be read by the bench as either a real failing in a particular matter or as a rhetorical sample chosen from many possible cases. Either way, the present-day record shows Powell capable of producing a full set of probate papers on demand, which weakens the broad characterisation of him as an executor who will never come to account without compulsion. The next consultation day will bring the four-headed order on Mrs Haswell's petition to its return, with the executors required to attend and answer. The order itself is the bench's framework for the disposition of the wider dispute, with the inventory production point now strongly set against Powell on Mrs Haswell's allegation but qualified by his fresh Harper precedent of the present day. The bench has structured the next sitting so that the substantive answer to all the open petitions - the executors' applications of 24 May 1715 and Mrs Haswell's petition of 31 May 1715 - will return on the same day, even though the original adjournment of fourteen days at Haswell's request on 24 May 1715 had pointed to the consultation after next. The procedural compression of the timetable by the order on Mrs Haswell's petition is one of the most consequential effects of the present sitting.
480	471	Island S[t] Helena At a Consultation held on Wednesday 1[st] of June 1715 at the United Castle in James Valley, Isaac Pyke Esq[r] Gov[r] George Haswell Dep[uty] Pres[ent] Matthew Bazett 3: Antipas Tovey 4: [...] Edw[d] Byfeild 5: in Coun[cil]	Island of St Helena. At a consultation held on Wednesday the 1 June 1715 at the United Castle in James Valley. Present: Isaac Pyke Esquire, governor; George Haswell, deputy governor; Matthew Bazett, third; Antipas Tovey, fourth; and Edward Byfield, fifth in council.

		Then the Hon[ble] Comp[anys] Letter by the Cardonnell Cap[t] W[m] Mawson was read in part [...] Resolved that wee meet to mor- row morning by Eight a Clock [...] go thro' with the same if that may be done in time and make markes thereon [...] putt it in Writing [...] if not to be done then Wee meet next morning till all is compleated, It was moved by the Gov[r] and agreed by all in Coun[cil] that Publick Notice be given that any Person on this Island may Sell if they are willing Beef at thirty shillings p[er] Hundred neat weight allowing the fifth quarter pro Rato as Usual to the Ship in the Road [...] that if they will not Supply the said Ship the Gov[r] will of the Hon[ble] Comp[anys] Stock at said Price, And Ordered accordingly that the following Advertizement be Published, Island S[t] Helena By the Worsh[i]p the Gov[r] and Council an Advertizement, These are to give Notice to the Inhabi[t]ants Margin Notes: read of Gen[era]ll Lett[er] (in part) by y[e] Cardonnell. Island S[t] Helena	The Honourable Company's letter by the <i>Cardonnell</i>, Captain William Mawson, was read in part. The council resolved to meet the following morning at eight o'clock and go through with the same, if that might be done in time, and make marks thereon and put it in writing. If not done then, the council would meet the next morning until all was completed. It was moved by the governor and agreed by all in council that public notice be given that any person on the island, if willing, might sell beef at 30s 0d per hundred neat weight, allowing the fifth quarter pro rata as usual, to the ship in the road. If they would not supply the ship, the governor would, of the Honourable Company's stock at the same price. The council ordered accordingly that the following advertisement be published. By the worshipful governor and council. An advertisement. These were to give notice to the inhabitants Interpretations The reading of the Honourable Company's letter by the <i>Cardonnell</i> is the first instance in the recovered record of the Pyke administration receiving formal instructions from the Lords Proprietors since the council's outgoing despatch by the <i>Aurengzebe</i> on 25 January 1714/15. The procedure of reading the letter in part, with adjournment to a planned working session the following morning at eight, and onward sessions until completed, is the systematic method by which the bench works through directors' correspondence requiring detailed answer. The marks thereon refer to the marginal annotations the council makes against each paragraph of instruction, indicating action taken or to be taken. Captain William Mawson appears here for the first time as the commander of the <i>Cardonnell</i>. The arrival of the <i>Cardonnell</i> answers the single alarm of 31 May 1715. The single sail signalled on the morning of the previous consultation has proved to be a homeward-bound or outward-bound Indiaman carrying directors' correspondence, and the governor's instruction of that day - that each councillor write down what should be mentioned in a general letter to the Honourable Masters, against a foul draft to be ready by Friday next - now meets the directors' own incoming letter. The two streams of correspondence, outgoing council letter and incoming directors' instructions, intersect at the present consultation. The bench's work over the next several mornings will be the matching of the council's planned reply against the directors' new requirements. The advertisement on beef supply to the ship in the road is the standard procedure by which the council manages refreshment of visiting Indiamen. The price of 30s 0d per hundred neat weight, with the fifth quarter pro rata as usual, is the same rate the bench has been operating under since the beef-arack exchange advertisement of 11 March 1715, which had offered inhabitants the right to buy arrack at 6s 0d per gallon when they sold beef at 25s 0d per hundred. The current price of 30s 0d is the slightly raised rate of June 1715, reflecting any movement in the cattle herd's condition since the recovery from the late great drought referred to by John Alexander on 17 May 1715. The fifth quarter pro rata is the offal, hide and other unsalable parts of the carcass, valued at one fifth of the dressed weight and allowed to the seller in addition to the head price. The governor's undertaking that, should inhabitants not supply the ship, he would supply her himself of the Honourable Company's stock at the same price, is the operational safety net by which Company stocks back the open offer. The mechanism transfers any unmet demand from the planters' herds to the Company's own holdings, and so guarantees the refreshment of the <i>Cardonnell</i> without enforced requisition. The same model has underpinned the Worrall yam strategy detailed at the

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			consultation of 26 April 1715 across the Hutts, Lufkins, Tibbills Gut, Coles Gut, Perkins's and Tombstone Wood, where total Company yams of 263,600 with 66,000 from Tombstone Wood gave the council the capacity to step in if planters failed to supply. Speculations The <i>Cardonnell's</i> arrival on the present day is probably the homeward-bound ship the council was preparing for at the previous consultation. The general letter being assembled by each councillor in writing on 31 May 1715 will perhaps go home by the <i>Cardonnell</i> once the council has worked through the directors' letter and prepared its replies. The bench has therefore a documentary window of perhaps a few days between the reading of the incoming letter and the closing of the outgoing reply, during which it will be in the unusual position of simultaneously absorbing London's instructions and composing its own account. The Powell-Gurling-Steward dispute, with the wife's petition returnable at the next consultation, and the executors' petitions returnable a week later under the Haswell adjournment of 24 May 1715, both fall within the window. The political composition of the homeward letter will perhaps be affected by what those returns produce. The choice to publish the beef advertisement before tackling the directors' letter in full is probably the operational priority. The ship in the road must be refreshed and dismissed before her stay extends the council's exposure to any further complication. The earlier intelligence on calmer-season voyages set out in the council's reply to the <i>Rochester</i> of 5 April 1715 confirms that an Indiaman calling at the start of June lies in the trough between the late March-early April heavy seas and any further weather, and so can be supplied and despatched without delay. The 30s 0d rate is set high enough to encourage planter supply and low enough to spare the Company stocks; the open offer with the Company backstop is the bench's standard solution at moments of high turnover in the road.
481	472	Inhabitants of the said Island that they have free liberty to sell and dispose of Beef at thirty shillings p[er] Hundred Neat w[i]th allowing the 5[th] Quarter Pro Rato as usuall, which if the said Inhabitants who have Beef to dispose of is not willing to sell at The Gov[r] will Supply the Ship Cardonnell (now in the Road) out of the Hon[ble] Companys Stock at the Price aforesaid. Sign'd p[er] Ord[er] of Gov[r] and Council Antipas Tovey Sec[reta]r[y] Dated at the United Castle in James[s] Valley this 1[st] day of June 1715, [signatures] Geo: Haswell Antipas Tovey Edward Byfield Margin Notes: advertizem[en]t To Sell Beef at 30/ p[er] 100 [...]	The advertisement continued. The inhabitants of the island were given free liberty to sell and dispose of beef at 30s 0d per hundred neat weight, with allowing the fifth quarter pro rata as usual. If the inhabitants who had beef to dispose of were not willing to sell at this price, the governor would supply the ship <i>Cardonnell</i>, now in the road, out of the Honourable Company's stock at the price aforesaid. The advertisement was signed by order of the governor and council by Antipas Tovey, secretary. It was dated at the United Castle in James Valley this 1 June 1715. The consultation was signed by the governor, George Haswell, Bazett, Tovey and Edward Byfield. Interpretations The signature of Antipas Tovey as secretary at the foot of the advertisement records the institutional capacity in which he authenticates public notices to the inhabitants. The role of secretary is here separated from his role as fourth in council and signatory to the consultation itself. The advertisement is a public document directed at the inhabitants, and so receives the secretary's hand under the heading by order of the governor and council; the consultation is a council document, and so receives the signatures of the councillors themselves. Tovey thus appears on the same opening twice, in two distinct capacities, illustrating the institutional dual standing he holds within the bench. The same Tovey carried the families' land and cattle register through the secretary's office between 8 March 1715 and 21 March 1715, signed the protective orders against Captain Haswell on 10 May 1715, and now signs the public-facing notice on beef supply.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			The advertisement's structure - the free liberty offered to inhabitants, the price stated in full, the fifth quarter allowance, the Company backstop - converts the council's resolution into a notice with operative effect. The phrase free liberty is the formal language by which the bench permits a transaction that might otherwise have required separate licence; it is the public assurance that no penalty attaches to selling beef to the ship at the stated price under the terms set out. The same formula has been used in earlier provisioning notices, for example in the beef-arrack exchange advertisement of 11 March 1715. The presence of all five council signatures at the foot of the consultation - the governor, the deputy governor, Bazett, Tovey and Byfield - records a full bench in session. The body is therefore at full strength at the moment of receipt of the <i>Cardonnell's</i> letter from the directors. The unanimity of presence will be useful when the council comes to read and answer the directors' instructions over the next several mornings, since every councillor will have heard the letter as it was read and will be capable of contributing to the marginal marks and the draft reply. The five-signature pattern contrasts with the four-signature orders against Captain Haswell of 10 May 1715, which were signed by Tovey alone or in pairs to avoid involving the deputy governor in business directed against him; the present consultation has no business of that kind on its face and accordingly receives the full slate. Speculations The Company backstop in the beef advertisement is probably calibrated against the bench's knowledge of likely planter response. With cattle stocks recovering from the late great drought to which John Alexander's loss of thirty head bore witness on 17 May 1715, and with the broader herd reductions feeding the famine-driven arrangements of 11 March 1715, the council cannot be confident that inhabitants will produce enough beef at 30s 0d to refresh the ship. The Company backstop covers the gap. The price is set at a level that allows planters to come forward if they can, while ensuring the ship is supplied if they cannot. The mechanism is the same balance the council has been operating between encouraging private supply and preserving public sufficiency since the consolidation of yam stocks reported by Worrall on 26 April 1715. The unanimous signing of the consultation by all five councillors, including the deputy governor whose conduct is under formal scrutiny in the executors' dispute and Mrs Haswell's petition of 31 May 1715, is probably the bench's way of presenting a settled appearance at the moment the directors' incoming letter is being read. Whatever the internal contest, the council goes on the public record as five together. The pattern will be the same when the homeward despatch goes by the <i>Cardonnell</i>: whatever the bench writes to the directors will be sent under the hands of all five councillors, with whatever the bench has resolved on the Powell-Gurling-Steward matter framed within that collective signature.
482	473	Island S[t] Helena At a Consultation Held on Tuesday the 7 Day of June 1715, at the United Castle In James Vally Isaac Pyke Esq[r] Govern[r] George Haswell Dep[uty] Pres[ent] Matthew Bazett 3[d] Antipas Tovey 4[th] [...] Edward Byfeild 5: in Council In the Last Gen[era]ll Letter Parr[agraph] Forty Fifth mention being made of Saveing Cows and Calves, It is Ordered That Publick Notice be given that no Person or Persons whatsoever shall Kill a Cow, Heifer or Calfe untell [...] after the 20: July which shall be in the Year 1716 without Speciall Leave [...] Lycence for so doing under the Govern[rs] hand,	Island of St Helena. At a consultation held on Tuesday the 7 day of June 1715 at the United Castle in James Vally. Present: Isaac Pyke Esquire, governor; George Haswell, deputy governor; Matthew Bazett, third; Antipas Tovey, fourth; and Edward Byfield, fifth in council. In the last general letter, paragraph forty-fifth, mention had been made of saving cows and calves. The council ordered that public notice be given that no person or persons whatsoever should kill any cow, heifer or calf until and after the 20 July, which should be in the year 1716, without special leave and licence for so doing under the governor's hand.

The executors of Mr Charles Steward appeared and said they were in a fair way of agreeing with Captain George Haswell about the Steward estate, in which the council wished them good success. They produced several papers and books, which the council, because the executors were in a fair way of agreement, refused to look over. The council advised them to make all the dispatch possible, which the executors said they believed might be done in a month. Note that Mr Steward's executors were likely to agree with Captain Haswell. The following petitions were presented to the worshipful governor and council. A petition of Balsar Breech, soldier. Breech humbly set out that he had served the Honourable East India Company his full contracted Interpretations The cow-saving order is the practical execution at the island of a specific paragraph of London's instructions in the <i>Cardonnell</i> letter. The bench has worked through the directors' letter sufficiently in the days since 1 June 1715 to reach the forty-fifth paragraph, and now translates that paragraph into a local prohibition with a sharp date. The thirteen-month protection of cows, heifers and calves until 20 July 1716, with the governor's hand required for any exception, is the bench's response to the cattle losses produced by the late great drought that John Alexander invoked on 17 May 1715 and that lay behind the famine-driven beef-arrack exchange advertisement of 11 March 1715. The directors at London have evidently received intelligence of the herd reduction, perhaps through the AURENGZEBE despatch of 25 January 1714/15, and now require active herd protection. The order is reactive in form but proactive in policy. The exception clause - special leave and licence under the governor's hand - is the operational safety valve. The general prohibition would otherwise close the supply of beef to visiting Indiamen and to the Company table, including any further supply to the <i>Cardonnell</i> under the advertisement of 1 June 1715. The licensing mechanism allows the governor to authorise individual slaughter where the operational case is made, while the standing rule preserves the herd from routine consumption. The same licensing structure was used by Pyke on the Latour public house licence of 13 April 1715 with its eighth condition of standing duty to observe future orders, and on the cattle restrictions running through the consultation record. The Powell-Gurling-Steward dispute is now in the procedural posture of a fair way of agreement between the executors and Captain Haswell. The bench responds with a single calculated paragraph: the wish for good success, the refusal to look over the papers and books produced, and the advice to make all the dispatch possible. The refusal to look at the documents is the bench's deliberate withdrawal from the matter while private settlement is in progress. By not examining the papers the council ensures that no formal entry is made on the substantive heads of the order against the executors of 31 May 1715 - the inventory, the aspersion, the burning and the detention. The four-headed order is therefore neither answered on its face nor enforced; the political solution is being allowed to overtake the procedural one. The executors' undertaking that agreement might be reached within a month places the resolution within a defined timetable but outside the consultation book. The Balsar Breech petition opens a fresh head of business familiar from earlier dispositions. A soldier petitioning for discharge at the close of his contracted time follows the same form as Daniel King's discharge on 8 April 1712 after four years as private sentinel, and

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			the Gibbs petition of 26 April 1715 for leave to sell goods and depart, which was refused on sickly-time grounds. The bench will now consider whether Breech's contracted service is concluded and whether leave to sell goods and depart can be granted on his own footing. Speculations The fair way of agreement reported by the executors is probably the product of the fortnight Captain Haswell had secured for himself by his request of 24 May 1715. The fortnight from the present sitting of 7 June 1715 reaches into the latter part of June, and the executors say agreement may be reached within a month. The bench's refusal to look at the documents now produced is probably calibrated against the broader procedural framework: if the council were to receive and examine the executors' papers, it would be drawn into formal adjudication of the matters in Mrs Haswell's petition of 31 May 1715, and the careful procedural balance the bench has been keeping would have to give way to substantive findings. By keeping the documents at arm's length, the council preserves its freedom of action should the private agreement fail, and avoids any documentary entry that could later be cited against any party. The thirteen-month cattle protection until 20 July 1716 is probably calibrated to the seasonal cycle of breeding and calving on the island. By setting the end date in the same month rather than at the end of a calendar year, the bench gives the herd two full breeding seasons, the present one and the one following, in which to recover. The choice of date is perhaps also related to the directors' instructions in the letter from London, which is being worked through in the morning sessions. The Honourable Masters' paragraph forty-fifth may have specified the principle but left the period to the council to fix according to local conditions. By extending the prohibition through to mid-1716, the bench commits the island to a substantial herd-rebuilding period that will continue beyond any individual councillor's tenure and so cannot easily be unwound.
483	474	Contracted time and is willing to goe off in this Ship now in the Road for that your Petition[r] begs the favour of yo[r] Worsh[i]p [...] Council to grant him his Request, Likewise yo[r] Petitioner begs the favour to consider him for 18: days work done for the Hon[ble] Company in M[rs] Coulsons House of what yo[r] Petition[r] has had no payment that he can settle his Acco[t] in the Store, And yo[r] Petition[r] shall Ever Pray Balzer Beeche This Petition Referred to a more Convenient Oppertunity, Island S[t] Helena To the Worsh[i]p Isaac Pyke Esq[r] Govern[r] [...] and Councill The most Humble Petition of Samuel Allgate Corporall Humbly, Shewth, That forasmuch as yo[r] Humble Petition[r] havinge Served the Hon[ble] Company some years above his Contracted time, and being very Desireous of Goeing farther Humbly Prays yo[r] Worsh[i]p [...] Council[] to grant him leave with his wife to take Passage on board the Ship Cardonnell now in this Road and yo[r] Petition[r] will take care to adjust all Acco[t]s on this said Island and does not doubt but that he shall be of as great Service to the Hon[ble] Compa[n]y Else where being willing to serve them as a Soldier in Bencoolen. June y[e] 7: 1715 And yo[r] Petition[r] as in Duty Bound shall Ever Pray. Samuell Allgate Granted His last Cow being Calfed and that Calfe Killed he haveing lately Married a young Woman	Breech continued. He had served his contracted time and was willing to go off in the ship now in the road. He begged the council to grant him his request. He also begged the favour of being considered for eighteen days' work done for the Honourable Company in Mrs Coulson's house, for which he had received no payment, so that he might settle his account in the store. The petition was signed by Balsar Breech. The council referred the petition to a more convenient opportunity. The next petition was presented to Isaac Pyke Esquire, governor, and council. The humble petition of Samuel Allgate, corporal. Allgate set out that he had served the Honourable Company some years above his contracted time, and being very desirous of going further, he humbly prayed the council to grant him leave with his wife to take passage on board the ship <i>Cardonnell</i>, now in the road. He would take care to adjust all his accounts on the island. He did not doubt but that he would be of as great service to the Honourable Company elsewhere, being willing to serve them as a soldier at Bencoolen. The petition was dated 7 June 1715 and signed by Samuel Allgate. The petition was granted, and the reason was that his last cow had been calved and that calf had been killed, he having lately married a young woman. Interpretations The Breech petition has two heads: leave to depart by the <i>Cardonnell</i> now in the road, and credit for eighteen days' work in Mrs Coulson's house for which no payment had been made. The reference to Mrs

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
		Margin Notes: Beulz[?] Beeches pet[ition] to go off [...] Referrd to another time Island S[t] Helena Shewth, Sam[d] Al gates pet[ition] to go off June y[e] 7: 1715 Granted [...] why	Coulson's house picks up the grievance presented at the general sessions of 7 February 1715, when the watercourse running before her door in the principal James Town footway between church and market place was indicted by the grand jury as a public and common nuisance. The eighteen days' work may have been on remedial action consequent on that presentment. Breech wishes to clear his Company account at the storekeeper's office before sailing, and asks the bench to credit the unpaid labour against any balance. The council's deferral to a more convenient opportunity suspends the discharge pending verification of the labour claim. The Allgate petition is the second discharge application of the present sitting and the more substantial. Samuel Allgate is the corporal whose long service the bench is now willing to release on the procedural ground that he has served above his contracted time. The grant of his petition reverses the position of the Gibbs application of 26 April 1715, refused on sickly-time grounds with the bench saying many men were dying and good men should be kept on the island. The change of disposition between April and June reflects the change of conditions: the sickly season has ended, the <i>Cardonnell</i> offers a homeward passage at a moment of routine traffic, and Allgate's circumstances have been transformed by domestic events. The undertaking to serve as a soldier at Bencoolen converts the departure from a loss of an established soldier to a transfer to another Company station, preserving the Company's interest in his future service. The reason entered against the grant - that his last cow had calved and the calf had been killed, he having lately married a young woman - records the immediate operative ground for the departure. The cow-saving order published earlier in the present consultation, prohibiting the killing of any cow, heifer or calf until after 20 July 1716 without special leave under the governor's hand, makes the killing of Allgate's calf an act that would either require licence or, if done before the order, removed his last breeding asset. With his last cow calved and the calf killed, Allgate's resources for maintaining a household have been exhausted. The recent marriage to a young woman has added a dependant and amplified the problem. The bench's grant therefore reads the petition as a household economic necessity rather than as a discretionary preference, and the cow-saving order provides the institutional framing. The earlier Allgate of the consultation record - committed by the governor on Friday before 19 April 1715 for leaving the back gate of the castle open all night, his case deferred 19 April 1715 for want of further councillors, and his petition for release from the loathsome and filthy prison submitted on 26 April 1715 with disposition not entered in the recovered text - is here brought to a settled close by the discharge. The corporal's last act on the island is the present petition, accepted on grounds that frame his departure as honourable rather than disciplinary. The connection between the open back-gate offence and the present discharge is not made explicit, but the bench's willingness to release a corporal it had so recently committed and confined suggests that the open-gate matter has been disposed of in his favour. The discharge to Bencoolen is the operational vehicle for that disposition. Speculations The bench's distinct dispositions of the two soldier petitions are probably calibrated against the differing service records of the petitioners. Breech is on his contracted time and is requesting to leave at the end of an obligation; Allgate is above his contracted time and is requesting to leave from a position of accumulated credit. The referral of Breech's petition and the

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			immediate grant of Allgate's reflect the natural ranking of the two cases on length of service, with the additional Allgate ground of domestic distress carrying the case across the line. The eighteen days' Coulson work for Breech can be checked against the records at the storekeeper's office, but the verification cannot be done before the <i>Cardonnell</i> sails. The reference to a more convenient opportunity perhaps means that Breech will lose this ship and have to wait for the next. Allgate's choice of Bencoolen for his future service is probably also strategic. The Mary and Ann Colgrave who had been sent from St Helena to Bencoolen by the previous administration drew bills on St Helena via Richard Skingle on 18 July 1712, demonstrating that personal financial connections persisted between the two stations. Allgate, going as a soldier rather than as a free passenger, will travel under Company employment and remain within the Company's establishment. The continued service preserves any pension entitlement his years above contracted time may have earned, and avoids the freeman's exposure to the open labour market the discharged soldier Gibbs had faced when refused departure on 26 April 1715. The corporal exits the island as a Company servant in good standing, his recent disciplinary trouble forgotten in the framing of the discharge.
484	475	Woman upon the Island with whome he had a good Portion which he has taken care to spend which has brought him into such a bad Habitt of Drinking that wee have little hopes of his doeing so much good heare as else wheres, Island S[t] Helena To the Worsh[ipfull] Isaac Pyke Esq[r] Govern[r] [...] and Councill The most Humble Petition of John Fleurkus Mason Humbly, Shewth, That forasmuch as yo[r] Petition[r] haveing Serv'd the Hon[ble] Compa[ny] above Eight Yeares and in Several Stations is now very desirous to depart this Island therefore humbly prays yo[r] Worsh[ip] [...] Council to grant your Petition[r] leave to depart this Island in the Ship Cardonnell[s] now Rideing in this Road he not doubting in the least but that he shall better his Present circum- stances and may be of as great Service to the Hon[ble] Company else where, But in case yo[r] Worsh[ip] [...] Council are Pleased to Detaine your Humble Petition[r] against his Will [...] Inclination He hopes yo[r] Worsh[ip] [...] Council will allow him Six Shillings p[er] Day or otherwise Desires to be dimitt from the Hon[ble] Companys business But your s[ai]d Petition[r] had Rather yo[r] Worsh[ip] [...] Council would let him depart then to detain him against his Will on any Terms, June y[e] 7: 1715 And Yo[r] Petition[r] as in Dutty bound shall Ever Pray [...] Jn[o] Fleurkus his X mark Margin Notes: Island S[t] Helena Shewth, Fleurus pet[ition] to go off [...] June y[e] 7: 1715	The reason continued. Allgate had married a woman upon the island with whom he had had a good portion, which he had taken care to spend. The marriage had brought him into such a bad habit of drinking that the council had little hopes of his doing so much good there as elsewhere. The next petition was presented to Isaac Pyke Esquire, governor, and council. The humble petition of John Fleurkus, mason. Fleurkus set out that he had served the Honourable Company above eight years and in several stations, and was now very desirous to depart the island. He humbly prayed the council to grant him leave to depart on the ship <i>Cardonnell</i> now riding in the road. He did not doubt that he would better his present circumstances and might be of as great service to the Honourable Company elsewhere. In case the council were pleased to detain him against his will and inclination, he hoped the council would allow him 6s 0d a day or otherwise. He desired to be dismissed from the Honourable Company's business, but he would rather the council would let him depart than detain him against his will on any terms. The petition was dated 7 June 1715 and signed by John Fleurkus. Interpretations The further reason for Allgate's discharge transforms the framing of the grant. The young woman he lately married brought him a good portion - a marriage settlement in cash or goods - and Allgate had spent that portion freely, contracting a habit of drink so settled that the council saw little prospect of his recovery on the island. The bench's disposition therefore reads not as the relief of household distress but as the removal from the establishment of a corporal whose conduct had passed beyond local correction. The earlier disciplinary record - committed by the governor on Friday before 19 April 1715 for leaving the back gate of the castle open all night, case deferred 19 April 1715, petition for release from the loathsome and filthy prison submitted on 26 April 1715 - is here read in retrospect as the surface symptom of the same problem. The discharge to Bencoolen is the Company's way of releasing him to a fresh start while retaining him on the establishment. The order has therefore the character of administrative banishment under a procedural form of grant. The reasoning candidly recorded by the bench - little hopes of his doing so much good there as

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			elsewhere - exposes the limit of the island's capacity to retain men whose habits have hardened on it. The island's small society, with limited entertainment beyond the public houses, has produced in Allgate's case the same pattern of drinking that lay behind Matthew Bazett's dismissal from the council on 2 October 1712 on charges of swearing, drunkenness, neglect of business and disrespect to the governor. The institutional response to the recurring problem is now to ship the affected man to another Company station, with the change of place offered as the remedy where local correction has failed. Bencoolen's distance and its different social environment are the bench's working hypothesis on the corporal's improvement. The Fleurkus petition stands on more conventional ground. Above eight years' service and a desire to better his circumstances are the same standard grounds on which discharges have been granted to long-serving Company men. The reference to several stations indicates that Fleurkus has served the Company at more than one of its establishments in the course of his eight years, and his mason's trade is the practical skill on which he proposes to seek improvement elsewhere. The bench's earlier preference at the Sandy Bay sea wall, where the stone-layers' combination of 18 January 1714/15 was broken by the arrest of Walter Morris for £38 0s 0d Company debt and replacement labour engaged at 3s 0d per day, has been to keep masonry rates depressed; a mason willing to leave for better wages elsewhere is the practical consequence of that policy. The bench's freeman has placed a fallback offer before the council. If detained against his will, Fleurkus would accept 6s 0d a day to remain on the Company's business. The figure is significantly above the 3s 0d per day at which replacement stone-layer labour was engaged after the breaking of the combination, and indeed above the 5s 0d that the original combination had demanded. The fallback is therefore a high-wage proposal that the bench is unlikely to accept, framed in such a way as to invite the discharge rather than the detention. Fleurkus closes by saying he would rather depart than be retained on any terms, which makes the fallback rhetorical: the procedural function of the alternative is to demonstrate that detention will be expensive while departure costs the Company nothing. Speculations The bench's frankness in recording the drinking habit and the spent portion of Allgate's young wife is probably calibrated to the directors' letter being worked through over the past several mornings. The Honourable Masters at London receive the consultation books on the <i>Cardonnell's</i> return voyage; the recorded reason for the corporal's discharge will read at London as the council's willingness to identify and act on a personnel problem rather than to conceal it. The candour of the entry is the institutional counterpart to the bench's broader posture of identifying its predecessor's failings under Boucher, transmitted by the <i>Aurengzebe</i> on 25 January 1714/15. The present record shows a self-policing council willing to enter on its books the operational reasons for its disciplinary choices, in language that the directors can read directly. Fleurkus's choice of fallback wage at 6s 0d a day is probably calibrated against his knowledge of what the Company will not pay. A man who frames his alternative as a figure above any rate the bench is willing to authorise has effectively committed the council to granting his discharge. The procedural structure of the petition - leave to depart with a high-wage alternative that no rational employer would accept - is the documentary mechanism by which the petitioner forces a yes-or-no choice in his favour. The pattern echoes the earlier strategy of the stone-layers' combination, whose 5s 0d demand was rejected by replacement at 3s 0d;

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			Fleurkus has learned from that experience that the bench will not pay near 5s 0d for masonry, and pitches his price at a level where refusal of detention is the only rational answer.
485	476	Island S[t] Helena To the Worsh[i]p Isaac Pyke Esq[r] Govern[r] [...] and Council The most Humble Petition of Richard Beale Orphan on behalf of himself and Anthony Beale his Youngest Brother Humbly Sheweth, That whereas your Petition[r] haveing 60: Acres of Land that lies now waste, and not any at all of fruit or Provisions therein tho very good ground, and for that yo[r] said Petition[r] being now of Age Capable of Cultivating [...] Manureing said Land (which is already Fenced in) and neither of us of any Trade. Granted.	The next petition was presented to Isaac Pyke Esquire, governor, and council. The humble petition of Richard Beale, orphan, on behalf of himself and Anthony Beale, his youngest brother. Beale set out that they had 60 acres of land that lay now waste, not having any fruit or provisions on it, although it was very good ground. The petitioner was now of age and capable of cultivating and manuring the land, which was already fenced in. Neither of the brothers had any trade and was living a kind of idle life for want of employment, which they could no way have or attain to. He humbly prayed that the council would be pleased to grant them possession of the land, that they might use an honest and industrious way to maintain themselves by raising provisions. They were now at an annual expense that might in great measure be prevented and saved. The petition was signed by Richard Beale. Granted. The following letter was sent to Captain Mawson since the last consultation day. To Captain Mawson. The governor had Interpretations The Beale orphan petition completes a chain of consultations on this family running through the recovered record. On 1 March 1715 George Carne by letter delivered through Richard Beal had sought to lay down the guardianship he had carried four years past, with reference to a saving of £100 0s 0d. Richard Beal had asked the governor to be his guardian, and was refused on the principle that the governor was the appellate forum for any complaint against a guardian, the governor instead offering to act in general for all orphans. On 14 December 1714 Richard Beale had petitioned for clothing through his uncle and guardian George Carne, with Carne to state accounts next council day, and valuation of orphan estate timber by John Bagley carpenter ordered for the Company's part. The matter then re-emerged at 17 May 1715, when Richard Beale petitioned in his own name and the audit of accounts between himself, his brother and the Company was assumed by the governor on his own offer of 1 March 1715. The present petition is the operational outcome of that audit, with Richard Beale now of age and the boys taking possession of their inheritance. The 60 acres of land lying waste, already fenced in but bearing no fruit or provisions, is the practical condition of the orphan estate after the period of Carne's guardianship. The fact of the existing fence is recovered from the petition itself: the land has been enclosed at some prior expense, perhaps under Carne's hand, but has not been brought into cultivation. The boys' present position is one of an annual expense for their maintenance funded out of the orphan estate accounts at the Company stores, without any corresponding income generated by the land. By taking possession and cultivating, Richard and Anthony Beale can replace the running expenditure with self-sustaining provision-raising. The bench's grant is the formal restoration of the land to the orphans for their own working. The orphans' description of themselves as living a kind of idle life for want of employment which they could no way have or attain to is the social diagnosis behind the petition. Without a trade and without standing in the labour market, two young men of orphan inheritance have no productive role on the island except by taking up their own land. The bench has been managing the same problem from the other

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			end at every recent consultation, refusing or restricting departures of soldiers and servants on the ground that good men are needed and dying. The Beale orphans now offer the opposite case: free planters of age who wish to be employed and have land already prepared. The grant is therefore not merely a probate disposition but a labour-policy decision, restoring two young men to productive occupation on the island. The reference to letters sent to Captain Mawson since the last consultation day records the outgoing correspondence by which the bench has been managing the <i>Cardonnell's</i> call at the island. Captain Mawson, identified at the consultation of 1 June 1715 as commander of the ship carrying the Honourable Company's letter, is now the addressee of formal council correspondence. The letters bridge the period between the reading of the directors' letter and the present sitting, and will perhaps cover beef supply under the advertisement of 1 June 1715, refreshment generally, and any matters touching the ship's continuing presence in the road. The recovered text breaks at the opening words of the first such letter, with the substance to follow. Speculations The grant of possession to the Beale orphans is probably also the bench's procedural close on the Carne guardianship transition. With Richard Beale now of age and the land restored to the brothers, the legal grounds for any continuing guardianship over Richard fall away, and Anthony's interest, as the youngest brother, will be administered alongside his elder brother's. Carne's earlier offer to lay down the guardianship of 1 March 1715 has been overtaken by the natural course of the elder boy's coming of age, and the question of fresh guardian appointment that the threads have carried as open since that date is resolved by operation of time rather than by formal appointment. The governor's audit assumed on 17 May 1715 has produced its first concrete restoration of property to the orphans, and the bench's stated principle of acting in general for all orphans has translated into a particular result. The decision to enter the outgoing letters to Captain Mawson in the consultation book is probably the bench's deliberate documentary record of its handling of the <i>Cardonnell's</i> call against any later question from the directors. With the incoming Honourable Company's letter being worked through over the past week and the outgoing general letter being prepared, the council is composing for the homeward despatch a complete dossier of its dealings with the ship. The letters to Mawson will form part of that dossier, allowing the directors at London to read the operational correspondence alongside the general letter and the consultation entries. The pattern continues the bench's practice of documentary self-presentation to its masters that has shaped the entries since the <i>Aurengzebe</i> despatch of 25 January 1714/15.
486	477	has Ordered me to acquaint you that there is a Double allarm made for Severall Ships and as they may be Pyrates He desires you will Imediatly cause a Hauser to be brought to the East Rocks or an Anchor into Shoal Water in Order to Haule near in upon Occasion, I am Sf[j]r yo[r] Hum[ble] Serv[an]t Union Castle 10 June 1715 Antipas Tovey A Protest against Cap[t] W[m] Manson We are Ordered by Our Hon[ble] Mast[er]s to Assist [...] dispatch your unloading what we can [...] you are by Charter Party to deliver the Cargo Consigned to us in ten working days which being expired We do hereby Protest [...] say that as you have not delivered yo[r] Cargo as aforesaid [...] have not wanted our Assistance all the Damages that shall Accrue thereby must redound to the Owners of yo[r] Ship Cardonnell	The first letter to Captain Mawson continued. The governor had ordered Tovey to acquaint Captain Mawson that there was a double alarm made for several ships, and as they might be pirates, the governor desired the captain to cause a hawser to be immediately brought to the east rocks, or an anchor into shoal water, in order to haul nearer the shore upon occasion. The letter was dated at the United Castle on 10 June 1715 and signed by Antipas Tovey. A protest against Captain William Mawson followed. The council was ordered by the Honourable Masters to assist and dispatch the captain's unloading what they could, and the captain was by charter party to deliver the cargo consigned to the council in ten working days, which had now expired. The council hereby protested and said that as the captain had not

		June y[e] 11: 1715 Wee are Yo[r] Hum[ble] Serv[an]ts Isaac Pyke Antipas Tovey Edward Byfield June 11. 1715 Report was made this Day that King George was Proclaim'd on Saturday last in Margin Notes: S[i]r Lett[e]r to Cap[t] Manson Protest ag[ains]t Cap[t] Manson June y[e] 11: 1715 June 11 1715	delivered the cargo and had not wanted the council's assistance, all the damages that should accrue thereby must redound to the owners of the ship Cardonnell. The protest was dated 11 June 1715 and signed by Isaac Pyke, Antipas Tovey and Edward Byfield. On 11 June 1715 a report was made that King George was proclaimed on Saturday last in Interpretations The double alarm of 10 June 1715 is the operational counterpart to the single alarm of 31 May 1715 that signalled the Cardonnell's own arrival. Where one sail signalled an Indiaman in the road, two sails signal multiple unknown vessels, and the council's working assumption is that the strangers may be pirates. The danger to a merchant ship lying at anchor in the road is that she may be cut off by an attacking force before she can slip her cables. The remedy ordered by the bench - either a hawser brought to the east rocks or an anchor laid in shoal water - allows the Cardonnell to haul herself closer to the shore on short notice, under the protection of the castle's guns. The advice is operational seamanship written into the consultation record as a formal communication, with Tovey signing as the conduit of the governor's order. The protest against Captain Mawson is the bench's formal legal instrument against a defaulting carrier. The Honourable Masters had directed the council to assist and dispatch the unloading of the Cardonnell; the charter party had bound the captain to deliver the cargo within ten working days; the ten days have now expired. The council records that the captain has neither delivered the cargo nor sought the council's assistance, and protests so that the consequences of the delay shall fall on the ship's owners rather than on the Company. The mechanism is the same protest procedure used in mercantile practice to lay the ground for a subsequent action for damages, with the documentary entry serving as evidence of the demand made and unmet. The protest is signed by the governor, Tovey and Byfield, but not by Captain Haswell or Bazett, whose absence is noted by silence. The pattern of selective signing first established on the orders against Haswell of 10 May 1715 is here repeated for a different reason. The proclamation of King George on Saturday last marks the constitutional consequence of the death of Queen Anne and the Hanoverian accession. The death of Queen Anne on 1 August 1714 produced the proclamation of George I in London on the same day, but the news has reached St Helena only with the Cardonnell's arrival on the present voyage. The Saturday before 11 June 1715 was 4 June 1715, and the proclamation made on that day at the island marks the formal acceptance of the new sovereign on Company territory. The bench has therefore on the present consultation day before it both an urgent operational matter (the double alarm and the protest against Mawson) and a constitutional matter of the first order (the local proclamation of King George). The two matters are entered side by side in the consultation book, with the proclamation entry recovered only as far as the day of its making. Speculations The protest's selective signing - Pyke, Tovey and Byfield, but not Haswell or Bazett - is probably calibrated to the bench's developing practice of separating instruments that involve formal legal positions from instruments that involve only routine business. The governor signs as principal; Tovey signs as secretary in his customary documentary role; Byfield signs as the newly appointed fifth in council whose probationary period encourages active involvement in the council's business. Haswell as deputy governor and Bazett as third in council are perhaps engaged elsewhere on the morning of 11 June 1715, or perhaps deliberately reserved against any future implication in proceedings

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			against the Cardonnell owners should the matter come to action in England. The pattern, whether by choice or by operational necessity, places the formal protest under signatures that can be relied upon to act consistently in any subsequent reference. The double alarm and protest taken together perhaps explain Captain Mawson's failure to discharge his cargo within the ten working days of the charter party. With unknown sail in the offing and the prospect of pirates, the Cardonnell may have been preparing for defensive movement rather than for continued unloading, with the crew at the guns and the hatches secured. The bench's protest, dated 11 June 1715, formally fixes the responsibility on the ship despite the operational circumstances that may have warranted Mawson's caution. The protest preserves the Company's legal position regardless of the eventual outcome of the alarm; if the alarm proves false and the ships in sight are friendly, Mawson will have lost his procedural ground for delay, and if pirates do prove to be in the offing, the protest will not impede any operational defence the captain may have to mount. The instrument therefore takes the Company's position cleanly out of the operational uncertainty and lodges it in writing on a day before the resolution of the alarm is known.
487	478	last in the following manner, Island S[t] Helena By the Govern[r] [...] Council A Proclamation Whereas it hath Pleased Almighty God to call to his Mercy our Late Sovereign Lady Queen Anne, of Blessed Memory by whose Decease, the Imperiall Crowns of Great Brittain France and Ireland are Solely [...] Rightfully come to the High and Mighty Prince George Elector of Bruns- wick Lunenburg Wherefore we the Govern[r] [...] Councill of the Island Do hereby Pursuant [...] in Obedience to the Hon[ble] the Lords Proprietors orders with one full Voice and Consent of Tongue and Heart Gladly Publish [...] Proclaim that the High and Mighty Prince George Elector of Brunswick Lunenburg is now by the Death of our Late Sovereigne come happy Memoray[?] of King William [...] Queen Mary by the King[s] George Lord by the only Reall of God King[?] of Great Brittain France [...] Ireland and of this our Island and all other Countries depen- ding on the Monarchy of Great Brittain Defender of the Faith [...] To whom we do acknowledge all Faith [...] Constant Obedience with all Hearty and Humble Affection beseeching God by whom Kings [...] Queens do Reigh over to Bless the Royall King George with Long and Happy Yeares to Reign over us, June y[e] 11 1715 God save the King Margin Notes: The Gov[r] [...] Council haveing Certain advice from England of Q[uee]n Anns Death intend on Tuesday Coun[cil] day to proclaim King George [...] Counsell [...] hav[ing] long since resolved to do it in his usuall most Solemn manor [...] they went first to Church[?] [...] all y[e] Gent[lemen] of y[e] Ship Solely in the rod[?] them at the Compa[n]y of Soldiers [...] all Off[ic]ers[?] Engin[?] [...] Gun[ners] [...] Cap[t] [...] mall[?] to [...] the Castle [...] Mill [...] [...] where they went on Garrison [...] [...] up [...] King was proclaim[d] there [...] at Casforders [...] the [...] Castle Gate [...] then his honour made a Sermon on the Sermon for all of our Late [...] the Company in [...] [...] Evening they drank [...] the King[s] health at [...] some fire The Following Proclamation was was read at the [...] Proclaiming of y[e] King June y[e] 14 1715 Granted[?]	The report of the proclamation of King George was set out in the following manner. By the governor and council. A proclamation. Whereas it had pleased Almighty God to call to his mercy the late sovereign Lady Queen Anne of blessed memory, by whose decease the imperial crowns of Great Britain, France and Ireland were solely and rightfully come to the high and mighty Prince George Elector of Brunswick Lunenburg, therefore the governor and council of the island did hereby, pursuant to and in obedience to the Honourable Lords Proprietors' orders, with one full voice and consent of tongue and heart, gladly publish and proclaim that the high and mighty Prince George Elector of Brunswick Lunenburg was now, by the death of the late sovereign Queen Anne of happy memory, become King George by the providence of God, King of Great Britain, France and Ireland, and of this island and all other countries depending on the monarchy of Great Britain, defender of the faith. They acknowledged him with all faith and constant obedience with all hearty and humble affection, beseeching God by whom kings and queens did reign to bless the royal King George with long and happy years to reign over them. God save the King. The governor and council, having received certain advices from England of Her Majesty's decease and orders to proclaim King George, on Monday the 6 instant proceeded to do it in the most solemn manner. They went first in their robes to the Great Castle, the officers of the ship in the road being present. They were attended by a company of soldiers, the engineers, gunners, trumpeters and drums, all of whom turned out. They went up to Castles Mill, where the King was proclaimed, and then to Cupboards, the Castle gates being thrown open. Pardon for all offenders was extended at Sandy Bay. The Company and the inhabitants were present. That evening they drank the King's health at the public houses, and bonfires were lit. The following proclamation was read at the proclaiming of King George on 6 June 1715. Interpretations The proclamation entry combines the formal text of the proclamation itself with a narrative account of the manner of its publication. The text is the standard form drafted to compass the constitutional doctrine of the descent of the Crown: Queen Anne's death has carried the imperial crowns of Great Britain, France and Ireland to George Elector of Brunswick Lunenburg by solely and rightfully descent. The phrasing affirms the

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			parliamentary settlement under the Act of Settlement of 1701, by which the Protestant Hanoverian line was preferred over the Catholic Stuart claimants, and rejects by implication any Jacobite assertion of rival succession. The island's bench, in proclaiming under the Honourable Lords Proprietors' orders, transmits the constitutional settlement of the metropolis to the Company territory. The phrase France in the royal style continues the centuries-old English claim to the French crown, retained in the royal titles since the reign of Edward III. The phrase carries no practical meaning at the island but is preserved as the formal title of the sovereign. The reference to all other countries depending on the monarchy of Great Britain registers the island's own constitutional position: not a British colony in any later sense, but a possession held by the East India Company under royal charter, depending on the British monarchy through its Company governance. The Monday the 6 instant date fixes the proclamation as 6 June 1715, the first working day after the <i>Cardonnell's</i> arrival had brought the orders to the island. The procedural delay of perhaps five or six days between the arrival of the ship and the proclamation reflects the time required to read the directors' letter sufficiently to be sure that the proclamation orders were among the instructions, and to assemble the formal ceremony. The narrative of the day - movement from the Great Castle to Castles Mill to Cupboards, soldiers and engineers and gunners and trumpeters and drums turned out, the Castle gates thrown open, the pardon for all offenders extended at Sandy Bay - records the deliberate ritual through which the change of sovereign was impressed on the entire inhabitant population. The drinking of the King's health at the public houses and the lighting of bonfires that evening completed the public observance. The general pardon for all offences at Sandy Bay is the constitutional grace customarily issued at a new sovereign's accession. The proclamation marks not only the descent of the Crown but the opening of a new political cycle, in which offences accumulated under the previous reign are remitted. At the island, the pardon would cover any outstanding minor offences not already adjudicated; the more substantial trials of recent months, including those of William Bever on 24 January 1714/15 and Toby on 10 May 1715, had already been concluded with formal sentences passed and entered. Speculations The proclamation orders carried by the <i>Cardonnell</i> are probably the same despatch that produced the cow-saving instruction at paragraph forty-fifth of the general letter, read at the consultation of 7 June 1715. The directors' letter has therefore proved to contain both the routine plantation matter and the constitutional moment, and the bench has had to interleave the proclamation ceremony with its ordinary business over the past week. The choice to proclaim on Monday 6 June 1715, two days before the council met on Tuesday 7 June 1715 for the routine business including the cow-saving order and the soldier discharges, reflects the bench's prioritisation: the change of sovereign required immediate public observance on the first working day, while the resulting administrative orders followed at the next regular sitting. The narrative inclusion of the general pardon at Sandy Bay alongside the bench's routine consideration of discharges to Bencoolen and grants of orphan land probably reflects the bench's awareness that the accession represents an opportunity to close the political balance sheet of the previous reign. The orders against Captain Haswell of 10 May 1715, the deferred orders on the executors' petitions of 24 May 1715, and Mrs Haswell's petition of 31 May 1715 all sit on the bench's books as inherited business from a period now

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			formally ended. The bench's reaction at the consultation of 7 June 1715 - that the executors and Captain Haswell were in a fair way of agreement, with the documents produced refused for inspection - perhaps reads in the light of the proclamation as the council's quiet attempt to close out the dispute under the cover of the new reign, rather than to carry it forward into formal proceedings under the new sovereign.
488	479	Island S[t] Helena To the Worsh[i]p Isaac Pyke Esq[r] Govern[r] [...] and Councill The most Humble Petition of William Beale Freeman Heembly Shewth That forasmuch as yo[r] Petition[r] for sometime past has had a desire to depart this Island [...] formerly by Govern[men]t had leave and Lyckence granted him [...] did make sale of his goods but after wards was detain'd to the very great Prejudice of himself [...] Familie but now hopes yo[r] Worsh[i]p [...] and Councill will be pleased to grant yo[r] Petition[r] leave to depart this Island in the Ship Cardonell now in this Road [...] hopes that he may have the same Liberty as was always usuall here that is to pay [...] be paid [...] also yo[r] Petition[r] is very willing to dispose of such of his Effects as may be for service of the Service of the Hon[ble] Company [...] your Petition[r] Humbly prays yo[r] Worsh[i]p [...] Council to take the aforesaid P[re]misses into yo[r] wise [...] Mature Consideration, June the 11: 1715 And yo[r] Petition[r] as in Duty Bound shall Ever Pray William Beale He being askt if he ment his family too to goe off Replies upon w[ch] he was allowed Liberty but not to have any of his Debts paid him in the Stores unless he has Bona Fide Credit There, Island S[t] Helena To the Worsh[i]p Isaac Pyke Esq[r] Gov[r] [...] Council Margin Notes: Island S[t] Helena Shewth W[m] Beales pet[ition] to go off. June the 11: 1715 Granted [...] Island S[t] Helena	The next petition was presented to Isaac Pyke Esquire, governor, and council. The humble petition of William Beale, freeman. Beale set out that for some time past he had had a desire to depart the island. Formerly, on Governor [...]s leave and licence granted him, he had made sale of his goods, but afterwards was detained to the very great prejudice of himself and family. He now hoped the council would be pleased to grant him leave to depart on the ship <i>Cardonell</i> now in the road. He hoped he might have the same liberty as was always usual at the island, that is, to be paid and also to dispose of such of his effects as might be for the service of the Honourable Company. He humbly prayed the council to take the premises into wise and mature consideration. The petition was dated 11 June 1715 and signed by William Beale. Beale was asked if he meant his family too should go off. Upon this it was granted that he was allowed liberty, but not to have any of his debts paid him in the stores unless he had bona fide credit there. The next petition was presented to Isaac Pyke Esquire, governor, and council. Interpretations The William Beale petition recovers a story of a freeman whose departure was once formally licensed and then frustrated by detention. The earlier leave and licence, granted under the hand of a previous governor, had been sufficient for Beale to dispose of his goods by sale in preparation for sailing. The reference to that governor is left as [...] in the recovered text, the manuscript ink at that point being unrecoverable; the most probable identification is Benjamin Boucher, whose administration ran into late 1712 and whose documentary case was transmitted to London by the <i>Aurengzebe</i> on 25 January 1714/15. The bench's restoration of Beale's right to depart is therefore in part the reversal of a frustrated permission granted under the previous administration, on the same principle that has guided the council's broader handling of Boucher-era matters. The phrase the same liberty as was always usual here is the freeman's claim to the customary departure procedure. The procedure has two heads: payment of any balance owed to the petitioner on the Company's books, and the right to dispose of effects to the Company that may be of service to it. The mechanism converts the freeman's island-side assets - goods, debts, perhaps land - into a clean exit in a single transaction. The bench has been applying the same model to soldier discharges at the present sittings, with Allgate granted on 7 June 1715 and Breech referred to a more convenient opportunity, and is now extending it to a free planter who has previously been frustrated. The conditional grant - liberty to depart but no debts paid in the stores unless he had bona fide credit there - protects the Company against any claim that cannot be substantiated in the books. The phrase bona fide credit is the legal qualifier separating real entries in the storekeeper's account from claims unsupported by documentary record. A freeman departing with a balance in his favour on the books may take that balance; a freeman with no such balance cannot create one by assertion at the moment of departure. The qualification is the storekeeper's procedural shield against last-minute claims, consistent with Bazett's

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			standing role in handling stores accounts and with the bench's recent insistence on documentary basis for any obligation binding the Company. The question put to Beale - whether he meant his family too should go off - is the bench's standard inquiry on departure applications. The Company's interest in the population of the island includes wives and children whose maintenance falls partly on Company resources but whose departure removes any future contribution to the inhabitant body. The Beale family's intentions therefore have to be entered on the record. The pattern was the same with William Marsden on 19 November 1711, who was granted leave with wife and family on the <i>Mead Frigate</i>. Beale's answer is not separately recorded in the recovered text, but the bench's disposition of the petition proceeds on the basis that the question has been answered. Speculations The connection between Beale and the William Beale recorded in the master reference as a planter granted a six-week fencing extension from 25 March 1712 on the ground of being poor, with a sick wife, one slave and a large family, is probably direct: the same man, four years later, has resolved to leave the island after a long period in which his circumstances on the island have not improved. The reference of late February 1712 to his poverty, sick wife, one slave and large family already showed a planter at the margin of subsistence; the present petition's reference to his having been detained to the very great prejudice of himself and his family confirms that the period since has not been kind to him. The bench's grant therefore allows a long-troubled freeman to remove himself from the island's economic establishment, perhaps to a better situation at another Company station or in England. The storekeeper's bona fide credit qualification is probably also the bench's procedural response to the pattern of last-minute departure claims that has emerged in the recent record. With several soldier and freeman applications on the books at the present sittings, and with the executors' dispute over the Charles Steward estate raising the broader question of papers, books and accounts open at the consultation of 31 May 1715, the bench has reason to be alert to claims that cannot be matched against the documentary record. By inserting the qualifier at the moment of grant, the council protects itself against any unverified claim Beale might attempt to assert at the storekeeper's office on the eve of his departure. The same procedural caution will perhaps recur on any subsequent freeman departure application carried by the <i>Cardonnell</i>.
489	480	Council The most Humble Petition of Andrew Bernwick Cooper Humbly, Shewth. That whereas yo[r] Petition[r] being left out of the Oxford Man of Warr one of the Squadron that Sail'd out of this Road the 17 July 1711 but was left Sick on Shoar for his Recovery being very weake [...] in a dangerous condition with the Survey so that Yo[r] Petition[r] was not able of goeing on board his s[ai]d Ship without Imminent danger of Looseing his life as will appear by his Certificate given under the hand of the Comander of the said Ship that it was the Opinion of the Surgeons of the Squadron [...] whereas sometime after yo[r] Petition[r] being well recovered he desired to continue here in the Hon[ble] Compa[ny] Service for a Year or two [...] now haveing Serv'd almost four Years Humbly prays Yo[r] Worsh[ip] [...] Council to grant yo[r] Petition[r] leave [...] Licence to Depart this Island In the Ship Eagle Galley now in the Road, June y[e] 11: 1715 And yo[r] Petition[r] as in Duty bound shall Ever Pray his Andrew + Bernwick mark	The next petition was the humble petition of Andrew Bernwick, cooper. Bernwick set out that he had been left out of the <i>Oxford</i>, man of war, one of the squadron that sailed out of the road on 17 July 1711. He had been left sick on shore for his recovery, being very weak and in a dangerous condition with the scurvy, so that he was not able to go on board without imminent danger of losing his life, as appeared by the certificate given under the hand of the commander of the ship that it was the opinion of the surgeons of the squadron. Some time after, being well recovered, he desired to continue in the Honourable Company's service for a year or two. Having now served almost four years, he humbly prayed the council to grant him leave and licence to depart the island on the ship <i>Eagle Galley</i> now in the road. The petition was dated 11 June 1715 and signed by Andrew Bernwick with his mark. The council answered that, having no other cooper upon the island, they could not let him go. As soon as another cooper could be got, if he was desirous to go, he should have leave.

		We having no other Cooper upon the Island we can't lett him goe but as soon as another Cooper can be gott if he is desiruous to goe he shall have leave, Island S[t] Helena To the Worsh[i]p Isaac Pyke Esq[r] Gov[r] [...] Council The Petition of Rich[d] Sheevu Stone Cutter Humbly Shewth That Whereas yo petition[r] has Serv'd Margin Notes: Shewth. And: Bringh[t] pet[ition] to go off. June y[e] 11: 1715 Granted as soon as can gett anoth[er] Cooper. Island S[t] Helena	The next petition was presented to Isaac Pyke Esquire, governor, and council. The petition of Nicholas Shreeve, stone cutter. Shreeve set out that he had served Interpretations The Bernwick narrative recovers a piece of naval and Company history not previously settled in the record. The <i>Oxford</i>, man of war, sailed out of the St Helena road on 17 July 1711 as one ship of a Royal Navy squadron, leaving Bernwick ashore for the recovery of his scurvy. The same departure of the <i>Oxford</i> on that date is the operative event behind the entry of 23 November 1711, when Andries Davick, cooper, was retained on the island at £0 2s 0d per month, diet self-found, having also been set ashore sick from the <i>Oxford</i>. The two coopers were therefore left at the island by the same squadron departure, with Davick taken on terms in November 1711 and Bernwick on a parallel arrangement of his own. Bernwick's almost four years of service places his start on Company pay in the second half of 1711, consistent with the same period. The medical certification procedure recorded in the petition is the standard naval mechanism for confirming a man's incapacity to sail. The commander of the <i>Oxford</i> certified the opinion of the squadron surgeons under his hand, and the certificate is the documentary basis on which the sick man was lawfully landed and retained at the island. The instrument protects both the Royal Navy commander against any later charge of having lost a man, and the man himself against any later charge of desertion. The procedure assumes that the squadron will eventually recover or replace the man through a later cruise or through Company employment, and Bernwick's continuation on the island has followed the latter path. The bench's qualified refusal of the petition - the council could not let him go, having no other cooper on the island, but he would have leave as soon as another cooper could be got - is the standard mechanism for retaining a skilled tradesman whose departure would leave a critical gap. The cooper's trade is essential to the Company's storage and shipping operations, with casks for water, beef, arrack, sugar and other commodities all requiring maintenance and repair. The same priority lay behind Davick's retention in 1711 on terms favourable enough to bring him onto the establishment. The Company's strategy is therefore to retain coopers until a replacement appears, with the present cooper's departure conditional on the recruitment of another, perhaps from a future Indiaman whose own cooper could be persuaded to remain. The arrival of the <i>Eagle Galley</i>, mentioned in the petition as the homeward vessel by which Bernwick wishes to sail, signals the presence of a second ship in the road alongside the <i>Cardonnell</i>. The bench had recorded a double alarm on 10 June 1715 with two unknown ships in the offing, and had ordered the <i>Cardonnell</i> to make ready to haul nearer the shore against the possibility of pirates. The <i>Eagle Galley</i> is perhaps one of those two sail, now identified on closer view as a friendly vessel rather than a hostile one. The protest against Captain Mawson of 11 June 1715 for failure to complete unloading within the ten charter-party days is in this light explicable: the appearance of further sail on 10 June 1715 perhaps gave Mawson reason to suspend the unloading until the new vessels were identified, but the council protested in any case to preserve its legal position regardless of the operational uncertainty. Speculations The Shreeve petition, recovered at the head of the next section, perhaps follows the same pattern of long Company service and desired departure that has run through the petitions of the present sitting. Nicholas Shreeve has appeared earlier in the record as the stone cutter who presented George Northen's will at the

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			probate of late August 1712 and as one of the trades represented in the island's free planter community. If Shreeve too is seeking departure, the bench is faced with a third trade-based decision after the cooper's qualified refusal and the mason Fleurkus's request of 7 June 1715. Stone cutting has been one of the operational shortages on the island since the breaking of the stone-layers' combination on 18 January 1714/15, and the bench's decision on Shreeve will perhaps test whether the same retention logic applied to coopers extends to other essential trades. The substance of the petition will appear in the next image. The bench's transparent reasoning on Bernwick - the petition refused not on the merits but on the want of a replacement, with leave to follow once another cooper is found - is probably designed to keep skilled tradesmen on the island under conditions that they perceive as fair. A blunt refusal might prompt absconding on a future ship, with the man slipping aboard against the bench's wishes; a refusal that recognises the merit and undertakes to grant the request as soon as conditions permit gives the cooper an incentive to remain in good order until that moment arrives. The bench is thereby managing the present cooper's continued service through a procedural commitment rather than through coercion.
490	481	Serv'd the Hon[ble] Comp[any] above the term of Seven Years, [...] haveing a wife [...] Children which he Rears wants his Assistance in Order to their well being, humbly desires your Worsh[ip] [...] Council will please to grant him leave [...] Liberty to go to England in y[e] homeward bound Ship now in the Road, [...] your Petition[er] as in duty bound shall ever pray. his Nich[d] N Shreeve mark Order'd, That Nich Shreeve be permitted to Send Home to his Wife a Bill of Cred[it] for her better Support [...] maintenance [...] that the books be lookt over to See how much he has formerly sent her, that she may have her former allowance. Island S[t] Helena By the Worsh[ip]full Isaac Pyke Esq[r] [...] Gov[r] [...] Council An Advertizement. Except upon just cause shewn to the Gov[r] for which they must have a Warrant under his hand for so doing, Dated at the Union Castle In James Valley this 15[th] of June 1715. Sign'd by Order of Gov[r] [...] Council. Antipas Tovey Sec[retary] Margin Notes: N. Shreeve pet[ition] to go off why he[s] all[ow]ed to Send yearly to his desires Island S[t] Helena The Advertizem[en]t not to kill Cow Etc kill aft[er] 20 July 1716	Shreeve set out that he had served the Honourable Company about the term of seven years, and having a wife and children who wanted his assistance in order to their wellbeing, humbly desired the council to grant him leave and liberty to go to England in the homeward bound ship now in the road. The petition was signed by Nicholas Shreeve with his mark. The council ordered that Nicholas Shreeve be permitted to send home to his wife a bill of credit for her better support and maintenance, and that the books be looked over to see how much he had formerly sent her, so that she might have her former allowance. The advertisement of the cow-saving order followed. By the worshipful Isaac Pyke Esquire, governor, and council. An advertisement. The Honourable Lords Proprietors having given the council orders not to kill any cow or calf, and strictly to forbid all others from doing so for some time, the council did in obedience to their commands strictly forbid all persons whatsoever to kill or cause to be killed any cow, heifer or calf from the date of the advertisement until and after the 20 July next, which should be in the year of our Lord 1716, except upon just cause shown to the governor, for which they must have a warrant under his hand for so doing. The advertisement was dated at the United Castle in James Valley the 15 June 1715 and signed by order of the governor and council by Antipas Tovey, secretary. Interpretations The disposition of the Shreeve petition reverses the substantive request and substitutes a different remedy. Shreeve had asked for leave to depart on the homeward bound ship in the road; the bench instead orders that he be permitted to send a bill of credit home to his wife and that his earlier remittances be checked against the books to set the proper allowance. The mechanism keeps the stone cutter on the island while addressing the domestic need that lay behind his petition. The procedural form is the same retention-with-compensation pattern applied to John French the gunner on 3 November 1713, when he was paid back £5 5s 0d yearly for three years past in respect of house rent paid since the demolition of the old fort. The Company addresses the operative grievance through a financial instrument while preserving the man's presence on the establishment.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			The reference to the books being looked over to set the wife's former allowance gives a glimpse of the Company's standing remittance system. Married Company servants on the island send money home through bills of credit drawn against their pay, with the remittances entered in the books at the storekeeper's office. Shreeve's prior pattern of sending money home, recoverable from the books, becomes the benchmark for the present grant. The procedure recognises a domestic obligation as part of the man's working terms and integrates it into the Company's account system. The same procedural channel is the one that the Carne family used in 1698 in dealings with Governor Poirier, where joint letters of administration over Richard Keeling's estate were granted to Carne and his wife on 5 May 1698; the documentary anchoring of family interests through the Company's books is a long-running practice. The cow-saving advertisement converts the resolution of 7 June 1715 into a public notice in formal advertisement form. The bench has taken eight days between the consultation order of 7 June 1715 and the dated advertisement of 15 June 1715 to produce the document. The interval reflects the work of drafting in the same form as the beef-supply advertisement to the <i>Cardonnell</i> of 1 June 1715, with the order recast as an instruction to all inhabitants under the secretary's signature by order of the bench. The phrasing of strictly forbid all persons whatsoever and the threat of warrant under the governor's hand for any exception establishes the breach of the order as a criminal matter, enforceable by the marshal under the fee schedule confirmed on 3 May 1715 if challenge requires. The reference to obedience to the Honourable Lords Proprietors' commands places the cow-saving order squarely within the Company's metropolitan instruction. The directors' letter brought by the <i>Cardonnell</i> and read at the consultations from 1 June 1715 onward contained the order; the council has now translated the order into a local advertisement under their own subscription. The chain runs from the Lords Proprietors at London, through the directors' letter, through the consultation order of 7 June 1715, to the published advertisement of 15 June 1715. The bench is therefore visible at each step as the agent of the metropolitan policy rather than as the originator of an island prohibition. Speculations The bench's substitution of the bill of credit remedy for Shreeve's departure request is probably also a quiet retention measure for an essential tradesman. Stone cutting has been a sensitive trade since the breaking of the stone-layers' combination of 18 January 1714/15 and the engagement of replacement labour at 3s 0d per day, and the Sandy Bay sea wall continues as a Company priority. A skilled stone cutter with seven years' experience on the island cannot easily be replaced by a single homecoming Indiaman's casual labour. By addressing the family-support grievance through remittance rather than through release, the bench secures Shreeve on the same logic that retained Andrew Bernwick the cooper at the same sitting on 11 June 1715 for want of a replacement. The two refusals on consecutive consultation days, both framed in language sympathetic to the petitioner, illustrate a coherent retention strategy across the essential trades. The dating of the cow-saving advertisement to 15 June 1715 rather than to 7 June 1715, when the resolution was passed, is probably not accidental. The eight-day interval coincides with the proclamation of King George on Monday 6 June 1715 and the surrounding political and constitutional business that has dominated the bench's attention during the intervening days. By the time the cow-saving order issues in its public form, the proclamation has been

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			read, the bonfires have been lit, the <i>Cardonnell's</i> cargo dispute has been addressed by the protest of 11 June 1715, and the discharges and refusals of the present sittings have been concluded. The advertisement enters a settled political landscape, with the new sovereign in place and the immediate ship-side business resolved, and so can take effect without competing with more urgent matters for the inhabitants' attention.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			Of the female 24 Wether killed 1 Increased 31 Turkey: Great and small 59 Stolen for the fort 2 Increased 11 Geese: Great and small 43 Stolen 11 The account was signed by William Worrall. Interpretations The Worrall stock account of 18 June 1715 is the comprehensive return on the Company's livestock under the new overseership probated on 5 April 1715 and matured through the yam-stock report of 26 April 1715. The neat cattle total of 136 head, against a last report of 90 head and an increase of 46 since 1 January 1715, records a herd recovering vigorously from the late great drought to which John Alexander's loss of thirty head bore witness on 17 May 1715. The recorded increase by birth of 14 calves in the period since the last account, augmented by purchases of 1 bull, 6 bullocks and 2 cows with 2 calves, against killings of only 2 bulls and 1 bullock, shows the herd's recovery as a combination of natural breeding, deliberate purchase and minimum slaughter. The pattern is the operational implementation of the cow-saving order published on 15 June 1715, with the Company's own stock managed on the same principle now applied to the whole island. The hog account at 214 head with 28 increased records a separate provisioning category whose loss pattern is different. Eight head killed in the last two months and a further eight died, of which six were young pigs lost in the natural rate, one a sow in dry, and one a shoat lost to a local distemper called the pants. The naming of the disease as known here amongst the hogs records an established veterinary problem of the island's pig population, distinct from the imported distempers that may attack a herd of fresh stock. The accounting of the death by category - young pigs, sow, shoat with named distemper - distinguishes routine losses from disease losses for the bench's reference. The goat account at 243 head with 91 increased shows a stock that has expanded sharply since the pound deliveries of 26 and 27 February 1715, where the Chapel Valley goat removal had brought in 195 goats from Carne 83, Long 65, Wrangham 46 and Spree 1. The Company's own goat herd at the present count has grown by 91 head since some prior point, the addition probably representing both natural increase and the absorption of impounded goats not redeemed by their owners. The ratio of 95 male to 148 female records the breeding-favourable distribution maintained for continued increase, with females nearly two-thirds of the total. The sheep at 34 head with 31 increased and 1 wether killed records a small but expanding flock, with the increase substantially through ewe lambs. The turkey count at 59 great and small with 11 increased and 2 stolen for the fort - perhaps meaning taken for the garrison's table without normal accounting - records a poultry establishment large enough to bear systematic theft as a recognised category of loss. The geese at 43 great and small with 11 stolen show a similar pattern of stock loss to theft on the larger poultry. The recording of stolen as a distinct category alongside killed,

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			increased and died is the bench's documentary acknowledgement that pilferage of Company stock is a continuing operational problem, exemplified in the recent record by the summary order against Henry Harmon the gardener of 26 April 1715 for carrying wood out of the Company's garden into the town. Speculations The detailed structure of the account, with each category broken down into stock at present, killed, died, increased, bought and stolen, is probably the procedural innovation Worrall has brought to the overseership since 5 April 1715. The earlier inventory of moveable goods at the new and old plantation house and Lufkins of 12 April 1715 by Bazett and Tovey, which noted defects such as the broken warming-pan handle, the holed brass kettle and the old lanthorn, established the principle of explicit recording of defects. The Worrall stock account extends the principle to livestock, with named diseases (the pants), specific categories of loss (stolen for the fort) and arithmetic against the prior return. The bench is now in possession of a stock-management document of unusual transparency, suitable for inclusion in the homeward general letter to the directors and useful as a baseline against any future audit. The reference to two turkeys stolen for the fort is probably the only entry in the account that names a specific destination for the loss, and is probably the bench's quiet recording of an irregular requisition by the garrison commissariat. The bench's response is to enter the loss honestly under stolen rather than under killed for table use, marking the requisition as outside the accounting structure rather than within it. The accounting choice is consistent with the broader documentary policy of the Pyke administration: failings of the establishment are entered candidly in the books rather than concealed, on the same principle that produced the open record of Samuel Allgate's drink-driven discharge of 7 June 1715. The pattern of self-policing transparency continues to shape what reaches the consultation books and from them the homeward despatch.
492	483	Island S[t] Helena The foll[owing] petition was Presented To the Worsh[i]p Isaac Pyke Esq[r] Gov[r] [...] [...] Council. The Humble Petition of Tho[s] Newington Writer Humble Sheweth, That yo[r] Petition[r] haveing Serv'd the Hon[ble] Comp[any] as a Writer upon this Island some time, [...] has had his Health very well is now very desirous to Serve y[e] Hon[ble] Comp[any] in other parts of y[e] World, most Humbly request that your Worsh[i]p [...] Council will be pleased to recomend him to be continued in y[e] same imploy elsewhere [...] that you'll grant him leave to depart this Island in the Ship Carzonnett, now in the Road, And yo[r] Petition[r] (as in duty bound) shall ever pray, Tho: Newington Granted [signatures] Geo: Haswell Antipas Tovey Edw[d] Byfeild Margin Notes: Island S[t] Helena M[r] Newington to go off Granted.	The following petition was presented to Isaac Pyke Esquire, governor, and council. The humble petition of Thomas Newington, writer. Newington set out that he had served the Honourable Company as a writer upon the island some time, and had had his health very well. He was now very desirous to serve the Honourable Company in other parts of the world. He most humbly requested that the council would be pleased to recommend him to be continued in the same employ elsewhere, and that the council would grant him leave to depart the island on the ship <i>Cardonnell</i> now in the road. The petition was signed by Thomas Newington. Granted. The consultation was signed by the governor, George Haswell, Antipas Tovey and Edward Byfield. Interpretations The Newington petition is the third departure application granted on a single Indiaman's stay in the road. The granting pattern is now distinct: Samuel Allgate granted on 7 June 1715 with the candid reasons of drink and the spent marriage portion; William Beale granted on 11 June 1715 with the bona fide credit qualification on his stores account; Newington granted on the present day on the strength of good health and a desire for service elsewhere. The bench has demonstrated across these three grants the operational tests by which a Company servant or freeman may leave the island: a discharged man may go (Allgate); a long-frustrated freeman whose earlier licence was disregarded may go (Beale); a healthy serving writer in good standing may go with a Company recommendation for

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			continued employment (Newington). The pattern stands against the qualified refusals of Andrew Bernwick the cooper and Nicholas Shreeve the stone cutter, where want of a replacement has prevented departure. The request for recommendation to be continued in the same employ elsewhere is the key procedural device of the Newington petition. The petitioner is not seeking discharge from Company service but transfer to another Company station, perhaps at Madras, Bombay, Bencoolen or one of the lesser establishments. The recommendation by the bench at St Helena is the credential by which a writer can present himself at another Company station with a proven record of satisfactory service. The same mechanism was contemplated for Samuel Allgate on 7 June 1715, whose petition undertook service as a soldier at Bencoolen and whose discharge was framed as a transfer rather than a release. The institutional pattern preserves trained staff within the Company's establishment when individual stations cannot continue to employ them. The phrase had had his health very well on the island places Newington's petition in deliberate contrast to the sickly-time refusal of John Gibbs of 26 April 1715. Where Gibbs's departure was refused on the practical ground that many men were dying and good men should be kept, Newington can demonstrate that his time at the island has not depleted his health and so cannot prejudice the establishment by his departure. The petition is constructed to anticipate and rebut the standard objection. The bench's immediate grant indicates that the construction was effective. The signatures at the foot of the consultation - the governor, George Haswell, Antipas Tovey and Edward Byfield - record a four-councillor bench at the close of the sitting. Matthew Bazett, third in council, is absent from the signatures of this consultation as he was from the protest against Captain Mawson of 11 June 1715. The pattern of his absence from formal entries through the <i>Cardonnell's</i> call is now consistent, although the reason is nowhere stated. The remaining four councillors continue to transact the bench's business, with Captain Haswell signing in his deputy governor's capacity alongside the others. The relations within the council that produced the executors' dispute and Mrs Haswell's petition appear, on the surface of the record, to be functioning normally for the moment, perhaps in the light of the executors' fair way of agreement reported on 7 June 1715. Speculations Newington's departure on the <i>Cardonnell</i> is probably the latest in a small sequence of writers and clerks moving between Company stations under the present administration. The earlier reference at 13 October 1713 to six men constantly at the lower table - including Samuel Brome, writer, Thomas De La Rose, writer, and others - registered a settled population of clerical staff at the island. Newington's request to be continued in the same employ elsewhere is consistent with the cycling of writers across stations as Company business requires, with St Helena functioning as one node in the wider Company network rather than as a final destination. The bench's recommendation will perhaps follow on the <i>Cardonnell</i> to the next establishment in her schedule. The absence of Bazett's signature from the closing of the present consultation is probably significant, given the procedural balance the bench has been maintaining through Mrs Haswell's petition of 31 May 1715 and the deferred return on the executors' charge. Bazett has remained an active councillor in the day-to-day business but appears not to have signed certain instruments since the protest of 11 June 1715. He may be absent in the country in the manner of the staying in the country pattern that has been recorded for Haswell on 3 May 1715, or he may simply have been engaged elsewhere on

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			the morning the consultation was authenticated. The pattern is not yet a settled feature of the record and is preserved here as in the source.

W[m] Allison The Cap[t] being acquainted herewith Sayeth that he caused all the Hon[ble] Comp[anys] Wines to be carefully Stowed away and that his own were [...] that his own were Stowed indifferently amongst the others as they came on board [...] that for the few pipes he has bought, he too by Leakage has suffered by Leakage at least equally with the Comp[anys] or rather more in proportion [...] that it may yet seen on board, his Own Casks being all markt with avery Different Mark from Margin Notes: Island S[t] Helena M[r] Allison y[e] Purs[er] of y[e] [...] Compl[ains] Cap[t]s reply	Island of St Helena. At a consultation held on Wednesday the 15 June 1715 at the Union Castle in James Valley. Present: Isaac Pyke Esquire, governor; George Haswell, deputy governor; Matthew Bazett, third; Antipas Tovey, fourth; and Edward Byfield, fifth in council. Mr William Allison, purser of the <i>Cardonnell</i>, made a complaint to the governor that Captain William Mawson, commander of the ship, had bought nine pipes of wine at Madeira and stowed them safely away. The Honourable Company's wine, however, had been stowed in such manner that by the careless putting of several heavy goods upon them, the casks were become leaky. He had this only by report of another. The complaint was signed by William Allison. The captain, being acquainted with the complaint, said that he had caused all the Honourable Company's wines to be carefully stowed away, and that his own were stowed indifferently among the others as they came on board. For the few pipes he had bought, he had suffered by leakage at least equally with the Company, or rather more in proportion. It might yet be seen on board that his own casks were all marked with a very different mark from Interpretations The Allison complaint opens a new front of dispute between the Company and the <i>Cardonnell</i> in addition to the protest against Captain Mawson of 11 June 1715 for failure to complete unloading within the ten charter-party working days. The complaint is brought by the ship's purser, who is the officer responsible for the cargo's accounting on the ship's side. Allison's complaint identifies the captain's personal purchases at Madeira - nine pipes of wine - as having been stowed safely, while the Honourable Company's wine had been stowed under heavy goods and rendered leaky. The accusation, if substantiated, would amount to the captain having favoured his own private trade goods over his charter cargo, the same conduct against which the protest of 11 June 1715 was implicitly directed. The phrase pipes of wine identifies the standard cask measure for shipped wine of the period, a pipe being approximately 105 gallons. The Madeira wines purchased at the island of Madeira are the standard outward cargo of an Indiaman calling there on the African coast voyage. The same Madeira wines have appeared in the recovered record at the sale by Isaac Cook of HMS Leopard on 26 June 1712, at £20 0s 0d per pipe wholesale. The captain's nine pipes therefore represent at the same rate a private trade investment of £180 0s 0d, a substantial sum to be carried as personal venture against any opportunity for resale at the homeward stations. The reference to the captain's casks being all marked with a very different mark from the Company's is the procedural mechanism by which the trade goods are distinguished from the chartered cargo at any future inspection. The marking system allows the cargo at the wharf or at the homeward port to be sorted by owner. Captain Mawson's defence is grounded on the visible evidence of these marks: any inspection on board will show his own casks among the others, suffering leakage at least equally with the Company's, and therefore inconsistent with deliberate favouring of his own stowage. The petitioner's qualifier - he had this only by report of another - is a frank admission that Allison has not himself inspected the stowage but is reporting at second hand. The procedural value of the entry on the consultation book is therefore diminished, since the

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			complaint rests on hearsay rather than on the purser's own examination. The bench will have to consider whether the matter merits further inquiry by direct inspection of the stowage, by appointment of councillors to go on board the <i>Cardonnell</i> in the same way Bazett and Byfield were ordered to view the place of Henry Francis's land application on 31 May 1715. The procedural pattern of physical inspection by appointed councillors has now been established on land matters, and would extend naturally to a stowage dispute. Speculations The Allison complaint is probably the product of a wider dispute within the <i>Cardonnell</i>'s crew, with the purser as the institutional voice of the ship's accounts against the captain's personal venture. The purser holds the books in which the cargo is reckoned, and any later questioning of the captain's handling of the voyage would draw on those books. By laying the complaint before the governor and council, Allison creates an entry in the council's consultation book that supports any later proceedings against Mawson by the Company. The procedural function is the same the council served at the protest of 11 June 1715: documentary preservation of a position for any future legal action against the captain or the owners. Mawson's defence, that his own casks were stowed indifferently among the others as they came on board and suffered leakage at least equally with the Company's wine, is probably calibrated to convert the dispute from a question of selective favouring into a question of routine voyage damage. If the captain's wines have suffered leakage in proportion equal to or greater than the Company's, the implication of deliberate misconduct falls away, and what remains is the ordinary loss of long voyages under tropical and equatorial latitudes. The verification of this position requires direct inspection of the marks on the casks at the present time, and Mawson is offering the bench precisely that test. Whether the council will accept his invitation, or whether it will hold the protest of 11 June 1715 as a sufficient basis for any future action, is the procedural question for the next sitting.
494	485	from the Comp[ay]s (Sign'd) Will[iam] Mawson M[r] Tho: Newsham Chief Mate of the Cardonnell Saith that when the Hon[ble] Comp[any]s Wines came on board at the Maderas they were Stowed in y[e] Main [...] After Hatch way with great care [...] that two teer in the Main Hatch way had nothing Stowed on them but two Deal boards Deep, that Hatch way being full up. [...] that those in y[e] After hatch way were intirely Riders Otways that all y[e] Hon[ble] Comp[any]s Casks were markt with a Different mark from the Cap[t]s [...] that the Cap[t] by his own Cask has in proportion suffer'd as much by Leakage as the Comp[any]s [...] that non[e] of the Casks are Leakt by bad Stowadge but by the badness of the Cask themselves [...] are as ill made and slight as he hath ever seen some of the staves being above an Inch [...] half in One part [...] less then half an Inch in another part which not beareing all alike Tis very probable has been the reason of this Leakidge [...] tho these Casks are so bad he has known Ships in Europe frequently to Suffer as much by Leakage (Sign'd) Thomas Newsham, M[r] John Lock Second Mate on board the Cardonnell Sayeth that he knows great care was taken in Stowing all y[e] Wines as they came on board [...] yet none had y[e] preference for he himself stowed all as they came on board [...] did not make any distinction between the Hon[ble] Comp[any]s Wine [...] y[e] Cap[t]s, [...] did not then observe there was two marks [...] but has since obs[erved] Margin Notes:	The captain continued. His own casks were all marked with a very different mark from the Company's. The reply was signed by William Mawson. Mr Thomas Newsham, chief mate of the <i>Cardonnell</i>, gave his account of the stowage of the Madeira wine. When the Honourable Company's wines came on board at Madeira they were stowed in the main and after hatchway with great care. Those in the main hatchway had nothing stowed on them but two deal boards deep, that hatchway being full up. Those in the after hatchway were entirely riders and lay so that all the Honourable Company's casks were marked with a different mark from the captain's. The captain by his own cask had in proportion suffered as much by leakage as the Company. None of the casks were leaked by bad stowage but by the badness of the casks themselves, which were as ill made and slight as he had ever seen. Some of the staves were above an inch and a half in one part and less than half an inch in another part, which not bearing alike very probably had been the reason of the leakage. These casks were so bad that he had known ships in Europe frequently to suffer as much by leakage. The deposition was signed by Thomas Newsham. Mr John Lock, second mate on board the <i>Cardonnell</i>, gave his own account of the stowage. He knew great care was taken in stowing all the wines as they came on board, and none had the preference. He himself stowed them as they came on board and did not make any distinction between the Honourable Company's wine and the captain's, and did not then observe there were two marks, but had since

		M[r] Newsham y[e] Chief Mate Acc[oun]t of Stowing y[e] Maderas Wine [...] Hon[ble] Comp[anys] [...] Comp[any] M[r] Lock 2[nd] Mate of y[e] Same	Interpretations The depositions of Newsham and Lock convert the dispute from a purser's complaint at hearsay into a documented inquiry on the testimony of the ship's working officers. The chief mate is the officer immediately responsible for stowage of cargo and is here giving his own first-hand account of the operation at Madeira. The second mate corroborates the working method on the deck. The procedural pattern is the same examination-in-writing the bench used in the trial of Toby on 10 May 1715, where the governor caused the evidence to be reduced to writing before the matter went to the jury. The bench has therefore moved the <i>Cardonnell</i> dispute from protest to formal inquiry on sworn officer testimony, building the documentary record that will accompany any subsequent action against the captain or the ship's owners. Newsham's account places the Company's casks in the main hatchway and the after hatchway, with only two deal boards on top in the main hatch and the after hatch arrangement carrying the casks as riders. The technical vocabulary is that of practical stowage: deal boards as light timber dunnage between cargo tiers, and riders as the upper tier of casks lying directly on the lower tier rather than separated by a deck. The arrangement described is the standard careful stowage for liquid cargo on a long voyage, with the lightest possible loading on top to minimise crush damage. Newsham's defence rests on the technical proposition that the stowage was sound and that no method short of perfect cask construction could have prevented the leakage. The cooperage defence shifts the responsibility from the captain to the original makers of the casks. Newsham's testimony that some staves were above an inch and a half in one part and less than half an inch in another part - a four-fold variation in thickness across a single stave - is a precise palaeographic measurement of cask construction failure. Casks made to that standard cannot bear the working pressure of long-voyage stowage, where the differential expansion and contraction of staves under tropical heat and equatorial cold opens any unevenly hooped joint. The cooper's failure, in this account, is the operative cause of the leakage rather than the captain's stowage choices. The Honourable Company will have to look to its supplier of casks at the Madeira purchase rather than to the <i>Cardonnell</i> for the loss. Lock's evidence corroborates the working method while adding the important point that he himself, as the man directly doing the stowage, did not make any distinction between the Company's wine and the captain's. The Company casks and the captain's were stowed as they came on board, without preference. Lock did not observe the two marks at the time, only learning of them since. The testimony if accepted destroys the implication of selective favouring on which Allison's complaint rests. The matter resolves into a cooperage problem, not a stowage problem; into a Madeira purchase issue, not a <i>Cardonnell</i> officer issue. Speculations The bench's procedural choice to take written depositions from the chief mate and the second mate, in addition to the captain's own reply, is probably designed to produce the most thorough documentary record possible against any future challenge. The Company's protest of 11 June 1715 and Allison's complaint of the present day are now supported by countervailing officer testimony from the ship; the bench can either accept the officer accounts and discharge the leakage matter as a cooperage failure, or reserve the question for further investigation at London once the <i>Cardonnell</i> arrives. By documenting both sides at the present sitting, the council ensures that any decision made at London on

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			the homeward despatch can rest on a complete record from the island. The convergence of Newsham's and Lock's testimony on the equal-leakage point - that the captain's own casks suffered as much or more than the Company's - is probably the procedural mechanism by which the captain insulates himself against any claim of selective favouring. The bench will perhaps order an inspection of the cargo at the wharf during the unloading to verify the markings and the leakage rates, in the same way Bazett and Byfield were ordered to view the place of Henry Francis's land petition on 31 May 1715. If the physical inspection bears out the officers' depositions, the matter falls away as a cooerage problem; if it does not, the bench has reserved the option of formal action against the captain on the strength of the protest already entered. Either way, the dispute has now been documented in a way that gives the bench the freedom to settle it on the evidence as it develops.
495	486	Observed it, [...] does know that y[e] Hon[ble] Comp[anys] Wines has a distinct [...] different mark from y[e] Cap[t]s Wines [...] is very positive that nothing was Stowed on y[e] Wines that did or was likely to do them any hurt [...] Believes the badness of the Casks to be the only Occassion of y[e] Leakage [...] Sayeth that the Cheif Mate [...] himself who had One Cask on board be- tween them have (tho they did take care of their Own Cask, Yet they have Suffered near One third part of their Cask being Leaked out w[ch] Certainly is by y[e] Slightness of the Cask (Sign'd) John Lock, Russell Walker third Mate of the Cardonnell Saith that he Assisted in y[e] Stowing the Wine at y[e] Maderas [...] Stowed the after part himself [...] that it was well Stowed [...] has Seen the other [...] says that was well Stowed as far as he could Judg [...] be- lieves y[e] occas[i]on of y[e] Leakadge in y[e] Hon[ble] Comp[any] Wines, proceeded from y[e] badness of the Cask, [...] he denys y[e] tolling y[e] purser that the wines was ill Stowed, But on y[e] Con- trary saith they were Stowed upon whole Deale Boards [...] could not give way to receive any damage by there being ill Stowed and he confesseth his fault in tarrying on shoar without his Comanders Lycence while the Ship was unloading But he saith that on Sunday morning when he did come on shoar he had leave to come then from y[e] Comanding Officer for that day [...] he did not intend then to stay any longer [...] was preparing to go on board Margin Notes: M[r] Walker y[e] 3[d] Mate. Acc[oun]t of y[e] Stowidge of y[e] Hon[ble] Comp[anys] Wine [...]	Lock continued. He had since observed it, and knew that the Honourable Company's wines had a distinct and different mark from the captain's wines. He was very positive that nothing was stowed on the wines that did or was likely to do them any hurt. He believed the badness of the casks to be the only occasion of the leakage. The chief mate and himself had one cask on board between them, and although they had taken care of their own cask, they had suffered near one third part of their cask being leaked out, which certainly was by the slightness of the cask. The deposition was signed by John Lock. Russell Walker, third mate of the <i>Cardonnell</i>, gave his account of the stowage of the Honourable Company's wines. He had assisted in the stowing of the wine at Madeira and had stowed the after part himself. It was well stowed. He had seen the other and said that that was well stowed as far as he could judge. He believed the occasion of the leakage in the Honourable Company's wines proceeded from the badness of the casks. He denied the purser's telling that the wines were ill stowed; on the contrary, he said they were stowed upon whole deal boards, and could not give way to receive any damage by being ill stowed. Walker confessed his fault in tarrying on shore without his commander's licence while the ship was unloading. He said that on Sunday morning, when he had come on shore, he had leave to come then from the commanding officer for that day, and did not intend then to stay any longer, and was preparing to go on board Interpretations The third mate's evidence adds the personal-financial confirmation of the cooerage failure. Lock and Newsham, the chief and second mates, had between them one cask of their own on board, of the same kind as the Company's. The two officers, looking after their own cask with personal care, had nevertheless suffered the loss of near one third of the cask through leakage. The implication for the bench is clear: a cask that loses one third of its contents under the direct attention of its owners cannot have been lost through neglect of stowage, but only through defective construction. The personal loss confirms the technical evidence that the cooerage at Madeira was inadequate, and the matter is now settled on the testimony of three officers of the ship. Russell Walker's deposition closes the stowage inquiry on the working-officer side. As the third mate who actually performed the stowage of the after part of the hold, his testimony is direct rather than corroborative. The after part was stowed by his own hands; the rest he saw, and judged well stowed. The technical detail of the wines being stowed upon whole

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			deal boards adds a further element of cargo-protection method: not the half-board or end-piece dunnage that might have indicated economising on materials, but full deal boards, providing the maximum cushion between cask and adjacent cargo. The stowage method was therefore not merely adequate but better than the minimum, and the leakage cannot be attributed to it. Walker's confession of his fault in tarrying on shore is the additional disciplinary head that has emerged in the course of the deposition. The third mate has been ashore without the captain's leave during the unloading period. The procedural significance is twofold. First, the deposition is being given by an officer who is himself in breach of his command. Second, the leave to come ashore had been obtained from the commanding officer of the castle for that day - that is, from the garrison, not the ship - and Walker had then extended his stay beyond his original intention. The confession recovers from Walker an honest admission of his irregular shore time, which the bench will weigh against the value of his testimony on the stowage matter. The procedural interaction between the protest of 11 June 1715 against Captain Mawson for failure to unload within the ten charter-party days, and the present deposition of an officer who was ashore without leave during the unloading, illustrates the operational complexity of the <i>Cardonnell's</i> call. The captain has been formally protested by the bench for delay; one of his own officers has now confessed that he was not on board during part of the unloading. The relationship between the captain's overall responsibility for the unloading and the third mate's individual absence will perhaps weigh in the bench's overall view of the matter at the close of the inquiry. Speculations The mates' decision to admit personal financial loss on their own joint cask is probably calibrated to support the cooerage defence by direct demonstration rather than by inference. By disclosing that they themselves had a cask of the same provenance that had lost a third of its content, the chief and second mates establish that the leakage problem extends across all the Madeira wine without discrimination by ownership. The captain, his officers and the Honourable Company have all suffered equally; the only differentiating factor is the quality of the cask, not the place of stowage or the priority given to one consignment over another. The procedural force of the personal disclosure is greater than that of any abstract assertion of equal treatment. Walker's voluntary confession of his unauthorised shore time is probably also a calculated procedural move. By disclosing his own irregularity in the course of giving testimony on the stowage, the third mate places his honesty on the record before any subsequent inquiry can discover the same fact through other channels. The disclosure positions Walker as a candid witness whose account of the stowage can be relied upon precisely because he has not concealed his own fault. The same self-presentation pattern was used by Mrs Haswell in her petition of 31 May 1715, where the prompt provision of inventory at the Harper probate of the same day was used to counter the wider charge of executor neglect. The procedural device of disclosing an adverse fact to strengthen the credit of a favourable one is now a settled feature of the matter being recorded by the bench.
496	487	board last night. Sign'd Russell Walker The said Walker further saith that he had a Quarter Cask of Wine of his Own which had no Weight upon it Yet it flew at the head Sign'd Russell Walker Island S[t] Helena. Cap[t] Haswell [...] M[r] Goodwins acc[oun]t how y[e] found y[e] wine Stowed M[r] Bridg[er] [...] passing[er] of y[e] Cardonnell [...] compl[ain]ts of Cap[t] usage defer[d] till to morrow[ing]	Captain Haswell, deputy governor, said that the day after the <i>Cardonnell</i> arrived the captain of her had told him he had some leakage on board, and desired him to go and see the stowing of the wines consigned to the island on the Honourable Company's account. Haswell, with Mr John Goodwin, went to see the same and found it well stowed, he very well understanding it. The casks being bunged up, bilge free and well bedded and quoin'd, he believed that what leakage there was in the wines had been occasioned by the slightness of the casks. Mr John Goodwin testified the same. Messrs Bridger, Aylmer and Wiley complained against Captain Mawson for using them ill on board his ship the <i>Cardonnell</i>. The hearing of the complaint was deferred till the morrow morning, the matter being for assaulting, striking and imprisoning of them without any reasonable cause, and other abuses which they said they could make appear to be very notorious and ill. They desired they might be redressed, or else that they might have liberty to return to England, and to proceed the voyage. The hearing of this was appointed for tomorrow morning. The bench noted that the bridges and passes of the <i>Cardonnell</i> were to be cleared of the complaint of Captain Mawson's people, but they were referred till the morning. Interpretations Walker's supplementary point about his quarter cask is the third independent technical demonstration of the cooperage failure. A quarter cask is a smaller measure than a full pipe, perhaps holding around 26 gallons, and Walker's quarter cask had no weight upon it at all, the standard condition for a cask in the upper tier or set apart for personal use. The cask nevertheless flew at the head, that is, sprang open at the end stave fitting, with no extrinsic cause. The detail extinguishes the last possibility that pressure from stowed cargo was the operative cause: a cask with no weight on it that opens itself is failing through its own construction. The technical evidence on this head is now uniform across Newsham, Lock and Walker, with each officer adding a different category of failure (slight construction, varied stave thickness, end-stave springing under no load). The Haswell deposition introduces the governor's own representative to the inquiry. The deputy governor and Mr John Goodwin had inspected the stowage of the consigned wines on the day after the <i>Cardonnell</i> arrived, at the captain's own invitation. The Captain's prompt notification of his own leakage problem to a senior Company officer is the procedural mechanism by which Mawson sought to protect himself in advance against any later complaint from the Honourable Company. Haswell, who very well understood the matter, found the stowage proper: bunged up (the casks closed at the bung-hole), bilge free (the widest part of the cask not bearing on hard surfaces), bedded (laid on dunnage) and quoin'd (wedged into place with chock blocks against rolling). The technical evaluation by the deputy governor confirms the working-officer testimony on its own footing. The Goodwin corroboration adds the testimony of the Company's assistant at the stores, the same John Goodwin who under the council order of 14 October 1712 was charged with receiving the <i>Abingdon</i>'s cargo and reporting daily. As the man whose ordinary office is the inspection of incoming cargo, Goodwin's professional opinion supports Haswell's. The convergence of the captain's officers, the deputy governor and the Company's stores assistant on the same cooperage conclusion settles the matter for the bench's record. The complaint of the purser Allison of the present consultation has been answered by formal depositions from every other relevant witness, and the

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			cause of the leakage is now established as defective casks at the source of supply. The Bridger-Aylmer-Wiley complaint opens a fresh and grave dispute against Captain Mawson on a quite different ground. The three petitioners charge the captain with assaulting, striking and imprisoning them without reasonable cause and with other notorious and ill abuses. The remedy sought is either redress at the bench or liberty to return to England by some other route and to abandon the <i>Cardonnell</i> voyage. The hearing has been deferred to the following morning, perhaps to allow Mawson notice of the charges and the petitioners time to assemble their evidence. The pattern of deferral for fuller hearing is the same the bench applied to the Bradley tenancy and house repair petition of 26 April 1715 and the executors' petitions of 24 May 1715, with the addition that the present matter touches the criminal conduct of a Company ship's commander rather than estate or administrative business. Speculations The captain's voluntary disclosure of leakage to the deputy governor on the day after arrival is probably the procedural foundation on which Mawson has organised his entire defence of the cargo dispute. By being the first to raise the matter with the Company's senior officer, and by inviting that officer to inspect the stowage in person, Mawson placed himself in the documentary position of a captain transparent about cargo problems rather than concealing them. The structure of his defence at the present consultation - working-officer depositions, his own reply, the senior Company officer's corroboration - all rests on that early disclosure as the foundation of credibility. The procedural pattern is the same Mrs Haswell used on 31 May 1715 with the Harper inventory: the immediate provision of a favourable instrument that anticipates and answers a wider charge. The Bridger-Aylmer-Wiley complaint, with its account of striking, imprisoning and other notorious abuses, is probably the substantive grievance from which the entire <i>Cardonnell</i> dispute has been generated. A captain who has fallen out with members of his ship's company in this manner, to the point that they seek either redress or release from the voyage, is a captain whose authority on his own deck has been called into question. The protest of 11 June 1715 for failure to unload in ten charter-party days, the purser's complaint of selective stowage of the present consultation, and the Bridger-Aylmer-Wiley grievance now produced together suggest a ship under strain. The bench's hearing on the following morning will perhaps reveal whether the cargo dispute and the personnel dispute share a single underlying cause, or whether they are independent problems converging on the captain at the same call.
497	488	Island of Helena. At a Consultation held On Thursday the 16 June 1715 At the Union-Castle in James Valley Isaac Pyke Esqr Govr Geo: Haswell Depr Matthew Bazett 3d Antipas Jervey 4th & Edwd Byfield 5. in Council Prest Mr Bridger attended this morning but Mr Aylmer & Wiley went into the Country last night, upon which the Govr sent word that they might (with any other of the Gent passengers who thought fitt to be there) attend the Council in the afternoon, &c. There did only appear in the Evening Mr Bridger, Aylmer & Wiley. & The matters of each of their compl[ts] are as foll[ow]. Vizt. Mr Bridger being call'd in to tell what complaints he had against Capt Mawson. Who Sayed he Used him ill; he was desired to explain himself & askt particularly whether he wanted Victuals. he s[ai]d. y[t] y[c] Capt did allow them well enú as he thought, for he Eat w[t]h him	Island of St Helena. At a consultation held on Thursday the 16 June 1715 at the Union Castle in James Valley. Present: Isaac Pyke Esquire, governor; George Haswell, deputy governor; Matthew Bazett, third; Antipas Tovey, fourth; and Edward Byfield, fifth in council. Mr Bridger attended that morning, but Mr Aylmer and Mr Wiley had gone into the country the night before. Upon this the governor sent word that they might, with any other of the gentlemen passengers who thought fit to be there, attend the council in the afternoon. There appeared in the evening Mr Bridger, Mr Aylmer and Mr Wiley. The matters of each of their complaints were as follows. Mr Bridger, being called in to tell what complaint he had against Captain Mawson, said that he had used him ill. He was desired to explain himself, and was

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
		& had no reason to complain on that Acc[t] but that Capt Mawson had call'd him Scoundrell Rascal on board Ship & did not show him as much respect as others & y[t] now Since he came to St Helena he had took notice of one Mr Diamond in a respectfull way by Speak- ing & pulling off his Hatt to him but Margin Notes: Mr Bridger &c attend. Mr Bridgers Complaint	asked particularly whether he wanted victuals. He replied that the captain did allow them well enough, as he thought, for he ate with him and had no reason to complain on that account. But Captain Mawson had called him a scoundrel rascal on board ship and did not show him as much respect as others. Now, since he came to St Helena, he had taken notice of one Mr Diamond in a disrespectful way, by speaking and pulling off his hat to him Interpretations The hearing arranged on 15 June 1715 to take place on the present morning was disrupted by the absence of two of the three complainants. Mr Aylmer and Mr Wiley had gone into the country the night before, presumably to Plantation House or to the houses of friends among the planters. The governor's response was to extend the appointment to the afternoon, with the additional concession that any other gentlemen passengers who chose might also attend. The procedural openness of the second invitation - any other of the gentlemen passengers who thought fit to be there - shows the bench treating the dispute as one that may extend beyond the three named complainants to the wider body of the ship's passenger cabin. The pattern is consistent with the bench's view, already developing from the previous evening's entries, that the <i>Cardonnell</i> dispute is wider than a single grievance. The category of gentlemen passengers identifies a particular stratum of those carried in the ship. They are not part of the working crew, and they are not subject to the captain's authority in the same way as the officers and men. Their relationship with the commander is that of paying or chartered passengers of social standing, with whom the captain is expected to maintain the courtesies of his cabin. The complaint that follows is therefore not a dispute about ship's discipline but about social conduct between the captain and the better sort of his passengers. Bridger's testimony when called in is the careful procedural opening of the hearing. Asked particularly whether he wanted victuals - that is, whether the food allowed at the captain's table had been insufficient - Bridger answered in the captain's favour. He had eaten with the captain and had no reason to complain on that head. The procedural separation of dietary complaint from personal-treatment complaint is the bench's standard early-modern shipboard inquiry framework: a passenger's victualling complaint is one category, his treatment complaint another. Bridger has cleared the captain on the first and proceeds to the second. The substance of the second complaint is the captain's treatment of Bridger as compared with other passengers. Mawson called him a scoundrel rascal on board ship and showed him less respect than others. Since the <i>Cardonnell</i> came to St Helena, Mawson had taken notice of one Mr Diamond in a disrespectful way, by speaking to him and pulling off his hat in a particular manner. The detail of pulling off a hat is the conventional sign of acknowledgement between men of standing in the period, and the manner in which it was done - the precise inflection of the gesture - is the social signal that carried the slight. The complaint is therefore the gentleman passenger's grievance over hat-honour, the standard ground for a polite dispute in the age. The matter has not yet been fully set out as the recovered text breaks. Speculations The withdrawal of Aylmer and Wiley to the country on the night before the appointed morning hearing is probably calculated rather than accidental. Their absence forces the bench into the afternoon and gives them additional time, perhaps to confer with island planters known to them, or to arrange the order in which the three complainants will present their cases. The procedural advantage of delay is that the captain

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			will then have to answer three sequential complaints rather than a single combined hearing, with each complainant tested by the bench in turn. The governor's response - to extend the appointment with an open invitation to other gentlemen passengers - converts the delay into an opportunity for the bench to widen the inquiry beyond the three named men. Bridger's careful exclusion of any victualling complaint, before turning to the matter of personal treatment, is probably the procedural sign of a complainant who has rehearsed his case. A gentleman passenger who can affirm that the captain has fed him well at his own table while still maintaining a grievance about social respect is a complainant whose position is grounded in honour rather than in material loss. The bench will perhaps find the limited scope of the personal complaint more difficult to redress than a victualling or assault charge would have been. The Bridger-Aylmer-Wiley reference of the previous evening to striking, imprisoning and other notorious abuses suggested more serious matter; the present hearing of Bridger's particular complaint, on the calling of a name and the manner of a hat-honour, places the grievance lower than the original characterisation. The full extent of the complaint will perhaps emerge as Aylmer and Wiley follow.
498	489	but had took no notice of him. The calling names was denied by Capt Mawson, & Mr Bridger could not say he ever call'd him any ill names particularly but as h'ws Spoke in Generall of those who were below sh[.] disorderly, & being ask't if he was One of them said no, Upon which the Govr told him then he could not take it to himself. Upon the whole it Seem'd Mr Bridger was Urg'd & perswaded to Join th[e] rest to complain as others were in the Country, were they went on purpose to gett those there to Joyn with them Upon which y[e] Govr advising Mr Bridger better, then, to be led away after so Silly a manner & to incourage complaints. He desired Capt Mawson not to take any further notice of it, or shew any disco[n]tent to Mr Bridger since he saw twas his weakn[es]s. which he promised to do, & they both were made friends, & Mr Bridger seem'd very well Satisfied, So the Govr invited Mr Bridger to Sup with him Then Mr Willy and Mr Aylmer complain'd the Capt: had imprison'd Willy on board the Ship & threatned to confine Aylmer & turn'd them from the Quarterdeck The Cap[t]n Answ[r] Said the reason that he confined Mr Willy was because he was a very abusive man in Words & made a distur- bance in the Ship, & resisted him in the doing the busines[s] thereof. The Chief Mate was Examind & sayd as followeth. Vizt. Upon Our arrival at y[e] Island of Madera being Oblidged to stow our hold for the reception of y[e] Honble Compys Wine Several goods of y[e] Factors could not be without removall Margin Notes: Capt: Mawsons reply. Govrs advise to Mr Bridger The Capt: & Mr Bridger recon- ciled. Mr Willy & Mr Aylmers Compl[t] y[e] Cap[t]s reply. Mr Newshams Acct of y[e] dispute	Bridger had taken no notice of Mawson. Captain Mawson denied the calling of names. Mr Bridger could not say that the captain had ever called him by any ill names in particular, but as he had spoken in general of those who were below to be disorderly, and being asked if he was one of them said no. Upon this the governor told him then he could not take it to himself. Upon the whole it seemed that Mr Bridger was urged and persuaded to join with the rest in complaint, as others were in the country, where he had gone on purpose to get those there to join with them. Upon which the governor advised Mr Bridger better than to be led away after so silly a manner and to encourage complaints. The bench desired Captain Mawson not to take any further notice of it, or show any discontent to Mr Bridger, since he saw it was his weakness, which he promised to do. Both were made friends, and Mr Bridger seemed very well satisfied. The governor invited Mr Bridger to sup with him. Then Mr Wiley and Mr Aylmer complained that the captain had imprisoned Wiley on board the ship and threatened to confine Aylmer, and turned them from the quarterdeck. The captain answered and gave his reason. He had confined Mr Wiley because he was a very abusive man in words, and made a disturbance in the ship, and resisted him in the doing thereof. The chief mate was examined and said as follows. Upon our arrival at the island of Madeira, being obliged to clear our hold for the reception of the Honourable Company's wine, several goods of the factors could not be without removal. Interpretations The Bridger complaint collapses on examination. The captain denied calling Bridger any particular ill names, and Bridger himself could not point to any. The most the complaint amounted to was the captain's general reference to those below as disorderly; Bridger, on being asked, did not place himself among them. The governor's intervention - that Bridger could not take to himself a general reference that he himself denied applied to him - is the bench's procedural disposal of a grievance unsupported by particular instance. The procedural mechanism mirrors the disposal of the first indictment against Toby on 10 May 1715, where the case fell because there was no evidence given and the complainant had only suspected the slave; here too the

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			complaint fails because the petitioner cannot specify the offence against him. The bench's reading that Bridger had been urged and persuaded to join with the rest in complaint, and that the others were in the country precisely to draw further support, exposes the procedural structure of the <i>Cardonnell</i> passengers' grievance. The three complainants of 15 June 1715 were perhaps not so much a coherent group of injured men as a coalition assembled for the present hearing, with Aylmer and Wiley's withdrawal to the country on the previous evening serving the function of recruitment rather than withdrawal. Bridger's case was the weakest of the three, and the bench's settled view that he had been led after so silly a manner places his complaint in the lower register of social grievance. The reconciliation of Bridger and Mawson under the bench's auspices is the procedural restoration of relations between a passenger and his captain. The bench's request that Mawson take no further notice and show no discontent to Bridger, and Mawson's promise to that effect, settles the matter without any formal finding against either party. The governor's invitation to Mr Bridger to sup with him is the social ratification of the reconciliation: a passenger who has just been corrected for being led after a silly manner is invited to the governor's table to dine, the gesture removing any lingering shame and re-establishing him in good standing on the island. The pattern of the governor's table as a venue for the closing of disputes is consistent with his earlier morning interview with Haswell of 4 May 1715, when the governor sought to dispose of the Toby complaint in private before any matter went to court. Wiley and Aylmer's complaint, by contrast, is of a substantively different order. Wiley had been imprisoned on board the ship, and Aylmer had been threatened with confinement; both had been turned from the quarterdeck. These are physical-disciplinary actions by the captain, not slights of social register. The captain's defence on Wiley - that he was a very abusive man in words who made a disturbance in the ship and resisted the captain in dealing with it - shifts the case to the legitimate exercise of shipboard authority against a passenger who had defied it. The bench has begun the inquiry by examining the chief mate, whose account from the arrival at Madeira will set out the operational background to the disturbance. Speculations The bench's procedural choice to dispose of Bridger's case in a single sitting through reconciliation, before moving to the Wiley and Aylmer cases, is probably calculated to separate the weakest complaint from the stronger ones at the outset. By demonstrating that Bridger's grievance has no foundation, the bench reduces the credibility of the original combined complaint of 15 June 1715, where all three petitioners had appeared together with the same general charges of striking, imprisoning and other notorious abuses. Wiley and Aylmer must now establish their own complaints on their own facts, without the support of the Bridger element. The governor's structural management of the inquiry follows the same pattern by which he has separated administrative from political business throughout the recent record. The chief mate's testimony, beginning at the <i>Cardonnell</i>'s arrival at Madeira, is probably the bench's deliberate frame for the entire inquiry. By starting at the point of the Madeira call, the inquiry will recover the conduct of the voyage from the moment the Company's wine was loaded - the same wine whose leakage occupied the consultation of 15 June 1715 - and so situate the personal-discipline complaints within the context of the cargo dispute already addressed. The two strands of the <i>Cardonnell</i> matter, the cargo and the

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			passengers, are perhaps to be unified through the chief mate's narrative of the voyage. The same Thomas Newsham whose stowage testimony of 15 June 1715 explained the leakage will now perhaps explain the disturbance, with the bench's view of the captain's authority on his ship resting on a single witness's account of both questions.
499	490	(as Hampers of Wine, Beer, Small boxes &c Whereupon I applied to y[e] Gent Factors then on board, Vizt: Mr Willy particularly to desire they would receive some of their small parcels into their own care in y[e] Cabbin being at y[t] time capable & clear enú to receive them, the s[ai]d Mr Willey opposed there coming in there. I[.] told him y[t] it was seasonable they should have y[e] same care of their own Goods as I had, & proposed y[t] only to prevent embezelments & also that we might not loose y[e] Use of Our men by being drunk with their Liquors. told him that I was under Obligation to make place for his Masters Cargoe, & would also take care of his as far as lay in my power But answered That he was as well Obli[d]g'd to take care of his, & y[t] he would not Suffer 'em come in there. Went a Second time with as much application & Curtesie as possible, But Mr Willy Swore that Capt Mawson himself should not bring them in & that he would defend the Door with his Sword. Upon which I acquainted Capt Mawson, who imodiatly went down & a[.]ked himself to carry in y[e] s[ai]d Hampers, upon which Mr Willy Struggled & shove y[e] Capt who gave him a blow about y[e] head or face and had not I enterven'd would at that time have Asaulted y[e] Capt & gave him the worst Language y[t] could be expected from One intrusted by y[e] Honble Compy. As Rogue, Rascal, Scoundrel & other ill Language, & threaten'd him to go on shoare & Clapt his hand upon his Britch & b[ai]d him kiss that & that he would call Capt. Mawson to an Account on Shoare. he	The chief mate continued. The goods to be removed were such as hampers of wine, beer, small boxes and other items. Newsham then applied to the gentlemen factors then on board, and particularly to Mr Wiley, to desire that they would receive some of their small parcels into their own care in the cabin, the cabin being at that time capable and clear enough to receive them. Mr Wiley opposed their coming in there. Newsham told him that it was reasonable they should have the same care of their own goods as he had, and proposed it only to prevent embezzlements, and also that the ship might not lose the use of the men by their being drunk with their liquors. Newsham told him that he was under obligation to make place for his masters' cargo and would take care of Wiley's goods as far as lay in his power. Wiley answered that he was as well obliged to take care of his goods, and he would not suffer them to come in there. Newsham went a second time with as much application and courtesy as possible. Wiley swore that Captain Mawson himself should not bring them in, and that he would defend the door with his sword. Upon this Newsham acquainted Captain Mawson, who immediately went down and applied himself to carry in the hampers. Mr Wiley struggled and shoved the captain, who gave him a blow about the head or face. Had Newsham not intervened, Wiley would at that time have assaulted the captain. Wiley gave him the worst language that could be expected from one entrusted by the Honourable Company, such as rogue, rascal, scoundrel and other ill language, and threatened him to go on shore. Wiley clapped his hand upon his breech and bid him kiss that, and said that he would call Captain Mawson to an account on shore. Interpretations The chief mate's narrative restructures the dispute from a question of the captain's conduct to a question of the passenger's conduct. The Madeira loading sequence is set out as a normal piece of voyage practice: the hold being cleared to make room for the Honourable Company's wine consigned to the island, the small parcels of the passenger factors had to be moved temporarily into the cabin space. The proposal was reasonable on its face, was made with care to preserve the factors' interests, and was supported by a particular operational concern. The risk of the seamen becoming drunk on opened liquor casks in the hold during the work of stowage is a recognised problem of long voyages, and the move of beer and wine hampers into the secure cabin space is the procedural safeguard against it. Wiley's response to Newsham was an outright refusal, repeated on a second application made with all possible courtesy. The escalation to a sworn declaration that Wiley would defend the cabin door with his sword against the captain himself converted the matter from a refusal of cooperation into a threat of armed resistance. The captain's intervention - going down to the cabin in person and applying himself to bring the hampers in - was the legitimate exercise of his authority over the ship's working space, with the cabin not the personal property of any passenger but accommodation provided under the voyage. Wiley's physical resistance, struggling and shoving the captain, was the breach of that authority, and the captain's blow about the head or face

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			was the proportionate response within the bounds of shipboard discipline. The chief mate's evidence that he intervened to prevent Wiley assaulting the captain establishes the threshold the bench will apply in considering the question of who was the original offender. Wiley spoke first, sworn defiance first, resisted physically first, and was prevented from assault only by the intervention of an officer. The captain's strike, by this account, was the response to physical aggression rather than the initiation of it. The mate's evidence on this point is precise and personal: he himself was on the scene and intervened. The procedural value of the testimony is high, in contrast to William Allison's purser's complaint of the previous day, which had rested on report of another. The catalogue of language used by Wiley - rogue, rascal, scoundrel and other ill language - is the documentary record of the verbal abuse. The bench has met this catalogue before, in Mrs Haswell's petition of 31 May 1715 alleging defamation of her reputation by Powell's articles. The standard of language counted as scandalous is now fixed in the consultation books as a benchmark against which the present case can be measured. Wiley's threat to call the captain to an account on shore is the conventional language of a duel challenge, the gentleman's recourse where shipboard authority cannot be answered with shipboard means. The threat moves the dispute from the legitimate hierarchy of the ship to the private rule of personal combat, and is the kind of conduct on which a captain has no choice but to confine the speaker for the safety of the ship's good order. Speculations The chief mate's narrative is probably the strongest single deposition in the <i>Cardonnell</i> matter. Newsham was present at every step, made the application himself, fetched the captain, and intervened at the critical moment. The accumulated weight of his testimony - on the stowage of the wine on 15 June 1715 and on the disturbance with Wiley today - establishes him as the bench's principal witness on the wider dispute. The pattern is consistent with Newsham's role as the senior working officer of the ship, whose duty embraces both cargo and crew management. By concentrating its inquiry on his evidence, the bench builds a single coherent narrative of the voyage from the Madeira loading to the present confrontation, with Wiley's conduct emerging as the operative cause of the imprisonment of which he now complains. Wiley's behaviour on board, as set out in the deposition, is probably also the operative cause of his having joined the original complaint of 15 June 1715. A factor who has been confined for armed defiance of his captain has every reason to seek redress by transferring the dispute to a venue where the captain is the defendant rather than the commander. By bringing the complaint at the island, with the bench as referee, Wiley converts an act of shipboard discipline into an alleged abuse of office. The procedural manoeuvre is the same Captain Haswell attempted at the trial of Toby on 10 May 1715, when the slave's prosecution sought to transfer the deputy governor's private trouble onto the criminal docket of the council. Both attempts have so far been seen through by the bench, with the underlying facts examined and the original aggressor identified through deposition of those present.
500	491	which may not improperly be called Mutiny for all Capt[s] are in danger if so liable to be Asaulted by people in such humours & had it not been for pestering Our Decks in a dangerous port, for my own part I should have left 'em to no greater care then of a Common Sailors. Mr Willy & Aylmer said the Capt & his Mate to be sure would make their Own cause as good as they could but	Newsham closed his testimony. The conduct of Wiley might not improperly be called mutiny, for all captains were in danger of being assaulted by people in such humours, and had it not been for pestering the decks in a dangerous port, for his own part he would have left them to no greater care than that of a common sailor.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
		they desired to be Judged by Mr Newcombs Testimony who was the Capts friend as well as theirs, who they believ'd would Speak the truth, Upon w[ch] he was call'd in & said as foll[ows]. Vizt. Mr Stephen Newcomb Saith that there has been great disturbances on board y[e] Ship Cardonnell, & Sayeth that y[e] Gentlemen passengers have in his Judgment, Severall tho not all been the Ocea[s]ion of it & Sayes that he remembers that he has heard Mr Willey say Capt Mawson was no Gentlemen & that he was a Scoundral, & that Once in the Voyage y[e] s[ai]d Willy expos'd his backside to the Capt & bid him kiss his Ars[e] A[n]d Saith that Mr Aylmer has in the mid night Sat to Drinking a Cup t[o] y[e] Moon & Order'd it to be Smug[d] that it might burn clearer to light him & has been very abusive to the Capt[n] & occasion'd many distur- bances to y[e] Ship & would knock against the Ceiling of y[e] Cabbin on purpose to disturb y[e] Capt that the said Aylmer is often drunk and abusive in his Liquor. And Sayeth also that Willy has very often drank to the Kings Health & there Margin Notes: Mr Willy & Mr Bridger refer to Mr Newcombs Testimony Mr Newcombs acc[t] of y[e] matter	Mr Wiley and Mr Aylmer said the captain and his mate to be sure would make their own cause as good as they could. They desired to be judged by Mr Newcomb's testimony, who was the captain's friend as well as theirs, and who they believed would speak the truth. Upon this Newcomb was called in. His testimony was as follows. Mr Stephen Newcomb said that there had been great disturbances on board the ship <i>Cardonnell</i>. The gentlemen passengers had, in his judgement, several though not all been the occasion of it. He remembered that he had heard Mr Wiley say Captain Mawson was no gentleman and that he was a scoundrel, and that once in the voyage Mr Wiley exposed his backside to the captain and bid him kiss his arse. Newcomb said that Mr Aylmer had in the midnight sat to drinking a candle at the moon, and ordered it to be snuffed that it might burn clearer to light him. He had been very abusive to the captain and had occasioned many disturbances in the ship. He would knock against the ceiling of the cabin on purpose to disturb the captain. Aylmer was often drunk and abusive in his liquor. Newcomb said also that Wiley had very often drunk to the King's health and then Interpretations The chief mate's characterisation of Wiley's conduct as not improperly called mutiny carries the gravest legal weight available in shipboard discipline. Mutiny is the resistance of constituted authority by the men of the ship, and the use of the word against a passenger rather than a member of the crew is a notable extension. The mate's reasoning is that the captain's authority over passengers is as essential to the safety of the voyage as his authority over crew, and that abusive interference with that authority creates the same operational risk. The reference to pestering the decks in a dangerous port is the operational consideration that Newsham invokes: a passenger who creates trouble while the ship is in harbour, perhaps with unknown sail in the offing of the kind reported in the double alarm of 10 June 1715, threatens the ship at her most exposed moment. Newsham would, by his own statement, have left such people to the care of a common sailor only, that is, treated them as ordinary seamen subject to the boatswain's rope's end rather than the captain's table. The Wiley-Aylmer party's decision to call Mr Stephen Newcomb as their own witness is the procedural turning point of the inquiry. Newcomb is presented to the bench as a man known to both sides - friend to the captain and to the complainants - and so as a witness whose testimony will be received as impartial by both parties. The selection of an agreed witness is a recognised mechanism in informal arbitration, by which both sides commit themselves in advance to accept the testimony of a single trusted person. Wiley and Aylmer's confidence that Newcomb will speak the truth is the predicate of their submission to his evidence; whatever Newcomb says, they have committed themselves to be judged by it. Newcomb's testimony then describes a sequence of acts by Wiley and Aylmer that confirms and extends the chief mate's account. Wiley had said the captain was no gentleman and that he was a scoundrel, and at one point in the voyage had exposed his backside to the captain and uttered the same gross phrase Wiley had used to Newsham at Madeira. The repetition of the gesture and the language across two separate incidents, and the corroboration by an agreed witness, makes the conduct a settled pattern rather than a single incident. Aylmer's behaviour is described as a different category of offence: drunken eccentricity such as sitting to drink to a candle held against the moon and ordering the candle snuffed for clearer light, abusive language to the captain, and deliberate physical interference with the captain's

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			rest by knocking against the cabin ceiling. The combination is the picture of a passenger habitually drunk and deliberately disruptive. The reference to Wiley's drinking the King's health, recovered as the principal text breaks, opens a further element of Newcomb's testimony. The toast to the King's health was the standard expression of loyalty in early Hanoverian shipboard practice, particularly important in the months immediately following the accession of King George on 1 August 1714. With the proclamation made at the island only on 6 June 1715 and the King's health drunk at the public houses with bonfires that evening, the toast carries continuing political weight. Wiley's frequent drinking to the King's health is therefore being recorded by Newcomb as a separate point, perhaps to introduce a circumstance that turns against him, or perhaps to introduce one in his favour. The next image will set out the qualification. Speculations The Wiley-Aylmer party's submission to Mr Newcomb as agreed witness is probably the gravest procedural mistake they could have made. Having staked their credit on his testimony, they cannot now contradict him without breaking the commitment by which they submitted. Newcomb has, on the recovered evidence, comprehensively confirmed the captain's account: Wiley's verbal abuse, his physical exposure, his confrontational language; Aylmer's drunkenness and deliberate disruption. The procedural device they chose - asking the bench to judge them by a mutual friend's testimony - has converted their complaint into a self-administered conviction. The pattern is unlike Mrs Haswell's careful petition of 31 May 1715, where the witnesses she offered were the nearer neighbours and children's relations she could be confident would support her; the <i>Cardonnell</i> complainants have miscalculated. The chief mate's invocation of mutiny against passengers is probably also the council's procedural ground for moving the inquiry from a personal hearing to a question of shipboard order. If the bench accepts Newsham's characterisation, the captain's confinement of Wiley is no longer a complaint to be redressed but a justified act of shipboard discipline. The complainants' original demand of 15 June 1715 to be redressed or to have liberty to return to England and to abandon the <i>Cardonnell</i> voyage becomes the bench's procedural opportunity: the council can grant the abandonment of the voyage as a way of removing the disruptive passengers from the ship, while restoring the captain's authority over his deck and protecting the <i>Cardonnell</i>'s remaining voyage. The inquiry has thus changed its character from a hearing of complaints against a captain to a settlement of the disposition of troublesome passengers.
501	492	Said, I don't mean King George but my Own King James the Third for all the Whiggs are Rogues. They then Seem'd Surprized that he should Speak of that, w[th] they had desired him not to mention The Govr told them they were not fitt persons to Serve the Honble Compys (who were the Kings best Subjects) & that such men ought not to proceed the Voyage, & he did not know whether 'twas safe to Send such persons any further or no but that 'twould be more for his Honr: Masters Interest to send them back again, which he thought was his duty Mr Aylmer sayd he Used not to be often Drunk in y[e] Voyage & that (when the great disturbance was made) He did ask the Capts pardon for disturbing him They both did now heartily ask the Govrs & the Capts pardon promising to behave themselves better for the future And had not now complain'd but that they had been inform'd Since they came here that they were not Used well & that they should have had a Servant	Newcomb closed his testimony. Wiley, when he had drunk the King's health, had said that he did not mean King George, but his own King James the Third, for all the Whigs were rogues. Wiley and Aylmer then seemed surprised that Newcomb should speak of that, which they had desired him not to mention. The governor told them they were not fit persons to serve the Honourable Company, who were the King's best subjects, and that such men ought not to proceed the voyage. He did not know whether it was safe to send such persons any further or no, but it would be more for his Honourable Masters' interest to send them back again, which he thought was his duty. Mr Aylmer said he was not often drunk in the voyage, and that when the great disturbance was made he did ask the captain's pardon for disturbing him. Both Wiley and Aylmer now heartily asked the governor's and the captain's pardon, promising to behave themselves

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
		appointed to Wait on them & fetch their things, clean their Apartment & do what else they wanted. They were asked who gave them such bad advice & information of what their Usage ought to be, but they were unwilling to tell & said they had been told so. But the Govr being most desirous to make every body contented enquired no further of y[t] matter And they agreed to write a Note to the Capt to ask his pardon & Margin Notes: Govrs opinion Mr Aylmers Vindication Query Govr desirous to make y[m] easy	better for the future. They had not now complained but that they had been informed, since they came to the island, that they were not used well, and that they should have had a servant appointed to wait on them, fetch their things, clean their apartment and do what else they wanted. They were asked who had given them such bad advice and information of what their usage ought to be, but they were unwilling to tell, and said they had been told so. The governor, being most desirous to make everybody contented, enquired no further of the matter. They agreed to write a note to the captain to ask his pardon. Interpretations The Jacobite revelation transforms the inquiry. Wiley's qualification of the King's health toast - that he did not mean King George but his own King James the Third, and that the Whigs were rogues - is an open declaration of allegiance to the Stuart pretender against the proclaimed Hanoverian sovereign. The phrase his own King James the Third refers to James Francis Edward Stuart, son of the deposed James II and the figure for whom the Jacobite cause raised arms in Scotland and northern England during the rising that broke out in the latter half of 1715. At the present consultation of 16 June 1715, ten days after the formal proclamation of King George at the island on 6 June 1715, such a declaration is direct opposition to the lawful sovereign and to the constitutional settlement under which the Honourable Company holds its charter. The procedural collapse of the complainants is immediate. Wiley and Aylmer's surprise that Newcomb had mentioned the matter, which they had asked him not to mention, exposes the complainants' awareness that the toast carried fatal implications. They had submitted to Newcomb's testimony in confidence that he would suppress the most damaging element of their conduct. The witness's choice to disclose it nevertheless, perhaps out of his obligation to speak the truth before the bench, places before the governor the full character of the men whose complaint had opened the inquiry. The procedural device of an agreed witness has now produced not merely the disposal of the personal-treatment complaints but a constitutional revelation against the principal complainant. The governor's response - that the men were not fit to serve the Honourable Company, that they should not proceed the voyage, and that it was more for the Honourable Masters' interest to send them back again - converts the inquiry into a personnel decision. The bench will send them home to England rather than allow their continued passage in Company employment. The phrasing of more for his Honourable Masters' interest is the standard formula for exercising discretion in the Company's commercial favour. The directors at London will receive at the homeward despatch both the complainants' original petition of 15 June 1715 and the depositions of the present consultation, with the governor's order for their return forming the disposition of the matter. The reconciliation that follows is the bench's softer landing for the wider matter. Aylmer's qualified admission - that he was not often drunk in the voyage, and that he had asked the captain's pardon when the great disturbance was made - is a partial concession on his particular behaviour. Both Wiley and Aylmer heartily asked the governor's and the captain's pardon, and promised to behave themselves better in the future. The bench has thus produced both a procedural finding against the men (that they will be sent home) and a social composition of the dispute (that they ask pardon and accept the captain's authority). The combination follows the same pattern by which Bridger's separate

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			complaint had been disposed of through reconciliation and a supper invitation. Speculations The governor's choice to enquire no further into who had given the complainants such bad advice and information of what their usage ought to be is probably calibrated to keep the matter within the bounds of the <i>Cardonnell</i> itself. Wiley and Aylmer's vague statement that they had been told so points to some person at the island who had encouraged them in their grievance, perhaps in the country during their visit there on the night of 15 June 1715. The most natural source of such advice would be the planters and Company servants among whom they spent the night, perhaps men with their own complaints against the present administration. The governor's decision not to pursue the trail is probably designed to avoid extending the inquiry into the island's own political tensions, particularly the still-unresolved Powell-Gurling-Steward matter and the protective orders against Captain Haswell of 10 May 1715. A formal enquiry into who advised the <i>Cardonnell</i> passengers would risk opening fresh disputes within the small island society, on a day already heavy with the constitutional implications of Wiley's toast. The Jacobite element of the testimony will probably be set down in the homeward despatch as an item of intelligence to the Lords Proprietors. With the rising in Scotland and the north of England now perhaps under way during the latter half of 1715, although news of the formal outbreak has not yet reached the island, the directors at London will be alert to expressions of Stuart sympathy among Company servants and passengers. The governor's documentary record of Wiley's toast - through the agreed-witness testimony of Newcomb and the complainants' own surprise that it had been mentioned - establishes the matter on the island's books in a form that can be transmitted to the metropolis without depending on the captain's own testimony. The bench's procedural composition of the day's record has therefore served both the immediate operational need to dispose of the disruptive passengers and the longer documentary need to inform the directors of the religious-political element among the <i>Cardonnell</i>'s company.
502	493	and did so, promising a Civiller behavoure for the future, And the Capt promised that all these matters should be forgot, and all being made friends they were dismiss It did appeare they had been privatly Urg'd by some body to complain, but we c[oul]d not discover who, only that 'twas some per- son in the Country. For their had been a Written paper drawn for a General complaint against Capt Mawson & handed about amongst all the pasingers but none would Sighe it but those three above mencond whose easy temper might without much difficulty be prevail'd on by any designing man Some gave the Govr an Account of One Mr Swarz but we could not think he could be so bad as to make these people fish in troubled Waters or to promote such complaints because he did not like their Captain but be it who it will, 'twas ill done, because some times from as Small matters as these when fomented in a Ship great disturbances do arise. All parties being made friends the passen- gers went up into the Country again to divert themselves, & the Govr gave them liberty to shoot partridges & wild fowl, &c. Geo: Haswell Antipas Jervey Edward Byfield Margin Notes: Complainants Sett on to it by persons in y[e] Country Likely Mr Swarz all made friends	Wiley and Aylmer did so, promising a civiller behaviour for the future. The captain promised that all these matters should be forgotten, and all being made friends they were dismissed. It did appear that they had been privately urged by somebody to complain. The council could not discover who, only that it was some person in the country. There had been a written paper drawn for a general complaint against Captain Mawson, and handed about among all the passengers, but only the three above mentioned signed it. Their easy temper might without much difficulty be prevailed on by any designing man. Some gave the governor an account of one Mr Swarck, but the council could not think he would be so bad as to make these people fish in troubled waters, or to promote such complaints because he did not like their captain. Be it who it will, the matter was ill done, because sometimes from as small matters as these, when fomented in a ship, great disturbances did arise. All parties being made friends, the passengers went up into the country again to divert themselves. The governor gave them liberty to shoot partridges and wild fowl. The consultation was signed by George Haswell, Antipas Tovey and Edward Byfield. Interpretations The closing of the <i>Cardonnell</i> dispute through reconciliation rather than formal sentence is the governor's settled disposition. Wiley and Aylmer promise civility for the future, the captain promises

			forgetting of the matters complained of, and all parties are made friends. The procedural pattern is the same the bench applied to Bridger and Mawson at the morning sitting and to the Allgate matter on 7 June 1715. The Jacobite toast of which Newcomb had spoken, however serious as a matter of allegiance, is not pressed to formal proceedings against Wiley; the governor's earlier statement that the men were not fit to serve and should be sent back to England has been quietly absorbed into the present reconciliation. The complainants will continue the voyage as passengers, but on the captain's terms and with their grievances disposed of. The discovery that the original complaint was the product of private urging by some person in the country opens a new question that the bench chooses not to pursue. The written paper for a general complaint against Captain Mawson, drawn up at some point and handed among all the <i>Cardonnell's</i> passengers, had attracted only the three signatures of Bridger, Wiley and Aylmer. The procedural force of the document was therefore weak, both because it gathered only three subscribers from the wider passenger body and because those three have now been characterised by the bench as men of easy temper. The reference to the prevailing problem: the <i>Cardonnell's</i> passengers were susceptible to the influence of an island-side person with reason to embarrass the captain. The naming of one Mr Swarck as the suspected agent of the design is the only specific identification in the recovered text. The governor declines to think Swarck would be so bad as to make these people fish in troubled waters, that is, to use them to exploit the disordered conditions on board for his own purposes. The phrase fish in troubled waters carries the same image used elsewhere in early modern administrative writing for the opportunistic exploitation of disorder by an interested party. Swarck's motive, if any, is left unspecified: the bench simply notes that he did not like their captain. The governor's restraint on this point - declining to pursue Swarck on the strength of unconfirmed information - is consistent with his earlier decision to enquire no further who had given the complainants such bad advice. The bench's working principle is to dispose of disputes by composition where it can, and to keep the inquiry within the bounds of the parties immediately before it. The grant of liberty to the passengers to shoot partridges and wild fowl in the country is the social ratification of the reconciliation. The men whose complaint had occupied two consultation days, and who had stood under the threat of being sent back to England, are now treated as gentlemen guests of the island, with the freedom of the country and access to its sport. The grant carries no rent or qualification; it is a courtesy extended at the close of a settled dispute. The signature pattern at the foot of the consultation - George Haswell, Antipas Tovey and Edward Byfield - records the deputy governor, the secretary and the new fifth in council as the authenticating bench. Matthew Bazett's signature is again absent, consistent with the pattern observed at the protest of 11 June 1715 and the Newington discharge of 14 June 1715. Speculations The governor's tactical reabsorption of his earlier finding - that the complainants were not fit to serve the Honourable Company and ought not to proceed the voyage - is probably the working pragmatism of a small council against a difficult disposition. To send Wiley and Aylmer back to England would require either holding them at the island until the next homeward ship or transferring them to a vessel already homeward bound, in either case with the management of two unruly passengers under Company custody. The reconciliation removes the practical burden by

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			permitting the <i>Cardonnell</i> to take them on as before, with the threat of formal proceedings held in reserve. The disposition is consistent with the bench's wider practice during the <i>Cardonnell</i>'s call of preferring composition over formal sentence where the operational interest is served. The decision not to name Mr Swarck on the record beyond the bench's open scepticism is probably designed to avoid a separate dispute with another planter or Company servant arising from the present matter. With the Powell-Gurling-Steward dispute still in its fair way of agreement and the inherited disciplinary order against Captain Haswell of 10 May 1715 not yet absorbed, the council cannot afford another political contest with a country-side resident. The governor's refusal to think Swarck so bad therefore performs two functions: it preserves the bench's freedom to act against him later if information should harden, and it allows the present consultation to close without provoking him into a response. The same restraint will perhaps yield to formal action only if the next ship to call carries fresh information that confirms the suspicion.
503	494	Island St Helena At a Consultation held on Tuesday the 21. of June 1715 at the Union Castle in James Vally Isaac Pyke Esqr Govr Geo: Haswell Depty Mathew Bazett 3d Antipas Jervey 4th & Edw Byfield 5th in Council Prest: This morning word was brought to y[e] Govr by Revd Mr Worrall that there was a paper Sett up at y[e] Ministers door, & did believe that it was a reflection on the Government &c. Upon which the Govr bid him go & take it down & bring it to him which he did. and it is as followeth Vizt. An Order of Govr Clark &c. Whereas Wee the Govr of Troy have heard the Complaints of the Barbarous, Rediculous & Scandelous Actions & treatments of Capt. Coxwain & his Lodgers & others in the Castle of Cap. Do Order & direct the said Capt. Coxwain to continue the same & according to Our Laudable Custom mettigate their grievances by Starving them, that none be left alive to complain to Govr Honor or revenge it by drubbing him. Wee Margin Notes: a Libel affixed at y[e] Parsons door. Copy thereof.	Island of St Helena. At a consultation held on Tuesday the 21 June 1715 at the Union Castle in James Valley. Present: Isaac Pyke Esquire, governor; George Haswell, deputy governor; Matthew Bazett, third; Antipas Tovey, fourth; and Edward Byfield, fifth in council. That morning word was brought to the governor by Mr William Worrall that a paper had been set up at the minister's door, and he believed it was a reflection on the government. The governor told him to go and take it down and bring it to him, which he did. The paper was as follows. An order of Governor Clark. The paper was framed as an order in the name of the Governor of Troy. He set out that he had heard of the harsh and absurd treatment dealt out by Captain Coxwain to his lodgers and others in the Castle of Capers. He directed Captain Coxwain to carry on in the same manner. By long-standing custom, he was to relieve their grievances by leaving them to starve, so that none remained alive to bring any complaint before him or to take revenge by beating him. The paper was signed: we. Interpretations The libel posted at the minister's door is a classic early modern political pasquinade, a satirical paper placed in a public location to attack the conduct of authority while remaining anonymous. The choice of location is deliberate. The minister's door is a place every inhabitant passes, and posting there gives the libel maximum visibility while attaching it loosely to the chaplain's office without making the chaplain himself the target. The same procedural mechanism was used in classical Rome, where notices were affixed to the statue of Pasquino in the Piazza Navona, the practice from which the word pasquinade derives. The libeller's choice of a public church-related location places the document in the tradition of political satire that targets officials through allusion rather than direct accusation. The transposition of the dispute into the language of the Trojan War is the libel's principal device. The author writes as the Governor of Troy, the captain in the libel is named Coxwain, the place is the Castle of Capers, and the targets are the lodgers and others. The substitution allows the libeller to attack the present government and its officers under cover of classical disguise, with each name carrying an obvious local meaning that the inhabitants would readily decode. The structure is a parodic warrant in the form of a Company instruction, with recital of complaints, mock authority

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			and operative direction. The choice of administrative form is the satire on the bench's own paper, and is the libel's claim that the council's instruments themselves are absurd and oppressive. The substance of the satire is precise. The mock order directs the captain to continue the alleged ill-treatment of his lodgers and to relieve their grievances by leaving them to starve, so that none remained alive to bring any complaint or take revenge. The two methods of mitigation are the inversion of recognised remedies: a grievance is to be addressed not by relief but by extermination of the grievants, and the alternative recourse of personal vengeance is foreclosed by depriving them of the strength to deliver it. The mock direction therefore charges the present administration with two related sins: tolerating ill-treatment of those in custody, and so administering its remedies that no complaint can survive. The substance of the satire turns on the loathsome and filthy prison of which Corporal Samuel Algate had complained on 26 April 1715 and the wider question of disciplinary practice on the island. The single-word signature - we - is the satirist's mock subscription, the royal plural of an authority claiming to speak for the whole government in a single voice. The choice avoids identifying any individual signer while maintaining the appearance of official authentication. The bench will now have to determine the authorship of the paper, the proper response to it, and whether any action is needed against the placing of it at the minister's door. The proceedings that follow will perhaps include questioning of those known to be capable of the literary style, of those with grievances of the kind alluded to, and of any who were observed near the minister's door at the time of posting. Speculations The libel is probably the product of one of the <i>Cardonnell</i> passengers whose dispute the council disposed of on 16 June 1715 through reconciliation. Wiley and Aylmer were sent up into the country again on the close of that consultation to divert themselves, with liberty to shoot partridges and wild fowl. A man of Wiley's literary capacity - capable of composing the King James the Third toast and the worst language to be expected from one entrusted by the Honourable Company - is precisely the kind of figure whose disposition to satire matches the present libel. The Castle of Capers, with its play on a punning name, perhaps gestures at the <i>Cardonnell</i>'s recent passage. The Mr Swarck against whom the governor declined to enquire further on 16 June 1715 is another possible candidate, an island-side person with reason to dislike the captain and the capacity to provoke a paper of this kind. The bench has not yet identified the author but the present occasion calls for fresh inquiry. The choice to bring the matter to William Worrall, the overseer of the plantations on his probationary appointment of 5 April 1715, rather than to the chaplain Joshua Tomlinson at whose door the paper was posted, is probably the morning timing rather than a procedural distinction. Worrall is the man who happened to be passing the minister's door on the way to the bench, perhaps in connection with his cattle account of 18 June 1715 or other plantation business. The governor's prompt instruction to him to take down the paper and bring it to the bench is the correct conservancy response: the libel was to be removed from public view at once and brought to the council for examination, rather than left at the minister's door for further reading by the inhabitants. The procedural priority was to limit the libel's circulation while reserving the question of authorship and response to the formal consideration of the bench.
504	495	Wee Council & Direct you to favour in- formers Mobb & Flatterers & on so Solid a Foundation. Build your	The paper continued. The mock order went on as follows.

		fame, & establish your Divine right to Arbitrary power, To Slight men of Station, Birth & Sense, y[t] your greatness may not be Eclipsed, Discont Aspired, or folly be conspicuous Wee further charge you not to immitate Capt. Seaman either in Sense, management or quiet Governing of his Ship but continue full of your Self admiration, cherish your Smile &c (if possible) be more Stupid then ever which will recomend you to Ours & y[e] Ladys favours. Given at Our Court in Grub Street in the City of Troy in the first Year of Our Reigne the 18: June 1715. Island St Helena. Since was Published. By the Worth: Govr & Council An Advertizement. These are to give Notice, that y[e] Honble Compa hath Upwards of One Hundred Rod of Morter or Wall to make in James[s] Valley, & that all materials to compleat y[e] Same work is within a Hundred Yards thereof. If any person or persons be willing to undertake the said work they may apply to y[e] Govr who will treat with him or them further about it. Dated at y[e] Union Castle this 24. day of June 1715. Signed by Order of Govr &c. Antipas Jervey Secr. Verte Margin Notes: Advertizem[t] to Erect Walling.	The Governor of Troy directed Captain Coxwain to give favour to his former mob and to those who flattered him, on so solid a foundation as that. He was to build his name and establish his divine right to arbitrary power, and to slight men of station, birth and sense, lest his greatness be eclipsed, his dissent despised, or his folly conspicuous. The Governor of Troy further charged Captain Coxwain not to imitate Captain Seaman, either in sense, management or quiet governing of his ship, but to continue full of self-admiration, to cherish his smile, and, if possible, to be more stupid than ever, which would recommend him to the favours of the governor and his lady. The paper was given at the court at Grub Street in the City of Troy, in the first year of the reign of the supposed governor, dated 18 June 1715. Such was the paper that had been published. By the worshipful governor and council. An advertisement. The advertisement gave notice that the Honourable Company had upwards of 100 rod of mortar or wet wall to make in James Valley, and that all materials to complete the work were within 100 yards thereof. If any person or persons were willing to undertake the work, they might apply to the governor, who would treat with them or them further about it. The advertisement was dated at the Union Castle this 24 day of June 1715 and signed by order of the governor and council by Antipas Tovey, secretary. Interpretations The libel's central political charge is the doctrine of arbitrary power. The mock order calls upon the supposed governor to build his name and establish his divine right to arbitrary power on a foundation of mob support and flattery, while slighting men of station, birth and sense. The phrase divine right to arbitrary power is the deliberate combination of two doctrines the parliamentary settlement of 1688 had been understood to reject: the Stuart claim of divine right of kings, and the absolutist claim of arbitrary power independent of law or counsel. The pairing is calculated to associate the present administration with the political theory that the Hanoverian succession proclaimed at the island on 6 June 1715 had defeated. By implication the libeller is charging the bench with proceeding on a constitutional theory at odds with the very settlement under which the new sovereign was proclaimed. The reference to mob and flatterers identifies the social allies of the supposed administration as the lower elements of the population and the obsequious courtiers, against the dispossessed party of station, birth and sense whom the order is to slight. The libeller therefore positions himself as a man of standing whose merit is being passed over in favour of unworthy creatures of the governor. The charge is the standard country-party complaint against any administration the writer disapproves of, but its location at the minister's door of a small island under Company government places the conventional rhetoric in an unconventional setting. The contrast with Captain Seaman is the libel's nautical comparator. The unnamed Captain Seaman represents the model of sense, management and quiet governing of a ship - the proper conduct of authority that Captain Coxwain is mocked for failing to imitate. The libeller's choice of a sea-going analogy invokes the same operational standard the chief mate Newsham applied to the <i>Cardonnell</i> on 16 June 1715, when he distinguished proper shipboard discipline from the disorder that troubled passengers had created. By calling on Coxwain to imitate Seaman, the libel implicitly identifies the present administration's conduct with the failed authority on the <i>Cardonnell</i>, and so links the

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			present satire to the recent disputes brought before the bench. The Grub Street dateline is the satirical reference to the London street that by 1715 had become synonymous with hack writers and political pamphleteers. By dating the paper at Grub Street in the City of Troy, the libeller acknowledges his own position as a writer of political libels in the cheap-press tradition, while continuing the Trojan disguise of the substantive content. The first year of the reign references both the supposed reign of the Governor of Troy and, by uncomfortable analogy, the first year of King George's reign, into which the mock administration is set. The 18 June 1715 date places the composition three days before its discovery at the minister's door on 21 June 1715. The wet-wall advertisement of 24 June 1715 returns the consultation book to routine business. The hundred rod of mortar or wet wall to be made in James Valley is the standard linear-measure unit for masonry, a rod being 5½ yards or about 16½ feet, and a hundred rod therefore amounting to perhaps 550 yards of wall. The work is connected to the Sandy Bay sea wall programme and the broader infrastructure works under the threads, with all materials available within a hundred yards of the site. The undertaking is to be by treaty with the governor, the usual mechanism for contracting masonry work where wage rates and conditions can be negotiated case by case, as with the replacement stone-layer labour at 3s 0d per day engaged after the breaking of the combination on 18 January 1714/15. Speculations The reference to the favour of the governor and his lady in the libel's closing paragraph is probably calculated to drag the governor's domestic establishment into the dispute. The phrase echoes the language of court patronage, where the favour of a chief executive's wife was a recognised channel of personal advancement. The implicit suggestion is that the present administration runs on the same favour-and-flattery basis as a Stuart court. The libeller has therefore concentrated his attack on the structural features the bench would find hardest to address: arbitrary power, divine right, mob support, slighting of station, and household influence. The bench cannot answer such charges with a particular order or a specific instruction; it can only proceed against the author if and when he can be identified. The juxtaposition of the libel with the wet-wall advertisement of 24 June 1715, with the dates only three days apart, is probably no accident in the bench's record-keeping. The advertisement is the bench's documentary answer to the libel: the present administration runs on practical engineering works open to public tender, with materials specified and treaty available, not on arbitrary favour to mob and flatterers. The consultation book is therefore composing its own implicit response by setting the routine administrative business immediately after the entry of the libel. The directors at London, when they read the homeward despatch carrying both items, will see at once the kind of public business the council is actually conducting alongside the satire that the bench has dignified by entering on the record.
505	496	The Govr demanded of Capt Haswell & Capt Bazett the following Questions Vizt. Q. Why the Books are not ready. A... They have not had time Q. Why the Accounts are not made Up. A... 		Q. How many Men are Absolutely necessary to write at the Stores, & how those are employed. A. They Say they want more. There are Capt Haswell Account- ant. Capt: Bazett Store keeper, Mr Byfield Mr Thomlinson, Mr John Goodwin, Thomas Goodwin & Richard D[...].on Mr William Allison purser of the Cardonnell being desirous to go for Great- Britain (& not proceed for Bencoolen) Proposed the Selling What goods he had on board & which were coming on shoar to Sell to the Honble Compa. It is Order'd That what Goods Margin Notes: Govrs Dema[n]d of Capt Haswell & Bazett ab[t] y[e] Store acc[ts] their Answr how many assists them Mr Allison proposeth to Sell his Goods.	Answer. Not till six months after the 25 of March, which, as Captain Bazett said, was the usual time. Question. How many men were absolutely necessary to write at the stores, and how those were employed. Answer. They said they wanted more. The assistants then at the stores were Captain Haswell as accountant, Captain Bazett as storekeeper, Mr Byfield, Mr Tomlinson, Mr John Goodwin, Thomas Goodwin and Richard [...]. Mr William Allison, purser of the <i>Cardonnell</i>, being desirous to go for Great Britain and not proceed for Bencoolen, proposed the selling of what goods he had on board and which were coming on shore to the Honourable Company. The council ordered that what goods he had Interpretations The bench's interrogation of Captain Haswell and Captain Bazett on the state of the books and accounts converts the long-running storekeeper-account problem from a thread on the open business to a formal proceeding under question-and-answer examination. The structure is the same the bench used for the <i>Cardonnell</i> officers on 15 June 1715: direct questions taken in order, with the answers entered word for word. The procedure preserves the responses on the record in a form that can be checked against later production. The dignity given to the questioning - both responsible officers examined together, the questions numbered in form - elevates the inquiry above ordinary administrative chasing and places it in the procedural class of a formal record. Haswell's role as accountant and Bazett's as storekeeper are the two principal offices in the Company's stores establishment at the island. The accountant is responsible for the running ledger of receipts and disbursements; the storekeeper is responsible for the physical custody of goods and for the day-to-day accounts of issues and receipts. Together they should produce the quarterly stores accounts that the bench has been pressing to settlement since the consolidated quarter to 25 February 1715 totalling £487 16s 3¼d, signed by Pyke, Haswell and Tovey without Mashborne or Bazett, and the second presentation of 25 December 1714 to 25 February 1715 delivered by Bazett on 29 March 1715 across five leaves with reading-uncertain figures. The continuing failure of the books to come up to date is therefore not a new problem but a long-standing administrative weakness now examined formally. The answers are extraordinarily candid for the consultation book. The two officers acknowledge that the books are not ready and the accounts are not made up because they have not had time. The fault is nobody's; three months are not sufficient; the work cannot be done till six months after 25 March, which Bazett identifies as the usual time. The bench's question on whose fault it is, and the answer of nobody's, exposes the structural problem: the stores establishment is undermanned for the work, and no single officer can be blamed for the systemic delay. The assistants currently employed - Byfield, Tomlinson, John Goodwin, Thomas Goodwin and Richard [...] - are listed by name on the record, with the implication that more men are needed and that any future hires should be drawn from the appropriate candidates. The procedural value of the question-and-answer is therefore the placing of a settled position on the record: the books will not be ready till six months after 25 March, and additional staff are required. The Allison proposal opens a fresh question. The purser, having decided to return to Great Britain rather than proceed on the <i>Cardonnell</i> to Bencoolen, asks the council to buy what goods he has on board and is bringing on shore. The pattern is the same one followed

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			for William Beale on 11 June 1715, where leave to depart was granted with the proviso of bona fide credit at the stores. Allison is converting his trading goods into Company credit before returning to England. The bench's order, broken at the foot of the page, begins the disposition. The change of voyage plan from the <i>Cardonnell's</i> outward leg to a homeward passage indicates that Allison has fallen out with the captain at the conclusion of the cargo dispute and the depositions of 15 June 1715 in which Allison's complaint about selective stowage was contradicted by the chief and second mates and the deputy governor. The voyage will continue without its purser. Speculations The candour of Haswell's and Bazett's answers - that the books are not ready, the accounts are not made up, and they have not had time - is probably calibrated to the homeward despatch by the <i>Cardonnell</i>. The Honourable Lords Proprietors will receive the consultation books, and a clear administrative explanation for the continuing delay in the stores accounts is more useful to the directors than any cover or excuse. The two officers, in answering the bench's questions on the record, are also addressing the directors at London through the same record. The phrase six months after 25 March which Captain Bazett saith is the usual time invokes Bazett's experience as storekeeper, established since the protest of 11 June 1715 against Captain Mawson and in continuous office since his restoration as third in council from December 1712. The directors will understand the answer as a statement of established practice rather than as a confession of failure. The procedural value of listing the seven men currently employed at the stores - Haswell, Bazett, Byfield, Tomlinson, John Goodwin, Thomas Goodwin and Richard [...] - is probably the bench's way of supporting a request to London for additional clerical staff on the establishment. By naming the current workforce and recording the answer that they wanted more, the council preserves the documentary basis for any future request for new writers to be sent out from England on the next ship. The Newington discharge of 14 June 1715, granting the experienced writer leave to serve the Company elsewhere, has left the establishment one short of its previous complement; the timing of the present examination places the staffing question before the directors at the same despatch that records the discharge.
506	497	he has that are wanting for the Use of this Island, & are not in the Store the Govr & Capt Bazett do Agree for the price if they think it cheap The proceedings relating to the Libel are as followeth Vizt. The Govr when he had received y[e] paper that was affixt At the Ministers door did believe it had been writt by some of the Gentlemen that made the Complaint against Capt Mawson tho he thought he had shewn them so much favour that they could not with any reason have cause to make such complaint. He imodiately Sent for Capt. Osborne Comd[t] of the Hannover, Capt Beeck- man Comdr of the Eagle & all the Council, shew'd them the paper, & they were all of Oppinion that 'twas very Scandalous and that the redicaling the Government in such a manner, if passed by, would tend to the lessening y[e] Government much in the Esteem of the people here. and that there fore it was very proper if possible to find out the Authors. Whereupon they Sent for Mess[rs] Aylmer, Bridger & Willey who being Ex- amind about it. Strictly deny'd their being concern'd any way in it, they pro- fessed they were very Sensable of the fa- vours they had received here & y[t] they & that they would Scorne to do a thing so ungratefull & added they could verily	The order continued. What goods Allison had that were wanting for the use of the island, and were not in the store, the governor and Captain Bazett would agree for the price, if they thought it cheap. The proceedings relating to the libel were as follows. When the governor had received the paper that had been affixed at the minister's door, he believed it had been written by some of the gentlemen who had made the complaint against Captain Mawson, although he thought he had shown them so much favour that they could not with any reason have cause to make such complaint. He immediately sent for Captain Osborne, commander of the <i>Hanover</i>, and Captain Beeckman, commander of the <i>Eagle</i>, and all the council, and showed them the paper. They were all of opinion that it was very scandalous, and that the ridiculing of the government in such a manner, if passed by, would tend to the lessening of the government much in the esteem of the people there. They thought it very proper, if possible, to find out the author. The bench then sent for Messrs Aylmer, Bridger and Wiley. Being examined about it, they strictly denied their being concerned any way in it. They professed they were very sensible of the favours they had received at

		reason Margin Notes: the Govr & Capt Bazet to agree for y[m] y[e] Govrs Opinion ab[t] y[e] Libel. Sent for some of y[e] Cardonnells passeng[rs]	the island, and said that they would scorn to do a thing so ungrateful and indeed they could very Interpretations The Allison goods order completes the procedure for the conversion of his trading stock into Company credit. The two operative tests are first whether the goods are wanting for the use of the island - that is, items the Company is short of in store - and second whether the price is cheap, judged by the governor and Captain Bazett together. The buy-or-decline mechanism gives the Company first refusal at advantageous prices, but only on items it actually needs. The mechanism mirrors the standard set-off practice that has been applied to John Alexander's bills of exchange and to other inhabitant accounts, but here applied to the unloading of a ship's purser's private venture rather than to a planter's debt clearance. The arrival of the <i>Hanover</i> and the <i>Eagle</i>, identified now in their commanders Captain Osborne and Captain Beeckman, registers the two additional ships in the road that completes the <i>Cardonnell</i> fleet picture. The earlier double alarm of 10 June 1715 had signalled multiple unknown sail; the <i>Eagle</i> was identified through Andrew Bernwick's petition of 11 June 1715, which named the <i>Eagle Galley</i> as the homeward vessel by which he wished to sail; the <i>Hanover</i> now appears for the first time in the recovered record by name. The two East Indiamen, together with the <i>Cardonnell</i>, form a small fleet at the island. The governor's choice to summon the commanders of the <i>Hanover</i> and the <i>Eagle</i> with the council to view the libel is the bench's deliberate use of the broader maritime community as a sounding board for the gravity of the offence. Three ship commanders and the full council together constitute a body whose joint opinion on the scandalous character of the paper will carry weight in any subsequent record. The unanimous verdict that the libel was very scandalous, and that to pass by such ridicule would lessen the government much in the esteem of the people, sets the legal benchmark for what follows. The bench has decided that the matter cannot be ignored. The reasoning is administrative rather than personal: it is the diminution of the government's standing among the inhabitants that must be prevented, not the personal hurt to any official. The same principle underlay the protective order of 10 May 1715 forbidding Captain Haswell to reflect on the jurors and the court to the scandal of the country and contempt of justice, and the conscious management of public dignity through formal advertisements such as the cow-saving order of 15 June 1715. The bench treats institutional standing as a tangible asset requiring active defence. The examination of Aylmer, Bridger and Wiley as the most natural suspects follows from the governor's initial suspicion that the libel had been written by some of the gentlemen who had made the complaint against Mawson. The three are summoned and questioned, and they strictly deny any involvement. Their professed sense of the favours received at the island - the dismissal of their complaint on terms, the liberty to shoot partridges and wild fowl, the supper invitation to Bridger from the governor - is invoked as evidence of their gratitude rather than of any motive to libel the government. The procedural value of their denial is high if it stands, and the bench will weigh it against the evidence of style, timing and opportunity that points in their direction. Speculations The governor's choice to involve the <i>Hanover</i> and <i>Eagle</i> commanders in viewing the libel is probably calibrated to neutralise any future criticism that the council overreacted to a satirical paper. By having three independent ship commanders confirm that the document is scandalous, the bench secures cover against any allegation that the present administration is

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			too sensitive to satire. The procedural device is the multiplication of authoritative witnesses to a finding, on the same model the bench used in taking written depositions from Newsham, Lock, Walker, Haswell and Goodwin on the <i>Cardonnell</i> stowage dispute on 15 June 1715. Both the wine question and the libel question now stand on substantial documentary foundations on the consultation book. The strict denial by Aylmer, Bridger and Wiley is probably truthful in form but not exhaustive in substance. The men may not themselves have written the paper but may have inspired it, dictated to it, or supplied the substance from which it was elaborated by a more literary hand. The references to the lodgers and others in the Castle of Capers, and to the captain of a ship whose conduct is contrasted with that of an exemplary commander, fit the <i>Cardonnell</i> passengers' complaints exactly. The mock Captain Coxwain is plausibly Captain Mawson under satirical disguise, the lodgers are the passengers themselves, and the alternative Captain Seaman represents the ideal against which they wish to measure Mawson. If the three passengers did not write the paper, they perhaps supplied the materials. The governor's earlier reluctance to enquire into who had given them such bad advice on 16 June 1715 has now caught up with him: the same designing man whose presence he then suspected may have moved from advising the complaint to writing the libel.
507	498	reasonably affirm the same for all the pasengers in their Ship. & that they were fully perswaded & convinced in their Own minds that it was not done in the Country & that it was not done by any Person belong- ing to their Ship, they all of their own ac- cord offerd the Keys of their Chests or Boxes both on shoare & a board that he might be convinced by comparing any writings he should find there, that nothing of their Writings was like that writing which gave y[e] Govr & y[e] Gent of the Council Such Satisfaccon that the doubted of them no further Then y[e] Govr sent for Mr Allison purs[er] of the Ship Cardonnell who upon some dissatis- faction with the Capt had agreed to go home when Mr Jervey came to him & askt him about this Libel & Whether he had any ways been concern'd in it or not. he possitively denied his being any ways concern'd in it but at the same time told him that One Mr Swartz who came out of the Country Yesterday with the other Gent: came into his room & took some paper away & retired & went to writing. But whether or no he writ that paper that was Stuck up he could not tell, upon which Mr Jervey took up the paper & comparing it with the Libel found it to be the same paper which he brought to the Govr & Council, who then Sent for Mr Swartz & Examin'd him about it. He denied it with a great deal of asurance disrespect & rudeness, & y[e] Govr having no other proof against him then that it was the same Sort of paper that he took of Mr Allison's, dismissed him but not without suspecting him to be the Author of that paper. He Margin Notes: Mr Allison sent for. Mr Swartz an acc[t] thereof	The three could reasonably affirm the same for all the passengers in their ship. They were fully persuaded and convinced in their own minds that it had not been done in the country, and that it had not been done by any person belonging to their ship. They all of their own accord offered the keys of their chests or boxes, both on shore and on board, that they might be examined by comparing any writings they should find there. None of their writings was like the writing in the libel. This gave the governor and the gentlemen of the council such satisfaction that they doubted them no further. The governor then sent for Mr Allison, purser of the <i>Cardonnell</i>, who upon some dissatisfaction with the captain had agreed to go home. Mr Tovey came to him and asked him about the libel and whether he had any way been concerned in it or not. He positively denied his being any way concerned in it. At the same time he told Tovey that one Mr Swartz, who came out of the country yesterday with the other gentlemen, had come into his room and taken some paper away, and had retired and gone to writing. Whether or not he had written the paper that was stuck up, he could not tell. Upon this Mr Tovey took up the paper, and comparing it with the libel, found it to be the same paper. He brought it to the governor and council, who then sent for Mr Swartz and examined him about it. He denied it with a great deal of assurance, disrespect and rudeness. The governor, having no other proof against him than that it was the same sort of paper that he took from Mr Allison, dismissed him, but not without suspecting him to be the author of that paper. Interpretations The cooperation of the three complainants in opening their chests and boxes to inspection of their handwriting is the procedural exoneration of the Aylmer-Bridger-Wiley party on authorship of the libel. The offer is made of their own accord, both on shore and on board, and so cannot be objected to as compelled. The comparison of writings is the standard early modern method for identifying anonymous authorship: a specimen of an undisputed hand is set against the disputed document, and the absence or presence of palaeographic similarities is taken as evidence one way or the other. The governor and council, finding no resemblance in any of the three

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			men's writings, are satisfied. The procedural pattern is the same the bench used in the <i>Cardonnell</i> stowage inquiry, where physical inspection of the cask marks would have settled the leakage question; here the writing comparison settles the authorship question against the three obvious suspects. The Allison information shifts the bench's attention to Mr Swartz, the same man named by some at the consultation of 16 June 1715 as the possible designing person behind the <i>Cardonnell</i> complaints, though the governor had then declined to think him so bad. The procedural progression is exact. On 16 June 1715 Swartz was a name passed to the governor in the wider context of the complaints, and the bench had not pursued the matter. Five days later, with the libel found at the minister's door on 21 June 1715, the same name comes forward through a different channel - the pursuer of the <i>Cardonnell</i> - and this time with a specific operational link: Swartz had come into Allison's room, taken some paper, retired, and gone to writing. The bench's earlier suspicion, dormant for want of evidence, is now reactivated by concrete circumstance. The crucial documentary identification is the paper itself. Mr Tovey, acting as the bench's investigator at this point, takes up the paper from which Allison's stationery had been removed and compares it physically with the libel found at the minister's door. They are the same paper - same sheet stock, same texture, same marks. The procedural force of the identification is high. A man who has been seen taking paper of a particular kind and going to writing, and whose taken paper matches the paper of the libel, has been placed in operational connection with the document. The match is not conclusive proof - the paper might have been further redistributed - but it is the strongest single piece of evidence the bench has assembled against any individual. The dismissal of Swartz from the examination, despite the bench's continuing suspicion, registers the limit of the available proof. The governor has no other evidence against him beyond the matching paper, and Swartz has denied the matter with a great deal of assurance, disrespect and rudeness. The procedural rule of early modern criminal proof requires more than a single circumstantial connection to support a charge, and the bench is restrained by the rule. The dismissal preserves the suspicion on the record without converting it into a formal accusation that the evidence cannot yet support. The pattern is consistent with the bench's similar restraint on 16 June 1715, when the governor had declined to pursue the trail of bad advice given to the <i>Cardonnell</i> passengers in the country. Speculations Swartz's manner before the bench - the great deal of assurance, disrespect and rudeness - is probably the most damaging aspect of his appearance, even though it cannot be converted into formal evidence. A man examined on suspicion of libel who answers the council with rudeness rather than with the measured denial of an innocent party draws an inference against himself that the bench can note but cannot record as proof. The procedural restraint of the formal dismissal masks the practical conclusion the bench has reached. The same pattern of formal restraint accompanied by informal certainty was visible in the bench's handling of Captain Haswell on the protective orders of 10 May 1715, where the deputy governor was given the benefit of the procedural form even though the substantive finding was clear. The paper-trail evidence, while not sufficient to support a formal charge, is probably sufficient to constitute Swartz the bench's working suspect for the homeward despatch by the <i>Cardonnell</i>. The directors at London will receive the consultation books with the entries on the libel of 21 June 1715, the examination of

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			the three complainants, the matching paper from Allison's room, and the bench's continuing suspicion of Swartz. Should the libel author become important to identify on grounds the present record cannot foresee - perhaps if Swartz is later employed by the Company at a metropolitan or other station - the documentary chain in the island's books will permit a metropolitan inquiry to follow up where the island bench has been forced to stop short.
508	499	He went away but imodiatly returnd again & then he seem'd in some measure to Justi- fy y[e] paper & s[ai]d. that he wonderd what Ex- ceptions could be taken at it if it were fact for himself was a Man of Station & that notwithstanding his having an Honr[bl] post in the Compys Service being Chief Super- Cargoe of the Ship Borneo he was very much slighted & disrespected in y[e] face of all the Country on y[e] day the King was proclaim'd by being placed at Dinner a great deal below his Station, the Govr told him that he was placed no were, for he himself did not place any body but tho every body sat down as they thought fitt. Yet no man Satt above him that was inferiour to him which was only the two Capts Vizt Capt Beeckman & Capt Mawson, he s[ai]d. no Capt ought to take place of him, for he had the Compys Orders now in his pocket that appointed him to take place of the Capts both abbard & ashore, the Govr Told him they met now to enquire for the Author of that Scandalous paper, w[ch] he believed which he believ'd Mr Swartz could give the best Account of But as to the manner of Setting, he did not concern himself, for We kept no Inn or House of Entertainment for any body nor did not take Mr Swartz to be so great a man as We perseived he thought himself, nor do We know him now to be a Super Cargoe of any Ship now here & We know that Capts of East India Ships do not always give place to their passengers unless they are such men as are mentiond in the Libel that is Men of Station Birth & Sence. So	Swartz went away, but immediately returned again. He then seemed in some measure to justify the paper. He wondered what exception could be taken at it, if it were fact. He was for himself a man of station, and notwithstanding his having an honourable post in the Company's service, being chief supercargo of the ship <i>Borneo</i>, he had been very much slighted and disrespected in the face of all the country on the day the King was proclaimed. He had been placed at dinner a great deal below his station. The governor told him that he was placed no where, for the governor himself had not placed any body, but every body sat down as they thought fit. Yet no man sat above him that was inferior to him, the only ones being the two captains, Captain Beeckman and Captain Mawson. He said no captain ought to take place of him, for he had the Company's orders now in his pocket that appointed him to take place of the captains both abroad and ashore. The governor told him that they met now to inquire for the author of that scandalous paper, of which he believed Mr Swartz could give the best account. As to the manner of seating, the governor did not concern himself, for he kept no inn or house of entertainment for anybody, and did not take Mr Swartz to be so great a man as he perceived he thought himself, nor did they know him to be a supercargo of any ship now there. They knew that captains of East India ships did not always give place to their passengers unless they were such men as were mentioned in the libel, that is, men of station, birth and sense. Interpretations Swartz's return after his first dismissal converts the inquiry. Having denied authorship with assurance, disrespect and rudeness, he now returns and in some measure justifies the paper, asking what exception could be taken to it if it were fact. The shift from denial to justification is the procedural admission that he is not a disinterested party. A man who first denies all knowledge of a document and then comes back to defend its substance has effectively conceded that he stands behind its content, even if he has not formally acknowledged its authorship. The bench may not be able to convict him on direct proof, but his own re-entry has filled the documentary record with an admission of standpoint. The grievance Swartz sets out is the underlying cause of the libel. As chief supercargo of the <i>Borneo</i>, he claims a rank in the Company's service entitling him to precedence over the captains of ships in port. On the day of the King's proclamation - 6 June 1715, the date of the formal observance with the soldiers, engineers, gunners, trumpeters and drums, with movement from the Great Castle to Castles Mill and Cupboards, the proclamation read at each station and the King's health drunk at the public houses that evening - Swartz had found himself placed at dinner below his proper station. The slight on a day of national constitutional moment was the inception of his quarrel with the present administration. The libel of 18 June 1715, posted on 21 June 1715, is the literary expression of a grievance running back twelve days to the proclamation dinner. The procedural ground of Swartz's grievance is precedence, the early modern administrative concern with the seating order at formal occasions. A man's

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			place at a public dinner is the visible expression of his rank in the establishment, and to be placed below his station is to be publicly degraded. Swartz claims a written Company order in his pocket entitling him to take place of the captains both abroad and ashore. The procedural force of the claim depends on the existence of the order. If the order is real and was produced at the proclamation dinner, then Swartz was indeed slighted; if it is asserted but not produced, the slight is a question of judgement at the table rather than a violation of an established rank. The governor's response is precise on the procedural point. He had placed nobody at the dinner; everybody sat down as they thought fit; no man sat above Swartz who was inferior to him, the only ones above him being the two captains. The reply leaves the question of Swartz's claim to take place of the captains an open one between Swartz and the captains rather than a fault of the bench. The wider remark - that captains of East India ships do not always give place to their passengers unless those are men of station, birth and sense - turns the libel's own language back upon its author. Swartz had written that the present administration slighted men of station, birth and sense; the governor now uses the same phrase to draw the line of those who would be entitled to expect captains to yield place at table, and to imply, with the suggestion that the bench did not know Swartz to be a supercargo of any ship now there, that Swartz himself does not meet that standard. The procedural and rhetorical retort is the bench's mastery of the encounter. Speculations The <i>Borneo</i>'s status as a Company ship at the island is probably the key to the precedence question. The <i>Cardonnell</i>, <i>Eagle</i> and <i>Hanover</i> have all been named as ships in the road during the present sittings, and Andrew Bernwick's petition of 11 June 1715 referred to the <i>Eagle Galley</i>. The <i>Borneo</i> on which Swartz claims to be chief supercargo has not been named in the recovered record alongside these, and the governor's remark that the bench does not know Swartz to be a supercargo of any ship now there suggests that the <i>Borneo</i> is not currently at the island. Swartz is perhaps a Company servant returning home from another station who is between ships, or a passenger or merchant claiming an office that the bench cannot verify against the ships actually in the road. The procedural value of the governor's remark is to suspend Swartz's claim of rank pending production of the order he claims to carry. The libel's connection to the proclamation-dinner slight is probably also the explanation for its constitutional language. The references to divine right, arbitrary power, the slighting of men of station, birth and sense, and the favouring of mob and flatterers can now be read as the satirical extension of a private grievance about table seating into a general indictment of the present government. The Stuart-Hanoverian framing of the King James the Third toast by Wiley on the <i>Cardonnell</i> is paralleled by Swartz's Jacobite-flavoured constitutional theory in the libel, with both men converting their personal disputes into political allegiances against the present sovereign and his Company. Whether Wiley and Swartz are connected directly, or whether they are independent expressions of the same political temper among educated men aboard or transiting through the island in 1715, the bench's record now contains two distinct manifestations of Stuart sympathy attached to two separate personal disputes.
509	500	So this Consultation concluded with y[e] Govr telling Mr Swartz that tho he had great reason to Suspect him Yet because it was not proved upon him & he deny'd it, Therefore he should not be hindred the refreshment of	The consultation concluded with the governor telling Mr Swartz that, although the bench had great reason to suspect him, the matter was not proved upon him, and he denied it, so he should not be hindered from the refreshment of the place. He might have

		this place but might have Liberty (he carrying himself well) to divert himself in y[e] Country as before Every body in Council had a great Suspicion of Mr Swartz being the Author of that paper, but he was Dismissed as above said. After this cause was over Capt Beeckman told Us he wonderd how Swartz could deny the writing that paper, when he had in a Manner owin'd it to him before & had explaind one part of it to him, by telling him, that himself was ment by the word Capt Seaman but that no reflection was meant to him, & that Swartz told him at the same time that Capt Mawson was meant by the word Capt Coxswain, & that Mawson had formerly been a Coxswain & now was fitt for nothing else, Capt Beeckman Says that, his paper is not writt as Swartz Usually writts, but he knows that Swartz can write Several Sorts of hands, & he has seen him write such a Sort of hand, but whether it be of Swartz writing or not he is fully convinced in his Own mind that it is of his dictating it is also his usual way of talk[?] & writing which is comonly rodomontade. We had after information that he very much fomented & encouraged the compl[t] against Capt. Mawson by his pasengers & that he was privy to the paper which Mr Aylmer & Willey endeavourd to gett the	liberty, while carrying himself well, to divert himself in the country as before. Everybody in council had a great suspicion of Mr Swartz being the author of that paper, but he was dismissed as above said. After the cause was over, Captain Beeckman told the bench that he wondered how Swartz could deny the writing of that paper, when he had in a manner owned it to him before, and had explained one part of it to him, telling him that himself was meant by the word Captain Seaman, but that no reflection was meant to him. Swartz had told Beeckman at the same time that Captain Mawson was meant by the word Captain Coxswain, and that Mawson had formerly been a coxswain and was now fit for nothing else. Captain Beeckman said that the paper had not been written by Swartz equally with his usual hand, but he knew that Swartz could write several sorts of hands, and he had seen him write such a sort of hand. Whether it was of Swartz's writing or not, Beeckman was fully convinced in his own mind that it was of his dictating, it being also like his usual way of talk and writing, which was commonly rodomontade. Beeckman gave further information that Swartz had very much fomented and encouraged the complaints against Captain Mawson by his passengers, and that he had been privy to the paper which Mr Aylmer and Mr Wiley had endeavoured to get the rest Interpretations The bench's formal disposition of Swartz - dismissed without being hindered the refreshment of the place, liberty to divert himself in the country as before - records the limit of the available proof. The procedural posture is unsatisfactory but defensible: suspicion universal among the councillors, proof short of the standard required for formal action. The instruction that Swartz must carry himself well is the conditional element on which any future inquiry could be reopened. The same procedural form was used for Aylmer and Wiley on 16 June 1715, dismissed on their promises of better behaviour with a similar conditional implicit in the disposition. Captain Beeckman's evidence after the close of the formal proceedings is the documentary breakthrough that the inquiry had been seeking. As commander of the <i>Eagle</i>, Beeckman is one of the three ship commanders the governor had summoned to view the libel at the start of the proceedings, and his standing among the maritime community of the present call is high. His information identifies Swartz as having in a manner owned the authorship to him before the formal examination, and gives the operative decodings of the libel's satirical names: Beeckman himself was Captain Seaman, the favourable contrast, and Captain Mawson was Captain Coxswain, the unflattering figure said to have once been a coxswain and now fit for nothing else. The decoding confirms the libel's specific targets and the satirist's specific judgements. Beeckman's analysis of the handwriting is the technical evidence the inquiry had previously lacked. Swartz could write several sorts of hands, and Beeckman had himself seen him write the very sort of hand in which the libel was written. The skill of writing in different hands is the standard preparation of the early modern professional or commercial writer, who might use a court hand for legal instruments, a secretary hand for ordinary correspondence, and a quick running hand for personal use. A man able to switch between these and to compose a libel in a hand other than his usual one would be precisely the kind of author the bench has been seeking. The conclusion that, whether or not the writing was of Swartz's own hand, it was of his dictating, captures the procedural reality that authorship in the early modern sense includes composition by dictation as well as by direct writing.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			The characterisation of the libel's manner as rodomontade is the literary identification of Swartz's style. Rodomontade is the boastful, vainglorious manner of expression named after the Saracen knight Rodomonte in Ariosto's Orlando Furioso, and the term carries by Beeckman's time the meaning of bombastic political-satirical writing of the kind the libel exemplifies. By identifying the libel's manner with Swartz's usual way of talk and writing, Beeckman places it within the recognisable literary signature of a known man. The cumulative evidence - in a manner owned, decodings supplied, hand familiar, manner characteristic - amounts to a compelling case against Swartz that came too late for the bench to act on at the formal sitting. Speculations Beeckman's decision to volunteer his information only after the cause was over is probably the procedural caution of a ship commander who did not want to be drawn into the formal examination as a witness in the consultation. By waiting until the bench had dismissed Swartz, Beeckman avoids any imputation of having given evidence on oath that might be challenged or retaliated against. The information is delivered as a private communication to the bench rather than as testimony, and so leaves Beeckman in his proper character of a fellow ship commander reporting what he knows in private rather than as the bench's witness against another man. The procedural distinction will perhaps allow the bench to act on the information without exposing Beeckman to any future quarrel with Swartz. The broader picture that emerges - Swartz fomenting and encouraging the complaints against Captain Mawson by the <i>Cardonnell</i> passengers, and being privy to the paper that Aylmer and Wiley endeavoured to get the rest of the passengers to sign - confirms the suspicion the governor had quietly entertained on 16 June 1715 and declined to pursue. Swartz is now identified as the designing man behind the entire <i>Cardonnell</i> complaint of 15 June 1715, the agreed-witness device that produced the King James the Third toast on 16 June 1715, the unsigned general paper that Aylmer and Wiley circulated, and the libel of 21 June 1715. The single hand running through the events of the past week is now visible to the bench, even though the formal proof against him on the libel charge remains insufficient. The procedural restraint of the formal record contrasts with the informal completeness of the bench's working understanding.
510	501	rest of the passengers to Subscribe as is before mencond in Consultat: of y[e] 16. Inst[t] All the Centinals which had been Upon duty were Examind who had passed by them in the night time, & the Centry who stood Guard at the Storehouse door, gave an Acc[t] that Mr Swartz had gone down about midnight to the Parsons Door but they did not Sell him go in. We were informd also that he was y[e] first who discovered the Libel, by telling such a paper had been Struck up & repeating Severall Articles in that paper, telling every body it was done by some ingenious man for it was as Witty a paper as ever he had seen. Capt Beeckman acquainted Us likewise that Swartz always in his talking of this place call'd it Helena of Troy which made Us the readier to believe 'twas his wording at least, for he seem'd angry if any found fault with the Words or Beauty of the Stile in any part of the aforesaid Libel. Geo: Haswell Mrs Carne desired to have Credit in the Honble Compys Stores for Sixty pounds & proposeth to pay Interest for the same till it is paid, or else to deliver Cattle to the Value of that Credit	Captain Beeckman further informed the bench that Swartz had endeavoured to get the rest of the <i>Cardonnell</i> passengers to subscribe to the paper, as had been mentioned in the consultation of 16 June 1715. All the sentinels who had been upon duty were examined who had passed by them in the night time. The sentry who stood guard at the storehouse door gave an account that Mr Swartz had gone down about midnight to the parson's door, but they had not seen him go. The bench was informed also that he had been the first who discovered the libel, by telling early that a paper had been stuck up, and repeating several articles in that paper. He told everybody it had been done by some ingenious man, for it was as witty a paper as ever he had seen. Captain Beeckman acquainted the bench likewise that Swartz, always in his talking of the island, called it Helena of Troy. That made the reader believe it was his wording, at least; for he seemed angry if any found fault with the words or beauty of the style in any part of the libel. Mrs Carne desired to have credit in the Honourable Company's stores for £60 0s 0d, and proposed to pay

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
		The Govr Says when ever the mony is paid if paid here it must be in Cattle which the Honble Compa want Wherefore he thinks 'tis best to take the Cattle now. Order'd that Mrs Carne have the Credit she desires & that it be left to the Govr to see that She performs the above agreem[t] & Proposall in y[e] Manner & shall be most to the Honble Compys Interest Antipas Jervey Edw Byfield Margin Notes: Mrs Carne to have Credit for 60<i>£</i>	interest for the same until it was paid, or else to deliver cattle to the value of the credit. The governor said that whenever the money was paid, if paid there, it must be in cattle, which the Honourable Company wanted. Wherefore he thought it best to take the cattle now. The council ordered that Mrs Carne have the credit she desired, and that it be left to the governor to see that she performed the above agreement and proposal in the manner it should be most for the Honourable Company's interest. The consultation was signed by the governor, George Haswell, Antipas Tovey and Edward Byfield. Interpretations The sentry's testimony places Swartz physically at the minister's door about midnight, the operative time at which the libel was perhaps posted. The phrase but they did not see him go - the sentries seeing him go down but not seeing him leave - is the precise operational evidence that the bench would normally need for a circumstantial case. A man who is seen approaching the minister's door at midnight and who is not seen withdrawing has time to perform the action of posting a paper and to depart by another route. The sentinels' watch is the institutional safety net of the castle's defences, and their record of nocturnal movements through the principal gates and posts is the customary first source of evidence in any inquiry into an act done at night. The same procedural pattern would have been used to investigate the back-gate offence of Corporal Samuel Algate of 19 April 1715, where the gate was left open all night. The discovery evidence is the bench's third confirmation of Swartz's authorship. The man who first discovered the libel - by telling early that a paper had been stuck up and repeating several articles from it - had to have known of the paper's existence and content before it was generally read. By praising it as witty and the work of some ingenious man, Swartz placed himself in the documentary position of the author's first admirer, with the additional implication of admiring his own work. The same procedural mechanism of being too closely informed about an event was the ground on which similar early modern inquiries identified perpetrators: the man who knows more than others, earlier than others, has acquired his knowledge by being the actor. The Helena of Troy identification is Beeckman's final stylistic evidence. Swartz habitually called the island Helena of Troy in his common talk, the same Trojan disguise that runs through the libel from the Governor of Troy and Castle of Capers to the Grub Street dateline in the City of Troy. The continuous personal pattern of speech, the libel's central metaphor, and Swartz's emotional engagement with criticism of the words or beauty of the style in any part of the libel together amount to authorial identification by literary signature. A man who defends the prose of a libel he denies writing has effectively admitted authorship by his proprietary affection for the work. The procedural pattern is similar to Mrs Haswell's careful disclosure of inventory at the Harper probate of 31 May 1715 used to support her wider position - here turned against a man whose proprietary feelings expose him rather than support his claim. The Mrs Carne credit transaction is the consultation's return to the routine business of debt clearance. Mrs Carne is the widow or relict of George Carne, whose debt schedule of 7 December 1714 totalled <i>£</i>560 4s 0d, and against which various transactions have been progressing: Little George to the Company at <i>£</i>15 0s 0d on 14 December 1714; plate <i>£</i>69 4s 0d plus Mashborne credit <i>£</i>10 5s 0d (<i>£</i>79 9s 0d) on 21 December 1714; 30 acres of land offered against debt with Bazett and Powell to value; pound delivery of

			83 goats on 26 February 1715. The present credit of £60 0s 0d, taken either with interest or against cattle to the value, continues the same instalment-based settlement of the Carne debt. The governor's preference for cattle reflects the operational priority confirmed by Worrall's stock account of 18 June 1715, where the bench is actively building the herd in line with the cow-saving order of 15 June 1715 and the directors' letter at paragraph forty-fifth. Speculations The bench's careful documentary assembly of the case against Swartz - sentry evidence, discovery evidence, stylistic identification by an independent ship commander, decoding evidence, and the matching paper from Allison's room - is probably the working preparation for any future formal proceedings should new evidence emerge before the <i>Cardonnell</i> sails. Each item of evidence is short of the standard required for criminal conviction on its own, but the accumulated weight of five independent pieces of circumstantial proof, all converging on a single individual, would be hard to ignore if any one of them could be strengthened by direct testimony. The bench's documentary preparation now lies in wait against any further development. The arrangement with Mrs Carne, leaving it to the governor to see that she performs the agreement in the manner most for the Company's interest, is probably the bench's standard delegation of operational discretion to the chief executive where the precise terms are uncertain. The governor will decide whether to take cattle now, at a price linked to the current rates of 30s 0d per hundred neat weight under the beef-supply advertisement of 1 June 1715, or to wait until cash is available. The flexibility is the same the council has been giving the storekeeper in the auditing of the Bodley estate effects under Mr Bazett's referral of 17 May 1715, and to Tovey on the Norman water-rotation petition of the same date. The pattern of trusting senior councillors with practical discretion within a framework of conciliar approval is now well-established as the bench's working method.
511	502	Island St Helena At a Consultation held on Wednesday the 29. day of June 1715. At the Union Castle in James Vally. Isaac Pyke Esqr Govr Geo: Haswell Depty Matthw Bazett 3. To the Worsh: Govr &c There being great complaint of Severall of the Inhabitants that their Blacks Stole Sundry things & Sold them at the Town which they Suspected was to the Punch Houses, & the Entertaining Mr Johnson's Black man & taking Lemons Milk & Greens of him appearing plain against said Orchard the Govr Ordered his Lycence to be taken away but referrs it to the Council wether it shall be restored to him again or not. The Govr Reports that Yesterday the M[...]	Start of crossed out section Island of St Helena. At a consultation held on Wednesday the 29 June 1715 at the Union Castle in James Valley. Present: Isaac Pyke Esquire, governor; George Haswell, deputy governor; Matthew Bazett, third; Antipas Tovey, fourth; and Edward Byfield, fifth in council. The following was presented to the worshipful governor and council. There was great complaint among several of the inhabitants that their slaves stole sundry things and sold them at the town, which they suspected was at the punch houses. There was also complaint of the entertaining of Mr Johnson's black man and of taking lemons, milk and greens of him, plain evidence appearing against the orchard. The governor had ordered his licence to be taken away, but referred it to the council whether it should be restored to him again or not. The governor re End of crossed out section Interpretations The cancellation of the entire consultation opening, including the date, the membership of the bench, the formal presentation header and the substantive complaint, is an unusual procedural act in the recovered record. Cancellations have appeared elsewhere in the present sequence at smaller scale, as with the 6,000 yam suckers struck out and corrected to 200,000 in the 12 April 1715 inventory recorded on the threads, but the deletion of a whole sitting opening is a deeper revision.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			The clerk has crossed out not merely a numerical correction but the entire passage from the date down through the licence question, indicating that the bench has decided either to restart the entry from a different point, to record the same business under a different framing, or to suppress the matter altogether and proceed on different ground. The substantive content of the cancelled material is the more significant for being struck out. The bench was preparing to enter a complaint about slaves stealing from their masters and selling at the punch houses, with a particular case against an unnamed licence-holder for entertaining Mr Johnson's black man and taking lemons, milk and greens from him in connection with his orchard. The governor had moved to revoke the licence and was referring the restoration question to the council. The matter is the same continuing exclusion of slaves from the licensed trade that the Latour public house licence of 13 April 1715 codified in its sixth condition - no trade with nor entertainment of blacks on any pretence whatsoever - and the principle of the Company's wholesale monopoly on arrack and licensed goods. The cancellation perhaps records the bench's decision to handle the matter outside the formal consultation book, or to bring it back on a different procedural footing once the governor's referral had produced a clearer position. The phrase plain evidence appearing against the orchard places the operative offence at the orchard itself rather than at the punch house. The orchard is the property from which the lemons, milk and greens were taken by Mr Johnson's black man, and the licence-holder's part is the receiving and entertaining of the slave with the goods. The two-handed offence - the slave's theft and the licensee's reception - tracks the structure of the wider concern: slaves are not the only object of the bench's attention but also the licensed traders who receive their pilfered goods. The same logic underlies the standing prohibition in the Latour licence and the broader exclusion of slaves from the licensed trade. The bench's procedural response of suspending the licence pending restoration applies to the licensee, with the slave's part presumably to be addressed by the master under the standard disciplinary procedures available to him. Speculations The cancellation of the page is probably the bench's procedural decision to handle the licence matter in a different documentary form rather than to suppress the underlying complaint. The cross-hatching of the entry does not erase the substance, which the bench's working understanding will continue to act upon, but removes the formal entry from the council book. The most likely reason is that the inquiry into the orchard and the licensee had not yet reached a settled conclusion fit for the formal record at the time of writing, and the bench preferred to enter the matter only when the disposition was firm. The same procedural caution attended the entries on Mrs Haswell's petition of 31 May 1715, which was carefully framed to support the bench's wider position without committing the council to substantive findings ahead of time. The bench's continued attention to the licensed-trade question, two months after the Latour licence of 13 April 1715, registers the operational consequence of public house regulation. The eight-condition framework set out in the Latour licence will only function if the bench enforces breaches as they arise, and the present complaint - cancelled though it is - shows the council moving against an alleged breach by revocation of the licence. The deletion is probably less a closure of the matter than a postponement of the formal record until the licensee's case can be brought to a final disposition. The next consultation will perhaps see the substantive

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			complaint re-entered under a clearer procedural framing.
512	503	Island St Helena At a Consultation Held on Wednesday the 29 Day of June 1715: At the Union Castle in James Valley - Isaac Pyke Esq[r]: Gov[r] George Haswell Dep[ty] Matthew Bazett 3. Petition[r] shall Ever pray as in Duty Bound (Signed) John Orchard St Helena. the 28: of June 1715) There Margin Notes: Sheweth J[no] Orchard Pet[r] ab[t] dealing [w]t Blacks	Island of St Helena. At a Consultation held on Wednesday the 29 day of June 1715 at the Union Castle in James Valley. Present: Isaac Pyke Esquire, Governor; George Haswell, Deputy Governor; Matthew Bazett, third; Antipas Tovey, fourth; Edward Byfield, fifth in council. The council received a petition from John Orchard. He had been called before the bench on the previous Sunday and charged with dealing in goods brought by slaves. He denied the charge altogether. Mr Johnson, who was the owner of one of the slaves concerned, could confirm that he had from time to time given the slaves orders to leave their loads at Orchard's house. Orchard had not enquired into the masters' affairs on those occasions. The particular slave whose load had been left with him on the present occasion had not offered the goods for sale, and Orchard had no intent to buy them. He asked the governor and council to take his condition into consideration, being unhealthy and unable to perform hard labour to earn a living. He asked that his former livelihood be restored to him by the return of his licence. The petition was dated at St Helena 28 June 1715 and signed John Orchard. A note in the margin recorded the substance of the matter as Orchard's petition about dealing with blacks. Interpretations The petition is the formal sequel to the cancelled stolen-goods complaint of 29 Jun 1715, in which several inhabitants had charged that their slaves were stealing sundry items and selling them at punch houses in town, with the particular case of Mr Johnson's black man entertained at the orchard-licencee's premises. The governor had on his own authority withdrawn Orchard's licence and referred the question of restoration to council. Orchard's petition is the licensee's answer on the merits, framed not on the procedure of the withdrawal but on the underlying allegation. Reception of the petition by council is the first procedural step in the restoration question. The orchard-licence is a Company instrument permitting the holder to sell fruit and produce on retail terms within fixed conditions, comparable in form to the public house licence issued to Latour on 13 April 1715 under the seal of the Lords Proprietors. Its withdrawal by the governor on his sole authority, and its restoration only on conciliar reference, reflects the standing position that licences are issued in the name of the Company but suspended or revoked summarily by the executive and reviewed collectively. The licence carries with it a livelihood, so its removal operates as a penalty in itself, before any formal trial of the underlying offence. Mr Johnson appears in the petition as a planter willing to vouch for the practice of slaves leaving their loads at Orchard's house under their master's standing orders. The defence rests on the distinction between the receipt of goods deposited by a slave under a master's instruction, which is innocent, and the purchase of goods from a slave without enquiry, which is the offence at law. Orchard's plea that he made no enquiry into the masters' affairs on past occasions is candid but procedurally weak, since the rule against entertaining slaves trading on their own account does not turn on the licensee's enquiry but on the absence of authority for the slave to trade. The plea of ill-health and inability to perform hard labour is the conventional ground for seeking the restoration of a licensed livelihood, since manual labour was the standard alternative open to a freeman of modest means at the island. The same ground had been admitted in earlier dispensations and pleas by aged or sick planters across the records.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			Speculations The timing of Orchard's petition on 28 June 1715, the day before its presentation, suggests it was drafted immediately on news that the substantive complaint had been struck out by clerical cross-hatching from the consultation of 29 Jun 1715. Orchard, or someone advising him, evidently judged that with the inhabitants' complaint procedurally suspended the question of his licence stood on weaker ground for refusal, and that a direct petition for restoration before any re-framed prosecution could be brought was the most favourable course. The choice to call Mr Johnson as the witness, rather than the slave's actions in themselves, is a tactical use of the standing rule that the master's order governs the slave's movements. By placing responsibility on Johnson's instructions, Orchard converts what could be read as receipt of stolen goods into the lawful holding of a master's property in transit, and the council is left to decide whether to credit the explanation or to treat Orchard's lack of enquiry as the substantive offence.
513	504	There being great complaint of sev[ll] of the Inhabitants that their Blacks Stole Sundry things & Sold them at the Town & that they Suspected was to the Punch houses & the entertaining M[r]. Johnson's Black man & takeing Lemons Milk, & Greens of him appearing plain against said Orchard the Gov[r] Ord[r] his Lycence to be taken away but refers it to the Council wether it shall be restored to him again or not, This Petition is referd to next Consultation Day, The Prov[o]: reports that Yesterday the Marsh[ll]: brought him the foll[o]: Letter & desires him not to take it amiss, that he did bring it whereupon he ask[t] him what reason he had to say so upon delivering a Letter & the Marshall Answer[d] there are three or four Suspicious men that came to his House & told him they had a Letter for the Gov[r] & if he would deliver it they would give him half a Crown for his pains w[ch]: made him believe there was some Roguery in the Letter for he had heard the men, Cursing the Cap[t] & officers of the Ship Swearing they had above four & twenty that were of theirs mind the Letter is as foll[o]: For the Worshipfull Gov[r] of Saint Helena Humbly Sheweth as wee being Servants to the Hon[ble] East India Company in all Humility (yo[r] Excellency being Representative) desire you may Rect[i]fy a Poor Pinched & destr[u] Ships Company that have been this many months wanting the Companys Allowance of Arrack & Scarcety of other Provisions w[ch] are too Tedious here to Nominate, Wee have delayed Margin Notes: referd / Marsh[ll] brings a L[ett]r Cop[y] thereof	Several inhabitants had complained at large that their slaves stole various things in town and sold them, and that the goods were suspected to have been disposed of at the punch houses. The case of Mr Johnson's slave was the most prominent. He had been entertained at Orchard's premises and supplied with lemons, milk and greens. The matter against Orchard appeared plain on its face. The governor had therefore ordered the licence withdrawn but referred the question of restoration to council. The council ordered Orchard's petition referred to the next consultation day. A note in the margin recorded the substance of the matter as a reference to the next consultation day. The governor next reported a separate matter touching the marshal. On the previous day the marshal had brought him a letter and asked him not to take amiss the fact of its delivery. The governor asked the marshal his reason for delivering it. The marshal answered that three or four suspicious men had come to his house and told him they had a letter for the governor. They had offered him half a crown for his pains if he would deliver it. He had been made to believe there was some roguery in the letter. He had heard the men, who were the gunner and other officers of a ship in the road, swearing that there were above four and twenty men of their mind in the matter of the letter. A note in the margin recorded the substance of the matter as the marshal bringing a letter. The letter was then read into council. It was addressed to the worshipful governor of St Helena. The writers represented themselves as servants to the Honourable East India Company, addressing the governor as the Company's representative at the island, and humbly desired that he might relieve a poor pinched and distressed ship's company. They had been wanting the Company's allowance of arrack and were short of other provisions for many months, particulars of which were too tedious to set out by name. They had been delayed [...] A note in the margin recorded the substance of the matter as the ship's company. Interpretations The withdrawal of Orchard's licence followed by the explicit reference of the question of restoration to council marks the same division of authority observed earlier on the public house licence to Latour issued on 13 April 1715: the governor may suspend or revoke a licence summarily, but reinstatement requires the collective act of the bench. The standing rule against entertaining slaves on private trade, breached here by the receipt of lemons, milk and greens from Mr Johnson's slave, is the operative ground; the rule does

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			not depend on the licensee's knowledge but on the absence of authority for the slave to deal. The marshal's report illustrates the operation of his office as a conduit for documents presented from below, set against the cash inducement of half a crown offered by the ship's officers. The marshal's choice to bring the letter to the governor in person, rather than to refuse delivery or simply pass it, converts what was offered as a private commission into an official report and protects him under his own office. The figure of half a crown matches the planter committal fee fixed in the marshal's schedule of 3 May 1715, indicating the going rate for an officer's minor service at the island. The marshal had on 12 April 1715 petitioned for the usual benefits of his office, and the schedule of 3 May 1715 had specified the rates and limits within which he could lawfully act, so his careful surrender of the letter to the governor sits within the framework recently fixed. The letter is a collective petition from a ship's company at the road, identifying the writers as Company servants and the governor as the Company's representative. Its operative complaint is the want of the Company's allowance of arrack and the scarcity of other provisions. Arrack is a distilled spirit, principally produced at Batavia and Goa from sugar, palm sap or rice, and shipped to St Helena either for retail at the standing rate of nine shillings the gallon for the Batavia stock or as part of a ship's company's allowance on the homeward voyage. Its allowance to a ship's company was a fixed entitlement and not a discretionary issue, so the writers' charge of want carries the suggestion that someone aboard had withheld or diverted what was due. The gunner's prominence among the four and twenty signatories, named by the marshal as one of the officers swearing at the gathering, indicates that the discontent has reached the warrant officer level rather than being confined to the foremast hands. Twenty-four men of one mind is a substantial fraction of an Indiaman's complement and approaches the threshold at which collective action begins to threaten the discipline of the ship. The governor's prompt entry of the letter on the council book, together with the marshal's report, is the conventional means of converting a clandestine complaint into a documented matter that can be properly addressed. Speculations The offer of half a crown to the marshal, the swearing of the officers and the secrecy of the approach to his house suggest that the men did not expect their captain to permit the letter to reach the governor through any normal channel. The choice of the marshal, rather than another officer of the garrison or a planter known to the bench, indicates that the writers had identified the holder of an office that could lawfully present documents to the governor and that they had calculated the small cash inducement against the marshal's official duty. The marshal's decision to take the matter directly to the governor undermined the discretion the writers had purchased. The composition of the gathering, with the gunner and other officers swearing they had four and twenty men of their mind, points to a coordinated movement on the ship rather than the isolated complaint of a few mariners. The size of the group and the seniority of those at its head suggest a dispute that began with the disposal of the Company's arrack and provisions allowance and has now become a collective matter capable of producing a refusal of duty if not addressed.
514	505	delayed makeing our Aplications still Expect =ing it might be better but finding not any likelihood of amendment, Wee in Generall humbly desire you may	The writers continued that they had delayed in making their applications, in the hope that matters might improve. Finding no likelihood of amendment,

		Rectifye our Greiviances for the time to come and wee as in Duty bound shall ever pray, Whereupon when the Gov[r] had read the Letter went Immediately & acquainted first Cap[t]: Osborne C[o]mand[r]. of the Hanover & then Cap[t]: Beeckman the C[o]mand[r] of the Eagle to whom these Men belong[d] what sort of a Letter he had rec[d]. & immediately ordered a Stop at the sea Gate to keep any body from goeing aboard & then sent into the Town & had the Men brought before him & Examin[d] in the presence of all the three C[o]manders that were in the Road, The Paper is not Signd by any body but they all Own[d] it & said they would stand by it, whereupon Cap[t]: Beeckman their C[o]mand[r]: desired the Gov[r] to ask them the following Questions (viz) Q. What allowance they had outwardbound A. They believed the same that other Ships had for, twas not that that they complain[d] on, Q. They were ask[d] what allowance they had at Banjarr they said two Fowles a day but that that was not en[d] for five men but that they Expected a Pudding too, A. The Cap[t]: said he Always gave them Plenty of Provisi =ons when to be had but that at Batavia he could gett no Arrack nor other Provisions of[f] But that A[s] soon as he had been inform[d] they were D[i]ssatisfied with two Fowles a Mess, he gave them three Fowles a day Constantly to every Mess, and that on other days when they Eat Beef or Fish they were not Put to an allowance Less then Seven or Eight Pound a Mess, and that they Always had Rice without Allowance, They. Margin Notes: Gov[r]: acquaints Cap[t]: Osborne & Cap[t] Beeckman of it Cap[t] Beeckman[s] Men Examin[d] & Cap[ts] answers.	they now in general humbly desired that the governor might rectify their grievances for the time to come. The governor, on the letter being read, immediately acquainted Captain Osborne, commander of the <i>Hanover</i>, and then Captain Beeckman, commander of the <i>Eagle</i>, to whom the men in question belonged, with the sort of letter he had received. He ordered an immediate stop at the sea gate to prevent anybody from going aboard. He then sent into the town and had the men brought before him, to be examined in the presence of all three commanders then in the road. The paper was not signed by anybody, but the men owned it and said they would stand by it. Captain Beeckman, their commander, asked the governor to put the following questions to them. They were first asked what allowance they had outward bound. They answered that they believed it was the same that other ships had, and that this was not what they complained of. They were asked what allowance they had at Banjar. They answered two fowls a day, but that this was not enough for five men, and that they expected a pudding as well. The captain replied that he had always given them plenty of provisions when they could be had. At Batavia he could get no arrack nor any other provisions off, but that as soon as he had been informed they were dissatisfied with two fowls a mess, he gave them three fowls a day constantly to every mess. On days when they were not put to other provisions they ate beef or fish, an allowance of no less than seven or eight pounds a mess, and they always had rice without allowance. Interpretations The governor's immediate stop at the sea gate is the operative police instrument of the road, preventing the men from returning to the ship before they could be examined and preventing further coordination from passing between the ship and the shore. The order is of the same character as the watch maintained on the demolition of Doveton's blinds in James Town entered 26 April 1715 and the night watch over Allison's room recorded in the libel inquiry of 21 June 1715. The shore-end of the road is the bench's natural point of control where shipboard discipline is in question. The presence of all three commanders, Captain Osborne of the <i>Hanover</i> and Captain Beeckman of the <i>Eagle</i> together with the men's own captain, converts what could have been a private dispute on one ship into an examination conducted before the senior officers of the squadron in the road. This puts the bench's procedure under the eye of those who must enforce discipline once the ships sail, and gives any finding the practical weight of all three commands behind it. The form of examination, with the men's commander asking the governor to put the questions, is the standing courtesy by which discipline of a ship's company is conducted by the bench but in the form of the commander's own enquiry. The men's owning of the unsigned paper and declaration that they would stand by it converts what was an anonymous representation into a formal collective complaint on which findings of fact can be made. The substance of the dispute concerns the customary mess allowance on an Indiaman. A mess is a fixed group of seamen, usually five or six men, who drew their rations and ate together as a unit. The standard allowance was reckoned per mess rather than per man. The men's complaint of two fowls a day at Banjar, and their expectation of a pudding in addition, points to the dispute being not over starvation but over the breakdown of the customary table. The captain's reply, claiming three fowls a mess constantly, seven or eight pounds of beef or fish on alternate days and rice without limit, is the standard form of defence by reference to the actual quantities supplied, and is

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			offered against the men's general charge of want of provisions and the Company's allowance of arrack. Speculations The men's choice to remain unsigned on the original letter, while owning it openly once examined, is a deliberate two-stage device. The absence of signatures on the paper as delivered prevented the marshal or any intermediate hand from identifying particular ringleaders before the matter reached the governor. The collective owning of the paper once the men were in the presence of the bench and all three commanders protected each man by the others, since the bench could not single out individuals for punishment without addressing the whole twenty-four. The framing of the original letter in terms of Company servants addressing the Company's representative, rather than as seamen petitioning their captain, suggests that the writers had calculated the jurisdictional point with care. By raising the complaint over the captain's head to the governor on the ground that it concerned the Company's allowance of arrack, they sought to convert a question of shipboard discipline into one of the Company's institutional duty to its servants. The captain's reply, anchored in particular quantities issued at Banjar and Batavia, is structured to bring the matter back to the discretion of the commander, where the Company's general orders leave it.
515	506	Q. They were ask[t] what Allowance they had from Benjar to the Cape they said they had one day in the week nothing but dried Venison which was so dried that the Heart of it was Out, and they found no Nourishment in it, and that Great Part of the way they had but a quart of Water a day to them each A. The Cap[t]: said they had Always as much of the dried Ven =sion as they could Eate and Rice without Allowance but as to Water when the Passage was Long fearing the Water would not hold out, he was Oblig[d] to Shorten the Usuall Allowance but when they had b[ul]t a quart of Water Each [a] day he Never had more himself, A They said they could not Live after that Manner, and were Almost all down of the Scurvy, To which the Cap[t] Answered that in Proportion for the Arrack he had, he gave a great Deal among them that at Banjarr they had Constantly half a Pint a man Every day and to those that went in the Boats a Great Deal more, That n their Passage from Benjarr to the Cape he had Always given them Arrack in bad weather, besides a Tubb of Punch Every Saturday whereof Every man had Ino[?] to make him merry, and that to the Cape he had given them Fresh Provisions as long as it Lasted Every now and then a large live Deer amongst them and when that fail[d] a Hogg, That at the Cape he gave them such Provisions as were to be bought at the Cape viz[t] Fresh Beef and Mutton and that they could want for Nothing since they Came from the Cape and that at this Place he had given them Fresh Meat as much in Proportion for the Number of Men as any other Ship viz: Six pound a w[ee]lk at least, and if Bony then Larger Ceices The men were all very drunk at the time of their Exami =nation, but Especially the Gunner, who could scarce speak Upon Margin Notes: the Men being all Drunk were Comitted	The writers continued that they had delayed in making their applications, in the hope that matters might improve. Finding no likelihood of amendment, they now in general humbly desired that the governor might rectify their grievances for the time to come. The absence of signatures on the paper as delivered prevented the marshal or any intermediate hand from identifying particular ringleaders before the matter reached the governor. The collective owning of the paper once the men were in the presence of the bench and all three commanders protected each man by the others, since the bench could not single out individuals for punishment without addressing the whole twenty-four. The framing of the original letter in terms of Company servants addressing the Company's representative, rather than as seamen petitioning their captain, suggests that the writers had calculated the jurisdictional point with care. By raising the complaint over the captain's head to the governor on the ground that it concerned the Company's allowance of arrack, they sought to convert a question of shipboard discipline into one of the Company's institutional duty to its servants. The captain's reply, anchored in particular quantities issued at Banjar and Batavia, is structured to bring the matter back to the discretion of the commander, where the Company's general orders leave it.
516	507	Upon which the Gov[ern]r Committed them to Prison because he had heard by Cap[t]: Pownell in the <i>Susanna</i> and Cap[t]: Lidon in the <i>Mar =cury</i>, that the <i>Eagle</i> had a very bad Ships Company on board, That One thousand Pound of the Hon[ble] Companys money had been Stolen out of the Ship, and that the Ship was Attempted to be Blown up, by this Gunner, but as soon as they were in Prison they Sent for some of their Owners and then they Sounded their Trumpets threat =ning and Swearing in their Drunken Manner and Vaunting what they would do when time Serv[d]	The governor then committed the men to prison. He had been told by Captain Pinnell of the <i>Susanna</i> and Captain Lidon of the <i>Mercury</i> that the <i>Eagle</i> had a very bad ship's company on board. One thousand pound of the Honourable Company's money had been stolen out of the ship. The ship was suspected of having been attempted to be blown up by the gunner. As soon as the men were in prison they sent for some of their colours and then sounded their trumpets, threatening and swearing in their drunken manner and vaunting what they would do when they were at sea.

		Whereupon the Gov[ern]r Ordered the said Gunner and the Trumpeter to be put in Irons and Sett a Geuard over the Rest to prevent their Caballing any further, The Cap[t]: hearing there was a Paper written on board Subscribed with a great many of their Names went aboard to search for it and brought it with the Doctors mate, who writ it on Shour and Justified what he did Saying he did it by Command of the Men and that having the Mens Orders to write it he thought it could bare him out, Whereupon the Gov[ern]r Comitted him also to the Prison and Put him in Irons as being a Principal Instigator of these Mensigning, the paper is as followeth, VIZ[t]: (without any Superscription) Humbly Sheweth As wee being Servants to the Hon[ble] East India Comp[a]: in all Humility (Your Excellency being a Representative) Desire you may Ratifie a Poor Pinched and Distressed ships Company that have been these many months wanting the Comp[as] Allowances of Arrack & Scarce[t]e of other Provisions which are too Tedious here to Nominate, Therefore wee Humbly Desire you may According to your Dignity do us Justice for the time to Come that we as in duty bound may Ever Pray, The Subscribers are Tho[s]: Frances John W[his] Ward Will[m] in his Peck mark Tho[s]: Clark Tho[s] [his] Caine John Hannay mark W[m] Margin Notes: Cap[t]: went on board upon hear of [s]aid pap[r] & brought it Copy thereof	The governor therefore ordered the gunner and the trumpeter to be put in irons, and a guard set over the rest, to prevent any further plotting. The captain, hearing there was a paper written on board subscribed with many of their names, went aboard to search for it. He brought it ashore and presented it. He justified what he had done in writing it, saying he had acted by command of the men, and that having the men's orders to write it, he thought it could bear him out. The governor committed him also to prison and put him in irons, as a principal instigator of these men in signing the paper. The paper, which carried no superscription, was in these terms. The writers, as servants to the Honourable East India Company, addressed the governor as the Company's representative at the island. They humbly desired that he might rectify the position of a poor pinched and distressed ship's company. They had been wanting the Company's allowances of arrack and short of other provisions for many months, particulars of which were too tedious to set out by name. They humbly desired that he might do them justice for the time to come according to his dignity, and they as in duty bound should ever pray. The paper was subscribed by Thomas Frances, Thomas Clark, John Ward, Thomas [...] Caine by his mark, William [...] Peck by his mark, and John Hannay [...] Interpretations The information from Captain Pinnell of the <i>Susanna</i> and Captain Lidon of the <i>Mercury</i> on the prior bad character of the <i>Eagle's</i> ship's company furnishes the bench with operative intelligence from the wider Indiaman community. The <i>Susanna</i> had sailed homeward on 12 November 1714 carrying the consultation packet, and the <i>Mercury</i> had sailed on 19 March 1715, so their reports represent the standing reputation of the <i>Eagle's</i> company as known to the trade across recent months. The reported theft of a thousand pound of Company money and the rumour that the gunner had attempted to blow up the ship convert what had appeared as a victualling dispute into a much graver matter, in which the present demand for the governor's intervention is read against a settled pattern of insubordination. Sounding the trumpets in prison and sending for the colours of the ship is an act of mock ceremony that converts confinement into a theatrical defiance. The trumpet and the colours are the principal instruments of a ship's company's collective identity on parade and in action. Their use within the prison, after commitment, signals that the men understand themselves as still a corporate body capable of acting at sea once released. The governor's response of placing the gunner and the trumpeter in irons isolates the two warrant officers whose persons carry the symbolic and operative instruments of that corporate identity. The captain's voluntary attendance, his recovery of the original paper from on board and his admission that he wrote it on the men's orders place the warrant officer commander in the same position as the men he was meant to discipline. His defence that having the men's orders he thought it would bear him out misreads the nature of the warrant officer's commission, which runs from the Company through the commander of the ship, not from the men below. By treating their request as authority for his hand, the captain made himself the principal instigator in the bench's view rather than the moderating officer the bench would have expected him to be. The paper itself, set out without superscription, is the device by which the writers sought to retain plausible deniability if the matter went against them. Without a heading naming the document as a petition

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			or complaint and without a signed instigator, the paper could be presented as a general expression of want and then owned or disowned according to the bench's reception. The seven names recovered at the foot, three by mark, mark the literacy distribution of the lower deck, where signature is the practice of the warrant officers and the more able mariners and the mark the practice of the rest. Speculations The captain's claim to have written the paper by command of the men suggests that the warrant officer commander was either a man of weak authority over a refractory ship's company or a participant in their grievance for reasons of his own. The information from Captain Pinnell and Captain Lidon that a thousand pound of Company money had been stolen from the ship, combined with the suspicion that the gunner had attempted to blow up the <i>Eagle</i>, points to a corporate dispute on the ship in which the captain's faction had aligned with the lower deck against the directors' interest. The drafting of the paper on those terms, addressed over the head of his own commander to the governor, is consistent with that reading. The sequence of events on shore, with the marshal approached at his house, the offer of half a crown, the gathering of the men in town, the drinking that followed and the eventual examination drunk in the presence of all three commanders, looks like a movement that began as a controlled approach to the governor and degenerated as the time spent waiting was filled with arrack. The trumpets and colours called for in prison, and the threats of what would be done at sea, suggest that the men understood the matter not as a petition that might fail and be abandoned, but as the first move in a course of action that they intended to continue once the ship sailed, regardless of the bench's response.
517	508	Will[m] Wells James [his] Bayles W[m] Green mark Alex: Adair Rich: Hughes Rob[t] Holl Henry Phillips Oliver Bagge Darby Field Rich: Adamson Mar: Ralfe Will[s] Waters Jos: Doswett. John Quick. The same day the Gov[er]nr Sent for the Chief on Shoar Mate on Shoar, and the Boatswain, And the Chief mate being Sworn, Gave the following Information, viz[t] Island St Helena. ss. William Hanray Marrin[er] being Chief Mate of the Ship Eagle Capt: Daniel Beeckman C[o]mmander being Duly Examined of what he knoweth touching the Mutineers on board the said Ship Sayeth on his Oath, That Thomas Francis the Boatswain Said at Batavia he should never be Easey till he Saw the Confusion of the Ship (meaneing the Ship Eagle) that the said Boatswain he knoweth to be of avery abusive Quarrellsome Temper very Negligent and Cabel[e]ss of his duty, and a Great Drunkard of a Muti =nous Temper and often Calleaging with the Men and abuseing the Officers of the Ship as by Report, But Such Men among the Sailers, that were not of his Faction, he was very Cruel to, and that there are twenty on board the Ship who have Subscribed a round Robbin Paper that have been very Lately Intimate with the Said Boatswaine which he believes by the basness and falsity of that Paper to have been upon a very bad Account, And the said William Hanray Sayeth that Thomas Clark the Gunner of said Ship is one of the said Mutineers which as he believes is Confirmed by his Signing the [s]ai[d] Paper, and is an Intimate Correspondent with the boatswaine and a Great abetor of these false C[o]mplaints but that he Carries it more shily than some others, and dos not Discover himselfe to the Mates so much as the Rest have done but he looks upon him to be a very bad man	The further subscribers to the paper were: William Wells Alexander Adair Henry Phillips Richard Adamson Walter Waters John Quick James Bayles, by his mark Richard Hughes Oliver Bagge William Green Robert Holt Darby Field Martin Ralfe Joseph Doewett The same day the governor sent on shore for the chief mate and the boatswain. The chief mate, being sworn, gave the following information. William Hanray, marriner, being chief mate of the ship <i>Eagle</i>, Captain Daniel Beeckman commander, was duly examined as to what he knew touching the mutineers on board. He said on his oath that Thomas Frances the boatswain had said at Batavia he should never be easy till he saw the confusion of the ship, meaning the <i>Eagle</i>. He knew the boatswain to be of a very abusive, quarrelsome temper, very negligent and careless of his duty, and a great drunkard of a mutinous temper. He often colloged with the men and abused the officers of the ship. By report, he was very cruel to such men among the sailors as were not of his faction. There were twenty on board the ship who had subscribed a round-robin paper, and these had lately been very intimate with the boatswain. From the baseness and falsity of that paper, he believed it had been on a very bad account. He further said that Thomas Clark the gunner of the ship was one of the mutineers, which he believed

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
		Margin Notes: Hanray Chief m[ate] by Exam[n]	was confirmed by his signing the paper. The gunner was an intimate correspondent with the boatswain, and a great abettor of these false complaints, but he carried it more slyly than some others, and did not discover himself to the mates so much as the rest had done. He looked upon him to be a very bad man. Interpretations The chief mate's deposition is the principal evidence to which the bench will turn in framing any subsequent charge against the men. Sworn evidence from the senior subordinate officer carries more weight than the commander's own report, since the chief mate has daily working contact with the lower deck and the warrant officers and is positioned to observe the patterns of association on which the bench's reading of the dispute now depends. His identification of Thomas Frances the boatswain as having said at Batavia that he should never be easy till he saw the confusion of the ship fixes the intent of mutiny to a date and place well before the present sitting at the island. The round-robin paper is a particular form of collective subscription used by ship's companies in matters of grievance or mutiny. The signatures are written in a circle around the page so that no single name appears first and no leader can be identified by position on the document. The device protects each subscriber by the others, since the bench cannot single out the ringleader from the form of the paper. The chief mate's evidence that twenty men aboard the <i>Eagle</i> had subscribed such a paper, in addition to the seven and the fourteen further names already on the council book, indicates that the disaffection on the ship runs broader than the present examination has yet uncovered. The verb colloque, used of the boatswain's dealings with the men, means to converse on familiar terms with intent to flatter or to draw into a private understanding, often to a bad purpose. Its use marks the boatswain's offence not as open insubordination but as the cultivation of a faction below decks. The boatswain by his office is the warrant officer responsible for the discipline of the lower deck and the maintenance of the rigging and stores, with the men working directly under his command. His turning of that position to faction-building, abusing the officers and treating cruelly the men who would not join him, is the precise inversion of the office and the operative ground for the chief mate's evidence. The chief mate's distinction between the boatswain, who carried his faction openly, and the gunner, who carried it more slyly, identifies the two warrant officers who are the bench's principal targets for confinement in irons. The gunner's signing of the round-robin paper is treated as the public confirmation of what the chief mate had suspected from his manner aboard. Together with the captain's commitment as the writer of the petition, the bench now holds the three persons who would have led the ship's company in any continuation of the dispute at sea, and has placed each under restraint. Speculations The boatswain's declaration at Batavia, that he should never be easy till he saw the confusion of the ship, points to a settled intent of mutiny formed long before the ship reached the island. The choice of the Banjar to Cape leg as the period for the cultivation of the lower deck, with the captain's own account of shortened water rations and reduced provisions on that passage, suggests that the boatswain had used the predictable hardships of the long ocean leg as the operative ground for building his faction. By the time the <i>Eagle</i> reached the road at St Helena, the disaffection had become the established temper of a substantial part of the company. The chief mate's account of the gunner as carrying his faction more slyly than the boatswain suggests a

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			deliberate division of role between the two warrant officers. The boatswain would carry the visible part, openly cultivating the men and abusing the officers, and would in consequence draw the attention of any inquiry. The gunner would retain his standing with the mates and would be in position to act when the boatswain's exposure made open leadership impossible. The bench's commitment of both warrant officers in irons, on the chief mate's evidence rather than on any further act, defeats that division by removing the alternative leadership before the prepared sequence could operate.
518	509	man, and a great fomenter of the Disturbances on board the said ship Eagle, And he sayeth that Alexander Adair the Doctors Mate is a very Malicious Man and has at severall times threatned the Capt: and Cheef Officers and when after he was formerly Con =fined for a Great Crime on board he voe[w]ed swearing against the Capt. and Officers if he had not Satisfaction Some other ways That he is not Only one of the Subscribers to the Pretious Robbin Paper but as by Report the Chief Contriver thereof, and the agent who went from one to the other of the Ships Comp[a] to gett them to Signe it, And the said William Hanray sayeth that William Wells the Trumpeter is another of the Ring Leaders and Conspi =rators on board the said ship Eagle, One of the first fomenters of Divisions and Complaints, a C[o]mmon Tiff[?]eer on board the ship and has Often been Urging the Men to make C[o]mp[ts] and did now Promote the signing of the Paper, and that those four before Named are the Principle of the Mutineers, hav =ing always been very Noisey troublesome People on board and by their fractious and bad behaviour he believes the Rest of the People have been Stirred up to Signe the Said Paper as much to try the Strength of their Party as more then for any other Reason there being no want of any kind of Provisions on board the Capt: having also been very kind always to them that he believes what Ever Pretence they may make their Designe is Rather to Cyrate the ship than for any Real Cause or want and as to what is here before Mentioned the Said William Hanray Affirmeth it to be all true Upon his own knowledge Except the Repo[r]t of the Boatswains Expressions of wishing Confusion to the ship w[ch] he had by the Repo[r]t of others but he believes that to be very true also, William Hanray. Jurat hoc 30 Junij 1715 Coram me Isa: Pyke	The chief mate added that the gunner was a great fomenter of the disturbances on board the ship <i>Eagle</i>. He further said that Alexander Adair the doctor's mate was a very malicious man. He had at several times threatened the captain and chief officers, and whenever he was sent for to attend a great person on board he would swear vengeance against the captain and officers if he did not have satisfaction from some other party. He was not only one of the subscribers to the round-robin paper but, by report, the chief contriver of it, and the agent who went from one to the other of the ship's company to get them to sign it. William Hanray further said that William Wells the trumpeter was another of the ringleaders and conspirators on board the <i>Eagle</i>. He was one of the first fomenters of divisions and complaints, a common talker on board the ship, and had often been urging the men to make complaint. He had now promoted the signing of the paper. The four men before named were the principals of the mutineers. They had always been very noisy, troublesome people on board, and by their fractious and bad behaviour he believed the rest of the people had been stirred up to sign the paper, as much to try the strength of their party as for any other reason. There was no want of any kind of provisions on board, the captain having also been very kind always to them. He believed that whatever pretence they might make, their design was rather to seize the ship than for any real cause or want. As to what was before mentioned, William Hanray affirmed it to be all true upon his own knowledge, except the report of the boatswain's expression of wishing confusion to the ship, which he had by report, but which he believed to be very true also. Signed William Hanray. The information was sworn before Isaac Pyke on 29 June 1715. Interpretations The chief mate's identification of four principals, Thomas Frances the boatswain, Thomas Clark the gunner, Alexander Adair the doctor's mate and William Wells the trumpeter, fixes a structured account of the mutiny by office and function. The boatswain operates on the lower deck through his command of the men, the gunner through his standing in the gun room, the doctor's mate through his access to every part of the ship by reason of his calling on the sick, and the trumpeter through his place as the ship's voice. Each of the four occupies a position that no ordinary mariner could supply, and together they cover the principal lines of communication and faction-building on an Indiaman. The doctor's mate is the warrant officer assistant to the surgeon, with charge of dressings and minor remedies and access to every man on the muster as patient or visitor. The chief mate's evidence that he went from one to the other of the ship's company to get them to sign the paper identifies the use the conspirators made of his rounds. The post is unsuspected for political purposes and provides the necessary cover for the systematic canvassing of the lower deck without raising the suspicion that would follow a boatswain or a gunner moving through the same quarters. The chief mate's account of him as the chief contriver and the agent for collection of signatures

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			fits the practical demands of the round-robin form, in which the order of approach and the management of the page must be controlled by a single hand. The chief mate's distinction between knowledge and report, made expressly at the close of his deposition, marks the deponent as careful of the limits of admissible evidence. He affirms on his own knowledge everything except the boatswain's expression at Batavia about confusion of the ship, which he had by report from another mariner. The qualification is the conventional form by which a deposition is made admissible at any subsequent trial, and is the sort of distinction the bench at the island had reason to expect after the marital privilege ruling delivered by Pyke at the Toby trial of 10 May 1715, in which the evidentiary standards for capital matters had been fixed by reference to Sir Edward Coke and Dalton's Justice. The chief mate's conclusion that the design was rather to seize the ship than for any real cause or want converts the matter from a question of allowance and provisions into one of intended piracy. Seizing an Indiaman on the homeward leg, with a Company cargo aboard, is the principal danger that the establishment at the island stood placed to forestall. The men's calling for their colours and sounding their trumpets in the prison, the boatswain's declaration at Batavia, and the doctor's mate's threats of vengeance against the captain and officers all align with that reading, and the chief mate's evidence puts the matter on the council books in terms that will sustain a charge of mutiny rather than of grievance. Speculations The chief mate's account of the doctor's mate going from one to the other of the ship's company to get them to sign the round-robin paper suggests that the round-robin was drafted at sea on the run from the Cape to St Helena, not at the island after arrival. The matter has the look of a prepared instrument timed for delivery on first contact with the bench at the road, with the marshal at his house identified in advance as the channel by which it would reach the governor without the captain's knowledge. The half crown offered to the marshal was small enough to read as a private commission and large enough to test his disposition before the paper itself was produced. The chief mate's identification of the trumpeter as a common talker on board, urging the men to make complaint, sits with the use of the trumpets in the prison once the men were committed. The trumpet is the ship's instrument of signal and command, and the trumpeter is positioned to hear and to convey the temper of the lower deck to any party seeking to organise it. The men's sending for the colours and sounding the trumpets after commitment, framed against the chief mate's account of the trumpeter as one of the principals, suggests that the ceremony in prison was not improvised in the heat of confinement but the executed form of a planned signal of defiance, prepared for use whether the men were on the ship or ashore.
519	510	Upon which the Boatswaine alsoe was C[o]mmitted to Prison and put in Irons, But in the afternoon these four were all againe Examine[d] and the Gunners and Boatswains Examinations are as followeth Thomas Clark Gunner of the Ship <i>Eagle</i> being duly Examin[d] touching the Lighted Match that was found in the Powder Roome of said ship Sayeth that he Left his Door Lock[d] and Left the key with his Mate, and bid him if the Capt: wanted any Armes to goe to the Chest that was aloft, but not to goe down below into the Powder Room, and has nothing more to say as to the Lighted Match, It being Demanded what objection he has to make against the Captain. He makes no Answer.	On the chief mate's evidence the boatswain was also committed to prison and put in irons. In the afternoon the four were all examined again. The gunner's and the boatswain's examinations were as follows. Thomas Clark, gunner of the ship <i>Eagle</i>, was duly examined as to the lighted match that had been found in the powder room of the ship. He said he had left his door locked and left the key with his mate. He had told him, if the captain wanted any arms, to go to the chest that was aloft, but not to go down below into the powder room. He had nothing more to say as to the lighted match. He was asked what objection he had to make against the captain. He made no answer.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
		Thomas Francis Boatswain of the Ship <i>Eagle</i> Gally being Duly Examined touching severall Misdemean[rs] Riots, and Offences by him Charg[d] to be C[o]mmitted, as Appears by the Oath of William Hannay Cheif mate of said ship, As to all those matters Mentioned by M[r]: Hannay, Sayes he knows nothing of them, it being Demanded by the Gov[ern]r what became of the Chest of money lost out of the Ship Saith he knows nothing of it, and being asked what he knows of the Intent of Blowing up the Ship at Batavia Sayeth that he knows there was a Lighted Match brought out of the Powder Room by the Gunners Mate which he believes was Laid there by Martin Calf a Sailor belonging to the [s]d Ship, and the Reason why he beleiveth Calf did it is because the day before the Lighted Match was found in the Powder Roome, he heard Calf Swear he could send all those Gentry in the Cabbin to the Devill were he sure of goeing to Hell himself, and the Reason why he Did threaten to do so was because he could not gett Leave to goe on shoar, and that he was up the Night before Margin Notes: Gun[er] & Boatswains Examination	Thomas Frances, boatswain of the ship <i>Eagle</i>, was duly examined as to several misdemeanours, riots and offences charged against him, as appeared by the oath of William Hanray, chief mate of the ship. As to all those matters mentioned by Mr Hanray, he said he knew nothing of them. He was asked by the governor what had become of the chest of money lost out of the ship. He said he knew nothing of it. He was asked what he knew of the intent to blow up the ship at Batavia. He said he knew there was a lighted match brought out of the powder room by the gunner's mate, which he believed had been laid there by Martin Calf, a sailor belonging to the ship. The reason he believed Calf did it was because, the day before the lighted match was found in the powder room, he had heard Calf swear he could send all those gentry in the cabin to the devil. He was sure of going to hell himself, and the reason he had threatened to do so was because he could not get leave to go on shore, and that he was up the night before [...] Interpretations The lighted match found in the powder room is the operative ground for the gunner's interrogation. A match in this context is the slow-burning length of treated hemp or cotton used to fire ordnance. Its presence unattended in the powder room of an Indiaman is the standard form of attempted destruction of a ship by fire, since the powder room is the central magazine where the ship's gunpowder is kept in barrels and where any spark will set off the principal explosion. The keeping of the room locked, with the key in the gunner's or the gunner's mate's hand, is the indispensable safeguard of the ship. The gunner's defence that he left his door locked and the key with his mate, with instructions to go only to the arms chest aloft, is calculated to remove him personally from the powder room at the relevant time without disclosing the identity of the person who placed the match there. The boatswain's defence is the conventional answer of a principal in a collective offence who relies on the difficulty the bench will face in proving the matters of common report against him without further depositions. By saying he knew nothing of the matters set out in the chief mate's deposition, he forces the bench to call further evidence rather than rest on the chief mate's account alone. His attempt to shift the lighted match in the powder room at Batavia onto Martin Calf, a mariner not yet named in the proceedings, is the standard form of deflection by a suspect who must answer the most serious charge first. The thousand pound of Company money lost out of the ship, raised again in the boatswain's examination, fixes the broader context in which the present matter stands. The intelligence first carried by Captain Pinnell of the <i>Susanna</i> and Captain Lidon of the <i>Mercury</i> is now put directly to the suspect, and his denial of knowledge of the chest of money places him in the conventional position of the man on whom suspicion lies but against whom no direct proof is yet on the council books. The governor's choice to put the question of the money to the boatswain in the same examination as the question of the lighted match treats the two matters as parts of the same course of conduct, in which theft of Company funds and attempted destruction of the ship are the operative grounds for any subsequent charge. The boatswain's report of Calf's expression about sending the gentry in the cabin to the devil, and being sure of going to hell himself, is reported speech being used in a deflection. The wording carries the conventional language of a mariner cursing those in authority on the ship and consigning himself with them, and the boatswain's choice to attribute the matter to Calf rests on the credibility of that wording as something a sailor of bad temper might say. The detail that Calf was up the night before, awaiting answer, supplies the boatswain's circumstantial basis for the

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			imputation, and the bench will treat the assertion against the documented pattern of the boatswain's own conduct on the ship. Speculations The gunner's refusal to make any answer to the question of what objection he had against the captain, after his guarded account of the lighted match, suggests a calculated silence on the only matter where the bench was inviting him to commit himself. By giving no answer he avoided both an acknowledgement of grievance, which would support the chief mate's account of him as a principal mutineer, and a denial of grievance, which would put him at odds with the round-robin paper he had signed. The choice is the prepared answer of a warrant officer who understands that further evidence is being collected against him and who intends to leave the bench to its proofs. The boatswain's deflection onto Martin Calf, a mariner not previously named in the round-robin paper or in the chief mate's deposition, looks like a prepared alternative narrative held in reserve for use if the matter of the lighted match at Batavia were ever raised against him. The choice of a sailor placed below the warrant officer line, with a recorded outburst that he could not get leave to go on shore, supplies the bench with a plausible individual offender at a lower level of responsibility. If credited, the device would account for the lighted match without implicating the warrant officer faction the chief mate had identified, and would leave the boatswain's position as the man best able to keep order on the ship intact for any later proceeding.
520	511	before, and had a light in the Cook Roome and the said Thomas Francis sayeth he saw the Lighted Match in the Powder roome about two hours before twas brought up, The Carpenter, Caulker, Carpenters Boy, and some others were discharged out of Prison, The Gov[ern]r sent on board for some of their Salt Beef one of the Bigest and one of the Least Ceices they could find, w[ith] was brought and weighed, the heaviest weighed about Seven Pound & a half the least above five pound and three quarters of a pound, It appear[d] they had always Rice at Will & dried Venison likewise But the Ground and Cheif of their C[o]mp[an]y was the want of Pudding to Eat with their meat and a Pint of Arrack a day which because the Capt of the Hanover had Allow[d] to his Men at Sea beleived t to be the Comp[an]y Allowance. That was the Subsistence that these four Men viz: the Gunner, the Boatswain, the Trumpeter and the Doct[or]s mate on behalf of the Rest Complained of, viz: The want of a Pudding with their Meat or Else two Ceices of Meat, and the Arrack as aforesaid, In the Examining this Matter the Gov[ern]r with his Council and all the Captains were Present, and it Appear[ed] to all that they had no other Pretence then as abovesaid, But upon Examining of some others of the Ships it did not Appear, but that there was a due & Propper Allowance of Every thing Excepting for about two Months before they Arrived at the Cape and then the Short Allow =ance (so much Complain[d] of) was as followeth, One Peice of such Beef as is above Mention[d] which is upwards of Six Pound five quarts of Water, and as much Rice as they would have was the Allowance of five Men - It Margin Notes: Some discharged upon Exam[n] before Gov[r] & Cap[ts] found the Men had a propper allow[ance]	The boatswain added that he had been up the night before, had a light in the cook room, and said he saw the lighted match in the powder room about two hours before it was brought up. The carpenter, the caulker, the carpenter's boy and some others were discharged out of prison. The governor sent on board for some of the ship's salt beef, one of the biggest and one of the least pieces they could find. The pieces were brought and weighed. The heaviest weighed about seven pound and a half, the least above five pound and three quarters of a pound. It appeared the men had always rice at will, and dried venison likewise. The ground and chief of their complaint was the want of pudding to eat with their meat, and a pint of arrack a day. They believed a pint to be the Company's allowance because the captain of the <i>Hanover</i> had allowed it to his men at sea. That was the substance of the matters which the gunner, the boatswain, the trumpeter and the doctor's mate had complained of on behalf of the rest, namely the want of a pudding with their meat or else two pieces of meat, and the arrack as already stated. On examining the matter, the governor with his council and all the captains being present, it appeared to all that the men had no other pretence than as above. On examining some others of the ship's company, it did not appear but that there had been due and proper allowance of everything, except for about two months before they arrived at the Cape, when the short allowance complained of was as follows. One piece of such beef as is mentioned above, which is upwards of six pound; five quarts of water; and as much rice as they would have: was the allowance of five men. Interpretations The governor's procedure of sending on board for one of the biggest and one of the least pieces of salt beef is a test of the ship's virtualling by physical sample. The bench weighs the actual pieces in court rather than relying on a paper allowance from the ship's books. Heaviest seven pound and a half, lightest above five pound and three quarters, places the issue at the upper

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			end against the standing benchmark of six pound a mess at least, which Captain Beeckman had defended in his earlier examination on the same day. The test confirms the captain's defence on the meat at the island, and removes the men's general charge of want of provisions from the operative ground of the complaint. The mess remains the unit of allowance, with the five-men ration on the short period before the Cape disclosed as one piece of beef upwards of six pound, five quarts of water and rice without limit. The figure of five quarts of water for five men for the day matches the quart a man already complained of in evidence at the earlier examination, and the captain's earlier admission of having shortened the usual allowance on a long passage fixing his own ration at no more than the men's. The bench now has on the record both the men's specific complaint and the captain's specific defence on the same units of measure, with the rice without limit as the operative cushion against the shortened meat and water. The narrowing of the dispute to the want of a pudding with the meat, or else two pieces of meat, and the pint of arrack a day, converts the matter from one of want of provisions into one of customary allowance against allowance on a comparable Indiaman. A pudding in a ship's mess of this date is a boiled dish of flour or oatmeal with suet, sometimes with raisins or other fruit, cooked in a cloth and served alongside the meat to make the ration go further. Its absence as a settled grievance is the operative complaint that the men were drawing meat and rice but not the carbohydrate ration that the lower deck regarded as essential to a proper meal. The pint of arrack a day, founded on the practice of Captain Osborne of the <i>Hanover</i>, presents the men's claim as one of comparative custom in the squadron rather than as the Company's general allowance. The Indiaman context of the <i>Hanover</i> and the <i>Eagle</i> fixes the practical benchmarks of the road. Each is a Company armed merchantman returning from the East with a cargo for the directors, with the <i>Hanover</i> under Captain Osborne and the <i>Eagle</i> under Captain Beeckman. Captain Osborne's allowance of a pint of arrack a day to his own men, taken as the founding fact of the <i>Eagle's</i> claim, sets the operative ground on which the bench will measure the present captain's regime. The discharge of the carpenter, the caulker, the carpenter's boy and the others removes from confinement the tradesmen of the ship not implicated in the warrant officer faction, and preserves the working complement of the ship for any continuation of the voyage to Bencoolen. Speculations The reduction of the dispute on examination to the want of a pudding and the pint of arrack suggests that the larger framing of the original paper, with its rhetoric of a poor pinched and distressed ship's company wanting the Company's allowance of arrack and short of other provisions for many months, was the chosen public face of a narrower domestic complaint. The choice of the comparative ground, the captain of the <i>Hanover's</i> pint a day at sea, suggests that the men had calculated their case before drafting the round-robin paper, and had identified the captain whose practice would give their claim the appearance of a Company standard. The bench's examination of others of the ship's company, finding due and proper allowance except for the two months before the Cape, exposes the gap between the public framing and the recoverable facts. The discharge of the carpenter, the caulker, the carpenter's boy and the others before the further examination concludes suggests a deliberate winnowing of the prisoners by the bench. Each of the released men is a tradesman with a specific skill that the ship cannot

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			continue the voyage to Bencoolen without, and each has been cleared by the chief mate's testimony and by the absence of his name on the round-robin paper. The pattern matches the bench's earlier handling of the <i>Cardonnell</i> passengers Aylmer, Bridger and Wiley on 16 June 1715, where reconciliation was preferred to formal sentence wherever the operational interest of the ship was served, and the men retained on the books for further examination are now confined to the warrant officer faction identified by the chief mate.
521	512	It appeared they were very Bold Resolute & Desperate Menace[d] People, they had all of them in their Turns Mentioned the brought to Reason Capt: and Cheif officers they seemed to be so Obstinate as not to be Perswaded by Perswasions or any fair & Moderate means but bo[a]sted themselves that the Rest of the Men were of their minds, Wherefore the Govern[r] Looking upon them as Dangerous men, Remanded them back againe to Prison. The following Affidavits were since taken. Island St Helena. ss (viz[t]) John Verchell sailer Being duly Examined on his Oath Saith that lately when the Ship Eagle Gally was at the Cape of Good hope, he heard the Gunner say, oh! my Little Dear Creature (meaning his wife) if it weart for her he would never goe in that Ship, for I am sure the ship will never Proceed her voyage but will either be Run away with, or blown up, This was Said to and in the hearing of Robert Toll, and this Deponent being askt why he did not Discover it to the Capt: Saith he was afraid to discover it because the Gunner had threatned him that if ever he discovered any thing to the Capt: that he Said that he should be hove over board some dark night and no body should know what became of him, He Saith also That one night Since they Came from the Cape of Good Hope he overheard the Boatswaine Say to the Gunner, this Ship will never goe for England But what must we do how shall we Mannage it, and the Gunner Sayd I shall do nothing my self for I will have but Little Hand in it but it shall be done in the same Manner as it was to be done at Batavia, and when those words was spoken the Gunner the Boatswaine, the Docters Mate, & Robert Toll. Margin Notes: Verchells Exam[n]	It appeared the men were very bold, resolute and desperate. They had all of them in their turns menaced the captain and chief officers. They seemed so obstinate as not to be reduced by persuasion or any fair and moderate means, but boasted themselves that the rest of the men were of their minds. The governor, looking upon them as dangerous men, remanded them back to prison. The following affidavits were since taken. John Verchell, sailor, was duly examined and said upon his oath that lately, when the ship <i>Eagle Galley</i> was at the Cape of Good Hope, he had heard the gunner say, Oh, my little dear creature, meaning his wife, if it were not for her he would never go in that ship, for he was sure the ship would never proceed her voyage but would either be run away with or blown up. This was said to, and in the hearing of, Robert Toll. The deponent being asked why he did not discover it to the captain, he said he was afraid to discover it because the gunner had threatened him that, if ever he discovered any thing to the captain, he should be hove overboard some dark night, and nobody should know what became of him. He further said that one night, since they came from the Cape of Good Hope, he had overheard the boatswain say to the gunner, this ship will never go for England, but what must we do, how shall we manage it. The gunner said, I shall do nothing myself, for I will have but little hand in it, but it shall be done in the same manner as it was to be done at Batavia. When those words were spoken the gunner, the boatswain, the doctor's mate and Robert Toll [...] Interpretations The taking of fresh affidavits after the remand to prison places the bench's procedure on the footing of preparation for a formal trial of mutiny rather than for any further reconciliation. The earlier examinations of the same day had drawn from the four principals their answers in person before the governor and the captains. The affidavits now build the documentary basis on which the matter can be charged, by reducing into sworn writing the evidence of mariners willing to discover what they had seen and heard at sea. The procedure follows the form of evidence-gathering established earlier in the present sittings, comparable to the documentary chain assembled against Swartz on 21 June 1715 in the pasquinade inquiry. The gunner's reported expression to his wife at the Cape, identifying her as the sole reason he would go in the ship at all and predicting that the ship would either be run away with or blown up, fixes the operative intent of mutiny at a date and place that the bench can put against the chief mate's earlier evidence of the boatswain's words at Batavia. The two warrant officers are now placed in parallel as having spoken of the destruction or seizure of the ship at separate ports on the homeward voyage, with each confided to a different witness. The pattern indicates concerted planning rather than isolated outburst, since the two sets of words bear on the same intention but were uttered at different stages. The gunner's threat to John Verchell, that he should be hove overboard some dark night and nobody should know what became of him, illustrates the

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			operative mechanism by which the warrant officer faction had silenced informers among the lower deck for the course of the voyage. The threat of unwitnessed disposal at sea is the standing terror by which mutineers control the rest of the company, since the man heaved overboard at night leaves no body to be returned to port and no immediate accuser. Verchell's stated reason for not discovering the matter to the captain is the conventional answer of a mariner who has held his information until placed in a setting where the bench can protect him. The exchange overheard since the Cape, with the boatswain asking how the seizure should be managed and the gunner replying that he would have little hand in it himself but that it should be done in the same manner as it was to be done at Batavia, ties the present plot to the earlier attempt of which the lighted match in the powder room had been the operative instrument. The gunner's careful distancing of himself from the principal action, while supplying the method by reference to the prior attempt, mirrors the chief mate's earlier evidence that the gunner carried his faction more slyly than the boatswain. The doctor's mate's presence at the conversation, identified at the close of Verchell's affidavit, confirms his place as one of the four principals in the operational planning, not merely as the chief contriver and circulator of the round-robin paper. Speculations The reference to the same manner as it was to be done at Batavia points to a planned attempt at the destruction of the ship by fire in the powder room as the standing method of the conspiracy, of which the lighted match found there at Batavia and traced by the boatswain to Martin Calf was the failed first execution. The bench now has on its books the boatswain's deflection of the Batavia attempt onto Calf and the gunner's reference to the same manner being intended for the present run, the two accounts pointing in opposite directions. The boatswain's choice of a sailor outside the warrant officer faction as his named alternative offender at Batavia looks like a defence prepared in advance for the contingency of arrest at a Company port, the gunner's reply to the boatswain in the overheard exchange exposing the device. Verchell's silence at the Cape and on the run to St Helena, broken only on the day after the warrant officer faction was confined in irons, suggests that the affidavits now coming in represent a settled body of evidence held by mariners on the lower deck against the moment when the bench would be in a position to protect them. The chief mate's earlier evidence of twenty subscribers to the round-robin paper aboard had placed the disaffected men against the rest of the company in numbers, and the appearance of Verchell and Robert Toll as informers now confirms that the larger part of the <i>Eagle's</i> mariners had stood against the warrant officer faction even when intimidated by threats of being heaved overboard. The bench's reception of the affidavits after the remand to prison signals that the inquiry will proceed on the gathered evidence rather than on any further offer of reconciliation to the principals.

Interpretations George Taylor's status as third mate gives his evidence the standing of an officer's deposition rather than a foremast hand's, and the bench will rate it accordingly. The third mate is the junior commissioned officer of the watch, ranking after the chief mate and the second mate, and is in daily contact with both the warrant officer level and the lower deck. His statement that he had only the ordinary allowance of foremast men marks the unusual choice of an officer to take the standard mariner's ration, and signals his independence from any officer's faction on the ship. The use of his own dissatisfaction with the captain, openly stated at the head of the affidavit, is the conventional device of a deponent establishing his credit on a matter where he has no interest to please the man defended. By stating that he had more reason to speak against the captain than the men who had signed the round-robin paper, because the captain had preferred another over his head, Taylor makes plain the personal grievance he might have advanced against Captain Beeckman and then sets it aside in favour of the truth on oath. The form of the statement is consistent with the standard of evidence noticed earlier in the chief mate's deposition, in which the deponent had distinguished knowledge from report and confined his oath accordingly. The comparative reference to other ships in which the deponent had served, where he had had less allowance of victuals than on the <i>Eagle</i>, is the operative answer to the men's framing of the dispute as one of unusual want. Taylor's evidence converts the comparative ground on which the men had built their case, founded on Captain Osborne's pint of arrack a day on the <i>Hanover</i> recorded earlier on 29 June 1715, into a comparison that runs against the men's claim by setting the <i>Eagle</i>'s regime against the range of Indian practice known to a working third mate. The figure of seven pound of mutton mentioned in the affidavit aligns with the standing benchmark of six pound a mess at least, with bony pieces larger, defended by Captain Beeckman in his earlier examination of the same day. Taylor's account of often-issued arrack, good and wholesome meat and the absence of any general want except over a particular period brings the third mate's evidence into agreement with the captain's defence and with the bench's own test by physical weighing of the salt beef. The corroboration of three sources, by direct test and by two separate depositions from officers of different rank, places the want-of-provisions framing of the round-robin paper substantially against the recoverable facts. Speculations Taylor's open declaration of his own grievance at being passed over by the captain, before swearing to the captain's kindness to the ship's company, suggests that the third mate had been approached at some stage by the round-robin party as a possible recruit, on the calculation that an officer with a private grievance might be willing to lend his name to the paper. His decision to

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			disclose the personal matter himself, rather than to be confronted with it in cross-examination at a subsequent trial, indicates a careful man who anticipates the lines of attack his deposition might face. The pattern reflects the same forensic care displayed in the chief mate's distinction between knowledge and report on the boatswain's expression at Batavia. The third mate's emphasis on the <i>Eagle's</i> allowance being not merely adequate but more generous than other ships he had served in suggests that the bench is being supplied, through successive depositions, with the basis for a finding that the round-robin paper was not merely an exaggerated grievance but a fabricated one. If the want of provisions was a constructed pretence, as William Hanray the chief mate had earlier concluded, the procedural ground for treating the matter as mutiny rather than as petition becomes the operative reading. The chief mate's view that the design was rather to seize the ship than for any real cause or want is now being underwritten by the third mate's parallel statement of contentment with the allowance, and the bench can frame the documentary chain on those two depositions.
523	514	Island St Helena ss Jacob Franklin Marriner & Midship man belonging to the Ship Eagle Gally Saith that during the voyage hitherto he has had Sufficient Allowance of Provisions So farr from wanting on the Ships Comp[a]: that he has Seen Rice often thrown over board by the People that they could not Eat, knows very well that Capt: Beekman very often gave the ships Company Arrack and Punch, and beleives the Allowance on board the said ship to be as good as any, and being askt what he knows of the Chest of Money being taken out of the ship, he Saith he knows nothing of it, That the boatswaine is a sotish Idle Saucy fellow, has done little or no duty the voyage, and the Gunner has Alsoe been very Negligent of his duty, As to the Doctors mate Saith he has behaved himself like a saucy fellow both to the Capt: and officers in said Ship, And that the Trumpeter has been as bad as bad Can be aboard Ship, Endeavouring to make Uneasiness and Disturbance on board said Ship, he never knew a worse, Altho' he had very Civill Useage from the Captain. Jacob Franklin Jurat hoc Tricessimo die Junij A: D: 1715 Coram me Isaac Pyke I Pyke Geo: Haswell Ant[ipas] Tovey Edw: Byfeld Margin Notes: Jacob Franklin Midsh[ipman] Exam[n]	Jacob Franklin, mariner and midshipman belonging to the ship <i>Eagle Galley</i>, said that during the voyage hitherto he had had sufficient allowance of provisions, so far from the ship's company wanting that he had seen rice often thrown overboard by the people because they could not eat it. He knew very well that Captain Beeckman had very often given the ship's company arrack and punch, and believed the allowance on board the ship to be as good as any. Being asked what he knew of the chest of money being taken out of the ship, he said he knew nothing of it. The boatswain was a sottiish, idle, saucy fellow, who had done little or no duty the voyage. The gunner had also been very negligent of his duty. As to the doctor's mate, he said he had behaved himself like a saucy fellow both to the captain and officers on board the ship. The trumpeter had been as bad as bad can be aboard ship, endeavouring to make uneasiness and disturbance on board. He never knew a worse, although he had had very civil usage from the captain. Signed Jacob Franklin. The affidavit was sworn before Isaac Pyke on 29 June 1715. The consultation was signed by Isaac Pyke, George Haswell, Antipas Tovey and Edward Byfield. Interpretations The midshipman's evidence completes the documentary chain established by the chief mate William Hanray and the third mate George Taylor, with three officers of distinct rank each speaking to the allowance on board and to the conduct of the four principal mutineers. Jacob Franklin holds the position of officer in training, junior in the line of officer succession on the ship, and standing as a young man on the foredeck rather than on the quarterdeck. His evidence carries the weight of an officer's deposition without the personal grievance Taylor had been at pains to set aside, and his sworn account of the four principals goes directly to the question of duty performed rather than to any private complaint. Franklin's evidence that the rice was so abundant that the men often threw it overboard because they could not eat it is the most direct refutation in the documentary chain of the men's framing of the dispute as one of want of provisions. Set against the captain's earlier account of rice without limit and the bench's own test on the salt beef by physical weighing, the picture of food refused and discarded on the lower deck removes any remaining ground for treating the round-robin paper as a complaint of hardship. The forensic weight of the deposition is increased by Franklin's place as an officer of low rank who would be in daily contact

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			with the foremast hands and able to observe their treatment of their ration directly. The four principals are now characterised in Franklin's evidence by office and conduct: the boatswain sottish, idle and saucy and doing little or no duty; the gunner very negligent of his duty; the doctor's mate saucy to the captain and officers; the trumpeter as bad as bad can be and a deliberate fomenter of disturbance. The accumulated descriptions sit alongside the chief mate's evidence of the boatswain's expression at Batavia, the gunner's threats to John Verchell at the Cape, the doctor's mate as the agent for collection of round-robin signatures and the trumpeter as a common talker urging the men to complain. The bench now has under its hand a coherent account of the four warrant officers as a settled faction against the captain and the regular discipline of the ship. The signing of the consultation by Isaac Pyke, George Haswell, Antipas Tovey and Edward Byfield, without Matthew Bazett's signature on a sitting that opened with him as third in council on 29 June 1715, follows the selective pattern noted earlier in the present sittings. The protest against Captain Mawson of the <i>Cardonnell</i> of 11 June 1715 had been signed by Pyke, Tovey and Byfield without either Haswell or Bazett, and the consultation of 14 June 1715 by Pyke, Haswell, Tovey and Byfield without Bazett. The absence of Bazett's name on the present matter, the most serious documentary entry of the present sittings, places the inquiry into the <i>Eagle Galley</i> mutiny under the hands of four councillors with the third councillor unrepresented on the record. Speculations The pattern of rice thrown overboard, taken with Franklin's evidence of often-issued arrack and punch and a generous allowance, suggests that the men of the <i>Eagle Galley</i> had not been short of any item necessary to subsistence at any point of the voyage that fell within Franklin's observation, and that the want of pudding earlier extracted from the principals on examination was the closest the four could come to a substantive complaint when pressed to particulars. The selection of a pudding with the meat as the operative grievance is a complaint over a customary table refinement rather than the kind of deprivation that would explain the elaborate organisation of a round-robin paper, the half crown to the marshal, the assembly in town and the affirmation of four and twenty men of one mind. The disproportion between the complaint as stated and the organisation deployed for its delivery confirms the chief mate's reading that the design was rather to seize the ship. The conspicuous absence of Matthew Bazett's signature on a consultation containing affidavits sworn before Pyke alone and signed by the other four councillors suggests that the third councillor was either not in attendance at the sittings on 29 June 1715 or chose not to sign the record. Given that Bazett had been recently interrogated on 21 June 1715 over the storekeeper's books and accounts, and had stated then that three months were not sufficient and the proper deadline was six months after 25 March, the third councillor's absence from this most formal documentary entry of the present sittings may reflect his ongoing occupation with the stores account in the days before the <i>Cardonnell</i>'s eventual departure. The pattern of selective signing on contested instruments, in which entries are placed under the hands of councillors who can act consistently in any subsequent reference, is now extended to the principal mutiny entry on the council books.
524	515	Island St Helena. At a Consultation Held on Fryday the first day of July 1715. At the Union Castle in James Valley. Isaac Pyke	Island of St Helena. At a Consultation held on Friday the first day of July 1715 at the Union Castle in James Valley.

		Esq[r] Govern[r] George Haswell D[e]p[u]ty Pres[t] Matt[w] Bazett 3 Antip[s] Tovey 4 & Edw[o]: Byfeld 5 in Counc[ll] Whereas there was Severall things wanting of the Cardonnels Cargoe which the Capt: in his Letter Promised to Delivr Else it had been Endorsed on the Bill of Loading But has not It is ordered That the Capt: be made Debitor for what he has not Delivered of said Cargoe. Ordered That Publick Notice be given that Mondays & Tuesdays in Every week Goods will be Sold and Send out of the Hon[ble] Companys Stores, and on no other days. I Pyke Geo: Haswell Ant[i]pas Tovey Edward Byfeld. Island Margin Notes: Goods wanting in Cardonels Cargoe Cap[t]: to be made debt[or] Goods out of Stores Monday & Tuesday only.	Present: Isaac Pyke Esquire, Governor; George Haswell, Deputy Governor; Matthew Bazett, third; Antipas Tovey, fourth; Edward Byfield, fifth in council. Several things were wanting of the <i>Cardonnell's</i> cargo which the captain in his letter had promised to deliver if it had been endorsed on the bill of lading, but had not. The council ordered that the captain be made debtor for what he had not delivered of the cargo. The council ordered that public notice be given that on Mondays and Tuesdays in every week goods would be sold and served out of the Honourable Company's stores, and on no other days. The consultation was signed by George Haswell, Antipas Tovey and Edward Byfield. Interpretations The deficiency in the <i>Cardonnell's</i> cargo is the operative continuation of the broader dispute with Captain William Mawson that has run through the present sittings since the protest of 11 June 1715, in which the bench had formally protested against the captain for failure to unload the cargo within the ten working days of the charter party. The earlier protest had been signed by Pyke, Tovey and Byfield without Haswell or Bazett. The present order places Mawson in the position of debtor to the Company for what he has not delivered, and converts the failure to deliver from a contractual breach of the charter party into a recoverable balance on the Company's books against him. The mechanism of making the captain debtor for goods short on the bill of lading is the standard institutional response of a Company factor to short delivery from an Indiaman. The bill of lading is the principal document of receipt from the loading port at which the goods were taken on board, and any endorsement of variations between that document and the goods actually delivered at the receiving port is the contractual means by which the captain may discharge his obligation. Mawson's failure to endorse the bill on his own showing leaves the original quantities standing as his obligation, and the bench's order treats the difference as a sterling charge against his personal account rather than as a matter for the broader dispute with him. The order restricting the issue of goods from the Company's stores to Mondays and Tuesdays of every week is an administrative reform addressing the demand on the storekeeper's establishment. The order follows directly from the storekeepers' interrogation of 21 June 1715, in which Captain Haswell as accountant and Captain Bazett as storekeeper had been examined on the books and accounts and had stated that three months were not sufficient for the production of the books and that the proper deadline was six months after 25 March, with the assistants then employed identified as Haswell, Bazett, Byfield, Tomlinson, John Goodwin, Thomas Goodwin and Richard [...]. By confining the issue of goods to two days in seven, the bench releases the storekeeper and his assistants for the remaining five days for the accounting and reconciliation that the documented staffing position cannot otherwise sustain. The consultation as recorded carries the signatures of Haswell, Tovey and Byfield. Pyke's signature is not visible on the present image, and the absence of Bazett's signature continues the pattern noted on the consultation of 29 June 1715 covering the <i>Eagle Galley</i> mutiny inquiry. The placing of administrative reforms touching the storekeeper's establishment under the hands of the deputy governor as accountant and the two junior councillors, rather than under the full bench including the storekeeper, holds with the broader pattern of selective signing observed across the present sittings. Speculations

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			The choice of Mondays and Tuesdays as the issue days for the Company's stores suggests a deliberate accommodation of the rhythm of arrivals and departures at the road. Indiamen calling at the island typically remained a number of days at anchor for water, refreshment and despatch, and the placing of the two consecutive issue days at the head of the week allows a ship's purser arriving over a Saturday or Sunday to come ashore on the Monday for the first issue and clear his needs in two consecutive days before the ship is ready to sail. The arrangement also concentrates the demand on the stores into a fixed window that the storekeeper and his assistants can plan around, rather than the open-ended issue that had perhaps strained the establishment in the days before. The order to make Captain Mawson debtor for the goods not delivered comes at a sitting from which the protest of 11 June 1715 framing has been institutionally settled, with the bench now moving from formal protest to recoverable sum. The choice to convert the dispute from a charter party matter into a debt on Mawson personally suggests that the bench has concluded that the ship will sail before any wider settlement is reached and that the only practical remedy is to place the unrecovered value on the Company's books against the captain's name for collection in due course. The pattern of signing, with Haswell now appearing on this order while Bazett is again absent, places the deputy governor on the documentary record of the Mawson business he had earlier declined to subscribe to.

He being then Gunners Mate of the said Ship, went down to fetch a Gun Case for the Capt: and going into the Powder Roome to fetch it he Saw a Lighted Match, lying over a Powder Barrell, which Powder Barrell Contained Cartridges and Loose Powder and Close by it Stood another Powder Barrell with Cartridges & Loose Powder Shott over them, and five or Six full Barrells of Powder lying also by them, that he was in a great Surprize to find a Lighted Match lying in So Dangerous a manner But he Clapt his hand under the Coal of the Match, and brought it away, this was According to his Memory, on or about the 29[th] of May but he has it down in his Book on board but dos Not Exactly Remember the day of the month, He Saith that at that time the Match was found alight in the Powder Roome, the Gunner was on Shoar on Father Smiths Island Sworn Margin Notes: W[m]: Ballaird 4[th] mate of [the] Eagle Examina[t]	At a Consultation held on Saturday the 2 day of July 1715 at the Union Castle in James Valley. Present: Isaac Pyke Esquire, Governor; George Haswell, Deputy Governor; Matthew Bazett, third; Antipas Tovey, fourth; Edward Byfield, fifth in council. The following affidavits were taken. William Ballaird, mariner and fourth mate of the ship <i>Eagle Galley</i>, said on his oath that about the latter end of May last, in the year 1714, he had been gunner's mate of the ship. He had gone down to fetch a gun case for the captain. On going into the powder room to fetch it, he saw a lighted match lying over a powder barrel. The barrel contained cartridges and loose powder, and close by it stood another powder barrel with cartridges and loose powder shot over them, and five or six full barrels of powder lying also by them. He was in a great surprise to find a lighted match lying in so dangerous a manner. He clapped his hand under the coal of the match and carried it away. This was, according to his memory, on or about the 29 of May, but he had set it down in his book on board, although he did not exactly remember the day of the month. At that time the match was found alight in the powder room, the gunner was on shore on Father Smith's Island. Interpretations The deposition of William Ballaird carries the documentary chain back to the original Batavia incident of late May 1714 referred to in earlier evidence as the prior attempt that the warrant officer faction had intended to repeat on the present voyage. The fourth mate is the most junior commissioned officer of the watch, ranking below the third mate George Taylor who had deposed on 29 June 1715, and his evidence now sworn places the eyewitness account of the lighted match in the hands of the man who had actually removed it. His prior office as gunner's mate at the date of the incident gives him the operative knowledge of the powder room and the working understanding of the danger that an ordinary mariner would not possess. The composition of the powder room described in the deposition explains the gravity with which the bench has treated the matter throughout the present

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			sittings. A powder barrel containing cartridges and loose powder, with a second such barrel close by carrying cartridges and shot, and five or six full barrels of powder lying around them, represents the full magazine of an armed Indiaman ready for action. A lighted match laid over the first barrel would on the burning down of the coal have set off the entire magazine, with the consequent destruction of the ship by explosion and the loss of the cargo, the company and any vessels in immediate company. The placement is the operative form of attempted destruction by a person with knowledge of the powder room. Ballaird's instinctive act of clapping his hand under the coal of the match to extinguish it, before lifting and removing the burning length, is the standard means used by an experienced powder man to deal with a stray spark in the magazine. The coal is the live burning end of the slow match, and the immediate cutting off of its access to air and powder is the only safe response when the source cannot be lifted clear quickly. The deponent's reflexive handling of the danger marks him as competent in his calling and gives weight to his evidence on the date and circumstances of the discovery. The whereabouts of Thomas Clark the gunner at the time of the incident, on shore at Father Smith's Island, is the operative fact that the boatswain Thomas Frances had used in his examination of 29 June 1715 to deflect the matter onto Martin Calf. Ballaird's evidence puts the gunner ashore but the lighted match in his powder room with the room presumably accessible to whoever the gunner had left the key with. The boatswain's earlier deflection had named Calf as the supposed culprit on the strength of his sworn intent to send the gentry in the cabin to the devil, but Ballaird's evidence places the matter on the documentary record without naming any individual offender, leaving the bench to test the rival accounts on the further evidence to be collected. Speculations The choice of Ballaird as the witness to the lighted match incident at Batavia, and the date on which his evidence has been taken, points to the bench moving in a planned sequence through the witnesses likely to have eye knowledge of the prior attempt. The chief mate Hanray had deposed on 29 June 1715 from his general knowledge of the conduct of the four principals over the voyage. The third mate Taylor and the midshipman Franklin had deposed on the same date on the allowance and the conduct of the four. Ballaird's deposition now turns to the operative incident itself, with the bench moving from the framing depositions on the men's general character to the particular evidence on the specific attempt that the gunner's overheard exchange with the boatswain at sea had pointed to. The discrepancy between Ballaird's date of on or about 29 May for the discovery of the lighted match, qualified by his note that he had it set down in his book on board, and the boatswain Frances's account of the day before the match was found at Batavia, suggests the bench is conscious of the difficulty of establishing dates by oral memory and is relying on the ship's own books for fixing the chronology. The reference to Ballaird's book on board, which he says he had not consulted before deposing, signals that the bench is prepared to call for the documentary record itself if any date becomes critical to the case, and the practice is consistent with the rigour applied to other documentary inquiries in the present sittings, such as the storekeeper's books and accounts of 21 June 1715.
526	517	Being askt what he knows of the Thousand Pound lost out of the Ship, he Saith it was not knownen at the time the ship was likely to be blown up that any money was Miss =ing, and the first time he knew any money was	William Ballaird, being asked what he knew of the thousand pound lost out of the ship, said it was not known at the time the ship was likely to be blown up that any money was missing. 		Lost out of the Ship was at a place Called Carry-Man-java But he never did hear who had the money, or how it went out of the Ship This Deponent farther Saith, he do[s] not think that Thomas Clark then Gunner to be fitt for that Employment. He being askt about the Signing the Paper that was brought to the Gov[er]nr Saith that he askt by the Doct[s] mate if he would Signe their Paper, and Said he could not Sett his hand to any thing, then Adair the Doct[r] mate replied askt you whether you will be in the Negative or Affirmative, Upon which this Deponent Replyed in the Negative, Being askt Concerning the Capt: he Saith the Cept: was never unkind to the People nor Severe, Saith that the Capt: never was Severe to the People on board the ship, But between Birnea and the Cape had Scant allowance but he he was the better Contented w[th] it beleiving the Capt: did the best he could. W[m] Ballaird Jurat hoc Secundo die July Dom 1715 Coram me Isaac Pyke Island St Helena ss William Waters Sailer on board the Ship Eagle, being duly Examined on his Oath sayeth that one day which he very well Remembers was on a Satur day, he having been all the night before at a Place Called Sallies Smiths Island near Batavia that the Long Boat Came on Shoar there that Satturday w[th] a great many hands in her amongst whom was Thom[s]: Clark the Gunner and as soon as the Gun[r] Came on Shoar he Exprest a great Deal of Satisfaction to the People that he was come out of Margin Notes: W[m] Waters Exam[n]	money was lost out of the ship was at a place called Carry-Man-Java. He never did hear who had the money, or how it went out of the ship. The deponent further said he did not think Thomas Clark, then gunner, fit for that employment. He was asked about the signing of the paper that was brought to the governor. He said the doctor's mate had asked him whether he would sign their paper. He had answered that he would not set his hand to anything. The doctor's mate Adair replied, ask you, whether you will be in the negative or the affirmative. To which the deponent answered in the negative. He was asked concerning the captain. He said the captain was never unkind to the people nor severe. The captain never was severe to the people on board the ship, but between Banjar and the Cape they had scant allowance. He was the better contented with it, believing the captain did the best he could. Signed William Ballaird. The affidavit was sworn before Isaac Pyke on 2 July 1715. William Waters, sailor on board the ship <i>Eagle</i>, was duly examined and said on his oath that one day, which he very well remembered was on a Saturday, having been all the night before at a place called Father Smith's Island near Batavia, the long boat came on shore that Saturday with a great many hands in her, among whom was Thomas Clark the gunner. As soon as the gunner came on shore he expressed a great deal of satisfaction to the people that he was come out [...] Interpretations Ballaird's evidence on the thousand pound and on the gunner's character now sits on the council books alongside the chief mate's evidence taken on 29 June 1715 and the captains' earlier intelligence from Captain Pinnell of the <i>Susanna</i> and Captain Lidon of the <i>Mercury</i>. The geographical anchor of Carry-Man-Java fixes the disclosure of the loss to a specific port of call on the homeward voyage, allowing the bench to test the question of when the money went missing against the ship's books and the dates of any other irregularities. The deponent's care to state that the matter was not known to be missing at the date of the powder-room incident at Father Smith's Island removes any suggestion that the two events were directly connected, and points to the loss as a separate offence on a later leg of the voyage. The exchange between the doctor's mate Alexander Adair and Ballaird over the round-robin paper is the operative evidence of the canvassing procedure described in the chief mate's deposition of 29 June 1715, in which Adair had been identified as the chief contriver of the paper and the agent who went from one to the other of the ship's company to get them to sign. Adair's form of words, asking the deponent whether he would be in the negative or the affirmative, is the operative test by which the doctor's mate sorted the company into those who would sign and those who would not. The phrasing converts what might have been a simple refusal into a recorded position, and identifies for the warrant officer faction the men whose silence on the lower deck cannot be relied upon when the time for action comes. Ballaird's evidence that he answered in the negative, taken with the chief mate's earlier identification of twenty subscribers and the seven and fourteen further names already recorded, indicates that a substantial part of the <i>Eagle's</i> mariners had refused to sign the paper when canvassed. The threat of being heaved overboard some dark night, recorded in John Verchell's affidavit of 29 June 1715 as the means by which the warrant officer faction had silenced informers, becomes operational only against the men recorded as negative on Adair's rounds. The pattern of canvassing is now visible as a two-stage device, with the affirmative signatures

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			committed to the paper and the negative refusers identified for separate handling at sea. William Waters's deposition opens the parallel account of the gunner's movements at Father Smith's Island near Batavia, providing a second eyewitness to set against the boatswain Frances's account on 29 June 1715. The reference to the long boat coming on shore on the Saturday with a great many hands, including the gunner, will allow the bench to fix the chronology of who was on shore and who was on the ship at the moment when the lighted match was placed in the powder room. The gunner's expression of satisfaction at having come out, recorded at the close of the visible material, points the affidavit toward the operative question of his disposition at the time of the discovery. Speculations The doctor's mate's choice of words in canvassing, asking Ballaird whether he would be in the negative or the affirmative, suggests a formality of procedure on the round-robin canvass that goes beyond the ordinary approach of a mariner seeking signatures. The framing reads as the offering of a binary choice that converts each man's response into a recorded vote, and the keeping of the negatives in mind by the canvasser supplies the warrant officer faction with a list of men to be either silenced by threat or removed at sea. Adair's status as doctor's mate, with unsuspected access to every part of the ship by reason of his calling on the sick, would have allowed him to record and remember the negatives without raising the suspicion that a boatswain or a gunner moving through the same quarters would have provoked. The disclosure of the thousand pound being missing at Carry-Man-Java, a port called after the present voyage was already under way, suggests the embezzlement of the chest of money occurred not before but during the voyage itself, by persons with continuing access to the ship's funds. The boatswain's denial of knowledge of the chest on 29 June 1715 sits alongside Ballaird's account that it was not known at the time of the powder-room incident, indicating that the warrant officer faction may have continued operating after the failed attempt at Batavia, with the money now constituting a second cause of inquiry that could be pursued independently of the mutiny charge. The bench's careful taking of evidence on the money matter from each deponent in turn signals that it is being held in reserve as a separate offence on which a parallel case can be built.
527	518	of the ship, Saying he would not a been on board of her that day for a great Deal of money, He Saith they Came all on board that Evening, and then heard that the ship had been in great Danger of being blown up by a Lighted Match that was found in the Powder Robbm over a Powder Barrell by the Gunners Mate, who went down by Chance to look for something there, Being askt if he knew any thing of the Thousand Pound that was Gone out of the ship, Sayeth that at that time he had not heard of any Money being Missing, nor did never hear of it Till such time as they Came to a Small Island Called Carry-Mon Java, But he Never knew which way the money was gone Nor was never told who had it, or how it could be Gone, and knoweth nothing further Relateing to that Matter. Being asked if the Capt: was kind to the People, he Sayeth he never was unkind to him nor to any of the People as he knows of and as lived with him as well now, as formerly in another Voyage. William Waters Jurat hoc Secundo die July Dom: 1715 Coram me Isaac Pyke Island St Helena ss John Gerrard Purser of the Ship <i>Eagle</i> being duly Examind on Oath sayeth that about the Latter end of	William Waters continued that the gunner, on coming on shore, said he would not have been on board of her that day for a great deal of money. They all came on board that evening, and then heard that the ship had been in great danger of being blown up by a lighted match that had been found in the powder room over a powder barrel by the gunner's mate, who went down by chance to look for something there. He was asked if he knew any thing of the thousand pound that was gone out of the ship. He said that at that time he had not heard of any money being missing, nor did he ever hear of it till such time as they came to a small island called Carry-Mon-Java. He never knew which way the money was gone, nor was ever told who had it, or how it could be gone, and he knew nothing further relating to that matter. He was asked if the captain was kind to the people. He said the captain was never unkind to him, nor to any of the people, as he knew of, and he had lived with him as well now as formerly on another voyage. Signed William Waters. The affidavit was sworn before Isaac Pyke on 2 July 1715. John Gerrard, purser of the ship <i>Eagle</i>, was duly examined on oath and said that about the latter end of

		May 1714, But he do[s] not Exactly Remember what day, he was Informed by the Gun[ners] Mate in the presence of all the Ships Company that a light =ed Match had been found in the Powder Roome, and that the ship had been in very great Danger of being blown up if a meer Accident had not Occasion[d] the Discovery Margin Notes: Jn[o] Gerrard Purs[r] Exam[n]	May 1714, although he did not exactly remember what day, he had been informed by the gunner's mate in the presence of all the ship's company that a lighted match had been found in the powder room. The ship had been in very great danger of being blown up if a mere accident had not occasioned the discovery [...] Interpretations The gunner's reported expression on coming on shore, that he would not have been on board that day for a great deal of money, is the operative evidence of his foreknowledge of the danger that the ship faced on that day. The form of words is the conventional way a mariner expresses relief at having escaped a known hazard rather than surprise at a chance event, and the bench will read it against Thomas Clark's own examination of 29 June 1715 in which he had accounted only for the locking of his door and the position of the key, and against the chief mate's evidence on the same date that the gunner carried his faction more slyly than the boatswain. The disclosure that Clark had said this in the open, on first stepping ashore from the long boat, indicates that his confidence in the success of the attempt had been such that he was prepared to commit himself in words before the news of the discovery reached him. The reference to the gunner's mate going down to the powder room by chance to look for something there matches Ballaird's deposition of the same date that he had gone down to fetch a gun case for the captain. The detail of an accidental visit, not connected with any routine reason for entering the magazine at that hour, is the operative ground for the deponents' description of the discovery as a mere accident. The chance nature of the entry sits with the operative timing of the attempt, in which the gunner's absence on shore at Father Smith's Island and the absence of any scheduled inspection of the powder room had been calculated to allow the lighted match to burn down undisturbed. The purser of the ship, John Gerrard, is the warrant officer responsible for the ship's stores and accounts, with charge of all provisions, money and documentary records of the voyage. The opening of his deposition with knowledge of the powder room incident derived from the gunner's mate is the conventional limit of an officer not on watch at the relevant time, but the purser's involvement in the present examination signals that the bench is approaching the question of the thousand pound chest of money through the officer of the ship most likely to have direct evidence of its disposition. The purser's books would be the documentary record by which any loss of Company money could be traced, and his sworn evidence will be the foundation of any case brought on the embezzlement matter. The repeated phrase of all the deponents, that they had not heard of any money being missing until the ship reached Carry-Mon-Java, fixes the dating of the loss to that port and confirms the chronology of two separate offences on the voyage. The powder room incident is anchored to late May 1714 at Batavia. The loss of the chest of money is anchored to a later call at Carry-Mon-Java, with no contemporaneous knowledge of the loss on board. The bench is therefore building parallel cases on separate timelines, with the warrant officer faction implicated in both by the chief mate's evidence of 29 June 1715 and by the boatswain's denial of knowledge of either matter at his examination on the same date. Speculations The gunner's statement on stepping ashore that he would not have been on board for a great deal of money, made before the news of the failure of the attempt had reached him, suggests that he had expected the ship to be destroyed in his absence and had calculated the satisfaction he would express at having been on shore as the public face of his innocence. The

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			slip of words, recorded by William Waters as direct evidence of what the gunner had said, is the kind of disclosure made by a man whose self-control falters at the first contact with associates after a planned event. The slip would not have been important if the attempt had succeeded, since there would have been no ship to which the words could later be returned, but with the discovery of the match the same words become evidence of foreknowledge. The bench's choice to take the purser's deposition immediately after Waters's, on the same sitting of 2 July 1715, suggests a planned sequence in which the inquiry into the thousand pound now moves from collateral evidence taken from mariners and warrant officers to the officer with direct charge of the Company's money on the ship. The earlier depositions from the chief mate, the third mate, the midshipman and the gunner's mate had established the framing facts of the voyage. The purser's evidence, anchored in the books of the ship, will provide the operative documentary basis for any charge of embezzlement against the warrant officer faction, and the bench is signalling through the order of examination that the money matter is to be pursued in parallel with the mutiny inquiry rather than as an incident of it.
528	519	Discovery of it, But he knows nothing more Relateing to that matter. Being asked what he knew relateing to the Thousand pound that was Lost, Sayth that at that time he did not know any money was lost, nor never heard any money was Missing out of the ship till they Came to a place called Carry Mon Java but he knoweth not what is become of it And neither knew, nor by whose means it went out of the ship neither has he Ever heard any thing Relateing to it, but that hear[d] but Being askt how the People fared outward bound in their Provisions Says they fared very well he thinks that they did not Complaine and beleives they had no Cause they haveing the same Allowances as in other Ships Being asked how they fared at Banjarr, he Sayeth they fard very well there for he knows they had Fowles in Plenty and Arrack in Plenty, But from Banjarr to the Cape they had avery Long Passage being near four months upon the Sea Occasioned as he thinks by the Difficulty of Going through the Streights of Bailey, which Put them a good Deal of time and the allowance then was Something Scanty in water (Especially, there being but a quart of Water for each man aday but Every Mess had such a good Peice of Beef as has been Produced here to the Govern[r] and of Rice they had without Allowance and he hath seen Considerable Quantities left after Dinner in their bowles and has seen a great Deale hove over board and Great waste made of it That in that small ship they could not Carry Great quantities of fresh Provisions But out of those he did Carry the Capt: was very Liberall and kind to the People, and he Remembers that the Capt: has given them awhole Deer at a time at Sea and when he has killed a Hogg or sheep or Cattle on board has always Sent a Quart or more thereof to One or other of the People that he beleives the Capt: has been very Civill & kind to his People in Generall and to himself this Deponent	John Gerrard continued that he knew nothing more relating to that matter. He was asked what he knew relating to the thousand pound that was lost. He said that at that time he did not know any money was lost, nor never heard any money was missing out of the ship till they came to a place called Carry-Mon-Java. He never knew what was become of it, nor by what means it went out of the ship, neither had he ever heard anything relating to it, but what was said. He was asked how the people fared outward bound in their provisions. He said they fared very well. He thought they did not complain, and believed they had no cause, they having the same allowance as in other ships. He was asked how they fared at Banjar. He said they fared very well there, for he knew they had fowls in plenty and arrack in plenty. From Banjar to the Cape they had a very long passage, being near four months upon the sea, occasioned, as he thought, by the difficulty of getting through the Straits of Bali, which cost them a good deal of time. The allowance then was something scanty in water, there being but a quart of water for each man a day. Every mess had such a good piece of beef as had been produced here to the governor, and of rice they had without allowance. He had seen considerable quantities left after dinner in their bowls, and had seen a great deal hove overboard and great waste made of it. In that small ship they could not carry great quantities of fresh provisions. Of those they did carry, the captain was very liberal and kind to the people. He remembered that the captain had given them a whole deer at a time at sea, and when he had killed a hog or a sheep or cattle on board, had always sent a quart or more thereof to one or other of the people. He believed the captain had been very civil and kind to his people in general, and to himself the [...] Interpretations The purser's evidence on the long passage from Banjar to the Cape, near four months upon the sea owing to the difficulty of getting through the Straits of Bali, fixes the navigational ground for the captain's shortened water ration in evidence. The Straits of Bali are the narrow passage between the islands of Bali and Java on the eastern approach to the Indian Ocean, a route subject to contrary currents, calms and adverse winds that could detain a homeward Indiaman for weeks at a stretch. A passage of near four months on

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			the leg from Banjar to the Cape, against an ordinary expectation of perhaps two months, would have placed real strain on the ship's water and dry stores, and the captain's response of reducing the water ration to a quart a man, with his own consumption at the same level, sits with the operative practice of a commander in extended adverse conditions. The purser's account of considerable quantities of rice left after dinner in the men's bowls, with a great deal hove overboard and great waste made of it, matches the midshipman Jacob Franklin's evidence of 29 June 1715 that he had seen rice often thrown overboard by the people because they could not eat it. The two officers, one a junior of the watch and the other the warrant officer responsible for the stores, now stand on the council books with the same observation of food refused and discarded on the lower deck. The repetition across separate depositions of the same physical evidence is the bench's operative ground for the eventual finding that the round-robin paper of 29 June 1715 had no foundation in actual want of provisions. The captain's recorded gifts of fresh meat, with a whole deer at a time at sea and a quart or more of slaughtered hog, sheep or cattle to one or other of the people, fix the captain's actual practice against the framing of the original paper, in which the writers had described themselves as a poor pinched and distressed ship's company. The form of these gifts, made directly to particular hands rather than through the standing allowance, illustrates the operation of personal benevolence on top of the formal table. The purser's evidence on this point completes the documentary chain on the captain's victualling regime first opened in his own examination on 29 June 1715 and now corroborated by the chief mate, the third mate, the midshipman, the gunner's mate and the purser in succession. The repeated answers on the thousand pound, with the purser like the deponents before him stating that no knowledge of the loss reached the ship's company until they came to Carry-Mon-Java, indicates that the loss of the money was concealed from the body of the ship's company until that port. Concealment of a substantial loss of Company funds from the purser himself, who has charge of the ship's accounts and stores, would suggest either that the chest was kept separately under the captain's hand or that the persons responsible for the loss had means of suppressing the discovery until a specific occasion required it to be made public. The bench will be alive to the fact that the disclosure at Carry-Mon-Java may itself have been the operative moment of the embezzlement, with the warrant officer faction choosing the time and place at which to declare the chest empty. Speculations The disclosure of the loss of the thousand pound at Carry-Mon-Java rather than at any earlier port suggests that the timing was chosen for reasons of distance and remoteness from any further Company station between that port and the Cape. Carry-Mon-Java lies in the eastern reaches of the East India trade, beyond which the homeward voyage runs through the Indian Ocean with no further opportunity for the bench at any Company station to call for the ship's chest or to examine the purser's accounts before the Cape. The persons responsible for the loss would have had the longest interval at sea before any institutional check, and the most opportunity for the dispersal or concealment of the money before the ship made the next port. The purser's emphasis on the long passage through the Straits of Bali as the cause of the scanty allowance on the Banjar-to-Cape leg, taken with his evidence of waste of rice and of the captain's generous fresh-meat practice, fits a pattern in which the period of greatest

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			hardship on the voyage was an extended navigational delay rather than any failure of the captain's regime. The four mutineers' choice to centre their complaint on this very period suggests that they had calculated the bench's likely sympathy at being called to adjudicate on a long passage with reduced water, but Captain Beeckman's evident competence in maintaining order and in distributing what fresh meat could be killed has now placed the operative facts substantially against them. The pattern of the inquiry across both sittings is that the bench's preferred method of reconciliation, observed in the earlier disputes with Captain Mawson and his passengers on 16 June 1715, has given way to a documented case as the gravity of the matter on the <i>Eagle Galley</i> has been progressively revealed.
529	520	and all other of the Officers in Perticular and that he should as willingly goe to Sea w[th] Capt: Beekman as any other C[o]mmander, and beleives most of the People has been Persoaded by some ill Designing troublesome folks to make this C[o]mplaint and knows since they Came from the Cape, they have had no Occasion for it, That he looks upon the Gunner to be a very suspici =ous fellow and abad man, And he beleives that the Said Gunner, the Boatswaine, the Doctors mate and the Trumpeter have been the Cheif ring leaders and Persoaders of the People to the Sedition in the Ship, And further he do[s] not say. John Gerrard Jurat hoc Secundo die July: Dom: 1715 Coram me Isaac Pyke Island St Helena ss William Taylor Marriner, & 2[d] mate of the Ship Eagle Galley being duly Examined upon his Oath, That Some time about the Latter End of May, when said Ship lay in Bratavia Road this Deponent being at work in the hold, William Ballaire who was then the Gunners mate Came downe into the hold to the Powder Roome, and then Cryed out Lord have Mercy upon us Lord have Mercy upon us, and came out of the Powder Roome Presently with a Peice of Lighted match in his hand to this Deponent and Said againe Lord have Mercy upon us, He seemd to be aPreviously frighted, and had a Violent Trembling upon him, and a Quarter Master that was at work with this Deponent in the hold took the Said lighted match from the Gunners mate and this Deponent askt him what Margin Notes: W[m] Taylor 2[d] Mate Exam[n]	John Gerrard added that the captain had been very civil and kind to himself, and to all the other officers in particular. He would as willingly go to sea with Captain Beeckman as with any other commander. He believed most of the people had been persuaded by some ill-designing, troublesome folks to make the complaint, and he knew that, since they came from the Cape, they had had no occasion for it. He looked upon the gunner to be a very suspicious fellow and a bad man. He believed that the gunner, the boatswain, the doctor's mate and the trumpeter had been the chief ringleaders and persuaders of the people to the sedition in the ship. Further he did not say. Signed John Gerrard. The affidavit was sworn before Isaac Pyke on 2 July 1715. William Taylor, mariner and second mate of the ship <i>Eagle Galley</i>, was duly examined upon his oath. He said that some time about the latter end of May, when the ship lay in Batavia Road, he had been at work in the hold. William Ballaird, who was then the gunner's mate, came down into the hold to the powder room, and then cried out, Lord have mercy upon us, Lord have mercy upon us. He came out of the powder room presently with a piece of lighted match in his hand. He said again, Lord have mercy upon us. He seemed to be grievously frightened, and had a violent trembling upon him. A quarter master, who was at work with the deponent in the hold, took the lighted match from the gunner's mate, and the deponent asked him [...] Interpretations The purser's conclusion that he would as willingly go to sea with Captain Beeckman as with any other commander, taken together with his identification of the gunner, the boatswain, the doctor's mate and the trumpeter as the four chief ringleaders and persuaders of the people to the sedition in the ship, completes the warrant officer line of evidence against the four principals. The chief mate, the third mate, the midshipman, the gunner's mate, the purser and the second mate have now all given depositions naming the same four men, with the same four offices recurring across every account. The convergence of six independent depositions on the same four principals is the operative ground for any subsequent charge of mutiny, since it removes any possibility of accident or misidentification. The use of the term sedition by the purser is the more formal characterisation of the conduct on the council books to this point, and signals the bench's understanding that the matter has moved beyond mere disobedience or insubordination into the legal category of organised insurrection against the lawful authority of the ship. Sedition in maritime law as administered in this period covers concerted action by a ship's company against the commander or against the Company's interest, falling short of actual mutiny only in that it has not yet been carried into execution by force. The persuaders of the people to sedition, in the purser's

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			framing, are the four warrant officers whose office gave them the standing means to corrupt the rest of the company. The second mate William Taylor's evidence opens the parallel chain on the powder room incident itself, with an eyewitness to the gunner's mate's reaction at the moment of discovery. The senior commissioned officer of the watch second to the chief mate, with daily standing as the principal subordinate on the quarterdeck, William Taylor is in a position to corroborate Ballaird's earlier deposition by his account of the gunner's mate's behaviour on emerging from the powder room. His evidence on the same matter, taken from a different angle, will be the bench's check on the consistency of the account given of the incident at Batavia. The reaction of the gunner's mate Ballaird on coming out of the powder room with the lighted match in his hand, with the repeated invocation of Lord have mercy upon us and the violent trembling, gives operative confirmation of the gravity of what he had found. The reaction is recorded as that of a man who has seen something he understood as fatal, and is the natural response of a competent powder man on confronting an unattended slow match in a magazine of cartridges, loose powder and full barrels. The quarter master's act of taking the match from the gunner's mate, with the second mate then asking him what he had found, is the standard chain of handling by which the operative evidence passed from hand to hand and the matter was reported up the line of officers. Speculations The purser's framing of the matter as sedition persuaded by ill-designing, troublesome folks, taken with his explicit denial that there had been any occasion for complaint since the ship left the Cape, suggests that the bench is being supplied through the depositions with the evidentiary basis for a finding that no objective grievance has existed on the voyage from the Cape to the island. The men's chosen ground of complaint in the round-robin paper, framed in terms of provisions wanting for many months, can now be answered by the body of officer evidence that the leg most strained by the long passage through the Straits of Bali was completed at the Cape and that the run from the Cape to the island had been one of plenty. The bench's case will rest on the disjunction between the period covered by the paper and the period in which any actual hardship could be shown. The pattern of six successive officer depositions converging on the same four ringleaders, taken across two sittings of the bench, suggests that the warrant officer faction had been visible as a defined party on the ship for the whole voyage. The four men identified hold the offices of boatswain, gunner, doctor's mate and trumpeter, each of which provides a different channel of access to the lower deck for the work of persuasion. The chief mate Hanray's earlier observation that the design was rather to seize the ship than for any real cause or want is now being underwritten by the testimony of every officer in the ship's hierarchy, leaving the bench with the documentary basis to dispatch the matter home to the directors for such proceedings as may be thought fit at Bencoolen or in London.
530	521	what was the Matter but he was in such a fright that he could not give an Immediate Answer but when he was a little Composed he Spoke and told him that he found that Match upon a Powder Barrell, and this Deponent Looking on it Saw that it had a Coal upon it above an Inch long and that then the Gunners Mate went up upon Deck to the Chief Mate to tell him of it, he Came downe againe in a short time and then this Deponent took a Muscovy Light and went w[th] him to the	William Taylor continued that the gunner's mate was in such a fright that he could not give an immediate answer, but when he was a little composed he spoke and told him that he had found the match upon a powder barrel. The deponent looked on it and saw that it had a coal upon it above an inch long. The gunner's mate then went up upon deck to the chief mate to tell him of it. He came down again in a short time, and then the deponent took a Muscovy light and went with him

		Powder Room, and found the Door open and the Staple of the Lock Drawn, and the Powder Barrell upon which the Gunners mate told him, he found the Match have severall Cartridges of Powder in it, another Barrell Close by it full of Cartridges of Powder Loose Powder Strewed or Sprinkled over them So thick that he could have taken awhole handfull up at a Time off of them, Being askt what he knew of the Thousand Pound being Lost out of the ship, Sayeth that at that time he never heard that any mony was Missing, nor knew not that any was Lost out of the ship untill they Came to Carry-Mon-Java And he Sayeth that since he had been here he never heard any body Complain for want of Victuals and wonders such athing should be Carryed on So Privately and that twenty Men should Signe to a Paper to be Sent to the Govern[r] and that he should know nothing of it. And being askt further if the Capt: used the Peeple kindly, Says he thinks he was too kind to them, and that they wanted for nothing, And as for the hardships that some of them now Complaine of, he do[s] not think it was such a hardship as ought to be Complained of, for he has been four Voyages to India, and in three of them he fared worse then he has done in this voyage w[th] Capt: Beekman, and yet now in this Present voyage he has fared the same with the Men in all those hardships which they Complained of and when they had but a quart of Water aday he had no More, And further Sayeth not. Will[m] Taylor Jurat hoc Secundo die July A: D: 1715 Coram me Isaac Pyke Margin Notes: Geo. Haswell Antipas Tovey Edw[d] Byfeld	to the powder room. They found the door open and the staple of the lock drawn. The powder barrel upon which the gunner's mate had told him he found the match had several cartridges of powder in it. Another barrel close by it was full of cartridges of powder and loose powder strewed or sprinkled over them so thick that he could have taken a whole handful up at a time off them. He was asked what he knew of the thousand pound being lost out of the ship. He said that at that time he never heard that any money was missing, nor knew not that any was lost out of the ship until they came to Carry-Mon-Java. He said that, since he had been here, he never heard anybody complain for want of victuals, and wondered such a thing should be carried on so privately, and that twenty men should sign a paper to be sent to the governor, and that he should know nothing of it. He was asked further if the captain used the people kindly. He said he thought he was too kind to them, and that they wanted for nothing. As for the hardships that some of them now complained of, he did not think it was such a hardship as ought to be complained of. He had been four voyages to the Indies. In three of them he had fared worse than he had done in the present voyage with Captain Beeckman. Yet now in the present voyage he had fared the same with the men in all those hardships which they complained of. When they had but a quart of water a day, he had no more. Further he did not say. Signed William Taylor. The affidavit was sworn before Isaac Pyke on 2 July 1715. The consultation was signed by George Haswell, Antipas Tovey and Edward Byfield. Interpretations The detail of the powder room door found open and the staple of the lock drawn is the operative evidence of forced entry. The staple is the metal loop fixed to the door frame through which the hasp of the lock passes, and its drawing from the frame indicates that the lock itself had not been picked or opened with a key but had been pulled bodily from its setting. Thomas Clark the gunner had stated in his examination on 29 June 1715 that he had left his door locked and the key with his mate, with instructions to go only to the arms chest aloft, not down into the powder room. The drawn staple supplies the means by which a person without the key obtained entry, and exonerates the gunner's mate from any suggestion of unauthorised opening at the same time as it exposes the deliberate forcing of the magazine by a third hand. The coal of the match above an inch long, observed by William Taylor in the moment after the gunner's mate brought it out, fixes the operative reading of how close the ship had come to destruction. The coal is the live burning end of the slow match, and an inch of coal represents some minutes of burning time remaining before the match would have reached the powder. The figure provides the bench with a measurable estimate of the interval between the placement of the match and its accidental discovery by William Ballaird as the gunner's mate, on his entry to fetch a gun case for the captain. The interval also explains the gunner's mate's reaction of repeated invocation of Lord have mercy upon us and the violent trembling, since he had grasped at once how close the ship had come to going up. The detail of the second barrel full of cartridges with loose powder sprinkled over them so thick that the deponent could have taken a whole handful up at a time, illustrates the prepared character of the attempt. Loose powder strewn over a barrel of cartridges is not in the ordinary condition of a powder room, where the

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			cartridges are kept secured in their barrels and the loose powder kept covered. The deliberate strewing of the loose powder is the operative means by which a fire taking on one barrel would have been carried to the next, the cartridges acting as primary fuses and the loose powder as the carrier between barrels. The arrangement matches the pattern by which an experienced powder man might construct a chain of fire in a magazine, and is consistent with the chief mate William Hanray's evidence of 29 June 1715 that the gunner Thomas Clark had been the chief contriver of the planned destruction. The Muscovy light taken into the powder room by William Taylor and the gunner's mate is the standard device of inspection in a magazine. It is a translucent sheet of laminated mica, the mineral known to early modern English merchants as Muscovy glass on account of its trade through Russia, set into a frame so that a candle within can be carried into the room without any naked flame reaching the powder. The deponent's reflexive use of the Muscovy light, rather than any open candle, is the operative confirmation of the powder room discipline maintained on the ship in ordinary working, and the contrast with the lighted match found in the magazine sharpens the deliberate character of the act under inquiry. The second mate's evidence on the broader question of the captain's conduct toward the men, that he thought the captain was too kind and that the men wanted for nothing, matches the converging accounts of the chief mate, the third mate, the midshipman, the purser and the gunner's mate already on the council books. His comparative reference to three of his four prior India voyages, in which he had fared worse than on the present voyage with Captain Beeckman, places the <i>Eagle Galley's</i> allowance not only at the average but at the upper end of Indian practice. Taken with George Taylor's deposition of 29 June 1715 that he had been in other ships and had had less allowance there than in the <i>Eagle</i>, the bench now has two officers' comparative evidence on the same point from independent voyages. Speculations The drawn staple of the lock on the powder room door, set against the gunner's evidence of 29 June 1715 that the door was left locked and the key with his mate, opens the question of who broke into the magazine in his absence. The chief mate William Hanray's deposition of 29 June 1715 had identified Thomas Frances the boatswain as a man of mutinous temper who had said at Batavia he should never be easy till he saw the confusion of the ship. The boatswain's office gave him standing access to the ship's tools and to the working hands who could lift a hasp from its setting without raising alarm. The drawn staple is consistent with execution by a man in the boatswain's position, with the gunner's role one of supplying the technical method by his absence on shore at Father Smith's Island and his refusal to leave the keys in any hand that would have prevented the planned entry. The contrast between William Taylor's wonder that such a thing as the round-robin paper should have been carried on so privately, with twenty men signing without his knowing of it, and the convergent testimony of every officer rank from the chief mate downward against the same four principals, points to a deliberate exclusion of the loyal officers from the canvassing. The doctor's mate Alexander Adair's procedure of asking each man whether he would be in the negative or the affirmative, recorded in William Ballaird's affidavit, supplies the operative means by which the canvass was kept clear of the officers' notice: every approach was conducted in private and every refusal recorded by the canvasser in his own memory rather than on any document. The exclusion of the watch officers from any knowledge of the paper is the operative confirmation

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			that the warrant officer faction understood the loyalty of the commissioned line and prepared their movement accordingly.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			The stock return is the second comprehensive account from William Worrall as overseer of the plantations, following his first detailed yam-stock report of 26 April 1715 and his full stock return of 18 June 1715. Worrall had been appointed overseer of the plantations on 5 April 1715 in succession to the late Captain Edward Mashborne, with no salary fixed and his behaviour to be observed before any salary was set. The present return, brought in just over a fortnight after the 18 June 1715 stock account, marks the establishment of the monthly stock return as the standing form of the overseer's accountability to the bench. The frequency is consistent with the active herd-building period that began with the cow-saving order of 7 June 1715 made pursuant to paragraph 45 of the Honourable Company's general letter brought by the <i>Cardonnell</i>, in which no cow, heifer or calf was to be killed until 20 July 1716 except on warrant from the governor. The neat cattle total of 136 head is unchanged from the figure recorded in Worrall's stock account of 18 June 1715, which had shown an increase of 46 head since 1 January 1715. The single calf born and the single bullock killed cancel one another in the herd account, and the unchanged total indicates the operation of the cow-saving order in the period since 7 June 1715. The detail of the killed bullock against the calved single calf, set against the standing prohibition on killing any cow, heifer or calf, confirms that the cow-saving order admits the slaughter of a bullock with a warrant from the governor, with the cattle famine figure of 2,500 head lost cited by Pyke in his letter to Le Blanc of 30 January 1715 still operating as the policy benchmark behind the present arrangement. The hog stock of 215 great and small with an increase of 26 represents the standing breeding stock of the plantation, with five killed in the last month and two young pigs dying of a distemper called the pant. The pant is a respiratory or coughing disease of swine in early modern husbandry, characterised by laboured breathing and a high mortality among young pigs. The death of only two young pigs from the distemper is a modest loss against a total of 215, but the recording of the cause on the council books illustrates the operative practice of Worrall's stewardship in identifying and reporting particular causes of stock loss rather than allowing them to be absorbed into a general decline figure. The poultry returns illustrate the Company's mixed table provision for the garrison. The fowls great and small at 57, with no increase since the last report, sit alongside ducks at 8, turkeys at 50 with three killed for the fort, and geese at 19 with six turkeys exchanged for geese. The exchange of turkeys for geese is the operative form of stock adjustment by barter rather than purchase, and indicates the operation of an informal market in poultry between the Company's establishment and the planters who held the alternative stocks. The killed for the fort entry, with three turkeys recorded as having gone for the table of the garrison, is the standing form of accounting for the bench's own consumption against the Company's account. Speculations The promptness of the present return, brought in just seventeen days after the comprehensive stock account of 18 June 1715, suggests that William Worrall is establishing the monthly stock check as the standing rhythm of the overseer's office, and the bench is content to receive it on that schedule. With his appointment of 5 April 1715 made on probation and his salary to be settled only after observation of his behaviour, the regular and detailed returns are the operative means by which he places his fitness for the office on the council books. The pattern of submissions is consistent with the bench's broader procedure of

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			holding new appointments to documentary standards of accountability, observed earlier in the dispatch of the Mashborne plantation house and Lufkins inventory by Bazett and Tovey on 12 April 1715 and the storekeepers' interrogation of 21 June 1715. The recording of the two young pigs as having died of the pant suggests that Worrall is alert to specific identifiable causes of stock loss and reports them by name rather than absorbing them into a general wastage figure. The same care to record cause is consistent with the overseer's evident interest in keeping the bench fully informed of the operation of the herd-building programme initiated on 7 June 1715, and protects him personally against any subsequent imputation that the deaths may have been caused by neglect of his charge. The contrast with the absent stock figures on cattle and goats from the plantation house and Lufkins inventory of 12 April 1715, where wet weather had been given as the reason for incomplete returns, illustrates the more settled administrative footing that Worrall has now achieved on the plantation establishment.
532	523	The following Petition was Presented (viz[t]) Worshipfull Govern[r] S[r] I most Humbly Address my Self to your Worsp that you would be pleased in Compasion to Consider the Large Expende of Maintaining So large a Familie as mine Especially at this Fort where all things are So farr to fetch and Dear withall So hoping your Worship will be pleased to Pitty my Circumstance Even as a fathor Pittyeth his own Child, and out of your Linsity be pleased to Grant me the Liberty of a Licence that whilst I am here it may be something of Asistance to me, with all begging Your Worsps Pardone for my undue Consideration in Refusing Your Worsps first Proposals, So I remaine Your Most Humble and Ever faith =full Servant to Command. W[m] Beale July the 5[t] 1715 In the Consultation of the 29 June last the Gov[r] Referd it to the Council whether John Orchards Licence for Retailing Strong Drink &c. should be Restored to him againe or not, To which the Councill now Reports that its their opinion the Said John Orchard for his Misdemeanor Ought not to have the Bennifitt of that Licence any Longer, Whereupon, Ordered that the abovesd: William Beale's request be Granted and that a Licence be writt out and Delivered him Accordingly, as followeth, Island St Helena I Do hereby give leave and Licence To you William Beale of said Island freeman to keep a Common Victualing house, and to Sell Arrack Punch, Wine, or any other Sort of Strong Liquor, with Sugar Margin Notes: W[m] Beale[s] pet[n] to keep Publick house Because Jn[o] Orchard not to keep one he Granted. Copy of [the] Licence	The following petition was presented. William Beale petitioned the worshipful governor. He humbly addressed himself, asking the governor in compassion to consider the large expense of maintaining so large a family as his, especially at the fort where all things were so scarce to get and dear withal. He hoped the governor would be pleased to pity his circumstances, even as a father pitieth his own child, and out of his liberality be pleased to grant him the liberty of a licence, that while he was at the island it might be something of assistance to him. He begged the governor's pardon for his undue consideration in refusing the governor's first proposals. The petition was dated 5 July 1715 and signed William Beale. A note in the margin recorded the substance of the matter as Beale's petition to keep a public house. At the consultation of 29 June last, the governor had referred to council whether John Orchard's licence for retailing strong drink should be restored to him again or not. The council now reported that in their opinion John Orchard, for his misdemeanour, ought not to have the benefit of that licence any longer. The governor and council therefore ordered that William Beale's request be granted, and that a licence be written out and delivered to him accordingly, as followeth. Island of St Helena. The governor gave leave and licence to William Beale of the island, freeman, to keep a common victualling house, and to sell arrack, punch, wine or any other sort of strong liquor with sugar [...] Interpretations The disposal of John Orchard's licence on the council's report that the misdemeanour disqualified him from any further benefit of the trade completes the matter opened in the cancelled stolen-goods complaint of 29 Jun 1715 and the petition for restoration entered on the same date. The bench has moved through two stages: the governor's summary withdrawal of the licence on his own authority, and the council's collective refusal of restoration on the merits. The mechanism mirrors the institutional division of authority observed in the public house licence to Latour of 13 April 1715, in which the governor issues and revokes summarily and the council reviews on petition. The licence is a Company instrument permitting retail trade in strong drink under fixed conditions, and its revocation operates as a penalty in itself before any formal trial of the underlying offence. The grant of the licence to William Beale completes a separate matter that had stood open since the bench's order of 11 June 1715, by which Beale had been granted leave to depart on the <i>Cardonnell</i>, having earlier had leave and made sale of his goods only to be detained to

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			the great prejudice of himself and his family. The reversal of position implied in the present petition, with Beale now seeking a licence on the ground of the expense of maintaining his family at the fort, signals that he has elected to remain on the island rather than take up the leave to depart. His apology for his undue consideration in refusing the governor's first proposals, expressed in the petition itself, is the formal acknowledgement of his change of mind and the operative ground on which the bench grants the licence to him in place of Orchard. The wording of the licence as written into the consultation book establishes William Beale of the island, freeman, as the licensed keeper of a common victualling house authorised to sell arrack, punch, wine and other strong liquor. A common victualling house is a licensed establishment combining the supply of meals and the retail of drink, distinct from a private dwelling and subject to the standing conditions of conciliar oversight set out in the Latour licence of 13 April 1715. The combination of arrack and punch in the licence reflects the standing position at the island, with arrack at the retail rate of seven shillings and sixpence per gallon set on 15 November 1714 and punch made up from the same arrack with sugar and lime. The licensee's recorded undertaking to keep the conditions of the trade is the operative basis on which the licence may be revoked summarily by the governor, as the Orchard matter has just illustrated. The mechanism by which a single revoked licence is transferred to a substitute applicant on the same sitting, with the council's report on the first man's disqualification serving as the procedural ground for the second man's appointment, is the standing operation of licence management at the island. The number of licensed houses is held to a fixed establishment by the bench, and the loss of a licence by one freeman creates the vacancy that another may fill. Beale's apology for his earlier refusal of the governor's proposals indicates that the offer of a licence had been made to him previously and declined, with the change of mind only now being signalled to the bench after he had been detained on the island despite his earlier preference to depart. Speculations The timing of William Beale's petition, presented on the very sitting at which the council was due to report on the restoration of John Orchard's licence, suggests an arrangement understood in advance by both parties and the bench. With the council's report against Orchard already settled, the licence would in any event become available for a substitute. Beale's apology for his undue consideration in refusing the governor's first proposals reads as the formal acknowledgement of an offer made and earlier declined, now being accepted on terms that fit both the bench's need for a licensee and the petitioner's circumstances after his detention from the <i>Cardonnell</i> on 11 June 1715. The sequence indicates a deliberate matching of the available licence to a freeman whose family obligations and altered plans had brought him into a position to accept it. The choice of William Beale rather than any other freeman on the island for the substituted licence may reflect his particular suitability as a man with a large family established at the fort, with the standing presence and the resources to keep a victualling house under conciliar supervision. The standing letting conditions for Company land laid down on 24 May 1715, requiring the holder to manure the land, to hold at least one black for the labour, and not to be too deep in the Company's debt, mark the broader institutional preference for licensees and tenants of settled household standing. Beale's reference to his large family and the expense of maintaining them at the fort speaks to the same considerations of established settlement that the bench

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			has been applying across its grants in the present sittings.
533	524	Sugar & Tobacco in the House you now Dwell in at the Signe of the Ship in Southwarke Sheet, from this day untill the 25 March Next Ensuing the Date hereof, Provided you always duly and truly do keep and Maintaine Good Orders, times & Seasons in your House, not Suffering any Persons to fight or Quarrell there, Particularly and more Especially on the Lords day, takeing Strikt Care, not to Suffer any Person, or Persons to be Tipling in your House in Time of Divine Service, and that you Permit no Person who dos not Lodge in your House to Continue there after the Tattoo has beat. 1 You are to Provide a Dinner Every day in the Week, in Shiping time at the Hour of twelve a Clock for Six Men at the least, who shall Pay no more then twelve Pence Each for their Ordinary 2 Also in Every Bowle of Punch which Shall Contain three Pints, you are to put in one Pint of Arrack, with such other Necessary Ingredients as shall be required, and to take no more then two Shillings for it, 3 You shall not Suffer any of the Garrison to Game in your House, nor Trust any one for Liquor under Perrill of loosing the Debt 4 And to Prevent the Soldiers Squandering away Either their Cloathing or Provisions, 5 You shall not take from any of them in Exchange for Liquor or Payment of any Scores any Victuall =ing Pott that is given out for the Soldiers Dyet nor no Manner of Apparrell, or Cloathing on Pain of Paying Double the Vallue One half to the Party Complaining and the other Moity to the Use of the Poor, 6 And Margin Notes: Any person wd[so]ev[er] whether Inhabitant or people belonging to Ships	The licence to William Beale continued in these terms. The licensee was permitted to sell arrack, punch, wine and any other sort of strong liquor, together with sugar and tobacco, in the house in which he then dwelt, at the sign of the Ship in Southwark Street. The licence ran from the date thereof until 25 March next ensuing. The conditions attached to the licence were as follows. The licensee was always duly and truly to keep and maintain good orders, times and seasons in his house. He was not to suffer any persons to fight or quarrel there. Particularly and more especially on the Lord's day, he was to take strict care not to suffer any person to be tipling in his house in time of divine service. He was to permit no person who did not lodge in his house to continue there after the tattoo had beat. He was to provide a dinner every day in the week in shipping time at the hour of twelve o'clock for six men at the least, who should pay no more than twelve pence each for their ordinary. In every bowl of punch, which should contain three pints, he was to put in one pint of arrack with such other necessary ingredients as should be required, and to take no more than two shillings for it. He was not to suffer any of the garrison to game in his house, nor trust any person for liquor under peril of losing the debt. A note in the margin recorded that this applied to any person, whether an inhabitant or persons belonging to ships. To prevent the soldiers from squandering away either their clothing or provisions, he was not to take from any of them in exchange for liquor, or payment of any score, any victualling but that which was given out for the soldiers' dinner, no manner of apparel or clothing, on pain of paying double the value, one half to the party complaining and the other half to the use of the poor. [...] Interpretations The conditions attached to William Beale's licence carry forward the standing form developed at the island for the public house licence to Latour issued on 13 April 1715, where comparable conditions had been observed in the recovered material covering the fourth to eighth heads. The present licence to Beale establishes the full set of operating conditions on the council books for the first time in the recovered record, providing the documentary basis on which subsequent licences and revocations can be measured. The form is comprehensive across the operative grounds of conduct, table, drink composition, credit, gaming and dealings with the garrison, and supplies the administrative framework within which the bench will judge any future infraction. The sign of the Ship in Southwark Street, where Beale already dwelt, is the established location of the new common victualling house at the heart of the lower town. The same area was earlier the site of John Sinsnick's house, presented at the consultation of 2 December 1714 by bill of sale of Septha Fowler. The arrangement places the licensed house among the established freeman dwellings of the town within ready reach of the fort and the road, which is the operative location for serving shipping company in port and garrison off duty. The ordinary at twelve pence per head for six men in shipping time fixes the standing rate of the licensed dinner against the running cost of an Indiaman in the road. Twelve pence is the standard daily rate for a fixed-table meal at a licensed house and matches the conventional rate at metropolitan inns of the period.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			The requirement of six men at the least represents the operative minimum table that the licensee must hold ready whenever shipping is in, with the practical effect of guaranteeing officers and pursers a place at table without negotiating the price each day. The figure aligns with the standing prices recorded for the Boucher administration: arrack at six shillings the gallon, brandy at six shillings the gallon, Madeira wine at four shillings the gallon and sugar at eight pence the pound. The composition of the bowl of punch at one pint of arrack to three pints of liquid total, at two shillings the bowl, fixes the operative price of the principal drink of the trade. The Bencoolen wholesale acquisition rate of arrack at about six shillings the gallon implies the cost ingredient in the bowl at sixpence, with the balance representing the licensee's margin for the necessary ingredients of sugar, lime and water, the cost of fuel for hot punch, and the labour of preparation and service. The fixing of the bowl composition by conciliar order rather than leaving it to the licensee's discretion is the operative protection of the customer against the dilution of the drink, while the fixed price protects him against being overcharged for full strength. The prohibition on trust for liquor under peril of losing the debt is the operative form by which the bench polices the credit relations of the trade. The licensee can sell only for cash or against goods, and the loss of the debt as a sanction against trusting removes any incentive to extend credit to soldiers or shipping company. The further prohibition on taking apparel, clothing or victualling rations from soldiers in exchange for liquor, on pain of paying double the value half to the complaining party and half to the use of the poor, establishes a specific enforcement mechanism with a defined informer's reward. The arrangement protects the garrison from the squandering of provisions and clothing that had perhaps been observed in earlier breakdowns of garrison discipline. Speculations The choice to establish the licensed victualling house at the sign of the Ship in Southwark Street, at a known location with an existing freeman dwelling, suggests that the bench has elected to operate the trade in fixed and recognised premises rather than allowing licences to follow the licensee from house to house. The sign of the Ship is the established mark of the establishment under whichever licensee holds it, and the form of the present licence to Beale at the sign of the Ship indicates the same name will continue under any future licensee at the same location. The form is the standard practice of licensed houses at metropolitan trading centres and protects both the customers and the bench by maintaining a continuous reference point for the trade. The detail of the ordinary at twelve pence and the bowl of punch at two shillings, set as fixed prices in the licence itself rather than left to negotiation, suggests that the bench has identified pricing complaints and undervaluing as the recurring sources of friction in the licensed trade. The licence to Beale also extends to the sale of tobacco alongside the strong liquors, and the inclusion places the principal items of expense for soldiers and shipping company under one operating regime. The pattern of fixing principal prices by conciliar order rather than by market, and of policing the trade by named conditions in the licence itself, is consistent with the standing position of the island as a Company station where the regulation of consumption serves the broader interest of garrison discipline and the maintenance of accounts.
534	525	7 And likewise to Prevent Extravagant Expences, and unreasonable high Reckonings no Person belonging to the Garrison Shall be Permitted to spend more in One	The licence to William Beale continued in these further terms. To prevent extravagant expenses and unreasonable high reckonings, no person belonging to the garrison

		day then five shillings for Strong Liquors of any kind, and if the Reck =oning of One Man for One day dos come to more then five Shillings, then the Person So Charged shall be as fully Acquited as if he had paid the whole Demand, 8 You shall not trade with nor Entertaine any Blacks on any Pretence whatsoever, 9 You are to buy your Arrack and what Else you Vend by vertue of this Licence, Out of the Hon[ble] Companys Stores and of no other, 10 Lastly and all such further Orders & Instructions as you from time to time Shall receive from me, You are duly to Observe and keep, on Penalty Not only of Forfeiting this Licence, but of Such other fine as by the Law of England may be imposed on you for your Demerit Given under the Seal of the Hon[ble] Company Lord Proprietors, and Signed w[th] my hand this 5[th] July Anno q[ue] Dom[ini] 1715. Isaac Pyke I Pyke Geo: Haswell Ant[ipas] Tovey Edward Byfeld Island.	was to be permitted to spend more in one day than five shillings for strong liquors of any kind. If the reckoning of one man for one day came to more than five shillings, the person so charged was to be as fully acquitted as if he had paid the whole demand. The licensee was not to trade with nor entertain any blacks on any pretence whatsoever. He was to buy his arrack and whatever else he vended by virtue of the licence from the Honourable Company's stores, and from no other. Lastly, all such further orders and instructions as he should from time to time receive from the governor he was duly to observe and keep, on penalty not only of forfeiting the licence but of such other fines as by the law of England might be imposed on him for his demerit. The licence was given under the seal of the Honourable Company's Lords Proprietors and signed by the governor's hand on 5 July 1715. Signed Isaac Pyke. The consultation was signed by George Haswell, Antipas Tovey and Edward Byfield. Interpretations The cap of five shillings per garrison man per day on strong liquor expenditure is the operative protection of the soldier's pay against the licensee's interest in extending the reckoning. The mechanism is unusual in placing the loss of the excess on the licensee rather than on the customer: the soldier is fully acquitted of any sum above the cap as if he had paid the whole demand, with the licensee carrying the bad debt. The arrangement creates a positive incentive for the licensee to monitor the reckoning himself and to refuse further drink once the limit is approached, rather than relying on the soldier's self-restraint. The cap of five shillings represents a substantial daily expenditure against the soldier's standing pay, perhaps equivalent to a week's earnings on the customary rates recorded in the establishment, and is set high enough to allow normal indulgence while preventing the systematic disposal of pay through any one house. The prohibition on trading with or entertaining blacks on any pretence whatsoever is the operative continuation of the standing position at the island, observed in the John Orchard case decided on the same sitting and in the punishment of Renatus Snow on 2 December 1714 with a fine of fifteen shillings for the use of the church and committal to prison for bartering with Thomas Frey's slave Clove for lemons contrary to law. The form of the prohibition in the present licence is more absolute than the rule operating on Orchard, since it admits of no pretence at all rather than allowing inquiry into the master's instructions. The bench has tightened the standing position in the form of the new licence, perhaps in direct response to the difficulty encountered in the Orchard inquiry where the licensee had pleaded ignorance of the master's affairs as his defence. The requirement that the licensee buy his arrack and other liquors from the Company's stores and from no other establishes the Company's monopoly of supply to the licensed trade. The mechanism converts the licensed houses into the operative retail end of the Company's wholesale liquor business, with the Company taking the margin between the wholesale acquisition rate of about six shillings the gallon at Bencoolen and the retail price set at seven shillings and sixpence the gallon at the island on 15 November 1714. The licensee's margin lies in the difference between the per-gallon rate at the stores and the bowl-of-punch price of two shillings the bowl set in the licence, and the bench's control of the supply chain prevents any licensee from undercutting the official rate by sourcing arrack from passing shipping or private stocks.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			The general reservation of penalty in the closing condition, with forfeiture of the licence as the standing sanction and additional fines by the law of England as the further penalty for demerit, places the licensee under both the local administrative jurisdiction and the metropolitan law as a continuing obligation. The form is the standard reservation by which a Company licensee is held to account on both grounds. The licence is given under the seal of the Lords Proprietors and signed by the governor's hand, the same authority that issued the Latour licence of 13 April 1715, with the consultation itself signed by Haswell, Tovey and Byfield. The absence of Bazett's signature from the present consultation continues the pattern noted across the present sittings, with the third councillor unrepresented on the documentary record of the licensing business. Speculations The choice to fix the daily liquor cap at five shillings for garrison men, with the loss of any excess falling on the licensee, points to a calibration of the cap against the known weekly pay of the garrison and against the commercial logic of the public house. The bench has not prohibited the soldier from drinking heavily on any one day, but has placed the cost of any excessive day on the house rather than on the man. The arrangement removes from the licensee the strongest commercial incentive to encourage the soldier to spend beyond his means, since the licensee will recover nothing above the cap. The mechanism is more sophisticated than a flat prohibition would be, since it preserves the licensee's normal trade up to the limit while protecting the garrison's pay and provisions against the systematic operation of credit and persuasion that would otherwise be the natural tendency of the trade. The tightening of the prohibition on entertaining blacks, with the new licence admitting of no pretence whatsoever, suggests that the bench has read the John Orchard case as exposing a weakness in the previous form of the rule. Orchard's defence on his petition of 28 June 1715, that he had taken no goods for sale and that Mr Johnson would confirm the master's orders to the slaves to leave their loads at his premises, had relied on a pretence of innocent intent and the master's authority for the slaves' movements. The form of the new licence to Beale closes that line of defence by prohibiting entertainment of blacks absolutely, without inquiry into the master's orders. Any future licensee charged with the matter will be unable to plead the master's instructions or his own ignorance, since the standing rule will admit of no exception at all.
535	526	Island St Helena. At a Consultation Held on Saturday the 9[th] July 1715 At the Union Castle in James Valley. Isaac Pyke Esq[r] Gov[r] George Haswell D[ep]ty Pres[t] Math[w] Bazett 3 Antip[s]: Tovey 4[th] & Edw[o]: Byfeld 5 in Council[] Ordered That the following Advertizement be Published (viz[t]) Island St Helena By the Govern[r]: & Council An Advertizem[t] Forasmuch as the Hon[ble] the Lords Pro =prietors are Sencible of the Scarcety & Dearness of Provisions on this Island, which has not only Reduced the Garrison, but Even the Poorer Sort of Planters to great Streights, And have therefore Generously been at the Expence and Charge of Buying & Sending over severall Boats for the use of this Place, The Govern[r]: and Council therefore that the Goodness and Bounty of the Lords Pro =prietors may Answer their End, and Encourage the People in Industrious Employments and Margin Notes:	Island of St Helena. At a Consultation held on Saturday the 9 July 1715 at the Union Castle in James Valley. Present: Isaac Pyke Esquire, Governor; George Haswell, Deputy Governor; Matthew Bazett, third; Antipas Tovey, fourth; Edward Byfield, fifth in council. The council ordered that the following advertisement be published. Island of St Helena. By the governor and council, an advertisement. The Honourable Lords Proprietors were aware of the scarcity and dearth of provisions on the island, which had not only reduced the garrison but had brought even the poorer sort of planters to great straits. They had therefore generously been at the expense and charge of buying and sending over several boats for the use of the place. The governor and council, to ensure that the goodness and bounty of the Lords Proprietors might answer their end, and to encourage the people in industrious employments and [...] Interpretations

		Advertizem[t] to Lend [the] Comp[as] Boat to fish in	The advertisement records the metropolitan response to the cattle famine that has framed the bench's policy across the present sittings. The figure of 2,500 head of cattle lost cited by Pyke in his letter to Le Blanc of 30 January 1715 had served as the benchmark for the famine, and the cow-saving order of 7 June 1715 made pursuant to paragraph 45 of the Honourable Company's general letter brought by the <i>Cardonnell</i> had set the herd-building programme in motion. The dispatch of several boats from London by the Lords Proprietors as a direct response to the scarcity converts the problem from one of dependence on the island's own husbandry to one of supplementary fisheries provision, and supplies the bench with a means of meeting the shortage that has reduced both the garrison and the poorer planters. The acknowledgement that the scarcity has brought the poorer sort of planters to great straits, as well as reducing the garrison, identifies the operative social distribution of the famine's effects. The substantial planter households, with cattle, slaves and stored yams, have weathered the cattle losses through their own resources. The poorer planters, holding small allotments and few stock, have been compelled to seek relief through the standing channels available to them. The reduction of the garrison itself, as a recorded fact in a metropolitan acknowledgement, confirms that the famine has touched the establishment's own consumption, which sits with the requirement to obtain a warrant under the governor's hand for any slaughter of a cow, heifer or calf, under the cow-saving order of 15 June 1715. The decision to supply boats specifically, rather than provisions for direct issue, identifies the metropolitan strategy as one of building local productive capacity rather than relieving the immediate want by import. Fishing boats placed in the hands of the island's people allow a continuing yield from the surrounding sea, and convert the relief from a one-time grant into a long-term asset on the establishment. The framing carries forward the operative principle observed in the cow-saving order, in which the present hardship is to be borne for thirteen months to allow the herd to rebuild, rather than relieved by immediate slaughter or import. The directors' provision of boats fits the same operative pattern of investment in the means of future supply. The framing of the advertisement as the public face of the Lords Proprietors' bounty, with the bench undertaking to ensure that the goodness and bounty might answer their end, places the directors' generosity at the head of the operative scheme and the bench's administration in the role of intermediary executor. The form is consistent with the manner in which other public notices have been framed across the present sittings, including the cow-saving order advertised under the secretary's hand on 15 June 1715, the standing Company-land letting conditions laid down on 24 May 1715 and the beef-supply advertisement of 1 June 1715 signed by order of the governor and council by Antipas Tovey, secretary. Speculations The decision to publish the advertisement on a Saturday, on the day after the licensing business of 5 July 1715 was completed, suggests that the bench is bringing the relief programme into operation in step with the broader rebuilding of the island's institutional framework that has run through the present sittings. The garrison stores reckoning of 5 April 1715, the standing letting conditions of 24 May 1715, the cow-saving order of 7 June 1715, the licence to William Beale of 5 July 1715 and the present advertisement on the boats together constitute a programme of institutional restoration on the part of the bench, with

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			each measure addressing a distinct shortage or weakness exposed by the recent famine. The provision of boats by the directors rather than direct food relief points to a metropolitan reading of the island's needs that places fish supply alongside cattle and yams as the operative components of the island's table. Fish from the surrounding waters had not previously appeared as a regular item on the bench's victualling accounts, and the establishment of a fishery on the basis of boats supplied from London would mark a significant change in the productive base of the island. The mechanism by which the boats will be allocated, the persons to whom they will be entrusted and the terms on which the catch will be disposed are the operative questions to which the rest of the advertisement is directed, and the bench is signalling its intent to manage the fishery through public conditions rather than through private grants.

Signed by order of the governor and council by Antipas Tovey, Secretary. The consultation was signed by George Haswell, Antipas Tovey and Edward Byfield. A copy was made. Interpretations The mechanism by which the boats are allocated proceeds on the principle of voluntary application within a defined ten-day window. The requirement that those desirous to share give in their names to the governor in person, rather than through the secretary or the storekeeper, places the operation under the direct hand of the executive and supplies the bench with a record of the applicants on which subsequent allocation can rest. The form is consistent with the standing position observed in the petition procedures across the present sittings, with the governor receiving applications directly and the council determining the disposal on the merits. The operating arrangement on the boat itself rests on a defined complement of one coxswain and four hands, with the catch divided on the principle that one sixth part of every voyage is to be accounted for the boat. The arrangement adapts the standing fishery practice known in metropolitan and colonial fisheries, in which the boat itself is treated as a participant in the division of the catch alongside the men working it. The sixth share for the boat covers maintenance, replacement of gear, repair of damage and the eventual depreciation of the hull, and gives the boat itself a continuing claim against the fishery so that the establishment is not dependent on private generosity for the upkeep of its productive assets. The substitution introduced by the bench, whereby the named applicants take the entire benefit of the boat for five voyages and surrender the sixth voyage to the boat's share, is an adaptation of the conventional fishery practice to the conditions of the island. Instead of

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			dividing each voyage's catch six ways, the bench has converted the proportion into a periodic rotation: five complete catches to the men, one complete catch to the boat. The mechanism simplifies the accounting on each individual voyage while preserving the underlying proportion of the standard practice over the cycle of six voyages. The arrangement also gives the boat's account a more substantial single inflow on its sixth voyage, which may be applied to particular repairs or to provisioning rather than divided in small parts each time. The standard boat complement of one coxswain and four hands is consistent with the long-boat crew arrangements observed in the records, where the boatswain at five shillings per day in the boat had been the rate set on 8 April 1712 for John Kelly, with the ordinary crew at two shillings and sixpence per day for John Somersby and others on the same date. The present arrangement is for a fishery rather than a freight operation, so the men work for their share of the catch rather than for daily wages, but the standard complement and the calibration of the boat's share against five hands' labour reflects the same practical understanding of what a working boat at the island requires. Speculations The choice to set the ten-day application window suggests that the bench expects more applicants than there are boats, and is providing the applicant pool from which the operative selections will be made. The window is long enough to allow planters in the country districts to learn of the advertisement and to attend the governor with their names, but short enough to keep the matter from drift. The mechanism of voluntary application rather than direct nomination places the initiative on the planters themselves, with the bench retaining the discretion to allocate the boats among those who have come forward. The decision to convert the conventional six-way per-voyage division into a five-and-one rotation suggests that the bench has reflected on the practical difficulties of dividing every catch into six small parts and has preferred the operational simplicity of an alternating cycle. The arrangement also reflects the social calibration of the scheme: with five entire voyages going wholly to the men's hands and one entire voyage going wholly to the boat's account, the men have a direct and substantial periodic interest in the boat's good condition, since their share depends on the boat remaining in service. The mechanism gives the operative crew a stake in the maintenance fund itself rather than treating the boat's share as a deduction from each voyage's catch that may breed grievance.
537	528	Island St Helena. At a Consultation held on Tuesday the 12[th] day of July 1715 At the Union Castle in James Valley. Isaac Pyke Esq[r] Gov[r] George Haswell D[e]p[u]ty Pres[t] Matth[w] Bazett 3 Antip[s] Tovey 4[th] & Edw[o] Byfeld 5 in Council The Govern[r] made the following Report. That whereas Joseph & Richard Coles have learned to Cutt Stone, and work at Stone Cutting in Sandy Bay for the Hon[ble] Comp[a] a Considerable time and are become indifferent workmen, at Plain work being Desireous to Continue to work at the Said Stone Cutting for three years longer Certain, but pray an Advance on their wages, and that while they are Contracted to work for the Comp[a] they should in Case of Sickness, have the Priviledge of the Hon[ble] Companys Servants (that is to pay nothing for their Phyfick, which is what is called in this Place being Surgeon free) The Govern[r] has agreed with them as followes (viz[t]) That to Christmas next they have Two shillings per day Each,	Island of St Helena. At a Consultation held on Tuesday the 12 day of July 1715 at the Union Castle in James Valley. Present: Isaac Pyke Esquire, Governor; George Haswell, Deputy Governor; Matthew Bazett, third; Antipas Tovey, fourth; Edward Byfield, fifth in council. The governor made the following report. Joseph and Richard Coles had learned to cut stone, and had worked at stone cutting in Sandy Bay for the Honourable Company a considerable time. They had become tolerably indifferent workmen at plain work. They were desirous to continue working at the stone cutting for three years longer certain, but prayed an advance on their wages. They also asked that while they were contracted to work for the Company, they should in case of sickness have the privilege of the Honourable Company's servants, that is, to pay nothing for their physic, which was what was called in this place being surgeon free. The governor had agreed with them as follows.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
		And that from Christmas next to Midsummer 1716, they have two Shillings & Six Pence Each [a] day, And that from and after Said Midsummer 1716 they shall have three Shillings for every day they Margin Notes: Gov[r] Report of Agreem[t] w[th] Jos[p]: & Rich[d] Coles to Cutt Stone	To Christmas next, they were to have two shillings per day each. From Christmas next to Midsummer 1716, they were to have two shillings and sixpence each per day. From and after Midsummer 1716, they were to have three shillings for every day [...] Interpretations The contract recorded between Joseph and Richard Coles and the Company runs on a stepped wage scale across the three-year term, with the rate rising from two shillings per day in the first six months to two shillings and sixpence in the following six months and three shillings from Midsummer 1716 onward. The arrangement is calibrated to the men's progressive acquisition of the trade, with each increment recognising the additional value of their labour as they consolidate their skill at plain work. The mechanism is consistent with the bench's broader practice of fixing labour rates by written agreement, observed in the Samuel Price apprenticeship contract for shoemaking and tanning of 12 April 1715, where the rate was set at two shillings and sixpence per day under a written agreement found among Captain Edward Mashborne's papers. The Coles brothers occupy a particular place in the labour establishment at the island. The free planter carpenter rate set on 13 October 1713 was four shillings per day with the workman finding his own diet, marking the upper bench rate for skilled trades on independent terms. The soldier stone-laying rate at the Prosperous Bay house had been set on 3 November 1713 at four shillings per day for John Sinsnick, with five shillings per alarm for nineteen alarms given at the bay. The reduced replacement-labour rate after the stone-layers' combination of 18 January 1714/15 had been broken stood at three shillings per day. The Coles brothers' present rates of two shillings rising to three shillings sit at the lower end of the scale, consistent with their status as tolerably indifferent workmen still acquiring the trade. The surgeon-free privilege requested by the Coles brothers, that they should pay nothing for their physic in case of sickness during the term of the contract, is the operative material benefit attached to Company service that they had not previously held as free planters. The arrangement converts them from the position of independent freemen liable for their own medical charges to the position of Company servants entitled to attendance from the garrison surgeon at the Company's account. The garrison surgeon's salary had been raised on 3 November 1713 to forty pounds per year, house rent included, for William Porteous, marking the institutional position of medical care as an established charge on the Company's books. The extension of that care to contracted stone cutters represents a deliberate widening of the Company's establishment of servants for the term of the work. The stone cutting work at Sandy Bay sits with the broader infrastructure programme observed across the present sittings, including the Sandy Bay sea wall and the advertisement of 24 June 1715 inviting tender for upwards of one hundred rod of mortar or wet wall to be made in James Valley with all materials within one hundred yards of site. The three-year term of the Coles contract is timed to carry through the principal works in progress and to provide the bench with continuity of supply in the cut stone necessary for completing both the Sandy Bay programme and the James Valley wall. The choice of a longer term rather than continuing on year-to-year engagements indicates the bench's assessment of the substantial work still in prospect. Speculations The choice of two brothers rather than one workman, contracted together for the same term and on the same scale, suggests that the bench has accepted the

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			practical arrangement by which the two have worked side by side and is treating them as a working unit rather than as independent contracts. Joseph and Richard Coles having learned the trade together, perhaps under the supervision of a more skilled hand at Sandy Bay, the joint contract preserves the working relationship and avoids any imbalance that separate scales would have introduced. The pattern indicates the bench's willingness to adapt the form of the engagement to the practical circumstances of the labour, rather than insisting on a uniform individual contract. The graduated wage scale with two upward steps within the three-year term suggests that the bench has built in to the contract its expectation that the men will continue to improve at the trade across the period, and is pricing their future labour at the rate appropriate to a workman of higher competence. The mechanism converts what could have been a fixed-rate contract into a developmental engagement, with the bench's investment in the men's continuing employment matched by the Company's progressive recognition of their improving value. The granting of the surgeon-free privilege at the outset of the term, on the same footing as established Company servants, sits with the same operative principle: the Coles brothers are being treated for the period of the engagement as part of the establishment rather than as transient hired hands.
538	529	they work for the Hon[ble] Company at the same trade of Stone Cutting untill the End of two Years. But they are not to be Excused of any Personall Duty for the Security or Defence of the Iseland but to be at their Posts as usuall on Alarms. The Govern[r] Reports that According to Consultation of the 8 July 1714 & Lon[d] of January, and in Obedience to the Hon[ble] Companys Generall Letter pr Cardonnell he has fin =ished the Ends of the two Wings Adjoyning to the Castle in this valley by Raiseing the Walls Higher by four foot and twenty Rows of Iron Storkadoes thereon which makes the Castle much Sewrer then it was. The 7[th] July Sailed the Hannover C[o]mmandore James Osborne and at the same time Sailed the Eagle Galley Cap[t] Daniel Beekman C[o]mmander under his Care. The Govern[r] Likewise Reports that he had cole the Ships were under Saile the following Letter Sent him from Capt: Beekman, viz[t] Worshipfull S[r] After returning You my hearty thanks for all favours, I think it my duty to Acquaint yo[r] Worsp of Some Proceedings Since my Comeing on board which is, M[r]: Swartz's Sending on Shoar Arrack, Mony &c. in Order to Supply those Rogues on Shoar w[ch]: Confirms my former Opinion and gives me good Reason to beleive that he will Stick at nothing to Prejudice (if it lay in his Power) Either Your Worship or me he in an Auda =cious Manner threatens You and a Certaine Person unknown, My Humble Service to your Good Lady and Sister, and shall be proud of an opportunity to Confirm how much I am. S[r] Yo[r] most Humble Serv[t] D Beekman M[r] Margin Notes: Worshipfull S[r] L[ett]r p[r] Gov[r] from Capt Beekman	The contract with Joseph and Richard Coles continued, with the men to work for the Honourable Company at the same trade of stone cutting until the end of two years. They were not to be excused from any personal duty for the security or defence of the island, but were to beat their posts as usual on alarms. The governor reported that, in accordance with the consultation of 8 July 1714 and 6 [...] of January, and in obedience to the Honourable Company's general letter by the <i>Cardonnell</i>, he had finished the ends of the two wings adjoining to the castle in James Valley by raising the walls higher by four foot and seventy rows of iron stockades thereon, which made the castle much securer than it was. On the 4 July, the <i>Hanover</i>, Captain James Osborne commander, had sailed, and at the same time the <i>Eagle Galley</i>, Captain Daniel Beekman commander, under his care. The governor likewise reported that he had, while the ships were under sail, the following letter sent to him from Captain Beekman. Captain Beekman wrote to the worshipful governor. After returning his hearty thanks for all favours, he thought it his duty to acquaint the governor of some proceedings since his coming on board, which was that Mr Swartz had sent on shore arrack, money and so on, in order to supply those rogues on shore, which confirmed his former opinion and gave him good reason to believe that Swartz would stick at nothing to prejudice him, if it lay in his power. He had also in an audacious manner threatened the governor, and a certain person unknown. He sent his humble service to the governor's good lady and sister, and would be proud of an opportunity to confirm how much he was the governor's most humble servant. Signed D. Beekman. A note in the margin recorded the letter as having been sent by Captain Beekman. Interpretations The exception in the Coles brothers' contract reserving their personal duty for the security or defence of the island, with the requirement to beat their posts as usual on alarms, is the operative protection of the garrison establishment against the privatising effect of a long-term Company labour contract. The defence of the island rests on the standing duty of every man on the muster, irrespective of his contracted employment. The

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			provision matches the earlier disposal of Sergeant Fairfax's report on 12 April 1715, where the <i>Mercury</i> alarm allowance had been admitted as a separate category of duty for which the garrison could be summoned regardless of standing employment. The bench's care to write the exception into the stone cutters' contract preserves the same standing principle against any future plea of exemption. The fortification of the two wings adjoining the castle in James Valley by raising the walls four foot and adding seventy rows of iron stockades is the executed performance of an order dating back to the consultation of 8 July 1714, in obedience to the Honourable Company's general letter brought by the <i>Cardonnell</i>. The work has been carried out under the direction of the governor across the intervening twelve months and is now reported as complete. The report places on the council books the documentary record that the standing orders from the metropolitan directors have been performed, ready for inclusion in the homeward despatch to the directors. The reference back to the standing orders also fixes the documentary chain for the <i>Cardonnell's</i> letter as the most recent direction from the directors that had been operating on the bench through the present sittings. The departure of the <i>Hanover</i> under Captain James Osborne and the <i>Eagle Galley</i> under Captain Daniel Beeckman on 4 July 1715, with the <i>Eagle Galley</i> under the care of the <i>Hanover</i>, is the operative resolution of the mutiny inquiry that had run through the consultations of 29 June 1715 and 2 July 1715. The four warrant officers Thomas Frances, Thomas Clark, Alexander Adair and William Wells were sent off the island under continuing restraint, with the captain of the <i>Eagle Galley</i> exercising responsibility for them on the homeward voyage and the captain of the <i>Hanover</i> providing the senior command for the joint passage. The arrangement places the matter on the homeward despatch to the directors for such further proceedings as may be ordered at Bencoolen or in London, and removes the disaffected company from the island. Captain Beeckman's letter, sent to the governor while the ships were already under sail, returns the bench to the libel inquiry of 21 June 1715 concerning the pasquinade posted at the minister's door. The libel had been dismissed for want of formal proof but with continuing universal suspicion of Swartz, the chief supercargo of the <i>Borneo</i>, who had been given liberty to divert himself in the country while carrying himself well. Captain Beeckman's report that Swartz had sent on shore arrack, money and so on, to supply those rogues on shore, identifies Swartz as the continuing source of practical support for the warrant officer faction even after the principals had been confined and the <i>Eagle Galley</i> under sail. The letter converts what had been a standing suspicion into evidence of operative conduct, with Swartz's audacious manner and threats against the governor and an unknown third party as the further offences laid on the council books. Speculations Captain Beeckman's choice to send the letter to the governor only after his ship had cleared the road, rather than as the ships were preparing to sail, suggests that he had calculated the safer course of communication. Any letter sent while the ships were still at anchor could have been recovered or its contents disclosed before his ship was clear of the island, with consequent danger of further trouble from Swartz or his associates. The despatch of the letter from a ship already under sail places the disclosure beyond any practical interference by the persons named in it, and protects both the captain and the governor from any reprisal in the moment. The pattern is consistent with the cautious form of his earlier evidence on the libel of 21 June 1715, in which he had given the bench operative information

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			from his own knowledge while being careful to identify the limits of what he could affirm. The fact that Swartz had sent on shore arrack, money and so on to supply rogues on shore after the <i>Eagle Galley</i> was already departed indicates that the warrant officer faction of the <i>Eagle Galley</i> and Swartz's interest had been operating in concert rather than as separate cases of disaffection. The libel inquiry of 21 June 1715, with its mock Order of Governor Clark addressed to Captain Coxwain in the Castle of Capers, dated at Grub Street in the City of Troy 18 June 1715, sits alongside the round-robin paper of the <i>Eagle Galley</i> mutiny as two expressions of the same disposition against the bench at the island. Captain Beeckman's letter, by identifying Swartz as the continuing supplier of the rogues on shore after the principal mutineers had been despatched, converts the two matters into a single pattern of organised opposition to the bench, in which the libel and the mutiny were perhaps the two principal acts of the same coordinated effort against the Company's administration.
539	530	M[r]: William Worrall overseer of the Hon[ble] Companys Plantation Represented to the Govern[r] and Council the want the Blacks were in of Cloaths, which in this Cold weather Pinches them very much. Ordered That they all have new Cloaths. The following Petitions were Presented. Island St Helena. July 12[th] 1715 To the Worship[ull] the Govern[r] & the Rest of the Gentlemen his Council[ll] The Humble Petition of James Vesey Humbly Sheweth Whereas your Petition[r] haveing been Lately (not to mention time Longer past) at great Sufferer in his Hoggs, and having all the reasons Imaginable to beleive the Cheifest of his Damages to Accrue through the Means of John Harding Planter, Humbly Desires to Lay before Your Worship, and Councill these following Conisider =ations to the End that your Petit[r] may Enjoy, Under God, and the Wisdome of your Worsp and Cun[t] the Bennifitts of his own. If care and Dilligence on my Part (which sever[ll] of the Garrison that has Lived w[th] me will I beleive Testify) would have Exempted me from both former and Latter Losses I should not have troubled yo[r] Worship and Councill but as there has been very Little if any on his Side, as by his own Hoggs Continually being in his Plantation and his fences being very Low and in Some Places Lying to the Ground, as the Neighbour =hood can Testifie, and what is almost as bad as Margin Notes: J[no] Vesey[s] pet[n] ag[t] Jn[o] Harding damaging him by Hogs	William Worrall, overseer of the Honourable Company's plantation, represented to the governor and council the want the slaves were in of clothes, which in the cold weather pinched them very much. The council ordered that they all should have new clothes. The following petitions were presented. James Vesey petitioned the worshipful governor and the rest of the gentlemen of his council on 12 July 1715. He had lately, not to mention time longer past, been a great sufferer in his hogs, and had all the reasons imaginable to believe the chiefest of his damages to accrue through the means of John Harding, planter. He humbly desired to lay before the governor and council the following considerations, to the end that he might enjoy under God and the wisdom of the council the benefits of his own. If care and diligence on his part, which several of the garrison that had lived with him would, he believed, testify, would have exempted him from both former and latter losses, he would not have troubled the governor and council. There had been very little if any care on Harding's side, as by his own hogs continually being in the deponent's plantation, and his fences being very low, and in some places lying to the ground, as the neighbourhood could testify. What was almost as bad [...] A note in the margin recorded the substance of the matter as Vesey's petition against John Harding for damaging him by hogs. Interpretations The supply of new clothes to the Company's slaves on the representation of William Worrall as overseer continues the pattern of the overseer's active stewardship observed across the present sittings. His earlier reports, the first detailed yam-stock account of 26 April 1715, the full stock return of 18 June 1715 and the further stock account brought in on 5 July 1715, have established the substantive accounting on the plantation establishment. The clothing representation now extends the same documentary practice to the working hands, with the cold weather identified as the operative cause of the want. The bench's prompt order that they all should have new clothes, made without delay or referral, reflects both the standing duty of the Company to maintain its working force and the bench's confidence in Worrall's judgement of practical need. The reference to the cold weather pinching the slaves confirms the moderate climate of the island, with seasonal cold sufficient to require clothed provision for the working hands rather than the year-round equability associated with tropical latitudes. The island lies in the south Atlantic at sixteen degrees south latitude, but the trade winds and the cool oceanic currents produce a

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			climate of mild winters in which the Company's slaves require provision against cold rather than against heat. The bench's response to Worrall's representation, made at the consultation of 12 July 1715 in the middle of the southern hemisphere winter, identifies the practical reach of the seasonal calendar on the island's labour establishment. The James Vesey petition against John Harding for damages from straying hogs sits within the recurring pattern of livestock-trespass disputes that the bench has handled across the present record. The earlier Mudge livestock trespass on Belvird's plantation of 5 June 1712 had been dismissed with severe check on the strength of evidence from Giles Hays. The Thomas Soulhen complaint against George Carne of 1 September 1713 for loss of a bull had been brought before the bench on the same procedural pattern. The Vesey petition continues the established practice of bringing planter-on-planter livestock disputes before the bench for adjudication, with the operative grounds running to the standard heads of insufficient fencing and the consequent loss to the neighbour. The petitioner's appeal to the testimony of the garrison that had lived with him, as the means of proving his own care and diligence, is the operative form of evidence in such disputes. The garrison men have lived as labour or as overseers on planter establishments and have direct knowledge of the working practices of the household, giving their testimony weight on questions of care and fencing standards. The form is consistent with the standing fence survey panels constituted under the bench's orders at the island, such as the panel of 23 November 1714 named for fence survey purposes that included Gabriel Powell and the deceased Charles Steward. Speculations The bench's immediate order that the slaves should all have new clothes, without delay or further inquiry into the particular need or the cost, indicates the bench's confidence in Worrall's stewardship at a point when his probationary appointment of 5 April 1715 has been running for just over three months. The pattern of prompt acceptance of his representations, taken with his regular and detailed returns on yams and stock, suggests that the bench is now satisfied of his fitness for the office and is preparing to settle the salary that had been deferred at his appointment for observation of his behaviour. The clothing order is the kind of routine administrative request that the bench would be unwilling to grant without confidence in the overseer's judgement, and its passing without procedural friction is the operative indication of his consolidation in the office. The choice of John Harding as the named defendant in the Vesey petition, with the petition opening on the unusual ground of damage by the defendant's hogs straying onto the plaintiff's plantation, suggests a continuing course of conduct rather than a single incident. The petitioner's reference to time longer past, with great sufferings lately and earlier, indicates that the dispute has been running for some time and that Vesey has now reached the point of bringing it formally before the bench. The complaint specifies low fencing in some places lying to the ground, indicating a settled neglect of the defendant's plantation boundaries rather than an accidental failure. The Vesey approach to the bench by petition rather than by direct neighbourly remedy or by civil action at the general sessions suggests that informal channels for resolution have already been exhausted between the two planters.
540	531	as my Damages, that when I have told him of them and that I could not bear it but must Complaine to the Govern[r], he has given Scurrulous and unseemly Language, the Damage I have Lately Recieved, is above	James Vesey's petition continued. As to his damages, when he had told Harding of them and that he could not bear it but must complain to the governor, Harding had given him quarrelsome and unfair

		five Pounds being two Sows nigh their Pigging well one day and found Dead w[th] their Backs broke the Next, which they wont say he did, Yet his Brothers were seen by one that Commonly Goes by the Name of Baker, and M[r]: Swords Children Lugging them and forcing them Down a Waterfall, It is Shame =ly Presume a Law on this Iseland that none should Damage any thing Except their Fences be According to the Statute, which how farr his is wanting is very well known to the Inhabitants of Sandy Bay, May it may it Please Your Worsp &c. While this is Denieing any Arrest but will Calmly Sett Down with my Loses could I be but secure for the future, But that your Worsp would be plea[s] to Advise him when your Worsp shall think fitt of the Unchristian as well as the Unwarrantableness of the Actions which I hope may be have and Presume be more Prevalent then all I could Ever obtaine from him And your Petition[r] as in duty bound shall Ever pray. James Vesey Ordered That John Harding do Immediatly Repair all his fences According to the Laws of this Iseland, or Else that the Laws for Neglecting the same be put in Execution it Appearing to us that M[r] Vesey has been a great Sufferer by Hardings bad fences. M[r] Vesey Produced Betty his Black to prove that Slaughters Jack had killd the Hogg, and Jack being Called Sayed he did not Kill M[r] Veseys Hogg, but James & Joseph Margin Notes: Harding to repair his Fences Harding Black kills Veseys Hogg	language. The damage he had lately received was above five pounds, with two sows nigh their pigging well one day and found dead with their backs broke the next. Harding would not say he did it. Yet his brothers were seen by one that commonly went by the name of Baker, and Mr Stroud's children, lugging them and forcing them down a waterfall. It was, he presumed, the shame of the law on the island that none should damage anything except their fences were according to the statute, which how far Harding was wanting in was very well known to the inhabitants of Sandy Bay. He did not, as it might please the governor, desire any arrest of Harding's person, but would calmly sit down with his losses if he could but be secure for the future. He prayed that the governor would be pleased to advise him when he should think fit of the unchristian as well as the unwarrantableness of the actions, which he hoped might be and presumed would be more prevalent than all he could ever obtain from him. The petition was signed James Vesey. The council ordered that John Harding should immediately repair all his fences according to the laws of the island, or else that the laws for neglecting the same be put in execution. It appeared to the council that Mr Vesey had been a great sufferer by Harding's bad fences. A note in the margin recorded the substance of the matter as Harding to repair his fences. Mr Vesey produced Betty, his black, to prove that Slaughter's Jack had killed the hog. Jack being called, said he did not kill Mr Vesey's hog, but James and Joseph [...] A note in the margin recorded the substance of the matter as Harding's brother kills Vesey's hog. Interpretations The order on John Harding to repair his fences immediately according to the laws of the island, or else that the laws for neglecting the same be put in execution, is the operative remedy in livestock-trespass disputes at the island. The standing form rests on the principle that responsibility for the prevention of stray livestock damage lies with the keeper of the boundary, and that the failure to maintain fencing according to the statute is itself the actionable wrong. The fencing proclamation of 30 October 1711 had set the deadline of 25 March 1712 for completion of fencing across the island, and successive extensions and disputes have been brought before the bench under the standing framework of that proclamation. The bench's finding that Mr Vesey had been a great sufferer by Harding's bad fences fixes the operative liability without requiring proof of Harding's personal involvement in the destruction of the hogs. The valuation of the damage at above five pounds, with two sows close to pigging found dead with their backs broken, marks the substantial loss to the planter. Sows about to farrow represent the future increase of the herd as well as the present beast, and the killing of the animal at the point of pigging compounds the loss by the destruction of the litter. The figure is consistent with the standing hog and pig valuations observed across the records, with the hog being the principal source of meat alongside cattle for the smaller planter. Worrall's stock return of 5 July 1715 had recorded the Company's own hog establishment at 215 great and small, with five killed in the last month and two young pigs lost to a distemper called the pant, giving the bench a comparative benchmark for the scale of the petitioner's loss. The introduction of Betty, the petitioner's black, as a witness to identify the persons who killed the hog, is the operative form of evidence in such disputes. Slave testimony on factual matters of observation has standing at the island bench in civil proceedings, distinct from the position in capital matters established by Pyke

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			at the Toby trial of 10 May 1715 where the marital privilege was applied to exclude slave wife testimony. The general procedure on slave evidence in civil disputes admits the testimony of a planter's slave on matters of direct observation, with the bench weighing the evidence against the answers of any slave on the other side. The pattern is consistent with the use of slave witnesses across the standing record of property disputes at the island. The named characters in the dispute connect the matter to households already familiar to the bench. Slaughter's Jack is the slave of William Slaughter, the sergeant and free planter whose lease and probate matters have repeatedly come before the bench, including the witness to Thomas Bagley's will of 8 April 1712, the joint petition against Perkins's grant of 8 October 1711 and the Slaughter-Harding settlement reopened on 3 November 1714. The Harding family is the same on which the Slaughter-Harding settlement had run, with William Slaughter senior having on 15 January 1713 claimed on behalf of Richard Harding's children seventeen acres in Sandy Bay and Powles Valley. The bench is therefore handling a dispute between households whose property relations have already been before it in another matter. Speculations The petitioner's expressed willingness to forego any arrest of Harding's person, accepting his losses if he could but be secure for the future, suggests that the matter is not pressed to its full procedural extent but is brought as a means of securing the bench's intervention in a continuing dispute. The petitioner has chosen the lighter remedy of an order on the fences rather than the heavier remedy of a civil action for damages, perhaps in recognition that a damages action would be slower, more contentious and more disruptive of neighbourly relations than a direct order from the bench. The form of the petition, with its appeal to the unchristian as well as the unwarrantableness of Harding's actions, addresses the bench in moral as well as legal terms, suggesting that the petitioner regards the matter as one of personal injury beyond the strict property loss. The naming of the Harding brothers as the persons who lugged the sows down a waterfall, with Baker and Mr Stroud's children as the witnesses, suggests that the destruction of the hogs was not the accidental consequence of stray fencing but a deliberate act of malice against Mr Vesey's property. The form of killing, with the sows forced down a waterfall to break their backs, indicates a destructive intent rather than a defence of crops or a casual encounter. The slave Jack's defence on being called, that he did not kill the hog but that James and Joseph did so, deflects the imputation from Slaughter's establishment onto the Harding brothers themselves. The pattern indicates that the underlying dispute may go beyond the question of fencing into longer-running tensions between the households, with the present petition representing the petitioner's choice of the bench as the venue for managing what could otherwise become a more open conflict.
541	532	Joseph Harding his Mast[rs] Sons had Sett their Dogg upon the Hogg to Lugg him, and the Dogg and hogg both fell down the waterfall together which was about thirty foot but the Dogg lived & came up againe. By which it Appeareth, that M[r] Vesey's Hoggs have been killed by them. Ordered that John Harding be sumond against next Council day to shew Cause why he should not Pay for the Hoggs. Island St Helena. To the Worshp[full] Isaac Pyke Esq[r] Govern[r] &c. and Council, The most Humble Petition of John William Cyser Smith Humbly Sheweth	Slaughter's Jack said that Joseph Harding, his master's son, had set their dog upon the hog to lug him, and the dog and hog both fell down the waterfall together, which was about thirty foot. The dog had lived and come up again. By which it appeared that Mr Vesey's hogs had been killed by them. The council ordered that John Harding be summoned against the next council day to show cause why he should not pay for the hogs. A note in the margin recorded the substance of the matter as John Harding to be summoned to pay for the hogs.

		That forasmuch as yo[r]: Petition[r] haveing Served the Hon[ble] Comp[a] more then his Contracted time, and haveing but thirty Pounds p[er] anum and to find himself Dyett out of the afos[d]: Sallary, Humbly prays Your Worsp &c. Councill will be pleased to allow him such an Additionall Sallary as in your goodness Shall seem fitt for his further Encour =agement. And yo[r] Petit[r] as in Duty Bound Shall Ever pray &c. July 12[th] 1715. John W[m] Cyser. It is our opinion that he has as much as he deserves and as much as has been formerly given the Smiths Mate that has been before him, The Smiths here haveing a Great Priviledge of doing Jobbs Margin Notes: John Harding to be Sumond to pay for [the] Hogs J: W: Cyser, Smith; pet[n] for add[c]: Sallary Answer[d]	The most humble petition of John William Pyfer, smith, was presented to the worshipful Isaac Pyke Esquire, Governor, and the Council. The petitioner had served the Honourable Company more than his contracted time, and had but thirty pounds per annum, and was to find himself diet out of that salary. He humbly prayed that the governor and council would be pleased to allow him such additional salary as in their goodness should seem fit for his further encouragement. The petition was dated 12 July 1715 and signed John William Pyfer. A note in the margin recorded the substance of the matter as John William Pyfer, smith, applying for additional salary. The council answered that it was their opinion that the smith had as much as he deserved, and as much as had been formerly given to the smith's mate that had been before him. The smiths here had a great privilege of doing jobs [...] A note in the margin recorded the response as answered. Interpretations The slave Jack's evidence completes the picture of how the sows came to be killed. The use of a dog set on the hog to lug it converts the matter from a question of strayed livestock into one of deliberate destruction by Harding's son. The thirty-foot waterfall down which both the dog and the hog fell, with the dog surviving and climbing back up, fixes the topography of the act and supplies the bench with the operative detail that confirms the manner of the kill. The order on John Harding to be summoned against the next council day to show cause why he should not pay for the hogs converts the proceeding from one of fencing remediation into one of damages, with the burden now placed on Harding to defend himself against the operative finding that his son and his establishment caused the loss. The smith John William Pyfer's petition for additional salary, with his statement that he had served beyond his contracted time on thirty pounds per annum and was to find his own diet out of that, places the question of his rate against the standing benchmarks at the island. The garrison surgeon William Porteous had been settled on 3 November 1713 at forty pounds per year with house rent included, marking the higher rate for a salaried Company servant in a skilled calling. The plantation overseer Giles Hays had been set on 8 April 1712 at twenty pounds per year for the four-plantation consolidated estate. The smith's thirty pounds without house rent or diet finding sits between these two benchmarks, and the petitioner's claim of having served beyond his contracted time is the operative ground on which the bench is being asked to consider a revision. The council's answer that it was their opinion that the smith had as much as he deserved and as much as had been formerly given to the smith's mate that had been before him fixes the bench's standing position on smith remuneration by reference to the rate paid to the previous holder of the office. The form of the answer is consistent with the procedure observed in the Samuel Price rate dispute resolved on 12 April 1715, where the rate of two shillings and sixpence per day was settled by reference to a written agreement found among Mashborne's papers, against Price's demand of fifteen shillings the week. The reference to the smith's mate that had been before him places the present petitioner on the same scale as the predecessor. The bench's reference to the smiths having a great privilege of doing jobs identifies the operative supplementary mechanism by which the Company's smiths at the island augmented their salary. Jobs in this context mean private commissions taken from planters and others outside the Company's standing work, for which the smith was paid directly by the customer. The

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			arrangement gave the smith a continuing private income alongside his Company salary, on the use of the Company's tools, forge and time. The bench's reliance on this privilege as the reason for refusing the additional salary indicates that the smith's actual earnings, including jobs, exceeded the bare salary by a substantial margin, and that the bench regards the privilege as the equivalent of further wages. Speculations The petitioner's choice to apply for a salary increase rather than for permission to depart at the end of his contracted time suggests that he intends to remain at the island and that the present petition is a negotiation for better terms within the Company's establishment rather than a step toward leaving. The bench's reply, refusing the additional salary on the ground that the smith already has what he deserves and the privilege of jobs, also serves to keep the petitioner on the existing footing without driving him to a more determined application. The pattern is consistent with the bench's broader practice of holding the line on established salary scales while leaving the petitioner the option of continuing on present terms or making his own arrangements for departure, observed in the disposition of comparable petitions across the present sittings. The bench's invocation of the smith's privilege of doing jobs as the operative answer to the salary petition opens the question of whether the Company has been formally accounting for the time and tools spent on private work. The bench's defence of the existing salary rests on the assumption that the privilege constitutes part of the smith's total earnings, but the records do not show any standing mechanism by which the Company recovers the value of its tools and forge used for private jobs. The pattern suggests that the smith's private work has operated as an informal supplement on the Company's facilities, with the bench treating the value as accruing to the smith in lieu of a higher cash salary. The Pyfer petition, by raising the question of additional salary, has prompted the bench to articulate the equivalence between the cash salary and the privilege, and may in time supply the procedural basis for a more formal accounting of the smith's combined earnings.
542	533	Jobs for the ships and Plunders with the Hon[ble] Comp[as] Coales. To the Worshipfull the Gov[r] & Councill The Humble Petition of Balser Preeche Soldier That whereas your Petition[r] being Detained here by your Worsp and Council against his Will is very Desireous to Reckon in the Store the which he Cannot do, yet having worked Eighteen days for the Hon[ble]: Company for which he is not Paid Therefore your Petition[r] Humbly begs that yo[r] Worsp and Councill will give him an Order for the same that thereby he may Reckon And Yo[r] Petition[r] as in duty Bound Shall Ever pray &c. St Helena July 12: 1715. Balser Preeche Ordered That for the time he did Realy work which was Ten days He be Allowed thirty Shillings. John Hoskison being Sumonoed to Appear before Gov[r] and Council to shew Cause why he Neglected his duty upon an Alarm which all Persons above the age of Sixteen are Obliged to do. Appeared but had little to say for himself and it being the first (to the Pres[t] Govern[rs] knowledge) he was ord[r] fin[d] five Shillings to the Hon[ble] Comp[a] I Pyke Geo: Haswell Ant[ipas] Tovey Edward Byfeld Margin Notes: Balser Preeche[s] pet[n] for 18 days work, to be p[ai]d 30 s[hillings] Jn[o] Hoskison Sumond for not being at [an] Alarm	The bench's answer to John William Pyfer continued. The smiths had a great privilege of doing jobs for the ships and planters, along with the Honourable Company's coals. The humble petition of Balsar Breeche, soldier, was presented to the worshipful governor and council. The petitioner, being detained at the island by the governor and council against his will, was very desirous to reckon at the stores, which he could not do, having worked eighteen days for the Honourable Company for which he had not been paid. He humbly begged that the governor and council would give him an order for the same, that thereby he might reckon. The petition was dated at St Helena 12 July 1715 and signed Balsar Breeche. A note in the margin recorded the substance of the matter as Balsar Breeche's petition for eighteen days' work. The council ordered that for the time he did really work, which was ten days, he should be allowed thirty shillings. A note in the margin recorded the order as to be paid thirty shillings. John Hoskison, being summoned to appear before the governor and council to show cause why he had neglected his duty upon an alarm, which all persons above the age of sixteen were obliged to do, appeared but had little to say for himself. It being the first to the present governor's knowledge, he was only fined five shillings to the Honourable Company.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
		fin[d] 5/	A note in the margin recorded the substance of the matter as John Hoskison summoned for not being at an alarm, and fined five shillings. The consultation was signed by George Haswell, Antipas Tovey and Edward Byfield. Interpretations The Balsar Breeche petition continues the matter first opened at the consultation of 7 June 1715, when his petition that he might depart by ship at the end of his contracted time and be considered for eighteen days' work done in Mrs Coulson's house had been referred to a more convenient opportunity. The reckoning at the stores is the operative settlement procedure by which a Company servant clears his account before departure, with all credits for service and all debits for goods drawn balanced into a final figure. The petitioner's continued presence on the island against his will, with the eighteen days' work unpaid, has prevented him from closing the account and so from proceeding with any departure arrangements. The bench's adjustment of the claimed work from eighteen days to ten days, with the allowance fixed at thirty shillings, sets the operative day rate at three shillings per day. The figure falls between the soldier stone-laying rate of four shillings per day set on 3 November 1713 for John Sinsnick at the Prosperous Bay house and the reduced replacement-labour rate of three shillings per day adopted after the stone-layers' combination was broken on 18 January 1714/15. The choice of three shillings is consistent with the post-combination rate now operating at the island, and indicates that the bench treats the Breeche work as falling within the standing replacement-labour scale rather than at the higher pre-combination rate. The reduction of the days from eighteen to ten represents the bench's exercise of its administrative discretion in establishing the operative facts of the claim. The petitioner had stated eighteen days, but the council's order recites only ten days as the time he did really work. The form of the order indicates that the bench has either heard testimony or examined documents that established the lower figure, with the petitioner left to accept the bench's finding rather than contest it. The pattern is consistent with the bench's broader practice across the present sittings of fixing labour claims by reference to verified records, observed in the Samuel Price rate dispute of 12 April 1715 and in the establishment of the Sergeant Fairfax disposal on the same date. The John Hoskison fine of five shillings for neglect of duty on an alarm establishes the operative standing penalty for absence from the post on an alarm at the island. The duty arises on every person above the age of sixteen, marking the universal nature of the obligation. The choice of five shillings as the penalty represents one alarm-watch unit, matching the alarm rate of five shillings per alarm paid to soldiers as encouragement to keep good lookout established on 3 November 1713. The fine therefore operates on the principle of recovering the cost of the alarm allowance for one alarm, on the basis that the absent person did not earn the allowance and ought to forfeit its equivalent to the Company. Speculations The Breeche reduction from eighteen days to ten suggests that the bench has verified the actual time worked through the accounts of Mrs Coulson's house or through the records of the relevant supervisor, and has fixed the operative figure on the documented work rather than on the petitioner's claim. The willingness to allow only the days established, while still recognising the petitioner's broader grievance of detention against his will, indicates the bench's preference for procedural rigour even in cases where the underlying detention of the petitioner is itself the bench's own act. The

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			reckoning at the stores will now proceed on the basis of the thirty-shilling credit, and the petitioner's departure on a subsequent ship can be arranged once the operative balance is settled. The treatment of the Hoskison alarm-duty fine as a comparatively light penalty, settled at five shillings on the ground of it being the first to the present governor's knowledge, suggests that the bench is establishing a graduated scale of response to alarm duty breaches. The light fine on a first offence creates the operative incentive for compliance, with the implication that subsequent breaches by the same person would carry a heavier penalty. The form of the order, with the explicit reference to the present governor's knowledge, places the precedent on the documentary record for any future reference and indicates that the bench is conscious of building a coherent scale of penalties for alarm-duty offences across the establishment. The Hoskison family name has appeared across the records, with George Hoskison having served as deputy governor under Boucher's administration and died on 6 March 1712, and the present John Hoskison representing the continuing presence of the family name on the standing duty rolls.
543	534	Island St Helena At a Consultation Held on Tuesday the 19[th] of July 1715 At the Union Castle in James Valley. That they be brought in next Consultation day. Complaint being made to the Govern[r] by Isaac Leech Gunners Mate that King Williams Fort above Bankses hill is in a Dangerous Condition not like to Stand the firing of one Gun. The Govern[r] Ordered that Mess[rs] Tovey and Byfeld goe and Survey the Same who Report that Yesterday they went, and did Survey the [s]d Fort. That they find it in a very Ruinous Condition the foundation of it all round being woore away the Stones fallen out, tis their opinion that It will not Stand the firing of any one Gun of the two Guns there without falling Down, All the face of the wall being loose, and many Stones dropt out Margin Notes: No Prop[s] being bro[ught] to prevent drawing Bills referd I[s] Leech C[o]mpl[ts] ab[t] Fort W[m] at Bankses being Survey[d] [by] Mess[rs] Tovey & Byfeld &c found in a Ruinous condic[on]	Island of St Helena. At a Consultation held on Tuesday the 19 of July 1715 at the Union Castle in James Valley. Present: Isaac Pyke Esquire, Governor; George Haswell, Deputy Governor; Matthew Bazett, third; Antipas Tovey, fourth; Edward Byfield, fifth in council. No proposals had been brought in that day in order to show some method for the preventing of drawing bills of exchange on the Honourable Masters. The council ordered that they be brought in next consultation day. Complaint had been made to the governor by Isaac Leech, gunner's mate, that King William's fort above Banks's hill was in a dangerous condition, not likely to stand the firing of one gun. The governor had ordered that Mr Tovey and Mr Byfield go and survey the same. They reported that the day before they had gone and surveyed the fort. They had found it in a very ruinous condition, the foundation of it all round being worn away and the stones fallen out. It was their opinion that it would not stand the firing of any one of the two guns there without falling down, all the face of the wall being loose and many stones dropped out [...] Interpretations The matter of drawing bills of exchange on the Honourable Masters identified an operative financial control on which the bench was inviting proposals from within its own membership. A bill of exchange drawn at the island on the directors in London was the principal instrument by which the establishment financed expenditure beyond the cash on hand, with the directors meeting the bill on presentation at the Company's house in London and charging the sum to the island's account. The Pinnell letter of 11 November 1714 protesting against the second barrel-of-powder charge of six pounds sixteen shillings and sixpence as double payment, and the Pinnell charge of two hundred and twenty-three pounds fourteen shillings and tuppence on bills drawn 1 July 1713 by Boucher and Bazett, had illustrated the kind of dispute that arose when bills were drawn without sufficient ground. The bench's call for proposals to prevent further bill-drawing on the Honourable Masters opened a procedural reform aimed at tightening the operative discretion of the executive over the most consequential financial instrument at its disposal. The complaint by Isaac Leech, gunner's mate, on the condition of King William's fort above Banks's hill, sat within the standing structure of fortifications at the island that the bench had been working to maintain

			across the present sittings. The fortification of the two wings adjoining the castle in James Valley, raised four foot higher with seventy rows of iron stockades and reported as completed at the consultation of 12 July 1715, had marked the principal investment in defence under the Honourable Company's general letter brought by the <i>Cardonnell</i>. The Leech complaint identified a separate and outlying defensive position at Banks's hill, which had not received the same attention and which a serving officer of the gunnery establishment now reported as past its serviceable state. The composition of the surveying party, with Mr Tovey and Mr Byfield going to view the fort and reporting back at the next sitting, followed the operative procedure established across the present sittings for fact-finding by junior councillors. The Bazett and Byfield pairing on the Francis survey of 31 May 1715 had marked the same pattern of pairing two councillors to view a particular site and report their findings to the bench. The choice of Tovey as fourth in council and Byfield as fifth in council for the present survey kept the most senior councillors free for other business while supplying the bench with a documentary report from two independent witnesses to the condition of the fort. The surveyors' finding that the fort would not stand the firing of any one of the two guns there without falling down placed the matter on the operative footing of immediate practical concern rather than long-term repair. A gun position that could not be fired without bringing down the wall in which it stood was no longer a defensive asset but a liability, since its use in alarm would have destroyed both the gun emplacement and the men working it. The detail of the foundation worn away all round, the stones fallen out and the face of the wall loose with many stones dropped out, fixed the operative condition of the structure and supplied the bench with the documentary basis for any subsequent decision on repair or abandonment. Speculations The choice of Isaac Leech, gunner's mate, as the person bringing the complaint to the governor suggested that the operative knowledge of the fort's condition rested with the gunnery establishment rather than with the engineering or fabric side of the garrison. A gunner's mate would have had standing duty to inspect the guns at each outlying position and to report on their serviceability, and the discovery of the wall's condition had probably arisen on routine attendance rather than on any special survey. The form of the bench's response, dispatching two councillors to verify the report and to bring back a documentary record, indicated that the bench was preparing the institutional basis for either a substantial repair or a formal decommissioning of the position, rather than allowing the matter to rest on the gunner's mate's word alone. The absence of any proposals on the question of bill-drawing on the Honourable Masters at the present sitting, with the bench reduced to ordering that they be brought in at the next consultation day, suggested that the proposals had been called for at an earlier sitting not visible on the present record. The form of the order, with no expression of impatience or surprise, fitted a procedural delay of a kind familiar in the bench's business across the present sittings. The bench's continuing attention to the question, with the further opportunity for proposals to be brought forward, indicated its determination to bring forth a documented reform on the most consequential financial instrument under its control, in keeping with the Pyke trusting rule of 21 December 1714 that had set the standing principles of trusting and credit at the island.
544	535	out, and they beleive its being built with Mudd Mortar as tis called, and that too Mixt w[th] Salt Water is the	The report on King William's fort continued. The surveyors believed it had been built with mud mortar, as it was called, and that being too mixed with salt water

		Rea =son it is so Soone decayd, Besides that the Foundation was never well Laid. The Guard House there too was alsoe Ruind, and not fitt to Shelter the People there from Rain. Ordered That the Said Fort be repaired, and the House for the Guard who do duty there, and the Planters upon Alarms. And that M[r] Byfeld do agree with Some Stone Layers, and Labourers &c. for the undertaking the Said work. The following Petitions were Present =ed, viz[t]: To the Worshp[full] Isaac Pyke Esq[r] Gov[r] &c. Council The Humble Petition of the Prisoners belonging to the Eagle Galley Humbly Sheweth That your Petition[rs] have been for Some time Under your Displeasures in Confinem[t] Humbly desires that your Worsp &c. may take it in Consideration, and grant us our Liberty, in Order to gett our bread Some other way, untill such times your Worsp &c. be Pleased to send us home, which being the Earnest and Sincere Desires of yo[r] Poor Petitioners. Who as in duty Bound shall Ever pray Lett them be Answered that they are not Under the Govern[rs] Displeasure in any Perticular manner but Margin Notes: Ord[r] [tha]t it be rep[aird] &c. agree w[th] Stone lay[rs] to do it Eagle Gally m[en] pet[t]	had been the reason it had so soon decayed. Besides that, the foundation had never been well laid. The guard house there too was also ruined, and not fit to shelter the people there from rain. A note in the margin recorded the substance of the matter as the surveyors having found the fort in a ruinous condition. The council ordered that the fort be repaired, together with the house for the guard who did duty there, and the planters upon alarms. A note in the margin recorded the order to be repaired. The council further ordered that Mr Byfield should agree with some stone layers and labourers for the undertaking of the work. A note in the margin recorded the order as Byfield to agree with stone layers to do it. The following petitions were presented. The humble petition of the prisoners belonging to the <i>Eagle Galley</i> was presented to the worshipful Isaac Pyke Esquire, Governor, and Council. The petitioners had been for some time under the governor's displeasure in confinement. They humbly desired that the governor and council might take it into consideration, and grant them their liberty in order to get their bread some other way, until such time as the governor and council might be pleased to send them home. The petition closed with the writers' expression of being in duty bound to ever pray. A note in the margin recorded the substance of the matter as a petition from the <i>Eagle Galley</i> prisoners. The council ordered that they be answered that they were not under the governor's displeasure in any particular manner, but [...] Interpretations The surveyors' identification of mud mortar mixed with salt water as the cause of the fort's rapid decay supplied the operative diagnosis of the structural failure. Mud mortar was an inferior binding material made of clay, sand and water, used at the island in place of properly slaked lime mortar where lime was scarce or where the cost of preparing it had been judged too high. Its use in coastal defence works was particularly vulnerable to failure, since the salt content in any water used in mixing prevented the proper setting of the binder and progressively weakened the structure as moisture entered the joints. The advertisement of 24 June 1715 inviting tender for upwards of one hundred rod of mortar or wet wall in James Valley had specified all materials within one hundred yards of site, indicating the bench's continuing concern with the supply of proper materials for defensive construction. The arrangement for the repair, with Mr Byfield directed to agree with stone layers and labourers for the work, placed the practical execution of the project under the junior councillor who had already surveyed the position. The standing rates on the bench's books supplied the operative basis for the labour negotiation. The soldier stone-laying rate of four shillings per day had been set on 3 November 1713 for John Sinsnick at the Prosperous Bay house. The reduced replacement-labour rate of three shillings per day had been adopted after the stone-layers' combination of 18 January 1714/15 had been broken. The Coles brothers' graduated contract of 12 July 1715, with rates rising from two shillings to three shillings per day across three years for their stone cutting at Sandy Bay, marked the lowest end of the operative scale. The bench's choice to leave the agreement to Mr Byfield, rather than to specify the rates by conciliar order, indicated the bench's confidence in his ability to settle the engagement on terms appropriate to the work. The petition of the prisoners of the <i>Eagle Galley</i> opened the operative question of what was to become of the four warrant officers Thomas Frances, Thomas

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			Clark, Alexander Adair and William Wells in the period between the departure of the ship on 4 July 1715 and the dispatch of a homeward vessel. The petitioners' framing, that they desired liberty to get their bread some other way until the bench might be pleased to send them home, identified the practical problem of supporting the prisoners during a confinement of indefinite length. The bench's response, that they were not under the governor's displeasure in any particular manner, set the operative position that the confinement rested on the merits of the mutiny inquiry of 29 June 1715 and 2 July 1715 rather than on any personal displeasure of the governor. The decision to repair the guard house alongside the fort itself, with the planters identified as the persons who did duty there on alarms, fixed the operative function of the position within the broader defensive establishment of the island. The position served as an outlying post manned by planters on alarm, rather than as a permanent garrison station. The combination of fort and guard house repair signalled the bench's intent to maintain Banks's hill as a continuing element of the defensive scheme, rather than to abandon the position. The arrangement followed the pattern of the present sittings, where the bench had consistently invested in defensive infrastructure under the operative direction of the Honourable Company's general letter brought by the <i>Cardonnell</i>. Speculations The choice of Mr Byfield as the councillor directed to agree with the stone layers and labourers for the work, on the same day that he had reported on the survey jointly with Mr Tovey, suggested that the bench had decided to keep the operative responsibility for the project in a single hand from survey through execution. The pattern is consistent with the bench's broader practice of delegating discrete projects to the junior councillors, where the deputy governor and the third councillor were occupied with the larger matters of stores, accounts and licensing. Mr Byfield's appointment as fifth in council on 17 May 1715, on the vacancy left by the death of Captain Edward Mashborne on 31 March 1715, had been followed by a series of operative engagements that placed him at the working end of the bench's executive functions, in keeping with the principle observed in his pairing with Bazett on the Francis survey of 31 May 1715. The petition from the prisoners of the <i>Eagle Galley</i> opened on the framing of being under the governor's displeasure suggested a calculated approach by the petitioners to soften the bench's posture toward them. By representing the confinement as a personal matter between the governor and the prisoners, the petitioners invited a personal reconciliation that might lead to release on lighter terms. The bench's reply, distinguishing the procedural nature of the confinement from any personal animosity, removed that framing and placed the matter back on the institutional ground of the mutiny inquiry. The bench's response indicated its determination to dispatch the prisoners home for further proceedings rather than to dispose of the matter at the island, in keeping with the documentary record assembled across the consultations of 29 June 1715 and 2 July 1715, and preserved on the council books for transmission to the directors.
545	536	but as all other Criminalls must be and they having been Accused of Such high Crimes as has been Sworne against them, he Can not discharge any of them Untill a Ship bound for England Arrives, Unless any one or all of them will discover the Intreague of Robbing and Attempting to Destroy the Ship Island St Helena. To the Worshp[full] Isaac Pyke Esq[r]: Gov[r] &c. and Council.	The bench's answer to the prisoners of the <i>Eagle Galley</i> continued. As all other criminals had to be treated, and they having been accused of such high crimes as had been sworn against them, the governor could not discharge any of them until a ship bound for England arrived. The exception was if any one or all of them would discover the intrigue of robbing and attempting to destroy the ship.

		The Humble Petition of John Long free hold[r]: Humbly Sheweth That whereas yo[r]: Petition[r] being desirous to Hire a Parcell of the Hon[ble] Companys Wast Land about four Acres, Adjoyning to M[r] Gargens, lying in Sandy Bay, Humbly prays Yo[r]. Worsp &c. Councill will please to Grant Your Petition[r]: a Lease thereof, to make him a Plantation July y[e] 16[th] 1715. And yo[r] Petit[r] (as in duty bound) shall ever pray. Jn[o] Long He being askt where it was, said that Minty Gutt adjoyning to M[r] Gargens and above the Waterfall that is below M[r] Gargens and M[r] Vesey's Land. He has twenty Acres of Free Land & five Acres of Lease Land, and shall have at his mothers death twenty Margin Notes: Answer. J[no] Long pet[t]: to hire Land Rejected why	A note in the margin recorded the response as the answer. The humble petition of John Long, freeholder, was presented to the worshipful Isaac Pyke Esquire, Governor, and Council. The petitioner desired to hire a parcel of the Honourable Company's waste land of about four acres adjoining to Mr Gargen's, lying in Sandy Bay. He humbly prayed that the governor and council would be pleased to grant him a lease thereof, to make him a plantation. The petition was dated 16 July 1715 and signed John Long. A note in the margin recorded the substance of the matter as John Long's petition for waste land. The petitioner, being asked where it was, said it was Minty Gut, adjoining to Mr Gargen and above the waterfall that was below Mr Gargen's and Mr Vesey's land. The petitioner had twenty acres of free land and five acres of lease land, and would have at his mother's death twenty [...] A note in the margin recorded the response as rejected, and the question why. Interpretations The bench's answer to the <i>Eagle Galley</i> prisoners established the operative legal framework under which they were held at the island. The classification of the prisoners as criminals charged with high crimes placed them in the category of persons whose confinement could be ended only by transmission home for trial or by their own disclosure of further evidence in their own discharge. The offer of release on discovery of the intrigue of robbing and attempting to destroy the ship gave the prisoners a procedural avenue out of confinement, but only on terms that compromised the warrant officer faction by requiring the discoverer to identify the other principals and to set out the operative facts of the conspiracy. The form of the offer reflected the bench's continuing interest in establishing the full pattern of the conspiracy, including the disposal of the thousand pound that had been lost from the ship at Carry-Mon-Java. The reference to a ship bound for England as the operative trigger for the prisoners' transmission identified the dependency of the procedural disposition on the broader pattern of shipping at the island. The next homeward vessel after the <i>Hester</i> despatch of 22 March 1715 and the <i>Aurengzebe</i> despatch of 25 January 1714/15 had been the <i>Cardonnell</i>, which had sailed for Bencoolen rather than for England under the dispute settled with Captain William Mawson at the consultation of 1 July 1715. The bench was therefore awaiting a further homeward sailing for the practical disposal of the prisoners, with the period of detention uncertain in its length. The John Long petition continued the practice of conferences over waste land grants and leases at the island, with the operative test of letting laid down in the standing conditions of 24 May 1715. The conditions, established on the refusal of Christopher Hell's petition for the Man Cupps, required that the tenant must be able to manure the land, must hold at least one black for the labour, and must not be too deep in the Honourable Company's debt. The petitioner's holdings of twenty acres of free land, five acres of lease land and the prospect of twenty further acres at his mother's death identified him as a substantial planter on his own account. The form of the petition, seeking a four-acre parcel adjoining Mr Gargen's holding at Minty Gut, identified the operative ground as Company waste land at the head of an established planter neighbourhood. The naming of Mr Gargen and Mr Vesey as the neighbours of the parcel placed it within a familiar planter neighbourhood already on the records of the bench. Mrs Gargen, formerly Marcy Alexander and the widow of Richard Alexander, had been granted a

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			twenty-one-year lease of her former husband's seized land on 8 October 1711 under paragraph 82 of the Toddington-Thistleworth letter. The Vesey hog-damage petition of 12 July 1715, with the resulting fence-repair order against John Harding, had identified Mr Vesey as a planter in the same district. The location of the parcel above the waterfall and below the Gargen and Vesey holdings established the operative topography of the request. Speculations The bench's reservation of the discovery option in answering the <i>Eagle Galley</i> prisoners suggested an intent to break the warrant officer faction's solidarity by offering the first informer the prospect of liberty. The four principals identified across the consultations of 29 June 1715 and 2 July 1715 had stood together through the formal examinations, with each denying knowledge of the matters charged. The bench's offer of release to any one or all of them on disclosure of the intrigue placed the operative pressure of separation on the group, since each prisoner would now consider whether his fellows might break first. The mechanism mirrored the bench's broader procedure across the present sittings of testing collective bodies by offering selective relief to those who would cooperate, observed in earlier resolutions of comparable disputes. The bench's note of rejected against the John Long petition, with the question of why set out in the margin, indicated that the rejection rested on operative grounds requiring further explanation in the consultation record. The standing letting conditions of 24 May 1715 admitted petitioners who could manure the land, held at least one black for the labour and were not too deep in the Company's debt. The petitioner's holdings of twenty acres of free land, five acres of lease land and the expectation of further acres at his mother's death made him at first sight a strong candidate, but the operative ground of refusal must have lain in another consideration not yet visible on the present record. The bench was perhaps testing the principle that a planter's existing holdings should be brought into proper cultivation before further grants were made, a principle implicit in the standing conditions but not yet articulated in the recovered material.
546	537	twenty Acres more of Free Land, wherefore his Petition not Granted. I Pyke Antipas Tovey Edward Byfeld. Island St Helena At a Consultation held on Saturday the 23 day of July 1715, at the Union Castle in James Vally Isaac Pyke Esq[r] Gov[r] Pres[t] Antip[s] Tovey 4 & Edw: Byfeld The Govern[r] says he Sent for us to be present at the hearing a Cause he having Recieved the following Petition Island St Helena. To the Worshipfull Isaac Pyke Esq[r] Govern[r] &c. The most Humble Petition of Eliz[th] Swallow, wife of M[r] Thomas Swallow Plant[r] Humbly Sheweth That whereas your Petition[rs] Husband uses her very ill with abundance of hardships, and will not allow Margin Notes: Eliz Swallow pet[n] ag[t] The Swallow her Husband	The petitioner would have twenty acres more of free land. His petition was therefore not granted. The consultation was signed by Antipas Tovey and Edward Byfield. Island of St Helena. At a Consultation held on Saturday the 23 day of July 1715 at the Union Castle in James Valley. Present: Isaac Pyke Esquire, Governor; Antipas Tovey, fourth; Edward Byfield, fifth in council. The governor said he had sent for the council to be present at the hearing of a cause, having received the following petition. The most humble petition of Elizabeth Swallow, wife of Mr Thomas Swallow, planter, was presented to the worshipful Isaac Pyke Esquire, Governor, and Council. The petitioner's husband used her very ill, with abundance of hardships, and would not allow [...] A note in the margin recorded the substance of the matter as Elizabeth Swallow's petition against Thomas Swallow her husband. Interpretations The bench's reasoning for the rejection of the John Long petition rested on the petitioner's prospective inheritance of twenty acres of free land from his mother's estate. The operative principle behind the refusal placed the petitioner's overall future holdings above the operative threshold at which further Company waste land could properly be granted. Long's existing twenty acres of free land and five acres of lease land already represented a substantial holding by island

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			standards, and the prospect of twenty further acres at his mother's death would have brought him to forty-five acres of free and leased land combined. The bench was treating inheritance prospects as part of the operative calculation in determining further grants, in keeping with the broader pattern observed in the standing letting conditions of 24 May 1715, in which the suitability of the petitioner for additional land was measured against his existing resources for husbandry. The composition of the consultation of 23 July 1715, with only Pyke, Tovey and Byfield present, marked the absence of both Captain Haswell as deputy governor and Captain Bazett as third in council. The pattern of partial attendance was consistent with the selective signing observed across the present sittings, where particular matters had been carried by the governor with junior councillors rather than by the full bench. The protest against Captain Mawson of 11 June 1715 had been signed by Pyke, Tovey and Byfield without Haswell or Bazett, and the consultation of 14 June 1715 had been signed by the governor, Haswell, Tovey and Byfield without Bazett. The present sitting, with both senior councillors absent, placed the cause about to be heard under the hands of the governor and the two junior councillors. The Elizabeth Swallow petition opened a domestic dispute of a kind not previously brought before the bench in the recovered record. The form of the petition, with the wife petitioning the governor and council against her husband's ill usage, marked an unusual application by a married woman acting on her own behalf rather than through her husband or her father. The standing position under English law at the date placed the married woman's legal personality under that of her husband, with her property and her capacity to sue both vested in him. The bench's willingness to receive the petition and to hear the cause indicated its readiness to entertain matters of conscience and equity that fell outside the strict legal framework of coverture. The naming of Thomas Swallow as the husband against whom the petition was brought identified him as the ancient and sick free planter on whose behalf his son Richard Swallow junior had presented a yam-offer petition on 24 May 1715 for thirty thousand weight of yams in payment of Company debt, refused on the ground that cattle or blacks would be accepted in lieu. The Swallow household was a substantial one, with a church rate position of thirteen in January 1714/15 marking it among the larger establishments at the island. The Richard Swallow executor of Thomas Bagley's will, the Richard Swallow creditor on bond on whom the credit transfer of 12 April 1715 had operated, and the present Thomas Swallow connected the bench's recurring dealings with the Swallow family across the records. Speculations The bench's choice to convene a special sitting on a Saturday to hear the Swallow cause, with the governor sending for the available councillors rather than waiting for a regular consultation day, suggested that the matter had been judged to require immediate attention. A domestic dispute of the kind described in the petition would not ordinarily have warranted the convening of an extra sitting, and the bench's response indicated that the petitioner's circumstances had been represented as urgent. The form of the response, with the governor stating that he had sent for the councillors to be present at the hearing of the cause, signalled the bench's intent to treat the matter on a formal procedural footing rather than as a private application for the governor's intervention. The presence of only the two most junior councillors with the governor at the hearing of a marital dispute may also have reflected a deliberate selection of councillors free of personal connection to the parties.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			Captain Haswell as deputy governor and Captain Bazett as third in council had stood at the centre of the executor dispute of 24 May 1715 over the Charles Steward estate, and were enmeshed in the broader pattern of household relations among the substantial planters. Antipas Tovey as fourth in council and Edward Byfield as fifth in council, the latter only appointed on 17 May 1715, occupied positions more independent of the recurring planter circles. The bench's composition for the present sitting may therefore have been deliberately chosen to ensure that the cause would be heard without the distorting influence of any prior connection to the Swallow household.
547	538	allow her any Subsistance to live upon, Altho' her Requests be very reasonable but threatens to Chain and use your Petition[r] as he hath for =merly done, Humbly prays yo[r] Worship &c. will be pleased to Oblige Yo[r] Said Petitioners Husband, to Allow her a Reasonable Main =tenance here below, as your Worsp &c. shall think fitt, She being afraid to Return into the Country with her daughters to live with him. And your Petit[r] as in duty bound shall Ever pray &c. Eliz[th] Swallow. Whereupon he sent a Summons for him to Appear this day, and knowing them to be People that are often making Com =plaints, they having made Severall to him Since he was here. He was willing Some of the Council should be present at the hearing the Cause. She Deposed as followeth Island St Helena ss. Elizabeth Swallow wife of Tho[s]: Swallow Planter Complains that her Husband having abused her formerly and threathning to do the Some Still which was Chaineing her above Stairs, and giv =ing her such ill usage, as was not to be born with Margin Notes: her hus[ban]d appearing She deposeth. He had threatened to chain and use her as he had formerly done. She humbly prayed that the governor and council would be pleased to oblige her husband to allow her a reasonable maintenance below in James Town, as the governor and council should think fit. She was afraid to return into the country with her daughters to live with him. The petition was signed Elizabeth Swallow. A note in the margin recorded the substance of the matter as her husband appearing. The governor had sent a summons for the husband to appear that day. Knowing them to be people that were often making complaints, they having made several to him since he was there, he was willing some of the council should be present at the hearing of the cause. Elizabeth Swallow deposed as followeth. Elizabeth Swallow, wife of Thomas Swallow, planter, complained that her husband, having abused her formerly and threatened to do the same still, which was chaining her above stairs and giving her such ill usage as was not to be borne with [...] A note in the margin recorded the substance of the matter as her deposition. Interpretations The petitioner's specific request for a reasonable maintenance below in James Town, with explicit fear of returning into the country with her daughters to live with her husband, marked the operative remedy sought by the petitioner. The mechanism of a separate maintenance in the town, with the husband ordered to support the wife in residence apart from him, represented an established equitable response to ill usage in marriage at the date, drawn from the practice of the ecclesiastical courts and the courts of equity in England. The bench's willingness to entertain such a petition at the island indicated that the standing position included the capacity to grant maintenance against an ill-using husband, even where the strict common law of coverture did not directly admit the wife's standing as a separate suitor. The governor's observation that the Swallows were people often making complaints, with several already made to him since his arrival, identified the household as a familiar source of contentious business at the bench. The Swallow connections across the records had brought matters before the council on multiple grounds. The yam offer presented by Richard Swallow junior on 24 May 1715 on behalf of his ancient and sick father had been refused, with cattle or blacks accepted in lieu, marking one such recent matter. The standing executor business of Thomas Bagley's will, in which Richard Swallow had stood as joint executor, and the credit transfer of 12 April 1715 to Richard Swallow on bond, marked further dealings. The governor's choice to summon the husband and to have councillors present at the hearing reflected his judgment that the present

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			matter required documentary treatment rather than informal disposal. The husband's threat to chain his wife above stairs identified the operative form of the ill usage complained of. The chaining of a wife in a private chamber as a domestic punishment represented a form of confinement that fell within the husband's claimed powers of correction under the standing position of the common law, but its actual exercise was a matter that the bench could examine on petition by the affected party. The petitioner's reference to such chaining as having occurred formerly, with the threat of its repetition, placed the matter on the operative footing of past act and present apprehension, supplying the bench with the documentary basis on which any subsequent order could rest. The petitioner's reference to her daughters as the persons whom she feared to take back into the country with her established the broader family dimension of the dispute. The Swallow household at the church rate position of thirteen in January 1714/15 marked a substantial establishment, and the daughters' continuing dependence on the petitioner placed them within the operative scope of any maintenance arrangement. The bench's response, in receiving the deposition and proceeding to hear the husband on summons, indicated its readiness to consider the daughters' position alongside that of the wife in framing any remedy. Speculations The petitioner's choice to make her petition to the bench rather than to seek private intercession through friends or relatives may have reflected the limited options available to her within the Swallow family circle. Her husband's sons by his earlier marriages had stood as parties in their own right in the dealings with the bench, and the family network may not have been disposed to take her part against the head of the household. The bench therefore represented the only available authority capable of compelling the husband to provide maintenance against his will, and the form of the petition reflected the petitioner's understanding that the operative remedy lay in conciliar order rather than in family mediation. The governor's observation that the Swallows were people often making complaints suggested that the bench had built up a working assessment of the family's standing and temper. The household's history of contentious business may have informed the present hearing in both directions: the bench would be alive to the possibility that the petitioner was prosecuting a manufactured grievance, but would also recognise that a household so often in dispute might genuinely harbour the kind of internal conflict the petitioner had described. The bench's procedural response, in summoning the husband and convening councillors for the hearing, indicated its determination to test the operative facts of the petition before reaching any conclusion, in keeping with the documentary rigour that had characterised its handling of comparable disputes across the present sittings.
548	539	with, and if he gave her any Victualls when in Chains [t]was with very aprobius words Suffered their own Son Richard to abuse and Strike her and hold her hands whilest he did, with such Like Useage, makes her afraid to live with him. Eliz[th] Swallow. Upon hearing the whole Matter, it appeared the Poor Woman, had been Grosely abused and kept very Short of Victualls Some times Chained up w[th] an Iron Chain very often beaten, The Govern[r] used a great many Arguments w[th] the Old man and Persoadded both to a Reconcilem[t] The Woman alledged she was willing to be Recon =ciled, But that her useage was so Extreabously Cruel	Elizabeth Swallow's deposition continued. If her husband gave her any victuals when in chains, it was with very opprobrious words. He had suffered their own son Richard to abuse and strike her and hold her hands while he did so, with such like usage. It made her afraid to live with him. The deposition was signed Elizabeth Swallow. The affidavit was sworn before the bench. A note in the margin recorded the substance of the matter as it appeared she had been ill used. On hearing the whole matter, it appeared the poor woman had been grossly abused and kept very short of victuals. She had at some times been chained up with an iron chain, and very often beaten. The governor had

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
		that she could not Live under it and tho' She was willing to forgive her Husband any thing that he had done to her, Yet She said Unless he could Promise her kinder Useage She was unwilling to forgive him at all, which the Old man Refused to Promise. Whereupon the Govern[r]: Ordered him to be Committed but at the same time Advised the old woman and one Richard Swallow a Relation to them, to goe and Compose the Matter, that the old man might not be Suffered to goe to Prison, So they came back to the Govern[r] and Said they had agreed Wherefore he Discharged the Warrant of the Peece But En =quireing into the Cause of their Frequent discontents it did appear that in their Younger Years they had both been Lewd, which the old man Reproached her with, which She thought avery great hardship, because whatever she had done in her youth, was by his Evill Example. It further appeared that their Son Richard Swallow had been a great insendary, and was Employed by Margin Notes: Jurat it appeared she had been ill us[e]d, [s]he willing to be reconcill[e]d Tho: Swallow committed their Son R[d] an incendiary	used a great many arguments to the old man and persuaded both to a reconciliation. A note in the margin recorded the substance of the matter as her willing to be reconciled. The woman alleged she was willing to be reconciled, but that her usage was so barbarously cruel that she could not live under it. Although she was willing to forgive her husband anything that he had done to her, she said that unless he would promise her kinder usage she was unwilling to forgive him at all. The old man refused to promise. The governor ordered him to be committed. At the same time he advised the old woman, and one Richard Swallow, a relation to them, to go and compose the matter, that the old man might not be suffered to go to prison. They came back to the governor and said they had agreed. The governor therefore discharged the warrant of the peace. A note in the margin recorded the substance of the matter as Thomas Swallow committed. On enquiring into the causes of their frequent discontents, it did appear that in their younger years they had both been lewd. The old man had reproached her with it, which she thought a very great hardship, because whatever she had done in her youth was by his evil example. It further appeared that their son Richard Swallow had been a great incendiary, and was employed by [...] A note in the margin recorded the substance of the matter as their son Richard an incendiary. Interpretations The bench's documented finding that the petitioner had been grossly abused, kept very short of victuals, at some times chained up with an iron chain and very often beaten, established the operative facts of the case on the documentary record. The pattern of physical confinement by iron chain, beating and the withholding of food represented a course of conduct beyond the scope of any standing right of correction admitted under English law at the date. The bench's finding placed the matter on the footing of established mistreatment rather than disputed allegation, and provided the operative basis on which the governor's order to commit the husband rested. The governor's preference for reconciliation over committal followed the pattern of disposition observed across the present sittings, where the bench had repeatedly preferred informal settlement to formal proceedings wherever the operational interest could be served. The Aylmer-Bridger-Wiley reconciliation after the <i>Cardonnell</i> passenger complaint of 15-16 June 1715 had produced supper invitations and the resumption of country diversions despite the Jacobite toast disclosure. The Bridger-Mawson supper invitation of 16 June 1715 had settled the captain's behaviour without formal sentence. The Toby trial of 10 May 1715 had been managed through the executor protection of 24 May 1715 rather than through formal proceedings against Captain Haswell. The Swartz libel of 21 June 1715 had been disposed of with liberty to divert in the country despite universal conciliar suspicion. The present matter followed the same operative method, with the threat of committal serving as the lever for an agreed composition rather than the actual destination of the proceeding. The discharge of the warrant of the peace on the parties' agreement marked the procedural mechanism by which the matter was disposed without formal trial. A warrant of the peace at the date was a binding-over instrument by which the bench could require a person to keep the peace toward a named party on pain of forfeiture, and the warrant could be discharged on the parties' composition without proceeding to the underlying offence. The form of the disposal placed the operative obligation on the husband to maintain proper

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			conduct toward his wife on pain of revival of the warrant, without committing him to immediate confinement. The disclosure of the parties' lewd behaviour in their younger years, with the husband's reproach of the wife and the wife's defence that whatever she had done was by his evil example, identified the underlying source of the present dispute. The bench's note on the documentary record of this background, rather than its formal exclusion as collateral, indicated the bench's understanding that the operative pattern of the marriage rested on long-running mutual resentment rather than on any single recent provocation. The son Richard Swallow's identification as a great incendiary in the dispute marked the further family dimension of the matter, with the next generation perpetuating the patterns established by the parents. Speculations The husband's refusal to promise kinder usage to his wife, in the face of the governor's persuasion and the prospect of immediate committal, indicated either a settled determination to maintain his disciplinary practice or a public posture not to be compelled into promises against his will. The form of the eventual disposal, with the husband's relation Richard Swallow taking part in composing the matter alongside the wife, suggested that the old man's resistance had been overcome by family pressure rather than by direct conciliar order. The mechanism placed the operative agreement within the family circle, with the bench providing the framing threat of committal as the lever, rather than imposing a settlement directly. The pattern was consistent with the bench's broader operative method of producing settlements through pressure rather than through direct decree. The identification of the son Richard Swallow as a great incendiary in the dispute placed the present matter alongside the household's recurring business at the bench. The Richard Swallow junior who had presented the yam-offer petition of 24 May 1715 on behalf of the ancient and sick father, the Richard Swallow who had received the credit transfer of 12 April 1715 on bond, and the Richard Swallow who had stood as joint executor of Thomas Bagley's will, represented either one person operating across all these matters or several persons of the same name in the connected family. The role of incendiary in the parents' marital dispute marked a further dimension of the same household's centrality in the bench's contentious business, in keeping with the governor's observation that the Swallows were people often making complaints. The bench's documentation of the son's role suggested its readiness to call him to account in any future renewal of the dispute, the present record supplying the operative basis for such accountability.
549	540	by the old man as a Spy upon his mother: That this Richard Swallow their Son had often beat her and was the Person that Put on the Iron Chain, He often Curseth both father and Mother, and on the least Provocation by words, beats his Mother, Seeing they were agreed the Govern[r] Advised them to goe Home and Live friendly, and Promised the Old woman that if that Wicked fellow their Son should be the Occasion of any more Disturbances between his father and Mother, he would make him Wear the same Iron Chain that he put upon her Legg, or one as Like it as could be gott. Whereupon the Old man Desired Liberty for his Son to goe off the Iseland, to which the Gov[r] Assented, and if they should hold of the same mind, we think it a good Riddance. I Pyke Antipas Tovey Edward Byfeld Margin Notes:	The son Richard Swallow had been employed by the old man as a spy upon his mother. The Richard Swallow, the son, had often beaten her, and was the person who had put on the iron chain. He often cursed both father and mother, and on the least provocation by words beat his mother. Seeing they were agreed, the governor advised them to go home and live friendly, and promised the old woman that if that wicked fellow their son should be the occasion of any more disturbances between his father and mother, he would make him wear the same iron chain that he had put upon her legs, or one as like it as could be got. The old man then desired liberty for his son to go off the island, to which the governor assented. If they should hold of the same mind, the council thought it a good riddance. A note in the margin recorded the substance of the matter as Richard Swallow had liberty to go off the island.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
		has Liberty to go off	The consultation was signed by Antipas Tovey and Edward Byfield. Interpretations The disclosure that the son Richard Swallow had been employed by his father as a spy upon his mother converted the present matter from a dispute between husband and wife into a more complex pattern of intra-household surveillance and coercion. The mechanism by which the father had set the son to watch the mother, with the son in turn becoming the agent of the physical confinement and beatings, established the operative structure of the household's internal discipline. The father's role had been one of direction and licence, with the son carrying out the actual application of force, including the placement of the iron chain on the mother's legs. The pattern placed the father's responsibility for the abuse on the operative footing of authorisation rather than direct act, while the son had carried the operative weight of the physical conduct. The governor's promise that the son should wear the same iron chain if any future disturbance occurred, or one as like it as could be got, established the operative deterrent against further abuse. The form of the threat, with the explicit proposal to apply the same instrument to the offender that had been applied to the victim, marked a particular calibration of the bench's authority to fit the punishment to the offence in its specific physical form. The promise was made directly to the old woman as the protected party, giving her standing to invoke the bench's intervention on the occurrence of any further mistreatment, and supplied the operative mechanism by which the present settlement could be enforced. The grant of liberty to the son Richard Swallow to go off the island, on the father's own request, marked the practical resolution of the matter through the removal of the operative agent of the abuse from the household. The arrangement removed the son from his position as the executor of the father's coercive direction, while leaving the parents to compose their relationship without his continuing presence. The bench's note that, if they should hold of the same mind, the council thought it a good riddance, conveyed the bench's assessment that the son's departure represented a net benefit to the island establishment as well as to the immediate parties to the dispute. The procedure of granting liberty to depart on the request of a parent rather than of the departing party himself reflected the operative position of the father as the head of the household and the principal interest holder in the son's actions. The form of the disposal placed the departure on the same footing as other departures granted across the present sittings on family or domestic grounds. The William Beale leave to depart on the <i>Cardonnell</i> of 11 June 1715 had been granted on family circumstances. The Samuel Allgate transfer to Bencoolen on 7 June 1715 had been resolved on similar grounds connected to his marriage and the loss of his stock. The present grant fitted the same pattern of conciliar disposal of contentious household members through removal from the island. Speculations The father's volunteering of his son for departure from the island, in the face of the governor's threat against the son in any future disturbance, suggested that the old man had calculated the operative advantage of removing the son before the threat could be invoked. With the son still on the island and continuing in the household, any further marital dispute would have brought the governor's penalty down on the family. By having the son depart, the old man avoided that contingency while also retaining the standing of having complied with the bench's intervention. The mechanism placed the practical burden of resolution on the absent

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			son rather than on the continuing parties, in keeping with the bench's broader method of disposal through removal observed across the present sittings. The bench's recorded judgment that the son's departure was a good riddance indicated that Richard Swallow had been recognised as a continuing source of disturbance beyond the immediate household. The pattern of the son's conduct described in the documentary record, with the cursing of both parents, the beating of the mother on the least provocation by words and the placement of the iron chain on her legs, marked a temperament that the bench had observed perhaps in other contexts. The form of the bench's assessment, treating the departure as a benefit to the establishment, suggested that the bench had been aware of the son's character as a continuing operative problem and had welcomed the opportunity to dispose of it through the present occasion. The disposition continued the bench's standing practice of using departures to settle continuing personnel difficulties without the requirement of more formal proceedings against the individuals concerned.
550	541	Island St Helena. At a Consultation held on Monday the 25 day of July 1715 At the Union Castle in James Valley. Isaac Pyke Esq[r] Govern[r] Pres[t] Matt[w]: Bazett 3 Antip Tovey 4[th] & Edw[o]: Byfeld 5[th] in Coun[c]l The Govern[r] Says that Benjamin Miller, who is one of the Hon[ble] Companys Servants that looks after the Blacks at the Hutts Plantation Came to him this morning, and Complains the Blacks are Sick, which is Occasiond by their unwholesome Victuals, they haveing nothing but Yams to Eat which are the yams now Produced here, and therefore he has called this Consultation to hear Benj[a] Millers Complaint who is here now Present and to See the Yams which he hath brought, and to take their Opinions therein, Benj[a]: Miller being askt if all the Yams were as bad as these. He Answers these are the best he could Pick out. Being asked were he had them, He Sayth of John Long, of whom the Hon[ble] Company now buys Yams We haveing Seen these Yams do think they are not fitt to be Eaten, being only fitt for Hoggs, and that they ought to have good Yams, Especially when they have Nothing Else to Eate, till the Last week the Gov[r] ordered Margin Notes: Ben[j] Miller[s] C[o]mplt[s] of badness of Yams yt makes [the] H[on] Comp[as] blacks Sick [Th]e yams produced & are bad	Island of St Helena. At a Consultation held on Monday the 25 day of July 1715 at the Union Castle in James Valley. Present: Isaac Pyke Esquire, Governor; Matthew Bazett, third; Antipas Tovey, fourth; Edward Byfield, fifth in council. The governor said that Benjamin Miller, who was one of the Honourable Company's servants that looked after the blacks at the Hutts plantation, had come to him that morning and complained that the blacks were sick. This was occasioned by their unwholesome victuals, they having nothing but yams to eat which were the yams now produced there. He had therefore called the consultation to hear Benjamin Miller's complaint. Miller was now present, both to show the yams which he had brought and to take their opinions thereon. A note in the margin recorded the substance of the matter as Benjamin Miller's complaint of the badness of yams, the makers of the Honourable Company's blacks sick. Benjamin Miller, being asked if all the yams were as bad as these, answered that these were the best he could pick out. Being asked where he had them, he said of John Long, of whom the Honourable Company now bought yams. A note in the margin recorded the substance of the matter as the yams produced were bad. The council, having seen the yams, did think they were not fit to be eaten, being only fit for hogs. The slaves ought to have good yams, especially when they had nothing else to eat. Until the last week the [...] ordered [...] Interpretations The complaint by Benjamin Miller as the overseer of the slaves at the Hutts plantation continued the line of overseer reports brought before the bench across the present sittings under the operative arrangement settled on 5 April 1715. Samuel Pessey had been continued as overseer of the Hutts plantation under William Worrall by the order of 5 April 1715, with the accounts to be given as formerly. The present complaint indicated either a change in the operative attendance at the Hutts, with Benjamin Miller now serving as the resident overseer of the slaves, or a parallel office in which Miller's particular charge was the care of the slaves themselves rather than the broader plantation establishment. The bench's prompt convening of a consultation on the matter, with the operative item produced for inspection, marked the seriousness with

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			which the bench treated the welfare of the Company's working hands. The supply of yams to the Hutts plantation from John Long, identified as the person of whom the Honourable Company now bought yams, established the operative purchasing arrangement under which the establishment was sourcing its principal staple. The arrangement marked a substantial change from the earlier supply pattern in which the plantation's own crop had been the primary source, with the Worrall yam-stock report of 26 April 1715 having recorded the total Company yams ready to dig at 263,600 across the plantations, plus the 66,000 bought by Pyke and Mashborne in Tombstone Wood on 19 October 1714. The Powell and Gurling provisions offer of 11 March 1715, with its 150,000 yams, two blacks, ten beeves, twenty hogs and some goats, had been reopened on 19 April 1715. The choice to buy yams from John Long, the same petitioner whose application for four acres of waste land had been refused on 19 July 1715 on the ground of his prospective inheritance, marked the operative pattern in which the Long household stood as a substantial supplier of yams to the Company. The bench's finding that the yams produced were not fit to be eaten, being only fit for hogs, supplied the operative judgment on the quality of the supplies being received. The standing principle that the slaves ought to have good yams, especially when they had nothing else to eat, marked the bench's recognition of the operative dependence of the slaves on the yam ration. The pattern of relying on yams as the sole staple for the slaves at the Hutts placed the quality of the supply at the centre of the establishment's labour management, since unwholesome food directly produced the sickness now reported by Benjamin Miller. The connection between the present complaint and the John Long petition refused at the consultation of 19 July 1715 placed the bench in an awkward operative position. The petitioner whose application for additional waste land had just been refused was now identified as the principal supplier of yams to the Company, with the quality of his supplies being found inadequate to feed the working hands. The pattern indicated either that the petitioner had been supplying inferior produce to the Company while reserving his better crop for sale to others or for his own use, or that his existing holdings were no longer producing yams of acceptable quality. The operative implications for the bench's relationship with the Long household across both matters would now require resolution. Speculations The temporal proximity between the refusal of the John Long petition for four acres of waste land on 19 July 1715 and the complaint of bad yams supplied by the same John Long brought before the bench on 25 July 1715 suggested a possible operative connection between the two matters. The bench's refusal of the petition had rested on the petitioner's existing twenty acres of free land, five acres of lease land and the prospect of twenty further acres at his mother's death, making him a substantial planter on his own account. The complaint about the yams now indicated that the petitioner, despite his substantial holdings, was supplying the Company with yams of poor quality. The temporal sequence raised the possibility that the present complaint represented either a deliberate response by Long to the refusal of his petition, or a continuing pattern of inadequate supply that had now come to the bench's attention through Miller's complaint. The bench's choice to convene a consultation specifically to hear Miller's complaint and to inspect the yams in person reflected the operative seriousness with which the welfare of the Company's slaves was treated as a matter of institutional management. The slaves at the Hutts represented the principal labour resource of

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			the Company's plantation establishment, and any sickness among them would have direct consequences for the operative capacity of the works in progress. The further investment in the herd-building programme initiated under the cow-saving order of 7 June 1715 and the broader infrastructure programme including the Sandy Bay sea wall and the James Valley wet wall advertised on 24 June 1715 depended on the continuing health of the slaves who supplied the operative labour for these projects. The bench's response to Miller's complaint therefore stood within the broader pattern of institutional investment in the productive base of the establishment that had characterised the present sittings.
551	542	Ordered them a Couple of Cows to Milk, and as Benjamin Miller says they are Unwholesome, We think So too, and as tis a long way to fetch them to the Hutts as far as from Sandy bay tis. Ordered That no more Yams be bought of John Long Especially because we give him four Shill =ings a hundred which is avery high Price and we are Sure we Can have better at a Cheaper Rate, Considering how far these are fetcht and. Ordered That John Long have Notice to Pay what he ow[e]s the Hon[ble]: Company some other way. I Pyke Antipas Tovey Edward Byfeld Margin Notes: to have 2 Cows to buy no more of those Yams of J[no] Long Long to pay [the] H[on] C[o] Some oth[er] way.	The bench had ordered them a couple of cows to milk. As Benjamin Miller had said the yams were unwholesome, the council thought so too, and it was a long way to fetch them to the Hutts as far as from Sandy Bay it was. A note in the margin recorded the substance of the matter as the slaves to have two cows. The council ordered that no more yams be bought of John Long, especially because they gave him four shillings a hundred, which was a very high price, and they were sure they could have better at a cheaper rate, considering how far these were fetched. A note in the margin recorded the substance of the matter as to buy no more of these yams of John Long. The council further ordered that John Long have notice to pay what he owed the Honourable Company some other way. A note in the margin recorded the substance of the matter as Long to pay the Honourable Company some other way. The consultation was signed by Matthew Bazett, Antipas Tovey and Edward Byfield. Interpretations The grant of two cows for milking to the slaves at the Hutts plantation supplied the operative remedy for the immediate problem of the unwholesome yam diet. The arrangement followed the bench's broader response to the cattle famine and the cow-saving order of 7 June 1715 made pursuant to paragraph 45 of the Honourable Company's general letter brought by the <i>Cardonnell</i>, in which no cow, heifer or calf was to be killed until 20 July 1716 except on warrant from the governor. The Worrall stock account of 5 July 1715 had recorded the Company's neat cattle herd at 136 head, including 42 cows. The diversion of two of those cows to the slaves at the Hutts for milking represented a small but operative reallocation of the herd resource toward labour welfare, consistent with the bench's standing pattern of investment in the productive base of the establishment. The order that no more yams be bought of John Long, with the price of four shillings a hundred identified as a very high rate, established the operative terms of the supply relationship that the bench was now bringing to an end. The reference to the bench's confidence that better could be had at a cheaper rate, considering how far these had been fetched from Sandy Bay, indicated that the operative cost of the supply had included a substantial transport element. The standing yam price benchmark on the bench's books had been four shillings the hundredweight, the rate at which Sarah Southen had on 25 September 1711 refused to sell without signed price-note, leading to the distraint order against her. The bench's present finding that four shillings a hundred was very high reflected a downward shift in the operative market for yams since that earlier benchmark, with the Worrall yam-stock report of 26 April 1715 having established that ample Company yams would be ready to dig by August. The decision that John Long must pay what he owed the Honourable Company some other way placed

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			the operative question of the petitioner's debt on the bench's agenda. The mechanism by which a planter delivered yams in payment of Company debt had been observed across the present sittings, with the Richard Swallow junior offer of 24 May 1715 on behalf of his ancient and sick father Thomas Swallow to deliver thirty thousand weight of yams at one time and thirty thousand more at another, with two head of breeding cattle, in payment of debt. That offer had been refused on the ground that yams already reported were more than the Company could take without apparent prejudice, and the council had indicated willingness to take cattle or blacks instead. The bench's present order on Long established the same operative principle in reverse, with the petitioner now required to find an alternative form of payment for his existing debt to the Company. The absence of the deputy governor Captain Haswell from the present consultation, taken with the signatures of Matthew Bazett, Antipas Tovey and Edward Byfield on the record, continued the pattern of selective attendance observed across the present sittings. The deputy governor had been absent from the consultation of 19 July 1715 alongside Bazett, with only the governor, Tovey and Byfield present at that earlier sitting. The present consultation had now restored Bazett to the bench while leaving Haswell absent. The pattern of partial attendance, with different combinations of councillors at different sittings, suggested either the practical realities of the councillors' other duties or the operative selection of councillors for particular business. Speculations The bench's choice to terminate the supply relationship with John Long on the very sitting at which the quality complaint was first heard, without referring the matter to further inquiry or offering Long any opportunity to remedy the supply, indicated the bench's settled view that the relationship could not be salvaged. The combination of high price, poor quality, long transport distance and the petitioner's evident willingness to supply inferior produce to the Company while reserving his better crop elsewhere supplied the operative ground for the immediate decision. The temporal proximity to the refusal of the Long petition for four acres of waste land at the consultation of 19 July 1715 raised the possibility that the present matter had been informed by a broader operative assessment of the petitioner's standing with the bench, with the supply decision marking the practical consequence of that assessment. The order that John Long must pay his debt to the Company some other way opened the operative question of how the debt would actually be discharged. The standing precedent from the Thomas Swallow yam offer of 24 May 1715 indicated that cattle or slaves would be acceptable in lieu, but the petitioner's existing twenty acres of free land and five acres of lease land suggested that his available resources for alternative payment would depend on his stocking levels rather than on further land. The bench's order placed the operative initiative on the petitioner to propose an alternative settlement, with the expectation that a fresh proposal would be brought before the bench in due course. The pattern was consistent with the broader operative method of the bench in disputes over Company debt, in which the petitioner was required to come forward with proposals for the bench's consideration rather than having a settlement imposed by direct order.

		Isaac Pyke Esq[r] Govern[r] George Haswell D[e]p[ul]ty Pres[t] Matt[w] Bazett 3 Antip[s] Tovey 4[th] & Edw: Byfeld 5[th] in Coun[ll] The Dispute between Richard Beale, and Martin Norman about a Parcell of Land belonging to Said Beale being Part of that Land called the Bursley beds, They were both here this day and after many Allegations on both Sides they agreed to Referr it to two men, Whereupon they were Dismist. The Govern[r]: Reports that Thomas Goodwin Monhoss who was on the 24 August last Appointed to Assist Capt: Bazett in Delivering Goods out of the Stores till the Accounts then in Arrear could be made up, which Accounts are long Since Dispatched and he not writeing a hand fitt for the Stores. He ordered him Either to do his Duty as Monhoss or Else to oversee the Blacks at work, both which he Declin[d]. Whereupon the Govern[r]: discharged him, Ordered That Thomas Goodwin Monhoss be Dismissed the Hon[ble] Companys Service from this day and his Pay to Cease Accordingly. It Margin Notes: R[d] Beal & Norman. Tho[s] Goodwin dismissed	Present: Isaac Pyke Esquire, Governor; George Haswell, Deputy Governor; Matthew Bazett, third; Antipas Tovey, fourth; Edward Byfield, fifth in council. The dispute between Richard Beale and Martin Norman about a parcel of land belonging to Beale, being part of that land called the Bursley Beds, had brought both before the bench that day. After many allegations on both sides they had agreed to refer it to two men. The council therefore dismissed them. A note in the margin recorded the substance of the matter as Richard Beale and Norman. The governor reported that Thomas Goodwin Monhoss, who had on 24 August 1714 been appointed to assist Captain Bazett in delivering goods out of the stores till the accounts then in hand could be made up, which accounts had long since been despatched, had not been willing to be a hand fit for the stores. The governor had ordered him either to do his duty as Monhoss, or else to oversee the blacks at work, both of which he had declined. The governor had therefore discharged him. The council ordered that Thomas Goodwin Monhoss be dismissed from the Honourable Company's service from that day, and his pay to cease accordingly. A note in the margin recorded the response as dismissed. [...] Interpretations The dispute between Richard Beale and Martin Norman over land at the Bursley Beds connected several matters already on the bench's record. Bursley Beds had been the location of the contested forty-five acres in the Powill v Girling cause of 2 September 1713, in which Hoskison had been found to have no power to mortgage his wife's separate estate. The land was therefore familiar to the bench as an established locus of contested property, with multiple competing claims running back through earlier dispositions. Richard Beale, the elder of the Beale orphans, had on 7 June 1715 been granted possession with his brother Anthony of the sixty acres of family land lying waste though fenced, and the present dispute marked a continuation of the Beale orphans' efforts to consolidate their inherited interests against neighbouring claimants. The Martin Norman water-rotation petition of 17 May 1715 had been referred to Tovey to examine and settle, with the petitioner's water kept off eight days in fourteen and substantial losses claimed. The present matter brought Norman before the bench in a different procedural posture, as a party to a land dispute rather than as a petitioner for water relief. The agreement of the parties to refer the matter to two men marked the operative form of arbitration that the bench had repeatedly preferred to formal adjudication. The mechanism placed the substantive determination in the hands of two arbiters chosen for their familiarity with the locality and the parties, with the bench's role limited to dismissing the cause from its own jurisdiction. The form was consistent with the bench's standing operative method of disposing of contentious matters through informal settlement wherever possible, observed across the present sittings in the Swallow reconciliation of 23 July 1715 and the various other reconciliations in the <i>Cardonnell</i> business. The dismissal of Thomas Goodwin Monhoss from the Company's service marked the operative resolution of a probationary appointment that had not produced the expected service. The appointment of 24 August 1714 had been a temporary assistance to Captain Bazett in the delivery of goods from the stores, pending the completion of the accounts then in hand. The reference to those accounts as long since despatched indicated that the original ground of the appointment had been exhausted, and that the bench had since been seeking to

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			find Goodwin Monhoss a continuing role within the establishment. His refusal both of the stores duty and of the alternative of overseeing the slaves at work placed him in the position of a Company servant who would not accept the duties offered him, and the discharge followed as the operative consequence. The connection of the Goodwin name to the broader stores establishment placed the present dismissal in context. The storekeepers' interrogation of 21 June 1715 had identified the assistants then employed at the stores as Haswell, Bazett, Byfield, Tomlinson, John Goodwin, Thomas Goodwin and Richard, with the surname incomplete. The present Thomas Goodwin Monhoss may have been the same Thomas Goodwin named in that list, or a second person of the same family name. The bench's standing position from the storekeepers' interrogation had been that more men were wanted at the stores, with three months stated to be insufficient and the proper deadline being six months after 25 March. The dismissal of Goodwin Monhoss therefore reduced the operative establishment at a time when the bench had been seeking to expand it, indicating that the bench would prefer to operate with one fewer hand than to retain a servant unwilling to perform the duties required. Speculations The agreement of Richard Beale and Martin Norman to refer their dispute to two men, after many allegations on both sides, suggested that the parties had recognised the limits of conciliar adjudication for matters of contested historical title. The Bursley Beds land had been the subject of multiple successive disputes across the records, with conflicting claims through different lines of descent and intermediate transactions. The bench's docket would not easily accommodate the kind of detailed historical examination required to resolve such matters, and the operative course of arbitration by two men familiar with the locality offered a more practical route to settlement. The pattern indicated the operative limits of the bench's jurisdiction in matters of substantive title, with arbitration filling the procedural gap where formal proceedings would have been disproportionate. The bench's note that the accounts mentioned in the original Goodwin Monhoss appointment of 24 August 1714 had long since been despatched indicated a careful documentary record of the temporal basis of probationary appointments. The bench's operative approach treated each temporary assignment as having a defined purpose and a defined termination, with the question of continuation arising only on the exhaustion of the original ground. The form supplied the operative basis for the present discharge, with the original purpose of the appointment no longer in force and the servant unwilling to accept any alternative role. The pattern was consistent with the bench's broader practice of documentary rigour across the present sittings, observed in the careful tracking of the storekeepers' accounts and the disposal of comparable probationary matters.

The council ordered that Captain Haswell have a boy of the Honourable Company's named Daniel to serve him for three years, and a girl named Mary for the same term, he providing for them as others were commonly provided for who were put out to planters. A note in the margin recorded the substance of the matter as Captain Haswell to have a slave boy named Daniel. The council ordered that Mr Byfield have a boy named Tom to serve him for three years, to serve him in the same manner. A note in the margin recorded the substance of the matter as Mr Byfield to have a slave boy Tom. The council ordered that Mr Tovey make enquiry and bring in an account next consultation day, what black boys or girls of the Honourable Company's had been put out after this manner, and to whom, and whether their contracted time had expired, that they might be put to the Honourable Company's works. A note in the margin recorded the substance of the matter as Mr Tovey to bring in a list of slaves of the Honourable Company's let out. The council further ordered that everyone in council next Tuesday do bring in something in writing by way [...] A note in the margin recorded the substance of the matter as the council to bring in their opinions to prevent drawing bills. Interpretations The clothing of the Company's slaves had been raised earlier in the present sittings, with William Worrall having represented the want of clothes at the consultation of 12 July 1715 on account of the cold weather pinching the slaves very much. The bench had on that occasion ordered immediately that they all should have new clothes. The present order of 26 July 1715, two weeks later, designated the governor and Mr Byfield jointly to see the clothing performed, marking the operative shift from the abstract order to the practical execution of the work. The arrangement placed the senior executive officer and the junior councillor most active in operational matters in joint charge of the project, consistent with the bench's pattern of pairing the governor with Byfield on direct executive tasks observed across the present sittings. The governor's report on the lemon trees in the fort garden, with two hundred and odd planted since his arrival and only six surviving, illustrated the practical difficulties of horticulture at the island. The reference to the moderate climate of the island, with its cool winter season noted in the slave clothing order, sat with the limited success of citrus in the fort garden. Lemons had been the subject matter of earlier business at the bench, with the Renatus Snow conviction of 2 December 1714 having involved bartering with Thomas Frey's slave Clove for lemons contrary to law. The persistence of the planting programme indicated the operative value placed on raising lemons locally, both as a dietary supplement and as a means of supplying the ships in the road with citrus for the prevention of scurvy. The grants of slaves to Captain Haswell and Mr Byfield, with Daniel and Mary to Haswell and Tom to Byfield for three-year terms, established the operative mechanism by which Company slaves were placed in private service. The form of the arrangement, with the holder providing for the slaves as others were commonly provided for who were put out to planters, indicated that this was a standing practice with established conditions. The granting of slaves to councillors as part of their establishment marked the operative integration of slave labour into the council's own arrangements, with the slaves remaining the

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			property of the Honourable Company while their service was vested in the named individuals for the contracted term. The order to Mr Tovey to enquire and bring in an account of slaves of the Company put out in this manner, and whether their contracted time had expired so that they might be put to the Company's works, represented the bench's operative effort to bring its slave establishment under proper documentary management. The enquiry would establish where each Company slave currently was, with whom, and on what terms, supplying the bench with the information necessary to recall those whose terms had expired. The form of the order was consistent with the documentary practice observed across the present sittings, including the Worrall stock returns of 18 June 1715 and 5 July 1715, the storekeepers' interrogation of 21 June 1715 and the plantation house and Lufkins inventory of 12 April 1715. The reminder that everyone in council should bring in something in writing the next Tuesday on the question of preventing the drawing of bills of exchange continued the matter opened at the consultation of 19 July 1715, when no proposals had yet been brought in. The bench had ordered that proposals be brought in at the next consultation day, but the matter had not appeared in the consultations of 23 July 1715 or 25 July 1715, and was now placed on the agenda for the consultation of the following Tuesday. The persistence of the matter on the bench's agenda, with the explicit reminder to each councillor, marked the bench's continuing determination to bring forward a documented reform on the most consequential financial instrument under its control. Speculations The choice to grant slaves directly to councillors at the same sitting at which the bench ordered an enquiry into Company slaves already put out suggested an operative pattern in which the bench's procedure for managing its slave establishment was being developed in real time. The grants to Haswell and Byfield set the immediate operative practice, while the order to Tovey sought the documentary basis on which the broader arrangement could be settled. The pattern indicated the bench's awareness that the slave establishment had perhaps been administered with insufficient documentary rigour in the past, with slaves being put out for various terms without a comprehensive record being maintained. The particular allocation of Daniel and Mary together to Captain Haswell, with Tom alone to Mr Byfield, suggested that the bench had given consideration to the operative needs of the holder when making the grant. Captain Haswell's establishment, as deputy governor and a substantial planter in his own right through his wife's interest in the Charles Steward estate, would have had use for the labour of two slaves of working age. Mr Byfield, more recently appointed to council and perhaps establishing his household at the island, may have had use for one slave for present needs. The pattern indicated the bench's attention to the practical circumstances of the holder in calibrating the grant, while maintaining the standing principle that the slaves remained Company property on a defined term of service.
554	545	way of Proposals for to avoid and Put a Stop to Drawing of Bills on our Honourable Masters, And against this day fortnight to bring in Writeing Some Minutes that may be Proper, toward Answering the Hon[ble] C[o]mpanys Last Gen[ll] Letter. 		Cardonnel for the Good of the Country But as there is Not Eno[u] to furnish all the Demands that will be made for them, Therefore he thinks twill be very Proper for Cap[t]: Bazett to Deliver to Each Inhabitant and Planter a Proportionable quantity According to the Number of their Respective families and to the Pod[s] in the same Manner, that all may have Equall Bennifit And notwithstanding that for other Goods there are Sundry Persons So greatly in Debt they cant w[th] Safety be Intrusted any more, yet in this Case Altho' they be in debt yet they may have there Share of Hooks and Lines Delivered to them, and we hope the Bennifitt thereof will Contribute Some thing toward their better of making them Capable to Pay [some] Subsistance and be ameans of L[i]ssening their Debts, I Pyke Geo: Haswell Antipas Tovey Edward Byfeld Margin Notes: [E]v[er]y[o]ne pro[p]d to ans[r] last Gen[er]all Lett[r] the Hooks & Lines to be proportion[d] by Cap[t] Bazett to ea: of Inhabitant [in] trust [of] [p]a[y] for it	answering the Honourable Company's last general letter. A note in the margin recorded the substance of the matter as each to propose to answer the Honourable Masters' general letter. The governor said that the Honourable Company had been pleased to send over a moderate quantity of hooks and lines in the late cargo of the <i>Cardonnel</i> for the good of the country. As there was not enough to furnish all the demands that would be made for them, he thought it would be very proper that Captain Bazett deliver to each inhabitant and planter a proportionable quantity according to the number of their respective families and to the rods in the same manner, so that all might have an equal benefit. Notwithstanding that, for other goods there were sundry persons so deeply in debt that they could not safely be trusted any more, yet in this case, although they were in debt, they might have their share of hooks and lines delivered to them. The council hoped the benefits thereof would contribute something toward their better subsistence and be a means of making them capable of lessening their debts. A note in the margin recorded the substance of the matter as the hooks and lines to be proportioned by Captain Bazett to each inhabitant, and trusted for it. The consultation was signed by George Haswell, Antipas Tovey and Edward Byfield. Interpretations The distribution of hooks and lines to the inhabitants and planters represented the operative continuation of the Lords Proprietors' relief scheme first announced in the advertisement of 9 July 1715. The earlier advertisement had set out the directors' provision of boats for the use of the place, with the ten-day window for applicants to give their names to the governor and the operative arrangement by which the boats would yield five complete catches to the men and one to the boat's account. The hooks and lines now distributed completed the practical equipment necessary for the fishery, supplying the smaller implements without which the boats could not be operated. The arrangement marked the second stage of the metropolitan relief programme, with the directors having calculated that boats alone would not put the inhabitants in a position to fish without the corresponding small gear. The principle of proportionable distribution according to the number of respective families set the operative basis on which the limited supply was to be shared out. The mechanism converted what could have been a contested allocation into one driven by family size, with the larger households receiving the larger share. The form was consistent with the bench's broader operative method observed in the church rate confirmation of 17 May 1715, which had fixed two shillings and sixpence a head for the year ensuing on every white and black above the age of sixteen, with the pauper-exemption clause for those certified poor. The family-size measure for hooks and lines used the same demographic logic of the household as the operative unit for both rating and relief. The bench's decision to extend the distribution to persons deeply in debt to the Company, in apparent departure from the Pyke trusting rule of 21 December 1714, identified the special character of the fishery scheme as a relief measure rather than as ordinary trading. The standing trusting rule had set three connected reforms as the operative pattern of the bench's credit policy, with credit transfer between debtors requiring particular order of council, no storekeeper credit without consultation-level approval of each particular, and trusting capped at one year's income at five pounds an acre, with three months' pay

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			for soldiers. The present decision to trust persons already too deeply in debt for ordinary goods, in respect of hooks and lines for the fishery, marked the operative recognition that the standing rule could be relaxed where the credit itself was directed toward the means by which the debtor might subsequently lessen his debt. The choice of Captain Bazett as the officer to deliver the proportionate quantities placed the distribution under the third councillor's hand as storekeeper, consistent with the operative arrangement under which goods from the stores passed through Bazett's control. The arrangement was consistent with the procedure of the storekeepers' interrogation of 21 June 1715, in which Bazett as storekeeper had been examined alongside Captain Haswell as accountant on the books and accounts. The placing of the present distribution under Bazett's hand kept the documentary record of the relief programme within the established storekeeping establishment, with the names of the recipients and their proportionate quantities to be entered on the books in the ordinary way. Speculations The bench's decision to order minutes for answering the Honourable Company's last general letter, with each councillor to bring in his own contribution against a fortnight, marked the bench's preparation for the homeward despatch on the matters raised by the directors in the <i>Cardonnell</i> letter. The general letter had been read in part on 1 June 1715, with successive mornings devoted to working through it under the procedure of marks thereon and put in writing. The cow-saving order of 7 June 1715 had been the first substantive response, made pursuant to paragraph 45 of the letter. The completion of the castle fortification works reported on 12 July 1715 had been the second, performed in obedience to the directors' standing orders. The bench's present call for written contributions from each councillor on remaining matters marked the operative effort to produce a comprehensive homeward response in time for the next homeward vessel. The pairing of the bills-of-exchange proposals with the answer to the general letter on the same fortnight deadline suggested that the bench had identified the two matters as closely connected. The Pinnell charges of 11 November 1714 had illustrated the difficulties that could arise when bills were drawn without sufficient operative ground, and the directors had perhaps raised the bill-drawing question in their general letter as a matter requiring the bench's response. The bench's choice to develop its own proposals for restricting the drawing of bills in parallel with its response to the directors indicated the operative intent to bring the two matters together in a coordinated homeward despatch. The pattern was consistent with the bench's broader practice across the present sittings of building documentary chains on connected matters before formal transmission to the metropolitan authority.
555	546	Island St Helena. At a Consultation Held on Tuesday the 2 of August 1715. At the Union Castle in James Valley. 		not so much as a few Plants or Garden Seeds are Sent, only a Short Letter which wee think is every way very Short, tho' not very Civill But here is a good quantity of Arrack brought here Privately to be Sold, of w[ch]: (thanks be to God) We have no very Extraordinary occasions, being at present moderately Supplied by what we formerly bought out of the Susannah the Frederick & the Aester Wherefore because wee resolve as much as Possible upon Strikt Observation of the Hon[ble] Comp[as] directions We shall not buy any of this Arrack at Present nor Suffer any to be bought so as to Draw home Bills for the Payment thereof Ordered That a Letter be Written to Cap[t]: Hurst to acquaint him that We have sent four men Detained here on Acc[t] of complaint of Mutiny w[t] intend[d] Piracey left out of the Eagle Galley which we must Margin Notes: Avarilla Cap[t] Hurst arriv[d] no goods from Bencoolen Order[d]	Bencoolen, but had brought no goods according to the conditions in the charter party for the island. Although the bench had written to Bencoolen for several things much wanted there, not so much as a few plants or garden seeds had been sent, only a short letter which they thought every way very short though not uncivil. There was a good quantity of arrack brought there privately to be sold, of which, thanks be to God, the bench had no very extraordinary occasion, being at present moderately supplied by what they had formerly bought out of the <i>Susanna</i>, the <i>Frederick</i> and the <i>Hester</i>. The bench therefore, because they resolved as much as possible upon strict observation of the Honourable Company's directions, would not buy any of this arrack at present, nor suffer any to be bought, so as to draw home bills for the payment thereof. A note in the margin recorded the substance of the matter as no goods from Bencoolen. The council ordered that a letter be written to Captain Hurst to acquaint him that the bench had sent four men detained there on account of complaint of mutiny intended against the <i>Eagle Galley</i>, which the bench [...] Interpretations The arrival of the <i>Avarilla</i> from Bencoolen but last from Batavia, with the alarm being made between twelve and one in the afternoon and the ship arriving about seven in the evening, established the operative timing of a single-alarm arrival of an Indiaman in the road. The pattern of a single alarm followed by the ship coming up in the evening matched the established practice for friendly vessels approaching the island, with the alarm serving to bring the garrison and the principal officers of the bench to readiness for the captain's coming ashore. The <i>Avarilla</i> arrival fell into the pattern of recent ship calls, with the <i>Cardonnell</i> arrival on the single alarm of 31 May 1715 having marked the principal recent precedent. The complaint that the <i>Avarilla</i> had brought no goods according to the conditions in the charter party for the island opened the operative question of supply from the regional Company station. The standing arrangement under which Bencoolen was to supply the island with particular goods on each homeward sailing represented the operative basis on which the bench expected to receive the smaller items needed for the establishment, including the plants and garden seeds particularly mentioned in the present consultation. The choice of those specific items reflected the bench's continuing concern with the island's productive capacity, in keeping with the moderate success of the lemon-tree planting reported by the governor at the consultation of 26 July 1715 and the broader agricultural programme of the establishment. The bench's decision to refuse the private arrack brought on the <i>Avarilla</i>, in strict observation of the Honourable Company's directions, marked the operative application of the directors' general letter to a particular case. The standing position on arrack at the island had been established at the retail rate of seven shillings and sixpence per gallon set on 15 November 1714, with the credit restriction limiting delivery to persons indebted above twenty pounds unless they brought ready money, good credit or provisions. The Welch, Frederick and Hester stocks identified as the present moderate supply established the operative basis on which the bench could afford to refuse fresh purchases. The connection to the bills-of-exchange business opened at the consultation of 19 July 1715 was direct, with the refusal to buy arrack on the bench's account preserving the bench from the necessity of drawing further bills on the Honourable Masters for the payment.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			The order for a letter to Captain Hurst on the despatch of the four mutineer prisoners marked the operative resolution of the <i>Eagle Galley</i> prisoner question first opened at the consultation of 19 July 1715. The prisoners had at that earlier sitting petitioned for their liberty, and the bench had replied that they could not be discharged until a ship bound for England arrived, unless any of them would discover the intrigue of robbing and attempting to destroy the ship. The arrival of the <i>Avarilla</i> with the prospect of an onward passage supplied the operative opportunity for the transmission of the prisoners. The choice of Captain Hurst as the receiving commander, with the prisoners being sent off the island on his ship, placed the further prosecution of the mutiny matter under the metropolitan authority through Bencoolen rather than directly through London. Speculations The bench's note that the Bencoolen letter was every way very short though not uncivil, taken with the failure of supply on the charter party conditions, suggested an operative tension between the island establishment and the Bencoolen government. The Bencoolen governor and council were under separate Company authority but stood within the broader institutional structure of the East India trade, with mutual obligations under standing Company directions. The bench's careful note of the letter's tone, distinguishing brevity from incivility, indicated the operative attention given to maintaining proper relations with the regional station even when its performance fell short of expectations. The pattern was consistent with the bench's broader practice across the present sittings of preserving the documentary record of inter-station correspondence for any subsequent metropolitan review. The choice to refuse the privately-brought arrack on the express ground of the Honourable Company's directions, with the operative consequence that no bills would be drawn home for payment, marked the connection between the bench's bills-of-exchange reform and the present practical decision. The bench's call for written proposals from each councillor on preventing the drawing of bills on the Honourable Masters, made at the consultation of 19 July 1715 and renewed at the consultation of 26 July 1715, was now being applied operatively in the immediate refusal of a transaction that would have required such a bill. The pattern indicated that the bench was using the development of formal proposals as the opportunity to bring its current practice into alignment with the standing directions, rather than waiting for the proposals to be formally adopted before acting on them. The Edward Byfield absence on grounds of sickness was the first such absence noted in the recovered record since his appointment as fifth in council on 17 May 1715, marking a temporary disruption to the regular composition of the bench.
556	547	must desire him to take on board, which was done as foll[o]: viz[t] Cap[t] Rob[t] Hurst S[r] I am Ordered by y[e] Gov[r] & Counc[ll] to acquaint you that here is four men detained upon complaints of Mutiny & designd PyracY on board the Eagle Galley which they intend to send home by you I am S[r] Yo[r] most Hum[ble] Serv[t] Antipas Tovey Union Castle St Helena 2 August 1715 The following Petition was Presented viz[t] Island St Helena To the Worsh[ip] Isaac Pyke Esq[r] Govern[r] &c. Council	The bench's order on the <i>Eagle Galley</i> prisoners continued. The bench must desire Captain Hurst to take on board the four men, which was done as follows. The letter was addressed to Captain Robert Hurst. The bench, by order of the governor and council, acquainted him that there were four men detained on the island upon complaint of mutiny and designed piracy on board the <i>Eagle Galley</i>. The bench intended to send them home by him. The letter was signed by Antipas Tovey as the bench's most humble servant, and dated at the Union Castle in St Helena 2 August 1715. A note in the margin recorded the substance of the matter as the letter to Captain Hurst to take the four of the <i>Eagle Galley</i> on board.

		The most Humble Petition of John Robinson free Planter Humbly, Sheweth That whereas yo[r]. Petition[r] did (Pursuant and Immediately after an Advertizem[t] Published for all Persons who Stood Indebted to the Hon[ble] Comp[a] to make Proposals of Payment) Repair to Cap[t]: Edward Mashborne at the Plantation House and Offered him the following Goods & Provisions viz[t] 60 Thousand of Yams one Large Bullock Some Dunghill Fowles, Ducks & Geese The three Last Named he had for breeders and Promised to take the Rest but Cap[t]: Mashborne being Since Dead, your Petition[r]: humbly addresses to yo[r] Worship &c. Council that you'll be pleased to take the Yams & Bullock above Mention[d] Offering thereto at this time a breeding beast & two fatt Hoggs having no other way of Payment. An Margin Notes: L[ett]r to Cap[t] Hurst to take 4 of [the] Eagles men. Robinsons pet[n] to take Yams &c	The following petition was presented. The most humble petition of John Robinson, free planter, was presented to the worshipful Isaac Pyke Esquire, Governor, and Council. He had, pursuant to and immediately after an advertisement published for all persons who stood indebted to the Honourable Company to make proposals of payment, repaired to Captain Edward Mashborne at the plantation house and offered him the following goods and provisions. 60 thousand of yams one large bullock some dunghill fowls, ducks and geese The three last named he had for breeders, and Mashborne had promised to take the rest. Mashborne having since died, the petitioner humbly addressed the governor and council that they would be pleased to take the yams and bullock above mentioned, offering thereto at that time a breeding beast and two fat hogs, having no other way of payment. A note in the margin recorded the substance of the matter as Robinson's petition to take yams and so on. Interpretations The letter to Captain Hurst formalised the operative arrangement under which the four warrant officer prisoners of the <i>Eagle Galley</i> would be transmitted home for further proceedings. The choice of language, with the description of the offence as mutiny and designed piracy, marked the operative gravity that the bench had attached to the matter. The earlier inquiry across the consultations of 29 June 1715 and 2 July 1715 had used the term sedition in the depositions of the chief mate William Hanray and the purser John Gerrard. The escalation to designed piracy in the present letter reflected the bench's settled view of the offence after the documentary chain had been assembled, with the chief mate's conclusion that the design was rather to seize the ship than for any real cause or want now adopted as the official characterisation of the matter. The choice of Captain Hurst as the operative custodian for the homeward voyage, with the prisoners to be delivered to him under the bench's letter and his ship the <i>Avarilla</i> the vehicle for their transmission, completed the operative resolution of the prisoner question first opened on 19 July 1715. The mechanism placed the further prosecution of the matter under the metropolitan authority, with the documentary record assembled by the bench providing the operative basis for any subsequent proceedings. The prisoners were Thomas Frances the boatswain, Thomas Clark the gunner, Alexander Adair the doctor's mate and William Wells the trumpeter, identified across the depositions as the four principals of the warrant officer faction. The John Robinson petition opened the operative matter of debt settlement under the late Captain Edward Mashborne's earlier arrangements. Captain Mashborne had died on 31 March 1715 after about three weeks' sickness, having been the third councillor at the time of his death. The reference to an advertisement published for all persons indebted to the Company to make proposals of payment indicated a debt-collection programme that the late Mashborne had been administering before his death, with the petitioner having complied with the advertisement by attending Mashborne at the plantation house and offering the goods listed. The Mashborne plantation house and Lufkins inventory had been ordered on 5 April 1715 to be given in by Bazett and Tovey, with the inventory delivered on 12 April 1715. The succession of William Worrall to the overseer's office, appointed on 5 April 1715, had taken effect in the same period.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			The composition of the petitioner's offer placed it within the established pattern of debt settlement by goods and provisions observed across the present sittings. The Powell and Gurling provisions offer of 11 March 1715, with its 150,000 yams, two blacks, ten beeves, twenty hogs and some goats, marked the largest such offer on the bench's records. The Thomas Swallow yam offer of 24 May 1715, with 30,000 weight of yams at one time and 30,000 more at another with two head of breeding cattle, had been refused on the ground that yams already reported were more than the Company could take. The Robinson offer of 60,000 yams, one large bullock, dunghill fowls, ducks and geese, with the additional offer now of a breeding beast and two fat hogs, sat between these two earlier offers in scale and composition. Speculations The bench's continuing willingness to entertain provisions offers in settlement of debt, despite the refusal of the Thomas Swallow yam offer on 24 May 1715 on the ground that yams already reported were more than the Company could take, suggested that the operative position on yam supply had shifted since the refusal of the Long yams complaint of 25 July 1715. The bench's order at that later sitting that no more yams be bought of John Long, on the ground of high price, poor quality and long transport distance, indicated that the Company's yam supply through purchase was no longer adequate for the establishment's needs. The Worrall yam-stock report of 26 April 1715 had projected ample Company yams ready to dig by August, but the operative experience since had perhaps shown the standing stocks to be of insufficient quality or quantity. The bench's willingness to consider the Robinson offer therefore marked a possible adjustment of the position on yam supply, with debt-settlement provisions now being treated as an operative source of stock. The petitioner's particular offer of a breeding beast, in addition to the bullock previously offered to Mashborne, fitted within the operative pattern of the cow-saving order of 7 June 1715 and the broader herd-building programme. The directors' standing direction that no cow, heifer or calf was to be killed until 20 July 1716 except on warrant from the governor had placed special value on breeding cattle within the establishment. The petitioner's offer of a breeding beast as part of his settlement therefore aligned with the bench's standing priority of building up the herd, and would supply the operative ground on which the offer could be accepted despite the bench's general caution about taking further yams in settlement. The pattern indicated the operative refinement of the bench's debt-collection arrangements under Pyke's administration, with the form of acceptable settlement now calibrated more closely to the standing institutional priorities.
557	548	And as in Duty bound shall Ever Pray &c. Jn[o]: Robinson He being called in was acquainted by the Gov[r]: that now we could not take any more Yams or Hoggs But that if he had any Cattle to spare we would take it towards Payment of the Hon[ble]: Comp[a] what he Owes them he haveing made no proposall in time according to the Advertizement Published the 14. Sept[r] 1714. we not being able to take all those that were Proposed, M[r]: Gabriel Cowill haveing desired a Sumons for the foll[o]: Persons viz[t] Francis Funge M[rs] Francis Carne & M[rs] Mary Mashborne Widows of M[r] Geo: Carne & Cap[t] Edw[d]: Mashborne they all appeared & M[r]: Cowill Produced a Letter of Attorney made to his Predecessor Cap[t]: George Hookison, by W[m]: Rose	John Robinson's petition closed in the usual form, with the petitioner as in duty bound ever to pray. Signed John Robinson. The petitioner, being called in, was acquainted by the governor that the bench could not now take any more yams or hogs. If he had any cattle to spare they would take it towards payment of what he owed the Honourable Company, he having made no proposal in time according to the advertisement published the 14 September 1714, the bench not being able to take all those that were proposed. Mr Gabriel Powill, having desired a summons for the following persons, namely Frances Funge, Mrs Frances Carne and Mrs Mary Mashborne, widows of Mr George Carne and Captain Edward Mashborne, they all appeared.

		of St Botolph Algate Gunsmith against Fran[s] Funge for Payment of 50 Pounds Due as by a Note under the said Funges hand but Francis Funge says he knows of no note but if such there be desires it may be Produced, w[ch] was not & therefore was discharged Said Cowill then Produced a Letter of Attorney made by Sam[^{ll}] Thomlinson of Pater Noster Row Butcher to said Hookison to Demand of Cap[t]: Thomas Goodwin formerly Dep[ty] Govern[r] & Th[o] Tackn[a]ld both Deceased what Effects they had (as Execut[rs]) to Tho[s] Phillips also dec[ea]s[ed] Cap[t] Goodwins Widow now M[rs] Fran[s]: Carne says says that her former Husband did Pay this mony to produced a Receipt for the same under the hand of Hugh Bodley Deceased & Witness[d] by Stephen Boirley the Late Gov[r] & Cap[t]: Matthew Bazett now present, Also another Letter of Attorney made by Cap[t] Anthony Tollett to Said Hookison for a Protested bill of Exchange drawn by M[r]: Geo: Carne on M[r] Fauckree in Covent Garden, M[rs] Fran[s] Carne his Widow says she knows nothing of this Matter & can give no Answer to it M[r] Carne being now Dead Insolvent Said Margin Notes: M[r] Cowill ord[r] Sumons 3 Persons for Debts cou[d] not be proved	A note in the margin recorded the substance of the matter as the women called by summons, but three persons for whom the bills could not be produced. Mr Powill produced a letter of attorney made to his predecessor Captain George Hoskison by William Rose of St Botolph Aldgate, gunsmith, against Frances Funge, for payment of fifty pounds due as by a note under Funge's hand. Frances Funge said she knew of no note, but if there was any she desired it might be produced. As the note was not produced, the matter was therefore discharged. Mr Powill then produced a letter of attorney made by Samuel Tomlinson of Pater Noster Row, butcher, to Hoskison to demand of Captain Thomas Goodwin, formerly Deputy Governor, and Mr Fackneld, both deceased, what effects they had as executors to Mr Phillips, also deceased. Captain Goodwin's widow, now Mrs Frances Carne, said that her former husband had paid this money, and produced a receipt for the same under the hand of Hugh Bodley, deceased, witnessed by Stephen Poirier, the late governor, and Captain Matthew Bazett, now present. Also another letter of attorney made by Captain Anthony Tollett to Hoskison for a protested bill of exchange drawn by Mr George Carne on Mr Faulkner in Covent Garden. Mrs Frances Carne, his widow, said she knew nothing of this matter and could give no answer to it, Mr Carne being now dead insolvent. Interpretations The governor's refusal of further yams or hogs from John Robinson, while leaving the offer open for cattle, marked the operative application of the bench's recent decisions on debt settlement composition. The Thomas Swallow yam offer had been refused on 24 May 1715 on the ground that yams already reported were more than the Company could take. The Powell and Gurling provisions offer of 11 March 1715 had been reopened on 19 April 1715, with the Worrall yam-stock report of 26 April 1715 substantially negative for the planter offer. The Long yams complaint of 25 July 1715 had produced the order that no more yams be bought of John Long. The bench's present position therefore continued the operative pattern of refusing further yam acquisition while remaining willing to accept cattle, reflecting the standing priorities established under the cow-saving order of 7 June 1715. The reference to the advertisement published on 14 September 1714 supplied the operative ground for the bench's distinction between proposals made in time and proposals made too late. The earlier advertisement had set a window during which debtors could come forward with proposals of payment, and the bench's present finding that Robinson had made no proposal in time placed his offer outside the operative scheme. The petitioner's claim that he had attended the late Captain Edward Mashborne at the plantation house in response to the advertisement, with Mashborne having promised to take the rest of the goods offered, sat against the bench's documentary record. The disjunction marked the operative difficulty in tracing private arrangements made by individual councillors after the principal's death, with the bench unable to confirm the Mashborne acceptance and the petitioner left to renew his offer on the present terms. The Gabriel Powill business represented the operative continuation of his role as substitute for the late Captain George Hoskison's affairs. Hoskison had died on 6 March 1712, having served as deputy governor under Boucher's administration. The three letters of attorney now produced by Powill, against Frances Funge for fifty pounds, against the late

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			Goodwin and Fackneld as executors of the late Phillips, and against the late George Carne on a protested bill drawn on Faulkner in Covent Garden, marked the long-running effort to recover sums owed to metropolitan principals through the operative authority of the late Hoskison. The pattern reflected the operative practice by which metropolitan creditors used the island establishment as their representative in pursuing local debts. The successful production of a receipt by Mrs Frances Carne, formerly the widow of Captain Thomas Goodwin, for the payment of the Tomlinson debt, marked the operative effect of careful preservation of documentary evidence. The receipt, signed by Hugh Bodley senior deceased and witnessed by Stephen Poirier as the late governor and Captain Matthew Bazett now present, supplied the operative defence against the present demand. Stephen Poirier had been an earlier governor of St Helena, having signed the registration order of 30 March 1699 and presided over earlier stages of the Powell-Beale case before his death. The witnessing by Captain Bazett, who now sat on the bench as the third councillor, placed the original transaction within the operative knowledge of a present member of the council. The pattern illustrated the long-running connections between the metropolitan creditors, the historical governors and the present bench across the documentary record of the island. Speculations The bench's refusal to entertain further yams from Robinson while leaving the door open for cattle established the operative position on debt settlement composition that would continue to guide the bench's responses to similar petitions. The mechanism by which existing debtors could now propose alternative settlements depended on bringing forward stock or breeding animals rather than the bulk vegetable produce that had been the staple of earlier offers. The pattern indicated the bench's adjustment of its operative priorities in response to the changed practical position of the establishment, with the cattle famine recovery now overriding the earlier preference for grain and root crops in debt settlement. The bringing forward of three separate metropolitan claims through Gabriel Powill on the same sitting, with the operative authority running back through the late Captain George Hoskison who had died over three years earlier on 6 March 1712, suggested that Powill had been accumulating these matters for collective presentation rather than addressing them individually. The mechanism by which metropolitan creditors continued to use the late Hoskison's letters of attorney through Powill as his substitute indicated the operative durability of these arrangements beyond the death of the original attorney. The form of the present consultations, with three separate claims handled in succession against three different families, reflected the bench's procedural willingness to dispose of related matters on a single sitting rather than spreading them across successive consultations. The pattern preserved the documentary record of each matter while concentrating the bench's attention on the operative questions presented by each.
558	549	Said Cowill also produced a Letter of Attorney made by Cap[t]: Eustage Peacock to said Hookison & M[r] Hen[ry] Francis to receive of Cap[t]: Mashborne Forty three Pounds Sixteen Shillings & Eight Pence on Acc[t]: of a Protested bill Drawn on M[r]: Sam[ll]: Mashborne in the Strand M[rs] Mary Mashborne Widow of said Cap[t]: Edward Mashborne Deceased says that she knows nothing more of this matter then that the mony has been paid	Mr Powill also produced a letter of attorney made by Captain Eustace Peacock to Hoskison and Mr Henry Francis, to receive of Captain Mashborne forty three pounds sixteen shillings and eight pence on account of a protested bill drawn on Mr Samuel Mashborne in the Strand. 		twice Once to Sam^[III] Mashborne & since then to Cap[t]: Peacocke St Helena The Gov[r]: Communicated the following Letter (Viz[t]) To the Worsh[ip] Isaac Pyke Esq[r] Gov[r]: &c. of Union Castle on the Iseland of St Helena. In Answer to a Letter received by yo[r]: Secretary M[r] Tovey dated the 2. Inst[t]. of yo[r] intention of sending four men that were taken out of the Eagle Gally for Mutiny & designd PyracY, in order to carry them for London I request that you would take it into Consideration that I haveing several such Sort of Persons on board my own Ship Some being now in Irons for the very same facts, that I do not think it Safe to take them on board to carry them off the Iseland, both for the Interest of the Hon[ble] United East India Comp[a] & the Owners &c I am S[r] Yo[r] most Hum[ble] Servt to C[o]mand (Signed) Rob[t]: Hurst From on board the Ship Averilla Riding in St Helena road Aug[st]: y[e] 3: 1715. I Pyke Antipas Tovey Edw: Byfeld Geo: Haswell [Is]land Margin Notes: Cap[t] Hursts Ans[r] to [the] fore going L[ett]r	twice, once to Samuel Mashborne and since then to Captain Peacock. The governor communicated the following letter. The letter was addressed to the worshipful Isaac Pyke Esquire, Governor and so on, of Union Castle on the Island of St Helena. The writer, in answer to a letter received by the secretary Mr Tovey dated 2 of the instant, regarding the bench's intention of sending four men taken out of the <i>Eagle Galley</i> for mutiny and designed piracy in order to carry them for London, requested that the bench would take it into consideration. He had several such sort of persons on board his own ship, some being now in irons for the very same faults. He did not think it safe to take them on board to carry them off the island, both for the interest of the Honourable United East India Company and the owners. The letter was signed Robert Hurst, the writer's most humble servant to command, from on board the ship <i>Avarilla</i> riding in St Helena road, August 3, 1715. A note in the margin recorded the substance of the matter as Captain Hurst's answer to the foregoing letter. The consultation was signed by George Haswell, Antipas Tovey, Edward Byfield and Pyke. Interpretations The Captain Eustace Peacock letter of attorney represented the fourth and final metropolitan claim presented by Gabriel Powill at the present sitting. The mechanism by which a protested bill drawn on a Samuel Mashborne in the Strand was being pursued through Captain Edward Mashborne at the island, with the operative authority running through both the late Hoskison and Henry Francis as joint attorneys, illustrated the complex documentary chains by which metropolitan financial instruments were enforced through colonial establishments. The sum of forty three pounds sixteen shillings and eight pence represented a substantial single bill, comparable to the amount of forty pounds annual salary for the garrison surgeon William Porteous set on 3 November 1713. The widow Mary Mashborne's response that the money had been paid twice, once to Samuel Mashborne and since then to Captain Peacock, supplied the operative defence against the present demand. The pattern illustrated the operative risk of double payment in long-distance debt collection, where the same sum could be pursued through different channels by different agents. The Captain Robert Hurst letter refusing to take the <i>Eagle Galley</i> prisoners on board the <i>Avarilla</i> marked the operative collapse of the bench's planned disposal of the matter. The bench had at the consultation of 19 July 1715 told the prisoners that they could not be discharged until a ship bound for England arrived. The <i>Avarilla</i> had arrived on 1 August 1715, and the bench had moved promptly to despatch the prisoners by her at the consultation of 2 August 1715. The Hurst refusal, on the ground that he had several persons of the same character already in irons on his own ship for the same faults, identified the operative pattern of disaffection among the East India shipping not as a peculiarity of the <i>Eagle Galley</i> but as a broader phenomenon affecting multiple vessels in the trade. The captain's invocation of both the Company's interest and the owners' interest as the operative ground for his refusal placed the matter on the standing footing of commercial risk to the cargo and the safe completion of the voyage. The cumulative effect of the four warrant officer prisoners now joined by several others already in irons on the <i>Avarilla</i> would have been to convert that ship into a transport for disaffected mariners on a single homeward voyage. The captain's calculation that this would not be safe, with the disaffected men under

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			restraint potentially outnumbering or coordinating against the loyal crew, reflected the operative dynamics of shipboard discipline. The bench's documentary preparation across the consultations of 29 June 1715 and 2 July 1715, with the careful assembly of depositions from the chief mate William Hanray, the third mate George Taylor, the midshipman Jacob Franklin, the gunner's mate William Ballaird, the purser John Gerrard and the second mate William Taylor, would now have to await a future homeward sailing for its operative purpose. The dating of the Hurst letter from on board the ship <i>Avarilla</i> on 3 August 1715, with its delivery to the bench in time for the present consultation, marked the rapid turnaround on the question. The bench's letter to Hurst of 2 August 1715, signed by Antipas Tovey as the bench's most humble servant, had been delivered to the captain on board ship the same day or the following day. The captain's reply, framed in terms of consideration of the broader Company and owners' interests, had been returned within twenty-four hours. The pattern illustrated the operative speed of correspondence between the bench and the road during shipping calls, and the practical difficulties of disposing of contentious matters on the short period that ships remained at anchor. Speculations Captain Hurst's refusal to take the <i>Eagle Galley</i> prisoners, with his disclosure that he had several persons of the same character already in irons on his own ship, opened the operative question of the broader pattern of disaffection in the East India trade. The chief mate William Hanray's evidence of 29 June 1715, that there were twenty men on board the <i>Eagle Galley</i> who had subscribed a round-robin paper and had been very intimate with the boatswain Thomas Frances, had suggested that organised disaffection on Indiamen was a substantial phenomenon. The intelligence from Captain Pinnell of the <i>Susanna</i> and Captain Lidon of the <i>Mercury</i> on the prior bad character of the <i>Eagle Galley</i>'s company, together with the present <i>Avarilla</i> evidence, indicated that the pattern of warrant officer factions and lower-deck disaffection was familiar across the trade. The bench's documentary record on the <i>Eagle Galley</i> matter would now serve as a contribution to the broader metropolitan understanding of the phenomenon when eventually transmitted, even if the prisoners themselves were detained longer at the island. The bench's continuing problem of disposal of the four prisoners after the Hurst refusal would now have to be addressed through subsequent shipping. The next operative opportunity would depend on the arrival of further Indiamen at the island, with the bench needing to find a commander either with fewer disaffected persons of his own already on board, or with sufficient confidence in his ship's discipline to accept the additional risk. The prisoners themselves remained under the operative arrangement set out in the bench's answer of 19 July 1715, with the offer of release standing for any who would discover the intrigue of robbing and attempting to destroy the ship. The continuing confinement of the four principals on the island, with no immediate prospect of transmission home, supplied the standing pressure under which any disclosure might come forward, and the bench would now be in a position to weigh any future offer of cooperation by one of the four against the practical difficulties of their continued maintenance on the island.

		Dep[ty] Pres[t] Mathew Bazett 3 Antipas Tovey 4 & Edward Byfeld 5 in Council Order[d] That William Wells the Trumpeter of the Eagle Galley be sent on board the Averilla, and that an order be sent to Cap[t]: Rob[t]: Hurst to take him, which was as foll[o] (Viz[t]) Cap[t] Rob[t] Hurst Wee desire and Order you to take on Board y[o]r Ship Averilla W[m] Wells and Carry him to London in y[o]r Ship and not to Discharge him there untill the Hon[ble] Comp[as] Packett be Delivered to them which Contains the reasons of Our detaining him here till now, and of Sending him home by you, Yo[r] Compliance herewith will be for the Hon[ble] Comp[as] Interest & the Publick good He haveing been Charged & Accused on Oath before us for divers Fellonious & Pyritical designs and for being foynd with divers others in a Conspiracy together to destroy or Steal away the Ship Eagle Galley We are Y[o]r Hum[ble] Serv[ts] (Sign[d]) Mett: Bazett Isaac Pyke Antipas Tovey George Haswell Edw[o]: Byfeld Union Castle Iseland St Helena Aug[st] 9: 1715. The Gov[r]: Reports that the Purser of this Ship the Averilla, has been with him to desire a bill home upon the Hon[ble] Comp[as]. for 28[s] which he Profers to Cap[t] in Presently in Dollars Thee Margin Notes: L[ett]r to Cap[t] Hurst to take W[m] Wells	Present: Isaac Pyke Esquire, Governor; George Haswell, Deputy Governor; Matthew Bazett, third; Antipas Tovey, fourth; Edward Byfield, fifth in council. The council ordered that William Wells, the trumpeter of the <i>Eagle Galley</i>, be sent on board the <i>Avarilla</i>, and that an order be sent to Captain Robert Hurst to take him, which was as followeth. The letter was addressed to Captain Robert Hurst. The bench desired and ordered him to take on board his ship <i>Avarilla</i> William Wells, and to carry him to London in his ship and not to discharge him there until the Honourable Company's packet should be delivered to them, which contained the reasons of the bench detaining him there till now, and of sending him home by Hurst. The bench's compliance herewith would be for the Honourable Company's interest and the public good. Wells had been charged and accused on oath before the bench for divers felonious and piratical designs, and for being joined with divers others in a conspiracy together to destroy or steal away the ship <i>Eagle Galley</i>. The letter was dated at the Union Castle on the island of St Helena 9 August 1715. The writers were the bench's most humble servants, signed Matthew Bazett, Antipas Tovey, Edward Byfield, Isaac Pyke and George Haswell. A note in the margin recorded the substance of the matter as the letter to Captain Hurst to take William Wells. Start of crossed out section The governor reported that the purser of the <i>Avarilla</i> had been with him to desire a bill home upon the Honourable Company for twenty eight [...], which he proposed to pay in presently in dollars [...] End of crossed out section Interpretations The selection of William Wells alone for transmission home, after the failure of the original four-prisoner request, marked the bench's operative adjustment to Captain Hurst's refusal of 3 August 1715. The captain had refused to take the four prisoners on the ground that he had several persons of the same character already in irons on his own ship. By reducing the demand to a single prisoner, the bench presented the captain with a less burdensome request that he might find easier to accommodate. The selection of Wells the trumpeter rather than one of the other three principals reflected the bench's calculation of operative risk on board ship: the boatswain Thomas Frances and the gunner Thomas Clark each held operative knowledge of their respective parts of the ship that would have made them more dangerous in irons among a disaffected company, and the doctor's mate Alexander Adair held the mobile access to every part of the ship that the chief mate William Hanray had identified on 29 June 1715. The trumpeter held the office of the ship's voice rather than of operative command, and would have presented less direct risk to the discipline of the receiving vessel. The framing of the letter to Captain Hurst, with Wells charged on oath for divers felonious and piratical designs and for being joined in a conspiracy together to destroy or steal away the ship <i>Eagle Galley</i>, fixed the operative legal characterisation on the documentary record. The shift in language across the present sittings, from sedition in the depositions of the chief mate William Hanray and the purser John Gerrard at the consultations of 29 June 1715 and 2 July 1715, through mutiny and designed piracy in the bench's letter to Hurst of 2 August 1715, to the present formulation of felonious and piratical designs, traced the operative escalation of the bench's settled view of the offence. The phrase to destroy or steal

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			away identified the two operative possibilities that the conspiracy had contemplated, with the lighted match in the powder room at Batavia of late May 1714 representing the destructive intent and the chief mate's reading of the design to seize the ship representing the alternative course. The signing of the letter by all five councillors, with the bench's full collective authority placed under the single order, marked a moment of complete unity on the operative matter. The pattern departed from the selective signing observed across the present sittings, in which the protest against Captain Mawson of 11 June 1715 had been signed by Pyke, Tovey and Byfield without Haswell or Bazett, the consultation of 14 June 1715 had been signed by Pyke, Haswell, Tovey and Byfield without Bazett, and the consultation of 29 June 1715 covering the <i>Eagle Galley</i> mutiny inquiry had been signed by Pyke, Haswell, Tovey and Byfield without Bazett. The placing of Captain Bazett's signature on the present letter alongside the rest indicated that on this particular operative matter the bench had assembled its complete collective authority before the captain. The cancelled opening of the <i>Avarilla</i> purser's business marked an operative beginning of a matter that the clerk subsequently struck through, perhaps because the substance of the purser's request was to be entered in fuller form later in the consultation or under a different procedural framing. The bench had at the consultation of 19 July 1715 first called for proposals to prevent the drawing of bills of exchange on the Honourable Masters, with the matter renewed at the consultation of 26 July 1715 in the context of each councillor bringing in written proposals. The present arrival of an <i>Avarilla</i> purser seeking a bill home for twenty eight, with payment offered presently in dollars at the island, placed the operative reform question directly against a real transaction. Speculations The bench's choice of William Wells alone, after the failure of the four-prisoner request, may have reflected a deliberate strategy of separating the warrant officer faction by removing its weakest member from the operative ground of mutual reinforcement. The chief mate William Hanray's evidence of 29 June 1715 had identified Wells as a ringleader and one of the first fomenters of divisions, but the same evidence had placed the boatswain, the gunner and the doctor's mate as the principal contrivers of the operative scheme. By transmitting Wells home for trial in London, the bench would have left the three remaining principals on the island under continued confinement, with the operative ground of mutual support reduced by one. The pattern of separating co-conspirators to break their solidarity was consistent with the standing offer of release made at the consultation of 19 July 1715 to any one of the four who would discover the intrigue of robbing and attempting to destroy the ship. The cancellation of the <i>Avarilla</i> purser's business in the consultation book, with the substance of the request struck through after entry, suggested that the bench had decided to handle the matter through a different procedural form. The connection between the purser's request for a bill home and the standing call for proposals to prevent the drawing of bills, made at the consultation of 19 July 1715 and renewed at the consultation of 26 July 1715, indicated that the bench would treat the present transaction as a test case for the operative reform under preparation. The choice to cancel the cursory entry and to handle the matter more carefully elsewhere fitted the bench's broader pattern of careful documentary practice on financial matters, with the operative form of the

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			eventual entry to be determined by the substantive resolution of the reform question.
560	551	The Gov[r]: sayeth he told him they could make no Such bill because we have Lately made an Ord[r] to draw no Bills home but upon very extraordinary occasions, The Purser then told him he had Occasion for a Small bill being unwilling to Carry his mony aboard again & if the Gov[r] would take the mony he was willing to take half of it out in Goods Viz[t]: Wine, Butter, & Bread if Wee would give him a bill for the other half Whereupon Seeing he is so desirous of a bill & is willing to lay half out in Such Goods We hope the mony will be Some little advantage to us against. We come to Pay the Soldiers in mony Therefore It is agreed That he may Leave his Twenty Eight Pound here, he taking one half in Goods & shall have a bill for the Remainder Order[d] that whereas in Our Gen[ll]: Letter to the Hon[ble]: Comp[as]. We have mentioned the drawing of no Bills upon Our Hon[ble] Masters this time, yet not =withstanding that it be added by way of Postscript the Reason of our drawing this small bill The Gov[r]: sayeth he has Just now rec[d] the following Letter from M[r]: Worrall (Viz[t]) Worsh[ip] S[r] I Sent to Rob[t] Gurling for Yams & have brought away 11 weight they Proved So very bad I gave them to the Hoggs So I desire to know were I Shall bring the next from. I am S[r] Yo[r]. Hum[ble]: Serv[t]: Aug[st]: 9: 1715 W[m]: Worrall. The Gov[r]: sayeth that this Gurling is one of those men mention[d] in the report of the 2 Nov[r] last but Since his Yams proves bad that they are of no Service to us he thinks it fit the [s]d Gurling should have notice given him to pay the Hon[ble] Comp[as] debt some other way, It is Ordered that M[r]: Tovey send him a Lett[r] accordingly, The Margin Notes: Gurlings Yams bad. to buy no More	The governor said he had told the purser that the bench could make no such bill, because they had lately made an order to draw no bills home but upon very extraordinary occasions. The purser then told him he had occasion for a small bill, being unwilling to carry his money aboard again. If the governor would take the money he was willing to take half of it out in goods, namely wine, butter and bread, if the bench would give him a bill for the other half. Start of crossed out section Whereupon seeing he was so desirous of a bill, and willing to lay half out in such goods, the bench hoped the money would be some little advantage to them against they came to pay the soldiers in money. It was therefore agreed that he might leave his twenty eight pound here, he taking one half in goods, and should have a bill for the remainder. The council ordered that, whereas in the bench's general letter to the Honourable Company they had mentioned the drawing of no bills upon the Honourable Masters this time, yet notwithstanding it be added by way of postscript the reason of the bench drawing this small bill. End of crossed out section The governor said he had just then received the following letter from Mr Worrall. The letter was addressed to the worshipful governor. The writer had sent to Robert Gurling for yams, and had brought away eight hundredweight, which proved so very bad that he had given them to the hogs. He desired to know where he should bring the next from. The letter was dated 9 August 1715, signed Mr Worrall as the governor's most humble servant. A note in the margin recorded the substance of the matter as Gurling yams bad. The governor said that this Gurling was one of those men mentioned in the report of the 2 November. Since his yams proved bad and that they were of no service to the bench, he thought it fit that Gurling should have notice given to him to pay the Honourable Company's debt some other way. The council ordered that Mr Tovey send him a letter accordingly. A note in the margin recorded the substance of the matter as to buy no more. Interpretations The bench's refusal of the <i>Anarilla</i> purser's request for a bill home, on the ground that an order had lately been made to draw no bills home but upon very extraordinary occasions, established the operative effect of the bills-of-exchange reform first opened at the consultation of 19 July 1715. The bench's call for proposals at that earlier sitting, renewed at the consultation of 26 July 1715 with the requirement that each councillor bring in something in writing, had now produced the standing order that supplied the operative ground for the present refusal. The order itself had not been entered in the recovered material, perhaps falling outside the consultations now visible, but its operative force was clear from the governor's reliance on it as the ground for refusing the purser's first request. The cancellation of the bench's subsequent willingness to grant the purser a partial bill, with the half-in-goods compromise initially accepted and then struck through, marked an operative second thought on the same matter. The pattern indicated that the bench had on first reflection considered the compromise sufficient to justify a small bill, but had on further reflection concluded that even the small bill

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			would compromise the operative principle just established. The decision to strike through the entry preserved the documentary record of the bench's considered position, while the cancellation removed the operative effect of the proposed compromise. The form of the entry, with the proposed postscript to the general letter explaining the reason for drawing the small bill, would have committed the bench to a particular framing of its own reform in the homeward despatch, and the cancellation perhaps reflected the bench's preference for a cleaner statement of policy without the contradictory exception. The Worrall letter on the Gurling yams marked the operative continuation of the yam-quality difficulties first observed in the John Long complaint of 25 July 1715. The Worrall report that the eight hundredweight of yams brought from Robert Gurling had proved so very bad that he had given them to the hogs, taken with the bench's earlier finding on 25 July 1715 that John Long's yams were only fit for hogs, suggested an operative pattern in which the principal yam suppliers to the Company were now delivering produce below the standing quality required for the slaves' diet. The dependence on Worrall's judgement on the spot, with the overseer's discretion to give the bad yams to the hogs rather than to the slaves at the Hutts, reflected the operative trust the bench had placed in his stewardship since his appointment on 5 April 1715. The bench's order on Robert Gurling to pay the Honourable Company's debt some other way placed Gurling on the same operative footing as John Long after the consultation of 25 July 1715. The pattern of debt settlement in yams had now broken down in two successive cases, with the bench requiring both planters to find alternative means of discharging their debts. The reference to the report of the 2 November identified Gurling as one of the persons named in an earlier consultation, perhaps among those debtors whose proposals had been considered under the advertisement of 14 September 1714 mentioned at the consultation of 2 August 1715 in the Robinson business. The connection of the Gurling household with the bench's recurring business across the records, with Robert Gurling having stood among the executor of the Charles Steward estate together with Gabriel Powell, placed the present matter within a broader pattern of dealings. Speculations The bench's cancellation of the compromise on the purser's bill, after the initial willingness to grant a small bill with the half-in-goods arrangement, suggested an operative tension between the practical advantages of the proposed transaction and the principle of strict adherence to the new bills-of-exchange policy. The argument advanced in the cancelled entry, that the money would be some little advantage against the bench's need to pay the soldiers in money, identified the operative cash-flow consideration that would have justified the small bill. The cancellation indicated that on reflection the bench preferred the longer-term institutional discipline of refusing all bills except on very extraordinary occasions to the short-term operational convenience of accepting the purser's funds. The pattern marked a deliberate institutional choice by the bench to prioritise the operative reform over the immediate practical interest. The systematic refusal of yams from substantial suppliers across successive sittings, with John Long on 25 July 1715 and Robert Gurling on the present consultation both being told to pay their Company debts some other way, suggested that the bench had identified an operative pattern of planters supplying inferior yams in settlement of debt while reserving

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			better stock for other purposes. The bench's broader response, with the Worrall stock returns establishing the operative basis on which the Company's own yam supply was now adequate to meet the establishment's needs, supplied the operative ground on which inferior supplies from planters could be rejected. The pattern indicated the bench's developing operative leverage over the planter community in matters of debt settlement, with the standing acceptance of yams in lieu of cash now giving way to a more selective regime in which the quality of the goods offered would determine whether the bench would accept them at all.
561	552	The following Petitions were Presented viz[t] Island St Helena To the Worsh[ip] Isaac Pyke Esq[r] Govern[r]: &c. Council The most Humble Petetion of W[m]: Porteous Surgeon Humbly, Sheweth That whereas yo[r]: Petition[r] hath a Black Girle of the Hon[ble]: Comp[as]: whom he has brought up from a Child & has not had the benefitt of any Service from her till of Late but have been at great Charge & Expençe in Provideing her w[th] Cloaths & Victualls both very dear and for that the said Girle being now Capable of doing yo[r] Petition[r] some Service in tending my young Child being at present destitute of any such Asistance Humbly prays yo[r] Worshp & Council to lett yo[r] said Petition[r] have the Girle one year longer which will be a favour to be acknowledged by yo[r] Petition[r] Who (as in Duty bound) shall ever Pray William Porteous Granted Island St Helena To the Worsh[ip] Isaac Pyke Esq[r] Govern[r]: &c and Councill The most Humble Petition of Tho[s]: Southen Serjant most Humbly, Sheweth That forasmuch as yo[r]. Petition[r] being quite destitute & without the Least Benefitt of any Pastur =rage for his Cattle & haveing not one foot of any manner of Land that he can Claim as his own and Else Humbly begs yo[r] Worsh[ip] &c. Council would be pleased (out of yo[r] goodness to grant yo[r] said Petition[r]: a Lease or Parcell of the Hon[ble]: Comp[as] wast Land lying near the High Peak (there being none Else that lyes Com[m]on within Severall miles yo[r] Petition[r]: habitation) which will be no way Prejudiciall to any person Humbly representing that if the Least dry weather should happen (yo[r] Petition[r]: living in the out parts of the Iseland) among Margin Notes: Sheweth Granted Sheweth Tho[s] Southen[s] pet[t] to hire Land	The following petitions were presented. The most humble petition of William Porteous, surgeon, was presented to the worshipful Isaac Pyke Esquire, Governor and Council. The petitioner had a black girl belonging to the Honourable Company, whom he had brought up from a child and had not had the benefit of any service from her till of late. He had been at great charge and expense in providing her with clothes and victuals, both very dear. The girl was now capable of doing some service in tending his young child, who was at present destitute of any such assistance. He humbly prayed the council to let the petitioner have the girl one year longer, which would be a favour to be acknowledged. The petition closed with the writer's expression of being in duty bound to ever pray, signed William Porteous. The council granted the petition. A note in the margin recorded the substance of the matter as Porteous's petition. The most humble petition of Thomas Soulhen, sergeant, was presented to the worshipful Isaac Pyke Esquire, Governor and Council. The petitioner was quite destitute and without the least benefit of any pasturage for his cattle, having not one foot of any manner of land that he could claim as his own or any else's. He humbly begged that the council would be pleased of their goodness to grant him a lease of a parcel of the Honourable Company's waste land lying near the High Peak, there being none else that lay common within several miles of the petitioner's habitation. This would be no way prejudicial to any person. He humbly represented that, if the least dry weather should happen, he, living in the out parts of the island [...] A note in the margin recorded the substance of the matter as Sergeant Soulhen's petition to hire land. Interpretations The William Porteous petition continued the operative pattern of councillors and Company servants holding Company slaves in private service on a term basis, recently observed in the orders of 26 July 1715 by which Captain Haswell had been granted Daniel and Mary for three years and Mr Byfield had been granted Tom for the same term. The Porteous arrangement was older, with the surgeon having brought up the girl from a child and now seeking only a one-year extension of an existing arrangement. The connection to the broader documentary review ordered on 26 July 1715, in which Mr Tovey had been directed to enquire and bring in an account of what black boys or girls of the Honourable Company had been put out and to whom, identified the Porteous petition as one of the cases that the bench's enquiry would have brought to attention. The petition's emphasis on the petitioner's expense in providing clothes and victuals supplied the operative ground on which the bench had granted further time, with the surgeon's claim of recovered value in the girl's recent service balancing against the years of unrecouped maintenance.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			The petitioner's standing as garrison surgeon supplied the operative context for the bench's response. William Porteous had received the substantive salary settlement of 3 November 1713, raised to forty pounds per year with house rent included, after almost six years of service without his predecessor's salary and thirty pounds of his own expenditure on lodging. The renewed petition of 25 January 1714/15 had brought the surgeon's allowances onto the bench's books for further consideration. The present petition for the continuation of the slave girl's service to tend the surgeon's young child fitted within the operative pattern of accommodations made to senior establishment servants whose own household required practical support. The bench's prompt grant of the petition, without referral or further inquiry, marked the operative trust placed in the surgeon's representation of his domestic circumstances. The Thomas Soulhen petition for waste land near the High Peak continued a recurring pattern of pasturage applications observed across the records. Soulhen had on 23 November 1711 been granted an adjoining barren rock, and on 8 April 1712 had been confirmed in his own property and granted a six-months' extension on a ten-acre Company leasehold. The earlier petition of 9 December 1712 for High Peak pasture had been refused. The present petition repeated the application for High Peak land on the operative ground that the petitioner had no pasture for his cattle and that the parcel in question lay common with none else within several miles of his habitation. The pattern of repeated application by the same petitioner for the same land identified the operative persistence required in matters of pasturage grant, with the petitioner's circumstances perhaps having shifted since the earlier refusal in ways that might now support a different decision. The standing letting conditions laid down by the bench on 24 May 1715 on the refusal of Christopher Hell's petition for the Man Cupps had established the operative test by which any letting of Company land was to be judged. The conditions required that the tenant must be able to manure the land, must hold at least one black for the labour, and must not be too deep in the Honourable Company's debt. The Soulhen petition would need to be measured against these standing conditions. The petitioner's identified holdings across the records, with the church rate position of three in January 1714/15 marking a modest establishment, suggested a household with limited resources for substantial new land development. The bench's response would depend on whether the operative use of the land for pasture, rather than for cultivation, might fall outside the manuring requirement that had been framed for arable holdings. Speculations The William Porteous petition's framing in terms of his young child's needs, with the slave girl tending the child as the operative reason for the requested extension, suggested that the bench's grant rested on the welfare of the child rather than on the operative merits of the petitioner's claim to further service from the slave. The Tovey enquiry ordered on 26 July 1715 would in due course identify the operative position of Company slaves put out to private holders, and the bench's standing principle had been that slaves whose contracted time had expired should be put to the Company's works. The Porteous grant for one further year created a defined extension within which the operative position could be reviewed at the end of the term, in keeping with the bench's general practice of fixed-term arrangements for slaves in private service. The pattern indicated the bench's willingness to

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			balance the institutional preference for recall against the practical hardship that would follow from immediate withdrawal of the slave from a household that depended on her service. The Thomas Soulhen petition's emphasis on the absence of any common land within several miles of his habitation, with the operative consequence that his cattle had no pasture, framed the matter as one of immediate practical necessity rather than of speculative acquisition. The petitioner's reference to the prospect of dry weather, with the further operative consequence of cattle losses for a household living in the out parts of the island, sought to anchor the petition in the standing concerns of the bench about herd preservation under the cow-saving order of 7 June 1715. The framing represented an operative effort to align the petitioner's individual application with the bench's broader institutional priorities, in the calculation that grants supporting the herd-building programme might be considered more favourably than grants for cultivation. The pattern was consistent with the operative method observed in other petitions across the present sittings, where applicants had framed their requests in terms that matched the bench's known standing concerns.
562	553	among Rocks and useless Land) his Cattle which is the Only Dependance to support so Large a Familie as he hath will be Inevitably Staring & your said Petition[r]: & Familie for Ever Ruind or Else must of necesity be Obliged to putt his Cattle into his Plantation & will then destroy not only the Provisions but young Wood Planted according to the former Law in that Case Wherefore begs heartily for a favourable and Kind Answer & Grant of said Land And as in Duty bound shall Ever Pray &c (Sign[dl]) Tho[s]: Southen A Petition of this Nature haveing been preferrd to us on y[e]: 24: of May 1715. by Richard Gurling it is thought Proper to make the same Order therein at this time as we made then (Viz[t]) Let this Land be Surveyed & Enquiry be made wether y[e] Letting of this Land may be any prejudice to the Hon[ble] Comp[a] also that enquirey be made how much Land he Possesses. I Pyke Geo: Haswell Antipas Tovey Edward Byfeld Margin Notes: Ord[r] thereon.	The Thomas Soulhen petition continued. He lived in the out parts of the island, among rocks and useless land. His cattle, which were the only dependence to support so large a family as he had, would be inevitably starved to the petitioner's family for ever ruined. Or else he must of necessity be obliged to put his cattle into his plantation, and would then destroy not only the provisions but also the young wood planted according to the former law in that case. He therefore begged heartily for a favourable and kind answer and grant of the said land. The petition closed with the writer's expression of being in duty bound to ever pray, signed Thomas Soulhen. A petition of this nature having been preferred on the 24 of May 1715 by Richard Gurling, it was thought proper to make the same order therein at this time as had been made then. A note in the margin recorded the substance of the matter as the order on Soulhen's petition. The council ordered that the land be surveyed, and enquiry made whether the letting of the land might be any prejudice to the Honourable Company. Enquiry was also to be made how much land he possessed. The consultation was signed by Isaac Pyke, George Haswell, Antipas Tovey and Edward Byfield. Interpretations The bench's order on Soulhen's petition followed the operative procedure established on 24 May 1715 for the Richard Gurling High Peak pasture petition. The Gurling petition had on that occasion been for a parcel of Company waste land underneath the Company's plantation at High Peak for pasturage to preserve his neat cattle, and the bench had ordered the matter referred for survey, with enquiry whether the letting would be any prejudice to the Company and how much land Gurling already possessed. The same operative procedure was now applied to Soulhen's similar petition for High Peak waste land. The pattern marked the bench's consistent application of standard institutional procedures across comparable matters, with the documentary record of the earlier decision serving as the precedent for the present disposition. The combination of survey and enquiry as the operative form of preliminary investigation supplied the bench with the necessary documentary basis for any subsequent grant decision. The survey would establish the physical extent and character of the

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			parcel sought, while the enquiry whether the letting might be prejudicial to the Company addressed the operative question of whether the land was needed for other Company purposes. The further enquiry into the petitioner's existing holdings completed the assessment under the standing letting conditions laid down on 24 May 1715, which required that the petitioner should not be too deep in the Company's debt and supplied the practical test against which any prospective grant would be measured. The operative consequence of the bench's procedure was to place the burden of the practical investigation on the surveyors and the enquiring officers, with the council retaining the final decision but on the strength of documented findings rather than on direct evidence at the consultation. The bench's choice of officers for the survey and enquiry had not been recorded in the present consultation, but the pattern of recent practice indicated the deployment of junior councillors for such work. The Francis waste land petition of 31 May 1715 had been referred to Bazett and Byfield to view the place and observe if granting might be any prejudice to the Honourable Masters. The Vesey-Harding fencing dispute of 12 July 1715 had been entrusted to the bench's broader oversight of fencing standards across the island. The present matter would be handled through similar operative arrangements once the survey officers were appointed. The petitioner's particular framing of his situation, with the alternative cast as either his cattle starving or his being forced to enclose them within his plantation to the destruction of provisions and young wood planted according to the former law, placed the petition under the operative concerns of both the cow-saving order of 7 June 1715 and the broader programme of plantation establishment. The former law to which the petitioner referred would have been the standing requirement, observed across the records, that planters maintain young wood and provisions plantings as part of the responsible management of their holdings. The petitioner's framing brought the present petition under the operative protection of these standing institutional priorities, with the grant of pasturage land presented as the means by which both the cattle and the plantation could be preserved. Speculations The bench's choice to apply the same procedural disposition to the Soulhen petition as had been applied to the Richard Gurling petition of 24 May 1715 suggested an operative pattern in which High Peak pasturage applications would be treated under a standing procedure rather than on the individual merits of each petitioner. The pattern offered the operative advantage of consistency across comparable matters, with the bench's preliminary procedure fixed regardless of the petitioner's particular circumstances or relationship with the council. The mechanism also served to defer the substantive decision to a later sitting, when the survey and enquiry reports would supply the operative basis for a documented response. The pattern was consistent with the bench's broader practice across the present sittings of building documentary chains before substantive decisions, observed in the Francis waste land petition of 31 May 1715 and in the more complex examples of the <i>Eagle Galley</i> mutiny inquiry and the <i>Cardonnell</i> cargo dispute. The reference to the petitioner's young wood planted according to the former law identified the operative standing of plantation forestry within the island's institutional framework. The cultivation of trees within plantations had been a matter of standing concern across the records, with various orders and arrangements designed to ensure the maintenance of timber resources for the island. The Bagley carpenter

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			petition of 8 April 1712 had sought confirmation of land planted with wood and fenced according to law, illustrating the operative form by which plantation forestry was recognised by the bench. The petitioner's invocation of the same standing law as the operative reason why he could not safely enclose his cattle in his plantation suggested the practical tension between cattle husbandry and plantation forestry within a single holding, and the operative case for pasturage on Company waste land as the means of preserving both.
563	554	Island St Helena At a Consultation held on Saturday the 13: of August 1715. At the Union Castle in James Valley. Isaac Pyke Esq[r] Govern[r] Matthew Bazett Pres[t] Antipas Tovey & Edward Byfeld Jepthah Fowler complains against Mary his Wife & Sayeth that yesterday afternoon he going home to Eat his Dinner found Andrew Berg along w[th]: his Wife a Drinking of Punch with her, that they Shutt the Door & his Wife then Incowraged the said Berg to beat him and Berg did beat him & broke his head & bruised him so that he is in great pain D[r] Porteous sayes he dressed Jepthah Fowlers head Last night and it was broke in three Places & bruised halfe over in a dangerous maner. Andrew Berg denied this till he swore it & then sayed the other beat him first but Fowler is a weakly man in Comparison with the other & has noe hurt and the other is much bruised Mary Fowler Says she knows not nether Berg beat her husband or no but Fowler charged his Wife also for Setting by while he was beat & saying all is faire She was Drunk Last night w[th] brought before the Govern[r] & is Scarcely Sober yet Ordered That Andrew Berg pay Twenty Shillings to Fowler & pay besides for the Cyre and to Ride the Wooden Horse, two Hours, And that Mary Fowler also Ride one hour before the Cooper & then be Ducktt The Margin Notes: Fowler compl[ts] ag[s]t his Wife & And: Bergs their punish[m]t.	Island of St Helena. At a Consultation held on Saturday the 13 of August 1715 at the Union Castle in James Valley. Present: Isaac Pyke Esquire, Governor; Matthew Bazett, third; Antipas Tovey, fourth; Edward Byfield, fifth in council. Jeptha Fowler complained against Mary, his wife, and said that the afternoon before, going home to eat his dinner, he had found Andrew Berg along with his wife a-drinking of punch with her. They had shut the door, and his wife had then encouraged Berg to beat him. Berg had beaten him, broken his head and bruised him, so that he was in great pain. A note in the margin recorded the substance of the matter as Fowler's complaint against his wife and Andrew Berg. Dr Porteous said he had dressed Jeptha Fowler's head the night before, and it was broken in three places and bruised half over in a dangerous manner. Andrew Berg denied this till he swore it, and then said the other had beaten him first. But Fowler was a weakly man in comparison with the other, and had no hurt, while the other was much bruised. Mary Fowler said she did not know whether Berg had beaten her husband or not, but Fowler charged his wife also for sitting by while he was beaten, and saying all is fair. She had been drunk the night before, when she was brought before the governor, and was scarcely sober yet. The council ordered that Andrew Berg pay twenty shillings to Fowler, and pay besides for the cure. He was also to ride the wooden horse for two hours. Mary Fowler was also to ride one hour before the cooper, and then to be ducked. A note in the margin recorded the substance of the matter as their punishment. [...] Interpretations The complaint by Jeptha Fowler against his wife and Andrew Berg opened a domestic and disciplinary matter combining the operative grounds of assault and adultery. The pattern of finding a man drinking punch with one's wife behind a shut door, with the wife encouraging the man to beat the husband and the husband then beaten and bruised, marked the operative form by which extramarital relations and physical assault came together in a single incident. The bench's choice to handle the matter directly rather than refer it to formal proceedings reflected its consistent practice across the present sittings of disposing of contentious domestic and disciplinary matters through summary conciliar order. The medical evidence of Dr William Porteous, the garrison surgeon, supplied the operative documentary basis for the bench's finding of fact on the assault. Porteous had on 3 November 1713 received the salary settlement of forty pounds per year with house rent included, and his standing as the establishment's principal medical officer gave his evidence on the extent of injury particular weight. The reference to Fowler's head being broken in three places and bruised half over in a dangerous manner placed the operative gravity of the assault on the

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			documentary record, supplying the basis on which the substantial penalty against Berg was framed. Andrew Berg appeared in the records as Andrew Bergh or Andrew Bernwick, the cooper and coxswain whose petition for departure on the <i>Eagle Galley</i> had been refused on 11 June 1715 for want of another cooper, with leave promised as soon as a replacement could be obtained. Berg had been at the island on the Company's establishment for nearly four years, having been left from HMS <i>Oxford</i> on 17 July 1711 sick with the scurvy. The present matter therefore involved a Company servant whose retention at the island had been a matter of operative necessity to the establishment, and whose conduct now brought him before the bench under a serious charge. The Septha Fowler bill of sale recorded earlier, with a house in Southwark Street, James Valley, presented to John Sinsnick by Septha Fowler on 2 December 1714, established the broader Fowler connection in the recovered material, though the present Jeptha Fowler may have been a different individual. The bench's order combined financial penalty with public corporal discipline. The twenty shillings payable by Berg to Fowler, with the additional payment for the cure performed by Dr Porteous, supplied the compensatory element of the order. The two hours of riding the wooden horse, with Mary Fowler's one hour before the cooper and subsequent ducking, applied the operative forms of public shame and physical discomfort used at the island for moral and disciplinary offences. The wooden horse was a punishment device on which the offender was made to sit astride a sharp wooden ridge, sometimes with weights tied to the legs, producing both pain and public humiliation. Ducking was the operative punishment for women under the formal designation of a scold, in which the offender was bound to a stool and lowered into water. Speculations The bench's choice to combine fine, payment for the cure and corporal punishment in a single order, with different forms of punishment for the male and female parties, reflected the operative calibration of penalty to offence under the standing assumptions of the establishment. The fine against Berg of twenty shillings represented the standing rate, and the additional liability for the surgeon's cure placed the operative principle that the assailant bore the practical costs of the injury. The riding of the wooden horse for two hours represented the public discipline for the man, while the ducking for the woman represented the equivalent public discipline for the female offender. The pattern was consistent with the bench's broader operative method of imposing physical penalties that reinforced the social ordering of the establishment, with the visibility of the punishment serving the wider purpose of moral example. The placing of the ducking punishment after the riding before the cooper suggested an operative coupling of Mary Fowler's punishment to Andrew Berg's occupation, with the cooper as the operative figure before whom she would ride in public discipline. The arrangement may have reflected the bench's purpose of marking the adulterous association by which Berg the cooper and Mary Fowler had been brought together, with the public order requiring her to ride before her partner in the offence before undergoing her own physical discipline. The form gave the punishment a particular operative shape tied to the specific facts of the case, rather than imposing a generic discipline on the female offender. The Andrew Bergh petition for departure of 11 June 1715, refused on the ground that no replacement cooper could be obtained, would now have the further operative

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			ground that the cooper's conduct had brought him under the bench's discipline.
564	555	The reason of this Punnishment being because beside the Present quarrell he has a long time kept unlawfull Company with that Woman & therefore Ordered Also That they neither come into Each others Company for the future on Pain of being Whipt. I Pyke Antipas Tovey Edward Byfeld Margin Notes: not to keep Comp[a]	The reason of this punishment was, because besides the present quarrel, Berg had a long time kept unlawful company with that woman. The council also ordered that they neither come into each other's company for the future, on pain of being whipped. A note in the margin recorded the substance of the matter as not to keep company. The consultation was signed by Isaac Pyke, Antipas Tovey and Edward Byfield. Interpretations The bench's stated reason for the punishment placed the operative weight of the order on the long-running unlawful company kept between Andrew Berg and Mary Fowler rather than on the single assault that had brought the matter before the bench. The reference to a long time kept unlawful company identified the offence as a settled course of conduct established over time, with the present quarrel marking only the latest and most violent manifestation of an ongoing pattern. The operative effect was to convert what could have been treated as a single assault case into a more substantial matter of moral discipline, with the punishments calibrated to the cumulative offence rather than to the immediate violence alone. The further order forbidding the two parties to come into each other's company in the future, on pain of being whipped, established the operative continuing constraint on the conduct of both parties. The mechanism converted the present discipline into a standing order with continuing operative force, much as the order of court forbidding Captain Haswell to reflect on the bench of 10 May 1715 had created a continuing prohibition with the threat of further sanction. The pattern reflected the bench's standing operative method of using single proceedings to establish continuing rules of conduct, supported by the threat of escalating penalty on further breach. The choice of whipping as the operative penalty for any future breach marked a significant escalation from the present punishments of the wooden horse for Berg and the ducking for Mary Fowler. Whipping at the flagstaff was the standard form of corporal discipline used at the island, observed across the records in such cases as the Beviau forty lashes settled at the general sessions of 7 February 1715, the Moll one hundred lashes ordered on 24 November 1714, the Harmon gardener forty lashes executed on 26 April 1715, and the twenty lashes administered to Ablard for the riotous assault on Lucas Mason within the fort settled on 20 November 1714. The bench's reservation of whipping as the operative penalty for future breach indicated the seriousness with which the standing prohibition was to be regarded by the parties. The absence of Captain Haswell from the consultation, with Bazett, Tovey and Byfield present alongside the governor and the closing signatures showing Pyke, Tovey and Byfield, continued the pattern of partial attendance observed across the present sittings. The deputy governor's absence from the present matter, with the bench composed of the governor and the three junior councillors, placed the disposal of the moral discipline case under a particular configuration. The pattern of Captain Haswell's absence from contentious matters touching domestic and household disputes was observable across the record, with comparable absences noted on the Elizabeth Swallow petition of 23 July 1715 and elsewhere. Speculations

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			The bench's specific reference to the long time over which Berg had kept unlawful company with Mary Fowler suggested that the matter had been known to the bench or to its officers before the present complaint, but had not previously been brought forward for formal disposal. The present occasion of the assault on Jephtha Fowler had supplied the operative trigger for the bench to address what had perhaps been a recognised but unproceeded pattern of conduct on the island. The mechanism by which the assault produced disposal of the broader moral offence reflected the bench's operative practice of using particular incidents to settle wider matters of conduct that would not on their own have justified formal proceedings. The further constraint imposed on Mary Fowler and Andrew Berg, with the threat of whipping for any future contact, would in practice have placed the operative burden of compliance on a man whose office as cooper and coxswain made him a familiar figure across the establishment and a woman whose place at the island would have brought her into regular public contact with him. The Andrew Bergh standing as the Honourable Company's only cooper, established at the consultation of 11 June 1715, made the cooper's continued discharge of his Company duties indispensable to the operative functioning of the establishment. The prohibition would in practice have required the cooper to maintain visible distance from Mary Fowler in all public places, with the burden of any chance encounter falling on the parties to demonstrate that no breach of the standing order had occurred. The pattern indicated the bench's confidence in its operative authority over individual conduct even in matters of personal association, with the threat of whipping serving as the practical lever by which the standing order would be enforced.
565	556	Iseland St Helena At a Consultacon Held On Tuesday the 16 of August A: D: 1715. At the Union Castle in James Valley. Pres[t] Isaac Pyke Esq[r] Gov[r] Matthew Bazett 4 & Edw: Byfeld 5: in Coun[ll] M[rs]: Mercey Gargen Widdow of Tho[s] Gargen Deceased brought an Inventory being the Account of the said Deceaseds Estate, at the time of his Decease & Tho[s]: Cason Gent[t] & Jn[o] Coles Planter having made the Appraisement According to the best of their Skill & knowledge were Sworn as Usual & the Widdow also Sworn that the Inventory is a true Acc[t]: of the said Estate According to the best of her knowledge but Says if she hereafter shall Discover more as she hopes she shall, she will bring in an Account thereof to be Added to the Inventory. The following Petition was Presented viz[t]: To The Worsh[ip]: Isaac Pyke Esq[r] Govern[r]: &c. Council The Humble Petition of Tho[s]: Thompson & Jn[o] O Bryan Sold[rs] Humbly Sheweth That Whereas yo[r]: Petitioners having done all Duty's at Banks this Eight Months & upwards to their great Detriment by runing Margin Notes: Wid[w] Gargen[s] prov[s] [ap]p[r]aysm[t] &c. & Inventory Sheweth	Island of St Helena. At a Consultation held on Tuesday the 16 of August 1715 at the Union Castle in James Valley. Present: Isaac Pyke Esquire, Governor; Matthew Bazett, third; Antipas Tovey, fourth; Edward Byfield, fifth in council. Mrs Mercy Gargen, widow of Thomas Gargen deceased, brought an inventory being the account of the deceased's estate at the time of his decease. Thomas Cason, gentleman, and Joseph Coles, planter, had made the appraisement according to the best of their skill and knowledge, and were sworn as usual. The widow also swore that the inventory was a true account of the estate according to the best of her knowledge. She said that if she hereafter should discover more, as she hoped she should, she would bring in an account thereof to be added to the inventory. A note in the margin recorded the substance of the matter as the will of Thomas Gargen proved, approved and inventory taken. The following petition was presented. The humble petition of Thomas Thompson and John O'Bryan, soldiers, was presented to the worshipful Isaac Pyke Esquire, Governor and Council. The petitioners, having done all duties at Banks for these eight months and upwards, to their great detriment by running [...] Interpretations The Mercy Gargen probate proceedings completed the formal estate administration of Thomas Gargen, with the appraisement under oath by Thomas Cason and Joseph Coles establishing the operative basis of the inventory. The procedure followed the standing form by which deceased estates were administered at the island, with two appraisers acting as sworn officers in the valuation and the widow

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			herself swearing to the truth of the account. The reservation by the widow that she would bring in any further discovery to be added to the inventory preserved the operative flexibility of the account against any property that might be located after the present formal close. The widow's standing in the records connected the present probate to a longer history of the Gargen household. Marcy Alexander, later Gargen, had originally been the wife of Richard Alexander deceased. She had on 8 October 1711 been granted a twenty-one-year lease of her former husband's seized land under paragraph 82 of the Toddington-Thistleworth letter, and the contested Bagley-Alexander land case had continued into November 1714, with her named John Alexander reply on behalf of the children Rijn, Abigail and Mary Alexander against the Bagley-Swallow papers in the Alexander land case. Her subsequent marriage to Thomas Gargen, and his death now bringing the present probate before the bench, marked the operative continuation of a household whose property arrangements had been before the bench in multiple matters. The choice of Thomas Cason and Joseph Coles as the operative appraisers placed the valuation under two persons whose standing in the bench's records gave their oath particular weight. Joseph Coles was perhaps the same Joseph Coles whose contract with the Company for stone cutting had been recorded at the consultation of 12 July 1715, with the graduated wage scale rising from two shillings to three shillings per day across the three-year term. The selection of Coles as an appraiser at the present probate, alongside Cason as a gentleman, marked the operative use of skilled persons of established standing for valuation work, with the appraisers expected to apply their practical knowledge to the operative task of fixing the worth of the deceased's goods. The petition of Thomas Thompson and John O'Bryan, soldiers, returned the bench to a familiar pattern of garrison personnel matters. John O'Bryan was the same soldier identified across the records, with Obriant having on 20 November 1714 been found guilty with Ablard and Thompson of riotously assaulting and wounding Lucas Mason within the fort, with twenty lashes administered to Ablard as the lightest sentence. The petitioners being now Thompson and O'Bryan, the present matter brought before the bench the same two soldiers who had been involved in that earlier riot. Captain Philip had on 20 November 1714 begged off Obriant and Thompson from prison after lashes, with the result that they were discharged from the fort and sent to Banks Fort. The reference in the present petition to having done all duties at Banks for eight months and upwards therefore aligned with the operative consequence of the earlier disciplinary disposition. Speculations The Gargen probate represented the closure of an estate whose head had been part of the broader network of property dealings on the island. The note that the appraisal was made by Thomas Cason as gentleman, taken with the choice of Joseph Coles as the planter appraiser, suggested an operative pattern in which gentlemanly standing combined with practical experience supplied the basis for an appraisal that the bench would accept without further inquiry. The probate's prompt disposal at a single consultation, with all the operative documentary elements in place at the same sitting, reflected the well-developed procedural form by which deceased estates were administered at the island. The Thomas Thompson and John O'Bryan petition, opening on the operative ground of eight

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			months and upwards of duty at Banks Fort to their great detriment by running, would on its full content provide an operative basis for the bench to consider the standing of soldiers on outlying posts. The reference to running suggested the practical wear of physical movement to and from the post over an extended period, with the operative consequence that the soldiers had perhaps not been able to attend to other matters that would normally have supplemented their pay or maintained their personal property. The pattern indicated that the soldiers' transfer to Banks Fort, made in 1714 as the operative continuation of the riot disciplinary disposition, had perhaps become a settled arrangement with cumulative effects on the men. The bench would now be in a position to consider whether some adjustment to their duty was appropriate, in keeping with the broader pattern of conciliar attention to garrison welfare observed across the present sittings.
566	557	runing them in Debt through w[t] means they are Denied necessaries out of the [s]tore Therefore yo[r]: Petition[r] humbly begs that your Worshp & Councill will take it into your Serious Consideration & release us from this Imprizonment, that hereby we may be in some Capacity to gett a penney to Pay the Hon[ble] Comp[a] and Banks Aug[st]: 16: 1715. Yo[r] Petition[rs] (as in Duty Bound) shall Ever Pray &c Tho[s]: Thompson Jn[o]: O Bryan Order[d] That they be Releivd by doeing Duty Weekly & some others Sent every other Week to do Duty there but this Liberty to be no longer than their good behaviour I Pyke Antipas Tovey Edward Byfeld Margin Notes: Thompson & OBryan relievd	The petition continued. The duty had been running them into debt, through which means they were denied necessities out of the stores. They humbly desired that the governor and council would take it into serious consideration and release them from this imprisonment, that thereby they might be in some capacity to get a penny to pay the Honourable Company. The petition was dated at Banks 16 August 1715, and signed Thomas Thompson and John O'Bryan, the petitioners as in duty bound to ever pray. A note in the margin recorded the substance of the matter as Thompson and O'Bryan relieved. The council ordered that they be relieved by doing duty weekly, with some others sent every other week to do duty there. The liberty was to last no longer than their good behaviour. The consultation was signed by Isaac Pyke, Antipas Tovey and Edward Byfield. Interpretations The petitioners' framing of their continuous duty at Banks Fort as a form of imprisonment supplied the operative ground on which the bench was being asked to reconsider their disposition. The reference to debt accumulated through the assignment, with consequent denial of necessities from the stores, identified the operative mechanism by which extended outlying duty had financial consequences beyond the soldier's standing pay. The soldiers' standing allowance had not been sufficient to maintain them at Banks Fort without their being able to supplement it through other means, and the cumulative effect of eight months and more at the outlying post had brought them into debt to the Company's stores. The further consequence of debt was that the soldiers could no longer draw necessities from the stores against their continuing pay, since the trusting limits under the Pyke trusting rule of 21 December 1714 had set the operative cap on storekeeper credit. The bench's order for relief by weekly rotation, with some others sent every other week to do duty at Banks Fort, supplied the operative remedy. The mechanism converted the standing assignment of two particular soldiers into a rotating duty drawn from a wider pool of garrison personnel. The arrangement preserved the operative function of the outlying post while distributing its burden more evenly, with the practical effect of allowing Thompson and O'Bryan to return to the central garrison and to recover their position with the stores. The reservation that the liberty was to last no longer than their good behaviour preserved the operative connection between the present relief and the underlying disciplinary disposition that had led to their assignment to Banks Fort in November 1714.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			The original assignment of Thompson and O'Bryan to Banks Fort had followed their conviction on 20 November 1714 of riotously assaulting and wounding Lucas Mason within the fort, in company with Ablard. The arrangement had been brokered through Captain Philip's intercession, which had begged off Obriant and Thompson from prison after lashes, with the result that they had been discharged from the fort proper and sent to Banks Fort. The present order, made nine months after the original disposition, marked the operative conclusion of the period of disciplinary segregation. The fact that the bench was willing to relieve the soldiers from the standing assignment, on the condition of good behaviour, indicated that the practical purpose of the segregation had now been achieved, with the men perhaps judged to have served their period of disciplinary exposure. The pattern of rotation as the operative substitute for permanent outlying assignment reflected the broader pattern of garrison administration observed across the present sittings. The Sergeant Fairfax disposal of 12 April 1715 had similarly distinguished different categories of duty under different operative arrangements, with the Boucher-time perpetual duty refused as bad precedent, three quarters under Pyke at usual pay only, the <i>Mercury</i> alarm allowed, and three quarters' salary allowed according to duty performed. The present order applied similar operative principles to the question of outlying duty at Banks Fort, with the principle of rotation now established as the standing arrangement for that post. Speculations The bench's choice to relieve Thompson and O'Bryan from continuous duty at Banks Fort suggested an operative recognition that disciplinary segregation through outlying assignment could become counterproductive when continued for too long. The original purpose of the disposition in November 1714 had been to remove the soldiers from the central garrison while applying a less severe penalty than imprisonment. The cumulative effect after nine months had been to bring the soldiers into debt and to deny them necessities, with the operative consequence that they could no longer maintain themselves on the standing pay. The bench's order returned the soldiers to the regular garrison rotation while preserving the operative form of the disciplinary disposition through the good behaviour clause, marking a calibrated adjustment rather than a complete reversal. The introduction of rotation as the operative arrangement for Banks Fort duty represented an institutional refinement of the standing garrison arrangements. The mechanism by which some others would be sent every other week to do duty at Banks Fort distributed the burden of the outlying post across a wider portion of the garrison, with the practical effect that no particular soldier or soldiers would bear the full weight of the assignment indefinitely. The pattern was consistent with the broader operative method observed across the present sittings, in which standing arrangements that bore disproportionately on individual servants were reformed in favour of rotated or distributed responsibility. The Sergeant Fairfax disposal of 12 April 1715 had marked a similar adjustment in the question of perpetual duty, and the present order on Banks Fort applied the same operative principle to the question of outlying garrison duty.

		Isaac Pyke Esq[r] Gov[r]: Geo: Haswell Dep[ty] Pres[t] Matthew Bazett 3[d] Antipas Tovey 4[th] & Edw: Byfeld 5[th] in Cu[oun]cl. The Following Petition was I St Helena. Presented (viz[t]) To the Worsh[ip] Isaac Pyke Esq[r] Gov[er]n[r] &c & Council The most humble Petition of Arthur Bradley Overseer. Humbly Sheweth That Whereas Your Petit =ion[r] is at very great Charges in building a house to dwell in Therefore humbly Prays yo[r] Worsh[p] & Council to Grant yo[r] Petition[r] a Lease thereof. And yo[r] Petit[r] as in duty bound shall ever Pray &c Aug[t]: 23[th] 1715 (Sign[d]) Arthur Bradley Refer[d] to Our former Order Order[d] That the Valuation of the Yams in the ground bought of M[r]: Geo: Carne Deceas[d] be refer[d] to Cap[t]: Bazett & M[r] Gabriel Cowill with any other two M[rs] Carne shall Appoint. I Pyke Ed: Byfeld Antipas Tovey Geo: Haswell Margin Notes: Bradleys pet[n] referd Carnes Yams to be Valued	Present: Isaac Pyke Esquire, Governor; George Haswell, Deputy Governor; Matthew Bazett, third; Antipas Tovey, fourth; Edward Byfield, fifth in council. The following petition was presented. The most humble petition of Arthur Bradley, overseer, was presented to the worshipful Isaac Pyke Esquire, Governor and Council. The petitioner was at very great charges in building a house to dwell in. He therefore humbly prayed that the council would grant him a lease thereof. The petition was dated 23 August 1715, and signed Arthur Bradley, the petitioner as in duty bound to ever pray. A note in the margin recorded the substance of the matter as Bradley's petition. The council referred the petition to their former order. The council ordered that the valuation of the yams in the ground bought of Mr George Carne deceased be referred to Captain Bazett and Mr Gabriel Powill, with any other two whom Mrs Carne should appoint. A note in the margin recorded the substance of the matter as Carne's yams to be valued. The consultation was signed by Edward Byfield, Antipas Tovey, George Haswell and so on. Interpretations The Arthur Bradley petition resumed an open matter first considered at the consultation of 26 April 1715. The earlier petition for re-thatching and rafter repair on the Company tenancy of a house and twenty acres at seven pounds the annum had been deferred until more of council were present, the matter being of some consequence. The present petition by Bradley as overseer, with the operative ground that he had been at very great charges in building a house to dwell in, marked a continuation of the same petitioner's effort to secure proper documentary recognition of his investment in the property. The bench's response, referring the matter to a former order, indicated that an earlier disposition had been made of the substantive question and that the bench was now applying that earlier order to the present petition. The form of the bench's response, with the matter referred to the bench's former order rather than disposed of by new decision, marked the operative practice of consistent procedural treatment. The bench was preserving the operative coherence of its standing position by reference to the earlier decision rather than reopening the substantive question afresh. The pattern was consistent with the broader practice across the present sittings of building documentary chains by which standing positions were reinforced through successive applications, rather than allowing repeated petitions to extract fresh dispositions on each occasion. The order on the valuation of the yams in the ground bought of Mr George Carne deceased established the operative arrangement for settling a particular question within the broader estate of the late Carne. George Carne had appeared across the records as a substantial planter whose dealings with the bench had involved multiple matters. The Carne real property security ordered on 8 October 1711, the Carne bond of 9 May 1711 securing Carne's debt for the Keeling orphans' money at three hundred and twenty one pounds three shillings and four pence, the Carne schedule of 7 December 1714 with twenty nine slaves at two hundred and ninety pounds, and the Powell judgment of 9 November 1714 ordering Powell to pay George Carne forty pounds with interest for the use of the heirs of Governor Keeling, all marked Carne's standing in the bench's books. The Carne death noted in the present consultation, with the widow Mrs Carne mentioned as the operative

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			party in the present matter, fixed the operative end of Carne's own dealings and the transition to estate administration. The composition of the valuation panel, with Captain Bazett and Mr Gabriel Powill, together with two others whom Mrs Carne should appoint, marked the operative balance between the bench's own representatives and the family's choice of valuers. The mechanism by which the executive nominated two valuers and the family nominated two more produced a balanced panel of four, with the operative function of fixing the value of yams already in the ground belonging to the Company through purchase. The arrangement followed the broader pattern of conciliar oversight observed in the Mercy Gargen probate of 16 August 1715, where two appraisers had been sworn under oath alongside the widow's own deposition. The present matter, involving an asset already transferred to the Company but still requiring valuation for the operative settlement of the deceased's estate, called for a more substantial panel given the size of the holding and the standing of the parties. Speculations The bench's choice to refer the Arthur Bradley petition to a former order, rather than to dispose of it by new decision, suggested an operative pattern in which the bench had reached a settled position on the broader question of overseer house leases that it was now applying to particular cases as they arose. The former order to which the bench referred had not been recovered in the present material, but its operative existence indicated that the bench had developed a standing framework for dealing with such matters. The pattern was consistent with the broader operative method of the bench across the present sittings, in which standing positions were established through the disposal of particular cases and then applied to subsequent applications under the same general framework. The composition of the yam valuation panel, with the deputy governor Captain Haswell conspicuously absent from the list of valuers despite his presence at the consultation, suggested an operative selection of the panel from councillors and figures with particular standing relevant to the matter at hand. Captain Bazett's standing as storekeeper, with the operative function of receiving goods into the Company's account, made him the natural figure to value yams that the Company had bought from the late Carne. Mr Gabriel Powill's standing in the broader Carne family circle, with his earlier appearance at the consultation of 2 August 1715 as the agent for multiple metropolitan claims against the Carne and other estates, gave him particular operative knowledge of the family's affairs. The mechanism by which Mrs Carne would appoint two further valuers preserved the family's operative interest in the valuation, with the panel as a whole representing both the Company's institutional interest and the family's preserved standing in the operative administration of the estate.

		hereof you are Not to faile And for s[o] Doeing this shall be your Sufficient Authority Dated under my hand & Seale 14[th] day of Decem[r] Ano[o] 1714. &c J Pyke.	They were not to fail of this, and for the doing of this their writ should be their sufficient authority. The writ was dated under his hand and seal the 14 day of December anno 1714, signed Isaac Pyke. Interpretations The form of writ for debt entered on the council books supplied the operative documentary template by which civil arrests for debt at the island were carried into effect. The form combined the operative elements of the metropolitan writ system, with the governor as the issuing authority in place of the English court, the marshal or bailiff as the executing officer, and the named defendant identified by occupation and place of residence. The mechanism converted the governor's individual judicial authority into a standing procedural instrument that could be used across multiple cases under the same operative form. The particular case recorded, with Godfrey Shoales of the island, tailor, named as the defendant on a plea of debt at the suit of the Honourable East India Company for the sum of fifty pounds, identified the operative target as a tradesman with a substantial Company debt. Godfrey Shoales had appeared in the records in connection with debt to the Company. On 14 December 1714 the governor had taken security of him for payment of his debt to the Company with interest at eight per cent, with Samuel Algate and John Pyfer as sureties. The present writ, dated 14 December 1714, was the operative companion to that bond arrangement. The same date for both instruments indicated that the security and the writ had been prepared together as parts of a single coordinated effort to bring Shoales's debt to formal recovery. The dating of the writ formula at the consultation of 23 August 1715, although the writ itself bore the date of 14 December 1714, marked the operative entry on the consultation book of an instrument that had previously been used but not formally inscribed. The pattern was consistent with the bench's broader practice of preserving standing forms for future reference, with the formal entry on the consultation book serving both to record the past use and to make the form available for future application. The arrangement supplied the operative basis on which subsequent writs for debt could be issued in the same form, with the council books standing as the documentary record of the procedural instruments developed at the island. The standing interest rate of eight per cent per annum applied to the Shoales debt aligned with the operative pattern observed across the records. The Porteous advance of 27 November 1711 had been at eight per cent, the Bell purchase of 24 July 1712 had been at eight per cent, the Welch sixty pound credit of 3 November 1713 had been at eight per cent, the Jessey fifty pound credit of 2 February 1714 had been at eight per cent, the Shoales debt with Algate and Pyfer as sureties had been at eight per cent on 14 December 1714, and the Swallow bond of 12 April 1715 had been at the same rate. The phrase the usual interest of eight per cent had confirmed the rate as the settled island standard, and the present writ for debt operated within the same standing financial framework. Speculations The bench's choice to enter the writ for debt formula on the consultation book at this particular sitting, in the context of broader administrative reforms across the present sittings, suggested an operative effort to consolidate the procedural instruments of the island's civil administration. The call for proposals to prevent the drawing of bills on the Honourable Masters opened at the consultation of 19 July 1715, the standing letting conditions of 24 May

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			1715, the marshal's fee schedule of 3 May 1715, the order forbidding reflection on the bench of 10 May 1715, the damages order on vexatious prosecution of 10 May 1715, and the present entry of the writ for debt formula together represented the operative consolidation of the procedural framework under Pyke's administration. The pattern indicated the bench's developing commitment to documentary procedural rigour, with standing forms entered on the council books for future reference rather than left to depend on the personal memory of the executive. The particular use of the Shoales case as the example for the writ formula, rather than a generic specimen, supplied the operative connection between the procedural form and the substantive matter. The choice of a fifty pound sum, a named defendant and a specific dated entry indicated that the bench was entering an actual writ that had been issued, with the operative effect of preserving both the form and the documentation of its use in a particular case. The pattern would supply the operative basis for any subsequent inquiry into the disposition of the Shoales debt, with the writ entry on the consultation book standing alongside the bond of 14 December 1714 and the involvement of Samuel Algate and John Pyfer as sureties to constitute the full documentary record of the recovery effort.
