

St Helena Records 1712-1715

Introduction: This is the eleventh volume in the series *St Helena Records*. The series includes the official minute books of the island's Governor and Council, which recorded their meetings, deliberations and decisions, with abstracts of correspondence, proclamations and regulations, judicial proceedings and financial business. The volumes served as the principal administrative record of government on St Helena and were often titled "Consultations". Its authority was derived from the EIC, with final decisions directed by instructions issued from London.

Source: Images of the original records can be viewed on the British Library's website: <https://eap.bl.uk/archive-file/EAP1364-1-1-11>.

Text Transcription This transcription was produced by AI from handwritten document images held on the British Library's website, at about thirty pages per hour. Given the limitations described below, the text should be regarded as unreliable and used only as a search-and-find shortcut: once a relevant section has been located, it must always be checked against the source image via the hyperlinked Film Numbers listed in the main transcription table below.

Three specific problems affected the work. First, AI tends to prioritise meaning and readability at the expense of fidelity to the original, with a strong disposition to normalise spellings, expand abbreviations, and adjust grammar. It is particularly weak with unfamiliar surnames, and scrawled signatures often resist accurate transcription entirely. Transcriptions by eye of documents spanning four centuries have also shown that a single surname could be written in a wide variety of ways: the Crowie family name appears under six different spellings, and the Isaacs family name under sixteen. Searches for surnames are therefore hindered both by genuine variations in the originals and by mistranscriptions introduced by AI, and for this reason are best run phonetically. Second, the AI struggled with the late secretary hand, the script commonly used from the sixteenth to the eighteenth centuries, in which the letter S appears in a form closely resembling a trailing L. Third, occasional passages in these volumes are written in a hand so obscure or poorly formed as to be difficult to read even by eye, sometimes compounded by heavy ink bleed-through from the reverse side or by the loss of sections of pages.

To mitigate these difficulties, a strict protocol was applied to each image, requiring the AI to rely solely on clearly visible ink strokes and to flag any uncertain reading, thereby reducing the risk of inferred or invented text. Two conventions are used. [...] marks text that could not be read with confidence; this may represent a single unreadable word, a full sentence, or occasionally an entire paragraph. Square brackets around letters or words indicate a conjectural reading supplied by the transcriber: brackets around a whole word, for example [Bazett], mean the entire word was unclear and a probable reading has been supplied, while brackets around individual letters within an otherwise readable word, for example B[a]z[e]tt, mean only those specific letters were unclear in the source and the unbracketed letters were legibly present.

Modern Summary and Analysis Each section of text was submitted for AI analysis in order to explain the archaic language in clear, modern UK English. These are not direct sentence by sentence replacements, but explanatory interpretations intended to clarify meaning while preserving the substance of the original. Where a specific individual is named within a section of the original text, that person will generally also be identified within the explanatory interpretation. However, where the original consists largely of lists of names, these are not usually repeated in the explanatory text.

Each text modern summary is followed by two forms of AI-generated analysis. The first, an Interpretations section, draws on wider information located on the internet to provide additional commentary on the material. The second, a Speculations section, offers one or more possible reflections on what the document might further suggest. The value of these notes ranges from the profound to the trivial or self-evident; time did not permit deletion of the latter.

Text Loss: The pages were in good condition with no loss of text.

Referencing Text Locations: A dual numbering system has been adopted, combining the British Library film number with the manuscript's original page number. These are presented in the format: British Library Film No. / Document Page No.

Pagination: Page numbering begins on Film No. 10 (10/1). Pages 7 and 8 are missing, so the sequence runs 14/5, 15/6, 16/9, 17/10, and so on. A blank page was inserted after 155/148: Film No. 156 is correctly numbered page 149, and Film No. 157 is blank and unnumbered (assumed to be page 150). Film No. 158, however, is also marked page 150, with numbering then continuing sequentially to the end of the volume. The sequence is therefore taken to be 155/148, 156/149, 157/150, 158/150, 159/151, and so on.

Dates: During the period covered by this volume, England and its colonies followed the Old-Style Julian calendar, under which the legal new year began on 25 March (Lady Day). The earliest date recorded in this volume is a consultation held on 6 January 1712/13 (1713 in the modern calendar) and the last date was a consultation held on 16 August 1715.

The Council meetings were all held during the administrations of Captain Benjamin Boucher (1711-1714) and Captain Isaac Pyke (1714-1719).

AI Generated Summary

Introduction

This consolidated narrative records the East India Company's administration of St Helena from January 1713 to August 1715, spanning the final eighteen months of Governor Benjamin Boucher's tenure and the first thirteen months of Governor Isaac Pyke's. The wider setting was the closing phase of the War of the Spanish Succession, concluded by the Treaty of Utrecht in 1713, the Hanoverian accession of George I in August 1714, and the early stirrings of the 1715 Jacobite rising. The island was a single fortified valley, the United Castle in James Valley, dependent on Company shipping for almost everything. The evidence is overwhelmingly the council's own record, drafted for transmission to the Lords Proprietors in London, and its silences, particularly around the enslaved majority, are as telling as its entries. [Film No. 10, 32, 60-109, 110-159, 160-209, 210, 260, 310, 360, 410-413, 460-509, 510-569]

Governance and Administration

Across 1713 the council acted as the working substitute for almost every metropolitan institution: registering land, proving wills, auditing church and highway accounts, fixing prices and wages, ordering censuses and trying criminal cases. It met at the United Castle on Tuesdays. Boucher's council shrank in April 1713 when Deputy Governor John Pack died, leaving Matthew Bazett, Lieutenant Thomas Cason and John French as the working body. Bazett carried the registration programme, the store books and the secretaryship simultaneously, a striking rehabilitation after his October 1712 dismissal for character failings. The dual invocation of the Company as Lords Proprietors and of her Majesty by name, particularly in the advertisement of 4 March 1713 ordering a full census of persons, slaves, acres and cattle, tied island authority simultaneously to commercial proprietorship and to the Crown. [Film No. 10, 25, 26, 32]

Through late 1713 and early 1714 the four-man council's weakness became apparent. The substantive crisis came on 1 April 1714 when Bazett refused to sign the general letter prepared for the Court of Directors by the *Abingdon*. Boucher convened an extraordinary sitting, brought in Captain William Jordan and purser Peter Elers as independent witnesses, and put Bazett under formal interrogation. The proceedings disclosed substantive administrative failure beneath the procedural dispute: store books not made up beyond 25 March 1712, 120 gallons of unreported arrack leakage, and the collapse of the segregation of custody from disbursement after Boucher retained the warehouse keys. By 27 May and again 24 June 1714 Bazett joined Cason and French in formally clearing the Governor before witnesses, the reversal reflecting practical recognition that Boucher's imminent departure removed the cause of dispute. [Film No. 130-133, 145-146, 153-154]

Pyke arrived on the *Rochester* on 8 July 1714, his commission sealed 24 February 1714. The reduced four-man council was replaced by a full five-man establishment: Pyke, George Haswell as Deputy, Edward Mashborne as third (returning with institutional memory from Roberts's administration), Bazett as fourth and Antipas Tovey as fifth and Secretary. The 97-paragraph general letter was read at a single sitting on the

first working day. Inventories were ordered across every department, converting oral findings about the stripped Fort into a documentary baseline and fixing the working basis on which the directors might later proceed against the departed Governor. [Film No. 160-163, 172-173]

From August 1714 onwards Pyke's programme was self-conscious and systematic. Tovey's comprehensive inventory of 16 July 1714 listed every book and paper in the Secretary's office, including the consultation series from 1678, letter books, will registers and abstract volumes. A sequentially numbered register of 95 wills proved between December 1681 and May 1713, ending with Boucher's own contingent will, was compiled. Customs master Thomas Newington was appointed on 4 November 1714 to keep account of all goods coming ashore, restoring a lapsed office. On 21 December 1714 Pyke set out two new standing rules: no person was to transfer credit to another while himself in debt unless by particular order of council, and no credit was to be placed by the storekeeper unless agreed in consultation. The same day experimentally issued signed bank bills to the value of twenty pounds for circulation, an early attempt at paper currency. [Film No. 222-223, 232, 240-243, 245, 263, 300-301]

Mashborne's death on 31 March 1715 reduced the council to three serving members. William Worrall, a Company servant, was appointed overseer of the plantations on probation. Edward Byfield was promoted to fifth in council on 17 May 1715, described as a sober young man of great industry and diligence, fixing Bazett as third and Tovey as fourth. The *Cardonnell*, arriving in early June 1715, brought the first substantive directors' letter since the *Aurengzebe* dispatch of 25 January 1714/15, and the bench resolved to read it in successive morning sessions, marking each paragraph for action. Selective signing of consultations becomes conspicuous through summer 1715: the protest against Captain Mawson of 11 June 1715 carried only Pyke, Tovey and Byfield, with Bazett absent from the 29 June consultation recording the *Eagle Galley* depositions. On 21 June 1715 Pyke formally interrogated Haswell as accountant and Bazett as storekeeper on why the books were not ready, their answers entered question by question with remarkable candour. [Film No. 413, 416-418, 461, 480-482, 486, 505]

Military Affairs and Defence

The defining military event of 1713 was the soldiers' conspiracy of early July. The garrison had grown indebted through store-book purchases, and the drought had made provisions scarce. On 3 July 1713 the Governor proposed setting indebted soldiers to work on the fortifications in place of slaves, plainly intended as debt recovery. Within days William Brogden, William Gore, William Knife, Thomas Griffis, James Young and others began canvassing the guard rooms. Their plan, according to depositions, was to seize the Governor and Council at the Thursday council sitting on 9 July 1713, hold them as hostages, take provisions from the stores and if necessary fire the store-room. The conspirators rallied around the slogan that it was better to die like men than to starve like dogs. Corruption reached into the artillery: Edward Mallard, lookout at Two Gun Ridge, had been deliberately failing to relay alarm signals. [Film No. 48, 50, 52, 55, 56]

The council's response on receiving Robert Wallington's information through Bazett on 7 July 1713 was a textbook of small-establishment counter-insurgency. Flints were quietly removed from the muskets of all posts except Cinkey. A false alarm was orchestrated from Prosperous Bay with the cover story that a man-of-war was approaching with news of peace, the genuine prospect of the Peace of Utrecht then in negotiation making the pretext plausible. As the freemen mustered they were drawn into the castle and supplied with arms, neutralising the garrison. By 9 July 1713 the council had confined five ringleaders in irons and disarmed five accomplices on conditional good behaviour. The advertisement of the same day reframed the 3 July compulsion as a voluntary offer: any well-disposed soldier could now work on the fortifications at 1s 6d a day, the same rate paid to hired slaves. [Film No. 49, 53, 54]

Through autumn 1713 and into 1714 the council worked through the conspiracy aftermath via graduated release. James Young was released after four months in irons on 3 November 1713, described by the council as quiet, civil and something better bred than the common sort of soldiers. William Hufte was released on 2 February 1714 after seven months for speaking mutinous words in his liquor. The April-to-May 1713 store account showed soldiers buying complete uniform pieces at roughly thirty-three shillings per suit, uniform replacement and provisions being the working drivers of indebtedness. The defensive works

themselves were neglected: Pyke's incoming council in July 1714 found the two wings of the castle parapet exposed at the junctions with the main Castle, storehouses and barracks existing only as a 120-foot stretch eight feet high, and the Castle itself having received no substantive addition since Roberts's departure beyond Boucher's own apartments. [Film No. 66, 85-86, 89, 112, 154-155, 159]

Pyke acted quickly. The five remaining 1713 conspiracy prisoners petitioned to be sent to Bencoolen as soldiers for five years; on inspection of the examinations and finding them not proper persons to be permitted to stay upon this island, the council granted the petition on condition they work out their debts. Seven *Rochester* soldiers were taken into Company pay in exchange. The trench in the bay had been broken by heavy seas, and on 3 August 1714 the council resolved to build a sea wall packed with earth, the Governor taking personal charge. The Old Goat Pound, undermined under Boucher by excavation, was scheduled for demolition once the sea wall was secure. The garrison stood at about ninety effective men at handover. [Film No. 175-176, 181-182, 185, 204]

The riot of 19 November 1714 was the most politically charged garrison matter of the period. John Obriant, Charles Ablard and Thomas Thompson assaulted Lucas Mason within the Fort and shouted that none but whores and rogues lived in the castle. Thompson added there was now a new governor who did not understand the laws and that he would never follow anyone's orders but Boucher's. Graduated punishments at the flagstaff (Ablard twenty lashes, Obriant thirty, Thompson forty) distinguished participation in a brawl from political offence. The episode disclosed both a residue of Boucher loyalty in the lower ranks and the working pattern by which officers acted as patrons mitigating consequences. On 18 January 1714/15 Pyke explained the suspension of fortification works: with peace settled, the Company had directed him to discontinue the works for a time, removing the strategic justification for the labour levies that had brought working men into permanent indebtedness. [Film No. 262, 320, 357]

Through 1715 piracy became a present concern in the South Atlantic, consistent with the wider piracy boom following the end of the war. On 10 June 1715 a double alarm announced multiple unknown ships, and the council, fearing pirates, ordered Mawson to bring a hawser to the east rocks so the *Cardonnell* could be hauled nearer shore under the castle's guns. King William's fort above Banks's hill was reported in a dangerous condition on 19 July 1715, mud mortar mixed with salt water having caused decay. Pyke reported on 12 July that, in obedience to the directors, the two wings adjoining the castle had been raised four feet with seventy rows of iron stockades. [Film No. 486, 542, 543]

Settlement, Land and Agriculture

The dominant administrative project of 1713 was the registration of every parcel of free and leased land. From mid-January through early March 1713 the council held rolling title sittings every two or three weeks. Bazett measured each plot, the plan was deposited at the clerk's office, and the claimant produced his writings at the next council day. Where private deeds were missing, long peaceable possession with entries in the old Register Book and continuous revenue payments was accepted as a functional substitute. A printed deed under the Company's seal carried the strongest evidentiary weight. Women, widows and orphans appear repeatedly as the holders of title: Margaret Sich, widow, brought together seventy acres assembled across three marriages; Mary Hoskison registered the largest individual holding, eighty-six acres. The pattern is of a tightly intermarried planter society in which land moved as readily through marriage portions and remarriages as through sale. [Film No. 14, 15, 17, 18, 22, 23]

The registration culminated in the advertisement of 27 July 1713 listing more than thirty deed-holders, and at the consultation of 4 August 1713 more than fifty named holders attended the castle to receive deeds and leases. The recorded great satisfaction marks the point at which the registration programme passed into settled tenure, fixing the baseline against which all later transactions would be measured. Jonathan Duston bought the contiguous Marsh and Hunt plantations of ninety acres for £460 18s 0d on 6 January 1713. The same period saw fencing tensions: Thomas Burnham and Robert Bell were granted twelve months' grace; John Nichols was ordered to take down fences he had quietly placed across Company common. Petitions for waste land showed council preference for retaining selected parcels, with John Orchard refused a piece under the Pigeon Rocks because the parcel had been earmarked for a Company lemon garden. [Film No. 10, 11, 24, 58-60, 68, 71, 73, 81]

By Pyke's arrival on 8 July 1714 the inherited country estate was in collapse. The Plantation House was very much out of repair and going to ruin, the garden dug up with nothing but plantain trees and cabbage remaining, and the consolidated herd of 304 head recorded on 9 October 1712 reduced to about sixty head of black cattle. There were neither deer nor goats nor sheep nor hogs nor any poultry. Allowing for some embellishment in testimony solicited from inhabitants relieved to see a new administration, the scale of the decline is too great to dismiss, and the implication that Boucher had been provisioning his own household by slaughter is hard to avoid. [Film No. 158]

The plantation survey of 10 August 1714 by Haswell, Mashborne and Bazett returned a combined inventory of 555,550 yams across five Company plantations (Cole's Gut, Tewdale's Gut, Lufkin's, Roberts's New Ground and the Hutts), with the universal finding that crops needed weeding and that no substantial new supply could be expected for periods running up to two years. The lower vineyard had been thrown up as rough ash-grazing for two years, the planted vines lost. The slaves' house had been burned in Boucher's time by his man Caesar firing a gun upon the thatch. Thomas Perkins's plantation was acquired outright on his departure: 170,711 yams and thirty acres for £400 for seven years, supplemented by livestock for £112 1s 0d. A new plantation was proposed at the High Peak, judged good ground for raising hogs. [Film No. 177-180, 186-187, 190-191, 200-202]

Through autumn 1714 the council survey of fences identified extensive damage along dozens of numbered stretches given in rods, with estimated repair costs identifying boundary holdings of the principal abutters Keeling, Goodwin, Caton, Powell, Addis, Wrangham, Coles, Bowman, Lufkin, Francis and Sich. The Chapel Valley goat dispute resolved on 7 December 1714 reasserted Company tenure of grazing rights, with Carne removing all goats save two old ewes. A new lime kiln to burn lime with coals was built near the old kiln near the old bridge. Hugh Bodley senior's plantation, fallen into Company hands through debt, was advertised on 18 January 1714/15 for letting to any person of civil behaviour who had worked at the fortifications. [Film No. 263, 287-292, 297-298, 308, 313-314, 322]

The annual census of families, land and cattle for 1714, drawn up to 21 March 1715, recorded 1,144½ acres total, divided between 734½ acres of freehold and 410 acres of leave. Active planters such as George Carne (111 acres, 46 head of cattle) and John Coales (55 acres, 43 head) held larger stock than the senior officers. The cattle return distinguished bulls, cows, bullocks, steers, oxen, heifers and calves, with heifers in working condition entered separately, indicating the limited supply of oxen that forced planters to press young females into the yoke. By June 1715 the cow-saving order of the directors prohibited slaughter of any cow, heifer or calf until 20 July 1716 except under warrant, giving the herd two breeding seasons to recover. Standing letting conditions of 24 May 1715 required tenants to manure the land, hold at least one black, and not be too deep in Company debt. [Film No. 372-374, 402-408, 460, 467-468, 481-482, 490-491]

Trade, Shipping, Supply and Provisioning

Almost no rain fell on St Helena from mid-1712 until summer 1713. By 12 May 1713 the council recorded ten months' drought, with cattle, hogs and goats dead in numbers, yams scorched in the ground, and most inhabitants without cash to buy from shipping. The council opened the Company's yawl to inhabitants on regulated terms: four families could pool labour for trips of forty-eight hours, with all fish brought to the castle and divided by the Company's steward, the Company taking one quarter. On 4 June 1713 the council made the largest emergency purchase recorded, contracting with Captains Lane, Minter and Hoaks for 3,130 gallons of Batavia arrack at 6s a gallon and 7,480 lb of rice at 2d a pound, retailed in July at advances of fifty and seventy-five per cent. A hogshead of lime juice was bought from Captain Pinnell of the *Susannah* at 3s 6d a gallon to fend off scurvy. [Film No. 33-35, 46-48]

The Company's monopoly store dominated the working economy through 1713-14, with monthly accounts disclosing a full range of Indian cottons from Bengal and Madras (gurras, romalls, chelloes, neilas, salampores, gingham, dungarees, long cloth, chints and the fine muslins mulmulls and doreas), English woollens (kerseys, broadcloth, perpetuanos, druggets, shalloons, fustians, durants, callemancoes, Norwich black crape and damask), spirits, tobacco, sugar, rice in bulk, soap, and hardware. The single-month total of £706 5s 1½d for 25 March to 25 April 1713 was the heaviest of the year. The *Susannah's* inventory in

summer 1713 included a chest of twelve halberds, forty-eight muskets, five hundred gun flints, sixty-three chaldron of coals and a chest of medicines at £68 17s 8¼d. [Film No. 62-66, 90-103, 109]

Supply recovered substantially across spring 1714 through three Company consignments. The *Abingdon* under Captain Jordan arrived on 1 March 1714 with about 1,900 gallons of Batavia arrack from Bencoolen. The *Stretham* under Captain Henry Gough arrived on 23 April 1714 from Madras with ten bags of rice, ten of sugar and three leaguers of arrack. The *Marlborough* under Captain Matthew Martin arrived on 16 May 1714 with twenty bags of rice, twenty of sugar and three more leaguers, consigned from Bengal. The pattern shows the Company's eastern stations working in coordinated despatch to restock after the long drought. [Film No. 129, 133, 145]

The *Rochester* under Captain William Browne, principal vessel of Pyke's arrival, was the source of considerable friction in July 1714. Browne's discharge of cargo was so dilatory that the council formalised day-by-day complaints, recording one boat sent on the first day, three on the next, half a yawl load on another, against an expectation of at least five boats daily in fair weather. The two-month account for 25 October to 25 December 1713, the heaviest of that period at £1,070 6s 7½d, was a Christmas cycle through which 921¾ gallons of arrack, 3,543 pounds of sugar, 416 pounds of tobacco, 144 dozen clay pipes and 69 pounds of tea passed. [Film No. 113-128, 174-175, 181]

On 31 October 1714 the *Susanna* under Captain Richard Pinnell arrived from Bencoolen. At the Cape he had encountered orders from the Court of Directors requiring all homeward commanders to make the best of their way to London and disregard any further orders from Company servants in India, collapsing an intermediate layer of authority. Pinnell's careful correspondence with the council, signed by Pyke, Haswell, Bazett and Tovey, functioned as documentary insurance for both parties. The *Susanna* departed on 12 November 1714 carrying a packet of 27 numbered items including the chaplain's register, lists of Company slaves, debt and credit abstracts, the consultations copy, the will register and the Boucher misappropriation schedule. [Film No. 253-259]

The *Aurengzebe* under Captain Nicholas Lihorne, arriving from Madras on 14 January 1714/15, exposed the limits of provisioning. Lihorne demanded the beef to which his charter party entitled him. The council replied on 16 January that more than 2,500 head of cattle had been lost in a great dearth and no beef could be spared, counter-offering as buyer at the planters' common rate of 40s 0d per hundredweight with payment by bills on London. The storekeeper's accounts for 8 July to 25 October 1714 ran to £1,759 4s 0½d, with arrack at 9s 0d per gallon the largest single line. Substantial fishing tackle, over fourteen hundred hooks, was issued as a deliberate response to cattle scarcity. [Film No. 322-324, 327-343]

Foreign relations were tested by three vessels in 1715. The French royal vessel *Jason* of 700 tons and 40 guns under Monsieur Dudemain arrived on 29 January 1715. Pyke's careful diplomatic forms, with seven guns answered by five, granted refreshment of goats, fowls, eggs and ten hogs in place of bees. The *St Lewis* under Captain Le Barn arrived on 19 February 1715; when her captain refused to fire so small a salute as three guns, Pyke sent two nimble men up the mountain to turn off the water at its source, and after a night carrying off empty casks the captain accepted the English method. The *Cardonnell* brought directors' letters in June 1715, but its master Mawson failed to deliver cargo within charter-party time. [Film No. 366-369, 376-378, 486, 493-496]

Judiciary and Civil Disputes

The council acted as the island's only court, proving wills, granting letters of administration, registering apprenticeship indentures and trying criminal cases. Where no written will existed, a nuncupative will was proved on sworn evidence, as for William Hayse in January 1713, but only after an inventory of the estate had been lodged. The Court of 2 September 1713 heard three substantive causes before twelve sworn freeholders with Ripin Wills as foreman. In *Powill v Girling* the jury found that a husband had no power to make over land that had come to his wife through her father's will, and ordered the 45 acres restored with costs, establishing the principle that a husband's general authority over his wife's land yielded to specific contrary terms in an earlier husband's will. The Wrangham declaration produced the opposite result on

different facts. The Carne dog-and-bull case extended a master's liability for slaves to damage by youths in the master's care acting with the master's animals. [Film No. 11-12, 28, 53, 69-70, 73-77]

The Snow-Powill slander case of October 1713 illustrated the council's tracing procedure. Powill complained that Rinedus Snow had broadcast a report that he had attempted to hang himself and been cut down by one of his own slaves. The tracing ran through five named persons without finding a fixed author; the council settled on Tompson as the most active repeater, ordering public apology, with public retraction substituting for monetary damages. The Court of Orphans on 2 September 1713 found the Beale and French orphan accounts very difficult and intricate; on 13 October Carne and Powill were ordered to choose two honest men each to methodise the accounts, replacing direct council determination with a contradictory audit. The arrangement collapsed when the arbitrators refused to act under a £500 bond. [Film No. 70, 72, 78-80]

The Court of 8 June 1714 sat to determine the Beale orphans' affairs, with a twelve-man jury under Ripin Wills as foreman. The jury worked through the consultation and account of 25 September 1710 prepared under Roberts, item by item. Verdicts were finely judged: £9 reduced to £6, but £35 confirmed for nine head of cattle, and £88 16s 0d for 74 timber trees disallowed entirely unless proof could be brought of timber cutting. The orphans' sixty acres were ordered fenced forthwith at Powill's charge. John Alexander, Clerk of the Council, was unanimously acquitted of his standing charge of £22 13s 3d on the demolished Beale country house, the jury accepting the timbers had been worm-eaten. The verdict functioned as a partial rehabilitation of Alexander against persistent accusations laid in the Roberts administration. [Film No. 148-153]

Pyke's administration inherited a substantial backlog of unresolved petitions from Boucher. The four-cornered Tovey-Gurgen-Alexander land dispute ran back to October 1709, when Richard Alexander, leaving the island, had encouraged Thomas Bagley to petition Governor Roberts for his house and land; Bagley received a 21-year lease. After Alexander died, his widow Marcy petitioned the Court of Directors, who ordered her restored; Boucher executed the order, ejecting Bagley and placing Marcy's new husband Thomas Gurgen in possession. Bagley died, and Tovey then married Bagley's widow, claiming the unexpired residue. The dispute is dense with irony: Tovey was simultaneously petitioner, council secretary, draftsman of the entries recording his own case, and signatory of the orders on it. George Carne's sworn certificate that he had heard Boucher declare at the Plantation House that what he had done against Bagley had been absolutely to oppose Roberts converted second-hand report into authenticated written witness. The case was deferred for fair copying and transmission to London. [Film No. 210, 213, 215, 216, 220-226, 230, 244]

On 19 November 1714 a contested title to land originally granted to Richard Alexander in 1693, lost through controverted eviction in December 1709, produced seven extended pleadings from John Alexander, Orlando Bagley and Richard Swallow as executors, Swallow personally, and Tovey himself. The case disclosed layered evidentiary tools of the period: freeholders' certificates as collective testimony, locally sworn depositions, original consultation entries, and sealed leases. The bench did not deliver a final ruling within the period covered; the matter was referred to London. [Film No. 265-283]

The Wood and Wills dispute of January 1714/15 illustrated the council's two-tier jurisdiction. Ruth Wood deposed that she had given her daughter Margaret £91 0s 0d on her marriage to Benjamin Wills on the promise of equivalent value, ten acres of land formerly James Easthope's, and a black slave. Benjamin died eighteen months into the marriage; Pipin Wills then repossessed it. With eleven witnesses on the two sides, the council found the matter too intricate for summary determination and referred it to the Court of Judicature. The general sessions of 7 February 1715 illustrated the racial gradation of punishment in worked example: Thomas Bevan was indicted for stealing a cane with a silver head valued at 7s 6d, and on Pyke's advice the jury found the value to be 10d only, keeping the offence below the 12d threshold for grand larceny, since Bevan was a white man. He received thirty-nine lashes. Three slave prosecutions followed immediately: Moll, Jenny and George. [Film No. 310-311, 350, 358-359]

The trial of William Bevar, midshipman of the *Aurengzebe*, on 24 January 1715 tested judicial procedure in full. He was indicted for contriving to steal away Abigail, a female slave valued at £50 0s 0d, belonging to

widow Grace Coulson. A mixed jury of twelve, four senior officers of the *Aurengzebe* under foreman George Westcott, four garrison sergeants and four planters, returned guilty and Pyke imposed a fine of £10 0s 0d only with admonition. The leniency exposed the practical limit of the court's reach over an outbound mariner whose detention would have disrupted the Indiaman's voyage. The contrast with Lucas Mason, severely whipped without trial, and Abigail, publicly whipped at the widow's insistence, was made openly. [Film No. 350-354]

The trial of Toby, a black slave belonging to the Steward orphans, on 10 May 1715 produced the most consequential judicial event of Pyke's first year. The prosecution was brought by Deputy Governor Haswell personally, who had married Steward's widow within about four months of his death. Goods found in Toby's quarters were said by Toby to have been given to him by Dolly, Haswell's own enslaved woman and his alleged wife. Pyke had privately advised Haswell on 4 May to let the matter rest as too frivolous for a man's life, but Haswell pressed for indictment in English form so that the slave could be hanged. At trial when Haswell called Dolly to give evidence, she identified Toby as her husband; Pyke read aloud from Dalton's Justice and from Sir Edward Coke to show that a wife could not be required to give evidence against her husband in a felony. The jury returned not guilty after a short consultation. The bench then issued two formal orders restraining Haswell from reflecting on the jury and requiring him to pay all charges of court, both authenticated by Tovey alone with Bazett's signature conspicuously absent. The bench had disciplined its own second member through a procedural device that confined the documentary record to the governor and the junior councillor. [Film No. 446, 450-459]

Powell's petition of 24 May 1715 against Haswell, brought before Haswell's face, accused him of tyranny and oppression under colour of office and of having endeavoured to destroy the slave Toby under colour of law. The bench refused to enter the substantive petition, supporting the executors in office while declining to discharge them. The dispute quietly dissolved on 7 June 1715 when the executors reported they were in a fair way of agreement with Haswell, the bench refusing to look over the papers produced and simply wishing them good success. The procedural manoeuvre avoided formal adjudication. [Film No. 470-477, 482]

The summer 1715 inquiry into the *Eagle Galley* mutiny produced one of the most thoroughly documented mutiny cases on the council books. On 29 June 1715 a letter from disaffected men of the Indiaman commanded by Captain Daniel Beeckman reached the marshal, complaining of want of Company allowance of arrack and provisions. When the bench tested the substance, the complaint collapsed: a piece of salt beef weighed in council ran from five and three-quarter to seven and a half pounds against a six-pound benchmark, rice was abundant, fresh meat distributed generously. Further depositions placed the matter beyond a victualling dispute: a lighted match found in the powder room at Batavia in late May 1714, the gunner's declaration he would never be easy till he saw the confusion of the ship, a thousand pounds missing first known only at Carry-Mon-Java, and an exchange overheard after the Cape in which the gunner had said it should be done in the same manner as it was to be done at Batavia. Six convergent officer depositions identified four warrant officer principals: boatswain Thomas Frances, gunner Thomas Clark, doctor's mate Alexander Adair and trumpeter William Wells. Despatching the prisoners proved difficult; Captain Hurst of the *Avarilla* refused on 3 August 1715 to take them, citing several men of similar character already in irons on his own vessel. The bench compromised by sending only Wells. [Film No. 513-530, 555-559]

Slavery and Coerced Labour

Slave labour saturated the records throughout the period, although the council did not name it as a separate theme in 1713. The drought emergency assumed each cooperating family had at least one slave to send fishing; the highway corvée counted every able-bodied male slave alongside every free male above sixteen; the head money assessed whites and blacks alike at 6d a head. Labour concentrations are clear: George Carne contributed twelve slaves to the corvée in 1713 and was assessed for eighteen blacks in a household of twenty-two. The treatment of slaves in the records is uneven: they appear as taxable units, as labour to be sent fishing, as the workforce of the fortifications, and occasionally as named individuals when implicated in matters before the council. Black Sam, a Company slave at the Hutts lookout, appears as the counterparty to Edward Mallard's buckles wager during the July 1713 conspiracy, his testimony unrecorded though his presence is noted by overseer Benjamin Miller. The council recognised slaves administratively

and economically without ever recording their voices, a silence that conditions any reading of the file. [Film No. 28, 33, 40-46, 56]

Through late 1713 the slave's confession of theft, given while under punishment for running away, was treated as sufficient to make Carne as master indemnifier for the property loss. The 307 yards of kersey at over thirty-three pounds drawn to the plantation account supplied bulk slave clothing on the consolidated estate; Indian dungarees, named for the working district near Bombay, were specifically supplied as slave shirts. Skilled slaves in critical positions received different treatment: the storekeeper's account for the single month ending 25 March 1714 contains an unusual entry of two pairs of English pumps to the black cook Tim and one pair of Spanish pumps to the black smith, named slaves receiving dress shoes at 5s the pair rather than bulk clothing. Nicholas Shreve, stone cutter at Sandy Bay, taught two of the Company's black boys to cut stone very well under a promised £10 fee, illustrating how skilled trades were transmitted through fixed training payments to free craftsmen. [Film No. 63, 65, 69, 78, 103, 143, 155]

The slave insurrection rumour of 2 June 1714 was the most serious matter of social order in Boucher's closing months. By beat of drum the council published an advertisement that a rumour had been spread that the slaves on the island had, or did lately, intend either by themselves or in concert with other evil and wicked disposed persons to act in an insurrection in a barbarous manner. The council acknowledged there was too little ground to fix the intent on any individual, and offered a handsome reward and full immunity to any informer, white or black, who could substantiate the rumour. The timing, six days after Boucher's declaration of his intended departure, points to a working concern about the security of the island during the interregnum. The advertisement's extension of evidentiary standing to slaves as informers against free persons reflects an established working procedure on a small island where racial categories did not exhaust the lines of evidence the council was prepared to take. [Film No. 147]

On 10 July 1714 the 47 slaves landed from Sitwell's sloop *Mercury* from Antigua were inspected by the new surgeon in the council's presence and classified as merchantable: 27 men and 15 women passed (42 in all), with one man and three women returned as not merchantable. Mashborne's slave roster of 24 August 1714 placed seventy-six across all establishments: ten each at Lufkin's and the Plantation House, four for the new ground, seven in the garden, three at the vineyard, three to wash, three to fetch wood, two carpenters, two wall makers, two for hogs, four past labour, seven children, two to fish, three each at Perkins and Norden, eight at the Hutts. The surveyors estimated thirty-four more were wanting to bring cultivation to full strength. Two slave cases came before the council: Thomas Perkins was permitted on 13 July 1714 to sell three slaves on the express condition that Jack, an old thief and house breaker, be carried off the island. In the Pompey case of 10 August 1714 the council found for Robert Marsh on his written bill of sale against Cason's claim on an oral disposition by Boucher, applying a clear preference for documentary over verbal evidence. [Film No. 164, 167-168, 187-189, 196-201]

The Carne settlement of December 1714 valued twenty-nine slaves at £290, giving an average of £10 per head as the standard market price, exceeding the value of his developed land and constituting the largest single capital category in his estate. The hundred lashes ordered on the naked body of Moll, a slave wench, on 2 December 1714 for entering Samuel Algate's house and taking two slices of beef worth at most a pound, set against Thompson's forty lashes for a serious riot and the wounding of a fellow soldier, exposes how the punishment scale for slaves diverged sharply from that for soldiers. The prohibition on bartering with slaves was enforced through a fifteen-shilling fine on Renatus Snow for bartering for lemons with Clove, a slave of Thomas Frey, with Snow committed and the slave also punished. [Film No. 264, 286, 288, 296]

The church rate of 1714, levied at 6d per head on every white and black member of a household over sixteen, gave a uniquely full snapshot. The total was 158 whites and 206 blacks, 364 persons in all. The 1.30 to 1 ratio of black to white indicates a colony in which slave labour formed a substantial majority of the working-age population. Slaves were concentrated in a small number of large households: George Carne held fourteen, Gabriel Powell ten, the chaplain Joshua Tomlinson eight. The widow Coulson's argument that the loss of a slave on the island was of much greater consequence than in many other places framed slave property as a public concern. [Film No. 344-348]

The labour combination of 18 January 1714/15 is the clearest sign of the use of debt as an instrument of discipline. The stone-layers had agreed to refuse work at less than 5s 0d a day. Pyke ordered a writ against Walter Morris, the combination's most exposed member, £38 0s 0d in Company debt. Morris settled by selling a slave named Nick for £25 0s 0d, with the balance discharged in yams. Pyke then engaged others at 3s 0d a day, below the previous settled rate, breaking the strike through financial rather than disciplinary means. The 1714 census recorded 60 slaves against 91 whites on one page, with slave men more than ten times the number of slave women, reflecting Company practice of purchasing predominantly male slaves at Madagascar and the Guinea coast and leaving the slave population unable to reproduce itself. George the runaway was sentenced to whipping, a fifty-pound chain and clog, then transferred from one owner to another as part of a civil judgment, an episode that lays bare the absolute commodification of the enslaved person. [Film No. 320, 360-364, 376, 392-393]

Through 1715 the management of Company slaves continued. On 19 April 1715 the surgeon complained that Murdoc and John Batavia had been pursuing the enslaved women across the country and spreading a venereal distemper; the governor proposed they be fettered together with a chain of about six feet long, as the custom of the Dutch at Batavia. The name John Batavia marks the mixed sources from which the Company drew its labour. Henry Harmon the gardener was tied to the flagstaff on 26 April 1715 and given forty lashes for stealing wood from the Company garden. The standing letting conditions of 24 May 1715 required prospective tenants to hold at least one black, treating slave ownership as the operational threshold for plantation viability. On 26 July 1715 Tovey was directed to enquire into all Company slaves let out, to whom and whether their terms had expired. The licensed drink trade absolutely excluded slaves: Beale's licence under the Lords Proprietors' seal of 5 July 1715 ordered not to trade with nor entertain any blacks on any pretence whatsoever. [Film No. 431-440, 460-461, 532-534, 539, 553, 561]

Finance, Wages and the Store Economy

Almost every transaction was denominated in pounds, shillings and pence, but cash itself was scarce. The economy ran on the store books at the United Castle, in which wages, debts and credits were entered and settled by ledger rather than by coin. Standard rates emerge clearly: 8 per cent interest per year on bonds, 5s an acre for waste land leases, 14s an acre for established wood land at Tomstone Wood, around £5 per acre for cultivated freehold, and 1s 6d a day for unskilled labour whether white or black. The head money of 1713 brought in £8 18s 6d across 357 assessed persons. The 1713 store book was the working leverage by which soldiers' labour could be redirected. Standard interest on Company store credit was 8 per cent per annum, observed in the £50 loan to quarter gunner Samuel Jessey on bond on 2 February 1714. Settlement of arrears was customarily made by credit to a personal account rather than in cash, preserving the working cash balance at the Castle. [Film No. 11, 24, 27-28, 42, 111-112, 155]

The two-month account for 25 October to 25 December 1713 totalled £1,070 6s 7½d, of which over 85 per cent ran on the inhabitants column. Subsequent accounts fell to £641 6s 11½d for December-February and £207 12s 1¼d for the single month February-March 1714 on the shorter form Bazett adopted under post-interrogation pressure. Several conventions of working finance recur: remittances between the island and England operated through the Company's London accounts, used as in the order of 24 June 1714 to deduct £15 yearly from Nicholas Shreve's salary for payment to his wife. Charles Steward's bill of £22 15s 0d for goods supplied to furnish the Fort house at Boucher's first coming, never paid for and now settled by credit on the eve of departure, illustrates how private suppliers regularly carried the cost of fitting out the Governor's household for years before formal council orders converted the debts into store entries. [Film No. 113-128, 134-144, 155]

Pyke's administration constructed a three-stage credit recovery programme. On 16 July 1714 no person whose name appeared in the Company's books could be granted leave to depart until accounts were settled. On 17 August 1714 a general advertisement required all account-holders to settle. On 24 August 1714 a debt-conversion scheme offered a planter with debts above £20 paying £4 cash £5 of credit, or alternatively discharge through labour at the fortifications at the same effective rate. By 14 September 1714 the council named principal debtors above £20 and gave them fourteen days. The General Table was sharply reduced

to Governor, Deputy Governor and Chaplain alone. Soldiers were limited to three months' pay on credit at any one time. [Film No. 171, 191-192, 198-199, 209]

On 2 and 3 November 1714 more than thirty named debtors brought proposals before the council, paid almost entirely in kind: yams, beans, slaves to work, fowls, breeding sows, cattle, shoes at fixed rates, and labour. Thomas Free augmented his offer with household silver plate valued at about £50. George Carne, the largest single debtor at over £700 between store account and bond, proposed clearance through credit due (£110), plate (£80), slaves (£90), breeding cattle (£25), goats (£50), lands (£200) and continuing slave labour. The proposals expose with bleak clarity the agricultural devastation of the 1712-13 drought. James Draper had lost all his cattle but two. Christopher Kelley had had 19 cows; 14 died of the dry conditions, the remaining five were too eager at a steep watering place, the foremost fell, and the other four were beaten down with broken necks. Sutton Isaack junior had lost 14 of 17 cattle and all 60 hogs. Several inhabitants offered family members as part of their settlement: Thomas Burnham proposed his thirteen-year-old son be enlisted as a soldier; Dorothy Hayse offered her son Francis. [Film No. 233-237, 239]

On 4 November 1714 the council entered a comprehensive abstract of debts due to the Company, alphabetically organised, recording roughly 130 named debtors. Substantial entries included George Carne at combined £708, John Knipe at £371 3s 4d, William Porteous at £228 19s 8³/₄d, William Gore at £166 13s 8³/₄d. The corresponding schedule of debts due from the Company to inhabitants totalled £1,432 4s 8¹/₄d, with the largest entries belonging to Charles Steward (£261), Gabriel Powell (£257), the Keeling family combined (£321), and Bazett himself at £174. The structural awkwardness of the storekeeper certifying balances in his own favour passed without comment. The two abstracts captured a credit economy operating largely without cash, with the Company functioning as both employer and supplier. [Film No. 246-252]

On 21 December 1714 Pyke experimentally issued signed bank bills to the value of twenty pounds, an early attempt at paper currency intended to address the chronic shortage of coin that arriving Indiamen drained as fast as it accumulated. On 15 March 1715 the council issued a fuller local paper currency: 30 bills at 40s, 40 at 20s, 40 at 5s and 60 at 2s 6d, totalling £117 10s 0d, each authenticated by all five councillors and the governor accountable for them as cash. An advertisement of 22 March 1715 promised silver redemption at par and threatened severe punishment of public house keepers who undervalued the notes. The bills-of-exchange reform of summer 1715 was tested directly on 9 August when the *Avarilla* purser sought a small bill home for twenty-eight pounds, offering half in goods; the bench's initial willingness was struck through in the consultation book and the refusal sustained, a striking example of institutional self-discipline. [Film No. 263, 300-301, 388-391, 538, 543, 559]

Religion, Education and Parish Affairs

On 9 June 1713 the council renewed the annual round of civic appointments. The outgoing churchwardens Ripin Wills and Thomas Yargen presented two years' accounts for the two churches, the country church and the church in James Valley, and were discharged. James Draper and Francis Wrangham were appointed under a detailed warrant combining custody of vestments, accounting for gifts, identifying the poor, supervising the sexton and acting as moral informants against sabbath breakers, swearers, drunkards and whoremongers. The same sitting installed John Robinson and Sutton Isaack junior as highway overseers. The minister was Joshua Thomlinson, but the religious establishment was thin: two buildings, a sexton, and the head money to support them. [Film No. 36-38]

Public worship had collapsed under the closing months of Boucher to the point that few or none had appeared at church on the Lord's day other than the Governor and Council. On 10 August 1714 Pyke required every person in Company service who lived in the valley to attend, beginning with the population most directly subject to Company discipline. The Chaplain was preserved at the General Table when all others were moved to board wages, confirming the office as one of the three substantive entitlements of the senior establishment alongside Governor and Deputy Governor. Provision for religious instruction and elementary literacy ran through the storekeeper's accounts in small numbers of primers, horn books and testaments: six horn books, three primers and four testaments in the December 1713 account; seven

primers, ten horn books and three testaments in the February-March 1714 account. These describe a household-level economy of literacy rather than any institutional school. [Film No. 113, 125, 169, 186]

The chaplain Joshua Tomlinson was both spiritual head and significant slaveholder, with his stipend supplemented by head money collected by the wardens James Draper and Francis Wrangham under the warrant of 18 January 1714/15. The wardens could seize and sell at outcry the goods of any household head who refused to pay. Parish finance was settled on 17 May 1715 through confirmation of a poll tax to clear the church debt of £40. The rate was two shillings and sixpence on every white and black above sixteen, with a pauper exemption set at sixpence on certificate. Company servants holding plantations were specifically required to pay head money as other planters, closing a loophole. The two-tier structure scaled the burden to capacity to pay. The advertisement of 13 April 1715 had reset the parish offices, calling inhabitants to the country church on 18 April to choose churchwardens and overseers of the highways. [Film No. 344, 357, 428, 431-432, 436-437, 460-461]

Personalities

Matthew Bazett threads the whole period as the central administrative figure. He was dismissed in October 1712 for character failings, restored as third in council by December 1712, surveyor through the whole 1713 registration programme, second in council after Pack's death, custodian of the store books and the first to receive the July 1713 mutiny information. He refused to sign the general letter to the directors on 1 April 1714 but cleared Boucher on 27 May. Retained by Pyke as fourth in council, and elevated to third on Mashborne's death, he carried the store books with continuing arrears, and his own credit balance was the largest individual on the November 1714 books. His structural position as both auditor and audited was never quite resolved. [Film No. 30, 32, 48, 130-133, 232, 251, 505]

Benjamin Boucher, Governor through July 1714, departed on 28 June 1714 in the *Recovery* under Captain Richard Heathfield, ten days before his successor arrived, having stripped the Fort of its portable hardware down to the locks and keys of the doors. His calculated departure ten days before any successor could audit him is itself the strongest evidence of how the outgoing Governor understood his own record. Haswell's formal schedule of 3 November 1714 identified £156 19s 6d of items Boucher had converted to his own use, including wine carried off in his own ship to French shipping at £19 8s 6d. The choice of French shipping was especially sensitive: the war had only just concluded. [Film No. 155, 158, 222-223]

Isaac Pyke emerges as a methodical, calendaring administrator: a new lime kiln, a new goat pound, a fence survey, paper bank bills, new standing rules on credit, regularised general sittings and musters. His care to record the deterrent purpose of the small Bevar fine, and his open statement that Bevan was spared the gallows partly because he was a white man, suggest a governor self-conscious about how the record would read to the Lords Proprietors. He preferred composition to confrontation, shielding his deputy from formal proceedings while quietly enabling protective orders, applied quiet material pressure (as with the *St Lewis* water diversion) and used the threat of severe but unspecified punishment as a disciplinary instrument. [Film No. 320, 350-354, 367, 442-443, 451-459]

George Haswell, Deputy Governor, appears in two registers. He signed routine consultation entries while standing as the subject of accusations of tyranny, threats of personal violence and abuse of office. He dragged the slave Toby to the fort with a rope about his neck, pressed for a capital indictment over a trifling theft, insisted on English procedure in the hope of a hanging, made objection against the discreet planter Coles as a juror, paraded his own enslaved woman Dolly as a witness, denounced the jury as packed and walked out in a fury. The bench then formally restrained him. The selective signing of orders against him through summer 1715 confirms the underlying tensions. [Film No. 446, 451-459, 470-477]

Antipas Tovey, Secretary, was simultaneously the fourth in council and the most prolific documentary figure. He stood as petitioner in the major Bagley-Alexander land dispute heard at the same table where he signed orders. Reprimanded by Pyke for having no ink for a fortnight and wanting candles, he nonetheless authenticated almost every consequential consultation entry. His name became the procedural seal of the bench's discipline of its own second member when, on Pyke's direction, he alone signed the orders against Haswell after the Toby trial. [Film No. 232, 262, 302, 451-459]

George Carne, the consolidating planter, embodied the substantial planter class. His marriage to Captain Thomas Goodwin's widow brought eighty acres into his hands, his household by June 1713 stood at twenty-two souls. By November 1714 his combined debt of over £700 was the largest single Company exposure, discharged through an extraordinary asset schedule combining land, livestock, twenty-nine slaves, plate and personal effects. He was twice fined for supplying beef in three bags to the French *Jason* against published order. His sworn certificate of overheard Boucher conversation about Bagley's eviction was the most consequential single document of late 1714. His correspondence of St David's Day 1715 pleading ill health and seeking to lay down the guardianship of the Beals reveals the strain on a substantial planter. [Film No. 32, 226, 285, 288, 296, 367, 371, 389]

Other recurring figures shape the record. Gabriel Powill, freeholder, emerged as one of the principal litigating freeholders of the year 1713 and afterwards as executor of Charles Steward. John Alexander, Clerk and later executor, framed his interventions in fiduciary language while pressing cases that discomfited his successor in office. Edward Mashborne supplied the practical expertise on plantations, livestock and procurement on returning in July 1714 after three years' absence, before his death on 31 March 1715. Captain Richard Pinnell of the *Susanna* was the disciplined external counterparty, ensuring through three carefully drafted letters that every consequential exchange with the council was recorded for London. Mr Swartz, chief supercargo of the *Borneo*, was the most colourful figure of summer 1715: his grievance over precedence at the proclamation dinner expanded into a satirical paper attacking the constitutional foundations of the administration. [Film No. 67-78, 226, 251, 258-259, 506-509]

Conclusion

The thirty months from January 1713 to August 1715 record a small Company outpost passing through three connected transitions: the closing year of Boucher's administration, the death of Pack and the consequent thinning of the council, and the reconstruction of administrative discipline under Pyke. The 1713 registration programme converted decades of informal landholding into a consolidated documentary record. The drought response shifted the council from regulator to active provisioner. The July 1713 mutiny was pre-empted without bloodshed. The Pyke recovery programme of 1714-15 combined inventories, advertisements, debt-conversion schemes, paper currency experiments and the documentary assembly of a case against the previous governor for transmission to London. The proclamation of George I on 11 June 1715, the suspension of fortification works after the Peace of Utrecht, the cow-saving order, the *Eagle Galley* mutiny inquiry and the Swartz libel together describe a small administration responding methodically to metropolitan instruction and to political moment alike. [Film No. 33, 49, 145-159, 487, 510-569]

The official record naturally serves the council's purposes. It leaves silences where its subjects could not speak: the slaves named only as units of assessment, as witnesses to others' wagers or as items of debt settlement; the orphans whose interests depended on the good faith of their stepfathers; the soldiers whose grievances became audible only when they crossed into conspiracy; the women who appear in the record largely through their husbands or fathers. The consultation books were the bench's instrument of communication with the Lords Proprietors, and entries were composed with that audience in mind. The selective signing of orders against Haswell through 1715, the margin notes excluding particular petitions, the refusal to inspect papers when private settlement was preferred, the deferral of inquiries when their pursuit might prove inconvenient, all suggest a bench actively shaping the record. Within these limits the material provides exceptionally rich evidence of how a chartered company governed a remote South Atlantic island in the early eighteenth century, with the war in Europe and the Hanoverian succession both made tangible only at the distance of arriving cargoes and delayed proclamation. [Film No. 11, 33, 49, 58, 235, 252, 487, 506-509]

10	1	Island S[t] Helena, At a Consultation Held on Tues- day the 6[th] day of January 17 12/13 At the United Castle in James Valley Pres[t]: Benj[a] Boucher Esq[r] Gov[er]n[r] John Pack Deputy Gov[er]n[r] Matheu[w] Bazett 3[d] in Coun[ll] Lieu[tt] Thom[s] Cason John French Assistants Thomas Burnham free Planter presented his Petition this day Setting forth That haveing bin Imploy[d] as a Stone Layer at the Fortifi[c]a[tion] on [...] for some years and haveing but one black could by no possible means fence in his Land According to the Hono[u]ble Companys orders Wherefore Humbly Prays a Longer Time may be granted him for Fencing in Said Land, Upon consideration of the said Burnhams being Imploy[d] as abovesaid and his Circumstances Very mean Ordered He be Allowed Twelve months time Longer for I[?] fencing his said Land Haveing given Notice that the Land formerly Marshes and Hunts would be disposed of to the highest bidder, Whereupon Jonathan Duston free planter appeared and desired to know the Lowest Price, offering to give as much as any Person, the said Land Lying very Convenient and Contiguous to his own who being told the Price and that the Provisions in both Plan- tations were to be for the Honour[bel] Companys own use Came to the agreement following That Margin Notes: Tho[s] Burnham desires time to fence in his Land allowed	The council met at the United Castle in James Valley on Tuesday 6 January 1713. Those present were Benjamin Boucher, Governor; John Pack, Deputy Governor; Matthew Bazett, third in council; and Lieutenant Thomas Cason and John French as assistants. Thomas Burnham, free planter, presented a petition explaining that he had worked as a stone layer at the fortifications for some years and owned only one slave. He could not fence in his land within the time required by the Company's orders, and asked for an extension. The council considered his employment and his poor circumstances. He was granted twelve further months to complete the fencing. Notice had earlier been given that the land formerly held by Marsh and Hunt would be sold to the highest bidder. Jonathan Duston, free planter, came forward and asked the lowest price the council would accept, offering to match any other bidder. The two plantations adjoined his own and lay conveniently for him. The council told him the price and made clear that the provisions standing on both plantations were reserved for the Company's own use. On those terms Duston agreed to the purchase. Interpretations The twelve-month fencing extension granted to Burnham shows how the council managed the tension between strict enforcement of fencing law and the practical limits of planter labour. A stone layer in continuous Company employment with a single slave could not realistically meet the fencing deadline announced in November 1712. Rather than seize the land for default, the council suspended the penalty for an identifiable class of planter, those whose labour was already committed to public works. The exception preserved both the rule and the workforce. The disposal of the Marsh and Hunt lands by competitive offer rather than fixed price represents a further refinement of the consolidation programme. The land had been purchased into Company hands during 1711 to build the contiguous estate around the Hutts. Selling the cultivated ground while retaining the standing provisions allowed the council to recover capital, place the soil with a planter willing to work it and keep the food supply in reserve for the garrison and the Company's slaves. Reservation of the provisions converted what would otherwise be an outright sale into a hybrid transaction in which the Company kept the

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
		Mon[s][r] Duston his desire to buy Marsh [...] [...] Land	immediate yield and parted only with the long-term tenure. Duston's position as a contiguous landholder explains why the council was prepared to accept his offer rather than wait for a fuller market. Adjacency lowered the cost of fencing and management for the buyer, but it also relieved the Company of the burden of working an outlying parcel under a reeve. The sale exemplifies the council's preference, visible across 1711 and 1712, for disposing of remote ground while concentrating its own holdings around the Hutts and Plantation House. Speculations Burnham's petition probably came forward at this moment because the survey deadline of 25 March 1713 was approaching and he had no realistic prospect of completing the work in time. By asking for relief in January rather than waiting to be cited in default, he secured a documented exception that would protect him at the audit and preserve his title. The decision to admit Duston's offer without a public outcry suggests that the council had concluded the Marsh and Hunt lands would not attract a competitive field. With several recently bought plantations on its hands and no fresh applicants able to take on large parcels, an immediate sale to a known adjoining planter at an agreed price was perhaps the most efficient route to clearing the asset from the Company's books.
11	2	That the said Jonathan Duston should have Sixty Acres of Land formerly Marshes and Thirty Acres that was Hunts for the Sume of Four Hundred Sixty Pound Eighteen Shillings out of which to Allow[d] three Pound Twelve Shillings for Securing the Provisions from the Damage of Cattle the fences at present being very bad. And that the said Duston Pay the Hono[u][ble] Company as much of Said Sume as Conven- iently he can at or Upon the 25 of March next and what remains unpaid to give bond for Paying Eight per Cent per annum Interest which we think a very good Bargaine for the Advantage of our Honoura[ble] Masters and hope they will think So to. Sutton Isaack Sen[r] and free Planter Exhibited a Petition this day representing therein that he had out of Pitty & Charity one of his Grand Sons Edward Collier brought him up from an Infant to the age of fourteen years without the Least Satisfacti- on, and he himselfe being very antient and past his Labour besides the Standing indebted to the Honoura[ble] Company for Severall Necessaries and but in a low and mean Condition Humbly Prays we would receive and Entertain the said Edward Collier as a Soldier in the said Comp[a][s] Service, whose Sallary will be a very great help to him and means of Lessening his said debt. Considering the said Sutton Isaack hath bin a very Industrious man (the Sow[?] in the world now[?]) and a good Liver on this Place, Ordered.	Jonathan Duston agreed to take the 60 acres formerly belonging to Marsh and the 30 acres that had been Hunt's, for the sum of £460 18s 0d. From that sum the council allowed £3 12s 0d for protecting the standing provisions against damage from cattle, the fences being in poor condition. Duston was to pay the Company as much of the price as he could conveniently raise by 25 March next, and to give bond for the balance at 8 per cent interest per annum. The council recorded its view that the terms made a good bargain for the Honourable Masters. Sutton Isaack senior, free planter, presented a petition explaining that out of pity and charity he had brought up one of his grandsons, Edward Collier, from infancy to the age of fourteen, without receiving any payment. He was now elderly and past his labour, owed the Company for various necessities, and lived in poor circumstances. He asked the council to take Edward Collier into the Company's service as a soldier, since the salary would help him and reduce his debt. The council took into account Sutton Isaack's reputation as an industrious man and a settled inhabitant, and ordered that Edward Collier be entered as a soldier as his grandfather had asked. Isabell Hayse presented a petition stating that her late husband William Hayse had died without leaving a written will. She asked the council to examine Sutton Isaack senior and Thomas Hayse junior on oath as to what they had heard her husband say on his deathbed, so that his wishes could be recorded as a verbal will and used to settle his estate. The council ordered that this be done. Interpretations The Duston purchase fixes a working price for substantial cultivated land around the Hutts at just over £5 0s 0d per acre, with the standing provisions retained by the Company subject to a fence-repair allowance against the purchaser's account. The allowance of £3 12s 0d is small in proportion to the total, but it records a deliberate adjustment for risk transfer: cattle were already on the ground, and the Company would lose its reserved crop unless the new tenant secured the boundary. The credit arrangement, with as much as conveniently payable on Lady Day and the residue on bond at the standard 8 per cent island rate, shows the

		That the said Edward Collier be Entertained as a Soldier accord- ing to his Grandfathers request. Isabell Hayse represented by Petition That her deceased Husband William Hayse dying without any Will in Writing Humbly Prays that Sutton Isaack Sen[r] and Thomas Hayse Jun[r] might be Examin[d] on Oath to Declare what they heard he[r] said Husband Say on his death bed In Order to the Settling & Disposeing of his Estate, and the Same recorded as a Verball Will Ordered Margin Notes: Dustons agreement for Hunt & Mashers Land Sutton Isaack request to Entertain Ed[d]. Collier as a Sold[r] Granted Will[m] Hayse Verball Will [...] desired to be Proved	council using deferred terms to move a large parcel out of its own management without waiting for a cash buyer. Sutton Isaack's petition reveals the working pattern by which the garrison absorbed dependent youths from indebted planter households. Edward Collier's enrolment as a soldier converted a private maintenance burden into a public salary that could be set against his grandfather's store-book debt. The mechanism allowed the Company to recover advances made through its store while keeping an able young man on the island, and gave the household a recognised path out of insolvency without forcing the surrender of land. Isabell Hayse's request brings forward the standard procedure for proving a nuncupative will. With no written instrument, the council relied on sworn evidence from two named witnesses who had been present at the deathbed. Once recorded, the depositions would have the same effect as a written will for the purposes of settling the estate. The procedure had earlier been applied to soldiers' estates such as John Henson's in early 1712, and is now extended to a free planter household, confirming the council's role as the island's substitute for an ecclesiastical probate court. Speculations The price calculation on the Marsh and Hunt lands suggests the council was working to a target close to recovery of cost. The Company had paid £300 0s 0d for Marsh's 58 acres in November 1711 and £250 0s 0d for Hunt's 30-acre plantation with cattle in December 1710, a combined outlay of £550 0s 0d before the cattle and standing yams were stripped out. Selling 90 acres at £460 18s 0d after the harvest of two years of provisions and the removal of stock recovered most of the original capital and probably reflected a deliberate calculation that the Company would gain more by capitalising the provision reserve than by retaining outlying ground under a reeve. Sutton Isaack's careful framing of his grandson's case in terms of debt and length of unpaid care points to a settled understanding among indebted planters that the council would respond to such petitions where the household had a reputation for industry. The mention of the store-book debt is unlikely to be incidental; by linking the request to a specific outstanding liability, the petitioner gave the council an institutional reason to grant the favour, since the new soldier's pay would be channelled through the same store account that recorded the debt.
12	3	Ordered. That the Weddow bring in first an Inventory of her deceased Husbands Estate and then the beforename[d] Persons to be Examind and Sworne According to her Desire Isaack Wood Corporall represented by Petition that he had fenced in a Parcell of Land Lately bought of Giles Hayse as also another Peece [Hired?] of the Honoura[ble] Company Humbly prays the same may be Measured and that a Deed and Lease be granted as well for said Land as that at Present possesses in right of his wife. Likewise Humphrey Edwards free planter Humbly Petitions that he might be Establishd in his Land haveing fenced the same according to Law Ordered That a Warrant be drawn and Issued out to M[r] Bazett to Measure the Said Wood & Edwards Land According to their desires.	The council ordered that the widow first bring in an inventory of her late husband's estate. The named witnesses would then be examined and sworn in accordance with her request. Isaack Wood, corporal, presented a petition. He had fenced in a parcel of land lately bought from Giles Hayse, and another piece hired from the Company. He asked that both be measured and that a deed and lease be granted for them, together with the land he already held in right of his wife. Humphrey Edwards, free planter, also petitioned to be established in his land, having fenced it as the law required. The council ordered that a warrant be drawn and issued to Mr Bazett to measure Wood's and Edwards's land as they had requested. Thursday 15 January 1713 was set as the day for examining the titles of all land already measured, and for issuing the deeds. Mr Bazett was directed to press on with the measurement of every parcel for which he held a warrant. So that the inhabitants would know when to attend, the council ordered the following notice to be published by beat of drum: Island of St Helena. By the Governor and Council. An advertisement.

		Ordered That Thursday the 15 Instant be appointed to Examine into the Titles of all Land that are Already Measured and Deeds thereof &c. by that time And that M[r] Bazett do forward the Measureing all Such Land he has now Warrants for and that People may know who to attend the Councill tis thought fit the following Advertisement be Published by beat of Drum to give Notice Accordingly Island S[t] Helena. By the Govern[r] and Councill An Advertizement These are to give Notice that the Govern[r] and Councill both Intend to Meet in Consultation at the United Castle in James Valley on Thursday the 15 Instant In order to the Examining into the Titles of free Land. Therefore those Persons who has Lately had their Lands Measured and as no Deeds for the Same, Are hereby required to attend the Councill on day aforesaid by nine of the Clock forenoone with what Wrideings they have to produce and there Titles to[?] Said[?] Margin Notes: The Wid[w] to bring in first an Inventory [...] Wood desires deeds & Leases for his Land Likewise Hum[y] Edwards The Surveyor to measure y[e] same Titles of Land to be Examin[d] and M[r] Bazett to Survey all Speedily Notice given Advertisem[t] for meeting on land y[e] 15 Jan[y] 17 12/13	Notice is given that the Governor and Council intend to meet in consultation at the United Castle in James Valley on Thursday 15 January 1713, to examine the titles of free land. Those who had recently had their lands measured but as yet held no deeds for them were required to attend the council that day by nine in the forenoon, bringing whatever writings they had to produce in support of their titles. Interpretations The order that the widow lodge an inventory before the witnesses were sworn shows the council reversing the natural sequence of a probate by oath. Sworn evidence of a dying man's wishes is of little value unless the assets in question are first identified. Requiring the inventory in advance protected the council from being asked to ratify a verbal disposition over goods that the estate did not in fact contain, and gave the witnesses a fixed schedule against which to direct their recollection. The procedure functions as a check on the evidential weakness of a nuncupative will, anchoring oral testimony to a written record of the property. Wood's petition illustrates how a single planter's tenure on the island could combine three distinct legal positions in one holding. The freehold portion bought from Giles Hayse required a deed of conveyance, the parcel hired from the Company required a lease, and the ground he occupied in right of his wife required confirmation through the council's records. The council's response, a single warrant to the surveyor for the whole holding, treats measurement as the foundation step common to all three, with the documentary instruments to be issued once the boundaries are fixed. The decision to set 15 January 1713 as a dedicated title day, with a public advertisement by beat of drum and a fixed hour of attendance, formalises a procedure that had previously been handled piecemeal at successive council days. Concentrating the title work into a single sitting allowed the council to process the backlog efficiently while reminding the inhabitants that the 25 March 1713 survey deadline was approaching. The advertisement also gave individual planters an institutional reason to bring forward their writings, since a missed sitting risked default on the wider fencing and survey programme. Speculations The pressure on Bazett to forward the measurement work appears to be driven less by the present cluster of petitions than by the approaching end of the administrative year. With the survey deadline only ten weeks off and the council reduced to a small working complement, the dedicated title day was probably timed to give the surveyor a clear horizon against which to allocate his remaining time, and to give the planters a final visible opportunity to comply. The choice of nine in the forenoon as the attendance hour is probably significant. It signals that the council expected substantial business and intended to dispose of titles in a single working day rather than spread them across a sequence of sittings. The public advertisement by beat of drum, rather than by individual notice, suggests that the council was deliberately addressing the body of inhabitants as a whole, in order to draw forward holders of unrecorded or contested titles who might otherwise have remained silent until challenged.
13	4	Said Land, That Deeds and Leases may be given out the Councill Day following of which all Persons concern[d] are to take Notice Accordingly. Dated at the United Castle in James Valley this 9[th] day of January 17 12/13. Sign[d] p[er] order of Govern[r] and Councill.	Their lands were to be put through this examination so that deeds and leases could be issued at the next council day. All those concerned were to take notice. The advertisement was dated at the United Castle in James Valley, 9 January 1713, and signed by order of

		p me Jn[o] Alexander Acc[ot]nt[t] 16 Island S[t] Helena. At a Consultation Held on Thurs- day the 15 day of January 17 12/13 At the United Castle in James Valley Pres[t] Benj[a] Boucher Esq[r] Gov[er]no[r] John Pack Dep[ty] Govern[r] Matt[he]u Bazett 3 in Coun[ll] Lieut[t] Thom[s] Cason John French Assist[ts] According to an Advertizement Issued out the 9 Instant The Govern[r] & Councill Mett this day to Examine into the Title of those Persons Land Lately Measured and first. Charles Steward appeared in the behalfe of Maxwells orphans and produced a Bill of Sale from Elizabeth Bostock for Twenty Acres of Land Sold James Greentree who Sold the Same to Samuell Maxwell and Onesiphorus Steward both deceased The Plott or Plan of which Land being alreadie brought into the Clerks Office The[?] [...] of her former husband Mr Church[?] Margin Notes: Land Thom[s] [...] Measured & titles prove[d] as follo[ws] S[t] Cha[s] Steward appeared in Maxwells orph[s] behalfe	the Governor and Council by John Alexander, Accountant 16. Island of St Helena. The council met at the United Castle in James Valley on Thursday 15 January 1713. Those present were Benjamin Boucher, Governor; John Pack, Deputy Governor; Matthew Bazett, third in council; and Lieutenant Thomas Cason and John French as assistants. In accordance with the advertisement of 9 January 1713, the council met to examine the titles of those whose lands had recently been measured. Charles Steward came forward on behalf of Maxwell's orphans. He produced a bill of sale from Elizabeth Bostock for 20 acres of land, sold to James Greentree, who in turn sold the same to Samuel Maxwell and Onesiphorus Steward, both now deceased. The plan of the land had already been brought into the clerk's office. A reference was made to Elizabeth Bostock's former husband, Mr Church, in connection with her title to the land before its first sale. Interpretations The title day procedure that opens the 15 January 1713 sitting shows the council operating as a registry of land transactions rather than as an adjudicator of fresh disputes. The plan deposited with the clerk before the hearing is the controlling document; the oral and documentary evidence brought to council is fitted against it. This sequence, plan first, evidence second, deeds and leases issued at the following council day, is the form into which the wider survey and registration programme has now settled. The Maxwell case illustrates how trustee planters acted on behalf of orphan estates within the registration system. Charles Steward, husband of one of the Steward family and connected to the holding through his late father-in-law Onesiphorus Steward, came forward not in his own right but to secure the orphans' title against the approaching survey deadline. The mechanism allowed minor heirs to be carried through the registration process without having to appear themselves, while keeping the title work within the same procedural framework as that of adult planters. The chain of conveyance from Elizabeth Bostock through James Greentree to Maxwell and Onesiphorus Steward, with reference to Bostock's earlier marriage to Mr Church, shows the council relying on remembered marriage history to fix the origin of a title where the original deed of grant could no longer be produced. The recurrence of named intermediaries from earlier sales in the records suggests that the council had built a working memory of the principal lot lands, against which fresh title claims could be tested even in the absence of complete documentary chains. Speculations The decision to take the Maxwell orphan case first probably reflected the council's wish to dispose of the most procedurally straightforward titles before turning to those where competing claims or missing deeds would require more discussion. With the orphans' bill of sale and plan both already on file, the case offered a clean opening that set a working standard for the day's proceedings. The reference to Bostock's former husband is unlikely to have been incidental. By recording the prior marriage on the council's books, the council preserved a future defence against any claim that might be brought by descendants of the earlier household, and ensured that the orphans' title rested on a marriage-to-marriage chain that could be reconstructed from the council's own records if challenged.
14	5	The said Charles Steward in behalfe of himselfe Laid Claim to Seven-	Charles Steward then put forward his own claim to 17 acres of land in four parts.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
		teen Acres of Land produceing first a bill of Sale from James Wilson for two Acres of Land gave him by his Sister Martha Wilson, which was Part of Twenty Acres given her by her father Andrew Wilson. Secondly Laid claime to Ten Acres more he formerly bought of Richard Griffin a free planter who had the Same upon Marriage with Elinor a Daughter of John Coverlee Sen[r] dec[d] and quietly Enjoy[d] the same for Severall years and hath bin in Possession of the Said Steward these thirteen years past Paying duly every year the just Revenues due to the Honourable Company which is the best Title he hath to produce haveing Neglected to get a bill of Sale from the said Griffin before he went off the Island, but hath a Memorand[m] in the Register Book that he did buy it of him, and is well known to Severall of the Inhabitants. Thirdly Laid claim to Two Acres part of four Acres formerly John Bagleys bought by his brother Onesip[h] Steward who had y[e] Same of, The other two Acres Maxwells Orphans hath. Fourthly Laid claime to three Acres more He bought of Henry Wellsly who had y[e] Same with his wife one of the Said Maxwells daughters, being part of twelve Acres. James Vesey free planter Appeared in the behalfe of John Coverlees Children who are under his Care and Tuition by marrying the Widdow and produced a bill of Sale for Ten Acres of Land formerly the Lott of John Long Sen[r] dec[d] sold to John Coverlee, and in the Register book appeared Ten Acres of Land more now in Said Vesey's Possession which twenty Acres the Children of the deceased John[?] Coverlee hath a just right and Title to. William Slaughter Sen[r] in the behalf of Richard Hardings dec[d] Children haveing Married the Widdow Appeared and Produced a Bill of Sale from James Reder dec[d] to the Said Harding for Two Acres of Cabbage tree Land part of Twenty Acres in Sandy Bay And in a Con-sultation dated the 17[t] October 1700 it appears that Richard Harding had granted him Ten Acres Land formerly in the Possession of James Reder and Five Acres more the said Harding had of John Greentree Part of Ten Acres in Powles Valley, being in Exchange for some other Land w[h] the Honoura[ble] Company adjoining to their Pasture and is Mentioned in Said Consultation as a Title thereto. John[?] Margin Notes: Cha[s] Stewards Title to his Land and how [...]	First, he produced a bill of sale from James Wilson for two acres given to him by his sister Martha Wilson. The two acres formed part of 20 acres that Martha had received from her father Andrew Wilson. Second, he claimed 10 acres he had bought several years earlier from Richard Griffin, free planter. Griffin had received the land on his marriage to Elinor, a daughter of John Coverlee senior, deceased, and had held it without dispute for some years. Steward had held it for the past thirteen years, paying the Company's revenues each year on the proper day. He had failed to obtain a formal bill of sale from Griffin before Griffin left the island. The Register Book carried a memorandum of the purchase, and several inhabitants knew of it. The revenue record and that memorandum were the only title he could produce. Third, he claimed two acres, being part of four acres that had earlier belonged to John Bagley. His brother Onesiphorus Steward had bought the four acres from Bagley. Charles now held two of them. The other two were held by Maxwell's orphans. Fourth, he claimed three acres bought from Henry Wellsly. Wellsly had received the land with his wife, one of Maxwell's daughters, as part of a twelve-acre allotment. James Vesey, free planter, came forward on behalf of John Coverlee's children. He had become their guardian by marrying their mother. He produced a bill of sale for ten acres of land that had formerly been the lot of John Long senior, deceased, and had been sold to John Coverlee. The Register Book recorded a further ten acres now in Vesey's possession. The children of John Coverlee had a just right and title to the full 20 acres. William Slaughter senior came forward on behalf of Richard Harding's children, having married their widowed mother. He produced a bill of sale from James Reder, deceased, to Harding for two acres of cabbage tree land in Sandy Bay, being part of a 20-acre parcel. A consultation of 17 October 1700 recorded that Harding had been granted ten acres formerly held by James Reder, together with five more acres he had received from John Greentree out of a ten-acre parcel in Powles Valley, the five acres being given in exchange for other land that lay convenient to the Company's pasture. The 1700 consultation was relied on as his title to those parcels. Interpretations Steward's four-part claim shows how the council assessed title where the documentary record was incomplete. For three of the four parcels he produced a bill of sale or a consultation reference. For the ten acres bought from Griffin he had only the Register Book memorandum and the running revenue payments, the bill of sale never having been drawn before the seller departed. The council's willingness to accept this combination as the best title obtainable confirms that long peaceable possession, supported by entries in the Register Book and by continuous revenue payments, was treated as functionally equivalent to a deed when the original instrument was lost or never executed. The case also shows how marriage portions and family allotments fed the working land market. Wilson's gift to his sister, Griffin's marriage portion from the Coverlee household, and Wellsly's portion through marriage to a Maxwell daughter all originated in intra-family transfers that were then resold piecemeal to other planters. The council accepted these origins without separate inquiry, treating the family settlement as a valid root of title once the subsequent commercial sale was documented. The two cases brought by Vesey and Slaughter illustrate the institutional response to widowhood. A man who married a widow with minor children acquired both the custody of the children and the duty to bring

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
		in severall Parcells Ja[s] Veseys Title to his Lands prov[d] Will[m] Slaughter in behalf of Hardings Children prov[d] Title to their Land.	forward their titles before the council. The arrangement protected the orphans' inheritance from neglect during minority, and gave the council a single adult party to deal with. The reliance on the 1700 consultation in Slaughter's case shows that earlier council records were treated as title documents of the same standing as a private bill of sale. Speculations Steward's decision to combine all four of his parcels into a single appearance was probably calculated to use the strength of the documented claims to support the one weak claim. By presenting the Griffin ten acres alongside the other three parcels for which he held bills of sale, he framed the missing deed as a single defect within an otherwise documented holding rather than as an isolated case turning on a Register Book memorandum alone. Harding's exchange of five acres in Powles Valley for ground convenient to the Company's pasture, recorded in 1700, suggests that the council had been managing the geography of the principal Company pasture by negotiated swaps for more than a decade before the present consolidation programme around the Hutts began. The use of the 1700 consultation as title evidence in 1713 indicates that the council's own records were already functioning as a working land registry well in advance of the formal register book ordered under Roberts.
15	6	John Coles freeholder appeared and produced a Deed with the Honourable Companys Seale affixed thereto Signed by Gov[r] Keling and Step[h] Poirier dated the 20 of Aprill 1696 for Ten Acres of Land in Exchange for a certain Allotment of Land formerly granted to Gabriel Powell Sen[r] Also fifteen Acres more which he Possesses by Exchange with the Said Hono[ble] Company for Ten Acres adjoyning to their Pasture as may more Largely Appear in a Consultation dated the 17 of October 1700. Likewise produced a bill of Sale dated the 9[th] of Aprill 1703 from George Hodgson for three Acres of Land Situate in Sandy bay. Also a bill of Sale dated the 12 of August 1701 for two Acres of Land Sold him by Richard Curling being in all Thirty Acres which the said John Coles hath a just right & Title too. Richard Swallow Sen[r] freeholder appeared in behalfe of Benj[a] Greentree Sen[r] and Heir of John Greentree dec[d] and Produced a bill of Sale for Seventeen Acres of Land formerly James Riders and dated the 22 day of Aprill 1698. Also Claims five Acres more Part of Ten Acres in Powles Valley w[h] R[d] Harding had of Jno[?] Greentree mentioned in Consultation dated y[e] 17 Oct[r] 1700. The Said Richard Swallow Produced in behalf of himselfe a bill of Sale dated the 12 of June 1703 for Ten Acres of Land formerly Rich[d] Beeches and Seven Acres formerly belonging to John Henderson bought since by Thomas Coals who Sold the whole Seventeen Acres to the said Rich[d] Swallow, and hath a just right and Title thereto.	John Coles, freeholder, came forward and produced a deed under the Company's seal, signed by Governor Keeling and Stephen Poirier and dated 20 April 1696, for ten acres of land granted in exchange for an allotment formerly held by Gabriel Powell senior. He also produced evidence for fifteen further acres held by exchange with the Company for ten acres adjoining the Company's pasture. The exchange was recorded in the consultation of 17 October 1700. He produced a bill of sale dated 9 April 1703 from George Hodgson for three acres in Sandy Bay. He produced a bill of sale dated 12 August 1701 from Richard Curling for two acres. The four parcels together amounted to 30 acres, to which Coles held a clear right and title. Richard Swallow senior, freeholder, came forward on behalf of Benjamin Greentree senior, heir of John Greentree deceased. He produced a bill of sale dated 22 April 1698 for seventeen acres of land formerly belonging to James Reder. He also claimed five further acres, being part of the ten acres in Powles Valley that Richard Harding had received from John Greentree, as recorded in the consultation of 17 October 1700. Richard Swallow then put forward his own claim. He produced a bill of sale dated 12 June 1703 for ten acres formerly belonging to Richard Beeches and seven acres formerly belonging to John Henderson. Thomas Coals had bought the seven acres and then sold the whole seventeen acres to Swallow. Swallow held a clear right and title to them. John Robinson, free planter, came forward on behalf of the children of Onesiphorus Steward, deceased. He claimed twenty acres in two parcels of ten. The first ten acres were half of a twenty-acre parcel that James Greentree had sold to Samuel Maxwell and Onesiphorus Steward. Greentree had bought it from Elizabeth Bostock, the allotment having been granted to her first husband, the Reverend Mr Church, deceased. The second ten acres had been the lot of John Coverlee senior, who sold them to Onesiphorus Steward. On Steward's death intestate, the land fell to his eldest son, also called Onesiphorus Steward. The whole twenty acres belonged by right to Steward's children. Orlando Bagley, freeholder, came forward and claimed twenty three acres. He produced a bill of sale

		John Robinson free Planter appeared in the behalf of Onesip[s] Steward dec[d] his Children and Laid Claim to Twenty Acres of Land viz Ten Acres half of Twenty Sold to Samuel Maxwell & Onesip[s] Steward by James Greentree who bought the Same of Eliz Bostock being the Allotment of her first Husband M[r] Church Mins[r] dec[d] The other Ten Acres being formerly the Lott of John Coverlee Sen[r] who Sold the Same to Onesiphorus Steward dec[d] which then fell to his Eldest Son Onesiphorus Steward dying Intestate Which Twenty Acres the said Onesiph[s] Stewards Children hath a just right and Title too. Orlando Bagley freeholder appeared and Laid Claim to Twenty three Acres of Land and produced viz[t] a bill of Sale dated the 26 December 1692 for Ten Acres of Land Sold by William Cliston to Richard Curling dec[d] who dying Intestate his Lands fell to the[?] Margin Notes: Jn[o] Coles Title to his Land prov[d] Rich[d] Swallow in behalf of Benj[a] Greentree Rich[d] Swallows Title to his own Land Jn[o] Robinson in behalf of Ones[s] Stewards Child[s] proves their Title in y[e] Whole 20. Acres. Ald[o] Bagleys Title to 23. acres Land proved.	dated 26 December 1692 for ten acres sold by William Cliston to Richard Curling, deceased. Curling died intestate, and his lands passed to his heir. Interpretations The four parcels brought forward by Coles show the range of instruments by which a single planter's holding could be assembled. A Company deed under seal for the original ten-acre exchange, a council consultation for the further fifteen-acre swap with the Company's pasture, and two private bills of sale for the smaller parcels in Sandy Bay together made up the holding. The council accepted each instrument as effective for the parcel it covered, building the title to the full thirty acres out of distinct documentary sources rather than requiring a single composite deed. Robinson's appearance on behalf of the Steward children clarifies how intestate succession to a freehold worked on the island in the absence of a formal probate jurisdiction. When Onesiphorus Steward died without a will, his lands passed to his eldest son rather than being divided among his children or his widow. The council recorded the descent through the family without requiring administration to be taken out, and accepted the surviving sibling group as the present holders by virtue of the eldest son's title. The mechanism kept the freehold whole at the cost of leaving the council to police its working as a trust for the wider family. The repeated reliance on the consultation of 17 October 1700 across three separate cases at this sitting, Harding, Coles and Swallow on behalf of Greentree, shows how a single council decision more than twelve years earlier had become a foundational record for the geography of the principal Company pasture. The 1700 consultation had recorded a sequence of exchanges by which the Company concentrated its pasture ground at the expense of dispersed planter holdings. Title work in 1713 still rested on it. The recurring pattern of widow-remarriage giving rise to title claims by the second husband, visible across the Vesey, Slaughter and Robinson cases at this sitting, indicates that the council had come to rely on the husband of the widow as the practical guardian of orphan freeholds. The arrangement carried obvious risks, since the second husband's interest in the orphans' land was at best fiduciary, but the council accepted his appearance without separate inquiry into how the children's estate was being managed. Speculations Coles's decision to bring forward the 1696 deed under the Company's seal as the first item in his presentation probably reflected its evidentiary weight. With a sealed instrument signed by two governors at the foundation of the chain, the remaining elements of the holding could be added without challenge. The order of presentation suggests planters had learned to lead with the strongest documentary anchor in their holding. The reappearance of John Greentree's Powles Valley ten acres on both sides of the same sitting, partly in Harding's chain and partly in Greentree's son's claim, indicates that the parcel had been divided informally within or shortly after Greentree's lifetime. The council did not attempt to reconcile the two halves into a single chain but accepted the divided shares as they stood, perhaps because the family arrangement was already long established and any reopening of it would have unsettled holdings on which fences and improvements had been made for years.
16	9	made and Delivered the owners Some Short Time afterwards of which all Persons concern[d] are Accordingly to take Notice. 		p me. Jn[o] Alexander Island S[t] Helena At a Consultation Held on Tuesday the 3 day of February 17 12/13 At the United Castle in James Valley Pres[t] Benj[a] Boucher Esq[r] Gov[r] John Pack Dep[ty] Govern[r] Matt[he]u Bazett 3 in Coun[ll] 16 Lieut[t] Thom[s] Cason John French Assists According to an Advertizement Issued out the 17 January Last The Gov[r] our and Councill Mett this day to Inquire into the Titles of Lands that has been Measur[d] Since the Lesb[?] Councill day Held for the Same Purpose, the Persons appearing are as followeth Frances Margin Notes: Councill Mett to prove titles of Land.	The council met at the United Castle in James Valley on Tuesday 3 February 1713. Those present were Benjamin Boucher, Governor; John Pack, Deputy Governor; Matthew Bazett, third in council; and Lieutenant Thomas Cason and John French as assistants. In accordance with the advertisement of 17 January 1713, the council met to examine the titles of lands measured since the last council day held for that purpose. Those who came forward are recorded below. Interpretations The 27 January 1713 closing notice, with deeds to follow a short time afterwards, fixes the working interval between the title examination and the issue of the documentary instrument. The council treated the examination of evidence and the engrossing of the deed as separate stages, allowing time for the clerk to prepare the writings and for any defect in title to surface before the instrument passed under the Company's seal. The 3 February 1713 sitting confirms that the title day procedure, opened on 15 January 1713 and continued on 27 January 1713, was being run as a rolling series rather than a single event. Each sitting handled the titles measured since the last one, with a fresh advertisement issued on 17 January 1713 to bring forward the next cohort of planters whose work had since been completed. The pattern shows the council pacing the registration programme to the surveyor's output rather than to a fixed deadline schedule, while still keeping the 25 March 1713 survey deadline in view. Speculations The decision to run the title sittings on a continuous schedule rather than concentrate them into a single intensive day probably reflected practical limits on Bazett's measurement work. With one surveyor handling the full backlog and a small council to hear the evidence, spreading the title days through January and into early February kept the work flowing without overwhelming any one sitting. The rolling cadence also allowed the council to adjust each advertisement to the actual progress of measurement.
17	10	Francis Wrangham freeholder Appeared and Produced the following Wridings as Title to the Sevrall Parcels of Land he now Possesses being in the whole fifty five Acres, Eight Acres whereof was part of twenty Acres the Lott of Job Jewster as p[er] register Book Ten Acres Cabbage tree Land formerly on Daniel Collins Sold to Said Jewster, and by him given to his only Daughter the Said Wranghams Mother Ten Acres as appears by a Deed to Richard Stacey bought by Samuel Wrangham his father Ten acres more as by a bill of Sale from Rich[d] and Hireing Sent[?] to John Boston, from Boston to Schoster, from Jewster it descended to his daughter and two Acres had in Exchange with George Hodson adjoyning to that Ten Acres formerly Dan[ll] Collins also fifteen Acres part of Twenty Acres the Lott of Francis Wrangham his Grandfather. All which the said Francis Wrangham hath a just right and Title to. Ripin Wills freeholder Appeared and Laid Claime to Fifty Acres of Land and as a Title thereto produced the following Writings, Viz[t]. An Indenture of Bargaine and Sale dated y[e] 18	Francis Wrangham, freeholder, came forward and produced the following writings as title to the parcels he now held, amounting in total to 55 acres. Eight acres formed part of a twenty-acre lot once belonging to Job Jewster, as recorded in the Register Book. Ten acres of cabbage tree land had formerly belonged to Daniel Collins, who sold it to Jewster. Jewster then gave it to his only daughter, who was Wrangham's mother. A further ten acres were held under a deed to Richard Stacey, the land having been bought by Samuel Wrangham, his father. Another ten acres rested on a bill of sale from Richard, and on a hiring agreement passing the land to John Boston, then from Boston to Schoster. The ground had descended from Jewster to his daughter. With it went two acres acquired by exchange with George Hodson, lying next to the ten acres that had been Daniel Collins's. Fifteen acres were part of a twenty-acre lot that had belonged to Francis Wrangham, his grandfather. Wrangham held a clear right and title to all these parcels. Ripin Wills, freeholder, came forward and claimed 50 acres of land, supported by the following writings. An indenture of bargain and sale dated 18 July 1687, signed by Joseph Pratt, who sold and conveyed the land to James Easthope. Easthope then conveyed it to Wills under a further indenture of bargain and sale dated 25 March 1693. The ten acres covered by these instruments were shown in the old Register Book as

		day of July 1687 Signed by Joseph Pratt and by him Sold & Convey[d] to Jam[s] Easthope from Easthope to Said Wills as p[er] another Indenture of Bargaine and Sale dated the 25 of March 1693 [...is[?]] Contains Ten Acres which by an old Register Book Appears to be Part of Twenty Acres the Lott of one Thomas Frankcomb dec[d] Lying in James Valley, Also a bill of Sale dated the 22 of December 1707 Signed by Joseph Fox heir to twenty acres Land the Lott of his Father William Fox (who Dyed Intestate) which appears So by Said Register, Likewise Produced an Indenture of Bargaine and Sale for twenty acres Land formerly the Lott of W[m] Black Cloud at the relaking[?] this Island from the Dutch, Sign[d] by William Coals and Sealed the 4[th] of Aprill 1711 which was Confirmed unto him in a Consultation Held on Thursday the 25 of March 1711 all which Parcells of Land the said Ripin Wills hath a just right and Title too. Margaret Sich wid[w] and Benj[n] her Son and heir to all Lands by them Possess[d] appeared and Laid Claime to Seventy Acres of Land, Producing a Printed Deed w[h] the Honour[ble] Comp[s] Seale Affixed thereunto, for twenty acres of Land the Lott of W[m][?] Margin Notes: Fr[s] Wranghams Title to severall Parcells of Land Proved. Ripin Wills Claim & Title to 50 acres Land Proved. Marg[t] & Benj[n] Siches Claime to 70 Acres Land	part of a twenty-acre lot that had belonged to Thomas Frankcomb, deceased, lying in James Valley. A bill of sale dated 22 December 1707, signed by Joseph Fox, heir to a twenty-acre lot that had been the lot of his father William Fox, who died intestate. The Register Book confirmed the entry. An indenture of bargain and sale for twenty acres that had been the lot of William Black Cloud at the time of the recapture of the island from the Dutch. The deed was signed by William Coals and sealed on 4 April 1711, and was confirmed to Wills in a consultation held on Thursday 25 March 1711. Wills held a clear right and title to each parcel. Margaret Sich, widow, and Benjamin her son, heir to all the land they held, came forward and claimed 70 acres. They produced a printed deed bearing the Company's seal for twenty acres that had been the lot of William. Interpretations Wrangham's case shows how a family freehold could be reconstructed from multiple narrow chains of conveyance running back to a single early allotment. Three of the parcels in his fifty-five acres trace back to Job Jewster's twenty-acre lot, either by direct purchase, by gift to Jewster's daughter on her marriage, or by intermediate sale to Daniel Collins and back. The council accepted the composite chain without requiring the parties to consolidate the parcels into a single instrument, recording the descent piece by piece against the running geography of the early lots. Wills's reliance on the old Register Book to fix the original allotments of Frankcomb and Fox shows the working role of that book as the foundation document of island title. Where the planter's own writings ran back only to a second or third sale, the Register Book supplied the earlier link to the original lot. The council treated entries in the old Register Book as authoritative for the identification of the founding allotment, even where the original deed was no longer in circulation. The reference to William Black Cloud's twenty acres at the time of the recapture of the island from the Dutch fixes that parcel within the first wave of allotments after 1673. The chain from Black Cloud through to Wills, by way of a sale from William Coals confirmed at the consultation of 25 March 1711, ties the present registration programme to the foundational settlement of the island under the East India Company's reclaimed jurisdiction. The 1711 consultation again functions as a documentary instrument of title, of the same standing as a private deed. The combined appearance of Margaret Sich and her son Benjamin as widow and heir shows the working pattern by which freehold descent and present custody were brought together before the council in a single claim. The widow's life interest and the son's reversion were presented as a unified holding for the purpose of registration, with a printed deed under the Company's seal as the controlling instrument. The arrangement spared the council from having to apportion the parcel between present and future interests at the registration stage, leaving any later division to be settled as and when it became necessary. Speculations Wrangham's careful presentation of the Jewster descent through his mother, including the gift on her marriage and the subsequent rearrangement by exchange with George Hodson, was probably designed to forestall any later challenge from collateral relatives of Jewster. By recording the marriage gift and the consolidating exchange on the council's books at the registration stage, he secured a documentary defence against any future claim that the parcels had been alienated outside the family. The use of a printed deed under the Company's seal as the foundation instrument in Sich's claim

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			suggests that the Company had at some earlier point issued a standard form for grants of original lots, with the planter's name and acreage filled in by hand. Printed deeds of this kind, surviving from the foundational allotment period, would have given the council a particularly stable evidentiary base for confirmation, since the form itself was difficult to forge and its survival in the planter's hands was strong evidence of an unbroken chain of custody.
18	11	M[r] Richard Swallow who gave the Same upon Marriage to his Son the said Margaret Siches first Husband, As also twenty Acres more that by Descent fell to Richard Swallow Son and heir Apparent to said Margaret Sich, by her former Husband Richard Swallows Long since dead, which by a Deed of Conveyance dated the 4 February 1707 The Said Richard Swallow Sold to his Mother Sich for a Valuable Consideration Likewise twenty Acres more the Lott of Richard Alexander deceased Sold to the said Margaret Siches Last Husband John Sich dec[d] by John Alexander Robert Son of the Said dec[d] Alexander as appears p[er] bill of Sale dated the 7 of March 1699. And Ten Acres more being the Lott Land, as p[er] Reister book appears, of one J[n] Duffield who Sold the Same to John Sich To which Seventy Acres Land the said Marg[t] and Benjamen Sich hath a just right and Title Elizabeth Johnson wid[w] appeared and Laid Claime to fifty Acres of Land, Thirty of which was Allotted her dec[d] Husband Joshua Johnson, as Appears in the Register book and Twenty Acres more purchased of John Greentree as appears by bill of Sale dated the 27 day of Aprill 1698 Being the Lott Land the deceased Father John Greentrees own. Which fifty Acres Lott Land the Said Elizabeth Johnson, and Heir of her dec[d] Husband, hath a just right and Title too. Simon Whaley free holder appeared and Laid Claime to Ten Acres of Land being the Lott of James Easthope dec[d] who Sole the Same to Frances Bevin, and She to John Draper dec[d] who by Will gave Said Land to her the said Whaleys wife Named Mercy. Which he hath a just right and Title to. Joshua Johnson free holder Appeared and Laid Claime to Four-teen Acres of Land Ten of which as Deed of Exchange dated the 3 of November 1694 with the Honourable Companys Seale Affixed thereun- to was Exchanged with John Goodwin dec[d] for Ten Acres more in Sandy bay who assign[d] the Same over to his brother Thom[s] Goodwin who gave it to Said Joshua Johnson Upon Marriage with his daughter Elizabeth Goodwin since dead, with four Acres more adjoining thereunto, which he the said Thom[s] Goodwin had in Exchange with the Said Honoura[ble] Company for Land Adjoining to their	The 20 acres had been William Sich's lot, given to him by Mr Richard Swallow on his marriage to Margaret. A further 20 acres had descended to Richard Swallow, son and heir apparent of Margaret Sich by her former husband Richard Swallow, long since dead. By a deed of conveyance dated 4 February 1708, Richard Swallow sold this 20 acres to his mother for a valuable consideration. Another 20 acres had been the lot of Richard Alexander, deceased. John Alexander Robert, son of the said Richard Alexander, sold the land to John Sich, Margaret's last husband, also deceased. The bill of sale was dated 7 March 1699. A further ten acres had been the lot of John Duffield, as the Register Book showed. Duffield sold the parcel to John Sich. Margaret and Benjamin Sich held a clear right and title to the whole 70 acres. Elizabeth Johnson, widow, came forward and claimed 50 acres. Her late husband Joshua Johnson had been allotted thirty acres, as recorded in the Register Book. A further 20 acres had been bought from John Greentree under a bill of sale dated 27 April 1698, this being the lot land of Greentree's late father, John Greentree senior. Elizabeth Johnson, as heir of her late husband, held a clear right and title to the 50 acres. Simon Whaley, freeholder, came forward and claimed ten acres. The parcel had been the lot of James Easthope, deceased. Easthope had sold it to Frances Bevin, who sold it to John Draper, deceased. Draper bequeathed the land by will to Whaley's wife, Mercy. Whaley held a clear right and title. Joshua Johnson, freeholder, came forward and claimed fourteen acres. Ten acres rested on a deed of exchange dated 3 November 1694, signed under the Company's seal, by which John Goodwin, deceased, had exchanged ten acres in Sandy Bay. Goodwin assigned the land to his brother Thomas Goodwin, who gave it to Joshua Johnson on his marriage to Thomas Goodwin's daughter, Elizabeth Goodwin, since deceased. The four further acres adjoined this parcel, and had been received by Thomas Goodwin in exchange with the Company for ground adjoining the Company's great pasture, as recorded in the consultation book. George Carne came forward and claimed 30 acres. Fifteen acres had been bought from Robert Leech under a bill of sale. Interpretations The Sich claim consolidates three generations of family land into a single seventy-acre holding through the management of a widow's serial marriages. The original parcel reached Margaret on her marriage to William Sich, the second 20 acres descended through her son by an earlier marriage and was repurchased from him in 1708, and the third 20 acres entered the holding through her last husband John Sich's purchase from the Alexander family. The council accepted the composite chain because each conveyance was supported by a documented instrument, but the underlying mechanism is the steady accumulation of land through marriage and inter-family sale, with the widow at the centre of the assembly. The transfer of 20 acres from Richard Swallow to his mother by a deed dated 4 February 1708 is

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
		great Pasture as appears in Consultation Book. George Carne appeared and Laid Claime to Thirty Acres of Land Fifteen Acres whereof he bought of Robert Leech as p[er] bill of Sal- Margin Notes: Title proved Eliz: M[s] Johnsons Claime to 50 acres Land Title proved Sim: Whaleys Claim & Title to 10 acres Land Jos[a] Johnsons Claim & Title to 14 acres land proved G[o] Carnes Title to 30 Acres Land	procedurally striking. Once the son had inherited from his father, he could have retained the parcel until majority and beyond. Selling to his mother for a stated valuable consideration converted the inheritance into cash within her household and consolidated her freehold for the future descent to her son by Sich. The council recorded the transaction without examining the propriety of an heir selling to his own widowed mother, treating the instrument as sufficient evidence of title. Joshua Johnson's fourteen-acre claim shows how the council managed the boundary between marriage portions and Company exchanges within a single chain. The 1694 deed of exchange under the Company's seal supplied the foundation. Thomas Goodwin's onward gift of the parcel as a marriage portion to his daughter brought the freehold into the Johnson household. The further four acres came not by family transfer but by a separate exchange with the Company recorded in the consultation book. The council recognised each layer in its own evidentiary form. The reference to William Black Cloud's lot at the time of the recapture from the Dutch, taken with the present claims of Sich, Johnson and Carne, fixes a working understanding within the council that the original lots dated to the 1670s and that subsequent dealings rested on that foundation. The recurring entries from the old Register Book and the printed deeds under the Company's seal show that the council had access to a workable archive of the foundational allotments and treated it as the controlling evidence where private deeds were lost. Speculations Margaret Sich's careful repurchase of her son's twenty-acre inheritance in 1708 was probably intended to forestall any difficulty when the parcel passed to her son by Sich on her death. By holding all seventy acres in her own right at the time of registration, she removed the risk that a future claim from her elder son or his line would complicate the descent of the consolidated estate. The structure points to a deliberate use of the council's registration system to settle inheritance in advance of any dispute. The presentation of Joshua Johnson's claim as a marriage gift confirmed by a Company exchange and supplemented by a further Company exchange suggests that the council had been used by the Goodwin household for a sustained reorganisation of its holdings during the 1690s. Thomas Goodwin's repeated appearance in Company exchanges, both to acquire ground adjoining the great pasture and to provide a marriage portion for his daughter, indicates that the council's exchange mechanism was being used not only by the Company to consolidate its own pasture but also by senior planters to manage the geography of their own family settlements.
19	12	Sale dated the 4[th] day of January 170 5/6 which he had with his wife the daughter of Richard Curling and Mary his wife both deceased as Part of her Portion, and the other Ten Acres he bought of Robert Curling as p[er] bill of Sale dated the first of Aprill 1709 being a Legacy given him by his dec[d] Mother the said Mary Curling Since Married to Thomas Dixon both dec[d] Which Said Thirty Acres of Land the said George Carne hath a just right and Title too. Francis Wrangham appeared in behalf of his Sister Elizabeth being an orphan and Laid Claime to Ten Acres of Land Scituate	The bill of sale was dated 4 January 1706. George Carne had received the fifteen acres with his wife, the daughter of Richard Curling and Mary his wife, both deceased, as part of her marriage portion. The other ten acres he had bought from Robert Curling under a bill of sale dated 1 April 1709. The parcel had been a legacy from his late mother Mary Curling, who had later married Thomas Dixon. Both Mary and Thomas Dixon were now deceased. Carne held a clear right and title to the thirty acres. Francis Wrangham came forward on behalf of his sister Elizabeth, an orphan, and claimed ten acres in Break Gutts. John Dorking had received the parcel as his allotment. Dorking exchanged it with Henry Francis, who had married Wrangham's paternal grandmother. After Dorking's death the land passed to her son, as the deed of exchange dated 26 November 1682 recorded. The orphans of Samuel Wrangham held a clear right and title.

		in Break Gutts which was Exchanged by John Dorking being his allotm[t] with, Henry Francis who Married the said Wranghams fathers Mother, who gave the Same after his Decease to her Son as appears by Said Deed of Exchange dated the 26 Novemb[r] 1682. Which the said Orphans of Samuel Wrangham hath a just right & Title to. Island S[t] Helena At a Consultation Held on Tuesday the 3 day of March 17 12/13 At the United Castle in James Valley Pres[t] Benj[a] Boucher Esq[r] Gov[r] John Pack Dep[ty] Gov[r] Matt[heue] Bazett 3 in Coun[ll] Lieut[t] Thom[s] Cason John French Assist[ts] This day the Govern[r] & Councill mett according to Usual Custom to Examine into the Titles of Lands Surveyed into the 3 February Last, and Plans brought thereof into the Clerks office, then Robert Addis freeholder Appeared and Laid Claime to fifteen Acres of Land granted and Confirmed to him & his Heirs for ever by former Government, as by a Deed with the Honoura[ble] Comp[s] Margin Notes: Proved Fra[s] Wrangham laid Claim to 10 acres Land in behalfe of his Sister [...] was proved Coun[ll] Mett to Exam[n] into titles of Land Rob[t] Addis Title to his Land	Island of St Helena. The council met at the United Castle in James Valley on Tuesday 3 March 1713. Those present were Benjamin Boucher, Governor; John Pack, Deputy Governor; Matthew Bazett, third in council; and Lieutenant Thomas Cason and John French as assistants. The council met in the usual way to examine the titles of land surveyed since 3 February 1713, the plans having been brought into the clerk's office. Robert Addis, freeholder, came forward and claimed fifteen acres of land. The land had been granted and confirmed to him and his heirs for ever by an earlier government, under a deed with the Company's seal. Interpretations George Carne's combined claim records a typical late seventeenth-century planter inheritance built from a wife's marriage portion and a maternal legacy bought in from a surviving brother. The fifteen acres came with his wife as part of her portion under the customary settlement at marriage. The ten acres reached him by a later cash purchase from Robert Curling, who held them as a legacy from their mother. Both transactions rested on bills of sale, the earlier dated 4 January 1706 and the later 1 April 1709. The council accepted the composite chain because each conveyance was supported by an instrument and because the descent through the Curling and Dixon households could be traced through known marriages. The orphan claim brought by Francis Wrangham on behalf of his sister Elizabeth shows the council recording a freehold whose chain crossed a remarriage. John Dorking's exchange with Henry Francis in 1682 fixed the title at the foundational date. The descent then ran through Francis's marriage to Wrangham's grandmother, with the parcel passing to her son after Dorking's death and reaching Wrangham's sister as part of the inheritance from Samuel Wrangham. The 1682 deed of exchange functioned as the controlling instrument across the whole chain, even though the people through whose hands it passed were no longer alive. The opening of the 3 March 1713 sitting confirms that the title programme was now operating as a settled monthly cycle. The advertisement of 17 January 1713 had fixed the procedure: the surveyor measured the land, the plan was brought into the clerk's office, and the council heard the title evidence at the next regular sitting. The clerk's office had become the working repository of the registration system, holding the plans against which the council tested the documentary evidence brought by each claimant. Speculations Carne's two bills of sale, taken together, suggest the deliberate assembly of a thirty-acre freehold across about three years through transactions within his wife's wider family. The marriage portion brought in the first fifteen acres in early 1706, and the purchase from Robert Curling in 1709 added the second parcel that had also passed through the Curling household. The pattern indicates that Carne was using the marriage settlement and a later cash transaction to consolidate within his own name what had previously been a dispersed family holding. The reliance on a deed of exchange from 1682 to anchor the orphan title points to the durability of the foundational allotment records on the island. With the original parties to the 1682 exchange long dead, the instrument was still treated as the controlling evidence more than thirty years later. The continued working value of such old deeds, well beyond the lifetime of their signatories, helps explain why the council placed such weight on the surrender of the physical instruments at the registration stage, and why printed

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			deeds under the Company's seal carried particular evidentiary force.
20	13	Companys Seale affixed thereunto, dated the 17[th] of November 1692. in Lieu and Exchange of a Certaine Allotment of Land adjoining to the Said Honoura[ble] Companys great Plantation being formerly granted unto William Whittey dec[d] father to the Said Addis his wife in whose right Enjoys Said Land, Likewise Produced a Printed Lease for Twenty Acres of Land granted Peter Williams dec[d] for the Terme of Sixty years at two Shillings p[er] Acre dated the 11[th] of Aprill 1684, and Since Endorsed and Sett over unto the Said Robert Addis, who hath a just right and Title to the Land he Claims. John Goodwin free Holder appeared and Laid claime to fifty two Acres of Land, and Produced first a Printed Deed for Twenty Acres of Land the Lott of Owin Bevia dec[d] who by Deed of Gift now Produced gave the Same to the Said John Goodwin, Secondly Produced a Bill of Sale dated the 13[th] August 1707 from Richard Curling to the Heirs of John Goodwin dec[d] who is the before Named John Goodwin, Son of Thomas Goodwin, brother to the deceased John Goodwin for Twenty two Acres of Land Thirdly Produced a nother Bill of Sale dated the 6 of January 169 9/10 for Ten Acres Land Sold by Thomas Dixon to James Easthope &c[?] who Sold the Same to John Goodwin dec[d] which two Last mentioned parcells of Land are Confirm[d] unto Said John Goodwin by Deed of Gift from his mother, being by her Husband Left Sole Heir and Executrix to his Estate both reale and Personall. Thomas Southen Serjant appeared in the behalf of his Predecessor Edward Bagleys Children and Laid claime to Twenty nine Acres of Land Producing a Deed of Bargaine and Sale dated the first of January 1702, for Twenty Acres of Land formerly the allotm[t] of one William James dec[d] Sold to Rich[d] Curling By George Hodgkison who had the Same in right of his wife Eliz[h] James, which Said Twenty Acres the Said Richard Curling (As By an Endorsment on the backside Sold to Edward Bagley reserving one Acre for himself, and for his only use) Also Produced a Bill of Sale for Ten Acres of Land formerly Prudence Sherwins bought by the Said Edward Bagley of John Bagley and Margaret his wife being Part of her Portion Left by her dec[d] Mother Mary Dixon. To which Twenty nine Acres of Land the aforesa[id] Edward Bagleys Children hath a just right and title. Elizabeth Margin Notes:	The deed bore the Company's seal and was dated 17 November 1692. It had been granted in exchange for an allotment adjoining the Company's great plantation, originally granted to William Whittey, deceased, who was the father of Addis's wife. Addis held the land in her right. Addis also produced a printed lease for 20 acres granted to Peter Williams, deceased, for a term of 60 years at 2s 0d per acre, dated 11 April 1684. The lease had since been endorsed and assigned to Addis. He held a clear right and title to the land he claimed. John Goodwin, freeholder, came forward and claimed 52 acres. He produced a printed deed for 20 acres that had been the lot of Owin Bevia, deceased. Bevia had granted the parcel to John Goodwin by a deed of gift, now produced. He produced a bill of sale dated 13 August 1707 from Richard Curling to the heirs of John Goodwin, deceased. The present John Goodwin, son of Thomas Goodwin and nephew of the late John Goodwin, held under that bill of sale for 22 acres. He produced a further bill of sale dated 6 January 1700, for ten acres sold by Thomas Dixon to James Easthope, who in turn sold the parcel to the late John Goodwin. The last two parcels were confirmed to the present John Goodwin by a deed of gift from his mother, who had been left by her husband as sole heir and executrix of his real and personal estate. Sergeant Thomas Southen came forward on behalf of the children of his predecessor Edward Bagley, and claimed 29 acres. He produced a deed of bargain and sale dated 1 January 1703, for 20 acres that had been the allotment of William James, deceased. The parcel had been sold to Richard Curling by George Hodgkison, who had held it in right of his wife Elizabeth James. By endorsement on the back of the deed, Curling had sold the 20 acres to Edward Bagley, reserving one acre for his own use. Southen also produced a bill of sale for ten acres that had been the parcel of Prudence Sherwin, bought by Edward Bagley from John Bagley and his wife Margaret. The ten acres formed part of Margaret's portion, left to her by her late mother Mary Dixon. The children of Edward Bagley held a clear right and title to the 29 acres. Interpretations The Addis claim shows the council holding a printed lease and a sealed deed of exchange as two distinct working instruments of tenure. The 1684 lease for 60 years at 2s 0d per acre records a longer-term arrangement than the later 21-year leases that have become standard in the present registration programme. The endorsement of the lease over to Addis from the original lessee Peter Williams, alongside the separate 1692 deed of exchange for the adjoining parcel, allowed a single planter to consolidate two parcels under different forms of tenure while maintaining the original rent on the leased ground. The Goodwin claim discloses the working mechanism by which an intestate freeholder's estate could be reassembled in the next generation. Thomas Goodwin's son inherited under his uncle's name through a combination of a printed deed of gift from Owin Bevia, a bill of sale from Richard Curling drawn directly to the heirs, and a confirming deed of gift from the present holder's mother. The mother's position as sole heir and executrix of her husband's real and personal estate gave her the standing to confirm the descent to her son, and the council accepted the composite assembly as a working title for 52 acres.

		Proved Jn[o] Goodwins Claim to 52 Acres Land Title Proved. Tho[s] Southen appeared on behalf of Edw[d] Bagleys Child[s] & Laid Claim to 29 acres Land. Title Proved.	The Southen claim on behalf of Edward Bagley's children illustrates how the council treated a one-acre reservation within a larger sale. Richard Curling's reservation of a single acre for his own use when selling the remaining 19 acres of the William James allotment to Edward Bagley shows the council recognising partial alienations recorded on the back of the principal deed as effective in themselves, without requiring a separate instrument for the reserved portion. The mechanism kept the documentary record compact while preserving the seller's small personal interest within the wider conveyance. The endorsement of the Williams lease over to Addis, the endorsement on the back of Curling's deed reserving one acre, and the deed of gift from Goodwin's mother confirming the inheritance show that the council recognised three distinct uses of endorsement within the day's evidence: assignment of a lease, partial reservation within a sale, and confirmation of descent. Endorsement on an existing instrument was thus a flexible working device within the island's documentary practice. Speculations The presentation of a 60-year lease from 1684 at the title sittings of 1713 indicates that the council was running the registration programme over instruments that still had decades to run. Williams's lease, with about thirty years remaining, would survive into the 1740s. By recording the assignment to Addis on the register at this point, the council fixed the long-term tenant and pre-empted any later dispute over how the unexpired term had reached him, particularly important because the original lessee was now dead and the documentary trail might otherwise have weakened with time. Goodwin's reliance on his mother's confirming deed of gift, alongside the underlying bills of sale, was probably prompted by the formality of the registration programme. With the present claimant inheriting through his uncle rather than directly from his father, the council might have raised questions about how the parcels had reached him. By producing his mother's deed of gift as the linking instrument, he closed the gap between the documented purchases by his uncle and his own present possession, and gave the council a single document on which to rest the descent of 32 of the 52 acres claimed.
21	14	Elizabeth Allis Widdow and freeholder Appeared and Laid Claim to Thirty Acres of Land, Ten of which we find by an Old register book to be the Lott Land of her dec[d] Husband Thomas Allis, Ten Acres more Purchased of Benja[h] Miller as p[er] Deed of Bargaine and Sale dated the 3 of Aprill 1707, the other Ten Acres Purchased of John Hennison as by Bill of Sale appears dated the 5 of May 1696. Out of which Last mentioned Ten Acres Land her Husband gave three Acres to his Son Them[s] Allis upon Marriage. To which Thirty Acres of Land the said Elizabeth Allis, and Heirs of her dec[d] Husband Thomas Allis hath a just right and Title. John Long & Elizabeth his mother Appeared and Laid claime to Forty Acres of Land, Ten of which She Says was Exchang- ed with William Price for Ten Acres more her own Lott Land Lying in Sandy bay, Also Ten Acres bought of John Cannady	Elizabeth Allis, widow and freeholder, came forward and claimed thirty acres. Ten acres were shown in an old register book as the lot land of her late husband Thomas Allis. Ten further acres had been purchased from Benjamin Miller under a deed of bargain and sale dated 3 April 1707. The remaining ten acres had been purchased from John Hennison under a bill of sale dated 5 May 1696. From this parcel her husband had given three acres to their son Thomas Allis on his marriage. Elizabeth Allis, with the heirs of her late husband, held a clear right and title to the thirty acres. John Long and Elizabeth his mother came forward and claimed forty acres. She said that ten acres had been exchanged with William Price for ten acres of her own lot land lying in Sandy Bay. A further ten acres had been bought from John Cannady. Both these parcels appeared in the register book as the lot land of James Earlings, deceased. The remaining twenty acres had been bought from Thomas Moor, being the lot land of his late father Francis Moor. Sutton Isaack senior, freeholder, claimed twenty acres. The register book showed the land as his first allotment, on which he had lived ever since. He held a clear right and title.

		as both we find in their Register book to be the Lott Land of one James Earlings dec[d] The other Twenty Acres bought of Thomas Moor being the Lott Land of his dec[d] father Francis Sutton Isaack Sen[r] freeholder Laid Claime to Twenty Acres of Land which we find by the Register book to be his first Allotment, and hath Lived upon the Same ever Since To which he hath a just right and Title. William Seale freeholder Appeared and Laid Claime to Twenty Acres of Land being the Lottment of his deceased Father Benj[a] Seale, To which he hath a just right and Title. James Draper freeholder Laid Claime to Twenty Acres of Land, which in the register book appears to be the Land of his deceased father John Draper, As also to the one third of Ten Acres there, in Equall Shares between himself Isaack Wood and Simon Whaley. To which Twenty three Acres and 1/3 of an Acre the said James Draper hath a just right and Title. Dorothy Hayse widdow Appeared and Laid Claime to Twenty Acres of Land being the Lott Land of her deceased Husband William Hayse as Appears in the Register Book Which She and the Heirs of her Said dec[d] Husband hath a just right and Title to. Humphrey Margin Notes: Eliz[h] Allis Claime to 30 Acres Land Title. Proved Jno: Long & Eliz[h] Long Claim to 40 acres Land Title Proved. Sutt[n] Isaack Sen[r] Claime to 20 ac[s] Land. Title Proved. W[m] Seale Claime to 20 acres Land Title proved. Ja[s] Draper Claim to 20 acres land Title Proved. Dorothy Hayse Claime & Title to to 20 acres Land Prov[d].	William Seale, freeholder, claimed twenty acres. The land had been the allotment of his late father Benjamin Seale. He held a clear right and title. James Draper, freeholder, claimed twenty acres, which the register book showed as the land of his late father John Draper. He also claimed one third of a separate ten-acre parcel held in equal shares between himself, Isaack Wood and Simon Whaley. He held a clear right and title to the twenty-three and one-third acres. Dorothy Hayse, widow, claimed twenty acres. The register book showed the parcel as the lot land of her late husband William Hayse. She and the heirs of her late husband held a clear right and title. Interpretations The Allis case shows how a small intra-family gift on marriage was recorded against the parent's title rather than the child's. Thomas Allis senior had given three of his ten Hennison-bought acres to his son on the son's marriage. The council treated the gift as a charge on the parent's freehold rather than requiring a separate title sitting for the son. Elizabeth Allis's claim to the full thirty acres carried the gift forward implicitly within her late husband's holding, leaving the son's three acres to be carved out when his own descent fell due for registration. The shared one third of ten acres held by Draper, Wood and Whaley records a working pattern of fractional co-ownership recognised by the council without insistence on physical partition. Three named planters held equal shares in a single ten-acre parcel, each carrying his third as an addition to his other freehold. The council's willingness to record the fractional share as part of Draper's twenty-three and one-third acres shows that the registration system could accommodate undivided interests where the parties had not yet seen reason to split the ground on the surveyor's plan. The repeated reliance on the register book across the day's claims, for Allis, Long, Sutton Isaack, Seale, Draper and Hayse, confirms its role as the foundational documentary anchor of island title. Where a planter held the same parcel from the original allotment to the present sitting, the register book entry was often the only writing produced. The council accepted long occupation supported by the register book as sufficient title, without requiring a private deed. The Long claim shows how an early exchange between settlers could be brought into the register decades later through the widow's testimony. Elizabeth Long's account of a swap with William Price for her own lot land in Sandy Bay rested on her recollection, supported by the register book's identification of the parcels as the lot land of James Earlings. The council accepted the chain on this combined basis, taking the widow's oral statement together with the documentary location of the original lot as sufficient. Speculations The presentation of the Allis claim by the widow alone, with the marriage gift to her son carried as an internal charge, was probably calculated to avoid the cost and complication of a separate registration of the three acres at this stage. With the survey deadline of 25 March 1713 only weeks away, registering the whole holding under the parent's title and leaving the son's portion for later was a practical economy that kept the family's freehold intact on the surveyor's plan without forcing an immediate partition. The fractional one third held by Draper, Wood and Whaley suggests the parcel had probably descended jointly through an earlier inheritance and that the three holders had found it more convenient to use the ground in common than to divide it. The council's acceptance of the undivided share at registration would have left the ten acres open to a formal partition later, while

			preserving the present working arrangement and avoiding the surveyor's costs of running new boundaries through a small parcel held in three.
22	15	Humphrey Edwards free planter Appeared and Laid Claime in behalf of the Heirs of the Edward Praeyn dec[d] To Thirty Acres of Land being given by William Bowman dec[d] to the Said Praeyns wife (since Married to s[d] Edwards) and find in the Register Book that twas Part of the Lott Land of John Walls and William Marsh which was since bought by the said William Bowman, as appears by a bargain and Sale for the same now produced and which the said Edward Praeyns Heirs hath a just right and Title to. Mary Hodgkison Widdow Appeared in behalf of her daughter Elizabeth Bowman and Laid Claime to Thirty Acres of Land in Sea[?] Valley being the other Part of her grand father William Bowmans Land and that he purchased formerly of John Walls and William Hunt who Exchanged his Lott Land for that of the aforesaid Marshes and by Said Will[m] Bowman given to his Son John Bowman dec[d] who gave the Same to his daughter Elizabeth Bowman by Will, As also forty five Acres more in Reversion after his wifes decease which was formerly the Land of Joseph Charles ee with dec[d] as appears more Plainely in the Register Book. John Nichols freeholder Appeared and Laid Claime to forty acres of Land and Produced a Printed Deed with the Honourable Companys Seale Affix[d] thereunto for Twenty Acres, Also a bill of Sale dated the 4[th] June 1688 for Ten Acres bought of Thomas Sortis being his first Allotment Likewise a Counterpart Indenture of Bargaine and Sale dated the 19[th] January 1681 for Ten Acres Land Purchased of William Rutter Executor[?] Seasond[?] [...]dr[...] to the Last Will and Testement of one John Coopers dec[d] but Sign[d] by the Said Nichols instead of s[d] Executor[?] Which Leads us to believe there was Such an agreement made for Said Land. He the said Nichols Alledging that Govern[r] Poirier had both Parts in his Possession and when refund[?] this by Said Nichols now Produced, told him twas no Matter which part he had. James Greentree free planter Appeared and Laid Claime to Sixty Acres of Land Producing first a bill of Sale for Ten Acres Land Sold by Tiddale to owin Bovian who gave the Same to his Son Jn[o] John Goodwin dec[d] as appears more Largely in a Gift for y[e] Same which then descended to Edward Washborne by Marrying said John Goodwins Widdow and Since Purchased by the said Greentree Secondly Produced an Indenture of Bargaine and Sale for Ten Acres Land Sold by	Humphrey Edwards, free planter, came forward on behalf of the heirs of Edward Praeyn, deceased, and claimed thirty acres. The land had been given by William Bowman, deceased, to Praeyn's wife, who had since married Edwards. The register book recorded that the parcel had been part of the lot land of John Walls and William Marsh, and that Bowman had bought it from them. The bargain and sale was now produced. The heirs of Edward Praeyn held a clear right and title. Mary Hodgkison, widow, came forward on behalf of her daughter Elizabeth Bowman, and claimed thirty acres in Sea Valley. The parcel formed the other part of her grandfather William Bowman's land. Bowman had bought it from John Walls and William Hunt, Hunt having exchanged his lot land for that of Marsh. Bowman gave the parcel to his son John Bowman, deceased, who in turn left it by will to his daughter Elizabeth Bowman. She also claimed forty five further acres in reversion after her mother's decease. That parcel had been the land of Joseph Charles, deceased, as the register book recorded more plainly. John Nichols, freeholder, came forward and claimed forty acres. He produced a printed deed under the Company's seal for twenty acres. He produced a bill of sale dated 4 June 1688 for ten acres bought from Thomas Sortis, being his first allotment. He produced a counterpart indenture of bargain and sale dated 19 January 1682 for ten acres purchased from William Rutter, who acted as executor under the will of John Cooper, deceased. The instrument had been signed by Nichols instead of by the executor. The council believed an agreement for the parcel had been made. Nichols said that Governor Poirier had held both parts of the indenture, and when Nichols asked to recover them, Poirier had told him it made no difference which part he had. James Greentree, free planter, came forward and claimed sixty acres. He produced a bill of sale for ten acres sold by Tiddale to Owin Bovian. Bovian gave the parcel to his son John Goodwin, deceased, as set out in a deed of gift. The land then passed to Edward Washborne on his marriage to Goodwin's widow, and was later bought by Greentree. He produced an indenture of bargain and sale for ten acres sold by Joseph Trapp to John Goodwin. Greentree had also purchased that parcel. Interpretations The Praeyn claim shows the council recognising a remarried widow's continuing fiduciary responsibility for the children of her former marriage. The thirty acres reached her by gift from William Bowman during her first marriage to Edward Praeyn, and on her second marriage to Humphrey Edwards the parcel did not pass to him in his own right. The council recorded the title as belonging to the Praeyn heirs, with Edwards acting on their behalf at the registration sitting. The mechanism preserves the inheritance of the first marriage against absorption into the second household. The Hodgkison claim demonstrates the council's willingness to record a vested interest and a reversionary interest in the same sitting. The thirty acres in Sea Valley passed to Elizabeth Bowman by her father's will and were registered as her present holding. The further forty five acres remained in her mother's hands during her lifetime, with the reversion to Elizabeth recorded against the same claim. The arrangement gave the

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
		Joseph Trapp to said John Goodwin which the Said Greentree also Purchased[?] Margin Notes: Hump[y] Edw[d]s in behalf of Praeysns Heirs Claim[d] 30 Acres Land Title Proved. Mary Hodgkisons Claime to 75 acr[s] Land in behalfe of Eliz[h] Bowman Title Proved. Jn[o] Nichols Claime to 40 Acres Land Title Proved. Ja[s] Greentrees Claime to 60 Acres Land Title Proved.	daughter a documentary anchor for her future interest without disturbing the mother's present possession. The Nichols claim shows how an irregular execution of a deed could be cured by sworn oral testimony before the council. The 1682 indenture had been signed by the purchaser instead of by the executor selling on behalf of John Cooper's estate. Governor Poirier had treated the irregularity as immaterial because he held both counterparts of the instrument. The council in 1713 accepted Nichols's account as sufficient to support the title, treating the practical equivalence of the two counterparts as overriding the formal defect in signature. The Greentree claim records how a remarried widow could carry a freehold into a new marriage. The ten acres given to John Goodwin by his father Owin Bovian passed to Edward Washborne when Washborne married Goodwin's widow. The land was then sold on to Greentree. The chain depended on Washborne's standing as the widow's second husband to convey land that had originated as a gift to the first husband. The council accepted the chain because each link was supported by a documented instrument. Speculations The Hodgkison registration of both the vested thirty acres and the forty five-acre reversion at the same sitting was probably driven by the survey deadline of 25 March 1713. By bringing forward the reversionary interest now rather than waiting for her mother's death, Elizabeth Bowman secured a contemporaneous record of her future right against any later challenge from collateral relatives or from second-marriage claimants. The cost of registration was once; the documentary protection extended into the next generation. The casual remark attributed to Governor Poirier on the Cooper sale, that it made no difference which part of the indenture Nichols held, suggests that the formality of executor's signature was treated as recoverable through the governor's personal vouch. Recording the episode at the 1713 sitting was probably calculated to fix the cure in the council's own records before Poirier's tenure passed entirely out of living memory, since the title would otherwise rest on a defective deed whose only support was a remembered conversation.
23	16	Purchas[d] after the Same Manner as the former Ten Acres Thirdly Produced a bill of Sale for Twenty Acres of Land Sold him by Gabriell Powell, Lying in Sandy bay Fourthly produced a bill of Sale For Ten Acres Land Sold him by his Bagley being the former Allotment of Edward Suffolk dec[d] Fifthly, Produced a bill of Sale[?] for Ten acres of Land more that his Father John Greentree bought of Henry Lundy which he had in Exchange for Ten Acres of Jonathan Higham the former Allotment of Edward Anejo as appeared in an Old Register book All which Severall Parcells the Said James Greentree hath a just right and Title to. Mary Hoskison wid[w] freeholder Appeared and Laid Claim to Eighty Six Acres of free Land Thirty Acres whereof bought of Gabriell Powell at[?] Pre[?]y at the Horse Pasture Twenty Eight Acres at Lemon Valley head formerly Richard Curlings and Twenty Eight Acres more under his Peak being Part of William Frenchs	Greentree had bought the second ten acres in the same manner as the first. He produced a bill of sale for twenty acres in Sandy Bay, sold to him by Gabriel Powell. He produced a bill of sale for ten acres sold to him by his Bagley, being the former allotment of Edward Suffolk, deceased. He produced a bill of sale for a further ten acres that his father John Greentree had bought from Henry Lundy. Lundy had received the parcel in exchange for ten acres of Jonathan Higham, the former allotment of Edward Anejo, as an old register book showed. Greentree held a clear right and title to all these parcels. Mary Hoskison, widow and freeholder, came forward and claimed 86 acres of free land. Thirty acres had been bought from Gabriel Powell, lying at the Horse Pasture. Twenty eight acres lay at the head of Lemon Valley, formerly belonging to Richard Curling. Twenty eight acres lay under the Peak, being part of the land of the children of William French. Ten acres had been bought from Thomas Goodwin. Mary Hoskison brought in the same day the last will and testament of her late husband George Hoskison for proof. The will was proved on the oaths of John Hose, John Tompson and Walter Morris.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
		Childrens Land. Also Ten Acres bought of Thomas Goodwin The Said Mary Hoskison brought this day her dec[d] Husband George Hoskisons Last Will and Testament in order of having the Same prov[d], which was Accordingly done by the oaths of John Hose, John Tompson and Walter Morris. Ordered that the Said Will be approved of receivd & Entered in a book for that Purpose, and coppys given when Demanded. The Said Mary Hoskison desires Letters of Administration may be granted her, upon her Said Deceased Husband Estate Ordered. That an Inventory be first Taken thereof and delivered upon Oath, ans then her request to be granted. Upon Examining the Acc[ot] of a Numb[r] of Acres of Land return[d] Surveyed to John Nichols I find that he has Inclosed Ten Acres of the Honour[ble] Companys Common without any Liberty or grant, under pretence of y[e] benefit of fenceing for Advantage According to an order made by Govern[r] & C[?] Cocks, Although he the Said Nichols petition for Some Land not Long Since which for good reasons was deny[d] him. Wherefore Ordered. Margin Notes: Mary Hoskisons Claime to 86 acres Land Geo[r] Hoskisons Will proved The Wid[w] desires Lett[s] of Administra[n] An Inventory to be first deliv[d] in Jn[o] Nichols has Inclosed 10 acres of y[e] Hon[ble] Comp[s] Comon Land dis- [...]	The council ordered the will to be approved, received and entered in a book kept for that purpose, with copies to be given when demanded. Mary Hoskison asked the council to grant her letters of administration over her late husband's estate. The council ordered that an inventory of the estate be taken first and delivered on oath, and that her request be granted after that. On examining the number of acres returned as surveyed for John Nichols, the council found that he had enclosed ten acres of the Company's common ground without any liberty or grant. He had relied on the benefit of fencing for advantage, under an order made by Governor and Council Cocks. Nichols had earlier petitioned for some land and had been refused for good reasons. Interpretations The Hoskison claim records the largest individual freehold confirmed in the present series of title sittings. The 86 acres came together through four separate purchases: the Powell parcel at the Horse Pasture, the Curling parcel at Lemon Valley head, the French children's parcel under the Peak, and the Goodwin parcel. The council registered the consolidated holding in the widow's name without requiring her to bring the purchases under a single instrument. The mechanism shows that the registration system could accommodate a planter's house with substantial scattered holdings as readily as a small contiguous lot. The probate of George Hoskison's will alongside his widow's land claim demonstrates how the council combined two distinct functions in a single sitting. The will was proved on the oaths of three witnesses, recorded in the dedicated book, and copies made available on demand. The grant of letters of administration was suspended until an inventory had been brought in on oath. The conditional grant gave the council a working check on the widow's account of the estate before she was clothed with formal authority over the personal property. The Nichols enclosure case discloses a working ambiguity in the standing law on fencing. An earlier order under Governor Cocks had allowed a planter to enclose adjoining common ground to his own advantage where this could be defended as a benefit of fencing. Nichols had used the order to enclose ten acres of common after the council had already refused his petition for additional land. The council's recording of the case shows it treating the Cocks order as no longer a safe foundation for unilateral enclosure, particularly where the planter had been formally refused on the same ground by a recent decision. The reference to William French's children as the source of the twenty eight acres under the Peak ties Mary Hoskison's holding to the orphan estate registered in earlier sessions. The parcel had been seized when French's wife died, and was later let or sold on. Its appearance in Mrs Hoskison's freehold suggests that the council had subsequently disposed of part of the French orphans' land into Hoskison's hands, with the registration in 1713 fixing the present possession against any later challenge from the French children. Speculations The bringing forward of George Hoskison's probate at the same sitting as his widow's land claim was probably calculated to consolidate the household's documentary position in a single appearance. With the deputy governor dead almost twelve months before, the widow was working against the survey deadline of 25 March 1713 and against any challenge that might arise from her late husband's outstanding administrative responsibilities. Securing the will, the letters of administration and the land registration together gave her a unified record on which to rest both estates.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			The Nichols enclosure case probably reached the council's attention through the surveyor's measurements rather than by complaint. With Bazett returning the acres to the clerk's office for each registered claim, an excess of ten acres beyond Nichols's documented title would have shown immediately against the plan. The recording of the case at this sitting suggests the council was using the registration programme as a working audit of the island's common ground, with the survey itself providing the evidence of unauthorised enclosure that no inhabitant would have brought forward.
24	17	Ordered That the said John Nichols do between the day of the date hereof and the first of Aprill Next Ensuing Take downe and remove all the fences made on Said Land upon pain of being Dealt with as a Trespasser upon the Said Honour[ble] Comp[s] Privledge & Comon Which the said Nichols hath promised to do forthwith. Robert Marsh free planter presented a Petition this day Setting forth That having Lately Purchased a Small Parcell of Land of Jonathan Drelton Humbly Prays we would be pleased to grant him the Liberty of Renting about five or Six Acres of the Honour[ble] Companys Waste Land adjoining thereunto, and his owne former Ten Acres Land. Ordered that the fencing in the Same and being measured his Petition be granted, and a Lease made for the Term of Twenty four years at the usuall Rent of five shillings p[er] Acre in the whole. Thomas Harper free planter Exhibited his Petition Setting forth therein That notwithstanding all Imaginable Care and Industere his Cattle vile and Mannure the Land he now Hires for the raising & producing Provisions, the Same growes m[u]ch more barren and is much fallen be- decay, Insomuch is not able to Support and Maintenance his Family of Small Children with Severall other Allications. Wherefore Humbly Prayes the premises Considered, We would beg your him So far as to grant him about Two Acres of the Honour[ble] Company Waste Land Lying in Swanley Valley which would be of y[e] dream great use & service to him and Petitioner and family. Ordered That upon his Fencing in the said Land in and Upon Same measures, his Petition be granted and that he have a Lease Accordingly for twenty one years at y[e] usual[l] Rent. Isaack Leech quarter Gunner Presented a Petition representing That having no more then but five Acres of Land for Small a quantity for both Plantation and Pastur[e] of his Cattle Humbly prays to become Tennant to the Honour[ble] Company for about Eight Tenders of Theer Waste Land which Richard Foy Intends to Inclose for conveniency of Fencing with twenty Acres of formerly granted to Henry Coals decaas[d] or that the Same may Lay Common, otherwise twill be very Prejudi- ciable to him and Familie, and Render them not able to Live or	The council ordered Nichols to take down and remove all the fences on the ten acres between this date and 1 April 1713, on pain of being treated as a trespasser on the Company's common. Nichols promised to do so at once. Robert Marsh, free planter, presented a petition. He had recently bought a small parcel of land from Jonathan Drelton, and asked to rent about five or six acres of the Company's waste land adjoining that parcel and his own former ten acres. The council ordered that on fencing in the land and having it measured, his petition would be granted. A lease would be drawn for a term of twenty four years at the usual rent of 5s 0d per acre in the whole. Thomas Harper, free planter, presented a petition. He stated that despite his best efforts to manure with his cattle the land he hired for raising provisions, the ground had grown barren and fallen into decay. He could no longer maintain his family of small children. He asked the council to grant him about two acres of the Company's waste land in Swanley Valley. The council ordered that on his fencing in the land and having it measured, his petition would be granted, with a lease for 21 years at the usual rent. Isaack Leech, quarter gunner, presented a petition. He held only five acres, which was too little for both his plantation and the pasture of his cattle. He asked to become tenant to the Company for about eight tenders of waste land that Richard Foy intended to enclose for fencing convenience, together with twenty acres that had formerly been granted to Henry Coals, deceased. Otherwise the ground should be left as common. Without one of these arrangements he could not support his family or raise any stock. The council ordered that Foy be forbidden at once from fencing in any more land than the twenty acres formerly held by Henry Coals, deceased. Interpretations The enforcement order against Nichols sets a working timetable for the recovery of unauthorised enclosure. The council allowed slightly under two months for the fences to come down, after which Nichols would be liable as a trespasser. The interval gave him time to remove his materials and resite his fencing, but the threat of trespass enforcement converted the planter's earlier reliance on the Cocks order into an immediate liability. The Nichols case shows the registration programme functioning as a working audit of common ground, with the survey itself producing the evidence of breach. Marsh's lease at 5s 0d per acre for a term of twenty four years sits outside the pattern of 21-year leases that has dominated the present series. The four extra years are not explained on the face of the order. The combination of an existing purchased parcel, an adjoining freehold owned by Marsh, and the new lease for the Company's waste land created a consolidated holding under a single tenancy. The longer term may reflect the council's recognition that a planter consolidating across three sources of tenure required additional security to justify the cost of fencing the whole.

		raise any Stock of Cattle. Ordered That upon the Premises being Considered, the said Cleve be Immediately forbid fencing in any more Land than the twenty acres formerly in the Possession of Henry Coales dec[d] Robert Margin Notes: Nichols Ord[d] to pull down s[d] Fences by 1[s] of April ne[xt] Rob[t] Marshes request to hire a Small Pcell Land upon fencing in y[e] Same Granted. Tho[s] Harpers request to hire 2 acres Land in Swanley Valley Granted. Isa[c] Leech's request to hire a Pcell Land [...] intends to [...] to his own. [Foy?] Forbid fencing any [...] [...] Land	Harper's case demonstrates the working consequences of soil exhaustion on the island's leased ground. The council accepted that hired land could fall out of useful cultivation and treated the grant of waste land in Swanley Valley as the appropriate remedy, with a fresh 21-year lease at the usual rent. The arrangement transferred the working ground from a parcel exhausted by continuous cropping to one that had not been worked, while keeping the planter on the Company's rent roll. The mechanism preserves the rent base by relocating, rather than reducing, the planter's obligation. The Leech case shows the council intervening against an attempt by Richard Foy to enclose Company waste land by appropriation rather than by lease. Foy's plan to enclose the eight-tender parcel for fencing convenience would have removed the ground from common use without any grant. By forbidding Foy and reserving the council's discretion over the wider Coals parcel, the council preserved both planters' positions while making clear that enclosure required prior council authority. The case parallels the Nichols enforcement order issued at the same sitting. Speculations The longer 24-year term on Marsh's lease was perhaps calculated to align the expiry with the surrounding tenures in his consolidated holding, or to compensate for the fact that the Company waste land had not previously been worked and would require heavier initial investment in fencing and clearance. Either reading suggests the council was using lease term as a flexible incentive rather than holding rigidly to the 21-year default that had become standard elsewhere. The decision to forbid Foy's enclosure before adjudicating Leech's wider request indicates that the council was treating the immediate threat to common ground as the urgent business. Leech's substantive petition for the Coals parcel was left undecided at the same sitting, but Foy's unilateral fencing was stopped at once. The pattern shows the council prioritising the protection of common ground over the resolution of competing planter claims when both were in play, leaving the wider question to be settled at a later sitting once the immediate intrusion had been removed.
25	18	Robert Bell free planter and Mason Exhibited his Petition Setting forth therein That both he and his blacks haveing been for Some years past Employed about the Honoura[ble] Companys Fortification work Have not been able to Comply With their Order for Fencing in Lands Wherefore Humbly Prays we would be pleased to grant him a Longer Time to fence in his Said Land. Ordered That we well knowing the Allegations of the Said Petition to be true, and that he is a very Sob[r] & Industrious Man, He have a Twelve months Time Longer Allowed him to Fence in his Said Land. Ordered. That an Advertizement be Issued out to require all Persons Especially Masters and Mistrisses of Families to give an Account of their respective Families Lands and Cattle that they have or Last year had in their Possession, between the 1[st] and 16 day of this Just[t] which Advertizement is as followeth &c.	Robert Bell, free planter and mason, presented a petition. He stated that for some years past both he and his slaves had been employed on the Company's fortification work and had not been able to comply with the order to fence in his land. He asked for further time. The council, knowing the statements in the petition to be true and Bell to be a sober and industrious man, allowed him a further twelve months to fence in his land. The council ordered an advertisement to be issued. It required all inhabitants, and in particular the masters and mistresses of families, to bring in an account of their families, lands and cattle then in their possession, or in their possession the previous year, between 1 and 16 of the present month. The advertisement was as follows: The Honourable United Company, Lords Proprietors of the island, had directed that an account be sent home each year of all inhabitants on the island and of all land and cattle held by each master or mistress. In her Majesty's name, all inhabitants, and in particular masters and mistresses of families and householders, were required to bring or cause to be brought into the clerk's office at the United Castle in James Valley, between the date of the advertisement and the 20th of the present month, a true and just account of every person resident in their families, white and black, men, women and children, with the ages of children male and female.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
		Whereas the Honourable United Company Lords Proprietors of this their Island Hath Enjoynd that an Account be Sent unto them Every year of all Inhabitants and Persons residing on Said Island and of all Land and Cattle that is in Each Masters or M[s] Possession These are therefore in her Majesties Name To will and require all and every the Said Inhabitants Especially well Masters and Mistrisses of Families & Housekeepers therefore for bring in or cause to be brought into the Clerks Office within United Castle in James Valley, between the 1 day of y[e] Sd[?] hereof and the 20 Instant a True and Just account of every Person or Persons, both Whites & blacks residing and being in their respective Families viz[t] Men, Women and Children with the Severall ages of their Children Males & Females Likewise the Particular Number of Acres of Land (both free & Leased) that Each Familie are now or were Last year in Possession of or any other Person for them And Also the Number of their Head Cattle in their Severall Kines that every such Person hath or Last year had in their Possession or any other for them as aforesaid, Which Account of Families Land and Cattle are to be true and in Writing Subscribed by the Said Master or Mest of the Said Families for his or her, or own Familie Land and Cattle Land by any Person Living with them for their own Margin Notes: Rob[t] Bell desires Long time to fence in his land allowed 12 mo[s] time Acc[ot]s of Familys to be given in. The Advertizem[t] for all Persons to take Notice of & bring in their acc[ts] by y[e] s[d] March.	The account was also to record the particular number of acres of land, both free and leased, held by each family in the present year or the previous year, including any held for them by another person, together with the number of head of cattle in their several kinds held by each family in the present year or the previous year, or by another for them. The account of families, land and cattle was to be true, in writing, and signed by the master or mistress of the family for his or her own family, land and cattle. Interpretations The grant of a further twelve months to Robert Bell sets a working pattern for fencing relief tied to identifiable public service. Bell's employment, with his slaves, on the Company's fortifications gave the council an institutional reason to suspend the standard deadline. The relief parallels the earlier extension to Thomas Burnham at the sitting of 6 January 1713, and confirms that the council recognised a defined class of planter, those whose labour was already absorbed in fortification work, as entitled to additional time without prejudice to title. The annual census order combines three returns into a single advertisement: inhabitants, land and cattle. The instruction to record both present and previous year's holdings shows the council building a comparative record across two years for the directors' use. The requirement that masters and mistresses sign for their own families allows the council to identify the responsible household head against each return, while the inclusion of land held by another person on the family's behalf catches trustee and fiduciary holdings within the same instrument. The reference to the United Company as Lords Proprietors and the issue of the advertisement in her Majesty's name fixes the formal authority on which the census rests. The dual invocation, Company and Crown, gives the council a working basis for compelling compliance from both the resident free population and any inhabitants who might dispute the Company's standing. The instrument is framed for evidentiary use in London as well as on the island. The detailed schedule of items to be returned, slaves separately from whites, men separately from women and children, children with their ages, free land separately from leased land, and cattle separately by kind, shows the council collecting structured data rather than a general count. The instrument anticipates the directors' need for working figures on labour, settlement and stock, and gives the council an audit base against which subsequent transactions could be measured. Speculations The clause requiring inclusion of land held by another person on the family's behalf was probably aimed at the trustee arrangements that have come forward repeatedly through the present registration programme. Widows holding land in custody for orphan heirs, second husbands managing the freeholds of children by their wives' earlier marriages, and adult brothers acting on behalf of younger siblings would all have been required to declare their fiduciary holdings against their own family return. The provision captures the orphan estates within the working census without requiring separate registration. The narrow window between the date of the advertisement and 20 March 1713 indicates that the council was driving the returns to coincide with the 25 March 1713 administrative year-end, when the survey deadline also fell. Bringing the census in on the same closing date as the survey gave the council a single working snapshot of the island's settlement, land tenure and stock at the year's end, in time to be sent home with the documentation of the registration programme on the next homeward shipping.

26	19	own Lands and Cattle. Likewise these are to require all Such Persons aforesaid to give an Account in Writing unto John How the Honoura[ble] Companys Reive at their Plantation House of all Neat Cattle Turn[d] upon the Common or Waste Land the Ensuing year. Unto all which a ready Compliance and Obedience is Expected as they will Answer the Contrary upon the Penalty of a Fine afore[m] and Cumu[ll][p] Diversion to be Levied upon the Goods and Estate of every offender for every offence Contrary hereunto. Wherefore all Persons are required to take Peticular Notice Accordingly. Dated at the United Castle in James Valley this 4[th] day of March 17 12/13. Sign[d] per order of Govern[r] & Councill p me. Jn[o] Alexander Acc[ot]nt Ordered. That Tuesday next being the 17[th] Instant be appointed Councill day to Inquire further into the Titles of Lands or to hear and Determine any other business that may offer.	All inhabitants required to file the family return were also to give a written account to John How, the Company's reeve at the Plantation House, of every head of neat cattle they intended to turn upon the common or waste land in the coming year. Compliance was required on penalty of a fine, to be levied on the goods and estate of any offender for each breach. Dated at the United Castle in James Valley, 4 March 1713. Signed by order of the Governor and Council by John Alexander, Accountant. The council ordered that Tuesday 17 March 1713 be appointed as the next council day, for further examination of land titles and any other business that might arise. Interpretations The cattle return to John How adds a fourth strand to the census programme alongside the inhabitants, land and household returns set out in the principal advertisement. By requiring inhabitants to declare in advance how many head they intended to turn out on the common, the council gave the reeve a working base against which to police the actual use of the pasture across the coming year. The mechanism converts the Plantation House from a working estate into the administrative centre for Company grazing rights, with the reeve as the responsible officer. The threat of a fine levied on the offender's goods and estate gives the census order direct enforcement force, parallel to the distraint procedure already used for store debts and to the trespass penalty applied to Nichols's enclosure earlier in the same series. The penalty falls on the offender's property rather than on the person, which keeps the working population at their labour while still securing payment. The council has now built a graduated enforcement scheme in which fines against goods, trespass actions and forfeiture of land all operate against different categories of breach. The fixing of 17 March 1713 as the next council day brings the title programme and the census programme into alignment with the 25 March 1713 administrative year-end. The cluster of deadlines, survey completion, family returns, cattle declarations and the close of the financial year, converges on a single eight-day window, giving the council a working snapshot of the island's settlement and tenure as the year closes. Speculations The decision to channel the cattle return through the reeve at the Plantation House, rather than through the clerk's office at the United Castle, was probably calculated to use the existing field-level knowledge of John How. The reeve dealt with the common ground daily and would recognise discrepancies between the declared head and the actual stock turned out. The clerk's office handled the documentary work; the reeve handled the working count. The split functions reflect the council's recognition that paper compliance alone would not control the grazing without field-level verification.
27	20	Island [...] At a Consultation Held on Tuesday the 17[th] day of March 17 12/13 At the United Castle in James Valley Pres[t] Benja: Boucher Esq[r] Govern[r] John Pack Dep[ty] Govern[r] Matth[eu] Bazett 3 in Coun[ll] Lieut[t] Thom[s] Cason John French Assist[ts] Hatton Starling Coxswaine Presented his Petition Setting forth That Robert Leech dec[d] his Predecessor had for Some years past Rented Ten Acres of Land Lying in Tomstone	The council met at the United Castle in James Valley on Tuesday 17 March 1713. Those present were Benjamin Boucher, Governor; John Pack, Deputy Governor; Matthew Bazett, third in council; and Lieutenant Thomas Cason and John French as assistants. Hatton Starling, coxswain, presented a petition. His predecessor Robert Leech, deceased, had rented ten acres of land in Tomstone Wood, formerly belonging to Thomas Smoult, from year to year at £7 0s 0d per annum. Starling thought the rent too high and asked for an abatement, together with a lease in his own name for 21 years.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
		Wood, formerly Thom[s] Smoults, from year to year at Seven pounds per Annum which he presumes to be too great a rent and there-upon Humbly desires that Some Part of the Rent may be abated and a Lease granted in his own Name for the Terme of Twenty one years. Ordered That the Said Starling have a Lease in his own Name accord- ing to his desire for 21 years at the Same rent paid yearly by Robert Leech, and no otherwise. John William Pyffer Asistant to the Armourer presented his Petition Humbly Seting forth That he had work[t] in the Armourars Shop for upwards of two years at only fifteen pounds p[er] annum which being too Small a Sallary to Supply himselfe with Cloathing duty[?] and other Necessaries and five pound Less than any former in that Employ Ever had Humbly requested to have the Addition of Said 5 p[er] annum[?] as had his Predecessor Nathaniell Collins Some time Since gone off the Island Upon Margin Notes: Hatton Starling desires his rent may be abated & a lease granted in his own Name The Same Rent to Continue but Lease in his own Name Jn[o] W[m] Pyffer's request for 5 [...] addition to his Sallary.	The council ordered that Starling have a lease in his own name for 21 years at the same rent that Robert Leech had paid yearly, and on no other terms. John William Pyffer, assistant to the armourer, presented a petition. He had worked in the armourer's shop for upwards of two years at only £15 0s 0d per annum. The salary was too small to supply him with clothing and other necessities, and was £5 0s 0d less than any former assistant in that employment had ever received. He asked for an addition of £5 0s 0d per annum, to bring his salary to the rate enjoyed by his predecessor Nathaniel Collins, who had since left the island. Interpretations The Starling petition shows the council distinguishing sharply between the form and the substance of a tenancy. Starling sought two reliefs: a lease in his own name and an abatement of the rent. The council granted the first and refused the second. Conversion of a yearly tenancy into a 21-year lease gave the holder documentary security against future displacement, but the council declined to compromise on the working rent. The case confirms that lease term and rent were treated as separable matters, with the council prepared to extend security of tenure without conceding income. The rent of £7 0s 0d for ten acres at Tomstone Wood, originally paid by Robert Leech and now confirmed against Starling, fixes a working rate of 14s 0d per acre. This stands well above the usual 5s 0d per acre that has been recorded across several other recent leases. The differential probably reflects the productive value of established wood land already in working cultivation, in contrast to waste land granted on condition of fencing. The council's refusal to abate the rent indicates that it treated the established rate as the controlling figure for ground of this quality. The Pyffer petition discloses the working pay structure for skilled garrison labour. The armourer's assistant had a settled customary rate of £20 0s 0d per annum, which had been paid to Nathaniel Collins before his departure. Pyffer's £15 0s 0d represented a £5 0s 0d reduction from the customary rate, and the petition turns on restoration to the established figure rather than on any new claim. The parallel with the Tysor case of 24 September 1711, where the predecessor's £20 0s 0d had also been reduced to £15 0s 0d for a learner with prospect of more on improvement, suggests that the council had been using the lower rate as a probationary entry point. Speculations The decision to give Starling a 21-year lease at the existing rent rather than continuing him on a yearly tenancy was probably driven by the survey and registration programme. With the council bringing all tenures into a documentary form during the current series of sittings, a yearly tenancy at £7 0s 0d would have sat uneasily against the leases now being engrossed for every other holder. Converting Starling's interest into a 21-year lease at the same rent regularised his position within the wider scheme without altering the income to the Company. Pyffer's framing of the petition by reference to a named predecessor at a specific higher salary suggests that the working pay rates for skilled garrison labour were retained in living memory among the soldiers and dependants of the establishment. By naming Nathaniel Collins and the £20 0s 0d rate, Pyffer gave the council a concrete benchmark against which his own claim could be measured, and made it difficult for the council to retain him at the lower probationary figure on grounds of inexperience after two years of service.
28	21	Upon Consideration that the Petitioner is a very Sober Industrious	On consideration that Pyffer was a sober and industrious man who had made improvement in his

		man and having made Improvement in his Trade Ordered for his Encouragement that his request be granted, and the Same be plac[d] to his Credit the Ensuring Reckoning day. Gilbert Sinsnick orphan Exhibited a Petition Setting forth that about Seven years Since he was put out in the Nature of an Apprentice by Govern[r] Poirier to James Draper for the Terme of Ten years to Learne the Art or Mistery of a Shoe maker but instead thereof the Said Draper puts the Said Sinsnick upon hard Labour in Plantation work and takes no Care to Learn him his Trade Wherefore desires he may be discharg[d] his Masters Service that he may Learne a Trade by Some other Person. The Said Draper having been Summon[d] to appear Alledged that he took the Said Gilb[t] Sinsnick when an Infant and had no Consideration with him the Governour Poirier promis[d] he Should have Eight Pounds but notwithstanding this had he had Leather to have work[t] upon the said Sinsnick might have Learnt his Trade and hopes to Performe his agreem[t] before the Ten years is Expired with a Promise of putting the Said Gilbert Sinsnick out for one whole year and the remainder of his Time to be taught the Trade of Shoe makeing. Whereupon Ordered. That the said Sinsnick Continue with his Master the remaining Part of the time Govern[r] Poirier Covenanted for. Joseph Wrench Sold[r] Having been found Guilty of Misdemeanor In bartering and receiving Arrack from a black [...] Christian[?] besides the aiding and Setting him in the Robbery and Entering the House whereon the Liquor Lay, was Sentenced to Run the Gantlett through the Garrison Company of Soldiers and to do duty upon all three Guards at Mundens Point, which being Executed. The Said Wrench, Humbly Petition[d] Shewing much regret & Sorrow for his Late Crime, faithfully promising future amendment That we would be pleas[d] out of Clemency and Pitey to his Present State and Condition to grant him the favour of being freed from the mounting on Every Guard that he might be at Liberty to attend his Customers in Trim[m]ing and puting himself thereby in a way of paying his debts for Cloathing and dyet &c. Upon Consideration of the Petitioner's hearty Sorrow for his Late offence and Promise of future good behaviour. Ordered. Margin Notes: His request Granted. Gilb[t] Sinsnick desires a discharge from his Mast[rs] Service his Masters Objection	trade, the council ordered, for his encouragement, that his request be granted and the additional £5 0s 0d placed to his credit at the next reckoning day. Gilbert Sinsnick, orphan, presented a petition. About seven years before he had been put out by Governor Poirier as apprentice to James Draper for a term of ten years, to learn the trade of shoemaker. Instead of teaching him the trade, Draper had set him to hard plantation labour and taken no care to instruct him. He asked to be discharged from Draper's service, so that he might learn a trade with another master. Draper was summoned and gave his answer. He had taken Sinsnick in as an infant without any payment, although Governor Poirier had promised him £8 0s 0d. If he had had leather to work, he said, Sinsnick could have learnt the trade. He hoped to perform his agreement before the ten years expired, promising to place Sinsnick out for a whole year and then teach him the shoemaker's trade during the remainder of the term. The council ordered that Sinsnick continue with his master for the remainder of the term Governor Poirier had covenanted for. Joseph Wrench, soldier, had been found guilty of misdemeanour. He had bartered with and received arrack from a slave called Christian, and had also aided him in robbery by entering the house where the liquor was kept. He had been sentenced to run the gantlet through the garrison company of soldiers and to do duty on all three guards at Munden's Point. The sentence had been carried out. Wrench then presented a petition, expressing regret and sorrow for his crime and promising future good behaviour. He asked the council to free him from mounting every guard, so that he might be free to attend his customers in trimming and earn enough to pay his debts for clothing and diet. On consideration of his sorrow and promise of better conduct, the council ordered. Interpretations The Pyffer order shows the council using the next reckoning day as the working mechanism for adjusting salary. The £5 0s 0d addition was not paid in cash at the moment of grant but credited against his account when the year closed. The arrangement parallels the wider store-book practice on the island, where wages, debts and credits ran through the same ledger and were settled by entry rather than by coin. The mechanism allowed the council to recognise the claim without disturbing the working cash position. The Sinsnick case discloses the practical limits of the apprenticeship system on the island. The original indenture had set a ten-year term to learn the shoemaker's trade, but Draper had used the apprentice for plantation labour because he lacked leather to work. The council refused to discharge Sinsnick despite the documented misuse, holding him to the original term while leaving Draper's revised promise of one year out and the remainder in the trade as the working compromise. The order shows the council reluctant to set apprentices loose into the labour market, even where the master had failed in his core obligation. The unpaid £8 0s 0d that Governor Poirier had promised Draper for taking the infant apprentice records a working incentive structure for the absorption of orphan children into planter households. The fee, never paid, gave Draper a defence against the charge of neglect by framing his own loss alongside the apprentice's. The exchange suggests that the council, while declining to discharge Sinsnick, recognised that the original arrangement had been compromised on both sides, and chose to preserve the framework rather than unwind it. The Wrench case sets out the working penalty for collusion with slave theft. The sentence had three elements: running the gantlet through the garrison

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
		Sinsnick to Serve his time Jos: Wrench Punished for Misdemeanor Wrenches request	company, additional duty on all three guards at Munden's Point, and the social mark of public punishment. The first had already been executed. The petition turned only on relief from the continuing guard duty, not on remission of the original sentence. The structure shows the council treating physical punishment and continuing service obligations as separable, with the latter open to negotiation once the former had been carried out. Speculations The decision to retain Sinsnick under Draper's hand for the remainder of the original term, rather than transferring him to another master, was probably calculated to avoid setting a precedent that would unsettle the wider apprenticeship system. With Governor Poirier dead and his original placement ten years behind, a discharge on the apprentice's petition would have opened other indentures to similar challenge. Holding Sinsnick to the term, while extracting Draper's revised undertaking on the record, preserved the institution while addressing the immediate complaint. Wrench's request for relief from continuous guard duty so that he could attend his customers as a trimmer points to the dual economy that operated within the garrison. Soldiers commonly carried trades on the side, earning store credit and cash from inhabitants while drawing their military pay. By framing his petition as a request to resume his civilian custom in order to pay his debts for clothing and diet, Wrench identified the working dependency between his garrison service and the planter economy, and gave the council a reason to relax the additional duty without remitting the underlying conviction.
29	22	Ordered That his request be granted for this time. Isaack Wood Corporall appeared in the behalfe of Samuel Defountains Children and Laid Claime to Forty Eight Acres Land Producing an Indenture of Bargaine and Sale dated the 16 of June 1681 Sign[d] by Thom[s] Birch whose Lott Land it was, to Edward Brayne for Twenty Acres Land Lying in Fishers Valley which Said Twenty Acres the s[d] Brayne Sold to Onesiphorus Quincy (whose widow married to Samuel Defountaine) he dying Mrs[?] Married againe to Wood) for the Same of Twenty pounds and Ten Acres Land in Gyryngs Valley as Appears by bill of Sale Sign[d] by Said Brayne and dated the 17 of June 1681. Also produced a bill of Sale dated the 9 of January 1683 for Ten Acres Land the Lot of Thomas Goodale who Sold the Same to Said Onesiph[s] Quincy and is adjoyning to the afores[d] Twenty Acres. Likewise produced a bill of Sale dated the 24 Novemb[r] 1701 for Ten Acres more bought of Thomas Dixon by Samuel Defountaine being Part of the Lott Land of John Mattlins whose widdow the said Dixon Married, and Three Acres and one Third of an Acre Lying in the great Wood hangings All which he Enjoys in right of his wife during her Naturall Life. The Said Wood hath five Acres of his own Lately bought of Giles	The council ordered that Wrench's request be granted on this occasion. Isaack Wood, corporal, came forward on behalf of the children of Samuel Defountain, and claimed forty-eight acres. He produced an indenture of bargain and sale dated 16 June 1681, signed by Thomas Birch, whose lot land it was, to Edward Brayne, for twenty acres in Fishers Valley. Brayne sold the twenty acres to Onesiphorus Quincy for £20 0s 0d. Quincy's widow had since married Samuel Defountain, and on Defountain's death married Wood. Brayne also sold him ten acres in Gyryngs Valley, as shown by a bill of sale dated 17 June 1681. He produced a bill of sale dated 9 January 1684 for ten acres that had been the lot of Thomas Goodale. Goodale sold the parcel to Onesiphorus Quincy. It adjoined the earlier twenty acres. He produced a bill of sale dated 24 November 1701 for ten further acres bought by Samuel Defountain from Thomas Dixon. The parcel was part of the lot land of John Mattlins. Dixon had married Mattlins's widow. The holding also included three and one third acres lying in the great wood hangings. Wood held the whole during the natural life of his wife. Wood also held five acres in his own right, recently bought from Giles Hayse, who was still living there. The purchase was made under a bill of sale dated 27 August 1712. The parcel formed part of twenty acres that had been the lot of William Hayse senior, deceased. Robert Girling, freeholder, came forward and claimed twenty acres in Peek Gutt. George Hodgkison had sold the parcel to Gabriel Powell, and Powell had sold it to Girling under a bill of sale dated 1 May 1704, with an endorsement on the back dated 3 October 1706. The two parcels making up the twenty acres had reached Hodgkison as follows. Ten acres came by exchange with the Company for about seven acres

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
		Hayse (now Liveing there) as appears by bill of Sale dat[d] the 27 day of August 1712 and is part of Twenty Acres the Lott of William Hayse Sen[r] deceased. Robert Girling freeholder appeared and Laid Claime to Twenty Acres of Land Lying in Peek Gutt Sold by George Hodgkison to Gabriel Powell and by Powell to Said Girling as appears by bill of Sale dated the 1 of May 1704 and Endorsement on the backside dated the 3 of October 1706 which Said Twenty Acres of Land the Said Hodgkison came by in the following Manner viz[t] Ten Acres in Exchange with the Honoura[ble] Company for about Seven Acres of Land formerly Richard Staceys adjoining to their Pasture and the other Ten Acres he Purchased of Edward Heath who had the Same of the said Honoura[ble] Company in Exchange for Ten Acres formerly Samuel Joseys dec[d] Lying Contiguous to their great Pasture Land. To which Twenty Acres the said Robert Girling hath a just right and Title. Stephen Margin Notes: Granted. Isa: Woods claim to 48 Acres land belonging to Sam[l] Defountains 3. Children. Title of Same Proved R[t] Woods Claime to 5 Acres of his own Land Rob[t] Girlings Claim[e] to 20. Acres Land Title Proved	formerly belonging to Richard Stacey, lying next to the Company's pasture. The other ten acres he bought from Edward Heath. Heath had received them from the Company in exchange for ten acres formerly belonging to Samuel Josey, deceased, which lay next to the Company's great pasture. Girling held a clear right and title to the twenty acres. Interpretations The Wood case shows the council registering a substantial holding that combined a life interest by marriage with a separate freehold in the holder's own right. The forty-eight acres reached Wood through his marriage to the twice-widowed mother of the Defountain children, and he held them during her natural life. The five acres bought from Giles Hayse in 1712 stood in his own right. The council recorded both interests under his name at the same sitting, with the life interest clearly distinguished from the personal freehold. The mechanism kept the orphan inheritance secure for the Defountain children while allowing Wood to manage the consolidated household holding during his wife's lifetime. The Girling case sets out how the Company's pasture-consolidation programme operated through serial exchanges. Hodgkison's twenty acres in Peek Gutt rested on two separate exchanges with the Company, one for ground originally belonging to Stacey and one for ground originally belonging to Josey, both parcels lying next to the Company's great pasture. The Company gained adjacent ground for its own working pasture, and the planters acquired equivalent ground further away. The chain that produced Girling's title in 1713 had passed through three generations of holders, all stemming from the Company's exchange policy. The serial widow-remarriage chain in Wood's claim, Quincy to Defountain to Wood, parallels the Sich and Praeyn cases in the earlier sittings. The recurring pattern shows that the council relied heavily on the husband of a widow as the working manager of orphan freeholds. Each successive husband recorded the holding under his own name at the registration stage, with the fiduciary character of the title implicit in the descent rather than separately recorded. Speculations The dating of the two purchases from Edward Brayne on consecutive days, 16 and 17 June 1681, suggests that the Quincy household had consolidated its holding in a single planned transaction. The simultaneous acquisition of twenty acres in Fishers Valley and ten acres in Gyryngs Valley from the same seller probably reflects either a structured sale that the parties chose to formalise in two instruments for legal reasons, or a deliberate strategy of bringing scattered parcels under one ownership at the moment when capital was available. The endorsement on the back of Powell's 1704 bill of sale, dated more than two years later in October 1706, may indicate that the transfer to Girling was completed in stages. The original instrument was perhaps held as security while the consideration was being paid, with the endorsement marking the moment when title finally passed. The pattern resembles the working credit arrangements visible elsewhere in the council's records, where a planter's title remained subject to deferred performance until the final payment was made.
30	23	Stephen Lufkin freeholder appeared and Laid Claime to Ten Acres of Land Producing a deed dated the 3 of June 1694 with the Honoura[ble] Companys Seale Affixed thereunto and Sign[d] by former Gov[r]	Stephen Lufkin, freeholder, came forward and claimed ten acres. He produced a deed dated 3 June 1694 under the Company's seal and signed by a former governor and council. His father, John Lufkin, had made the exchange with the Company on behalf of his eldest son John Lufkin, taking ten acres on the skirts of Sandy Bay. Stephen Lufkin held a clear right and title.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
		and Council which his father John Lufkin in behalf of John Lufkin his Eldest Son Exchanged with the Honora[ble] Company for Said Ten Acres Lying on the Skirts of Sandy bay, To which the Said Stephen Lufkin hath a just right and Title. Orlando Bagley & Charles Steward Executor[s] of the Last Will and Testament of Thomas Earle dec[d] Produced a Printed Deed with the Honoura[ble] Companys Seale affixed thereunto, dated the 16 August 1684 for Twenty Acres of Land granted Andrew Wilson dec[d] who gave the Same to his daughter Martha the Said Thomas Earles wife. Which Land the Said Earles Children hath a just right & Title too. George Carne having Lately Married the Widdow of Captaine Thomas Goodwin Appeared and Laid Claime to Eighty Acres of Land She being by her Husbands Last Will and Testament made and Constituted Sole Heir and Executrix to all and Singular his whole Estate and Produced the following Wridings to prove Title thereunto Viz[t] First An Indenter of Bargaine and Sale dated the 3 Novemb[r] 1683. dly for Ten Acres Land Sold to Henry Kersey by Samuel Josey &c. 2 An Indenture of Bargain and Sale dated the 1[st] Decemb[r] 1691. Title to for Twenty Acres of Land Sold by Henry Kersey to Thom[s] Goodwin One Ten Acres being Part of his Lott Land, and the other bought dly of Sam[^l] Josey as Abovesaid. 3 A bill of Sale dated the 18 January 1689 for Twenty Acres Sold by y[e] Same William Fox Jun[r] to Thomas Harper and by s[d] Harper to Thomas Goodwin as appears by bill of Sale dated the 10 of May 1694. thly A bill of Sale dated the 24[th] of May 1693 for Eight Acres of Land 4 [...] Part of Ten Acres the Lott of James Wakefield Sold by John Proved. Young to Thomas Goodwin. a bill Margin Notes: Ste: Lufkins Claime to 10. Acres Land Title Proved. The Earles Execu[ot]rs Claime to 20 acr[s] Land on behalfe of his Orphans Title Proved. Geo[r]: Carnes Claime to 80 Acres Land formerly Tho[s] Goodwins dec[d]	Orlando Bagley and Charles Steward, executors of the last will and testament of Thomas Earle, deceased, produced a printed deed under the Company's seal dated 16 August 1684 for twenty acres granted to Andrew Wilson, deceased. Wilson had given the parcel to his daughter Martha, who became the wife of Thomas Earle. The children of Thomas Earle held a clear right and title. George Carne had recently married the widow of Captain Thomas Goodwin. She had been left sole heir and executrix of her late husband's estate, real and personal, under his last will and testament. Carne came forward in her right and claimed 80 acres, producing the following writings. An indenture of bargain and sale dated 3 November 1683 for ten acres sold to Henry Kersey by Samuel Josey. An indenture of bargain and sale dated 1 December 1691 for twenty acres sold by Henry Kersey to Thomas Goodwin. Ten acres were part of Kersey's own lot land, and the other ten were the parcel he had bought from Josey. A bill of sale dated 18 January 1690 for twenty acres sold by William Fox junior to Thomas Harper, and a further bill of sale dated 10 May 1694 by which Harper sold the same parcel to Thomas Goodwin. A bill of sale dated 24 May 1693 for eight acres, being part of ten acres that had been the lot of James Wakefield, sold by John Young to Thomas Goodwin. Interpretations The Earle case shows the council registering an orphan freehold through the executors of the children's late father. The 1684 deed established the title in Andrew Wilson, and the chain ran through Wilson's gift to his daughter Martha, her marriage to Earle and her death before her husband. With Earle now also dead, the executors brought the parcel forward on behalf of the children. The mechanism preserves the orphan inheritance by treating the executors as the working party at registration, with the children's interest recorded as the underlying title. The Carne claim sets out how a fresh marriage could bring a substantial deceased planter's estate into a new household. The widow of Thomas Goodwin held the whole estate as sole heir and executrix under her late husband's will. On her remarriage to George Carne, the consolidated holding came into his hands during her lifetime. The council registered the 80 acres in his name without separate inquiry into the working balance between his interest and his wife's underlying right. The structure parallels the earlier cases of Vesey, Slaughter and Wood, where second husbands of widows acted at the registration sitting. The chain of bills of sale assembled by Thomas Goodwin during the 1680s and 1690s, recorded across four separate instruments between 1683 and 1694, shows how a senior planter built a substantial estate through serial purchases from earlier holders. The parcels reached him from Kersey, Harper, Young and the Josey chain, each transaction supported by a documented instrument. The council accepted the composite chain in 1713 because each link could be produced, even though the original holders were largely dead. The recurrence of Thomas Goodwin's name as both a Company exchange counterparty in earlier sittings and as a purchaser of multiple private parcels confirms his position as a working consolidator of the island's freehold during the late seventeenth century. The 80 acres now reaching Carne through his marriage to Goodwin's widow had been assembled by Goodwin during his lifetime through both Company exchanges and private purchases, with the registration in 1713 fixing the consolidated estate in the next generation of household management.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			Speculations The careful production of four separate instruments to establish Goodwin's eighty acres, rather than a single confirmatory deed, was probably calculated to preserve the underlying chain against any later challenge. With each parcel anchored to a documented sale, the holding could be defended piece by piece if any single transaction came into question, rather than standing or falling on a single instrument. The approach reflects the council's working preference for cumulative documentary evidence over consolidating conveyances. Carne's appearance at this sitting on behalf of his new wife, so soon after her remarriage, suggests that he had moved quickly to fix the documentary position of the Goodwin estate within the wider registration programme. With the survey deadline of 25 March 1713 only days away, registering the consolidated holding under his name before the year closed gave him a working title against the census returns and against any later question about how the Goodwin freehold had passed into his household.
31	24	thly A bill of Sale dated the 19[th] of March 169 1/2 for Two Acres 5 of Land being the remainder of the aforesaid Ten Acres) Sold by Edward Bby[?] to Thomas Goodwin thly A bill of Sale dated the 20 of March 168 7/8 for Ten Acres of 6 Land Sold by Philip Savage to John Fuller who gave y[e] Same to Said Goodwin upon Marriage with his daughter thly and Lastly a Bill of Sale dated the 26 of March 1696 for Ten 7 Acres of Land Sold by John Coles to Said Goodwin being Part of the Lott Land of John Coles Sen[r] Deceased. All which Parcells and Peices of Land before mentioned, the Said George Carne in right of his wife, hath a just Title to. Walter Morris free planter Humbly Petition[d] Praying to Rent a Small Peece of Land Adjoyning to his and Curlings, alledging twas no prejudice to neither him or other Neighbours. Ordered That if tis no Prejudice to any the Neighbourhood his request be granted, and that M[r] Bazett have a Warrant to measure the Same. Jonathen Doveton free holder Appeared and Said he had Sold the Ten Acres of Land he bought formerly of his Father William Dovetons Executors mentiond more Largely in a Con- sultation of the 30 January 1711 to Samuell Jeffrey who desires may have a Deed for the Same in his own Name and Heirs for ever. Ordered. That the bargain and Sale aforesaid do and shall Stand good and that the Said Samuell Jeffrey have a deed drawn and delivered him Accordingly. Island. Margin Notes: Walt: Morris's request to hire a p[cell] Land. If no Prejudice y[t] Granted	A bill of sale dated 19 March 1692 for two acres, being the remainder of the ten acres formerly held by James Wakefield, sold by Edward Bby to Thomas Goodwin. A bill of sale dated 20 March 1688 for ten acres sold by Philip Savage to John Fuller. Fuller gave the parcel to Thomas Goodwin on his marriage to Fuller's daughter. A bill of sale dated 26 March 1696 for ten acres sold by John Coles to Thomas Goodwin, being part of the lot land of John Coles senior, deceased. George Carne held a clear title to all these parcels in right of his wife. Walter Morris, free planter, presented a petition asking to rent a small piece of land adjoining his own and Curling's parcels. He said the grant would not prejudice himself or any neighbour. The council ordered that if the grant caused no prejudice in the neighbourhood, the request be granted, and that Mr Bazett have a warrant to measure the parcel. Jonathan Doveton, freeholder, came forward and stated that he had sold the ten acres he had earlier bought from the executors of his father William Doveton, as set out more fully in the consultation of 30 January 1712, to Samuel Jeffrey. Jeffrey wished to receive a deed in his own name and heirs for ever. The council ordered that the bargain and sale stand good, and that a deed be drawn and delivered to Samuel Jeffrey accordingly. Interpretations The completion of the Goodwin chain through three additional instruments brings the total documented assembly to seven separate bills of sale, covering parcels acquired between 1683 and 1696. The final parcel, sold by John Coles to Goodwin in 1696, was a fragment of John Coles senior's lot land, illustrating how the principal early allotments of the island were broken up and recirculated through the working market during the late seventeenth century. The council accepted the full composite chain in Carne's name through his marriage to Goodwin's widow. The Morris petition shows the council applying a working test of neighbourhood consent before granting waste land for rent. The phrase no prejudice to himself or other neighbours captures the council's recognition that small grants of adjoining ground could affect the working geography of surrounding holdings, particularly in matters of access, fencing and drainage. The conditional grant gave Bazett the authority to confirm the absence of prejudice through his measurement,

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
		Jon[a] Dovetons request for a Deed for Land he Lately [...] Sold S[m] Jeffrey The Same Conf[d] [...] to Jeffrey	rather than requiring a separate inquiry before the council. The Doveton transfer to Jeffrey demonstrates how the registration programme accommodated onward sales within the working framework. Doveton's title had been settled at the consultation of 30 January 1712, and the present sitting confirmed the subsequent sale to Jeffrey by ordering a deed in the buyer's own name and heirs for ever. The mechanism preserved the working continuity of the registration, with each subsequent transaction registered against the existing documented base rather than requiring a fresh examination of the underlying title. The use of the phrase heirs for ever in the order for Jeffrey's deed records the strongest form of freehold tenure recognised by the council. The instrument carried the title beyond the present holder's life into an open-ended descent through his line. The contrast with the 21-year and 24-year leases granted at the same sitting, and with the conditional grants depending on fencing, marks the council's working hierarchy of tenures, with freehold heirs-for-ever titles at the top of the scale. Speculations The marriage gift from John Fuller to Thomas Goodwin in 1688 of the parcel originally bought from Philip Savage shows how the early planter community used marriage settlements to consolidate the land base across generations. Fuller's gift to his son-in-law brought the parcel into the Goodwin household at the moment of family formation, with the underlying chain from Savage providing the documentary anchor. The reappearance of this 1688 transaction in the 1713 registration suggests that the council's working memory of early settlement transactions remained accessible through the documented chains, even where the original parties had been dead for years. The willingness of Doveton to sell the parcel he had only registered in early 1712 within little over a year suggests that the present registration programme was producing an active onward market in titled land. By securing a documented title under the new register, planters could realise the value of their holdings through onward sale with greater confidence than under the earlier informal arrangements. Jeffrey's request for a deed in his own name reflects this confidence, with the documented title now functioning as a working commercial asset rather than a passive record of possession.
32	25	Island S[t] Helena. At a Consultation Held on Tuesday the 7 of April 1713 At the United Castle in James Valley Pres[t] Benja[n] Boucher Esq[r] Govern[r] Matth[eu] Bazett 2 in Coun[ll] 16 Lieut[t] Thom[s] Cason John French Assists Whereas Capt[n] John Pack deputy Govern[r] dying the 3[d] Instant. Ordered. That M[r] Bazett Succeed him in the Care and Charge of the Store Books See the Accounts made up, and Monthly Accounts to be brought in duly of all goods Sold and Deliver[d] out Pursuant to the Honourable Companies orders, And that Mondays Tuesdays & Wednesdays be Appointed for Serveing such Goods out by M[r] Bazett, Lieut[t] Cason and M[r] French till the Honoura[ble] Companies Pleasure be farther	The council met at the United Castle in James Valley on Tuesday 7 April 1713. Those present were Benjamin Boucher, Governor; Matthew Bazett, second in council; and Lieutenant Thomas Cason and John French as assistants. Captain John Pack, Deputy Governor, had died on 3 April 1713. The council ordered that Mr Bazett succeed him in the care and charge of the store books, see the accounts made up, and bring in monthly accounts of all goods sold and delivered out, in accordance with the Company's orders. Mondays, Tuesdays and Wednesdays were appointed for serving out such goods, by Mr Bazett, Lieutenant Cason and Mr French, until the Company's further pleasure was known. Mrs Pack and her family were given leave to lodge in the storehouse, having no other convenient place, until she met with an opportunity to return to England. Interpretations The death of Pack reduces the council to a single substantive member under the governor, with Cason and French continuing as assistants. The pattern of senior attrition that began with the deaths of Hoskison in March 1712 and Griffith in May 1712 now extends to the deputy governor's office, leaving Bazett as the

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
		knowne herein And that Mist[s] Pack with her Familie have Leave to Lodge in the Store house haveing no other Convenient Place till such time She meets with an Opportunity of going Home to England Margin Notes: Capt[n] Packs death. M[r] Bazett to Succeed him and to have y[e] Care and Charge of y[e] Stores &c[a] M[rs] Pack to Lodge in y[e] Store till goes off. Inv[t]	working second after his own restoration to the council in December 1712. The council has had to absorb three successive deaths in the senior establishment within thirteen months, with no replacement appointed from London in the interval. The transfer of the store books to Bazett combines two functions that were not previously held together. Bazett had been the working surveyor of the registration programme since late 1711, and now takes the storekeeper's responsibility added to his duties as second in council. The order divides the actual issue of goods across three officers, working Mondays through Wednesdays, which spreads the daily burden while preserving the documentary accountability in Bazett's hands. The arrangement is explicitly temporary, awaiting the directors' further pleasure. The lodging of Mrs Pack and her family in the storehouse shows the council using the principal Company building as emergency accommodation for the widow of a senior officer. The decision reflects the practical limits of the small island establishment, where no separate official residence was available for the deputy governor's family and the housing stock was committed to other inhabitants. The arrangement also placed the family in proximity to the working store, with the implicit recognition that Pack's outstanding accounts and household effects were tied up with the building's operations. The structured three-day weekly schedule for issuing goods, with the remaining four days reserved for other business, formalises the working pattern of the store in the absence of a single storekeeper. The split of responsibilities across the three remaining officers gives each a working share of the income-generating routine while preserving the council's collective oversight, and reduces the risk that any single officer would build up the kind of unsupervised position that had attracted criticism of earlier administrations. Speculations Bazett's elevation to second in council and the addition of the store books to his portfolio represent a striking return to the centre of administration for an officer who had been dismissed for character failings only six months earlier on 2 October 1712. The speed of the rehabilitation, with no formal order of reinstatement on the visible record, suggests that the council's working needs in the face of repeated death in the senior establishment overrode the earlier concerns. The decision probably reflects both the lack of alternative qualified personnel on the island and Bazett's demonstrated competence as the working surveyor through the demanding registration programme. The decision to lodge Mrs Pack and her family in the storehouse rather than in a private dwelling probably reflects the council's wish to keep her under direct Company custody while her late husband's accounts were settled. The store was the working centre of the Company's commercial operations, and her presence there allowed the council to ensure that any household effects intermingled with store goods could be properly separated before her departure. The arrangement also signalled to the wider inhabitants that the widow had not been abandoned but was being supported through the Company's own establishment until passage home could be arranged.
33	26	Island S[t] Helena. At a Consultation Held on Tuesday the 12 day of May 1713 At the United Castle in James Valley Pres[t] Benj[a] Boucher Esq[r] Govern[r] Matth[eu] Bazett 2 in Coun[ll] Lieut[t] Thom[s] Cason John French Assist[t]s	The council met at the United Castle in James Valley on Tuesday 12 May 1713. Those present were Benjamin Boucher, Governor; Matthew Bazett, second in council; and Lieutenant Thomas Cason and John French as assistants. Almighty God had not sent any rain for nearly ten months past. The Company and most of the inhabitants had suffered the loss of cattle, hogs, goats and other

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
		It having pleas[d] Almighty God not to send us any raine for nigh Ten months past and thereby to our great grief and daily concern the Honourable Company and most of the Inhabitants hath Suffered the Loss of Cattle Hoggs Goats &c[a] Insomuch that meat is become very Scarce and much wanted, as well in Severall Families as in the Garrison of Sold[rs] Have therefore thought fit and Accordingly Ordered that the following Advertisement be Immediately Published by beat of Drum Whereas the Govern[r] and Councill being greatly convinced To See this dry weather and not Insensible its continuance will reduce many People to great Necessity, doth heartily wish it Lay in their Powe[r] to Render the Inhabitants & wants Less Sensible, and to that End hopes the following Method will in Some Small degree Answer there[?] Honest Intentions And for as much as boats are wanting for Fishing to most or all the People of Said Island (the only relief in this Scarcity of Provisions of other Kind) they Shall and may all have the Joint Use of y[e] Comp[s] Yau'll, under the following restrictions viz[t] First That four families joyne (giveing their Names to M[r] Bazett or in his and how. absence to the Chief Officer at United Castle) to Send Each a black in the boat who Shall have leave to stay out forty Eight Houres and no Longer. That Margin Notes: Provisions much Wanted. An Advertizem[t] to Encourage Fishery. First and how.	stock. Meat had grown scarce in many families and in the garrison of soldiers. The council ordered the following advertisement to be published at once by beat of drum. The Governor and Council, concerned at the continuing dry weather and the necessity it would bring on many inhabitants, hoped that the following arrangement would in some small degree relieve the want. Boats for fishing were lacking among most of the inhabitants of the island. Fish was the only relief available in the present scarcity of other provisions. The inhabitants were therefore given joint use of the Company's yawl on the following conditions. Four families were to join together and give their names to Mr Bazett, or in his absence to the chief officer at the United Castle. Each family was to send one slave in the boat. The party would have leave to stay out for forty-eight hours and no longer. Interpretations The drought response shows the council acting on an island-wide shortage of meat by opening a single Company asset, the yawl, to the working population. The yawl had until now served as a Company boat for fortification work and victualling, and the order converts it temporarily into a shared resource for the wider inhabitants. The mechanism preserves the Company's ownership while granting use rights organised on family lines, with four households pooling labour to crew each trip. The condition that each family send one slave to crew the boat fixes the working unit of the response at the household with sufficient labour to spare a worker for two days. Free planters without slaves were thereby excluded from the direct benefit of the order, although they would presumably share in the fish brought home by neighbouring households. The arrangement reflects the working organisation of the island's labour, where slave labour rather than free family labour was the marginal resource available for non-routine tasks. The 48-hour limit on each outing balances the council's wish to give the boat productive use against the need to make it available in rotation across the wider inhabitants. The fixed period would have allowed a worked-out estimate of how many family groupings could be served across each week, and the requirement to register names with Bazett or his deputy gave the council a working record of which households had received the benefit. The structure pre-empts disputes about access by establishing a queue under official supervision. The convening of the response in the form of a public advertisement by beat of drum, rather than a series of individual permissions, indicates that the council recognised the scarcity as an island-wide condition requiring a public administrative answer. The framing of the order in providential language at the opening, with the drought attributed to Almighty God, gave the council the standing to invoke public obedience without naming particular grievances, and aligned the order with the wider religious framework that governed the inhabitants' expectations of communal hardship. Speculations The decision to channel the registration of fishing parties through Bazett or the chief officer at the United Castle rather than through John How at the Plantation House probably reflected the need for daily availability of the boat and its assignment. The yawl was based at James Bay rather than in the interior, and registration at the castle allowed the working scheduling of departures and returns to be managed in the same building from which the boat was launched. The choice also kept the scarcity response within the council's direct oversight rather than delegating it to the reeve.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			The careful structuring of the order, with named conditions on family pooling, slave labour and time limits, suggests that the council had already encountered or anticipated practical difficulties in any less regulated grant. Without the four-family pooling rule, the boat might have been monopolised by larger or better-organised households. Without the 48-hour limit, the working rotation would have collapsed. The detail of the regulation shows the council learning from the difficulties of earlier emergency provisions, including the Arland arrack distribution of 1711, when an undifferentiated grant had produced uneven access.
34	27	dly That they be obliedged to come to the Fort Valley without goeing on Shoar 2 Else where. to be dly That they bring all the fish catched to the Castle there to be distributed by Distributed 3 the Said Companys Steward justly to Each their Share. when thly That the Company have one fourth Part of the whole for their use. Cat[ct] 4 thly That the remainder be divided in four Equall Parts to the Persons owning 5 the blacks who are in the boat. thly That a Proper Person be sent for the Company as Coxswaine and that 6 what y[e] fish he Catches he be allowed a four[t] Share for himself, the remainder for the Companys use. Under these rules most House keepers may in Some measure be relieved by turns with good Mannagement. And whereas the Garrison may thinck themselves under a hard- ship if they don't come into the Generall Advantage of this Licence to the rest of the Island, Wherefore the Govern[r] and Coun[ll] notting they fetch upon four men out of Each guard upon duly to have twelve hours to fish in under the foregoing restrictions, and that the whole guard have an Equall Share in the fish they Catch to be agreed by themselves. Dated at the United Castle in James valley this 12[th] day of May 1713 Sign[d] p[r] order of Govern[r] & Councill p me. Jn[o] Alexander Acc[ot]nt Margin Notes: dly 2 to be Distributed dly when 3 Cat[ct] thly 4 thly 5 thly 6 Sold[rs] allowed y[e] Same Pri- voledge	The remaining conditions of the advertisement were as follows. The party was to come ashore at Fort Valley and not to land elsewhere. All fish caught was to be brought to the castle, where the Company's steward would divide it justly among the shares. The Company would take one fourth part of the whole for its own use. The remainder would be divided in four equal parts among the owners of the slaves in the boat. A proper person would be sent as coxswain for the Company. He would have one fourth share for himself of the fish he caught, with the remainder going to the Company's use. Under these rules, the council expected that most householders might be relieved by turns with good management. The garrison might count themselves under a hardship if not included in the general advantage of this licence. The council therefore ordered that four men from each guard on duty have twelve hours to fish under the same restrictions, the whole guard sharing equally in the fish they caught, as they themselves should agree. Dated at the United Castle in James Valley, 12 May 1713. Signed by order of the Governor and Council by John Alexander, Accountant. Interpretations The distribution scheme converts the fishing trip into a regulated commercial arrangement under the Company's supervision. By requiring all fish to be brought to the castle and distributed by the Company's steward, the council removes any opportunity for under-the-table sale and ensures that the agreed shares reach the participating families. The mechanism transfers the function of fair division from the parties themselves to a recognised officer, eliminating disputes at the point of distribution. The 25 per cent Company share recovers the cost of providing the yawl while still leaving three quarters of the catch for the families that supplied the slaves. The split recognises the Company's contribution of the capital asset while keeping the working incentive in the hands of the participating households. The further provision that the Company coxswain receive his own quarter share of any fish he personally caught, with the remainder going to the Company, gives him a direct incentive to fish actively rather than merely steer the boat. The garrison provision shows the council responding to anticipated grievance from the soldiers without disturbing the structure already established for the inhabitants. The four-men-per-guard arrangement gives each guard a working share of the boat's time, with the twelve-hour limit allowing the guard to be reformed within the day. The internal distribution among the guard is left to the soldiers themselves, on the basis that working comrades will settle their own shares without need for the council's intervention. The instruction that landings be confined to Fort Valley with no shore party elsewhere shows the council

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			using the fishing licence to maintain security as well as to distribute provisions. The single landing point at Fort Valley placed the boat under the working oversight of the castle establishment, prevented unauthorised contact with visiting shipping or undeclared landings on the island's lonely coast, and consolidated the distribution process in one place. The condition reflects the council's continuing concern with controlled movement during a period of stress on the island's working order. Speculations The decision to extend the licence to the garrison only after the inhabitants' scheme had been settled probably reflected the council's working judgement that the inhabitants' need was the more urgent. With soldiers' rations issued from the Company store, the garrison was less exposed to the immediate effects of the meat shortage than the free families and their dependants. The order to include the garrison may have been a response to anticipated grumbling rather than to actual want, and the twelve-hour rotation per guard rather than the inhabitants' 48-hour pooling reflects this lower urgency. The provision that the coxswain receive a quarter of his own catch with the rest going to the Company indicates that the council had thought carefully about how to keep a salaried Company officer working hard in a context where he could not be supervised directly. The split incentive aligns his personal interest with the fishing effort while preventing the position from becoming a private benefit. The arrangement parallels the working pay structure for skilled garrison labour, where small additions to settled salary were used as incentive payments rather than as part of base wages.
35	28	Island S[t] Helena At a Consultation Held on Thursday the 4[th] day of June 1713 At the United Castle in James Valley Pres[t] Benj[a] Boucher Esq[r] Gov[er][r] Matth[eu] Bazett 2 in Cou[ll] Lieut[t] Thom[s] Cason John French Assist[t]s Whereas this Island to our daily greif being at Present in a very bad and Deplorable Condition for want of Raine these Ten months and better and thereby most of all Plantations of Yeams &c[a] Provi- sions being meerly Burnt and Scorcht up, and Little of any Sort to be Seen above ground and those roots in the Earth very Small and not Eatable for man or beast besides the great death and Consumption of Cattle, Hogs, Goats &c[a] which has reduced most of the Inhabitants Stocks very Low and not wherewith to buy any Provisions or Little of any thing Else out of Shiping. Have therefore for the Generall good of the Island as well as for the Interest of our Honoura[ble] Masters thought it fitt and Convenient to buy what Arrack and Rice we Possible can out of this Fleet and have agreed Accordingly with Capt[n] Lane for four Butts of Batavia Arrack containing 482. Gallons at Six Shillings p[er] Gallon and 5683. weight of Rice at two pence p[er] pound	The council met at the United Castle in James Valley on Thursday 4 June 1713. Those present were Benjamin Boucher, Governor; Matthew Bazett, second in council; and Lieutenant Thomas Cason and John French as assistants. The island remained in a deplorable condition for want of rain, which had not fallen for upwards of ten months. Most plantations of yams and other provisions had been burnt and scorched. Little of any sort was visible above ground, and the roots in the earth were too small to eat. Cattle, hogs and goats had died in large numbers, reducing the inhabitants' stocks very low. Few of the inhabitants now had enough money to buy provisions or anything else from the shipping. For the general good of the island and for the Company's interest, the council resolved to buy as much arrack and rice as it could from the present fleet. It had agreed accordingly with Captain Lane for four butts of Batavia arrack containing 482 gallons at 6s 0d per gallon, and 5,683 lb of rice at 0s 2d per pound. With Captain Minter it had agreed for five leaguers of Batavia arrack containing 796 gallons, and 1,797 lb of rice, at the same prices. With Captain Hoaks it had agreed for twelve leaguers of Batavia arrack containing 1,852 gallons, at the same price. This was the lowest rate the council could obtain. The quantity was expected to be sufficient, or at least a great means of supplying the inhabitants' and garrison's wants in this scarcity until rain returned. Interpretations The council's bulk purchase from three separate captains, totalling 3,130 gallons of Batavia arrack and 7,480 lb of rice, marks the largest single emergency provisioning recorded in the present sequence. The decision converts the visiting fleet into a working supply source for the island at a moment when the local food economy had collapsed. The Company's working capital is committed not only to its own store and garrison but to the wider inhabitant population, on the explicit

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
		Also with Capt[n] Minter for five Legars of Batavia Arrack containing 796. Gallons and 1797 weight of rice at y[e] Price aforesaid Likewise with Capt[n] Hoaks for Twelve Legars Batavia Arrack containing 1852 Gallons at y[e] Same Price, which is the Lowest rate we could get it at and hope will be a Sufficient quantity or at Least a great means of Supplying the Inhabitants & Garrisons wants, in this great Scarcity of Provision, tle it please God to Send us a Lashing raine. Thomas Margin Notes: Provisions being Very Scarce. Rice and Arrack bought out of Shiping to releive The Poor Inhabit[s]	reasoning that the general good of the island is itself the Company's interest. The settled rate of 6s 0d per gallon for Batavia arrack and 2d per pound for rice across three independent captains shows the council securing a uniform price by working the fleet collectively. By treating the three captains as a single market and locking the rate at the lowest available price, the council avoided the inflation that competitive bidding would otherwise have produced during a scarcity. The mechanism reflects the working leverage that the council could exercise over visiting shipping that depended on the island for water and refreshment. The use of butts and leaguers as the working units of measure for arrack records the practical organisation of the maritime spirits trade. A butt held roughly 120 gallons and a leaguer roughly 150 to 160 gallons, with the precise gallonage stated against each transaction in the record. The variation between the working contents and the standard size of each cask was tracked by the actual gallons rather than assumed from the nominal capacity, which gave the council a working check against subsequent disputes about delivered quantities. The framing of the council's reasoning in terms of providential causation, with the drought set against the eventual sending of rain by God, parallels the opening of the fishing advertisement on 12 May 1713. The repetition suggests that the council was working within an established framework of public communication about disaster, in which the duration of the emergency was treated as outside human control while the response to it remained the council's working responsibility. The Company's purchase of supplies fits within that framework as a working answer to a providentially imposed scarcity. Speculations The decision to buy arrack in substantially greater quantity than rice probably reflected the working role of spirits as both a medicinal supply and a tradeable store of value. With 3,130 gallons of arrack against 7,480 lb of rice, the council was acquiring not only a fluid for immediate consumption but a commodity that could be issued in measured doses across an extended period, sold to inhabitants at retail to recover the Company's outlay, and used as a working currency among the garrison during the continuing shortage. Rice, by contrast, would have served the more immediate function of replacing the lost yams as the working starch staple. The acquisition of arrack from three separate captains in a single round of contracting suggests that the council deliberately spread its purchasing across the fleet rather than concentrating it with one master. The arrangement probably served several purposes at once: it secured a larger total quantity than any one captain could supply, it preserved working relationships with each of the captains for future calls at the island, and it avoided giving any single master a monopoly position in the council's emergency provisioning. The structure parallels the council's earlier use of fragmented contracting to limit dependence on any one supplier of stores.
36	29	Thomas Free who for his Sottishness Neglect of Buisness and other Enormities being Dismiss[t] from Clerk of Councill, but continued as youngest Insigne, Presented his Petition Praying to be Discharg[d] the Honoura[ble] Companys Service haveing Served Longer than his Contracted Time and very Sickly Since Married to the Widdow Sarah Griffith. Ordered	Thomas Free had been dismissed from his post as clerk of the council for drunkenness, neglect of business and other failings, although he had continued as youngest ensign. He presented a petition asking to be discharged from the Company's service. He had served beyond his contracted time, had grown sickly, and had since married the widow Sarah Griffith. The council ordered that his request be granted. The four preceding consultations had been copied and sent to England by the ship Heath, in care of Mr Cosman. Island of St Helena.

		That his request be granted Accordingly. Theis four hath bin Copy[d] & Sent to England y[e] Ship Heath for[?] [...] Cosman[?] Island S[t] Helena At a Consultation Held on Tuesday the 9[th] day of June 1713. At the United Castle in James Valley Pres[t] Benj[a] Boucher Esq[r] Govern[r] Matth[eu] Bazett 2 in Coun[ll] Lieut[t] Thom[s] Cason John French Assist[t]s According to a Summons Issued out the old Church Wardens viz[t] Ripin Wills and Thomas Yargen appear[d] with their Accounts for two years Past, of all Collections gifts Disbursments reparations of the Churches &c[a] which was Examin[d] & Approv[d] of. Ordered Margin Notes: Tho[s] Free his request to be Discharg[d] Comp[s] Service Church Wardens Acc[ot] Approved of	The council met at the United Castle in James Valley on Tuesday 9 June 1713. Those present were Benjamin Boucher, Governor; Matthew Bazett, second in council; and Lieutenant Thomas Cason and John French as assistants. The old churchwardens, Ripin Wills and Thomas Yargen, came forward in answer to a summons. They produced their accounts for the past two years, covering all collections, gifts, disbursements and repairs to the churches. The council examined and approved the accounts. Interpretations The discharge of Thomas Free closes an institutional case that ran through the present sequence of records. His earlier role as clerk of the council, his dismissal for drunkenness and neglect, his retention as youngest ensign and his subsequent marriage to Sarah Griffith, the widow of the late Daniel Griffith, together trace the working career of a Company servant who had moved between civil and military posts on the island. The council's willingness to grant his discharge on grounds of completed service and sickness shows that even officers dismissed for character failings retained access to the standard release procedure when their contracts had run. The marriage of Thomas Free to the widow of a former council member illustrates the close interconnection of the senior island establishment. Sarah Griffith had appeared in earlier sittings as the widow of Daniel Griffith, and her remarriage to a dismissed clerk now ensign suggests the limited marriage market available to widows of senior officers on the island. The arrangement also brought together two households with documented interests under the registration programme, with Griffith's land confirmed at the consultation of 3 February 1713 now passing under the same household management as Free's own affairs. The despatch of the four preceding consultations to England by the ship Heath in care of Mr Cosman fixes the working channel for the council's documentary returns to London. The Heath had carried the documentary record of the registration programme alongside the emergency provisioning correspondence, with Cosman acting as the named recipient or agent for the transmission. The mechanism shows that the council's working communication with the directors operated through specific personal contacts rather than only through institutional addresses, with documents handed to named individuals on the homeward shipping. The two-year accounting period of the churchwardens, covering collections, gifts, disbursements and repairs to the churches, indicates that the island maintained a working religious establishment with its own income and expenditure separate from the Company's accounts. The audit by the council shows that civil oversight of the church accounts was exercised by the governor and council acting as the local civil authority, in the absence of any ecclesiastical visitation. The procedure fits within the council's wider role as the working substitute for the metropolitan probate, registration and audit functions on the island. Speculations Free's framing of his discharge request around three grounds, completed service, sickness, and his recent marriage, gave the council multiple grounds on which to grant the release without reopening the earlier dismissal. The marriage to Sarah Griffith in particular established him as a settled inhabitant rather than as a Company servant in transit. By presenting these three factors together, Free converted what might have been a problematic petition from a dismissed officer into a routine discharge from completed service.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			The continuation of Free as youngest ensign after his dismissal from the clerkship suggests that the council had used the military commission as a working refuge for an officer who had failed in his civil post. The arrangement preserved his salary and standing on the island while removing him from the more sensitive position of council clerk, and gave him time to recover or to make his own arrangements for return. The pattern parallels the later treatment of John Alexander, who was retained on the island after his dismissal from the clerkship in 1709 while his various charges remained pending.
37	30	Ordered That the Said old Church Wardens be discharged from their Office, and the New ones James Draper and Francis Wrantham Invested in Said Office for the Ensuing year and take charge & Care of the Church Utensils Accordingly, and to follow the Rules and Method hereafter mentioned. Likewise the old Overseers of the High ways viz[t] John Coulson (Robert Leech being dead) brought and Delivered an Account of those Persons that had not don[t] at the high ways for two years past and those that had not work[t] which was Examined and approved of. Ordered. That the said John Coulson be discharged from the Office of Overseer and that John Robinson and Sutton Isaack Jun[r] (the two Persons Nominated and represented to us by the old overseers) be appointed overseers of Said High ways the Ensuing Year, and to follow the Warrant hereafter Mentioned. Church Wardens Warrant Viz[t] Island S[t] Helena. You James Draper and Francis Wrantham both of the Said Island free holders are hereby Nominated and appointed Church Wardens for this Present year 1713. And whereas you desire and request According to y[e] Usual Custome of this place to be inform[d] what is the Proper Dutys requisite for the Performance of that office And Considering the Circumstances of this Island, We Thinck fitt that the Rules following be the Rules and Methods for the Church Wardens to Governe themselves and walk Bye First You are to take care of the Furneture Vestments and Utensills belonging to both Churches Seeing that no Embezzlement be made of any that Shall be Delivered into your care & Custody dly You Shall keep a good Account of all gifts &c Dedicated To and 2 for the use of both Churches and give an Account of your Disbursments Margin Notes: The Church Wardens Discharg[d]. New ones Approv[d]. alsoe	The council ordered that the old churchwardens be discharged from their office. James Draper and Francis Wrantham were appointed for the coming year, to take charge of the church utensils and to follow the rules set out below. John Coulson, the surviving overseer of the highways (Robert Leech being dead), brought in an account of those who had worked at the highways during the past two years and those who had not. The council examined and approved the account. The council ordered that Coulson be discharged from the office of overseer, and that John Robinson and Sutton Isaack junior, the two persons nominated by the outgoing overseers, be appointed overseers of the highways for the coming year, to follow the warrant set out below. The warrant to the churchwardens was as follows. Island of St Helena. James Draper and Francis Wrantham, both freeholders of the island, were nominated and appointed churchwardens for the year 1713. They had asked, as was the customary practice on the island, to be informed of the duties of the office. Having regard to the circumstances of the island, the council had thought fit to set out the following rules for the churchwardens to govern themselves by. First, they were to take care of the furniture, vestments and utensils belonging to both churches, and to see that no embezzlement was made of any items delivered into their care and custody. Second, they were to keep a good account of all gifts and dedications made to and for the use of both churches, and to give an account of their disbursements. Interpretations The annual rotation of churchwardens and highway overseers, with named successors nominated by the outgoing officers and confirmed by the council, fixes the working pattern of civic office on the island. The two offices share a common structure: a two-year term, an audit at the end of service by the governor and council, the nomination of successors by the retiring officers, and confirmation in office under written warrant. The arrangement gives the council control over the appointments while preserving a working continuity within the inhabitant population, with experienced officers passing the office to known successors. The reference to two churches in the warrant to Draper and Wrantham confirms that the religious establishment on the island had grown beyond a single building. The earlier records make repeated reference to the country church and to the church in James Valley, and the warrant treats both as falling under the joint care of the churchwardens. The structure shows the working geographical reach of the religious establishment, with the country church serving the dispersed planter population alongside the principal building near the castle. The explicit instruction against embezzlement of church furniture, vestments and utensils indicates that the council was aware of the risk of loss or unauthorised removal of valuable goods held in working custody. The vestments and utensils of an English parish church of

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
		the Overseers of high ways Discharg[d]. Church Wardens Warrant Warr[t] to the Overseers new Church Wardens	this period would have included silver vessels, embroidered cloths and printed books, all readily portable and saleable. The instruction to keep a good account of all gifts and dedications gives the churchwardens a working record against which any later inventory could be checked. The simultaneous discharge of the churchwardens and the highway overseers, with both audits taken at the same sitting, shows the council consolidating the year-end review of civic office into a single occasion. The arrangement aligns with the wider pattern of administrative concentration around the 25 March year-end, with the registration programme, the census returns and now the civic office accounts all settled within the same closing period. The mechanism gives the council a working snapshot of all the island's standing administrative arrangements at the close of each year. Speculations The nomination of successors by the outgoing officers, rather than by direct council appointment, preserves a working element of self-government within the inhabitant population while keeping the final decision with the council. The arrangement allowed the experienced officers to identify candidates capable of taking over the routine of the office without requiring the council to canvass the inhabitants for replacements. The pattern reflects the working balance the council had reached between maintaining its own authority and managing the limited administrative capacity available within a small free population. The decision to appoint Francis Wrangham as a churchwarden alongside James Draper places two of the most active recent participants in the registration programme into the year's civic offices. Both men had appeared at the title sittings of February 1713 as substantial freeholders with well-documented titles. Their selection for the church accounts probably reflected the council's working judgement that men capable of presenting their own land titles with documentary precision were well suited to managing the church's gifts, disbursements and inventories under the same standard of accounting.
38	31	Disbursements of the Same for the use of the Gifts So given. dly You Shall take Notice of all Notorious and open Prophane 3 Persons and Wicked Sabbath breakers Swearers Drunkards Whoremongers and give Notice of them unto us but as for Sabbath breakers Swearers you are to Reprove and admonish as you Shall thinck fitt But if such Person or Persons So offending will not refraine and desist from Such Wicked Practises after you have ad- monished him or them once or twice Not Exceeding the third Time you are are hereby required to represent Such offender or offenders to us the Next Councill day following or once a moneth at furthest, that he or they may be fined According to the Law made & Provided in Such cases. thly You Shall upon Monday next after Easter Sunday Assemble with 4 the Inhabitants free holders of this place at the Church in the Countrey or Some other Convenient Place and there by Majority of votes Nominate and make Choice of Four Persons for Church Wardens, and four Persons	Third, they were to take notice of all notorious and open profane persons, sabbath breakers, swearers, drunkards and whoremongers, and to give notice of them to the council. Sabbath breakers and swearers they were to reprove and admonish as they thought fit. If such persons did not desist from these wicked practices after one, two or at most three admonitions, the churchwardens were required to present the offenders to the council at the next council day, or at the latest once a month, so that they might be fined according to the law made and provided in such cases. Fourth, on the Monday next after Easter Sunday they were to assemble with the freeholders of the island at the country church or some other convenient place. By majority vote the freeholders would nominate and choose four persons for churchwardens, and four persons for overseers of the highways, to succeed the present officers once the outgoing churchwardens and overseers had passed their accounts. Fifth, they were to have regard to the poor and impotent on the island, and to relate their condition to the council so that some care could be taken for their necessary relief. Sixth, they were to take care that no disorders occurred in the church during divine service. They were to charge the sexton to attend his duty, to assist him in his salary, and to make presentment accordingly. The council added that this was all that seemed needful at present for the duty of churchwardens, until some other matter should arise. In testimony the governor and council set their hands on 9 June 1713.

		for overseers of the high wayys to Succeed you and the Present overseers after that you and they have Past your Accounts with us in y[t] places. thly You Shall Likewise See and have Some respect to the Poor and Impo-5 tent on this Island and relate their Conditions to us that Some care may be taken for their Necessarie relief thly You Shall take care that no disorders be in the Church dureing the 6 time of divine Service for which Purpose you must charge the Sexton to attend his duty, and assist him his Sallary, and make a Presentm[t] for the Same Accordingly This is all at Present we can think needfull and Requisite for the duty of Church Wardens, untill Some other Matter Shall Occure In Testimony where of we the Govern[r] & Council for the Time being do hereunto Sett our hands this 9[th] day of June 1713. To James Draper & Francis Wrangham Church Wardens These	The warrant was addressed to James Draper and Francis Wrangham as churchwardens. Interpretations The third article gives the churchwardens a working role as moral informers to the council, with a graduated procedure for dealing with offenders. Sabbath breaking and swearing are to be handled by admonition in the first instance, with reference to the council only after one to three failures to amend. The arrangement preserves church discipline as a working function of the churchwardens themselves, with the council acting as the secondary enforcement body when persuasion has failed. The named categories of offence, sabbath breaking, swearing, drunkenness and whoremongering, capture the standard concerns of an English parish moral economy adapted to island conditions. The fourth article establishes a working electoral mechanism for the annual rotation of civic office. The freeholders gather on the Monday after Easter at the country church or another convenient place, and choose four nominees for each of the two offices by majority vote. The council retains the final selection from the four nominees, as the present sitting demonstrates with the choice of Draper and Wrangham from among the four put forward by the outgoing officers. The procedure preserves a measure of inhabitant participation while reserving the final decision to the council. The choice of the country church rather than the principal building near the castle for the freeholders' meeting recognises the country church as the working centre of the dispersed planter population. The fifth article makes the churchwardens responsible for identifying the poor and impotent and bringing their condition to the council's notice. The article does not give the churchwardens authority to relieve the poor directly from church funds, but treats their role as informational. Relief itself is reserved to the council, which would presumably draw on the Company's store or on collected church gifts as appropriate. The arrangement keeps both the identification of need and the decision on relief within the working administrative framework. The sixth article on the sexton shows the churchwardens managing a paid church servant whose salary was supplemented by their own working contribution. The instruction to assist him in his salary and to make presentment accordingly suggests that the sexton's pay was made up partly from a settled stipend and partly from incidental payments by the churchwardens, with the latter to be accounted for in the annual return. The structure parallels the working pay arrangements for skilled garrison labour, where settled salaries were supplemented by working additions tied to particular tasks. Speculations The graduated admonition procedure for sabbath breakers and swearers, with reference to the council only after up to three failed admonitions, was probably calculated to manage the small population of the island without flooding the council with disciplinary cases. By giving the churchwardens working discretion to deal with first and second offences, the council preserved its own time for substantive matters while ensuring that persistent offenders eventually reached the formal penalty. The procedure also reduced the risk that personal grievances between inhabitants would be brought directly to the council under cover of moral complaint. The decision to specify the country church as the default location for the annual freeholders' meeting on the Monday after Easter probably reflected the geography of the inhabitant population. The country church served the dispersed planter holdings across the

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			interior, and a meeting there would have been more accessible to the freeholders than one at the principal building near the castle. The arrangement signalled that the annual rotation of civic office was treated as a matter for the inhabitant community itself, gathered in their own working space, rather than as a function of the castle establishment.
39	32	Whereas there being one year viz[t] the year 1713 head money due to the Church from the Inhabitants of Said Island which is after the rate of Six pence p[er] head for all whites and Blacks in Each Masters and Mistress[s] Families that are of the age of Sixteen years and upwards. These are therefore in her Majesties Name To Order and Command You whose Names hereafter follows to pay the respective Sums of money plac[d] against your Names to James Draper and Francis Wrangham Church Wardens for the present year and in case any Person or Persons refuses to make Payment thereof You the aforesaid Church Wardens are hereby Impowered to make Seizure of Such goods and Chattles and Sell the Same at a Publick outcry Rendering the overplus if any to the owner after you are Sattisfyed and reasonable Charges deducted. Margin Notes: Warrant to Collect head money. Each P[er]sons	The council issued a warrant to the churchwardens for the collection of head money for the year 1713. The rate was 6d per head for all whites and blacks in each master's and mistress's family aged sixteen years and upwards. In her Majesty's name, the persons named in the warrant were ordered to pay the sums set against their names to James Draper and Francis Wrangham, churchwardens for the present year. If any person refused, the churchwardens were empowered to seize the goods and chattels of the offender and sell them at public outcry. After they had been satisfied and reasonable charges deducted, any overplus was to be returned to the owner. The warrant was given under the council's hands and the Company's seal on 9 June 1713, addressed to James Draper and Francis Wrangham, churchwardens. The schedule of liable persons followed. Matthew Bazett, second in council 3 whites, 4 blacks, total 7 £0 3s 6d Lieutenant Thomas Cason 1 white, 3 blacks, total 4 £0 2s 0d John French 1 white, 5 blacks, total 6 £0 3s 0d Joshua Thomlinson 1 white, 4 blacks, total 5 £0 [...]s 6d John Alexander 1 white, 4 blacks, total 4 £0 2s 0d William Pilceous 1 white, 1 black, total 2 £0 1s 0d Thomas Perkins 1 white, 3 blacks, total 4 £0 2s 0d Thomas Southen 1 white, 2 blacks, total 3 £0 1s 6d John Worrall 1 white, 1 black, total 2 £0 1s 0d William Slaughter 1 white, 3 blacks, total 4 £0 2s 0d Christopher Kelley 2 whites, 0 blacks, total 2 £0 1s 0d Isaack Wood 2 whites, 5 blacks, total 7 £0 3s 6d Carried over 18 whites, 32 blacks, total 50 £[...] 5s 0d Interpretations The head money assessment establishes a working tax base for the church on the island, levied on every household member of sixteen and upwards regardless of legal status. The flat rate of 6d per head treats white and black persons identically as units of assessment, with no allowance for the differing legal positions of free inhabitants and slaves. The mechanism captures the working economic strength of each household, with larger households bearing a proportionate share of the

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
		Name & Num[br] of Family Pay[ble] at 6 [...] p[er] head	church's support, while the actual revenue is paid by the householder out of his or her own resources. The empowerment of the churchwardens to seize and sell goods at public outcry to satisfy unpaid head money gives the church a working enforcement mechanism parallel to the council's own distraint procedures. The procedure reserves any surplus from the sale to the owner after the churchwardens have been satisfied and reasonable charges deducted, which protects the property holder against confiscation beyond the actual liability. The structure resembles the distraint orders against Sarah Southen for store debt at 25 September 1711 and against unauthorised cattle on the Half Way Tree common at 5 February 1712. The schedule discloses the working composition of the senior establishment's households. The council members and their immediate working circle account for 50 persons between 12 households, with whites outnumbered by blacks 32 to 18. The proportions confirm the working pattern in which slaves outnumbered free persons within the principal Company households, although the assessment counts only those aged sixteen and upwards and would therefore exclude both white and black children. The inclusion of the lower officers and tradesmen of the establishment, the surgeon, the gunner, the clerk, three sergeants and the boatswain, alongside the council members shows that the head money fell on the entire working civil and military payroll, not merely on the inhabitant freeholders. The assessment treats the establishment as a settled community for the purposes of church finance, with each officer's household contributing in proportion to its size. The arrangement preserves the principle that the church is supported by the whole resident population rather than by any particular class within it. Speculations The decision to issue the head money warrant under the Company's seal in her Majesty's name combines the secular and ecclesiastical authority structures of the island in a single instrument. By giving the churchwardens an order under both the Crown's authority and the Company's seal, the council placed the collection beyond easy challenge by any inhabitant who might dispute either source of authority on its own. The dual invocation parallels the framing of the census order of 4 March 1713 and shows the council building a working formula for compelling compliance with island-wide levies. The order in which the names appear in the schedule, beginning with the council members and proceeding through the lower officers and tradesmen, probably reflects both the social order of the establishment and the working order of collection. By placing the council members at the head of the list, the warrant signalled that the highest officers bore the same liability as the rest, and gave the churchwardens a working starting point that began with the most likely to pay. The pattern parallels the structure of subscription lists and other working assessments where the senior establishment led by example.

Mary Easthope, 1 white, 0 blacks, total 1, £0 0s 6d. Humphrey Edwards, 3 whites, 9 blacks, total 12, £0 6s 0d. Thomas Free, [...] whites, [...] blacks, total [...], £1[...]. Carried over: 75 whites, 104 blacks, total 179, £4 9s 6d. Interpretations The continuing schedule discloses the working distribution of household labour across the inhabitant population beyond the senior establishment. With 75 whites and 104 blacks counted in 36 households, the proportion of slaves to free persons is lower than within the senior establishment recorded on the first part of the schedule, but blacks still outnumber whites by about three to two. The pattern shows that slave labour was present throughout the inhabitant economy and not concentrated only in the council households, although the largest single concentration in this section, George Carne's 18 blacks in a household of 22, stands well above any other entry. The appearance of women, orphan estates and small establishments in their own right within the schedule shows that the head money fell on the working unit of the household regardless of who held it. Elizabeth Allis, Mary Easthope, Mary Conaway and the orphans of Cotgrave each appear under their own names with separate assessments, confirming the working position of widows and orphan trusts as taxable households on the same footing as those headed by free men. The mechanism preserves the integrity of the household as the working unit for civic assessment. The 6d minimum assessment for households of one or two persons gives a working threshold below which the rate becomes flat rather than proportionate. Several single-person households at the bottom of the schedule fall under this minimum charge, including Welch, Funge, Bevia, Forster, Rice and Snow. The arrangement captures the small inhabitants within the assessment while recognising that the working cost of collection from a one-person household imposed a practical floor on the rate. The Carne entry of 22 persons in a household, 4 white and 18 black, is the largest individual assessment on the schedule so far. The figure confirms the

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			concentration of household labour in his hands following his marriage to the widow of Thomas Goodwin, and reflects the working consequence of inheriting a consolidated estate alongside his existing freehold. The £0 11s 0d assessment captures the working scale of his establishment within the church's revenue base. Speculations The arrangement of the schedule in roughly alphabetical order from the second tranche onwards, beginning with Allis and continuing through to Edwards in this section, indicates that the churchwardens had access to a working roll of inhabitants probably derived from the census returns made in March 1713. The use of the census base for the head money assessment would have made the levy administratively economical, with the working calculation of liability flowing directly from the family returns already filed under the 4 March 1713 advertisement. The blank or illegible entry for Thomas Free at the end of this section probably reflects either incomplete information at the time of drafting or the uncertain status of his household following his discharge from the Company's service on 4 June 1713. With his marriage to the widow Sarah Griffith only recently formalised and his departure from the establishment newly recorded, the churchwardens may have been unable to fix his household composition at the moment when the schedule was prepared, leaving the entry to be completed at collection.

Interpretations The second tranche of the schedule confirms the working pattern visible in the first. Slaves continue to outnumber free persons by roughly three to two across the wider inhabitant population, but the distribution within individual households varies sharply. Gabriel Powill's 18 blacks in a household of 22 stands second only to George Carne's 22 in the earlier section, and together with Henry Francis's 9 and Margaret Sich's 8 indicates a small group of inhabitants who controlled labour resources well beyond the average. These concentrations correspond to the larger consolidated freeholds confirmed in the registration sittings of February and March 1713. The continuing alphabetical sequence from Francis through to Tovaits confirms that the schedule was drawn from an ordered roll rather than from a working list of payers in the order of their appearance. The arrangement gave the churchwardens a working document against which they could mark each payment as it came in, with the running totals at the foot of each section allowing them to verify their accumulated collections against the schedule as the work proceeded. The pattern parallels the structured returns made under the 4 March 1713 census advertisement. The inclusion of John Orchard with no whites and two blacks records the working position of an inhabitant whose household contained only slaves. The composition probably reflects a household in transition, where the free head had died or departed and the slaves remained as the working occupants pending some further arrangement. The churchwardens nevertheless treated the household as a taxable unit, with the assessment falling on the slaves at the standard rate. The arrangement preserves the integrity of the assessment regardless of the household's free composition. The appearance of Peter Sinsnick alongside his brother Gilbert as a single entry shows the working treatment of dependent siblings within the assessment. The reference to Gilbert connects to the apprentice case heard at the consultation of 17 March 1713, where the orphan Gilbert Sinsnick was retained in the service of James Draper. The pairing of the two brothers under a single household assessment suggests that they were still treated as a working unit despite Gilbert's continued apprenticeship, with Peter as the responsible elder for the purposes of the head money. Speculations The substantial concentration of slaves in the Carne, Powill, Francis and Sich households probably reflects both the working scale of their freeholds and their position in the slave-purchase economy. The slave price ceiling proclamation of 20 December 1710 fixed maximum prices for purchases off shipping and between planters, but did not limit the working accumulation of slaves by larger households over time. The pattern visible here, with a small group of inhabitants holding ten or more slaves while the majority held two or fewer, indicates that the working slave economy on the island had concentrated into a relatively narrow group of senior planter households by the middle of 1713. The grouping of Peter Sinsnick and his brother Gilbert under a single household entry probably reflects

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			a working arrangement by which Peter was treated as the responsible household head while Gilbert remained at Draper's house under his apprenticeship indenture. The orphan brothers had no parental household to be assessed against, and the church needed a settled responsible party for the head money. The pairing under Peter's name preserved the assessment within a single working unit while leaving Gilbert physically with his master, an arrangement that fits the wider pattern of fictive household assignments visible in the orphan and apprentice cases of the period.

These are therefore in her Majesties Name To will and require you John Robinson and Sutton Isaack Jun[r] to cause all Persons both Whites and Blacks to work one day and no more in y[e] makeing and repairing all Such high ways as are Needfull and Necessarie to be done, As also Stiles and Bridges So as all and Every the whole Inhabitants as aforesaid and their Men blacks do work at the Said high ways one day and no more this present year as before Mentioned And if any Person or Persons after due Warning by you or Either of you Shall absent himself and doth not come or Send his black or blacks on the days and times by You Margin Notes: Overseers Warrant to Cause all Persons to Work at high ways	The schedule of head money concluded. Brought over: 143 whites, 193 blacks, total 336, £8 8s 0d. James Vesey, 3 whites, 2 blacks, total 5, £0 2s 6d. Simon Whaley, 3 whites, 1 black, total 4, £0 2s 0d. Ripin Wills, 2 whites, 4 blacks, total 6, £0 3s 0d. Francis Wrangham, 2 whites, 3 blacks, total 5, £0 2s 6d. Wrangham's orphans, 0 whites, 1 black, total 1, £0 0s 6d. Total: 153 whites, 204 blacks, total 357, £8 18s 6d. Island of St Helena. John Robinson and Sutton Isaack junior, freeholders, were nominated and appointed overseers of the highways for the year 1713. They were required to execute the office carefully and diligently. To assist them, a list was annexed of the names of all white male inhabitants, except those in the Company's service, and of all slaves held by any person, except those held by the Company. In her Majesty's name, the council required Robinson and Sutton Isaack junior to cause all persons, white and black, to work one day and no more during the present year in making and repairing such highways, stiles and bridges as were needful and necessary. The whole inhabitants and their male slaves were to work at the highways one day, and one day only, during the current year. If any person, after due warning, absented himself and did not come or send his slave or slaves on the days appointed by the overseers. Interpretations The total of 357 persons aged sixteen and upwards assessed for the head money fixes the working size of the church's revenue base for the island in 1713. With 153 whites and 204 blacks recorded across the schedule, the proportion of slaves to free persons stands at roughly four to three within the assessed population. The aggregate yield of £8 18s 6d gives a small but predictable annual income to support the working maintenance of the two churches and the salary of the sexton. The highway warrant establishes a working corvée labour system on the island, with each adult male, free or slave, owing one day's labour per year to the maintenance of the public roads. The system replaces money payment with direct labour service, which fits the working currency shortage on the island and gives the overseers a workforce that the council could not otherwise have mobilised within the church's modest income. The exemption of those in the Company's service and of the Company's own slaves preserves the working priorities of the principal employer, while drawing the wider inhabitant population into the public maintenance. The empowerment of the overseers to give due warning followed by enforcement against absentees parallels the working enforcement structure used for the head money. Both warrants give the named officers a graduated procedure: first a working summons or notice, then a formal sanction in the event of non-compliance. The arrangement provides administrative redress without immediate recourse to the council,

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			allowing the routine cases to be settled at the level of the office while preserving the council's role for cases that escalated beyond the overseers' authority. The treatment of slaves as the unit of labour assessment for the highway work, with each holder owing his slaves' working days as well as his own, captures the working economic position of slaveholding within the corvée structure. A planter with many slaves contributed proportionately more labour than a single inhabitant, which placed the burden of public maintenance in rough alignment with the working size of each household. The mechanism parallels the head money assessment, where both whites and blacks above sixteen counted equally, but now applies the working principle to labour rather than to cash. Speculations The narrow yield of £8 18s 6d from the head money probably constrained the working scope of the church's establishment. With a sexton's salary, candles, repairs and incidental gifts to support, the working income left little margin for any expansion of religious provision on the island. The corvée labour for the highways, by contrast, supplied a much larger working contribution at no cash cost. The two mechanisms together show the council using the resident population's labour rather than its cash wherever possible, recognising the working limits of the cash economy on the island. The pairing of John Robinson and Sutton Isaack junior as overseers reflects the same pattern visible in the choice of churchwardens, where two substantial inhabitants with documented holdings under the registration programme were placed in the working office. Robinson had appeared at the consultation of 3 February 1713 on behalf of the Steward children's estate, and the Isaack family had appeared repeatedly across the registration sittings. The selection of officers with proven working competence in the documentary procedures of the council parallels the choice of Draper and Wrangham for the church accounts, and shows the council drawing its civic officers from a working pool of capable inhabitants.
43	36	you appointed, then and there to Labour as aforesaid, then you are to put in Some other Man or Men black or blacks in the absent Persons roome to work one day as aforesaid which Person So put in, you are to pay According to the Said Honoura[ble] Companys orders viz[t] Eighteen Pence for a white mans days work and 18 for a black mans days work. And Such Person or Persons So absenting refusing or not Sending as aforesaid are forthwith to Pay you which if they deny So to do You are hereby Impowered to take and Distress any goods from Such Person or Persons and Sell the Same at a Publick outcry delivering the overplus (if any) to the owners after you are repaid and reasonable Charges deducted. For which this Shall be your Sufficient Warrant given under our hands and the Honoura[ble] Companys Seale Affixed hereunto this 9[th] day of June 1713. To John Robinson & Sutton Isaack Jun[r] Surveyors these A list of all Persons both Whites & blacks that are to Work	If after warning the absentees did not come or send their slaves on the days appointed, the overseers were to put in other men, white or black, in their place, to work the day as required. Such substitutes were to be paid according to the Company's orders, at 1s 6d for a white man's day's work and 1s 6d for a black man's day's work. Absentees who refused or failed to send their slaves were required to pay the overseers the cost of the substitute. If they refused to pay, the overseers were empowered to distrain goods from the offender and sell them at public outcry. Any surplus over the cost and reasonable charges was to be returned to the owner. This warrant served as their authority. It was given under the council's hands and the Company's seal on 9 June 1713, addressed to John Robinson and Sutton Isaack junior, surveyors. A list of all persons, white and black, required to work at the highways one day during the year 1713 followed. Matthew Bazett, second in council, [unrecorded number of] blacks. Lieutenant Thomas Cason, assistant, 3 blacks. John French, 1 white, 5 blacks. Joshua Thomlinson, minister, 1 white. John Alexander, clerk of council, 1 white, 3 blacks. Thomas Perkins, sergeant, 1 white, 3 blacks. Thomas Southen, sergeant, 1 white, 2 blacks. John Worrall, 1 white, 1 black. William Slaughter senior and his sons-in-law of Mr Richard Harding, 2 whites, 2 blacks. Carried over: 2 whites, 19 blacks.

		at the Said high ways one day & no more this Present year 1713 Persons Names viz[t] Whites Blacks P[er]sons Names Mattheu[w] Bazett 2 in Councill [...] Lieut[t] Thomas Cason Assist[t] 3 [...] John French 1 5 [...] Joshua Thomlinson Minist[r] 1 [...] John Alexander Clerk of Coun[ll] 1 3 Thomas Perkins Serj[t] 1 3 Thomas Southen do[?] 1 2 John Worrall 1 1 Will[m] Slaughter S[r] & Sons in Law of M[r] Rich[d] Harding 2 2 Carried over 2 19 Margin Notes: P[er]sons Names &c[a]	Interpretations The fixed labour rate of 1s 6d for a day's work, applied equally to white and black substitutes, gives a working market value for unskilled day labour on the island. The uniform rate across racial categories captures the working economic reality that the council had to pay the same price for a day's work regardless of who supplied it, even though the underlying legal positions of the two classes were profoundly different. The rate parallels the wider working pay structure on the island, with the hired slave rate of 1s 6d per day appearing as a settled benchmark since at least the consultation of 9 January 1711. The empowerment of the overseers to distrain and sell goods at public outcry to recover the cost of substitutes places the highway corvée within the same enforcement framework as the head money. Both warrants give the named officers a working power of distress against defaulters, with the surplus returnable to the owner after reasonable charges. The parallel structure shows the council building a consistent administrative pattern for the working assessment of inhabitants, in which non-compliance moved automatically from notice to substitution to distraint, without requiring fresh recourse to the council at each stage. The treatment of substitutes shows the council recognising that the working labour might be supplied by hired hands rather than by the absentees themselves. The provision converts the labour obligation into a working cash obligation at the rate of 1s 6d per day, with the absentee charged the cost of the substitute even though no labour passed through his own hands. The mechanism preserves the working maintenance of the highways without requiring the personal attendance of any particular individual, recognising that the substantive requirement was the day's work rather than the working presence of the named obligor. The grouping of William Slaughter senior with his sons-in-law of Mr Richard Harding under a single line shows the working treatment of an extended household for corvée purposes. The arrangement parallels the head money treatment of Peter and Gilbert Sinsnick, with related inhabitants assessed as a single working unit rather than as separate households. The mechanism recognises that the working organisation of labour on the island ran along household lines rather than along individual ones, and that the overseers needed a single responsible party for each working group. Speculations The exclusion of Company servants and Company slaves from the highway corvée probably reflects a deliberate working policy of preserving the Company's labour for its own projects. With the fortifications, the Plantation House and the Sandy Bay stone and lime works all drawing on Company labour, the council could not afford to lose working days to the highways. The exclusion also preserved the working hierarchy between Company labour and inhabitant labour, with the inhabitants bearing the public maintenance burden while the Company labour remained focused on its own priorities. The placing of the council members and senior officers at the head of the highway list, parallel to their position at the head of the head money schedule, was probably calculated to demonstrate the working equality of the assessment. By including their own slaves in the corvée alongside those of the inhabitants, the council members showed that they accepted the same burden they imposed on the wider population. The arrangement parallels the appearance of the senior officers at the head of the head money schedule, and shows the council using the visible order of the working lists as a means of legitimising the assessment.

Thomas Harper, 1 white, 1 black. Jonathan Higham, 1 white, 1 black. Carried over: 31 whites, 88 blacks. Interpretations The differential between the highway list and the head money schedule shows the working distinction between the two assessments. The head money counted all white and black persons aged sixteen and upwards within each household, including women, while the highway list counts only the working male labour. Several households that appeared with multiple white members on the head money schedule, such as Bagley and Wrangham, contribute fewer white workers to the corvée, while the slave counts also differ where the head money included female slaves who were excluded from the labour assessment. The grouping of working units under the names of senior tradesmen and their apprentices, visible in the entries for John Bagley and Orlando Bagley, shows the working organisation of the artisan economy on the island. The apprentice contributes his labour through the master's household, parallel to the working treatment of Gilbert Sinsnick under his brother Peter on the head money. The mechanism allows the council to capture the working capacity of apprentice labour without requiring separate registration of the apprentice's obligations, which would have created administrative work disproportionate to the result. The combined entry for Thomas Free and James Rider as a single working unit indicates that Free had taken Rider into his household, perhaps following his marriage to the widow Sarah Griffith and his discharge from the Company's service on 4 June 1713. The arrangement preserves the working accountability of both men under a single line while recognising that they had joined into a single working establishment. The combined figure of 2 whites and 7 blacks places the new Free household near the top of the list in terms of

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
		1 1 Carried over 31 88	working labour, reflecting the consolidated household resources brought together by his marriage. The appearance of Antipas Josey's blacks as a separate line, without any white head, shows the working treatment of an estate held in trust or in transition. The three slaves appear under the deceased Antipas Josey's name as a working unit owing labour to the highways, although there is no free person to lead them. The mechanism parallels the head money treatment of the same estate, where the slaves of a deceased holder remained assessable until the estate was settled and reassigned. The continuity ensured that the working obligation passed through with the estate without requiring fresh registration. Speculations The reduction of George Carne's working contribution to 1 white and 12 blacks on the highway list, against his head money assessment of 4 whites and 18 blacks, probably reflects the exclusion of women and persons unfit for manual labour from the corvée. The reduction shows the working refinement of the assessment, with the labour obligation falling on the able-bodied males of each household rather than on the whole adult population. The same reduction is visible across the larger households on the list, with Powill, Sich and Francis all contributing proportionately fewer working hands than their head money figures would suggest. The careful identification of relationships within the list, with John Bagley and his apprentice grouped under one line and William Slaughter senior with his sons-in-law of Richard Harding under another in the earlier portion, suggests that the overseers were assembling not merely a roll of liable persons but a working map of the household structures within which the labour would be supplied. The information would have helped the overseers in their working practice, allowing them to call on entire households as units and to plan the daily attendance around the working organisation of the inhabitant population.

Wrangham's orphans, [...]. The following persons, white and black, had not worked during the past two years, as recorded by John Coulson, then surveyor of the highways. Daniel Griffith, deceased, now Thomas Free's household, 0 whites, 6 blacks. Thomas Perkins, 1 white, 0 blacks. James Vesey, 1 white, 1 black. Carried over: 65 whites, 154 blacks. Interpretations The continuation of the list confirms the working differential between the head money and the highway corvée. The labour assessment counts able-bodied males only, with the women and infirm of each household excluded from the working duty. Households appearing on the head money under a widow's name, such as Isabell Hayse, Mrs Elizabeth Johnson and Jane Mudge, contribute no white labour to the highways and supply only their male slaves. The pattern shows the council adapting the assessment to the working economic position of each household, while preserving its inclusion within the wider obligation through the slave contribution. The separate list of persons who had failed to work during the past two years gives the new overseers a working starting point for enforcement. By providing the names of those who had defaulted under the previous administration, the outgoing overseer's account converted the corvée into a working continuing obligation rather than a fresh annual demand. The arrangement allowed the new overseers to pursue the unfulfilled labour of earlier years alongside the current year's assessment, and signalled that the council treated the highway maintenance as an ongoing responsibility rather than as a series of separate annual events. The combined entry for Sinsnick brothers, with Peter and Gilbert each appearing under their own names with one white and no blacks, departs from the head money treatment that grouped them under a single household line. The differing treatment shows the working distinction between the two assessments: the head money fell on the household as a single unit, while the highway corvée counted each able-bodied male separately even where they lived together. The mechanism captured Gilbert's working labour separately from his brother's, recognising that the apprentice could supply his own day's labour despite remaining under his brother's roof. The recurrent entry of John Robinson with his son-in-law Francis Steward as a single working line, parallel to the appearance of Thomas Swallow with his son Richard and Margaret Sich with her son Benjamin, shows the working pattern of family labour units within the corvée. Adult sons and sons-in-law residing within the same household contributed their working labour through the senior head, with the combined entry reflecting both the working organisation of the family and the council's preference for a single responsible party at the working level. Speculations The decision to include the unworked days of the previous two years under Daniel Griffith's name, now transferred to Thomas Free's household, probably reflected the working consequence of Free's recent marriage to Sarah Griffith. Free had inherited the working obligations of the Griffith estate along with the household, including the accumulated arrears from before Daniel Griffith's death in May 1712. The six unworked black days transferred to him represented a substantial liability against the new household, and may

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			have given Free a further working reason to seek his discharge from the Company's service alongside his other grounds. The placing of Wrangham's orphans on the list with their labour obligation left blank suggests that the overseers had not yet settled the working arrangement for the orphan estate's contribution. With Francis Wrangham acting as the responsible head of his own household and the orphan estate held separately, the question of who would supply the working day for the orphans' single slave remained open. The blank entry preserves the orphans' liability without committing to any particular working method, leaving the question to be resolved by the overseers during the year as the practical arrangement became clearer.

Totall 76 175 Wee have agreed with Capt[n] Pinnellis for a Hogshead of Lime Juice Con- taining Sixty Gallons at three Shillings & Six Pence p[er] Gallon being much Cheaper than the Buying of Lemons at three Shillings p[er] Hundred as we are obliedged to do, the Hon[ble] Company having not Sufficient to Serve their Table Since their Gardens has bin blasted. Margin Notes: Lime Juice b[t] of Cap[t] Pinnell	The list of persons required to work at the highways concluded. Brought over: 65 whites, 154 blacks. John Alexander, 0 whites, 1 black. Arthur Bradley, 1 white, 0 blacks. George Carne, 0 whites, 6 blacks. Mary Conaway, 1 white, 0 blacks. Cotgrave's orphans, 1 white, 0 blacks. John Crosby, 1 white, 0 blacks. Richard Girling, 1 white, 1 black. James Greentree, 1 white, 4 blacks. Mary Hoskison, now Gabriel Powill's household, 0 whites, 2 blacks. Peter Marsh, 0 whites, 2 blacks. Jane Mudge, 1 white, 0 blacks. John Nichols junior, 1 white, 2 blacks. Charles Steward, 0 whites, 2 blacks. Elizabeth Sanderson, now Joshua Thomlinson's household, 0 whites, 2 blacks. Wrangham's orphans, 0 whites, 1 black. James Leech, 1 white, 0 blacks. Total: 76 whites, 175 blacks. The council agreed with Captain Pinnell for a hogshead of lime juice containing 60 gallons at 3s 6d per gallon. This was much cheaper than buying lemons at 3s 0d per hundred, which the Company had been obliged to do since its gardens had been blasted by the drought and could no longer supply its own table. Interpretations The final tranche of the highway list, headed by the unworked days from the past two years, captures a working enforcement liability separate from the current year's assessment. The repeat entries of names already appearing on the main list, including George Carne, James Greentree and Charles Steward, show that even substantial households had defaulted on their corvée obligations under the previous administration. The aggregation of current and arrears entries on the same working list gave the new overseers a single working schedule against which to plan their pursuit of unfulfilled labour. The reassignment of named slaves to their current households, with Mary Hoskison's two now appearing under Gabriel Powill and Elizabeth Sanderson's two now under Joshua Thomlinson the minister, shows the working tracking of slave labour through the changes of household arrangement. The mechanism preserves the working liability of each slave's day regardless of whose household held the title, while updating the responsible head to the current possessor. The arrangement parallels the head money treatment, which recorded households according to their working composition at the moment of assessment rather than their formal legal arrangements. The final totals of 76 whites and 175 blacks for the highway corvée stand against the 153 whites and 204 blacks for the head money. The labour assessment captures roughly half the white population and about five-sixths of the black population recorded for the

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			head money. The differential reflects the working principle that only able-bodied males contributed to the corvée, while women, the infirm and Company servants paid the head money but were excluded from the labour. The mechanism gave the council a working labour force of around 250 working days per year for the maintenance of the public roads. The purchase of a hogshead of lime juice from Captain Pinnell at 3s 6d per gallon reflects the continuing effects of the drought on the Company's working table. With the gardens blasted and lemons available only at the substantial retail rate of 3s 0d per hundred, the bulk purchase of preserved juice from a visiting captain offered a working economy. The arrangement parallels the bulk purchases of arrack and rice made on 4 June 1713, with the council using visiting shipping as a working supply source for commodities that the island itself could no longer provide. The acquisition of lime juice in particular suggests concern for the prevention of scurvy among the establishment in the absence of fresh citrus. Speculations The placement of John Alexander as clerk of the council on the arrears list, with one black day unworked, indicates that even members of the senior establishment had defaulted on their slave's contribution under the previous administration. The inclusion of his name alongside the inhabitant defaulters shows that the new overseers were applying the working enforcement evenly across the establishment, without distinguishing between Company servants and inhabitants on the arrears question. The mechanism preserved the credibility of the corvée as a working obligation binding on all households equally. The purchase of lime juice in a single hogshead rather than in smaller working quantities probably reflected both the cheaper unit rate available for bulk purchase and the working storage capacity of the Company's cellars. With 60 gallons in a single cask, the council could lay down a working reserve against the continuing drought without the labour cost of repeated negotiations with visiting captains. The unit rate of 3s 6d per gallon compares with the 6s 0d per gallon agreed for Batavia arrack on 4 June 1713, showing that the council secured a substantial working discount on the juice through bulk acquisition.
47	40	Island S[t] Helena At a Consultation Held on Fryday the 3 day of July 1713. At the United Castle in James Valley Pres[t] Benj[a] Boucher Esq[r] Govern[r] Matth[eu] Bazett 2 in Coun[ll] Lieut[t] Thom[s] Cason John French Assists The Governour and Council mett this day to Settle the Severall Prices on the Cargo of goods brought from England by Ship Susannah Capt[n] Richard Pinnell as also those brought from Madrass and Bengall p[er] Ships Kent and Hewolen[?] which is as followeth Strong beer at Eighteen Pence p[er] Gallon Bread at Four pence p[er] pound Cheshire Cheese at Ten pence p[er] pound Flower at four pence p[er] pound Casteel Soap at fifteen pence p[er] pound Musk and Pevett[?] Powder at Eighteen pence p[er] ounce All the rest of the Cargo to be Sold out at forty p[er] cent upon the whole after the Ships Demorage and charges of House-	The council met at the United Castle in James Valley on Friday 3 July 1713. Those present were Benjamin Boucher, Governor; Matthew Bazett, second in council; and Lieutenant Thomas Cason and John French as assistants. The council met to set the prices on the cargo of goods brought from England by the ship Susannah, Captain Richard Pinnell, and those brought from Madras and Bengal by the ships Kent and Hewolen. The prices were as follows. Strong beer at 1s 6d per gallon. Bread at 0s 4d per pound. Cheshire cheese at 0s 10d per pound. Flour at 0s 4d per pound. Castile soap at 1s 3d per pound. Musk and Pevett powder at 1s 6d per ounce. The remainder of the cargo was to be sold at forty per cent profit on the whole, after the ships' demurrage and the charges of housing the goods in the warehouses had been brought to an average. The pricing followed the thirty seventh paragraph of the general letter sent by the Toddington, and the cargo that had been brought by the Abingdon. The council ordered that Monday, Tuesday and Wednesday next be appointed as serving days for both the inhabitants and the garrison, with the following Thursday as the council day. Public notice was to be given accordingly.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
		ing them in the Ware Houses are brought to an Average According to the thirty Seventh Parragraph of the Generall Letter p[er] the Toddington and that Cargo was by the Abbingdon Ordered. That Monday Tuesday & Wednesday next be appointed for Serving days both for the Inhabitants and Garrison. and that Thursday following be Councill day and Notice to be given Accordingly Ordered That the Garrison Soldiers be Supplyd with the remaining Part of the bread that Capt[n] Lesly brought hether, And Likewise with Rice Margin Notes: Prices of Goods Sett on Ship Susanna[h] Cargoe days to Serve out Goods Sold[rs] to have bread brought by Cap[t] Lesly	The council ordered that the garrison soldiers be supplied with the remaining bread that Captain Lesly had brought to the island, and likewise with rice. Interpretations The price schedule for the Susannah's cargo confirms the operation of the standing thirty seventh paragraph of the directors' general letter brought by the Toddington in 1711. The forty per cent markup applies to the cargo as a whole, calculated after the working freight charges and warehouse handling are brought to an average. The mechanism preserves the directors' standing profit target while distributing the working cost of demurrage and storage across the entire cargo, rather than concentrating it on particular lines. Several specific items, including bread, flour, cheese, soap, beer and powder, receive named retail prices rather than the working markup, which gives the inhabitants a clear schedule for the staple commodities. The pricing of bread and flour at the same 4d per pound, and of strong beer at 1s 6d per gallon, shows the council fixing working rates for the staple imports from England against the failed local provision economy. With yams scorched and the gardens blasted, the working English-pattern foodstuffs from the Susannah took on a new working importance as the substitute for the lost local supply. The named prices appear to be set somewhat above the wholesale value to allow the Company its return while keeping the staples within reach of the inhabitants during the continuing scarcity. The Castile soap at 1s 3d per pound and musk powder at 1s 6d per ounce represent two markedly different categories of imported good. Castile soap was the working hard soap of the period, made from olive oil and used for fine washing and laundry. Musk powder was an aromatic preparation, used both as a perfume base and as a medicinal ingredient. The pricing of the musk powder by the ounce rather than the pound reflects its working classification as a luxury commodity rather than a staple, with the higher unit value justifying the smaller working measure. The three-day weekly serving cycle for both the inhabitants and the garrison parallels the structure established for the store after Pack's death on 7 April 1713. Monday through Wednesday open the store for retail issue, with Thursday reserved as the council day for substantive business. The fixed weekly schedule converts the working trade in cargo into a predictable cycle, allowing the inhabitants to plan their visits and the council to keep its business days clear of routine commerce. The pattern shows the working administrative discipline that the council had imposed on its own operations in the wake of the senior attrition. Speculations The decision to bring the cargoes of three separate ships, the Susannah from England, the Kent and the Hewolen from Madras and Bengal, into a single pricing schedule probably reflected the council's wish to handle the consolidated stock as a working whole rather than as separate cargoes. The arrangement allowed the working capital across the ships to be priced uniformly under the directors' standing instruction, and gave the inhabitants a single schedule rather than multiple competing prices for similar commodities. The mechanism also smoothed the working calculation of demurrage and warehouse charges across the entire consignment. The direction to supply the garrison with the remaining bread and rice from Captain Lesly's earlier voyage, alongside the new Susannah cargo, suggests that the council was working to clear the older stock before drawing on the newer arrivals. With the Susannah bread priced at 4d per pound and the older bread now to be issued to the garrison, the working sequence preserved the freshness of the saleable stock while ensuring that the soldiers received their working ration from the

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			existing reserves. The arrangement maintained the working economy of the store, where older inventory was issued institutionally before being offered at retail.
48	41	Rice and other Provisions haveing represented they are Likely to Starve there being no Provisions to be got at this time off the Planters by reason of this Long drought and those Sojiers that are most Indebted to the Honoura[ble] Company be often call[d] upon and obliged to Work at the Fortifications and other Buildings. The Governour Says tis his opinion that the blacks be discharged from the fortification Work and that the Sojiers that are most Indebted as above- said be made work till they have paid their debts. The Governo[r] made a Demand of the Monthly Accounts for all goods Sold and Delivered out of the Stores to this time, which M[r] Bazett Says cannot be got ready they being daily about other buisness to bring the books up. Ordered. That all the Arrack now in the Stores be sold out at Nine Shillings per Gallon being Fifty p[er] Cent advance, and the Rice at three Pence half Penny p[er] pound which is Seventy five per cent. and Sufficient time the retailed out by Small Parcells. Margin Notes: Likewise Rice &c[a] and those most in debt to Work at Fortifications Gov[ts] opinion ab[t] working at Fortifications Demand of the monthly Acc[t]s Arrack to be Sold at 9 [...]/Gall[n] [...] [...] Rice at 3 1/2 p[er] [...] [...]	The soldiers had reported that they were likely to starve, since no provisions could be had from the planters during the long drought. Those most indebted to the Company had been repeatedly called upon to work at the fortifications and other buildings. The Governor gave his opinion that the slaves should be discharged from the fortification work, and that the soldiers most indebted to the Company should be set to work until they had paid their debts. The Governor demanded the monthly accounts of all goods sold and delivered out of the stores up to the present time. Mr Bazett said the accounts could not yet be brought ready, since other business had occupied the working time required to bring the books up to date. The council ordered that all the arrack now in the stores be sold out at 9s 0d per gallon, being a fifty per cent advance, and that the rice be sold at 3 1/2d per pound, which was a seventy-five per cent advance. There would be sufficient time for both commodities to be interlaid in small parcels. Interpretations The Governor's proposal to discharge the slaves from the fortifications and replace them with indebted soldiers shifts the working labour burden onto a different class of worker. The slave force had been the standing workforce for the heavy construction projects since the establishment of the Sandy Bay lime kiln and the consolidated plantation works. The replacement of slaves with indebted soldiers converts the working labour at the fortifications from a public Company expense into a debt-recovery mechanism, with the soldiers' working days credited against their store-book balances. The arrangement frees the slave force for the immediate working priority, which the drought has made the supply of provisions and water rather than the maintenance of the fortifications. The retail pricing of arrack at 9s 0d per gallon represents a fifty per cent advance on the 6s 0d per gallon acquisition price agreed with Captains Lane, Minter and Hoaks on 4 June 1713. The rice at 3 1/2d per pound represents a seventy-five per cent advance on the 2d per pound acquisition price. The differential between the two commodities shows the council applying a sharper working markup to the rice than to the arrack, perhaps reflecting the higher working storage cost for grain or the relative scarcity value of the staple over the spirit during the drought. The combined working margin recovers the Company's outlay while the goods are still in demand. The Governor's demand for the monthly accounts of goods sold from the stores indicates a working tension within the reduced council over administrative discipline. The order of 7 April 1713 had required Bazett to bring in monthly accounts after taking over the storekeeper's responsibilities from the late John Pack. Three months later the working accounts were still in arrears. The Governor's formal demand for the books, with Bazett's plea of other business as the explanation for the delay, suggests that the working capacity of the diminished establishment was struggling to maintain the routine documentary discipline that had been imposed in the spring. The retail sale of the bulk-purchased provisions in small parcels shows the council using the working drought as an opportunity to recover its emergency outlay through controlled distribution. By restricting the working size of each retail transaction, the council both extended the period over which the stock could be drawn down and ensured that the working benefit reached a wider section of the inhabitants. The mechanism parallels the brandy distribution of June

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			1710 and the arrack distribution of May 1711, where small-parcel retailing during scarcity was used as a working tool of administration as well as commerce. Speculations The Governor's specific proposal that indebted soldiers replace slaves at the fortifications probably reflected a working calculation that the soldiers' debt liabilities had become a serious working burden on the establishment. With store balances accumulating against the soldiery during a period of scarcity, the conversion of working hours into debt repayment offered a route to clearing the balances without requiring cash payment. The arrangement also gave the indebted soldiers a working obligation to perform their labour, which served both as discipline and as a recovery mechanism. The proposal stands in contrast to the working pattern of garrison labour at the fortifications, where soldiers had earlier been employed for ad hoc tasks rather than as a substitute for the slave force. Bazett's explanation that the books could not be brought up because of other business probably points to the practical limit of a single working officer holding the consolidated storekeeper, councillor and surveyor responsibilities. With Bazett carrying the burden of the working store accounts on top of his continuing surveying obligations under the registration programme and his position as second in council, the administrative routine had outrun his working capacity. The Governor's demand for the books suggests that the council was beginning to recognise the working limits of the consolidated arrangement, although no immediate alternative appears to have been proposed.
49	42	Island S[t] Helena. At a private Consulta[t]on Held on Wednesday the 8[th] day of July 1713 At the United Castle in James Valley Pres[t] Benjam[n] Boucher Esq[r] Govern[r] Mattheu[w] Bazett 2 in Coun[ll] Lieut[t] Thom[s] Cason John French Assist[t]s Yesterday being the 7[th] Instant the Govern[r] rec[d] Information at the Plantation House by a Letter from M[r] Bazett that he was inform[d] by Robert Wallington Sold[r] That Severall of the Sodiers belonging to the Garrison did designe to rise in a Mutinous Manner under p[re]tence of wanting Victualls At the Severall of them had Each man Ten pound of bread Servd out of the Stores but on Saterdag before being the 4 Inst Upon which the Governo[r] wrote a Letter Immediatly to M[r] Bazett then in James Valley To take great care of the Castle and Store House that night and to place Such Honest Centinalls (and others as Officers) that was not Suspected to be in the Plott, and to order all the Flints to be taken out of all the Small Armes, Except those at Cinkey and up all other Necessary cautions to Prevent Mischief or Surprize and in the night he would Send Privately to Prospenbay to order an Alarm to be made at break of day next morning and upon the hearing it To give out that the Ship was Suppos[d] to be a Man of Warr or Advice boat from England to	The council met privately at the United Castle in James Valley on Wednesday 8 July 1713. Those present were Benjamin Boucher, Governor; Matthew Bazett, second in council; and Lieutenant Thomas Cason and John French as assistants. On 7 July 1713 the Governor had received information at the Plantation House by letter from Mr Bazett. Bazett had been told by Robert Wallington, soldier, that several soldiers of the garrison intended to rise in a mutinous manner, on the pretext of wanting victuals. Each soldier had been issued ten pounds of bread from the stores on Saturday 4 July 1713. On receipt of the letter the Governor wrote at once to Bazett, then in James Valley. The Governor directed him to take great care of the castle and storehouse that night, to place honest sentinels and officers who were not suspected of being in the plot, to take the flints out of all the small arms except those at Cinkey, and to take such other precautions as were necessary to prevent mischief or surprise. The Governor would send privately in the night to Prosperous Bay to order an alarm to be made at daybreak the next morning. When the alarm sounded, the story to be put out was that the ship was supposed to be a man-of-war or advice boat from England bringing news of peace. As the freemen came down to their posts, they were to be drawn into the castle and supplied with arms and ammunition, which would keep the soldiers in awe. The Governor would come down in the morning and examine the information. The examination took place on 8 July 1713, in the following manner. Robert Wallington, soldier, was examined on oath. He deposed that on Monday night 6 July 1713. Interpretations The Governor's response to the mutiny report shows the working defensive procedures available to the council at moments of internal threat. The removal of flints from the small arms at all posts except Cinkey rendered the working firearms inoperable while preserving a single armed reserve at the most defensible position. The mechanism allowed the garrison to be

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
		bring News of Peace and as the Freeman came down to those Posts to draw them all into the Castle and Deliver 'em Arms and Ammunition which would keep the Soldiers in awe And when he came down in the morning would Examine into the abovesaid Information which Accordingly did as followeth. Robert Wallington Soldier being Examined on oath Deposes that on Monday night last being the 6[th] Instant, as he was Margin Notes: Information ab[t] The Sold[r]s Designs of Plundering The Stores by[?] y[e] Coun[ll] &c[a] Wallingtons Deposition	neutralised as a working military force without provoking the soldiers by an open disarmament, and gave the council a hidden working margin while it assessed the credibility of the report. The procedure parallels the working precautions taken at the recapture of the island in 1673, when control of the working firearms was the central question. The use of a false alarm as a pretext for arming the freemen converts the working militia of the inhabitant population into the council's working reserve against the garrison. By presenting the call-up as a response to a friendly ship rather than as a precaution against the soldiers, the council preserved the working confidence of the soldiery while drawing the freemen into the castle under arms. The arrangement shows the council using the working defensive structure of the island, the dispersal of the freemen at outlying posts and their concentration at the castle on alarm, as an instrument of internal security rather than of external defence. The choice of Cinkey as the single post retaining its working firearms identifies that position as the working strongpoint of the castle's defences. The retention of armed sentinels at Cinkey allowed the council to maintain a working defensive capability at a known and trusted point while the wider establishment was rendered temporarily inoperable. The working logic parallels the council's earlier organisation of the island's defences around named strongpoints, with Munden's Castle, Bambolts and the trench works each serving particular working defensive functions. The convening of a private consultation rather than the usual public sitting, with the formal examination of the informant under oath on the following day, shows the working judicial procedure available to the council in security cases. The private hearing preserved the working confidentiality of the deposition while establishing the formal documentary record on which any subsequent proceedings against named soldiers could rest. The arrangement parallels the working procedure used in earlier security matters, including the punishment of Joseph Wrench for collusion with slave theft at the consultation of 17 March 1713. Speculations The Governor's elaborate cover story, with the false alarm presented as a response to a supposed man-of-war bringing news of peace, was probably calculated to address both the soldiers' working morale and the wider inhabitant expectation. With the War of Spanish Succession still in progress, news of peace would have been a working event of obvious importance to the garrison and the inhabitants alike. The choice of this particular cover story gave the council a working reason for the alarm that no one on the island could safely investigate or contradict, while also offering the soldiers a working psychological alternative to the immediate grievance of food shortage. The issue of ten pounds of bread per soldier from the stores on Saturday 4 July 1713, three days before the reported mutiny was to take place, suggests that the council had already attempted to relieve the working pressure through emergency provisioning before the conspiracy was reported. The fact that the soldiers were nevertheless planning a rising despite the bread issue indicates that the working grievance was deeper than the immediate supply position, perhaps extending to the working conditions of garrison service during the drought or to the labour at the fortifications that the Governor had proposed on 3 July 1713 to extend to indebted soldiers in place of slaves. The chronology suggests a working connection between the labour proposal and the mutiny report.
50	43	was Lying downe upon his Guard bed in the Sessions House William Brogden	Robert Wallington, soldier, was examined on oath. He deposed that on Monday night 6 July 1713, while he was lying on his guard bed in the Sessions House,

Geo[r] Sanders George Sanders Soldier Declares that on Monday Last being Deposition the 6[th] Instant he went into the Cooks House to broile a fish, where he had bin above two or three Minutes before Edward Mallard Sold[r] came in and askt this Deponent whether he was a Granadeer or not who answeed yes and why do you ask, nothing Says Said Mallard But	William Brogden, soldier, came and sat down by him and told him their design was going on. The deponent made no immediate reply, but after a pause asked Brogden who was to lead. Brogden answered that Sergeant Pirkins, then on duty, was to lead. He said that on the Thursday following, which was the appointed council day, they would seize the Governor and Council as they were sitting in the hall and keep them prisoners until a ship came, intending to take provisions and whatever else they wanted out of the stores by force. Wallington further deposed that he had heard James Ryon say the previous night, when the deponent had asked him whether Brogden had said anything more of this intention, that the conspirators would set the store room on fire. James Ryon, soldier, was examined. He said that Robert Wallington had asked him the previous night whether he knew anything of the garrison's rising, or of any design to obtain provisions, or whether he had heard Brogden say anything about it. He had replied that Brogden had said they had given a petition to the Governor about being supplied with provisions, and that he had heard several others talk about the matter. He had also heard Thomas Griffis say the previous night that, if care were not taken, the store would be set on fire within three days. Henry Harmon, soldier, deposed that on Tuesday 7 July 1713 William Brogden had asked him, when he came into the Sessions House where the guard was kept, which side he would be for. Harmon, not knowing of Brogden's design, replied that he would be for the garrison. He heard Brogden talk about firing a gun and hoisting a flag, naming Thursday, and heard Brogden ask George Sanders which side he would be for. He could not say what answer Sanders gave, as he was then leaving the guard room. George Sanders, soldier, declared that on Monday 6 July 1713 he had gone into the cook's house to broil a fish. He had been there only two or three minutes before Edward Mallard, soldier, came in and asked the deponent whether he was a grenadier. The deponent answered yes, and asked why Mallard wanted to know. Mallard replied nothing. Interpretations The conspirators' plan, as described in the depositions, shows the working internal geography of the castle being turned to mutinous use. The seizure of the Governor and Council during a sitting in the hall would have captured the working civil authority at its most concentrated point, with the seizure of the stores supplying the working logistical objective of the rising. The mention of holding the Governor and Council until a ship came indicates that the conspirators intended to use them as hostages for negotiated departure rather than simply to seize control of the island, which suggests a working aim of escape rather than insurrection. The choice of Sergeant Pirkins as the named leader, identified by Brogden as the man to head the rising, points to the working role of the non-commissioned ranks in any garrison conspiracy. With the commissioned officers necessarily aligned with the Council, the working organisation of a soldiers' rising would have to flow through the sergeants who commanded the working guard rotations. The naming of a serving sergeant as the intended leader gives the depositions a working operational specificity that distinguishes them from mere grievance talk among the soldiery. The threat to set the store room on fire, attributed to Thomas Griffis through Ryon's testimony, identifies a working secondary objective that would have served as a destruction of evidence as well as a means of coercion. If the council refused to yield to the immediate seizure, the destruction of the store would

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			deprive the establishment of the working basis of its supply, while also destroying the documentary records held in the building. The threat shows the working understanding of the conspirators that the store room was the central asset of the council's working position on the island, and that its destruction would force concession on terms unfavourable to the council. The working method of recruitment visible in the depositions, with named conspirators approaching individual soldiers in the guard room and the cook's house and asking which side they would be for, shows the open and unsecured character of the conspiracy. The conversations took place in the working spaces of the garrison and could be overheard by soldiers not yet enlisted in the plot, which exposed the conspirators to immediate informing. The pattern suggests that the rising was being organised by working grievance and personal contact rather than by careful clandestine planning, which gave the council its working opportunity to anticipate and pre-empt the action. Speculations The intended date of Thursday 9 July 1713 for the rising probably reflected the conspirators' working calculation that the Governor and Council would be most accessible during their regular sitting. With the council day fixed under the 3 July 1713 order for Thursdays following Monday-to-Wednesday store issues, the Thursday hall sitting offered a working window in which the council would be assembled in one place without armed escort. The conspirators' choice of the council day shows that they had read the working administrative pattern of the establishment and planned their operation around it. The petition to the Governor about being supplied with provisions, mentioned by Ryon as having been delivered by the soldiers before the rising was planned, suggests that the conspiracy emerged from a working sequence of grievance and refusal rather than from a sudden impulse. The soldiers had first attempted the established working channel of petition, and only after some disappointment with the response had moved to plan the rising. The chronology supports a reading of the conspiracy as a working escalation from grievance to direct action, with the failure of the petition providing the working trigger for the more dangerous course.
51	44	But that William Brogden wants to Speak with you in the Sessions House, where the Deponent went and was then askt by the Said Brogden whether he was for the good of the Garrison or not, to which the Said Deponent replied yes I am and for the good of all at which time heard the Said Brogden Say that an Alarum would be on Thursday following and as the Freemen came down in the Valley they would Lay them up. James Young Soldier being Examined Saith he has heard Severall of the Garrison Soldiers Say that they would not be Starv[d] and would Shoot Some of the Planters Hoggs & Goats And that he heard Brogden Say that if they had a Parcells of Stoute fellows twould be no hard Matter to Seige the Govern[r] & Councill. Joseph Bates Soldier being Examined Says he has often heard William Gore Thomas Griffis and others when warme with Liquor Curs and Damn the Governo[r] and Coun[ll] and that the Said Gore Said if all the Garrison was Like him, he would	George Sanders deposed further. William Brogden had said he wanted to speak with him in the Sessions House. When Sanders went there, Brogden asked whether he was for the good of the garrison. Sanders replied that he was, and for the good of all. He then heard Brogden say that an alarm would be raised on the following Thursday, and that as the freemen came down into the valley the conspirators would lay them up. James Young, soldier, was examined. He said he had heard several of the garrison soldiers say that they would not be starved, and would shoot some of the planters' hogs and goats. He had heard Brogden say that if they had a parcel of stout fellows it would be no hard matter to seize the Governor and Council. Joseph Bates, soldier, was examined. He said he had often heard William Gore, Thomas Griffis and others, when warm with liquor, curse and damn the Governor and Council. Gore had said that if all the garrison were like him, he would soon remedy their condition of being so much in want of victuals. While talking in this way, Bates had seen Griffis clap him on the back and say "God a Mercy, messmate." Bates had also heard William Knife wish that the garrison were like himself and Gore. Brogden had said, when they were complaining for want of victuals, "Why don't you take your pieces and go kill a hog or a goat?"

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
		Soone remedy their Condition of being in So much want of Victualls and when talking at this rate he's Seen y[e] Said Thom[s] Griffis Clap him on the back and Say God a Mercy Mess-mate and has farther heard William Knife wish y[e] Garrison was Like him and Said Gore and that Brogden has Said when they have been Complaining for want of Victualls why dont you take your Peices and go Kill a Hogg or a Goate. John Muchmore Soldier being Examined Saith he has heard Severall of the Soldiers Say they had Petition[d] for Victualls and would have Some. Robert Wallington Sold[r] appeared againe and Declard That he heard James Young ask Edward Smith Last night if he would not Stand by Poor folks that was ready to Starve To which the Said Smith made answer and Swore by his maker yes he would as Long as he had a drop of blood in his body and being talking farther about the hardship they Lay under for want of Victualls, heard one of them name Nine a Clock to which Will[m] Brogden made Answer that's the hour. James Margin Notes: James Youngs Deposition Jos[h] Bates Deposition Jn[o] Muchmores [Deposition] Rob[t] Wallingtons Deposition to y[e] Former	John Muchmore, soldier, was examined. He said he had heard several of the soldiers say that they had petitioned for victuals and would have some. Robert Wallington appeared again. He declared that the previous night he had heard James Young ask Edward Smith whether he would not stand by poor folks who were ready to starve. Smith had answered, swearing by his maker, that he would, as long as he had a drop of blood in his body. While they were talking further about the hardship they were under for want of victuals, Wallington heard one of them name nine of the clock. William Brogden had answered, "That's the hour." Interpretations The cumulative working detail of the depositions discloses an organised conspiracy with named leaders, an established date, a working sequence of operations and a recruitment process running through the guard rooms. Brogden emerges from the testimony as the working organiser of the rising, with Gore, Griffis and Knife as the principal accomplices. The naming of nine of the clock as the hour fixes the working timing of the operation against the council day sitting, which gives the council a precise working basis for placing armed freemen in the castle before the conspirators could move. The detail of the conspirators' working plan to lay up the freemen as they came down into the valley shows that the rising was intended to overpower both the council and the inhabitant militia in a single coordinated operation. The conspirators had recognised that the freemen would respond to an alarm and had planned their seizure as part of the working sequence. The plan parallels the council's own counter-plan to draw the freemen into the castle under the cover of a false alarm, which suggests that both sides were working with the same understanding of the working mobilisation procedures on the island. The casual tone of Brogden's suggestion to fellow soldiers that they take their pieces and shoot a hog or a goat shows the working route by which the conspiracy emerged from ordinary grievance into planned action. The soldiers' working grievance about victuals had reached the point at which open suggestions of unauthorised slaughter of inhabitants' livestock were circulating in the guard rooms. The progression from suggested poaching to planned seizure of the council suggests that the conspirators had moved through a working escalation as the working grievance failed to find official remedy. The recurring presence of liquor in the depositions, with Gore, Griffis and others reported as cursing the Governor and Council when warm with liquor, identifies the working setting in which the conspiracy took shape. The garrison drinking sessions in the guard rooms and the cook's house provided the working space in which grievance could be expressed and recruitment could be conducted, away from the working oversight of the commissioned officers. The pattern parallels the working role of liquor in the Wrench case earlier in the year, where the soldier had bartered with a slave for arrack and joined in the robbery of the house where the liquor was kept. Speculations The fact that Wallington, the principal informer, had been approached by Brogden and had then been the first to report the conspiracy to the Council through Bazett suggests that the working network of the conspirators included men who would not in the event commit to the action. The recruitment of Wallington shows the conspirators' working confidence that grievance was sufficiently general to draw in any soldier asked, but it also shows the working vulnerability of an open recruitment to early informing. The pattern indicates that the conspiracy had probably not yet

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			secured a working majority of the garrison at the moment of its disclosure, and that the council intervened at a moment of working uncertainty rather than after the plot had become consolidated. The depositions repeatedly identify named ringleaders, Brogden, Gore, Griffis and Knife, with Sergeant Pirkins as the supposed military leader. The convergence of multiple soldiers' testimony on the same names suggests that the working organisation of the conspiracy was an open secret in the garrison rather than a closely held plot. The council's working response, of placing honest sentinels and removing the flints, anticipated that the conspirators would discover their detection only when they attempted to act, which suggests that the council judged it safer to neutralise the working capacity of the conspiracy than to attempt arrests in advance.
52	45	James Young Says he and Snow having quarrell'd & fought against a little before in the Evening, made a Challeng to fight next morning at nine a Clock and that was the meaning & reason of his and Edward Smiths naming nine a Clock and Brogdens making Answer to it. Thomas Southen Serj[t] being Examined Declares that on Monday night Last as he and Serj[t] Slaughter was at the Castle Gate Saw John George William Gore and Some others of the Soldiers talking together and overheard Gore Say twas better to be hang[d] then to be Starv[d] to death, and Thom[s] Griffis Say twas better to die Like men then die Like doggs which and Such Like discours he has heard Severalls of the Sold[rs] Say for Some time Past haveing Checkt them for utering Such words believeing twere the Effects of too much Strong drink then any ill intent they had. farther adds That as he went into the Guard house Last night and Seing James Young Lying down ordered him to rise and put his Sword on and gird his Armes ready To which the said Young Swore and Said what is the French a Comeing and gave the Declarant So with all Saucy and very Provoaking words, which Occasioned his Striking him upon which William Knife Seem'd displeas[d] and Swore he would not be fetcht down by any Officer Edward Smith being then present gave the Said Declar[t] cant very ill Language with Threats what he could do at which time heard it Said that James Young Should ask the Said Smith if he would Stand by Poor People that was ready to Starve to which Smith made Answer yes as Long as he had a drop of blood in his body and that he or Edward Smith Said twas very hard to be Starv[d] to death whereupon James Young made Reply dam you Because you are a Parcell of fooles its better a great deal to be hang[d] like men then to be Starv[d] like doggs. Richard Saygers Soldier being Examined Saith he heard Thomas Griffis Say that if they could not have dyet one way	James Young added that he and Snow had quarrelled and fought a little earlier in the evening, and had agreed to fight again next morning at nine of the clock. That was the meaning of his and Edward Smith's naming nine of the clock, and of Brogden's reply. Thomas Southen, sergeant, was examined. He declared that on Monday night, while he and Sergeant Slaughter were at the castle gate, they saw John George, William Gore and other soldiers talking together. He overheard Gore say that it was better to be hanged than to be starved to death, and Thomas Griffis say that it was better to die like men than to die like dogs. He had heard such talk from several of the soldiers for some time past. He had reprov'd them for using such words, believing they spoke from the effects of too much strong drink rather than any settled ill intent. Southen added that when he went into the guard house the previous night and saw James Young lying down, he ordered him to rise, put on his sword and gird his arms ready. Young swore and asked whether the French were coming, and gave him saucy and provoking words. Southen then struck him. William Knife appeared displeased and swore he would not be brought down by any officer. Edward Smith, then present, used very ill language to Southen with threats. Southen also heard James Young ask Smith whether he would stand by poor people who were ready to starve. Smith answered yes, as long as he had a drop of blood in his body. Smith said it was very hard to be starved to death. Young replied, "Damn you, because you are a parcel of fools. It is a great deal better to be hanged like men than to be starved like dogs." Richard Saygers, soldier, was examined. He said he had heard Thomas Griffis say that if they could not have provisions one way, they would have them another. William Brogden, soldier, was called in. The earlier examinations were read to him. He answered that most of the garrison soldiers were very much dissatisfied and ready to starve for want of victuals. Interpretations The introduction of the duelling explanation by James Young, that nine of the clock referred to a private fight with Snow rather than to the hour of the rising, gives the conspirators a working alternative narrative. The depositions of Wallington and others had pointed to nine of the clock as the agreed hour for the seizure of the council, but Young's account offered a working innocent reading of the same phrase. The council had now to weigh the working evidence of Brogden's separate naming of the hour against the supposed coincidence of a duelling appointment, with the truth turning on whether the conspirators had used the duel as a working cover for their own meeting. Sergeant Southen's working testimony confirms the wider pattern of grievance and insubordination among the garrison without itself disclosing a specific

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
		they must and would a Nother. William Brogden Soldier being call[d] in and y[e] aforesaid Exa- minations Read to him made answer that most off[?] Garrison Sold[rs] were very much dissatisfied and ready to Starve for want of Victualls Margin Notes: James Youngs futher Deposit[n] Tho[s] Southens Deposition Rich[d] Saygers Rob[t] Brogden P[r]y[m]ary Leader of	conspiracy. The reproof he had administered for treasonous talk and his striking of Young show the working authority of a sergeant in the guard room being exercised against open expressions of grievance. The response of Knife, Smith and the others to Southen's intervention indicates that the working discipline of the garrison was already breaking down, with soldiers swearing they would not be brought down by any officer. The breakdown of working subordination is itself the substantive disclosure of Southen's deposition. The repeated working currency of the formula better to die like men than to die like dogs, attributed by several soldiers to Griffis and others, shows the conspirators using a working slogan to convert grievance into resolve. The contrast between dying like men and starving like dogs frames the rising as a working assertion of dignity against a humiliating death, which gave the conspirators a working rhetorical position more defensible than mere theft. The use of such a phrase suggests that the conspiracy had moved beyond simple working grievance into a working ideology of last-resort action. Brogden's working answer when called in and confronted with the examinations is striking. Rather than denying the conspiracy, he confirmed that most of the garrison were dissatisfied and ready to starve. The response neither admits nor denies the planned rising but shifts the working ground to the underlying grievance. The reply gives the council a working choice between treating Brogden as the disclosed leader of a serious conspiracy or as a working spokesman for genuine garrison distress. The framing puts the council in the position of having to address the working substantive complaint as well as the working procedural breach. Speculations Young's working duelling explanation may have been genuine, or it may have been an attempt to provide a working cover for the conspiracy after the depositions had begun to surface. The fact that the duelling appointment coincided exactly with the supposed hour of the rising, on the same date as the council day, leaves both readings open. The coincidence of date and hour stretches credulity, but the working culture of garrison fighting was real enough that the duel might have been a separate working matter. The council would have had to weigh both possibilities, with the credibility of Young's explanation turning on whether Snow could confirm the working appointment. The working pattern of the depositions, with Brogden named repeatedly as the central figure but without any deposition directly proving his complete plan, suggests that the council was building a working case on cumulative testimony rather than on a single conclusive deposition. The repeated naming of Brogden by independent soldiers, each disclosing a partial conversation with him, gave the council a working basis for action against him as the ringleader without requiring any one soldier to give comprehensive evidence. The mechanism reflects the working judicial practice of building convictions from multiple working witnesses where no single witness could speak to the whole.
53	46	Victualls and that rather then they would die for want when Some was to be had, they designd to Seize the Govern[r] and Councill without Spilling any blood and no farther. Whereupon It was ordered. That William Brogden William Gore William Knife Thomas Griffis and James Young Sold[rs] being found the Chief Fomenters and ring Leaders of this Mutinous & Seditious	Brogden added that rather than die for want of victualls when some was to be had, the soldiers had designed to seize the Governor and Council, without spilling any blood and no further. The council ordered that William Brogden, William Gore, William Knife, Thomas Griffis and James Young, soldiers, being found the chief fomenters and ringleaders of this mutinous and seditious design, be immediately confined close prisoners in irons, until a further examination. The council hoped the further

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
		designe be all Immediately Confin[d] Close Prisoners in Irons till a farther Examinatio[n] which we hope will bring out others That may be concern[d] with them in this Plott. And that. John Muchmore John George Abram Dorman Edward Smith and Charles Ablard being Impudent Saucy fellows and Suspected of being the first that would be ready to doe any Mischief be Disarm[d] and Continue So upon their good behaviour Dureing Govern[t] and Councils Pleasure Ordered Further That the following Advertisement be Published Tomorrow by beat of Drum Margin Notes: Severall of y[e] Mutinours Committed to Prison others Suspec[d] Sold[rs] Disarm[d]	examination would bring out others concerned in the plot. John Muchmore, John George, Abram Dorman, Edward Smith and Charles Ablard, being impudent and saucy fellows and suspected of being the first to be ready to do any mischief, were to be disarmed. They were to remain disarmed upon their good behaviour, during the pleasure of the Governor and Council. The council further ordered that the following advertisement be published the next day by beat of drum. Interpretations Brogden's working confession identifies the working aim of the conspiracy as the seizure of provisions rather than the killing of officers. The qualifying phrase, without spilling any blood and no further, attempts to confine the working scope of the plot to a limited operation aimed at the stores, with the seizure of the council as a working instrumental step rather than an end in itself. The framing parallels his earlier working answer, which shifted the working ground to the underlying grievance, and suggests a working defence strategy of presenting the rising as a desperate working remedy rather than a deliberate insurrection. The decision to confine the five ringleaders in irons while merely disarming the five accomplices establishes a working graduation of response matched to the degree of working culpability. The principal organisers face working detention with the prospect of formal proceedings, while the secondary figures lose their working access to arms but retain their liberty under conditional good behaviour. The mechanism allows the council to neutralise the working threat without committing to prosecute the entire suspect group, and preserves the working capacity of the disarmed soldiers to perform their other duties. The phrase upon their good behaviour, during the pleasure of the Governor and Council, places the five disarmed soldiers in a working position of continuing dependence on the council's working judgement of their conduct. The disarmament can be lifted at any time, but only at the council's pleasure, which gives the council a working continuing leverage over the disarmed men. The arrangement parallels the working treatment of Wrench at the consultation of 17 March 1713, where the petitioner's relief from continuous duty was granted on conditions of working future behaviour, and shows the council using working conditional clemency as a tool of garrison discipline. The proposal for a further examination, with the working hope that it would bring out others concerned in the plot, indicates that the council was treating the present depositions as a working first round rather than as a complete record. The continued detention of the ringleaders in irons would give the council working time to pursue additional informers, and the working prospect of identifying other conspirators would presumably encourage further depositions from soldiers who feared their own working implication if they did not come forward. Speculations Brogden's careful working framing of the conspiracy's intention, with the explicit assurance that no blood would be spilt, was probably calculated to preserve a working defence against capital charges. Mutiny accompanied by violence carried the working death penalty under military law, while a non-violent seizure of provisions, however grave, would offer working grounds for clemency. By placing the working limits of the planned action on the record at the moment of his examination, Brogden gave himself a working argument against the most serious working penalty, even though he could not avoid working punishment altogether.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			The selection of five ringleaders for irons and five secondary figures for disarmament probably reflects a working calculation about the degree of working evidence available against each soldier. The five named ringleaders had been identified by multiple working depositions, with Brogden, Gore, Griffis and Young each appearing in three or more accounts. The five disarmed soldiers had been mentioned in fewer working depositions or only as general malcontents. The mechanism shows the council matching working detention to the strength of the working evidence, with the more lightly detained group held under disarmament rather than committed to working trial.
54	47	Island S[t] Helena. By the Govern[r] and Councill An Advertisement. Whereas Severall or most of the Garrison Soldiers through their daily Extravagancy and Ill Husbandry being at Present very much Indebted unto the Honourable Company and thereby Some grown wicked and Desperate besides their Rendering themselves Lyable to want and Pennury not only in one but Severall respects, Especially those of Cloathing and Dyet. Wee do therefore for the Encouragement of all Honest and well disposed Soldiers that are quiett and desire to Live So, Admit and give Leave to all Such to work at the Said Honoura[ble] Companys Fortifications and other buildings Duty free at Eighteen Pence p[er] day besides their Growing Sallary, which Expedient wee are in great hopes will be a good means of Lessening their debts and themselves of[p] Air and better Supplyd with Such Necessaries as are most requisite for their Support and Subsistance, And those that do's not Embrace this offer & Encouragement wee Shall Look upon as Idle Lasey Profligate fellows. Dated at the United Castle in James Valley this 9[th] day of July 1713. Sign[d] p[er] order of Govern[r] & Councill P me. Jn[o] Alexander Acc[ot]n[t] Margin Notes: Advertizem[t] to Encourage Sold[rs] to work at y[e] Fortifica- tions.	Island of St Helena. By the Governor and Council. An advertisement. Most of the garrison soldiers had run up heavy debts to the Honourable Company through daily extravagance and poor management of their money. Some had grown desperate and disorderly as a result. All were exposed to want and hardship, particularly in clothing and food. To encourage the honest and well-disposed soldiers who wished to live quietly, the council offered any such man leave to work on the Honourable Company's fortifications and other buildings, free from his ordinary military duty, at one shilling and sixpence per day in addition to his running salary. The council expected this arrangement to reduce the soldiers' debts, improve their health and supply them more fully with the necessities they required for their support. Any soldier who declined the offer would be regarded as an idle, lazy and profligate fellow. Dated at the United Castle in James Valley, 9 July 1713. Signed by order of the Governor and Council by John Alexander, Accountant. Interpretations The eighteen pence per day rate set the soldier-labourer at the same daily wage as the standard hired slave rate of 1s 6d, established in the labour-cost projections of 9 January 1711 and confirmed in the highway labour warrant of 9 June 1713. The advertisement extended that uniform rate to indebted free soldiers, allowing the Company to recover store-book debts in labour at the going market price for unskilled fortification work, without offering a premium for free status. Duty free here means relief from the soldier's normal guard and parade obligations during the period of paid construction work, not exemption from levies or charges. The growing salary phrase confirms that the labour payment was additive to the standing military pay, so that a working soldier received both, with the construction wage available to be applied against his store-book debt. The advertisement functioned as a debt-management instrument as much as a labour-recruitment one. The store books at St Helena were the working ledger of private indebtedness on the island, and the Company's principal exposure to its own garrison ran through them. By naming idle, lazy and profligate fellows as the residual category for those who refused, the council signalled that future discipline against indebted soldiers would rest on the record of who had accepted the offer. The timing places the advertisement on the day after the mutiny conspiracy of 8 July 1713, in which indebted soldiers were the principal element and the governor's earlier proposal of 3 July 1713 to put indebted soldiers to fortification work in place of slaves had been the immediate provocation. The advertisement converted that proposal into an open and voluntary scheme. Speculations

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			The wage of one shilling and sixpence per day matched the hired slave rate exactly rather than exceeding it. The choice probably reflected a deliberate refusal to let the soldier's free status command a wage premium when set against the same physical task, since paying free labour more than slave labour for the same work would have made the indebted-soldier scheme more expensive without addressing the underlying debt problem. The reframing of the 3 July 1713 compulsion as a voluntary offer, published the day after the conspiracy was disclosed, suggests the council recognised that compelling indebted soldiers to fortification labour had been a precipitating grievance. Casting the same arrangement as an encouragement, with the refusers labelled as profligate rather than the acceptors as coerced, allowed the work to proceed on essentially the original terms while removing the public appearance of forced labour against the garrison.
55	48	July the 9[th] 1713. The Examination & Depositions of Severall Soldiers concerning the Mutiny aforesaid. James Wilson Gunners mate Deposes that yesterday when the Alarm was made at Prosperous bay he repaired to his Post at Mundens Point and Looking over the Guns found the Tomplins in the Muzles upon which ask[d] Isaack Hudgeson Monrofs[?] then at the Said Post why the Tomplins was taken out before y[e] Guns was Prim[d] who made answer they are not Prim[d] yet, but Expecting the Ship to be Soon in Sight, hastend a[s] Soon as Possible to get y[e] Guns ready Prim[d] which when done this Deponent went to William Brogdon who was a Small Distance off and Said William how do you do, I thank y[e] he replyd Jim very well and what makes you Prime the Guns which way do you Look for the Shipp, why Says this Depon[t] to Windwoeo[?] for the C[o] Guns has fired and She is not to Leeward. No (replyd Said Brogdon) if you Expect the Ship you might Look for her this way and Pointed toward the Fort Valley, why So Says this Deponent what a name of God I hope the blacks are not rising To answer[d] the Said Brogdon. they took our Flints out of our Peices Last night upon Suspeticion of a Mutiny, but what we do we will do by day Light and not by night for if you was the first man we came to and would not Cole[?] find to us you would be a dead man, upon which the Depon[t] Surpriz[d] there was a mutiny in hand and therefore would Say no more to him but call[d] Serjant Fairfax (the Chief officer then at Mundens Point) a one Side and advis[d] him to Send a hand over to M[r] Bazett or Lieut[t] Cason to acquaint them with the Suspected Mutiny to which the Serj[t] replyd I dont know what to do who can wee trust or what can I do in the Matter, & farther Saith not.	On 9 July 1713, several soldiers were examined on the mutiny disclosed the previous day. Their depositions ran as follows. James Wilson, gunner's mate, deposed that on the previous day, when the alarm was made at Prosperous Bay, he went straight to his post at Munden's Point. On checking the guns he found the tomplions still in the muzzles. He asked Isaack Hudgeson, matross then at the post, why the tomplions had been taken out before the guns were primed. Hudgeson answered that the guns were not yet primed, but as the ship was expected soon in sight he was hurrying to prime them as fast as he could. Once the guns were primed, Wilson went to William Brogdon, who was standing a short distance away. He greeted him and asked how he did. Brogdon answered that he was very well and asked why Wilson was priming the guns and from which direction he was looking for the ship. Wilson said to windward, because the Company's guns had fired and the ship was not to leeward. Brogdon answered that if Wilson expected the ship he might look for her this way, pointing toward Fort Valley. Wilson asked what he meant, and said he hoped the blacks were not rising. Brogdon answered that the flints had been taken out of their pieces the previous night on suspicion of a mutiny, and that whatever he and his fellows did they would do by daylight and not by night. He added that if Wilson had been the first man they came to and had not joined them, he would be a dead man. Wilson, recognising that a mutiny was in hand, said no more to Brogdon. He called Sergeant Fairfax, the chief officer then at Munden's Point, aside and advised him to send a man to Mr Bazett or Lieutenant Cason to acquaint them with the suspected mutiny. The sergeant answered that he did not know what to do, whom he could trust, or what he could do in the matter. Wilson said no more on the point. John Davis, soldier, deposed that on Monday 6 July 1713 he came into the castle to find out whether any cheese had been served out to go with the bread they had received the previous Saturday. At the castle gate John Lane, soldier, told him that nothing was to be had and instructed him to go and fetch his musket, saying they must serve themselves. Davis answered that he was not on the guard. Lane replied that this made no difference, and pressed him to go and fetch his piece. Davis was unwilling to do so and showed no sign of discontent. Interpretations The tomplion was the wooden plug fitted into the muzzle of a gun to keep out damp and dirt when the piece was not in immediate use. Removing the tomplions before the guns were primed reversed the

		John Davis Soldier Deposes that coming into the Castle a Monday Last being the 6[th] Instant to See if there was any Cheese Servd out to the bread they had the Satterday before and when at Castle Gate was told by John Lane Sold[r] there was nothing to be had and bid me go and fetch my Muskett Saying we must Serve our Selves to which answered I am not upon the Guard no matter for that Said the Said Lane Pay & go and fetch your Peice which the Said Depon[t] not being willing to do, or Shewing any Concern of Discontent The Margin Notes: Further Examinations about y[e] Sold[s] Mutyning. Ja[s] Wilsons Deposition Jn[o] Davis Deposition	proper sequence and exposed the priming powder to the weather, so Wilson's question to Hudgeson on the matter was a technical check on artillery discipline at Munden's Point, not an idle remark. Hudgeson's matross rank places him in the same artillery sub-establishment, ranking below the gunner's mate, that was already visible in the cases of John Welch and James Vesey. Brogdon's reference to flints taken out of the pieces the previous night identifies the security precaution ordered by the governor on 8 July 1713 as the immediate trigger for the conspirators' decision to act by daylight rather than by night. The flintless muskets of the garrison meant the conspirators could not rely on the soldiers to fire on them in darkness; daylight gave the council time to react, but it also exposed any rising to immediate observation from the castle and the gun posts. The choice between the two timings became a working calculation rather than a tactical preference. The Fort Valley direction of approach in Brogdon's hint to Wilson is consistent with the conspiracy's reported intention of seizing the Governor and Council during the council sitting in the castle in James Valley. By naming Fort Valley as the quarter from which the supposed ship was to be expected, Brogdon was identifying the landward axis along which the conspirators would move on the castle, rather than the seaward axis used by visiting shipping. Sergeant Fairfax's response, that he did not know whom he could trust, exposes the depth of the council's exposure. The sergeant in command of the principal seaward battery was unable to identify reliable men in his own detachment for an errand of less than two miles to the castle. The conspiracy's reach into the artillery establishment, and not only among the unskilled garrison, becomes visible at this point. Speculations Brogdon's threat to Wilson, that if he had been the first man approached and had refused to join he would have been a dead man, suggests that the conspirators expected to recruit by direct personal solicitation at the moment of action rather than by pre-arranged enlistment. The threat assumed Wilson would have been canvassed only when the rising was already under way, and would have had to commit or be killed on the spot. This explains why the council's pre-emption by false alarm and flint removal, rather than by arrest of named ringleaders before disclosure, was the working response: the full membership of the conspiracy was not fixed in advance and could not be identified by interrogation of any single man. The Lane-Davis exchange at the castle gate on 6 July 1713, three days before the planned rising, indicates that the conspirators had begun on a programme of arming men off the guard under cover of a complaint about short rations. The cheese pretext gave Lane a routine reason to be at the gate, and the instruction to fetch a musket and serve themselves carried the double meaning of taking provisions and joining the rising. Davis's refusal, recorded as showing no sign of discontent, marks the point at which the conspiracy's recruitment by daylight solicitation began to fail, and is consistent with the disclosure that reached Bazett through Wallington shortly afterwards.
56	49	The Said Lane call[d] the Said Depon[t] Severall Names and offered to Strike him at which time the Said Brogdon was by and Said much to the Same Effect as Lane did and thereupon the Said Deponent walked away from them to the Smiths Shop, Farther adds that he heard	Lane called Davis several names and offered to strike him. Brogdon, who was nearby, spoke to much the same effect. Davis walked away from them to the smith's shop. He further deposed that he had heard Peter Forman say the men wanted victuals, and that when the rising came he would knock down the first man who opposed them. Forman had also said he had loaded his piece with a brace of balls.

		Peter Forman Say that they wanted Victualls and where the up short came he would knock the first man downe that Should oppose them and that he had Loaded his Peice with a brace of balls. Haveing Some information that Edward Mallard Sold[r] Who keeps the Lookout at the two Gun ridge was acquainted with this Conspiracy Benjamin Miller overseer of the Hutts Plantation Deposes [...] that on Saturday the 4 Instant being in Company with the s[d] Mallard and John How at the said Hutts house where being talking about Alarms the Said Mallard Propos[d] to Lay a wager of his Silver pair of buckles then in his Shoes against a pair of brass buckles with Black Sam a Slave of the Honoura[ble] Companys that there would be an Alarm before that day Sennight. The Said Edward Mallard being this day Examined why he did not fire any more then one Gun to Alarum Sandy bay as usuall, upon the hear- ing that Alarm made at Prosperous bay a Wednesday morning to Summons the Planters to their Severall Posts made answer among other frivolous Excuses that he could not fire any more then one Gun Comeing broke the Muskett with a fall in his easy to Sandy Bay ridge and that one is hard fire he was forc[t] to do it with a fire Stick. John Mills Soldier being Examined Saith that on Sunday Last being the 5[th] Instant Edward Mallard came to him as he was Setting on the Logs of Timber at the Castle Gate, and askt him if he would Sett his hand to a Paper that Severall of the Sold[rs] had desigene to put up at the Store Roome To which this Depon[t] made answer if you'l Let me read it and Like it perhaps I may Signe it but the rest upon it the Said Mallard Said they would protectthem (who he might cant tell unless twas the Govern[r] and Council[ll]) a weeks Warning, and if Pro- notice was taken in that time to Supply em with more Victualls a Great Gun would be fired at the Fort and upon the hearing of it he would throw away all the Ammunition at y[e] two Gun ridge that no body might make use of it and then come Downe to the Fort. John Margin Notes: Benj[a] Millers Deposition Edw[d] Mallard Examined. Jn[o] Mills Deposition.	The council had received information that Edward Mallard, the soldier who kept the lookout at the Two Gun Ridge, was party to the conspiracy. Benjamin Miller, overseer of the Hutts plantation, deposed that on Saturday 4 July 1713 he had been in the Hutts house in company with Mallard and John How. While they were talking about alarms, Mallard had offered to wager his silver shoe buckles, then in his shoes, against a pair of brass buckles belonging to Black Sam, a slave of the Honourable Company, that an alarm would be made before that day se'nnight. Mallard was then examined as to why he had fired only one gun, instead of the usual number, when the alarm was made at Prosperous Bay on the previous Wednesday morning. The single gun would not have been enough to summon the planters of Sandy Bay to their several posts. Among other frivolous excuses, Mallard answered that he could not fire more than one gun, since on coming to Sandy Bay Ridge he had broken the musket by a fall, and the one shot he did fire he had been forced to set off with a firestick. John Mills, soldier, was examined and stated that on Sunday 5 July 1713 Mallard had come up to him as he was sitting on the logs of timber at the castle gate. Mallard had asked him whether he would set his hand to a paper that several soldiers intended to put up at the storeroom. Mills answered that if Mallard would let him read it, and he liked it, he might perhaps sign it, but he could not commit to it without reading it. Mallard said they would give a week's warning to those concerned, whom Mills could not name with certainty though he supposed they meant the Governor and Council, and that if no notice were taken in that time to supply them with more victuals, a great gun would be fired at the fort. On hearing it, Mallard would throw away all the ammunition at the Two Gun Ridge so that no one could make use of it, and would then come down to the fort. Interpretations The Two Gun Ridge formed part of the chain of outlying alarm posts whose function was to multiply a single warning shot from one of the central batteries into a relayed signal across the island's settled districts. Mallard's failure to relay the Prosperous Bay alarm with the customary number of guns was therefore not a private lapse but a defeat of the alarm system at the link between the seaward post and the planters of Sandy Bay. The firestick excuse, recorded as frivolous by the examining council, signals that the council had already concluded the omission was deliberate. The wager on the silver buckles two days before the planned rising operated as concealed confirmation of inside knowledge. Mallard's certainty that an alarm would be made within the week, staked against a fellow lookout's brass buckles, made sense only on the assumption of an event the wagerer could himself bring about, or knew was to be brought about by others. Black Sam appears here in the working role of fellow lookout at the Hutts establishment, where slaves and free men shared the daily alarm watch under Miller's overseership. Mills's deposition discloses the conspirators' working method for committing fresh men: a written paper to be posted at the storeroom presenting the men's complaints as a collective petition, with the rising as the threatened sanction if no relief came within a week. The paper would have converted the conspiracy from a private agreement among ringleaders into a public list of names, and its posting at the storeroom, the central point at which the soldiers drew their rations, placed it where every soldier and inhabitant would see it. The instruction to throw away the ammunition at the Two Gun Ridge on the firing of the signal gun confirms that the lookout posts were treated by the

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			conspirators as ammunition stores to be neutralised in advance of the rising, not as defensive positions to be held. The plan was to deny the council and the freemen any reserve of powder and shot at the outlying posts before moving on the castle, in parallel with the flintless muskets already in soldiers' hands. Speculations The week's warning that the paper was to allow before any rising suggests the conspirators expected that a public petition backed by the threat of mutiny would either secure the additional victuals demanded or place the responsibility for the rising openly on the council. The arrangement was structured to give the council a window in which to concede on rations, which would have ended the conspiracy on the conspirators' terms without exposing the ringleaders to prosecution. The decision to act by daylight, taken after the flint removal of the previous night, replaced this slower approach with a more direct seizure of the council during a regular sitting. Mallard's wager of his silver buckles against brass buckles belonging to a Company slave is best read as a measure of his own confidence in the planned rising, since silver buckles were worth several times the brass equivalent. The asymmetric stake, made before a planter overseer who knew both men, accepted the visible loss in the event the alarm did not come, and so functioned as a private undertaking by Mallard that he was committed to the plan. The wager also drew Black Sam into the matter as an indirect witness, and may have been intended to neutralise the chance of his disclosing the lookout's conduct on the day.
57	50	John How Sold[r] Deposes that on Tuesday Last being at the Hutts Benjamin Miller and he was talking of Alarms which Edward Mallard hearing propos[d] to Lay a wager of his Silver Buckles then in his Shoes against a pair of brass buckles of Black Sams That there would be a Double Alarm by the next Tuesday following. Ordered. That the said Edward Mallard be put into Prison in Irons with the rest of his Confederates. Richard Tompson Soldier Deposes that on Sunday night being the 5[th] Instant he was in Company with Peter Towers William Brogden Thomas Lightwood and Jn[o] Davis at their Lodgings in the House of Jonathan Doveton and being talking about Victualls, & being this Deponent asked the Said Peter Towers if he would go a fisshing with him a Monday morning who made Answer No he Said other work to do, and would work em they ow's never So work[t] in their Lives and Said he had Loaded his Muskett with a brace of balls and they would fire as Long as he could, and then go to Club Law however a Monday morning the Said Depon[t] asked Towers againe if he would go a fisshing, who told him no he had other Buisness to do. John Davis Soldier Saith much to the Same Effect as the Said Tompson hath The Said Rich[d] Tompson adds farther that Thom[s] Lightwood at the Time and place aforesaid Said they had Eighteen of the	John How, soldier, deposed that on the previous Tuesday he had been at the Hutts in company with Benjamin Miller. The two of them were talking about alarms when Edward Mallard, overhearing them, offered to wager his silver shoe buckles against a pair of brass buckles belonging to Black Sam that there would be a double alarm by the following Tuesday. The council ordered Mallard sent to prison in irons with the rest of his confederates. Richard Tompson, soldier, deposed that on the night of Sunday 5 July 1713 he had been in company with Peter Towers, William Brogden, Thomas Lightwood and John Davis at their lodgings in the house of Jonathan Doveton. They had been talking about victuals. Tompson asked Towers whether he would go fishing with him on the Monday morning. Towers answered no, that he had other work to do, and that he would work them as they had never been worked in their lives. He added that he had loaded his musket with a brace of balls, that he would fire as long as he could, and would then go to club law. The next morning Tompson asked Towers again whether he would go fishing, and Towers again refused, saying he had other business to do. John Davis, soldier, gave evidence to much the same effect as Tompson. Tompson added that at the same place and time Thomas Lightwood had said they had eighteen of the best men in the garrison and did not care for the rest, because the men wanted provisions and could not get any, and for that reason would take provisions themselves. While this was being said, Peter Towers was speaking to a black woman of Jonathan Doveton's household about the shortage of victuals, and saying that the men would have some if the rest would stand by them. Lightwood answered Towers that he need not fear on that score. John Davis added that when Lightwood said they had eighteen of the best men in the garrison on their side Interpretations

		best men in the Garrison and did not care for the rest, for they wanted Provision and could not gett any for which reason would take it themselves at which time Peter Towers being talking to a black wench of Said Jonath[n] Devetons about the want of Victualls and Saying they would have Some if the rest would but Stand by 'em the Said Lightwood made answer you Need not fear that further Saith not. John Davis adds farther that when Lightwood Said they had Eighteen of the best men in the Garrison on their Side the Margin Notes: Jn[o] How's Deposition. Mallard Sent to Prison Rich[d] Tompsons Deposition Rich[d] Tompson adds further. 18 men Jn[o] Davis adds further.	The double alarm in Mallard's second wager refers to the firing of the signal that distinguished a serious general emergency from a routine single warning shot of the kind discussed in the earlier wager with Black Sam. The escalation from a single alarm in the first wager to a double alarm in the second indicates that, by the Tuesday before the planned rising, Mallard already knew the planned action was to be of the order that would require the larger signal, and was staking his buckles against that specific outcome rather than against alarms in general. Going to club law was the working soldier's phrase for resorting to the butt of the musket once the powder and ball were spent, and so for hand-to-hand fighting at close quarters. Towers's stated sequence, firing as long as he could and then going to club law, fixed his personal expectation that the rising would be carried through to a physical engagement with anyone who opposed it, regardless of whether his ammunition lasted, and is the most direct evidence of intent to lethal force recorded in these depositions. The lodging of the conspirators in the house of Jonathan Doveton, a freeholder already established in the present working volume, places the planning meetings of 5 and 6 July 1713 in private quarters rather than in the garrison barracks. The arrangement gave the conspirators a venue beyond the immediate observation of officers, and made one of the principal freeholders a witness, by his household, to conversations that included a slave belonging to him. The black woman is the working informant whose presence is recorded but whose evidence is not separately taken in this examination. Lightwood's count of eighteen of the best men in the garrison fixes the working strength of the conspiracy at a level well below the total of those committed close prisoners or disarmed by the council on 8 July 1713, indicating that the council's pre-emption neutralised only the leading and most exposed members. The phrase the best men distinguishes the active core from a broader penumbra of soldiers expected to follow once the rising was begun, and provides the principal evidence that the conspiracy's working method depended on a small armed nucleus drawing in the remainder of the garrison by example. Speculations Towers's repeated refusal to go fishing with Tompson on the Sunday night and again on the Monday morning suggests that the conspirators were operating under a rule that members were not to absent themselves from the settled area in the days immediately before the rising, since fishing parties on the yawl under the order of 12 May 1713 took the men away for periods of up to forty-eight hours and would have removed Towers from the planning meetings and from the action itself. The settled date for the rising was therefore probably already fixed by the Sunday night, and the working core of the conspiracy was already under a self-imposed restriction on movement. Lightwood's assurance to Towers that he need not fear on the question of the rest of the men standing by them, given in answer to a remark made to a slave of Doveton's household in a freeholder's house, suggests that the conspirators were prepared to discuss their numbers openly in the presence of slaves and household women. The risk of disclosure through such audiences was apparently regarded as acceptable, which is consistent with the conspirators' expectation that the rising would happen within days and that any disclosure thereafter would come too late to be acted on.
58	51	the Said Tompson made answer what will you do if the rest dont Stand by and consent to assist you, to which Said Lightwood replyd	Tompson said in answer that he asked Lightwood what he and his associates would do if the rest did not stand by them and consent to assist. Lightwood replied that there was no great fear of that.

Advertizm[t] for Persons to receive Deeds & Leases for Lands	The council ordered Peter Towers and Thomas Lightwood put immediately into prison in irons, to remain there with the rest of their associates. Island of St Helena. By the Governor and Council. An advertisement. Notice was given to all persons that the council had examined the titles of the following persons' lands and intended to establish them in their several properties by delivering out deeds and leases on Tuesday 4 August 1713. Any person who had anything to object against the confirmation of any of these titles was to appear and make the claim. After that day all such persons would be excluded and debarred, and any claims, demands and pretensions then advanced would be reckoned null and void. The persons named: James Draper Maxwell's orphans George Carne Simon Whaley Robert Marsh Richard Girling Stephen Lufkin John Bagley Richard Swallow Dorothy Hayse Joshua Johnson Richard Harding's children Jonathan Doveton Elizabeth Johnson Walter Morris Elizabeth Allis Wrangham's orphans Orlando Bagley Sutton Isaack senior James Greentree Benjamin Greentree John Nichols senior Francis Goodwin (now Carne) Thomas Allis Mary Hoskison (now Powill) Samuel Defountains's children Charles Steward Gabriel Powill Francis Wrangham John Coles Francis Steward and sisters Interpretations The fixed cut-off date of 4 August 1713 carried the legal effect of a quieting decree against all unstated claims to the listed parcels. The notice operated on the working principle already applied to Jonathan Doveton on 30 March 1711 and to James Reder on 30 May 1711, by which a published period for objection, once expired, foreclosed all further private claims. The list of more than thirty named holders represents the largest single application of the procedure since its introduction, consolidating the title work of the registration programme that began in January 1713. The form Francis Goodwin (now Carne) and Mary Hoskison (now Powill) confirms that the council was issuing deeds in the names under which the women presently held, not in their names at first allocation. Title would therefore vest in the second husband in right of his wife, in accordance with the working pattern visible in the earlier Carne and Bowman cases. The notice fixed the present marital state of each holder for the purpose of the deed, which removed the possibility of later challenge on the ground that the title should have run in a former married name. Several of the named holders appear in family groupings rather than as individuals: Maxwell's orphans, Wrangham's orphans, Richard Harding's children, Samuel Defountains's children, Francis Steward and sisters. The notice treated these as single title units to be

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			confirmed by a deed naming the children or the orphan group as a class, with the working consequence that any later partition among them would have to be made within the four parcels rather than by reopening the title to the Company. The mechanism preserved the council's audit at one document per parcel while accepting collective beneficial ownership beneath the title. The ordering of the list, which intermixes free planters, orphan groups, widows now remarried, the holders of consolidated estates and the holders of small single parcels, suggests that the working sequence of the deeds was governed by the order in which the title sittings of January, February and March 1713 had completed each examination, rather than by social rank or size of holding. The notice thereby left the queue at the council door on 4 August 1713 to be settled by readiness of the documents and not by precedence. Speculations The decision to fix the delivery on a single Tuesday, rather than to spread the deeds across the rolling first-Tuesday council days established in December 1712, suggests that the council was treating the issue of deeds as a public event in its own right and not as routine consultation business. A single delivery day concentrated the formal moment of confirmation, placed all the named holders together at the castle on the same morning, and turned the act of receiving the deed into an occasion observed by all the other holders. The arrangement was probably intended to bring home to the holders, after the disclosures of the previous week, that the Company's grant of formal title remained intact and was proceeding on schedule despite the conspiracy. The publication of the list five days after the mutiny advertisement of 9 July 1713 placed the council's reform of free planters' titles in the most visible possible juxtaposition with the disciplinary advertisement to the garrison. The named holders, taken together, represented the principal element of free society on the island whose loyalty the council needed to retain. Publishing the deed-delivery notice in the immediate aftermath of the conspiracy probably served, in part, to signal to the planters that their established interests were being secured by the same administration that had pre-empted the rising, and to bind the freemen still more closely to the council on whose authority their titles depended.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			The heading single leases marks these holders out as taking a single instrument from the Company, in contrast to the deed-holders of the earlier list who received freehold conveyances. The distinction reflects the working division established under the registration programme between those whose title to the land was being confirmed in fee and those who held by lease, typically the 21-year lease at the customary rate that had become the standard for waste-ground grants from 20 December 1710 onward. The same 4 August 1713 delivery day served both classes, but the instrument carried at the castle door differed. The list mixes officers, soldiers and free planters in a single category of leaseholders, with Lieutenant Cason among them. Cason had been granted his six to eight acres of cabbage tree land on 2 September 1712 on a 21-year lease, and his appearance among the single-lease holders here, rather than among the deed-holders of the earlier advertisement, confirms that the leasehold tenure attached to the land and not to the rank of the holder. The Company retained the reversion regardless of the office held. The lease class included family groupings of the same kind seen in the deed list, with Thomas Earles's children, Edward Brayns's heirs and the Sich combination of mother and son taking their leases as defined units. The administrative practice of issuing one instrument per parcel to a named class continued without distinction between freehold and leasehold tenures, so that the council's audit pattern remained consistent across both forms of grant. The dating of the advertisement at 27 July 1713, eighteen days after the disclosure of the conspiracy and one week before the planned delivery day, indicates that the deed-and-lease programme was being driven forward on the timetable set in advance of the disturbances. The conspiracy did not interrupt the registration sequence, and the council's working priority remained the completion of the consolidated title record begun in January 1713.
60	53	Island S[t] Helena. At a Consultation Held on Tuesday the 4[th] day of August 1713 At the United Castle in James Valley Pres[t] Benjam[n] Boucher Esq[r] Govern[r] Mattheu[w] Bazett 2 in Coun[ll] Lieut[t] Thom[s] Cason John French Assist[ts] According to an Advertizement Issued out the 27[th] of July Last past The Govern[r] and Council Mett this day to Signe and Deliver out Deeds and Leases for Lands to the Sevrall Persons & free- holders mentioned in the said Advertizem[t] who all appeared and recieved them Accordingly with great Sattisfaction for being confirmed in their Properties. Hugh Bodley Sen[r] free planter Lately deceased being Indebted unto the Honoura[ble] Company for Rents Revenues &c[a] and no Likely- hood or Probability for his widdow to make Payment She and family being helpless and in a deplorable Condition. Ordered. That the Provisions Standing and growing upon the Land which the Said dec[d] Hugh Bodley rented of the Said Honoura[ble] Company be Expos[d] to Publick Sale for and Towards the Payment of Said Debt And that	Island of St Helena. Consultation held at the United Castle in James Valley on Tuesday 4 August 1713. Present: Benjamin Boucher Esquire, Governor; Matthew Bazett, second in council; Lieutenant Thomas Cason and John French as assistants. In accordance with the advertisement of 27 July 1713, the Governor and Council met to sign and deliver out the deeds and leases for the lands of the several persons and freeholders named in the advertisement. All those named appeared and received their instruments accordingly, with great satisfaction at being confirmed in their properties. Hugh Bodley senior, free planter, lately deceased, had died indebted to the Honourable Company for rents, revenues and other charges. There was no probability that his widow could make payment, the family being helpless and in a deplorable condition. The council ordered the provisions standing and growing on the land that Bodley had rented of the Honourable Company exposed to public sale, in part payment of the debt. An advertisement was to be published by beat of drum giving notice of the sale. William Worrall, matross, presented his petition. He set out that he had lately bargained for the purchase of a house, land and provision of Richard Cleve, and being not in a capacity Interpretations The delivery of the deeds and leases on 4 August 1713 brought together more than fifty named holders in a single morning at the castle, completing in one sitting the formal confirmation of titles examined across the rolling title days of January, February and March 1713. The recorded great satisfaction of the holders marks the

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
		An Advertizement be Published by Beat of Drum to give Notice Accordingly. William Worrall Montrofs Presented his Petition this day Setting forth therein that he had Lately bargain[d] for a Purchase of Land House and Provision of Richard Cleve and being not in a Capacity Margin Notes: Coun[ll] Mett to Deliver out Deeds & Leases. Provisions on Bodleys ground to be Sold for Paym[t] of his debts.	institutional moment at which the registration programme passed from administrative process into settled tenure for the freemen of the island, and fixed the working baseline of land ownership against which all later transactions would be measured. The order on the standing provisions of the late Hugh Bodley applied the working pattern already established for the estate of Thomas Swallow senior on 20 December 1710. Where a tenant of Company land died indebted to the store, the council seized the growing crop rather than the land itself, since the lease reverted to the Company automatically on the tenant's death. The provisions, as moveable produce of the soil once cut, were converted into cash at public outcry against the running debt, leaving the Company free to relet the bare ground without entanglement in the widow's affairs. The phrase helpless and in a deplorable condition served the working purpose of recording that the council had considered the widow's circumstances before ordering the sale, and had concluded that no compromise short of conversion of the standing provisions could be reached. The council's protective role over widows and orphans, declared on 5 April 1711 and 11 December 1710, did not extend to forgiveness of store-book debts, but it required that the basis for the seizure be entered on the consultation as a record of due process. The petition of William Worrall, matross, identifies a soldier-tradesman of the artillery sub-establishment as the working buyer of a free planter's house, land and provisions through private bargain with Richard Cleve. The transaction confirms the continuing porosity between the garrison and the planter class already visible in the cases of Hayes, Vesey, Welch and Wood, with matross rank carrying no formal bar to acquisition of substantial freehold property.
61	54	Capacity to make Present Payment for the whole being One Hundred and Twenty Pound Humbly begg[d] the favour to be Intrusted the Sume of fifty Pound in the Honourable Companys Store-books offering the usuall Interest and Security if required. Upon consideration that the Said William Worrall hath Served the Honoura[ble] Company Some years and a Sober Industrious Young man and Lately married. Ordered that for his Encouragem[t] to raise himselfe in the World his request be granted he paying the usuall Interest of Eight p[er] Cent p[er] Annum for So Long time he hsd Credit for the said fifty pounds. Island S[t] Helena. By the Govern[r] & Councill An Advertizem[t] These are to give Notice unto all Persons that the Govern[r] and Councill doth intend to meet in Consultation at the United Castle in James Valley on Tuesday the first day of September next Ensueing the Date hereof as well to Examine into the Titles of Lands as Shall be by that Time Measured and Plans brought in. As to hear any other Matters that may offer. Likewise Wednesday following being the 2 Sept[r] will be held a Court of Orphans Appointed for y[e] Examining	Worrall set out that he was not in a capacity to make present payment for the whole, the price being £120 0s 0d. He humbly begged to be trusted with £50 0s 0d in the Honourable Company's store books, offering the usual interest and security if required. The council considered that Worrall had served the Honourable Company some years, was a sober and industrious young man, and had lately married. The council ordered, for his encouragement to raise himself in the world, that his request be granted, on his paying the usual interest of 8 per cent per annum for as long a time as he had credit for the £50 0s 0d. Island of St Helena. By the Governor and Council. An advertisement. Notice was given to all persons that the Governor and Council intended to meet in consultation at the United Castle in James Valley on Tuesday 1 September 1713, both to examine the titles of any lands that should by that time be measured and plans brought in, and to hear any other matters that might offer. On the following day, Wednesday 2 September 1713, a Court of Orphans would be held. The court was appointed to examine all accounts and adjust the same, and to put a final determination to all disputes, controversies, claims, challenges and demands relating to orphan estates. A jury of freeholders would be summoned to appear for the purpose. All persons concerned were required to take especial care to have their accounts or complaints drawn up in due Interpretations The advance of £50 0s 0d to Worrall on the store books at the standing rate of 8 per cent per annum followed the working pattern of the Porteous advance on 27 November 1711 and the Bell purchase of the Belvird country plantation on 24 July 1712. The Company stood as broker between the seller Cleve and the buyer Worrall, taking the credit risk on the buyer in

		unto all Acc[ot]ts and to adjust the Same As also to put a finall Determination to all Disputes Controversis Claims Challenges or Demands whatsoever relateing thereunto for which Purpose a Jury of free holders will be Summon'd to appear Wherefore all Persons concern[d] are hereby required to take Especially care to have their Acc[ot] or Complaints Drawn up in due Margin Notes: Will[m] Worralls desires 50. in y[e] Stores. Granted at 8 [pcent] Int Titles of Land to be Exam[n] Orphans Court appointed	return for the running interest, and the offered security against the advance would have followed the form of real property pledged on the land itself. The grounds for the grant, that Worrall had served the Honourable Company some years, was a sober and industrious young man, and had lately married, identify the working test that the council applied when extending credit to a soldier-tradesman for the purchase of freehold property. Length of service supplied the record of conduct, sobriety and industry supplied the character, and marriage supplied the settled household that made repayment a matter of family interest. The combination distinguished the application from the indebtedness of the indebted soldiers addressed in the advertisement of 9 July 1713. The advertisement of 1 and 2 September 1713 paired a regular consultation for title confirmations with a Court of Orphans appointed for final determination of orphan accounts and disputes. The pairing carried forward the working separation between routine land registration, handled by the council in consultation, and contested estate business, handled by the council sitting as a court with a jury of freeholders. The combined notice gave the inhabitants a single date to bring forward both classes of business. The phrase final determination signalled the council's intention to close out the backlog of contested orphan business in a single sitting. The reference echoes the comprehensive review of the Beal orphans' estate at the Court of Orphans of 25 September 1710, but the use of the term final, with the summoning of a jury of freeholders, places this court in the higher class of the Powell-Beale trial of 18 October 1711 rather than in the audit-style examinations of intermediate dates. The settled accounts were to be carried no further. Speculations The choice of 8 per cent as the standing rate on store-book advances, applied to Worrall as it had been applied to Porteous and Bell, probably reflected a working accommodation between the rate the Company was authorised to charge under standing instructions and the rate at which the local commercial credit market operated. The same rate had been the subject of the Carne controversy of March 1711, where a bond drawn at 6 per cent against a council order at 8 per cent had been described as clandestinely drawn and underhand managed. The council's continued application of 8 per cent without challenge by 1713 suggests that the rate had become the settled and uncontested benchmark for advances under its authority. The decision to summon a jury of freeholders to the Court of Orphans, rather than to leave the accounts to determination by the council sitting alone, suggests that the council was preparing for contested matters of fact, perhaps relating to the Beal, French or Hoskison orphan estates, on which the working audit had reached the point at which the council's own previous decisions could be reopened. The freeholders' jury supplied an independent finding of fact that closed off any later challenge on the ground that the council had been judge in its own previous business.
62	55	due forme five days at Least before the aforesaid 2 Day of Septem[r] that Warrants may be Issued out and timely Notice given thee Defendants in order of making Preparation and Defence Accordingly. Dated at the United Castle in James Valley this 15[th] day of August 1713. Sign[d] p[er] order of Govern[r] & Councill P me. Jn[o] Alexander S[t] Helena An Acc[ot] of what has been Sold and Deliverd out of the Honoura[ble] Comp[s]	All persons concerned were required to have their accounts or complaints drawn up in due form at least five days before 2 September 1713, so that warrants might be issued and timely notice given to the defendants for the preparation of their defence. Dated at the United Castle in James Valley, 15 August 1713. Signed by order of the Governor and Council by John Alexander. Account of the goods sold and delivered out of the Honourable Company's stores at St Helena to the inhabitants, for the use of the fortifications, the general table, the plantation and several other general charges, from 25 March 1713 to 25 April 1713:

The five-day interval reflected the time needed for the clerk to draft the warrants, for John Alexander or the marshal to serve them across the settled districts, and for the defendants to prepare a defence. The procedure converted the Court of Orphans from a working audit into a contested forum on the model of the Powell-Beale trial of 18 October 1711. The store account for the month from 25 March 1713 to 25 April 1713 opens the new administrative year and falls in the first month after the deadline of the fencing programme. The four-fold division between inhabitants, general charges, the general table and the plantation continued the working classification visible in the accounts of 1709 to 1712. Gurras and romalls were grades of Indian cotton cloth carried on Company ships from Bengal and Madras, and appear in the inhabitants' column as the staple eastern textiles supplied through the store. Kerseys, fustians, thicksets, dimities and blankets were the woollen and mixed-cloth supplies from England, with kerseys serving as the standard coarse woollen, fustians as a coarse cotton-linen, and thicksets and dimities as the heavier and lighter weaves of fustian respectively. Holland tape was a flax tape from the Low Countries used for binding and trimming, while

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			gartering was the narrow woven band used to fasten stockings below the knee. The presence of hats at £18 4s 0d for thirty-seven items, against woollen blankets at £8 9s 9d for eight pair, places hats among the higher-value individual items in the inhabitants' purchases for the month. The unit cost of approximately 9s 10d per hat exceeds the unit cost of approximately 21s per pair of blankets only by reference to material, since hats were finished felt goods imported ready-made from England, while blankets were rougher woven cloth carried in pairs. The store's pricing reflected the working differential between manufactured and unfinished textile goods.

The Indian cottons of the inhabitants' column include ginghams, gurras and romalls, while the English woollens and mixed cloths include kerseys, fustians, druggets and perpetuanoes. Druggets were a coarse woollen or part-silk cloth used for outer garments; perpetuanoes were a durable worsted serge made primarily for export. The two categories of drugget, silk at the higher line and cloth at the lower, illustrate the working differential by content within a single textile name. The braziers' ware line covered worked brass for kitchen, household and lighting use, including the brass lamp charged separately to general charges. The braziers' trade supplied the fittings that the local smith's shop could not produce in worked brass, and the Company's store stood as the only legitimate channel for such goods on the island. Bird shot at the fortifications confirms that the Company's powder-and-shot establishment continued to supply the small game that supplemented the garrison's diet, separately from the maritime musket-balls supplied to the same account. The hooks and lines line ran across the three columns of inhabitants, general charges and plantation, with the working purpose of supplying both private and Company fishing. The presence of 55 lines and 4½ dozen hooks on the general charges column reflects the working consequence of the yawl fishing licence of 12 May 1713, by which the Company itself sent out fishing parties under the steward's control, and a single line on

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			the plantation column supplied the slaves' yam-and-fish ration at the Hutts and Plantation House establishments. The metals account for the month confirms the working position of the store as the principal channel for finished consumer goods on the island. Pins at seventeen thousand to the line, needles at one hundred and twenty-five, sail needles for the plantation and thimbles for the household, represent the small implements of the inhabitants' working day, while white lead, indigo, sackings and pitch covered the maintenance materials needed for fortifications and structures. The five categories of column for general charges, inhabitants, fortifications, plantation and general table preserved the audit pattern visible in the accounts from 1709 onward.

Pewter for the table and bedroom, bone lace and ribbon for women's dress, silver and gold breast buttons for finished garments, glass ware and tin ware for the household, and horn books for the rudimentary instruction of children, all passed through the storekeeper's account in quantities that reflected the small but settled domestic economy of the settled freemen. Turnery ware covered turned wooden objects such as bowls, handles and small implements made on a lathe; bunting was a loose worsted fabric used principally for flags and signal cloth; ragg stone was an abrasive stone used for sharpening tools; horn books were the standard children's reading primers, a single printed leaf protected by a thin sheet of horn and mounted on a wooden paddle.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			The fortifications column drew the heavier and structural items, with shovels at twelve shillings for six pieces, glass squares at one pound ten shillings for thirty pieces and the half-share of the turnery sieves shifted to general charges. The thirty squares of glass on fortifications confirm that glazing work continued at Munden's Castle or the United Castle during the new working year, in line with the storehouse rebuild proposed by the governor on 25 November 1712. The general charges column carried the mixed institutional items, including the two basins and two chamber pots in pewter for the castle establishment and the lantern for night work. The broad cloth at £22 10s 7¾d for thirty yards stands out as the single highest line in the month's purchases by inhabitants, with the black at sixteen shillings per yard and the coloured at approximately fifteen shillings per yard. The price differential reflects the working position of broadcloth as the most expensive standard textile in the Company's English consignments. The line was probably drawn by a small number of higher-ranking freeholders for formal wear, in contrast to the kerseys and fustians of the previous month's account, which served the broader inhabitant body. The presence of horn books at four pence for three and a half items, taken with the working ratio of approximately one penny each, identifies the working scale at which formal instruction of children proceeded on the island. The cost of furnishing a single child with the primary instrument of learning to read fell within the reach of any household, but the very small total purchased in the month indicates the actual scale of demand. The pattern is consistent with the working absence of a settled school on the island and the dependence of children's instruction on the household, the schoolmaster Samuel Broome, or the minister.

Neilas, chelloes, salampores and caunoas were grades of plain or striped Indian cotton in standard piece sizes,

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			supplied to the inhabitants for shirts, linings and household use; mulmulls and doreas were fine and figured muslins respectively, drawn at the higher price points for finer wear; shalloons were a worsted English lining cloth used for the inside of coats; duraotties or duroyas were a lighter cotton used for outer summer wear. Osnaburgs were a coarse German linen, originally from Osnabrück, supplied through England as a working cloth for slaves' shirts, sailors' clothing and rough domestic use. The presence of all these grades on a single monthly account confirms the store's working position as the comprehensive textile supplier for the island's free population. The arrack account at 305 gallons of Batavia arrack to the inhabitants at the going retail rate, with 39 gallons to the diet expenses column and 12 gallons to the plantation, marks the working scale of spirits distribution one month after the bulk purchases from Captain Lane, Captain Minter and Captain Hoaks recorded on 4 June 1713. The diet expenses column carried the spirits issued to the soldiers' general table, and the plantation column the working ration to slaves and overseers. The combined monthly volume of 357 gallons places this as one of the heavier spirits months in the present series. The tobacco line at 425 [...] of leaf tobacco and 13 gross and 2 dozen pipes to the inhabitants, with subsidiary quantities to general charges and the plantation, fixes tobacco at approximately two shillings per pound and pipes at approximately six pence per dozen at the working retail rate. The volume of pipes, equivalent to about 1,896 pipes for the month, reflects the high breakage rate of clay pipes and the working consequence that supply needed to be continuous rather than annual. The line is the largest non-textile non-spirits inhabitant purchase of the month and confirms tobacco as the standing staple of the islander's recreational consumption. The ironmonger's ware line spans inhabitants, fortifications and plantation columns, with the iron pot of 9½ [...] at £1 15s 0d standing as a single high-value plantation item alongside the bulk of nails and assorted ironwork. The pot would have served as kitchen equipment at the plantation house, the Hutts or one of the outlying overseer establishments. The combined plantation entries on iron, including the pot, the 3½ hundredweight of bar iron at £1 12s 4d, and the 18 sorted pieces at £4 12s 6½d, place the working iron requirement of the Company's own estate at approximately £8 0s 0d for the month, against £2 19s 2d for the inhabitants and £2 2s 3½d for the fortifications.

		Serge 17 1/2 yards at 4: 10 p[er] yard Gen[r] Charges 4 1 7 Shoe Thread 2 Ditto 5 Sum Totall £ 706 05 1 1/2	Serge 17½ yards at 4s 10d per yard general charges £4 1s 7d Shoe thread 2 [...] general charges 5s 0d Sum total £706 5s 1½d Interpretations The Norwich stuffs at the head of this portion of the account confirm the working position of the Norwich worsted trade as a principal source of the Company's English textile consignments. Norwich stuffs were the worsted fabrics produced in and around Norwich for the home and export markets; black crape was a thin transparent worsted used principally for mourning wear; damask was a figured silk or linen with a reversible pattern. The combined line at over £37 to the inhabitants in a single month places these fabrics among the higher-value English textile imports of the year and marks them as the dress materials of the upper layer of free society on the island. Long cloth was a fine plain Indian cotton in long pieces; thrown silk was raw silk twisted into yarn ready for weaving; neckcloths were the standard formal accessory for men's wear, with the higher price points at over a pound a piece pointing to lace-trimmed or embroidered finishes; chints were the printed and painted Indian cottons that gave their name to the modern chintz; nuns' thread was a fine white thread, named for its monastic origin, used for cambric and lawn sewing; crewel was a two-ply worsted yarn used for embroidery; the term stuff covered any worsted woven cloth in the working English usage of the period. The provisions line at £14 14s 10d to the diet expenses column covers the working ration of the soldiers' general table for the month. Rice at 156½ [...] in the principal entry and 43 [...] in the subsidiary marks the continued substitution of Indian rice for English wheat as the staple grain at the castle, in line with the bulk purchases recorded on 4 June 1713. The two casks of bread of four hundredweight each, at £6 13s 4d, supplied the wheat-based ration that the rice did not displace, and the one cask of peas of ten bushels at £4 15s 0d supplied the standard pulse complement. The combined ration reflects the working diet of the establishment under continuing drought. The soldiers' clothes line at £21 15s 2d for thirteen coats, nine waistcoats and ten pair of breeches on the inhabitants' column, with a subsidiary £2 12s 2d on general charges, marks the working sale of complete garrison uniform pieces to the soldiers themselves. The men bought their own clothing from the store at the published rates, applied against their store-book accounts in the working manner described in the advertisement of 9 July 1713. The unit cost of approximately 33 shillings per complete suit, taken across coat, waistcoat and breeches, fixes the working clothing exposure of the soldier-debtor at over £1 12s 0d per uniform replacement and identifies clothing as a principal component of the indebtedness that drove the recent conspiracy. The grand sum total of £706 5s 1½d for the month of 25 March 1713 to 25 April 1713 places this account among the heaviest single-month volumes in the present series, well above the £302 11s 5¼d of the corresponding month two years earlier and the £298 0s 11d cumulative figure of 25 December 1709 to 25 February 1710. The increase reflects the working consequence of the Susannah cargo from England under Captain Pinnell and the Kent and Hewolen cargoes from Madras and Bengal, all of which had been priced and brought into the store under the 3 July 1713

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			order. The first month of the new administrative year therefore opens with the store in its fullest stocked condition since the spring of 1711. Speculations The decision to issue thirteen coats, nine waistcoats and ten pair of breeches, in quantities that do not match a uniform garrison-wide issue of complete suits, suggests that the soldiers were buying replacement pieces rather than full uniforms during this month. The mismatch between coats and waistcoats, and between waistcoats and breeches, points to garments being replaced by individual men as each item wore out, rather than the establishment being clothed in a single coordinated order. The pattern is consistent with the working consequence of the 9 July 1713 advertisement, by which indebted soldiers were drawing items separately against future earnings at the fortifications, rather than being clothed at one stroke from the Company's stock. The month's heavy volume of £706 5s 1½d, the heaviest in the present series, falls in the same window as the suppression of the conspiracy, the publication of the indebted-soldiers' work advertisement, and the delivery of the deeds and leases on 4 August 1713. The concentration of three major administrative events in a single month, with the store account simultaneously at its peak, suggests that the Company's fully stocked condition was a working precondition for the council's confidence in announcing the indebted-soldier scheme. The offer of paid fortification labour at 1s 6d per day would only have stabilised the garrison if the store had the goods on hand for the soldiers' shillings to be spent against their debts, and the timing of the cargo arrivals therefore underpinned the timing of the political response.
67	60	Giles Smith free planter and Carpenter represented That being Lately Married and Destitute of a Habitation hath made a bargain with William Beale (who is desirous to go to India) for his House and Plantation but being not able at Present to make full Payment Humbly desires we would do him the favour as to Intrust him about Seventy or Eighty Pounds in the Honoura[ble] Companys Store books of Acc[ot] Upon Consideration the Said Giles Smith being a Young Married man having a good Trade and Employ[d] in the Honoura[ble] Companys Service as a Carpenter, almost Constantly and a Sober Industrious man Ordered. That the Said Giles Smith Stand charged in his Acc[ot] with what Sum of money the aforesaid Beale is now Indebted to the Honoura[ble] Company in their Store Books of Acc[ot]: and Discharg[d] from the Same Accordingly. Whereas the Honourable Company in their Generall Letter by the Susanna dated the 20 March 1712 in the 31 Parragraph Say they understand Richard Cleve Joyner is Employed about their Timber work, and thereupon order he be Appointed to have the mannagement of all their Timbers Cutt out to the best advantage, and that he be Allowed his Dyett at the Said Honoura[ble] Companys Table, for his Encouragement, besides his Wages Whereupon the Said Richard Cleve was Sent for and heard the whole Parragraph read and Accepted the Said Employ provided he was Allowed Six Shillings	Giles Smith, free planter and carpenter, represented to the council that he had lately married and was without a settled house. He had made a bargain with William Beale, who wished to go to India, for the latter's house and plantation, but he was not able at present to make full payment. He humbly desired that the council favour him with credit of about £70 0s 0d or £80 0s 0d in the Honourable Company's store books of account. The council considered that Smith was a young married man with a good trade, almost constantly employed in the Honourable Company's service as a carpenter, and a sober and industrious man. The council ordered that Smith stand charged in his store account with the sum of money that Beale presently owed to the Honourable Company on the store books, and that Beale be discharged of that debt accordingly. The Honourable Company in their general letter by the Susanna of 20 March 1712, in the 31st paragraph, stated that they understood Richard Cleve, joiner, was employed about their timber work. They therefore ordered that he be appointed to take charge of all their timbers and to cut them out to the best advantage, and that for his encouragement he be allowed his diet at the Honourable Company's table in addition to his wages. Cleve was accordingly sent for and heard the whole paragraph read. He accepted the employment on condition that he be allowed six shillings for every day he worked, besides his diet. The council ordered Cleve entertained and employed in accordance with the Honourable Company's orders, at six shillings per day with his diet at the Company's table, on condition that he discharge his duty. Interpretations The Smith arrangement carried the Worrall pattern of 4 August 1713 a step further. Where Worrall had been granted a £50 0s 0d advance at 8 per cent to be applied against Richard Cleve's house, land and

		for Every day he workt besides his dyett. Ordered. That the Said Cleve be Entertaing and Employ[d] pursuant to the Said Honoura[ble] Comp[s] Orders at Six Shillings p[er] day and dyett at their Table, takeing care to discharge his duty. Margin Notes: Giles Smith Desires 70 or 80 at 8 p[er] Cent. Considering he is a young Married man &c[a] To be charged w[th] what Beale ow[s] y[e] Hon[ble] Comp[s] Abstract of an Ord[r] ab[t] Cleve y[e] Joyner. Cleve accepted of Employ & allowed 6 p[er] day Entertained Accordingly.	provisions, Smith was now to assume directly the sum that Beale already owed the Company on the store books, in substitution for cash payment to Beale. The Company stood as the working clearing house for the transfer of a freehold property between a departing seller and a settled buyer, by the simple device of moving the debt from one store-book account to another. Beale was discharged, Smith was charged, and the property changed hands without any sterling passing through the Company's coffers. The mechanism reduced the Company's credit exposure to nil, since the debt remained the same in total, while securing the property in the hands of a man whose trade and conduct made repayment more probable than continued residence by Beale would have done. The instruction in the 31st paragraph of the general letter by the Susanna of 20 March 1712, brought into effect at this consultation, gave the Court of Directors' direct authority to the management of the Company's timber stocks on the island. Timber was the working constraint on all the construction work projected since the 9 January 1711 hydraulic scheme, repeatedly delayed for want of plank and deals from the store ships. By naming Cleve specifically in the standing instruction, the Directors removed the choice of timber officer from the local council and fixed it on the man already at work, on terms that included diet at the general table as a working perquisite distinguishing him from the ordinary day-rate craftsman. Cleve's response to the Directors' instruction was a counter-offer rather than acceptance: he set his daily rate at six shillings on top of the diet allowance, against the working benchmarks of five shillings per day for a stone layer of 9 January 1711 and five shillings per day for the long-boat boatswain Christopher Kelly of 8 April 1712. Six shillings per day placed Cleve above both, in recognition of the specialist nature of the joiner's work on the Company's timber. The council's acceptance of the counter-offer rather than insistence on the standard rate is recorded without comment, marking Cleve as the highest-paid working craftsman on the present establishment. The Smith transaction also discloses the working position of the carpenter in the Company's service. Cleve held the joiner's appointment under the Directors' standing instruction, while Smith held the carpenter's place by working employment of the local council. The distinction between joiner and carpenter, fine timber-work as against framing and rough construction, was preserved on the island as a working division of trades. Both men were freemen and married householders, but only one stood under direct metropolitan appointment. Speculations The choice to settle the Smith purchase by direct debt transfer between store-book accounts, rather than by extending fresh credit at 8 per cent in the manner used for Worrall on the previous council day, suggests that the council was applying different mechanisms according to the working position of the buyer. Worrall was a matross of the artillery, with no certain future on the island; Smith was a carpenter in constant Company employment with a steady income flow against which the assumed debt could be paid down. The council's choice of mechanism reflected its assessment of the security each man offered, and the absence of any interest charge on the transferred sum probably reflected the Company's confidence that Smith's working wages would clear the debt without the need for the additional charge. Cleve's counter-offer of six shillings per day, made on his own initiative after hearing the Directors' instruction read aloud, suggests that the standing rates on the island had created an effective market for skilled craftsmen with no European competition. Cleve's knowledge that no other joiner of equivalent standing

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			could be brought from England within a year, and that his own service was already taking the working timber operation forward, gave him the leverage to set his rate above the standing five-shilling benchmark. The council's acceptance, rather than reference back to the Directors for further direction, suggests that the working timber programme could not afford the delay that a refusal and counter-correspondence would have entailed.
68	61	Nicholas Shrove Mason Presented his Petition this day Setting forth therein That he had Serv[d] the Honoura[ble] United Company five years being his full contracted Time at too Small a Sallary and not Sufficent to find himself with Necessaries and Meat for a Labouring Man Wherefore Humbly Prays his Sallary may be Augmented to Six Shillings p[er] day Every thing being very Scarce and Extream dear. Considering that the Said Nicholas Shrove has Serv[d] his contracted time and at a Small Sallary Provisions &c[a] being now very Scarce and Dear. Ordered. That his request be granted for his further Encouragement. John Orchard free planter represented by Petition his great Want of a habitation to Live and maintaine his familie on, that he hies of Robert Girling being very ordinary Land producing but Little Provisions notwithstanding his great Paines and Labour therein, Wherefore Humbly Prays we would grant him a Peice of the Honourable Companys Waste Land containing about five Acres, Scituate in Sandy bay Valley under the Pigeon Rocks. The Petitioner is answered That that Peice of Land he Petitions for Lies very convenient for the Hono[r]a[ble] Companys Use to make a Lemon Garden of there being Some Trees planted there alreadie, but if he can Petch upon any other Land that's not a Prejudice by Letting it to any Person he may have the grant thereof and not of this now Petition[d] for. Island Margin Notes: Nic[s] Shrove desires 6 p[er] day Granted. Jn[o] Orchards request to hire Land in Sandy bay. Denyd for good reasons.	Nicholas Shrove, mason, presented his petition. He set out that he had served the Honourable United Company five years, the full term of his contract, at too small a salary. The pay had been insufficient to find him in the necessities and the meat required by a labouring man. He humbly prayed that his salary be raised to six shillings per day, since everything was now very scarce and extremely dear. The council considered that Shrove had served out his contracted time at a small salary, that provisions and other goods were now very scarce and dear. The council ordered his request granted, for his further encouragement. John Orchard, free planter, represented by petition his great want of a place in which to live and maintain his family. He held land from Robert Girling, but the ground was very ordinary and produced little provisions notwithstanding his pains and labour upon it. He humbly prayed that the council grant him a piece of the Honourable Company's waste land of about five acres, in Sandy Bay Valley under the Pigeon Rocks. The council answered that the piece for which he petitioned lay very convenient for the Honourable Company's use as a lemon garden, several lemon trees having already been planted there. If Orchard could find any other piece of land that was not prejudicial to let to any person, he might have the grant of it, but not of the parcel he had now petitioned for. Interpretations Shrove's grant of six shillings per day brought him to the same daily rate that Richard Cleve had set on accepting the joiner's appointment under the 31st paragraph of the Susanna letter. The council's award placed the mason of completed contract on the same working rate as the joiner under direct metropolitan appointment, distinct from the standing five-shilling rate paid to the stone layer in the 9 January 1711 costing and to the long-boat boatswain Kelly on 8 April 1712. The pattern marks a working revision upward of the daily rates for specialist craftsmen on the island, attributed by the council to the scarcity and dearness of provisions under the continuing drought. A petty contractor was a fixed-term Company servant who had completed the period of indentured service brought from England; on expiry of the contract the craftsman became a free agent on the island and might negotiate his rate, as Shrove and Cleve did here in succession. The Orchard refusal exposes the working principle by which the council distinguished Company waste land from waste land it intended to retain. The Pigeon Rocks parcel in Sandy Bay Valley fell into the second category, since lemon trees had already been planted upon it as the working start of a Company lemon garden. The council declined to grant the parcel without prejudice to its existing programme. By inviting Orchard to nominate any other parcel that was not prejudicial to let, the council preserved the working test of opportunity cost first applied in the refusals of Thomas Southen and John Nichols on 9 December 1712, in which the value of pasture to the Company's herds had defeated the planter's claim. The lemon garden under the Pigeon Rocks served the working anti-scorbutic programme of supplying lemons and limes to visiting shipping and the garrison.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			The Pigeon Rocks under which the lemon garden stood were the rock outcrops in Sandy Bay Valley used as nesting sites by the wild rock pigeons of the island, and serve here as a fixed locational marker rather than a place name with administrative content. The placing of the lemon garden under their shelter probably reflected the working microclimate that the rocks created, with shade and cooler air assisting the young trees against the working effects of the drought visible in the bulk lime juice purchase from Captain Pinnell on 9 June 1713. The pairing of the Shrove grant and the Orchard refusal in a single council sitting marks the working contrast in the council's response to two simultaneous applications. The salary was raised to retain a specialist craftsman in the Company's service, while the land was withheld to preserve a programme of the Company's own production. The two decisions together reflect the working tension between the council's role as employer and its role as landlord, with the Company's institutional interest preferred in each case over the immediate claim of the petitioner. Speculations The award of six shillings per day to Shrove, the second such award within the present council day after Cleve's earlier acceptance, suggests that the council was settling on six shillings as the working ceiling for specialist craftsmen completing their first English contract. The two awards on the same day, made to men in different trades, identify the rate as the council's settled response to the scarcity and dearth of provisions on the island, rather than as an exceptional concession to a single petitioner. Other completed-contract craftsmen could now be expected to apply on the same terms, and the working wage bill of the Company would rise accordingly across the establishment. Orchard's choice of the Pigeon Rocks parcel, of all the waste ground available in Sandy Bay Valley, probably reflected the working knowledge among the free planters that the land most desirable for cultivation was that on which the Company itself had already begun improvements. The Company's prior identification of a parcel as suitable for its own lemon garden served, in effect, as an unintended advertisement of its agricultural promise. The council's refusal, with the open invitation to nominate any other parcel, indicates that the working competition between the Company's own programmes and the settlement of free planters was already producing applications that targeted the better ground rather than the unimproved waste.
69	62	Island S[t] Helena. At a Consultation Held on Tuesday the 1[st] day of September 1713 At the United Castle in James Valley Pres[t] Benjam[n] Boucher Esq[r] Govern[r] Matth[eu] Bazett 2 in Coun[ll] Lieut[t] Tho[s] Cason John French Assist[ts] Thomas Southen Serj[t] made Complaint against George Carne for denying to make him Sattisfaction for Goods Stolen out of his House in James Valley to the amount of Twenty five Shillings by a black boy now in the Said Carns Possession, who is an old Runaway and offender in other Like Cases and being under Punishm[t] for his So Runing away confess[d] the flict[?] which the Said M[r] Carne Says he knows nothing of But beleiving it now	Island of St Helena. Consultation held at the United Castle in James Valley on Tuesday 1 September 1713. Present: Benjamin Boucher Esquire, Governor; Matthew Bazett, second in council; Lieutenant Thomas Cason and John French as assistants. Thomas Southen, sergeant, complained against George Carne for refusing to make him satisfaction for goods stolen out of his house in James Valley to the value of 25s 0d. The goods had been taken by a black boy now in Carne's possession, who was an old runaway and an offender in other like cases. The boy was under punishment for running away, and on examination had confessed the theft. Carne said he knew nothing of the matter, but believing it now to be true, he offered to make Southen satisfaction for the goods stolen. Southen made a further complaint against Carne. Richard Beale and Richard Goodwin, both youths under Carne's care and tuition, had set a dog at a bull belonging to Southen. The bull had fallen down a hill and had since died. Southen went to Carne with the news and demanded satisfaction. Carne refused.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
		to be true offers to made the Said Serjeant Southen Sattisfaction for the goods Stolen. The Said Thomas Southen made Compl[t] further That Richard Beale and Richard Goodwin both Youths and under the Care and Tuition of the Said George Carne had Sett a dogg at a Bull of his which caused him to fall down a Hill and is Since dead, Whereupon y[e] Compl[t] went to the Said Carne Acquainting him therewith and Demanded Sattisfaction which the Said Carne deny[d] to do alledgeing that the Said Rich[d] Beale & Goodwin told him the Bull fell down by chance and not by any means of theirs tho[u] they own[d] to have Hunted Some Cattle out of y[e] Said Carns Plantation, who Runing together which twas Steep the rest of the Cattle Gos[t]ed and have y[e] Bull down being very poor and weak. Thom[s] Margin Notes: Tho[s] Southens Compl[t] against Geo[r] Carne. His further Complaint for Paym[t] of a Bull	Carne alleged that Beale and Goodwin had told him the bull fell by chance and not by any act of theirs, though they admitted hunting some cattle out of Carne's plantation. The cattle had run together where the ground was steep, the others had jostled the bull, and as the bull was very poor and weak it had been brought down. Interpretations The council's handling of Southen's first complaint shows the working position of the slave's confession in property disputes between freemen on the island. The black boy's confession, given while under punishment for running away, was treated as sufficient evidence on which Carne, as master, was expected to make the property owner whole. The mechanism placed the master in the position of indemnifier for the slave's acts, with the master's denial of knowledge giving no defence once the slave's own admission established the act. Carne's eventual offer of satisfaction, made on accepting the confession as true, brings the slave's status as moveable property within the master's household together with the master's personal liability for damage caused by that property, in a working pattern parallel to the law of waste applied to working animals on the island. The second complaint discloses the working position of youths held in care and tuition by a freeholder of standing. Richard Beale and Richard Goodwin are described as under Carne's care and tuition, the phrase placing them in the half-ward, half-apprentice position familiar from the earlier orphan placements at Mr Francis and Hugh Bodley. Richard Beale is identifiable as the younger Beale orphan whose case had run through the council since 1710, and Richard Goodwin as the son of Frances Goodwin, widow of Captain Thomas Goodwin and now wife of George Carne; the household therefore contained the wards of three previous administrations brought together under a single guardian. The defence advanced through Carne, that the cattle had crowded together on steep ground and the working weakness of the bull from poor pasture had done the rest, places the cause of death between the boys' acknowledged act of hunting the cattle and the natural condition of the working stock. The argument turns on the distinction between proximate and contributory cause familiar in English common law, and is the second occasion in the present working volume on which an English legal doctrine has been raised in defence by Carne, after the courtesy of England plea of the Powell-Beale trial. Setting a dog at livestock was a working offence in early modern English manorial practice, by which a man whose dog worried the livestock of another was liable in damages even without proof of intent. The bull's described condition as very poor and weak places it among the working stock that had suffered under the ten-month drought visible in the relief measures of May and June 1713. The death of a single bull was a working loss to a planter of Southen's standing, the value of a breeding bull on the island standing at a multiple of the ordinary working bullock recorded in the 5 July 1711 livestock census and the 9 December 1712 monthly return. The complaint therefore concerns a substantial property loss for Southen, and the precise mechanism of causation matters for the question of what satisfaction Carne would be required to make. Speculations Carne's distinction in his two responses, immediate offer of satisfaction for the stolen goods on the slave's confession and refusal of satisfaction for the bull on the boys' denial, suggests a working calculation of the relative cost of disputing each claim. Twenty-five shillings was a small sum against which to contest the

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			slave's evidence, particularly with the slave already in punishment for the running away and likely to be punished again for the theft. The bull, by contrast, represented a much larger working loss for which Carne would be required to provide a replacement of breeding stock, and the boys' denial gave him a defence on which to resist payment. The differential response reflects the working pattern of a defendant choosing concession on the small claim and contest on the large. The placement of Richard Beale, son of the principal orphan estate at the centre of the Powell-Beale trial of 1711, and Richard Goodwin, stepson of Carne by his marriage to Frances Goodwin, in a single household under Carne's care suggests that the council had earlier consented to Carne's consolidation of the working wards of multiple estates under one master. The arrangement gave Carne a position of considerable working authority over the rising generation of children of the principal early freeholder families, and the present complaint may indicate that the practical conduct of those wards was beginning to draw on the goodwill that the council's earlier indulgence had given Carne. The further course of the matter would test whether the working accommodation between guardian and council could survive the boys' conduct in the country.
70	63	Thomas Hoskison being Examined Says he Saw the Said Richard Beale and Richard Goodwin Sett two of M[r] Carnes Doggs at a Parcell of Cattle which Runing on the Side of a Steep Hill the Bull fell down and could not rise againe. After Severall debates on both Sides and being mov[d] by M[r] Carne to have the Determination of this Matter decided by a Jury of free holders. Ordered. That there being a Jury Summon'd to Appear Tomorrow for the Decision of Some causes Depending this Dispute between the Said Carne and Southen be Laid before them for their Determination. Elizabeth Wrangham Orphan Petition[d] this day Setting forth that being of Age to make Choice of a Guardian, Humbly Prays She may be admitted to that Priviledge and to Choose her brother Francis Wrangham to Act as Such and for that George Carne haveing Married the widdow of Thomas Goodwin who was Executor to her dec[d] fathers Estate and thereby all her Estate and Effects being in the Said Carns Possession, Humbly Prays farther that he may be Ordered to Deliver her Said Estate into the Said Francis Wranghams Possession, he being willing to take the Office of a Guardian upon him and to mannage the Same to her best Advantage. Ordered. That at the Said Elizabeth Wranghams request her brother Francis Wrangham be Admitted and Improved to act as Guardi-an to his Sister Estate and that the Said George Carne have an order Sent him to Deliver the Same into his the Said	Thomas Hoskison, on examination, said he saw Richard Beale and Richard Goodwin set two of Carne's dogs at a parcel of cattle. The cattle ran on the side of a steep hill, the bull fell, and it could not rise again. After debate on both sides, Carne moved that the matter be decided by a jury of freeholders. The council ordered that, as a jury had been summoned to appear on the following day to decide several other causes then depending, the dispute between Carne and Southen be laid before that same jury for their determination. Elizabeth Wrangham, orphan, petitioned. She set out that she was of age to choose a guardian and humbly prayed that she might be admitted to that privilege. She wished to choose her brother Francis Wrangham to act as her guardian. George Carne had married the widow of Thomas Goodwin, who had been executor of her deceased father's estate, and through that marriage all her estate and effects had passed into Carne's possession. She humbly prayed further that Carne be ordered to deliver her estate into the possession of Francis Wrangham, who was willing to take the office of guardian and to manage the estate to her best advantage. The council ordered that, at Elizabeth Wrangham's request, her brother Francis Wrangham be admitted and approved to act as guardian to her estate. Carne was to receive an order to deliver the estate into Francis Wrangham's possession, and to take a discharge in respect of his sister Wrangham accordingly. Interpretations The Hoskison evidence and the reference to the jury together mark the working procedural division between matters the council determined as sitting magistrates and matters it remitted to the freeholders' jury. The dog-and-bull case had originally come before the council as a private claim for satisfaction between two freemen, but Carne's motion to put the matter to the freeholders shifted it from administrative determination to common-law trial of fact. The council accepted the motion without resistance, in line with the pattern established in the Long against Marsh referral of 29 May 1711 and the Powell against Beale's orphans trial of 18 October 1711, by which contested questions of fact between freemen were sent to a jury rather than determined by the council sitting alone. The combining of the Carne-Southen cause with the jury already summoned to appear on the following

		Wranghams Possession and thereupon to give a discharge in behalf of his Sister Wrangham James Margin Notes: Tho[s] Hoskisons Evidence Refer[d] to a Jury. Eliz[h] Wrangham Orph[s] desires to Choose a Guardian Fran[s] Wrangham admitted Eliz[h] Wranghams Guardian	day reflects the working economy of jury sittings on the island. Empanelling a jury of twelve freeholders drew the principal planters from their plantations during the working day, and the council had a settled interest in disposing of as much contested business as possible at each sitting. The arrangement also placed Carne, whose Beale-orphans accounts and Keeling-orphans bond were already among the most heavily contested matters of the present working period, before a jury of his neighbours for the resolution of yet a further dispute. Elizabeth Wrangham's petition exposes the working position of the orphan whose estate had passed through successive guardians by marriage and execution. Her father had appointed Thomas Goodwin as executor, Goodwin had died and his widow Frances had married Carne, and through Carne the estate had reached its third guardian. The choice of a guardian by the orphan at age, granted here as a privilege, gave the orphan the working right to withdraw the estate from the descending chain of administrators by marriage and to place it under a guardian of the orphan's own selection. The mechanism preserves the property of the orphan against the ordinary law of marital devolution that would otherwise have left it permanently in the new husband's hands. Francis Wrangham, named here as guardian to his sister, is the same freeholder whose 55-acre title chain had been confirmed at the title day of 3 February 1713 and whose orphan sister had been listed separately in the deed advertisement of 27 July 1713. The brother's admission to the guardianship places the working management of the orphan's estate within the same family that had built up the freehold, and resolves any future question whether the orphan's land was to be treated as part of Carne's consolidated holdings or as a separate parcel under independent management. Speculations Carne's request to put the dog-and-bull cause to a jury rather than accept the council's determination probably reflected his working calculation that a jury of freeholders, including planters who themselves owned stock on common ground, would be more sympathetic to the defence that cattle worried by dogs on steep ground sometimes fell of their own weakness. The council, having previously taken the slave's confession at face value on the smaller claim, might be expected to take Hoskison's eyewitness account in the same direct way on the larger one. The jury introduced the possibility of contributory causation as a working defence and shifted the burden of decision to a body whose members had their own working interest in the law of stock-and-dog liability. The timing of Elizabeth Wrangham's petition, presented in the same sitting at which Carne's dog-and-bull cause was referred to the jury and immediately before the comprehensive Court of Orphans appointed for the following day, suggests that the petition was framed to take advantage of the council's working concentration on orphan business at this date. By raising the application for change of guardian on the day before the comprehensive court, Elizabeth Wrangham and her brother probably calculated that the council would be more disposed to grant the change as part of a broader process of orphan-estate settlement than as an isolated case raised at another time. The arrangement removed her share from Carne's accounts before the formal audit of the orphan court on the following day, with the working consequence of separating her estate from the wider Carne-managed accounts subject to that audit.
71	64	James Greentree freeholder Petition[d] this day Praying to hier a Small Parcell of y[e] Honoura[ble] Companys Waste Land Lying Scituate toward the head of Lemon Valley	James Greentree, freeholder, petitioned to hire a small parcel of the Honourable Company's waste land at the head of Lemon Valley, a little distance from his own

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
		a little distance from the Said James Greentrees House and Plantation formerly Robert Goodwins dec[d] Ordered. That the Said James Greentrees request be granted and when the Land is fenced in a Lease to be made for the Term of Twenty one years. Samuel Broome Sold[r] Presented his Petition Setting forth therein That he having Servd the Honourable United Company Six years and upwards as a Soldier and one year and a half as a Writer under the Store-keeper and Clerk of the Council Dureing which Time never had any more Sallary than that ten Pound thirteen Shillings as Soldier per Annum, finding himself dyett all the Time he workt in the Store which being a great deale out of So Small a Sallary and a Discouragment Humbly Prays he may have an Additional Sallary, whilst he Writes under the Clerk of the Coun[ll] Settled by the year or three Shillings p[er] day as M[r] Free had besides his dyett at y[e] Companys Table and an Allowance for the Time he found himself dyett, while Employ[d] in the Stores. Upon consideration that the Said Sam[ll] Broome having bin Employ[d] as a Writer only at y[e] Sallary by him mention[d] and finding himself dyett while under Capt[n] Pack[?] Ordered. That the Said Broome be allowed the Sume of Twenty Pounds per Annum from this time and his dyett till Place paid back for So much as his dyett came to when Employ[d] in the Stores having been very Dilligent all that Time. Richard Beale Orphan Petition[d] this day Seting forth his Inclination to better his fortune by the first advantageous Proffers Margin Notes: Ja[s] Greentrees request to hire Land. Granted. Sam[ll] Broome's request for an Addition[ll] Sallary Granted 20 [...] p[er] annum Rich[d] Beale	house and plantation, the parcel having formerly belonged to Robert Goodwin deceased. The council ordered the request granted. When the land was fenced in, a lease was to be made for a term of 21 years. Samuel Broome, soldier, presented his petition. He set out that he had served the Honourable United Company six years and more as a soldier, and one year and a half as a writer under the storekeeper and clerk of the council. During that time he had received no more salary than his soldier's pay of £10 13s 0d per annum, and had found his own diet for the whole period he had worked in the store. The arrangement had taken a great deal out of so small a salary, and was a discouragement. He humbly prayed for an additional salary while he wrote under the clerk of the council, either settled by the year or at three shillings per day as Mr Free had received, besides his diet at the Company's table. He also asked for an allowance for the time he had found his own diet while employed in the stores. The council considered that Broome had been employed as a writer at no more than the salary he had named, and had found his own diet while under Captain Pack. The council ordered Broome allowed £20 0s 0d per annum from the present date, together with his diet at the Company's table, and that he be paid back for as much as his diet had cost him during his time employed in the stores. He had been very diligent throughout that time. Richard Beale, orphan, petitioned. He set out his inclination to better his fortune by the first advantageous offers Interpretations The Greentree grant follows the working pattern of waste-land leasing established in the present working volume: identification of a parcel by reference to a deceased former holder, application by an adjoining freeholder for consolidation, conditional grant subject to enclosure, and a 21-year lease to issue on completion of fencing. Robert Goodwin deceased is the master of the Northumberland identified in the present working volume as the late captain of that ship, whose death at Bencoolen had been the subject of correspondence delivered by the Nathaniel on 30 November 1710 and whose mother was the widow Frances Goodwin. The Lemon Valley parcel was therefore drawn from the estate of a member of one of the principal Goodwin lines, and its transfer to Greentree marks the working consolidation of the late captain's outlying ground into a neighbour's plantation. Broome's settlement at £20 0s 0d per annum with diet, in addition to the back payment of his board, brings his rate close to the working clerical wages of the establishment. The comparison drawn in the petition to Thomas Free, the previous clerk of the council, sets three shillings per day with diet as the working benchmark for a writer under the clerk, but the council settled on the slightly lower annual figure of £20 0s 0d, equivalent to approximately one shilling and threepence per day on a 313-day working year, with diet supplied separately. Free had been discharged from the Company's service on 4 June 1713 and had married the widow Sarah Griffith, so Broome's promotion to a writer's salary fills part of the working vacancy created by Free's departure. The same Broome had appeared as schoolmaster to Richard Beale at Mr Francis on 5 April 1711, had been chastised for prompting a hearsay petition on that occasion, and had been a creditor of the William French orphans for 4s 6d in respect of grave-making. His settled position as a writer in the store under Captain Pack, recorded here, shows the working trajectory of a soldier-tradesman moving through schoolmastership, manual graveside work and clerical service over a period of years on the island.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			The back-payment for diet, ordered with the new salary, places the council in the working position of correcting a past underpayment by the Company rather than simply revising the rate forward. The petition was therefore granted as a remedy and not as a fresh concession. The council's acceptance of the underpayment claim, and its order that Broome be made whole for the cost of finding his own dinners during his service in the stores, marks the working recognition that the Company's terms of employment could be revised retrospectively where a servant had been carrying part of the cost of his own employment out of his soldier's pay. The petition of Richard Beale, breaking off mid-sentence with his stated inclination to better his fortune by the first advantageous offers, identifies the elder Beale orphan as a working applicant for his own settlement at age. The same Richard Beale had been the boy at Mr Francis's lodging on 5 April 1711 whose petition Broome had drafted, and at the dog-and-bull incident of the present consultation he is one of the two youths under George Carne's care and tuition. The application places him at the working point of transition from ward to adult, with the council to be asked to assist in the conversion of his orphan share into a working settlement on the island or beyond. Speculations Broome's reference to Mr Free's rate of three shillings per day with diet, made openly in the petition, suggests that he had access to the working knowledge of Free's terms either through the clerk's own informal report or through Broome's own service in the store under Free's clerkship. The petition therefore amounts to an application for the same rate as the previous holder of the writer's place, framed as a request for either the lump-sum annual figure or the daily rate at the petitioner's choice. The council's award of £20 0s 0d per annum, slightly below the equivalent of three shillings per day, probably reflected the working distinction between the clerk of the council, who held a defined office with attendance on the council, and the writer beneath the clerk, who served at the clerk's direction without independent standing. The award nonetheless brought Broome from soldier's pay to a settled clerical wage, and resolved a working underpayment that had run for eighteen months under Captain Pack. The submission of Richard Beale's petition at the same council day on which his guardian Carne was facing a complaint over the dog-and-bull cause and his fellow ward Elizabeth Wrangham was applying to change guardians, suggests that the wards of the Carne household had collectively decided to use the present working sitting to clarify their own positions. The simultaneity of the three petitions points to a coordinated approach by the wards rather than separate spontaneous applications, with each ward bringing forward the particular relief appropriate to that ward's circumstances. The pattern is consistent with the working consequence of the Hoskison household's reduction in late 1712 and 1713, by which the principal orphan estates of the island had been concentrated in a single guardian whose conduct of the wards had now drawn the wards' coordinated response.
72	65	Proffers, and having for Some years past had Effects in the Possession of M[r] Hoskison deceased. Humbly requests that all Acc[ts] Depending between him and Said Hoskison or any other Persons may be Adjusted And that he may have Leave to Choose a Guardian and Sue for what is his due.	Richard Beale, orphan, set out that he wished to better his fortune by the first advantageous offers and that for some years past he had had effects in the possession of Mr Hoskison deceased. He humbly requested that all accounts between him and Hoskison, or any other persons, be adjusted, that he have leave to choose a guardian, and that he be allowed to sue for what was due to him. Beale was called in and asked who he had chosen for his guardian. He answered his uncle Mr Carne.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
		The Said Richard Beale being call[d] in and askt who he had made Choice of for his Guardian, made answer his Uncle M[r] Carne, who being Sent for and Acquainted therewith readily Shewd his willingness to act for the good of y[e] Said Orphan Rich[d] Beale. Whereupon Ordered. That Gabriell Powill having Married the Said M[r] Hoskisons widdow, He the Said Carne or Rich[d] Beale go and Adjust Acco[ts] with him the Said Hoskison having Charg[d] himself with fifty odd Pounds direct to the Said Rich[d] Beale for Money arriseing for a Horse Sold by order of former Govern[r]s and paid into the Said Hoskisons hands for y[e] Said Orphans use. Margin Notes: desires all Acc[ts] w[th] him may be Speedily Sett[d] & to Choose a Guardian M[r] Carne accepted Acc[ts] to be made up w[th] M[r] Powell.	Carne was sent for and acquainted with the choice, and readily showed his willingness to act for Beale's good. The council ordered that, since Gabriel Powill had married Hoskison's widow, Carne or Richard Beale go to Powill and adjust accounts with him. Hoskison had charged himself with over £50 0s 0d directly due to Beale, arising from the sale of a horse by order of a former Governor, and paid into Hoskison's hands for the orphan's use. Interpretations Richard Beale's choice of George Carne as his guardian, made openly on examination by the council, places him in working opposition to the choice his fellow ward Elizabeth Wrangham had made at the same sitting. Where Wrangham had moved her estate away from Carne by selecting her brother as guardian, Beale moved his estate toward Carne by selecting him over any other adult relative. Carne is recorded as Beale's uncle, the relationship running through Carne's wife Frances Goodwin, sister of the boy's mother, and the working consequence is that the Beale orphan estate now stands committed to the same household whose conduct of the wards has been the subject of complaint in the dog-and-bull cause earlier in the present sitting. The £50 0s 0d charged on Hoskison's books to Richard Beale's account, arising from the sale of a horse by order of a former Governor and paid into Hoskison's hands for the orphan's use, identifies the working point at which the orphan estate had become entangled with the deputy governor's personal accounts. The death of George Hoskison on 6 March 1712 had left such sums in his estate, and the marriage of Gabriel Powill to Mary Hoskison the widow has brought them into Powill's working possession through right of his wife. The arrangement parallels the working pattern visible in the wider Hoskison case, by which the orphan's claim devolves on the new husband through the widow's intermediate right. The order that Carne or Beale go to Powill to adjust the account treats the sum due as a debt recoverable by the orphan's guardian directly from the working holder of the widow's estate, without further involvement of the council. The mechanism preserves the council's working principle, declared at the Court of Orphans of 5 April 1711, that the council was not itself executor to orphan estates. The orphan or his guardian was to pursue the account between private parties, with the council's order serving as the working warrant for the demand rather than as a determination of the sum itself. The succession of guardian-holders of Beale's effects, from Hoskison to Powill through Mary Hoskison's remarriage, follows the working pattern of the Wrangham estate from Goodwin to Carne through Frances Goodwin's remarriage. In both cases the orphan's effects pass without break of legal possession from one freeholder husband to the next through the widow's intermediate right. The choice of guardian by the orphan at age, exercised by Wrangham to withdraw from the chain and by Beale to confirm a substitute within it, is the working mechanism by which the orphan recovers some control over the eventual destination of the estate. Speculations Beale's choice of Carne despite the dog-and-bull complaint, presented in the same sitting, probably reflects the working position that Carne was the only adult freeholder of standing who already held the principal documentary record of the Beale orphans' working accounts, having pursued them through the Court of Orphans of 25 September 1710 and the Powell trial of 18 October 1711. Replacing Carne with any other guardian would have required the new man to begin from the working entries on Hoskison's books and to negotiate afresh with Powill, while Carne could

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			move directly to recovery of the £50 0s 0d. The choice prioritises the working recovery of the existing claim over any reservation about the household's recent conduct, and converts the dog-and-bull dispute from a question about a guardian into a question about a fellow freeholder. The submission of the petition immediately after Elizabeth Wrangham's, with the two wards selecting different guardian directions on the same day, suggests that the working consultation between the wards had not produced a single unified position. Wrangham removed her estate from Carne; Beale confirmed his under Carne. The split probably reflects the working difference between the two estates and their working condition at this date. Wrangham's estate was already in Carne's hands and could be withdrawn intact by a brother of standing, while Beale's principal recoverable sum lay outside Carne's hands and required someone with the records of the earlier proceedings to pursue it. The two decisions, taken together, mark the working point at which the wards of the Carne household began to act independently in their own interest rather than as a single collective.
73	66	Island S[t] Helena At a Court Held on Wednsday the 2 day of Septemb[r] 1713 At the United Castle in James Valley For the Determination of Severall causes. Pres[t] Benjam[n] Boucher Esq[r] Gov[r] Matth[eu] Bazett 2 in Coun[ll] Lieut[t] Tho[s] Cason John French Assist[ts] Then the Court was opend According to the Usual manner, and those Persons Appointed for Jurors are as followeth. 1 Ripin Wills foreman 2 Robert Addis 3 John Cole 4 Thom[s] Perkins 5 Orlando Bagley 6 Henry Francis 7 Robert Bell 8 Thom[s] Yargen 9 Joshua Johnson 10 Charles Steward 11 John Robinson 12 William Beale who were all Sworne, and Then the Complaint and Declaration of Gabriell Powill free holder was read against Richard Girling free holder as followeth. That Margin Notes: Court. The Compl[t] Rich[d] Girling	Island of St Helena. Court held at the United Castle in James Valley on Wednesday 2 September 1713 for the determination of several causes. Present: Benjamin Boucher Esquire, Governor; Matthew Bazett, second in council; Lieutenant Thomas Cason and John French as assistants. The court was opened in the usual manner. The persons appointed for jurors were: 1 Ripin Wills, foreman 2 Robert Addis 3 John Cole 4 Thomas Perkins 5 Orlando Bagley 6 Henry Francis 7 Robert Bell 8 Thomas Gargen 9 Joshua Johnson 10 Charles Steward 11 John Robinson 12 William Beale All twelve were sworn. The complaint and declaration of Gabriel Powill, freeholder, was then read against Richard Girling, freeholder, as follows: Interpretations The opening of the court and the empanelling of twelve jurors mirrors the procedural form first applied in the Powell against Beale's orphans trial of 18 October 1711. The court is convened at the United Castle rather than at the Sessions House used on that earlier occasion, indicating that the venue for jury trials had been brought within the seat of government. The compression of multiple causes into a single sitting, with a single jury, reflects the council's ordinary management of jury business across the present series. Nine of the twelve jurors had received their deeds or leases at the delivery sitting of 4 August 1713: Wills, Addis, Cole, Bagley, Francis, Johnson, Steward, Robinson and Beale. The other three, Perkins, Bell and Gargen, were settled freeholders confirmed in earlier sittings. The composition placed the determination of contested causes in the hands of the same body of freemen whose own titles had just been settled by the council. Ripin Wills as foreman held the senior position by reference to his ancient title to land originally allotted to William Black Cloud at the recapture from the Dutch in 1673, confirmed at the title day of 3 February 1713. Robert Bell, juror seven, was the mason who had bought the Belvird country plantation for £200 0s 0d on 24 July 1712, marking the integration of the

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			freeholder-tradesman class into the panel. Charles Steward, juror ten, was the freeholder whose £20 0s 0d bill-of-exchange discrepancy had been ordered for adjustment on 9 December 1712 and whose lands had been confirmed at the title day of 15 January 1713. The opening cause was Powill's complaint against Girling. Powill was the same Gabriel Powell of the Beale partition trial of 18 October 1711 and the consolidated estate buyer whose holdings had been the subject of repeated council business across the present sequence. Girling was the freeholder confirmed in his fenced land on 28 February 1712. The placing of their dispute at the head of the day's court, before the Wrangham declaration, the Carne dog-and-bull cause referred from the previous day's consultation and the Court of Orphans appointed by the advertisement of 15 August 1713, made the Powill matter the first item for jury determination. Speculations The selection of nine deed-holders out of twelve jurors, all of them confirmed in their titles within the past month, suggests that the council was choosing its jury principally from the body of freemen most directly interested in the orderly conduct of the registration programme. A jury so composed had a personal interest in upholding the procedural framework on which their own titles rested, which probably operated as a working assurance for the council that contested causes would be determined within the framework the council had been building. The order of business, with the Powill complaint heard first, was probably arranged to dispose of the longest-standing contested matter before the jury turned to the day's remaining causes. The substance of the Powill complaint reached back to the mortgage arrangement of 6 July 1708 and through the marital successions of Charlesworth, Bowman, Hoskison and Powill, making it the oldest item of business before the court. Disposing of it first allowed the jury to address the more recent causes with the longer matter already settled.
74	67	That whereas Capt[n] George Hoskison at the Time of his Departure off this Island in the Ship Albermarle did contrary to any known custome and without the knowledge or Consent of his then wife Mary Hoskison Sett and make over by way of Mortgage 45 Acres of Land (a Plantation Excepted) unto Rich[d] Girling for and During the Naturall Life of the afores[d] Mary Hoskison paying and yeilding therefore the Sume of Eleven Pounds Ten Shillings yearly as (by a Short Instrum[t] of Writing bearing date the 6[t] day of July 1708 may and doth more fully Appear. Now forasmuch as the Said 45 Acres of Land with a Dwelling House and Provisions haveing bin for many years past Peaceably Enjoyd by Josiah Charlesworth and at his decease bequeathed between his Son John Charlesworth and the Complainants Present wife The Said John dying Soon after the whole Estate descended Immediately after to her as next heir and So may be Properly Term[d] her Dowbery and by marriage to John Bowman dec[d] the Same became at his Sole Disposall, who by his Last Will and Testam[t] gave the Said 45	Powill's complaint against Girling set out the following case. When George Hoskison departed the island in the ship Albermarle, he had, contrary to any known custom and without the knowledge or consent of his then wife Mary Hoskison, made over by way of mortgage 45 acres of land to Richard Girling, the plantation being excepted. The mortgage was to run for the natural life of Mary Hoskison, with Girling paying £11 10s 0d yearly. The arrangement appeared more fully in a short instrument of writing dated 6 July 1708. The complaint set out the title to the parcel. For many years past the 45 acres, with a dwelling house and provisions, had been peaceably enjoyed by Josiah Charlesworth. At his death he bequeathed the property between his son John Charlesworth and Powill's present wife. John Charlesworth died shortly afterwards and the whole estate descended immediately to her as next heir. The parcel could properly be termed her dower. By her marriage to John Bowman, since deceased, the estate came at his sole disposal. By his last will and testament Bowman gave the 45 acres in particular to his wife, now Powill's wife, for her natural life. He had done so with the design and intent that the parcel be preserved and set apart from the rest of his estate for her own good and benefit, and that no person should intermeddle with or molest her in the quiet possession of it. He had made her his sole executrix to his whole estate, without giving any power to a second husband to let, set or mortgage that estate or any part of it. Powill submitted that no person could, by any lawful act or custom of the island, mortgage the land in question unless by the genuine and free consent of his

		Acres of Land Nam[d] in Particular to his wife (now y[e] Complain[ts]) for & Dureing her Naturall Life with an Honest Designe and Intent to be preserv[d] and Sett a Part from the rest of his Estate for her own good and Bennefitt and that none might intermeddle or Mollest her in the Quite Possession thereof made her whole and Sole Executrix to all and Singular his whole Estate not giving the Least Power to a Second Husband to Lett, Sett, or Mortgage that Estate or any part thereof. And it's to be Presumd none can by any Lawfull Act or Custom of this place unless by the Prevolyt and free Consent of his wife and if So it ought to Appear and be made Mannifest That She was not anyway sweegled[?] or did it through fear, force or Threats but of her own free and Voluntary Will otherwise the Complain[t] Humbly Presumes its not binding or valid tho' her hand and Seale be to the Lease, or Indenture of Mortgage which the Complain[t] moves as a plea to quash the agreem[t] with his Predecessor and Said Richard Girling and to Invalid the Same farther begs Leave to Inform the Right Worship[ll] Judge and Jurie that the Said Girling hath Oblig[d] himself to pay the before mention[d] Sume of Eleven Pounds Ten Shillings Yearly which he has not Perform[d] there being two years Rent due at this Time and therefore a breach and forfeiture of Said agreement. For Margin Notes: Gab[ll] Powill ag[t] Richard Girling Ditto Continued.	wife. If she had given such consent, it ought to appear and be made manifest that she had not been wheedled, and that she had not acted through fear, force or threats, but of her own free and voluntary will. Otherwise the lease or indenture of mortgage was not binding or valid, even though her hand and seal were affixed to it. Powill moved this as a plea to quash the agreement made by Girling with his predecessor, and to invalidate it. He further begged leave to inform the judge and jury that Girling had bound himself to pay £11 10s 0d yearly, and had not performed. Two years' rent were due at this time, which Powill submitted was a breach and forfeiture of the agreement. Interpretations The complaint sets out a chain of title running through three marriages and an outright bequest. The substantive question for the jury is whether a husband could mortgage land that his wife held under the terms of an earlier husband's will. The argument turns on the distinction between an estate held in dower at common law, which a husband could administer during the marriage, and an estate held by separate devise from a former husband, which was preserved against the second husband's power of disposal. Dower at common law was the widow's customary right to one third of her deceased husband's lands for life; a life estate by devise was a separate creation by will, with the husband as devisor naming the wife as life tenant of specified land. The Charlesworth-Bowman-Hoskison-Powill sequence carries the same 45 acres through four households in approximately fifteen years, each succession resting on the death of the prior holder and the remarriage of the widow. The complaint applies the term dower loosely to the parcel as it descended to her on John Charlesworth's death; the proper description of that descent would be inheritance rather than dower, since dower attached only to land held by the husband during the marriage. The term nonetheless marks the parcel as settled property of the widow, distinct from any later husband's general estate. The two-year arrears claim attached to the consent argument gives Powill an alternative ground of recovery. If the mortgage stood as valid despite the contested consent, the arrears alone would forfeit it under the terms of the instrument. If the mortgage fell on the consent argument, the arrears claim became academic, since the whole arrangement would be void from the start. The pairing places Girling in a position from which neither defence carries the case for him without the other. The reference to the wife having been wheedled, or having acted through fear, force or threats, identifies the test the court was to apply if the question of consent were reached. The complaint anticipated that the indenture would be produced bearing the wife's hand and seal, and prepared the ground for a challenge to the validity of that signature on the circumstances of its giving. The doctrine reflects the position in early modern English law that a married woman could not contract independently of her husband except in narrowly defined cases, and that signatures obtained from her by force or undue influence were liable to be set aside. Speculations The timing of the original mortgage on 6 July 1708, contrasted with the present trial five years later, indicates that the consequence of the mortgage to the wife had been postponed by her own marital position throughout that period. Mary Hoskison had remained married to George Hoskison until his death in March 1712, and had then married Powill. The action against Girling could not be brought during Hoskison's lifetime, since the property had been treated as under his control regardless of the circumstances of the

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			original mortgage. The present action therefore represents the first practical opportunity, after two intervening events, to challenge the mortgage in court, and the two years' arrears bring the unpaid rent into the same window in which the right of action first opened. The framing of the case as a question of free will and consent, despite the parcel being described as the wife's separate estate under Bowman's will, suggests that Girling was expected to produce the indenture with Mary Hoskison's signature upon it. The complaint anticipates that the document will bear her hand and seal and prepares for a substantive challenge to the conditions of signing before the indenture is laid before the jury. The strategy fixes the jury's attention on the manner in which the signature was obtained before the document itself is read.
75	68	For all which reasons and Severall others besides theie Detriment and Damage that the Complainant Suffers by the Said Girlings being in Possession of Said Land. Humbly prays that the Same may be Enquired into and whether the Said Hoskison had any right to Mortgage the Land of his own afores[d] and Contrary to any President on this Place, which if Allow'd may in time prove of Ill consequence and render buisness Endless and Troublesome. The Complainant farther Prays that the Account between Capt[n] Hoskison and Jonathan Beale Orphans as Likewise the Acc[t] between him and William Finches Orphans may be Examin[d] into and fairely Stated there being Severall Mallicious and unjust Acc[ts] and Sums of money Laid to Said Hoskisons charge (as well as to Some others) by former Goverment, otherwise the Said Complain[ts] cant make a fair Account or Inventory of his the Said Hoskisons Estate, nor know on what footing he Stands. All which matter and cause the Complain[t] Leaves to y[e] Wise & Mature Consideration and Judgment of the R[t] Worship[ll] Judge and Councill together with the Gentlemen of y[e] Jurey And as in Duty bound Shall Pray &c[a] To which the Defendant Richard Girling made reply, That he has had the aforesaid 45 Acres of Land in his Possession without any Mollestation for four years past and upwards and has paid the Annuall Rent according to his agreement which Produced in Writeing alledging farther that the Said Gabriell Powills wife knew of her former Husband George Hoskisons Letting him the Said Land and never made any objection againsh it but on the contrary Seem'd well Enough Satisfyd till married to the Said Powill, whom y[e] Defendant pre-sumes has no right to Sue for Said Land and that the Said George Hoskison might Lett or Mortgage y[e] Same during his wifes Life it being no prejudice to her (nor the Heir)	Powill submitted that, for these reasons and several others, including the detriment and damage he suffered through Girling's possession of the land, the court ought to inquire into the matter. The question was whether Hoskison had any right to mortgage the land in the manner described, contrary to any precedent on the island. If such a mortgage were allowed, it might in time prove of ill consequence and render business endless and troublesome. Powill prayed further that the account between Captain Hoskison and the orphans of Jonathan Beale, and the account between Hoskison and the orphans of William French, be examined and fairly stated. Several malicious and unjust accounts and sums of money had been laid to Hoskison's charge by former government, as well as to some others. Until those accounts were cleared, Powill could not make a fair account or inventory of Hoskison's estate, nor know on what footing he stood. He left the matter to the mature consideration and judgment of the judge, council and jury. Girling, the defendant, replied. He had held the 45 acres in his possession without any molestation for four years and upwards, and had paid the annual rent according to his agreement, which he produced in writing. He alleged further that Powill's wife had known of her former husband George Hoskison's letting him the land, and had never made any objection to it. She had, on the contrary, seemed well enough satisfied with the arrangement until she married Powill, whom Girling presumed had no right to sue for the land. Hoskison might let or mortgage the parcel during his wife's life, since the arrangement was no prejudice to her, nor to the heir. After debate on both sides, the jury withdrew. They desired to peruse the last will and testament of John Bowman, the first husband of Powill's wife, and also the agreement made between Hoskison and Girling. Interpretations Powill's request that the Beale and French orphans' accounts against Hoskison be examined and fairly stated draws two of the principal contested orphan estates of the present series into the present cause as collateral matters. The Beale orphans' accounts had been the subject of the audit at the Court of Orphans of 25 September 1710 and had been carried forward through the Powell trial of 18 October 1711, with the order of 28 March 1711 charging John Alexander £22 9s 3d to complete the appraised value of the country house. The William French orphans' accounts had been before the Court of Orphans of 28 March 1711, with French as the seized planter and his children listed as beneficiaries of the estate seized on 7 January 1708. Powill's reference here opens both estates afresh, since he could not finalise the inventory of Hoskison's estate in right of his wife until both orphan claims had been cleared. Girling's response rests on three grounds: peaceable possession for over four years with regular

		After Several debates on both Sides the Jury withdrew Desiring the perusal of the Said Gabriell Powills wife first Husband John Bowmans Last Will and Testament as also the agreem[t] made between George Hoskison & the Defendant and Margin Notes: Acc[ts] between M[r] Hoskison & a Clue between him and William Finches Orphans defaird to be adjusted by y[e] Complain[ts] Gab[ll] Powills Rich[d] Girling Defendant his reply debates heard Jury withdrew.	rent payment, the wife's contemporaneous knowledge without objection, and the principle that a husband might let or mortgage land during the wife's life. The first ground answers the breach claim, the second answers the consent claim, and the third answers the underlying authority claim. The defence sets the practical fact of payment and possession at the head, before the legal arguments, so as to invite the jury to weigh the reality of four years of tenure against the abstract question whether Hoskison had had the power to grant it. The jury's withdrawal to peruse Bowman's will and the Hoskison-Girling agreement shows the procedural method by which a contested cause of this kind was brought to a determination. The two written instruments stood at opposite ends of the chain of title: the will fixed the position of the parcel before any subsequent marriage, and the agreement fixed it after Hoskison's intervention. The jury's request signals that they intended to read the two documents together and find whether the second was reconcilable with the first. The procedural step parallels the method used in the Powell-Beale jury trial of 18 October 1711, in which Jonathan Beale's will had similarly been placed in the jury's hands for direct reading. Girling's silence on the categorisation of the property as dower or as separate estate, despite Powill's deployment of the term in the complaint, marks the strategy of declining to engage with the doctrinal classification. By restricting the defence to peaceable possession and Hoskison's general husbandly authority, Girling avoided the trap of conceding the parcel's status as separate estate of the wife, since any such concession would have weakened his position on the power of the husband to mortgage. The drafting met contested doctrine on the law of marital property with silence rather than direct contest, leaving the facts of possession and payment as the primary basis for decision. Speculations The bracketing of the Beale and French orphan accounts within the present cause, even though neither orphan estate is directly the subject of the dispute over the 45 acres, indicates that Powill was using the trial to clear his position as administrator in right of his wife of all the contested charges against Hoskison's estate. By inviting the council and jury to find that the malicious and unjust accounts had been wrongly laid to Hoskison's charge, Powill positioned himself to take over the management of his wife's interest in Hoskison's estate on a clean basis. The strategy reaches beyond the recovery of the 45 acres into the broader consequence of his marriage, namely the assumption of administration over an estate burdened with disputed orphan claims. Girling's argument that the wife had seemed well enough satisfied with the mortgage until she married Powill probably reflects the assumption that a widow's challenge to her late husband's transactions arose only on her remarriage, when the new husband's interest in maximising the recoverable estate began to operate. The defence implicitly attributes the present action not to a settled grievance of the widow herself but to the calculation of the second husband. By placing the wife's apparent acquiescence at the foreground, Girling invited the jury to find that the supposed defect of consent was a construction of Powill's rather than a complaint of the widow herself, and that the present action was best understood as a remarriage-driven attempt to recover an estate that had been peaceably let for over four years.
76	69	and Stayed out about half an hour, then returned their Verdict as followeth. That the before Named Capt[n] George Hoskison had	The jury stayed out about half an hour and then returned their verdict, as follows. George Hoskison had no power or right to make over or mortgage the 45 acres belonging to the heir of

		no Power or right to make over or Mortgage the aforesaid forty five Acres of Land belonging to the Heir of John Bowman without the foreknowledge and Consent of his wife it being Express[d] in y[e] Said John Bowmans Last Will and Testam[t] That the Said Land Should be and Remaine in his wifes Possession Dureing her Naturall Life. Upon which Ordered. That the Defendant Richard Girling Deliver up the afores[d] forty five Acres of Land with it[s] Appurtenances thereunto belonging unto the Plaintiff Gabriell Powill and to pay charges of Co[ts]. Then the Declaration of Francis Wrangham freeholder was read as followeth. That his Grand father Job Jewster at the Time of his decease Stood Possessed of a Dwelling House Scituate in James Valley and dying Intestate the Said House with all other reale Estate fell by due Course of Law to his daughter Neome[?] as being next Heir who Some time afterward married with the Said Wranghams father both Since dead, and Leaving but one Male Issue viz[t] The Said Francis Wrangham doth deem himself the only and Lawfull Heir to the aforesaid House it never having bin in the Possession of the Said Wranghams father or by him any manner of way given or bequeathed or was the Same Ever appraised into his Estate either at the Time of his decease or Since Altho four Several of his daughters Married and Each recieved their Portions but remain[d] in the Possession of Mary the Said Job Jewsters widdow till the time of her decease. Wherefore the Said Francis Wrangham for the reasons aforesaid Humbly Prays he may be admitted and Putt into quiete Possession of Said House and Premises thereunto belonging notwithstanding the unjust and unreasonable Claime thereto Laid by any Person whatsoever Margin Notes: Jury's Verdict Ord[r] of Court Declaration of Fra[s] Wrangham ab[t] a House formerly Mary Jewsters.	John Bowman without the foreknowledge and consent of his wife. It was expressly stated in John Bowman's last will and testament that the land should be and remain in his wife's possession during her natural life. The court ordered Girling to deliver up the 45 acres, with the appurtenances belonging to them, to Powill, and to pay the costs of court. The declaration of Francis Wrangham, freeholder, was then read, as follows. His grandfather Job Jewster, at the time of his death, had stood possessed of a dwelling house in James Valley. Jewster had died intestate, and the house, with all his other real estate, had fallen by due course of law to his daughter Neome, as next heir. Some time afterwards she had married Wrangham's father. Both were now dead, and they had left only one male issue, the said Francis Wrangham. He deemed himself the only and lawful heir to the house. It had never been in his father's possession, nor had it been given or bequeathed by him by any means. Nor had it been appraised into his estate either at the time of his death or since, although four of his daughters had married and each had received their portions. The house had remained in the possession of Mary, the widow of Job Jewster, until her death. For these reasons, Wrangham humbly prayed that he be admitted and put into quiet possession of the house and the premises belonging to it, notwithstanding any unjust and unreasonable claim laid by any other person. Interpretations The verdict establishes, as a settled principle, that a husband's general authority over his wife's land yielded to specific contrary terms in an earlier husband's testamentary disposition. Any planter contracting to take a mortgage of land formerly held under a deceased husband's will must first inspect that will and obtain the wife's express consent. The verdict therefore has consequences beyond the present parties, reaching every transaction in which a remarried widow's separate estate is offered as security. The award of costs to Powill allocates the financial burden of the trial against Girling. His defence had rested on the reality of four years of peaceable possession with rent paid, but the jury found this insufficient to override the testamentary terms. The award follows the pattern visible in the smaller civil claims of the present series, by which costs followed the unsuccessful party regardless of his good faith. The Wrangham declaration moves the court from contested marital property to contested intestate succession through three generations. Job Jewster died intestate; his daughter Neome took the real estate as next heir; she married and predeceased her husband, who has also died; the present Wrangham, as their only male issue, claims as next heir of his mother. The chain depends on the rule of descent applicable on the island, by which real estate of an intestate descended to the next heir at law rather than passing by the dower or curtesy interest of a surviving spouse. The continuous holding of the house by Mary Jewster through her long widowhood, until her own death, anchors the chain to the Jewster line independent of Wrangham's father. The declaration's emphasis that the house never came into Wrangham's father's possession, nor was bequeathed or appraised into his estate at his death, anticipates a defence by parties claiming through the father's line. The point that four of his daughters had married and each received their portions, none drawn from the house, fixes the position that the father's daughters' portion accounts had treated the Jewster house as outside the father's estate. The contest to come will probably turn on the entitlement of those daughters or their husbands to a share in the house

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			notwithstanding their having received their portions from other property. Speculations The jury's brief withdrawal of about half an hour to read the two written instruments and return a clear verdict indicates that the terms of John Bowman's will, once examined, settled the contest substantively notwithstanding the elaborate argument on the bench. The express provision that the land should remain in his wife's possession during her natural life appears to have resolved the matter for the jury, regardless of the practical considerations advanced in Girling's defence. The pattern indicates that on the island, contested matters involving written wills were determined principally by the terms of the document where those terms were clear, and that arguments based on the convenience of long undisturbed possession carried little weight against an unambiguous testamentary direction. The placing of the Wrangham declaration immediately after the Powill verdict, in a single sitting of the court, probably reflects a deliberate decision by the council to set out two cases on related principles of property succession in immediate sequence. Both involved how property passed through a chain of marriages and deaths against the interest of one or more parties currently in possession. Hearing the cases together gave the jury a continuous opportunity to consider the law of succession, in a sitting that would also dispose of the Carne dog-and-bull cause referred from the previous day's consultation and the comprehensive Court of Orphans appointed by the advertisement of 15 August 1713.
77	70	whatsoever under bare and frivolous Pretentions no ways at all warrantable. To which Declaration those Persons Interesed in the Estate of Samuel Wrangham dec[d] by marriage with his Daughters made an objection and reply, which after Severall debates being Laid before the Jury they withdrew and Stayd about a quarter of an Hour, then returned and Delivered their verdict. That the House Scituate in James Valley formerly Job Jewsters and Lately in the Possession of Mary Jewster his w[e] decaed, be Divided in Equall Parts between all the Children of Samuel Wrangham or their heirs, as the rest of his Estate was according to his Last Will & Testament. Whereas yesterday Thomas Southen Serj[t] Presented his Petetion Seting forth that he had Suffered the Loss of a Bull by being Hunted by Some of M[r] Carnes Familie viz[t] Richard Beale and Richard Goodwin which the Said Carne refusing to make Sattisfaction for, the Claintiffe pray[d] he might be Compell[d] thereto having proof that the Said Rich[d] Beale and Rich[d] Goodwin Satt two Doggs at a Parcell of Cattle the Bull was among, & caus[d] it to fall down a Steep Hill. Upon which the Said Carne desired the Cause might be decided by the Jury this day who haveing heard the Complaint read the Said Carnes reply thereto	The persons interested in the estate of Samuel Wrangham deceased, through marriage with his daughters, raised an objection and reply to Wrangham's declaration. The arguments on both sides were laid before the jury. The jurors withdrew, stayed about a quarter of an hour, and returned with their verdict. The house in James Valley, formerly Job Jewster's and lately in the possession of his widow Mary, was to be divided in equal parts between all the children of Samuel Wrangham, or their heirs, as the rest of his estate had been divided according to his last will and testament. On the previous day, Thomas Southen, sergeant, had presented his petition. He set out that he had lost a bull to hunting by members of Carne's household, Richard Beale and Richard Goodwin. Carne had refused to make satisfaction. Southen prayed that Carne be compelled, on proof that Beale and Goodwin had set two dogs at a parcel of cattle among which the bull stood, and had caused it to fall down a steep hill. Carne asked that the cause be decided by the jury on the present day. The jury heard the complaint, Carne's reply and the arguments on both sides. They withdrew, stayed about half an hour, and returned their verdict. Carne was to make Southen satisfaction for the bull, the value to be set by two indifferent men who had known the beast at the time it was hunted and killed by Carne's dogs. Carne was also to pay all charges. The accounts of the orphans of Jonathan Beale and William French were then examined. They were found to be very difficult and intricate in respect of several debts paid and received as charged, and were not rightly adjusted as the council had reason to believe. The council ordered Interpretations The Wrangham verdict reverses the position taken in the declaration. Where Francis Wrangham had claimed the house as sole male heir on the ground that it had never been appraised into his father's estate, the jury found that it was to be divided in equal parts

		and what could be Said on both Sides they withdrew and Stayd about half an hour, then returned and Delivered their verdict. That the aforesaid George Carne make Serj[t] Southen Sattisfaction for the Bull as he Should be Vallued by two Indifferent men that knew the beast at y[e] Time twas Hunted and killed by the Said Carnes doggs, and to pay all Charges. Then the Acc[ts] of Jonathan Beals and William Frenches Orphans was Examined into, and finding it very difficult and Intricate upon Severall Debts paid and rec[d] as therein charg[d] and not rightly Adjusted as we have reason to believe, Ordered. Margin Notes: Ja[s] Defendants objections & reply. Jury Verdict. Serj[t] Southens Compl[t] against M[r] Carne. debates heard Jury Verdict. Orph[s] Acc[ts] Examined and then	between all the children of Samuel Wrangham, in the same proportions as the rest of his estate under his will. The verdict treats the house as having descended from the mother into the father's estate by operation of law on the mother's death, regardless of whether the father had taken physical possession during his lifetime. Land coming to a wife as next heir of her father, and never alienated, vested by descent in her husband and from him in his testamentary estate, with the consequence that her brothers-in-law and their wives had taken an interest through their marriages to the daughters. The portion arrangement that had governed the rest of Samuel Wrangham's estate now governed the house. The Carne verdict on the dog-and-bull cause settles the principle that a freeholder is liable for damage caused by his dogs to the livestock of another where the dogs have been set on by members of his household. The jury did not require proof that Carne himself had been present, nor that he had directed the boys, nor that the bull had been killed by direct impact of the dogs as distinct from the consequence of the chase. The act of two youths under Carne's care and tuition, set on with two of his dogs against cattle on steep ground, was sufficient to make Carne liable in damages. The doctrine extends the liability of the master for his slave, applied earlier in the present series to the stolen goods of 25 shillings, to liability for damage caused by youths in the master's care acting with the master's animals. Indifferent men was the standard phrase for impartial appraisers chosen for their familiarity with the property and lack of interest in the outcome. The orphan-accounts examination, opened with the council's finding that the Beale and French accounts were very difficult and intricate and not rightly adjusted, brings on the Court of Orphans in its role as the final tribunal for orphan estate audits, as appointed by the advertisement of 15 August 1713. The accounts at issue are the same ones whose complexity has been before the council since the audit of 25 September 1710, the William French inventory and creditor schedule of 28 March 1711, and the protracted Beale partition order of 30 October 1711. The phrase as we have reason to believe records the council's judgement that the existing accounts contained matters wrongly entered, in line with Powill's complaint of the previous day that Hoskison's estate was charged with malicious and unjust accounts. The combined pattern of the three verdicts in the day's court is consistent. In each case the jury accepted the underlying principle advanced by the moving party but adjusted the outcome to reflect the broader rights of the wider beneficiaries: in Powill the wife's separate estate prevailed, in Wrangham the wider testamentary scheme of Samuel Wrangham prevailed over the male-heir claim, and in Southen the bull's loss was to be valued by indifferent men rather than at the plaintiff's stated figure. The jury gave each plaintiff a recovery, but on terms that preserved the interests of all the affected parties rather than the maximum claim of any one. Speculations The brief quarter-hour withdrawal in the Wrangham cause, shorter than the half-hour taken in the Powill cause, indicates a confidence on the jury's part that the Wrangham testamentary scheme governed all the property of Samuel Wrangham, including any descended from his wife. The brief deliberation suggests that the jury did not regard the male-heir argument as carrying significant weight against the testamentary direction for equal division. The pattern is consistent with the position the jury had taken in the Powill cause, where a clear testamentary direction prevailed over a long-standing practical arrangement. The decision that the bull be valued by two indifferent men, rather than at a figure named by Southen, probably reflects the calculation that the bull's

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			condition as very poor and weak at the time of the chase had to be allowed for in fixing the damages. By referring the valuation to indifferent men who had known the beast at the time of the incident, the jury preserved Carne's substantive ground of defence within the frame of the award. The verdict gives Southen the recovery he sought in principle while protecting Carne from being charged with the value of a sound and healthy bull of the same breed, allocating the consequence of the bull's poor condition between the two parties rather than placing it wholly on either.
78	71	Ordered. That the Store Books be first Examin[d] into and all other Accounts Depending with Said Orphans that the Same may be Adjusted next Councill day or as Soon as Possible. Then the Court was adjourn[d] according to usuall Custome. Island S[t] Helena. At a Consultation Held on Tuesday the 13[th] day of Octob[r] 1713 At the United Castle in James Valley. Pres[t] Benjam[n] Boucher Esq[r] Gov[er][r] Matth[eu] Bazett 2 in Coun[ll] 16 Lieut[t] Tho[s] Cason John French Assist[ts] Gabruell Powill freeholder made Complaint this day by Petition Setting forth therein that Rinedus Snow Soldier had falsly and Malliciously in a most Gross and Degradeing Manner, in broaching and Scandalously reporting to divers Persons that the Said Complainant did or attempted to heing himselfe with a rope, and was Cutt down by a black man of his thereby Stainning and takeing away the good Name Reputation of Margin Notes: Referr'd. Gab[l] Powills Compl[t] against R[d] Snow	The council ordered that the store books be examined first, and that all other accounts depending with the orphans be adjusted by the next council day, or as soon as possible. The court was then adjourned according to the usual custom. Island of St Helena. Consultation held at the United Castle in James Valley on Tuesday 13 October 1713. Present: Benjamin Boucher Esquire, Governor; Matthew Bazett, second in council; Lieutenant Thomas Cason and John French as assistants. Gabriel Powill, freeholder, made complaint by petition. He set out that Rinedus Snow, soldier, had falsely and maliciously, in a most gross and degrading manner, broadcast and scandalously reported to divers persons that Powill had hanged himself, or had attempted to hang himself, with a rope, and that he had been cut down by a slave of his. The report stained and took away the good name and reputation of Interpretations The council's order to examine the store books first, before the other accounts depending with the orphans, places the audit of the Beale and French orphan estates on the same footing as every other adjusted account on the island. The store books carried the entries by which Hoskison had charged himself with sums for the orphans' use, and constituted the baseline against which the malicious and unjust accounts alleged in Powill's complaint would be tested. Beginning there indicates that the council intended to verify the foundational entries before adjusting the derived claims, in a sequence that placed source documents ahead of summary accounts. The Powill complaint against Snow concerns the law of slander as it operated on the island. Snow had spread a report that Powill had hanged himself, or attempted to do so, and that he had been cut down by a slave. The imputation carried damage of three combined elements: an act of self-destruction tending to <i>felo de se</i> under English common law, in which a man who killed himself forfeited his moveable goods to the Crown; the spiritual stigma of attempted suicide as an offence against divine law; and the social degradation of being saved by a slave of the accused's own household, reversing the proper hierarchy between master and slave at the moment of greatest dependence. The combination made the report defamatory of the most serious kind in early modern terms, and the petition's framing of it as staining and taking away the good name and reputation of the plaintiff identified the actionable consequence in the same terms used in English defamation pleadings of the period. The slave-rescuer element gives the insight that a freeholder's reputation on the island could be damaged not only by allegations of his own conduct but by the imputed conduct of his slaves toward him. The proper hierarchy required that the master act and the slave obey; the reverse arrangement, in which the slave saved the master from death, inverted that hierarchy. The damage to Powill's name lay not only in the supposed attempt on his own life but in the supposed dependence on a slave to be rescued from it, with the consequence

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			that two distinct strands of reputation were said to be injured by a single report. The dating of the consultation on 13 October 1713, with the present complaint against Snow as its principal opening business, identifies the time-scale at which the council moved from one contested matter to the next. The Carne dog-and-bull verdict had been given on 2 September 1713; the orphan accounts examination had been adjourned to the next council day; six weeks have now passed before this consultation. The interval reflects the pace of council business under continued drought conditions, the comprehensive registration programme still being administered, and the need for the storekeeper and clerk to complete the examination of the store books before further determination of orphan business could proceed. Speculations The substantive opening of the present consultation with a slander complaint by Powill, made within six weeks of his successful recovery of the 45 acres from Girling, indicates that the consequence of the September verdict had been to expose Powill to the kind of public report that the present petition addresses. The reputational pressure of a small freeholder society probably operated against any freeholder who had succeeded in dispossessing a neighbour of long-held land, and Snow's report would have circulated more readily for that reason. The petition seeks to redirect the pressure of public talk away from the recovered acres and onto the soldier-source of the report, with the consequence that any further repetition of the slander would expose its author to the council's authority rather than be left to be checked by Powill's private response. The choice of Snow, a soldier, as the named defendant rather than the divers persons among whom the report had circulated, indicates that Powill had identified the original source of the rumour and chose to proceed against the one most exposed to council discipline. Soldiers under continuing service to the Honourable Company were subject to the council's authority in a way that freeholders were not, and Snow's position in the garrison made him liable to military punishment in addition to any civil sanction. The strategic calculation is consistent with the pattern visible across the present series, by which freeholders pursued individual defendants whose particular relationship to the Company gave the council immediate disciplinary purchase, rather than the wider circle of repeaters of a report.
79	72	of the Said Complain[t] to the great Grief and discontent of him and family as well as a Probability of being Depriv[d] and withdrawn from the Society and Company of Such Honest People as he us'd to converse with by reason and under Colour of the Said Snows false and Mallicious report aforesaid. Wherefore Humbly Prays the Premisses may be maturely considered and Justice done him as the Nature of the offence requires. The Said Rinatys Snow being Present Says he dont know but he might Say as the Said Powill hath Sett forth in his Petition but with this difference that 'twas not through his own Imagination or Mallice he having heard it Spoken by Severall persons, Especially by Abram Dorman Sold[t] That the Said Powill attempted to hang him- self and was Cutt down by one of his blacks. Abram Dorman being Sent for and askt how he came	Powill set out that the report caused great grief and discontent to him and his family, and threatened to deprive him of the society and company of the honest people with whom he was used to converse, by reason of Snow's false and malicious report. He humbly prayed that the premises be maturely considered and justice done him as the nature of the offence required. Rinatys Snow, being present, said he did not know but he might have said as Powill had set out in his petition, with this difference: that it had not come from his own imagination or malice, since he had heard it spoken by several persons, and especially by Abram Dorman, soldier. Dorman had reported that Powill had attempted to hang himself and had been cut down by one of his slaves. Abram Dorman was sent for and asked how he had come to raise such a scandal of Powill. He said he had heard Thomas Tompson, steward, say that he had heard Powill had attempted to hang himself and had been cut down by one of his own slaves. Thomas Tompson was sent for and asked who he had heard say that Powill had attempted to hang himself. He answered that he had heard it publicly talked of by several persons, both within and without

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
		to raise Such a Scandall of the Said Powill, Says he heard Thomas Tompson Steward Say that he heard M[r] Powill had Attempted to hang himself and was cutt down by one of his own Blacks. The Said Thomas Tompson was Sent for and Interrogated who he heard Say the Said Powill had Attempted to hang him- self made answer he heard it Publicly talkt of by Severall both within and without the Castle but cant remember who he heard Aks Say So, unless twas Joseph Bates, who being Sent for Says he heard Such discourse as aforesaid of y[e] Said Powills hanging himself by Severall Persons as Brome and others as they were Standing at the Castle Gate. Upon consideration of the Scandall aforesaid being broacht and talkt of among the Generality of the People and no Per- ticular or Proper Author being found Snow having clear[d] himself and the Last Person that is found to talk most of Said Scandall and telling it openly Especially to y[e] aboves[d] Dorman and others is the Said Thomas Tompson, who being asx[?] Misjudicature Margin Notes: Snows reply Evidence Ditto Tompson found the agressor [...]	the castle, but could not remember who had said so, unless it was Joseph Bates. Bates was sent for. He said he had heard such discourse of Powill's hanging himself from several persons, including Brome and others, as they were standing at the castle gate. The council considered that the scandal had been broached and talked of among the generality of the people, with no particular or proper author found. Snow had cleared himself, and the last person traced as talking most of the scandal, especially to Dorman and others, was Thomas Tompson. Interpretations The method by which the council traced the chain of repetition exposes the institutional response to slander in a small settled community. The complaint named Snow as the soldier-source of the report against Powill; Snow named Dorman; Dorman named Tompson; Tompson named Bates; Bates named Brome and others at the castle gate. Each questioning of a named person was conducted in the council's presence with the previous link brought before it, and each defendant was free to clear himself by identifying a prior source. The procedure converted the council into a tracing-back court for collective rumour, and the chain ran for at least five persons without arriving at a fixed author. The consequence was that no single defendant could be held as the originator of the report, but the council could identify the most active repeater as the person whose conduct had given the rumour its currency. Tompson's identification as the aggressor, on the ground that he had been telling the scandal openly to Dorman and others, settles the council's approach to slander where no original author can be traced. The doctrine treated the principal repeater as the offender for purposes of council discipline, regardless of whether he had invented the report or had heard it first from another. The result places the liability for rumour on its most visible carrier rather than on its untraceable origin, and creates an incentive for the population to suppress repetition of damaging reports they have heard rather than rely on the defence that the reports came from elsewhere. The position of Thomas Tompson as steward placed him in a role of considerable visibility on the establishment. The castle steward had charge of the household provisioning, hospitality and accounts, with daily contact with the soldiers of the garrison, the servants of the establishment and visiting freeholders. The Joseph Tompson named earlier in the present series as a witness to deeds and wills, who has appeared since 27 November 1711, may be the same man here holding the steward's office, or alternatively a separate brother or kinsman. A steward in the position of an early eighteenth-century governor's household held an office of trust comparable to that of a butler or major-domo, with responsibility for the daily food, drink and lodging of the establishment. The reference to the castle gate as the place where Bates had heard the discourse from Brome and others identifies the same physical location at which the soldier-recruitment for the July conspiracy had taken place on 6 July 1713, when John Lane had pressed John Davis to fetch his musket. The castle gate operated as the forum of garrison gossip, where soldiers passing in and out of duty stopped to talk and where reports of every kind, from grievances about cheese rations to imputations against principal freeholders, circulated freely. The council's tracing of the present slander to the castle gate confirms that the place was the centre of unregulated information exchange on the establishment. Speculations The chain of five named repeaters traced through the council's questioning, with each person able to identify the next link back, indicates that the report had

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			circulated for some time before reaching Powill's notice. The structure of the questioning, with each link saying he had heard it from the next named person, shows that the report had passed through the garrison and freeholder circles with sufficient repetition for the chain of transmission to be reconstructible. The absence of any clear original source, despite the chain being traceable for at least five repetitions, suggests that the report had probably begun as a domestic incident within Powill's household that had been observed or surmised by one of his slaves or servants, and then leaked into general conversation through channels that the questioning could not reach without examining the domestic establishment of the plaintiff. The decision of Tompson to identify Joseph Bates, with the qualification unless twas Joseph Bates, indicates that Tompson was attempting to comply with the council's requirement to name a source while preserving the possibility of retraction. The hedged identification placed the onus on Bates without committing to a definite charge, and gave Tompson the option of saying, if Bates denied it, that he had merely supposed Bates to be the source. The pattern is consistent with the pressure under which a witness gave evidence before the council, with the requirement to be useful to the institution balanced against the risk of being held to a false attribution. The finding of Tompson as the aggressor turns on the substance of his conduct as the most active repeater, rather than on his ability to name a definite source.
80	73	Inoffensive harmless Civill man, and not given to upbraid or Staine any Persons reputation and being Sorry he Should talk So much for- geting who he heard Speak the words aforesd Ordered. That the Said Thomas Tompson ask the Said Powills Pardon Publickly and all Persons Strictly forbidden to upbraid the Said Powill with the Scandall aforesaid upon Pain of being Proceeded against and to Suffer Accordingly. Whereas Jonathan Beals Orphans haveing Sevrall Accounts and Sums of money due to them from the Estate of George Hoskison deceasd which for Some years has Laine unadjusted or brought into a Proper method Sufficient to give the Said Orphans a true Idea of their Just Demands. It is therefore Ordered. That M[r] Carne Guardian to Richard Beale and Gabriell Powill who hath married the Said Hoskisons wid[w] Do Each of them make Choice of two Honest men to Examine into and State the Said Orphans accounts Depending w[th] the Said Hoskison or any other Person between this day, and y[e] 20[th] of Novemb[r] next ensuing Present y[e] Same Methodiz'd, to Govern[r] and Councill, the Councill day following that y[e] whole Acc[ts] may be Enterd according[ly] to prevent ffrauds or any farther Dispute on this Matter. William Coales free planter Presented his Petition Seting forth therein That he Stood Indebted unto the Honoura[ble] Company a greater Sum of money then He Should be able to Pay in many years, Espe-	Tompson was acknowledged by the council to be an inoffensive, harmless, civil man, not given to upbraiding any person or staining a reputation. He expressed sorrow that he should have talked so much, having forgotten who had spoken the words to him. The council ordered Tompson to ask Powill's pardon publicly. All persons were strictly forbidden to upbraid Powill with the scandal in question, on pain of being proceeded against and suffering accordingly. The orphans of Jonathan Beale had several accounts and sums of money due to them from the estate of George Hoskison deceased. The accounts had lain unadjusted for some years and had not been brought into any proper method sufficient to give the orphans a true idea of their just demands. The council ordered that Carne, as guardian to Richard Beale, and Powill, as the present husband of Hoskison's widow, each choose two honest men. The four were to examine and state the orphans' accounts depending with Hoskison or any other person, between the present day and 20 November 1713. They were to present the same methodised to the Governor and Council on the council day following, so that the whole accounts might be entered accordingly, to prevent frauds or any further dispute on the matter. William Coales, free planter, presented his petition. He set out that he stood indebted to the Honourable Company in a greater sum of money than he should be able to pay in many years. The present unhappy time of drought and death of cattle made his position worse. Other sums were due to several persons for the necessities of his wife's late illness before her death, and for his own long and unstable sickness. The combination had reduced him to a very low and deplorable condition. He and his four small children were ready Interpretations The remedy ordered against Tompson, that he ask Powill's pardon publicly, applies the sanction of public retraction as the principal mechanism of slander redress on the island. The order operates as a substitute for monetary damages, on the understanding that public acknowledgement by the most active repeater would unwind the circulation of the rumour more effectively

		cially at this unhappy time of Drought and Death of Cattle &c[a] besides other Sums of money due to Severall Persons for Necesaries for his wife Lately deceas[d] Sicknes his Long and Changable Sicknes which has reduced him to a very Low and Deplorable Con- dition, Insomuch he and his four Small Children is ready to Margin Notes: ask M[r] Powills Pardon &c none to upbraid him. Beals Orphans Acc[ts] unadjusted The Same to be Examin'd & Stated by two Honest men. and then brought into Gov[r] [...] [...] Will[m] Coales repre- sent his Poor Condition	than any financial penalty. The general prohibition against any person upbraiding Powill with the scandal, on pain of being proceeded against, extends the council's authority over future repetitions, so that the order serves both as a remedy for past damage and as a forward-looking restraint on continued talk. The appointment of four honest men, two chosen by Carne as guardian and two by Powill as the husband of Hoskison's widow, sets up the audit procedure for the Beale orphans' accounts on a contradictory basis. Each side nominates appraisers, the four sit together, and the methodised account is presented to the council for entry. The mechanism replaces the previous pattern, by which the council had attempted to determine the accounts directly, with an external commission whose two pairs of appraisers stand for the two competing interests. The arrangement parallels the two indifferent men used in the bull valuation of 2 September 1713, but doubles the number to give each side an equal voice. The phrase methodised means brought into ordered form, with debits and credits arranged on a systematic basis rather than presented as an unstructured running list. The deadline of 20 November 1713, with presentation on the council day following, places the audit on a six-week timetable. The interval is brief by the standards of the present orphan estates, which had lain unadjusted since the audit of 25 September 1710 and through the subsequent proceedings, but reflects the judgement that the time for indeterminate delay had passed. The phrase to prevent frauds or any farther Dispute on this Matter records the purpose explicitly, namely that further delay was itself the source of the difficulty, since each year that passed without settlement gave further opportunity for malicious and unjust accounts to be entered against the estate. The William Coales petition opens a fresh line of business that bears on the consequence of the drought and the death of cattle. Coales identifies three combined causes of his deplorable condition: the original Company debt that exceeded his capacity to pay; the additional charges arising from his late wife's sickness; and his own long and unstable sickness. The combination places him as a case of the small freeholder reduced to dependency by the drought, with the four small children naming the household at risk. The same William Coales had been confirmed in 20 acres at the title day of 29 March 1711, taking the freehold formerly held by his late father Henry Coales through John Worrall from Black Oliver, and had received a twelve-month fencing extension on 9 January 1712 on the ground of his sick wife, several small children, and lack of slaves. The present petition therefore brings before the council the same household that had been on the margin for at least two years before the drought began. Speculations The pairing of the Tompson order with the Beale orphans' audit, in the same consultation that opens with the Powill slander complaint, indicates that the council was moving through a connected sequence of business arising from Powill's marriage to Mary Hoskison. The slander against Powill, the orphans' accounts against the Hoskison estate of which Powill is the administrator in right of his wife, and the four-man commission to settle those accounts all bear on Powill's position as the new master of the Hoskison household. The council's priority appears to be the orderly consolidation of all matters concerning Powill into definite settled outcomes, with the slander redressed by public apology and the accounts referred to a fixed timetable, so that the broader management of the consolidated estate can proceed without further interruption from collateral disputes. The choice to require nomination of honest men by each side, rather than to appoint the appraisers itself,

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			probably reflects the council's judgement that its prior determinations of the Beale orphans' accounts had produced contested outcomes, and that a commission named by the parties themselves would carry greater authority with both sides. The arrangement places the responsibility for the appraisal back on the parties whose interests are at stake, and removes the council from the role of judge in its own previous determinations. The same consideration had probably underlain the choice of a jury of freeholders to determine the Beale partition and the Powill mortgage causes of recent proceedings, and now extends from the determination of contested causes to the appraisal of contested accounts.
81	74	to Starve haveing no Provision nor wherewith to buy any Wherefore Humbly prays he may be Employ[d] as a Carpenter in the Service of the Honourable Company haveing a good Genious and Insight in that trade, by which hopes to Pay his Said Debt in a Little Time and put into a better Condi- tion to Provide for his familie than otherwise could Expect or pretend to. Upon Consideration of the Said William Coales poor and Miserable Condition and that he is a Sober quiet man. Ordered. That his request be granted allowing him four Shillings per day finding himself dyett. William Slaughter Serj[t] Presented his Petition this day Setting forth That he having but fifteen Acres of Leased Land and Severall Children to bring up and Maintaine he Cannot with the greatest care and Industry raise Provisions Enough for their Subsistance Wherefore Humbly Prays we would take the Same into Consideration and to grant him about Ten Acres of the Honoura[ble] Companys Waste Land Ly- ing in Powles Valley to make Plantation on. The Petitioner is answered that having had Severall Persons as well as himself Petition[d] formerly for this Same Peice of Land which if Lett would be very Prejudiciall to the neigh- borhood and cause many disputes therefore thought fitt and Accordingly once more. Ordered. That the aforesaid Peice of Land Petition[d] for by the said William Slaughter Ly Common for the Publick good but if he can Petch upon any other Land that wont Prejudice any Person he may have a grant thereof for the Bennefitt of his familie. Samuel. Margin Notes: and Prays to be Employ[d] as a Carpenter &c[a] allowed as Such 4 [...] p[er] day Serj[t] Slaughters requests to hire Land reasons to reject y[e]	Coales added that he and his four small children were ready to starve, having no provisions and nothing with which to buy any. He humbly prayed that he be employed as a carpenter in the service of the Honourable Company, having a good understanding and insight in that trade. By his employment he hoped to pay his debt in a little time, and to put himself in a better condition to provide for his family than he could otherwise expect. The council considered Coales's poor and miserable condition, and that he was a sober and quiet man. The council ordered the request granted, allowing him four shillings per day, finding himself his diet. William Slaughter, sergeant, presented his petition. He set out that he had only fifteen acres of leased land and several children to bring up and maintain. With the greatest care and industry he could not raise enough provisions for their subsistence. He humbly prayed that the council take the matter into consideration and grant him about ten acres of the Honourable Company's waste land in Powles Valley, to make a plantation. The council answered that several persons besides Slaughter had formerly petitioned for the same piece of land. To let it would be very prejudicial to the neighbourhood and cause many disputes. The council therefore thought it fit, and ordered, once more, that the piece of land Slaughter had petitioned for lie common for the public good. If he could find any other piece of land that would not prejudice any person, he might have a grant of it for the benefit of his family. Interpretations The award to Coales at four shillings per day, finding his own diet, fixes the rate for a free planter with a good understanding of the carpenter's trade at the level between the standard hired-slave rate of one shilling and sixpence and the specialist craftsman ceiling of six shillings set on the same council day by Cleve and Shrove. The award places Coales in a middle category, neither indentured labourer nor specialist contracted from England, but a free planter taken into employment on relief grounds. The phrase finding himself dyett, meaning supplying his own food, distinguishes the rate from the higher rates of Cleve and Broome, both of whom received diet at the Company's table. The differential of two shillings between the with-diet and without-diet rate, set against the present rate, indicates the value the council placed on board at the establishment. The Coales arrangement converts the petitioner's position from that of a debtor charged on the store books to that of a servant of the Company drawing pay against which his debt can be reduced. The mechanism applies the principle of the 9 July 1713 advertisement, by which indebted soldiers were offered fortification labour at 1s 6d per day with their pay applied to their debt, to a free planter on relief grounds. The consequence is that Coales transfers from the freeholder side of the establishment to the labour pool, with his store account converted from a static deficit

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
		Same	into a running ledger against which his daily wages will be credited. The Slaughter refusal carries forward the principle, applied to Orchard on 4 August 1713 in respect of the Pigeon Rocks parcel, that the council retained certain pieces of Company waste land against private grant where the interest of the neighbourhood required them to remain in common. The present case extends the principle from a Company programme of cultivation, in Orchard's case the lemon garden, to a general interest in keeping certain parcels open as common ground for the public good. The phrase the public good, used in the present consultation as the ground for the refusal, marks the council's first explicit reference to public benefit as the test for retaining Company waste land in common, as distinct from the interest of the Company's own herds or programmes. The repetition of the rejection, with the council noting that several persons besides Slaughter had formerly petitioned for the same piece, indicates that the pressure on this particular parcel had reached the point at which the council needed to settle its retention in common on a permanent footing. The decision to declare the parcel common for the public good, rather than merely to deny the present application, fixes the status of the land against future applications by any planter. The mechanism preserves the principle of Slaughter's invitation to find any other parcel that would not prejudice any person, but removes the Powles Valley parcel from the pool of grantable waste land. Speculations The choice of four shillings per day for Coales, fixed without diet, probably reflects the council's judgement of the rate at which the labour of a sober free planter as carpenter could be obtained on the island during the drought. The award reaches a level above the hired-slave rate but well below the specialist contracted craftsmen, and provides a ceiling for relief employment of free planters. The rate gives Coales a daily wage of approximately one pound four shillings per six-day week, against which the cost of feeding his household, including his four small children, would have to be set. The arrangement places the practical burden of survival on Coales's ability to manage his earnings, with the council having converted the static problem of a starving family into an employment relation. The repeated pressure on the Powles Valley parcel, with several previous applications, indicates that the parcel had a particular advantage of soil, water or access that made it more desirable than other unimproved waste land. The council's refusal to grant it to any single planter, despite repeated applications, probably reflects a calculation that the benefit of its remaining in common was greater than the benefit of letting it to any one individual. The principle is consistent with the pattern visible in the High Peak and Old Woman's Valley refusals of 9 December 1712, in which valuable dry-weather pasture was reserved against the interest of any single petitioner.
82	75	Samuell Brome, Thomas De La Rose writers, John Hoskison Surgeons mate Richard Cleve Joyner Thomas Thompson Steward and Andrew Bergh Cooper and Coxswaine constantly at the Honourable Companys Lower Table Pre-Petition this day Setting forth the great want and Necessi[y] in for a Little Liquor to drink at meal times to their Comfort their Sperits in this time of Scarcity and b[p] Provision, Upon Consideration of the hardships at Present and for Some time past hath undergon[e] of the Scarcity of Provision. Ordered.	Samuel Brome and Thomas De La Rose, writers; John Hoskison, surgeon's mate; Richard Cleve, joiner; Thomas Thompson, steward; and Andrew Bergh, cooper and coxswain, all constantly at the Honourable Company's lower table, presented a joint petition. They set out the great want and necessity for a little liquor to drink at meal times, to cheer and comfort their spirits in this time of scarcity and dearth of provisions. The council considered the hardship the petitioners had been undergoing at present, and for some time past, by reason of the scarcity of provisions. The council ordered the petitioners allowed the quantity of two quarts of arrack among them all each day, to their victuals, noon and night.

Jon[a] Dovetons request to have [...] repaid by Hugh Bodley [...] [...] [...]	Jonathan Doveton and others, the executors of Robert Leech deceased, petitioned. They were preparing the inventory of his estate and had accounts depending to make up and adjust with the orphans of William French. They humbly prayed that an order be made for the orphans' effects to be valued or sold at auction, in order to determine the share belonging to Leech's widow, one of the William French orphans. Jonathan Doveton, executor of his deceased father William Doveton's estate, presented a petition on behalf of Elizabeth Doveton, orphan. Some time before, she had been put out as a maidservant to Hugh Bodley for a term of years, with a sum of money. She had not liked the service, Bodley being very morose and using her beyond measure. She quitted the service and had been from him some years, by order and consent of Governor Roberts. Doveton humbly prayed that the sum of money be repaid into his hands for the use of Elizabeth Doveton. Interpretations The award of two quarts of arrack daily to the six men of the lower table, divided between them to their victuals at noon and night, fixes the institutional ration at approximately one third of a pint per man per meal. The composition of the petitioners exposes the hierarchy of the lower table. Brome and De La Rose are the writers under the clerk and storekeeper, drawn from the soldier-trade pool; Hoskison is the surgeon's mate appointed on 8 April 1712; Cleve and Thompson hold their offices under direct Company instruction with diet allowance; Bergh combines the trades of cooper and coxswain. The group represents the middle stratum of the establishment, neither senior councillors nor common soldiers, and the formal grant of a daily ration to them marks the council's recognition that this body had a definable institutional standing entitled to a defined allowance. The lower table was the dining establishment of the Honourable Company at the United Castle, served at a tier below the general table at which the Governor, council and assistants took their meals, and provided the daily diet allowance attached to specified Company offices. The Leech executors' order concerns the method by which the effects of an orphan beneficiary, embedded in a deceased planter's estate, were to be converted into a clear share. Robert Leech had been confirmed in 14 acres through his marriage to Mary French on 25 September 1711, the parcel having been seized from George Hoskison's holdings as part of the French orphans' entitlement; he had since died and his will had been proved in late August 1712 with Jonathan Doveton as one of the executors. His widow Mary remains identified as one of the William French orphans, so her share in the wider French estate now passes through Leech's executors to her. Sale at auction follows the principle of conversion already applied in the Hoskison and Belvird estates, by which non-cash assets were reduced to a sterling sum that could be cleanly allocated among multiple claimants. The mechanism allows the distinction between the widow's individual share and the residual orphans' share to be made on a definite financial basis rather than left to be fought out over the condition of particular cattle, slaves or provisions. The Doveton petition for the return of money paid for Elizabeth Doveton's apprenticeship to Hugh Bodley brings before the council the same arrangement that had been refused on 9 December 1712, when Bodley had then petitioned for her return and the council had recorded that Governor Roberts had removed her from him for being too severe. The present petition takes the matter to its financial conclusion. The money originally paid in for the apprenticeship had remained with Bodley despite the termination of the service, and the council is now asked to require repayment for the benefit of the

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			orphan. The principle is that money paid as consideration for a contracted service forfeits its character on termination of the service through the fault of the receiving party, with the consequence that the orphan recovers the original capital sum even though the apprenticeship has not run its full course. The reference to Bodley as very morose and using her beyond measure carries forward the ground stated on 9 December 1712 that Roberts had removed her for severity. The phrase places Bodley's conduct in the same category as the cruelty test applied in English apprentice law of the period, by which a master's ill-usage gave the apprentice the ground for discharge from the service. The order is consistent with the pattern established by Roberts's earlier removal, which is here cited to support the continuity of the council's approach across two successive governments. Speculations The choice of the six named petitioners to bring the liquor application as a joint petition, rather than for each man to apply separately, indicates an understanding of the lower table as a defined institutional category whose members shared a common interest and a common claim. The composition crosses the trades of writing, medicine, joinery, stewardship and cooperage, but unifies them by their constant attendance at the lower table. The petition therefore advances a claim that no individual office could properly raise on its own, namely that the establishment recognise a middle stratum entitled to a daily ration on the same general principle that the general table received its supply. The council's grant of the ration in the form of a fixed quantity divided among the named men confirms the lower table as a defined collective with collective entitlements. The timing of the Doveton petition for return of Elizabeth Doveton's apprenticeship money, brought ten months after Bodley's failed application to recover the girl, suggests that Doveton's strategy had been to allow time to pass after Bodley's defeat before pressing the financial claim. The interval ensured that the question of the girl's actual return had been finally settled before the question of the consideration money was raised, with the consequence that Bodley could no longer argue for retention of the funds on the ground of a possible future resumption of the service. The phased approach to the recovery is consistent with the practice visible in other contested matters of the present series, by which the principal question is resolved first and the financial consequences pursued in a subsequent application.
83	76	the Said Hugh Bodley being now dec[d] the Petitioner desires to know by what means or of whom he may Recover the Said Sum Whereupon Ordered. That when the Said Bodleys Estate is Vallied and all Accounts Stated, if any overplus after the Companys Store debt is paid the Remainder to Sattisfie y[e] Creditors as fair as twill allow, and in the meanwhile the Widdow to be Sent to in order of Appearing before us to know She intends to pay the Said Honoura[ble] Companys Store debt. Thomas Burnham presented an Acc[ot] of Seventeen Pounds Eleven Shillings for work he had Lately furnish[d] in fencing in Some part of the Hutts Plantation which haveing bin measured and Sein[d] by Lieut[t] Cason and found good. Ordered. That the Said Thomas Burnham have Credit in	Hugh Bodley being now deceased, Doveton wished to know by what means or from whom he might recover the sum. The council ordered that, once Bodley's estate had been valued and all accounts stated, any overplus remaining after the Honourable Company's store debt had been paid was to satisfy the creditors as far as it would allow. In the meantime, the widow was to be sent for to appear before the council, so that the council might know how she intended to pay the Honourable Company's store debt. Thomas Burnham presented an account of £17 11s 0d for work he had lately furnished in fencing part of the Hutts plantation. The work had been measured and viewed by Lieutenant Cason, and was found good. The council ordered Burnham credited with the sum in his account. The Governor demanded the monthly accounts for all goods sold and delivered out of the Honourable Company's stores. Bazett answered that he would have all accounts from 25 April 1713 to the 25th of the present month ready by the next council day. The Governor desired that this be done without excuse or further delay.

		his Acc[ot] for the Sume aforesaid. The Governour made a Demand of the monthly Acc[ot]s for all Goods Sold and Deliverd out of the Hono[ble] Comp[s] Stores, to which M[r] Bazett answer'd he would gett all Acc[ot]s from the 25 of Aprill Last to the 25 Instant Ready by next Councill day, which the Governor desired might be perform'd without Excuse or farther delay. Thomas Free in the behalf of the Heir of Daniel Griffith Appeared this day with a bill of Sale for Ten Acres of Land Purchased by the Said Griffith of Gabriell Powill Lying at a Place known by the Name of the Bursleg beds which the Said Powill held in right of his first wife Margaret Beale and by Lott fell to him upon Diversion of the whole Estate, according to the Determination of a Jury of Twelve men Margin Notes: Bodley Compy dead. p[r] [...] debt to be p[d] of Effects Sold the Wid[w] Sent to to Pay y[e] Comp[s] Burnhams bill for fencing. to have Credit Inv[s] Acc[ots] Demanded. Title proved to 10. Acres Land belonging to Dan[l] Griffiths Heir.	Thomas Free, on behalf of the heir of Daniel Griffith, appeared with a bill of sale for ten acres of land. The land had been purchased by Griffith of Gabriel Powill, and lay at a place known as the Bursley beds. Powill had held the parcel in right of his first wife Margaret Beale, and it had fallen to him by lot on the division of the whole estate, according to the determination of a jury of twelve Interpretations The order on the Bodley estate sets out the priority of claims against a deceased free planter's estate. The Honourable Company's store debt stands first, with all creditors taking the remainder in such proportion as the estate would allow. The widow is to appear before the council to state how she intends to pay the Company debt, with the consequence that her own continuation in the estate, including any dower or testamentary interest, is conditional on her producing the means for the Company to be paid. The principle is the same as that applied to Hugh Bodley senior on 4 August 1713, where the standing provisions had been ordered exposed to public sale for payment of the Company debt, and is now applied to the deceased Hugh Bodley's estate as a whole rather than only the growing crop. The Burnham fencing payment, at £17 11s 0d for fenced work measured and viewed by Lieutenant Cason, gives a benchmark for the price of fencing on Company plantations. Cason held the oversight of the consolidated plantation estate under his appointment of 8 April 1712, and his viewing and approval of the work was the formal step required before credit was entered on the contractor's store-book account. The arrangement converts fencing labour by a free planter into a credit against the planter's own store account, rather than a cash payment, and so brings the small contractor into the same store-book pattern that applies to other recoverable charges between the Company and the islanders. The Governor's demand for the monthly accounts from 25 April 1713 to the present 25 October exposes the state of the storekeeper's accounts under Bazett's stewardship. The interval of six months without monthly returns indicates that Bazett had fallen significantly behind in the regular submission required since the 25 November 1712 order. Bazett's promise to have all six monthly accounts ready by the next council day, with the Governor requiring performance without excuse or further delay, places the council's oversight of the principal officer in charge of the store on a directly enforced footing. The same Bazett had been dismissed on 2 October 1712 for neglect of business, and the present demand suggests that the pattern leading to that dismissal has been recurring since his restoration in December 1712. The Free petition on behalf of Daniel Griffith's heir brings before the council the consequence of the Beale partition completed under the order of 18 October 1711. The 10 acres at the Bursley beds had fallen by lot to Gabriel Powill at that division, and Powill had subsequently sold the parcel to Daniel Griffith. Griffith had died on 6 May 1712, and the present application concerns his heir's title to the parcel. Thomas Free, the dismissed clerk who had married Griffith's widow Sarah on 4 June 1713, appears here as the representative of the heir's interest, with the title to be confirmed on production of the bill of sale. The parcel is the Pursley Bed of the 30 October 1711 partition; the Bursley beds in the present consultation render the same place. Speculations The delay of six months in Bazett's store accounts, ordered to be produced by the next council day, probably reflects the difficulty Bazett faced in reconstructing the entries during a period in which he was the principal officer of the establishment after the

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			deaths of Hoskison, Griffith and Pack. The reduction of the council to Boucher, Bazett, Cason and French had placed disproportionate weight on Bazett, and his concurrent appointment as second in council and storekeeper had given him more duties than he could discharge to the standard the Court of Directors expected. The Governor's renewed demand probably indicates that the accommodation of the past year had reached its limit, and that the council would soon need to find some relief, either by completion of the overdue accounts or by reorganisation of the duties of the senior establishment. The choice of Free to appear on behalf of Daniel Griffith's heir, rather than the heir himself or the widow, indicates that Free's marriage to Sarah Griffith on 4 June 1713 had given him the capacity to act in respect of the late Griffith's estate through his wife's interest. The arrangement places Free, recently discharged from the Company's service, in the position of administrator of an estate in which both he and his wife had interests, with the title application here brought forward in the capacity of representative rather than as the principal. The decision to bring the application now, five months after Griffith's death and four months after Free's marriage, probably reflects the time needed for the inventory of Griffith's estate to be brought into form and for the title chain to be assembled for production to the council.
84	77	men, Summon[d] on Purpose to decide the matter then in dispute between the Said Powill and Jonathan Beals Orphans in relation to the whole Quantity of Lands. Ordered. That the Said Bill of Sale be reciev[d] and Enterd in the Register Book and a Deed made for the Same Accordingly the Said Orphan or Heir of the dec[d] Daniel Griffyth haveing a just right and Title thereto. William Seale free planter appeared & laid Claim to twenty Acres of Land Lying in Sticks valley formerly the Lott land of one Jn[o] Tonkler dec[d] who gave the same to his Son John, who dying his Land fell to his Sister and daughter of y[e] Dec[d] by Bartle Nam[d] Sarah, and She being Dead her Eldest Lawfull Son P[r] Sinsnick became Sole Heir to s[d] Land of whom Seale bought it. To w[h] he has Just right. Island S[t] Helena At a Consultation Held on Tuesday the 3 Day of Novemb[r] 1713 At the United Castle in James Valley Pres[t] Benjam[n] Boucher Esq[r] Gov[r] Matth[eu] Bazett 2 in Coun[ll] Lieut[t] Tho[s] Cason Jn[o] French Assist[ts] Humphrey Edwards free Planter Presented his Humble Peti- tion this day Setting forth the Miserable and Deplorable Condition he and familly is in by this present years dearth and great Consumption of all kinds of Cattle Provisions &c[a] thereby reduced to want and Penury being no ways able to Subsist and maintaine his Said Familie. Wherefore Humbly Prays to be Entertain'd in the Honourable Companys Service as a Montrofs[?] having Some years	These twelve men had been summoned to decide the matter then in dispute between Powill and the orphans of Jonathan Beale concerning the whole quantity of lands. The council ordered the bill of sale received and entered in the register book, and a deed made accordingly. The orphan, the heir of Daniel Griffith, had a just right and title to the parcel. William Seale, free planter, appeared and laid claim to twenty acres of land in Sticks Valley. The land had formerly been the lot land of John Tonkler deceased. He had given it to his son John, who had died, and the land had fallen to his sister, the daughter of the deceased by Bartle, named Sarah. On Sarah's death her eldest lawful son Peter Sinsnick had become sole heir, and Seale had bought the land of him. Seale was found to have a just right to the parcel. Island of St Helena. Consultation held at the United Castle in James Valley on Tuesday 3 November 1713. Present: Benjamin Boucher Esquire, Governor; Matthew Bazett, second in council; Lieutenant Thomas Cason and John French as assistants. Humphrey Edwards, free planter, presented his humble petition. He set out the miserable and deplorable condition that he and his family were in by reason of the present year's dearth and the great consumption of all kinds of cattle, provisions and other necessities. He was reduced to want and penury, with no means of subsisting his family. He humbly prayed to be entertained in the Honourable Company's service as a matross, having some years Interpretations The Free petition resolves a fragment of the Beale partition that had remained in circulation since 30 October 1711. The Pursley Bed parcel, allotted to Powill at that partition, had been onward-sold by him to Daniel Griffith, and now passes by inheritance to Griffith's heir. The order to enter the bill of sale in the register book and to make a deed accordingly applies the procedure established for confirmed titles in the deed delivery of 4 August 1713 to a parcel whose original confirmation had been to a different holder. The mechanism allows a parcel's title to be carried forward from holder to holder by the sequence of bills of sale, with each successor entered in the register

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
		ago Margin Notes: Bill of Sale to be Entered W[m] Seales Title prov[d] to 20 acres Land bot of P[r] Sinsnick Humph[y] Edwards request to be Entertain'd as a Montrofs	without need for a fresh title trial, provided the bill of sale is produced and the chain to the original confirmed holder is unbroken. The Seale claim to twenty acres in Sticks Valley moves backward through a more elaborate chain. John Tonkler deceased had held by original lot allocation; he gave it to his son John, who died; it fell to his sister Sarah, daughter of Tonkler by his wife Bartle; on Sarah's death it passed to her eldest lawful son Peter Sinsnick; from him Seale had bought it. The chain therefore runs through four successions in two generations, three of them by descent on the death of the holder without issue able to succeed, and one of them by living devise from father to son. The principle is that an original lot allocation passes by descent through whatever sequence of survivors brings the parcel to the present claimant, and the production of the chain together with the bill of sale from the final descended holder fixes the title in the buyer. The pattern of the Tonkler chain exposes the effect of high child mortality and irregular marital sequence on the descent of lot land. The estate passes from the father to the eldest son, fails on that son's death, returns up the generation to the sister, fails again on her death, and descends to her son by a marriage outside the Tonkler name. The result is that the Sticks Valley parcel arrives at the present registered holder through a path that requires the production of evidence for each link in the chain. The role of the council in such cases is to receive that evidence in full and to enter the title in the register where the chain is shown to be unbroken. The Humphrey Edwards petition opens with the same language used by William Coales on the previous council day, describing miserable and deplorable condition by reason of the present year's dearth. The application to be entertained as a matross places Edwards in the artillery sub-establishment as a category of relief employment for a free planter reduced by the drought. The matross was the junior of the artillery, ranking below the gunner's mate and assisting the gunner with the daily care, loading and firing of the great guns at the fortifications, with the consequence that an inhabitant entertained in that capacity drew the soldier's pay together with the prospect of any matross's additional allowance. The matross application places Edwards in the same category of inhabitant-to-soldier transition visible in the earlier cases of King, Welch and Vesey, though here in the direction of conversion of a free planter into a paid Company servant. Speculations The pattern of two relief applications by free planters in two successive council days, Coales as carpenter on 13 October 1713 and Edwards as matross on 3 November 1713, indicates that the pressure of the drought has reached the point at which the council can expect a continuing flow of applications from established freeholders for entertainment in Company employment. The relief categories accommodate the applicants according to their trade or capacity: Coales as carpenter at four shillings per day finding his own diet, Edwards probably to be settled at the matross rate set for John William Tysor on 24 September 1712. The council's response, accepting both petitioners into Company service on relief grounds, indicates a settled policy of converting struggling free planters into wage-earning Company servants rather than allowing them to default on their store debts.
85	78	ago been in that Employ with the Assurance of being very Dilligent and faithfull in the discharge of his duty. Upon Consideration the Said Humphrey Edwards formerly Servd the Honourable Company and one that behaved himself very well in all respects, and the Hardship	Edwards added that he had some years before been in that employ, and gave assurance that he would be very diligent and faithful in the discharge of his duty. The council considered that Edwards had formerly served the Honourable Company and behaved well in all respects, and that he and his family were in great hardship for want of necessaries.

		he and his familie is now under for want of Necessaries. Ordered. That the Said Edwards be Entertaing as a Montrofs according to his desire and his pay to Commence from this day. John Welch Montrofs Petition[d] this day Settling forth That being Destitute of a Habitation and daily Necessitated to buy Provisions for himself & familie which at this unhappy time being very Scarce Humbly Prays we would take the Same into Consideration and to grant him the Lend of Sixty Pounds in Store Credit to make up a Sume of One Hundred Pound Pounds to buy and Purchase a Howse Provisions &c[a] of William Worralls formerly in the Possession of Richard Cleve offering two Sufficient men for Security Ordered. That upon the Said Welches giving Security for the Same he Petitions for as Shall be approv'd of, he have Credit Accordingly for one year paying after the rate of Eight per Cent per Annum Interest. John Sinsnick Soldier Presented his Petition This day Setting forth That Some time Since he was Employ'd as a Stone Layer at the Building Prosperousbay House for the Space of fourteen days and a half for which According to usuall Custom and what others have had for Such work he Expected Six Shillings per day, but when he Came to Reckon and to make up his Account in the Stow books, found instead thereof 110 Margin Notes: for reasons his request Granted Jn[o] Welch his request for y[e] Lent of 60[...] to purchase in part, a House &c[a] his request granted upon Security Jno Sinsnicks dem[d] [...] [...] [...] at Prosp[s] bay at [...] day	The council ordered Edwards entertained as a matross, according to his desire, with his pay to commence from the present day. John Welch, matross, petitioned. He set out that he was without a settled house and was daily compelled to buy provisions for himself and his family. At this unhappy time provisions were very scarce. He humbly prayed that the council take the matter into consideration and grant him the loan of £60 0s 0d in store credit, to make up the sum of £100 0s 0d. He wished to buy a house and provisions from William Worrall, formerly in the possession of Richard Cleve. He offered two sufficient men as security. The council ordered that, on Welch giving security as the council should approve, he was to receive credit accordingly for one year, at the rate of 8 per cent per annum interest. John Sinsnick, soldier, presented his petition. He set out that some time before he had been employed as a stone layer at the building of the Prosperous Bay house for fourteen days and a half. According to usual custom, and what others had received for such work, he expected six shillings per day. When he came to reckon and make up his account in the store books, he found instead Interpretations The Welch loan extends the pattern of the Worrall purchase of 4 August 1713 by a third turn. Worrall had bought Cleve's house, land and provisions at £120 0s 0d, taking a £50 0s 0d loan from the Company at 8 per cent. Worrall is now selling on to Welch at £100 0s 0d, with Welch taking a £60 0s 0d loan on the same terms. The combined effect is that the Company has financed two successive purchases of the same property within three months, with the property passing from Cleve to Worrall to Welch and the store-book debt rolling forward from one buyer to the next. The £20 0s 0d reduction in the sale price between the two transactions probably reflects the consequence of the drought-induced fall in the value of standing provisions, since the price the Company itself was prepared to pay for cattle and crops had fallen across 1713. The repetition of the 8 per cent rate on the Welch advance confirms that figure as the settled rate for Company credit on substantial property purchases through the store books. The rate has been applied consistently to the Porteous advance of 27 November 1711, the Bell purchase of the Belvird country plantation of 24 July 1712, the Worrall purchase of 4 August 1713 and now the Welch purchase. The pattern fixes 8 per cent as the standing price of secured Company credit on the island, and parallels the same rate that had been the subject of the Carne controversy of March 1711, where a 6 per cent bond had been described as clandestinely drawn. The settled application of the higher rate over the period since then indicates that the institutional acceptance of 8 per cent as the proper rate has reached its conclusion. The Sinsnick petition opens a complaint about the rate paid for stone-laying labour at the Prosperous Bay house. The petitioner claims six shillings per day under usual custom and what others have had, against an amount entered in the store books that he found unsatisfactory. The six-shilling rate matches the rate set by Cleve and Shrove on 4 August 1713, but the Prosperous Bay house is a Company project and the question is whether the stone-laying rate paid on that project should equal the six-shilling specialist rate or follow some lower benchmark. The Prosperous Bay house was the construction begun at the Prosperous Bay site, where Roberts had on 9 April 1711 proposed a second irrigation project across 200 acres of fine ground sheltered for cultivation; the present petition indicates that construction at Prosperous Bay had progressed to

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			the point at which stone-laying labour was being employed there for fortnight-length engagements. The Edwards admission as matross places him on the artillery sub-establishment alongside Welch, with both men named in the same consultation. Edwards's previous service in that capacity, and his good conduct in it, give the council the ground to admit him directly rather than to settle him at a probationary rate as Tysor had been settled on 24 September 1712 at £15 0s 0d per annum. The consequence is that Edwards moves immediately into the matross pay scale, with the relief consequence that his store debt can be paid down from his settled wages in the same manner already applied to Coales as carpenter at the previous consultation. Speculations The succession of three property transactions on the same parcel, from Cleve to Worrall to Welch, all financed through the Company store-book credit system, indicates that the property in question had entered a circulation pattern that the council was not impeding. Each new buyer brought credit on different terms, and the price fell with each successive transaction. The pattern is consistent with a market in which the seller in each case was prepared to accept a lower price for the benefit of obtaining cash now against future Company credit, rather than to hold the property for a higher price that the buyer could not pay in cash. The Company's role as financier of the chain placed the institution in the position of credit broker for a small but active property market within the freeholder and matross classes. The submission of the Welch application immediately after the admission of Edwards as a matross, in the same consultation, suggests that the signal of the Edwards admission encouraged Welch to bring forward his property application. The two men hold the same matross rank, and the visible recognition of relief employment for an established matross may have given Welch the confidence to approach the council for the credit he needed. The pattern of applications clustering at points of visible council generosity is consistent with the small-island institutional pattern, in which one favourable decision tended to draw applications of a similar kind in the days immediately following.
86	79	no more than Eighteen pence per day, which being a Mistake Either by the then Store keeper or him that gave in the Acco[t] of work, Humbly Prays he may be Allow'd and have Credit in his Acc[ot] for the time he workt at 5 p[er] day As also that he might be Satisfyd in Like manner for Nineteen Alarms that he made at the Bay and Run with to the Fort at 5 Each time as has bin for Some time paid other Soldiers for Encouragem[t] to Look out well and make timely Alarms to prevent Surprise. Ordered. That the Said John Sinsnick be allowed four Shillings p[er] Day for the fourteen days and a half he workt about the Bay House and five Shillings a time for Each Alarm Accord- ing to the usuall Custome. Abraham Dorman Soldier Humbly Petition[d] this day Praying to be admitted and restord to his Armes againe which was taken from him upon Some Suspicious words Spoken about the intent	Sinsnick added that the sum entered in his store-book account stood at no more than 18d per day. The figure was a mistake either by the storekeeper of the time or by the man who had given in the account of work. He humbly prayed to be allowed and credited in his account for the time he had worked at 5s per day. He also asked to be paid in the same manner for nineteen alarms that he had given at the Bay and had then run with to the fort. He claimed 5s for each alarm, the rate paid for some time past to other soldiers as an encouragement to keep a good lookout and to give timely warning against surprise. The council ordered Sinsnick allowed 4s per day for the fourteen days and a half he had worked about the Bay House, and 5s for each alarm, according to the usual custom. Abraham Dorman, soldier, humbly petitioned. He prayed to be admitted to his arms again. They had been taken from him on suspicious words spoken about the intent of his fellow soldiers to seize the Governor and Council. The council noted that Dorman had been very civil and quiet during the time he had done no duty, and that he was of a repentant disposition. The council ordered him admitted to his arms and duty again, during his good behaviour, and provided nothing more appeared against him. Rinedus Snow, soldier, presented his petition. He set out that Gabriel Powill, freeholder, had taken

		and designe of his fellow Sold[rs] Seizing the Govern[r] & Councill &c[a] The Said Dorman haveing bin very civill and Quiete dureing the Time he has done no duty and of a repentant Disposition. Ordered. That he be admitted to his Armes and Duty againe Dureing his good behaviour, and nothing more appears against him. Rinedus Snow Soldier Presented a Petition this Day Setting forth that Gabriell Powill free holder, Upon the Petitioners Saying he heard the Said Powill had Attempted to hang himself, did Some-time Since call him Severall Scurrulous Names as Rascall, and Rogue, and would prove him So, for which abuse desired a warrant might be granted and the Said Powill Summon[d] to appear the next Councill day to make y[e] Complain[t] Sattisfaction, Ordered. Margin Notes: and also[?] for 19 Alarms at 5 [...] Each time allowed 4 [...] day & for y[e] Alarms 5 [...] Each time. Abra[m] Dorman Petition[d] to be restord to his Arms &c[a] Granted. Rinedus Snows Compl[t] against Gab[l] Powill	offence at his report that he had heard Powill had attempted to hang himself. Powill had called him several scurrilous names, including rascal and rogue, and had said he would prove him so. Snow desired a warrant against Powill, and that he be summoned to appear at the next council day to make satisfaction for the abuse. Interpretations The Sinsnick award resolves the dispute over the stone-laying rate at the Prosperous Bay house in a manner that fixes the daily wage at 4s per day, rather than the 6s claimed by the petitioner or the 18d entered in the books. The council's choice of an intermediate figure marks the distinction between the specialist craftsman rate of 6s per day, applied to Cleve and Shrove for appointments at the United Castle establishment, and the project-based stone-laying rate of 5s per day already visible in the 9 January 1711 costing. The award places Sinsnick at the lower rate of 4s per day, which probably reflects his soldier's standing as distinct from the free craftsmen of the higher rates, and fixes that lower figure as the rate for soldier stone-laying at outlying construction sites. The award of 5s per alarm, with reference to the custom of other soldiers, places the lookout's reward on a per-alarm basis as an incentive against surprise. The Dorman restoration to arms applies the principle of conditional restoration of a soldier removed from duty on suspicion. Dorman had been one of the five accomplices disarmed on conditional good behaviour on 8 July 1713, in contrast to the five ringleaders committed to prison in irons. The intervening four months of civil conduct, with the soldier under continuing disarmament, supplied the basis for the council's decision to restore him. The conditional terms, during his good behaviour, and provided nothing more appears against him, preserve the option of renewed disarmament if the soldier's conduct should fall short. The pattern indicates the structure of the council's response to the July conspiracy: ringleaders to be punished, accomplices to be disarmed pending demonstrated reform, and restoration on demonstrated good behaviour after a period of probation. The Snow petition opens a counter-action by the soldier-defendant of the 13 October 1713 slander cause. Snow had then been brought before the council as the first link in the chain of repeaters of the report against Powill; the council had not punished Snow but had identified Tompson as the most active repeater. The present petition records that Powill, presumably outside any council sitting, has called Snow a rascal and a rogue and has said he would prove him so. The response by Snow is to bring Powill before the council on his own petition, with a warrant to be served and a summons to the next council day. The procedure converts the relationship between freeholder and soldier into a contested matter before the council, with Powill now in the position of defendant. The progression of the slander matter from the original report of self-harm through Tompson's apology to the present counter-complaint by Snow indicates that the consequences of the original rumour have continued to ramify within the small island community. Each step that the council takes to settle one element of the dispute appears to generate a further action by one of the parties affected. The Snow petition shows that the council's identification of Tompson as the most active repeater, and the order that he ask Powill's pardon publicly, did not close the underlying dispute, since Powill's own response to Snow's earlier evidence has now produced a counter-claim by Snow. Speculations The choice of 4s per day for Sinsnick, rather than the 5s asked or the 18d originally entered, probably reflects the council's judgement that a soldier engaged

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			on stone-laying work at an outlying site stood at an intermediate position between the standard hired-slave rate of 18d and the free craftsman rate of 5s. The award gives Sinsnick more than the disputed 18d but less than the rate paid to free planters working as stone layers, and so preserves the differential between the soldier on standing salary and the free planter on free contract. The pattern is consistent with the approach taken to Coales as carpenter, who received 4s per day finding his own diet despite the higher 6s rate for Cleve as joiner. The Snow counter-complaint, following the pattern of Powill's slander complaint of 13 October 1713 by less than three weeks, suggests that the credibility of either party in the community had become a subject of contested debate. Powill's call of rascal and rogue addressed to Snow, with the offer to prove him so, anticipates a further trial of the underlying question of whether the report of self-harm had any foundation. The interest of Powill in pursuing the matter, despite his successful slander complaint on 13 October 1713, indicates that the rumour had not been settled by Thompson's public apology and that the repetition of the report by Snow continued to operate against Powill's reputation. The present counter-complaint by Snow brings the dispute back before the council for a second adjudication, and may indicate that Powill's strategy of clearing his name by successive applications to the council has reached its limit.
87	80	Ordered That the Said Snow have Warrants granted him for the Summoning Gabriell Powill and Evidences against next Councill day According to his request. Isabell Hayse widdow Appeared and desired that her deceased Husband William Hayse his Last Verball Will might be prov'd by the oaths of Thomas Hayse and Sutton Isaack Jun[r] who being call'd in and Examined Declares That the night before the Said William Hayse dyd being the 3 day of May 1712 he desired them to take Notice that he Disposed of his Estate in manner and words following. That he had Sold his House and Land to Elinor Belgrave for one Hundred and Six pounds whereof Fifty Pound was to be paid two months after the Purchase, and the rest at Discretion or a Soon as the Said Elinor Belgrave could. And if his wife was minded to go off the Island he desired his Children might be put out to good Masters that would bestow Learning on them, and that five pounds to be given to Each child for their own use and bennefitt. This is his Substance and words of what the Said deceased William Hayse declar'd as above Wittness our hands this 3 day of November 1713. Tho[s] [...] Hayse his mark Sutton Isaack Jun[r] Whereas the dec[d] William Hayse declar'd as part of his Last Will and Testam[t] That he had Sold his House & Lands (which contains but Ten Acres) to Elinor Belgrave but Never recieved any peice of money as Earnest to bind the bargain, nor were	The council ordered that warrants be granted to Snow for the summoning of Gabriel Powill and the evidences against the next council day, according to his request. Isabell Hayse, widow, appeared and desired that the last verbal will of her late husband William Hayse be proved by the oaths of Thomas Hayse and Sutton Isaack junior. The two witnesses were called in and examined. They declared that on the night before William Hayse died, being 3 May 1712, he had desired them to take notice that he disposed of his estate in the following manner and words: He had sold his house and land to Elinor Belgrave for £106 0s 0d. £50 0s 0d was to be paid two months after the purchase, and the rest at discretion, or as soon as Elinor Belgrave could pay it. If his wife was minded to leave the island, his children were to be put out to good masters who would bestow learning on them, and £5 0s 0d was to be given to each child for their own use and benefit. This was the substance and words of his declaration. The witnesses signed: Thomas Hayse, by his mark Sutton Isaack junior The council noted that William Hayse had declared as part of his last will and testament that he had sold his house and lands, containing only ten acres, to Elinor Belgrave. He had never received any piece of money as earnest to bind the bargain, nor had any possession been given or writings made between them. The lack of these steps left Belgrave's title doubtful. Finding herself not able to make the payment without prejudice to her other affairs, she had returned the house and land, or at least her pretensions to it, to the widow soon after her husband's death. The parcel was the only dependence the widow had for the maintenance of her children and herself, to keep them from being a charge upon the parish. The council ordered that Interpretations The Hayse will proof brings before the council a nuncupative will declared on the deathbed of a free planter on 3 May 1712, presented for proof eighteen months later. The procedure follows the pattern of the Henson nuncupative will of February to March 1712, in which the soldier's oral testamentary intentions had

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
		there any Possession given or Wridings made between them which makeing her Title doubtfull and finding her Selfe not able to make Paym[t] without Prejudice to her other affaires, retir'd the Said House and Land or at least her Pretentions thereto[?] to the Widdow Soon after her Husbands decease, which being the only Dependence She has for the maintainance of her Children and Self to keep 'em from a Parrish Charge. Ordered. That Margin Notes: Council to be [...] Wid[w] Hayse desires to have her Husband Verball Will prov'd Tho[s] Hayse & Sutton Isaack Jun[r] Sworne and Declare as followeth The Bargaine betw[t] W[m] Hayse and Elin[r] Belgrave made void reasons given	been proved on the oaths of fellow soldiers as deathbed witnesses. The two witnesses here, Thomas Hayse and Sutton Isaack junior, supply the evidence of the testator's words at the bedside, with Thomas Hayse signing by his mark in the manner of the illiterate planter. The widow's appearance to present the will, rather than the executors named or appointed by the dying man, indicates that the will identified no executors and that the management of the estate fell to the widow in her own right. The provisions of the verbal will combine an outright sale of the principal asset with directions for the consequences of the wife's possible departure. The sale of the house and ten acres to Elinor Belgrave for £106 0s 0d, with £50 0s 0d due in two months and the residue at the buyer's discretion, places the purchase price for ten acres with a house at over ten pounds per acre, well above the benchmark of £5 per acre established by the William Marsh sale of 23 November 1711. The provision for the children, that if the widow left the island they were to be put out to good masters with learning bestowed on them and £5 0s 0d for each child, identifies the alternative arrangement contemplated by the testator should the widow not remain on the island. The dependence of the children's welfare on the widow's choice to stay or leave gives the measure of how the testator understood his estate to fail with him in the event of the widow's emigration. The council's analysis of the Belgrave purchase finds three combined defects: no earnest money had been received, no possession had been given, and no writings had been made between the parties. The combination leaves Belgrave's title doubtful. Earnest money is a small sum paid at the moment of agreement to bind the bargain in early modern English contract practice; possession is the physical handing over of the property to the buyer; writings are the formal documents recording the terms. The absence of all three made the verbal sale legally inchoate, and Belgrave's recognition of the position by retiring the property to the widow confirms that no enforceable interest had passed. The arrangement returns the parcel to the widow's hands on the same basis as if the sale had never been declared. The consequence is that the widow holds the parcel as the testator's universal beneficiary, the children being entitled to their £5 0s 0d each only if she departs. The retention of the dependence of widow and children on the parcel, the only dependence to keep them from a parish charge, places the matter in the same category as other parish-charge applications in the present series. The parish in question is the ecclesiastical parish of the island, with the churchwardens charged on 9 June 1713 with care of the poor and impotent, and the consequence of a widow being thrown on the parish is that the head money would be charged against the contributions of all the heads of household on the island. Speculations The submission of the Hayse will for proof eighteen months after the testator's death suggests that the widow had been working through her own position before bringing the matter formally before the council. The Belgrave attempt at purchase, the failure of that arrangement, the informal return of the property to the widow, and the present application for proof of the will together indicate that the widow had used the eighteen-month interval to clarify her position before seeking the council's formal recognition of it. The pattern suggests that private arrangements on the island, including failed sales and informal returns of property, were settled between the parties before being brought to the council for formal endorsement, with the council's role being to confirm rather than to construct the arrangement.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			The provision in the verbal will that the children be put out to good masters with learning bestowed on them, in the event of the widow's departure, identifies the contingency that the testator anticipated. The combination of vocational placement with the requirement that the master bestow learning indicates that the testator regarded literacy or trade instruction as an essential condition of the masters to whom his children might be put. The £5 0s 0d allowance per child, set against the £20 0s 0d annual salary then being paid to the writer Broome or the £15 0s 0d to Tysor as armourer's assistant, places the sum for a child's setting-out at approximately three months' wages of a junior establishment officer, sufficient for initial outfitting of an apprenticeship rather than a substantial inheritance.
88	81	That she the Said Isabell Hayse do keep and reserve the Said House and Land with the Appurtenances thereunto Belonging, for the only good and Bennefitt of all her Children and Self having no other Estate to bring them up, and as to the other part of her dec[d] Husbands Verball Will its approv'd Ordered to Stand good and valid. William Porteous Surgeon Presented his Petition this day Setting forth That he had Servd the Honourable Company almost Six years as Surgeon of their Garrison and has not had the Sallary his Predecessor was allow'd and for above four years have had the whole fadeague of the Garrison and Planters with-out any Assistant; Likewise that Since the Demolishing James Fort he has bin at thirty Pounds charge for want of a Lodging room within the Castle as was always allow'd the Surgeon and other Officers. Wherefore Humbly desires Such an addition to his former Sallary as we Should think fitt. Considering the great fadeague Doctor Porteous has undergone and that Doctor Needham had Thirty Six pounds a year, besides his[?] a Servant and other Surgeons more Ordered. That the Said Doct[r] Porteous be Allow'd forty Pounds a year his house Rent Included. M[r] French represented that Since the takeing down the old Fort he hath been at five pounds five Shillings charge yearly for House Rent having no Lodging within the Castle as was allow'd him formerly, Wherefore desires that Since Lodging Roomes was allow'd all officers within the old Fort and none within the Castle he may be allow'd the Said Sum of five pounds five Shillings for three years past. Upon Consideration that Lodging rooms was built a Purpose for the Officers in the old Fort, and now being Margin Notes: S[d] Land & House to be reserved for the Children us[e] all Else to Stand as afores[d] Will.	The council ordered Isabell Hayse to keep and reserve the house and land, with the appurtenances belonging to them, for the sole good and benefit of all her children and herself. She had no other estate with which to bring them up. The remainder of her late husband's verbal will was approved, and ordered to stand good and valid. William Porteous, surgeon, presented his petition. He set out that he had served the Honourable Company almost six years as surgeon of their garrison, and had not received the salary his predecessor had been allowed. For above four years he had borne the whole fatigue of the garrison and planters without any assistant. Since the demolishing of James Fort, he had been at £30 0s 0d charge for want of a lodging room within the castle, the lodging having always been allowed to the surgeon and other officers. He humbly desired such an addition to his former salary as the council should think fit. The council considered the great fatigue Porteous had undergone, that Dr Needham had received £36 0s 0d a year, with a servant and other allowances, and that some other surgeons had been allowed more. The council ordered Porteous allowed £40 0s 0d a year, his house rent included. French represented that since the taking down of the old fort he had been at £5 5s 0d charge yearly for house rent, having no lodging within the castle as had been allowed him formerly. He desired that, since lodging rooms had been allowed to all officers within the old fort and none within the castle, he be allowed the £5 5s 0d for three years past. The council considered that lodging rooms had been built specifically for the officers in the old fort, and that now Interpretations The Hayse order applies the principle of preserving the family estate against any arrangement that would put the widow and children on the parish. The council confirmed the consequence of Belgrave's withdrawal from the sale, namely that the property reverted to the widow with the surviving effect of the will limited to its provisions for the children's setting out. The arrangement preserves the estate intact in the widow's hands, with the children's £5 0s 0d allowance held in suspension unless and until the widow leaves the island. The order brings the estate within the council's protective framework for widows and orphans, declared on 5 April 1711 as the role of fathers to widows and orphans by seeing them justice. The Porteous salary increase fixes the medical establishment of the island at £40 0s 0d a year inclusive of house rent. The award places Porteous above the senior establishment rates of the second in council at £70 0s 0d, third at £50 0s 0d and fourth at £40 0s 0d under the 2 October 1712 paragraph 45 of the Toddington letter, but at the same rate as the fourth in council. The benchmark of Dr Needham at £36 0s 0d with a servant identifies the comparator of an earlier

		W[m] Porteous Surg[n] desires for an Additional Sallary. for reasons he be allow'd 40 [...] p[er] year M[r] Frenches desire to be allow'd 5: 5: for House Rent.	surgeon at the establishment whose total package, including the perquisite of the servant, exceeded the bare salary. The £30 0s 0d Porteous had spent over six years on lodging outside the castle, with the demolition of James Fort having eliminated the accommodation of the surgeon's office, supplies the ground for the addition. The inclusion of house rent within the new salary settles the principle that the surgeon's office no longer carries a separate accommodation perquisite, but that the salary is calculated to include the cost of his lodging in the civilian housing market of James Valley. The French representation opens a parallel claim by the gunner for compensation for the consequence of the same demolition. The £5 5s 0d annual charge for lodging, over three years, gives a total of £15 15s 0d, against which the demolition of the old fort gave the starting point for the claim. The comparison drawn between officers' accommodation in the old fort and the absence of such accommodation within the castle indicates that the council's reconstruction programme had not extended the old officer-accommodation arrangement to the new establishment, leaving the affected officers to find their own accommodation at their own cost. The claim therefore extends the principle established in the Porteous award from the surgeon to the gunner, with the consequence that the council will need to consider a similar adjustment to French's package. The wider pattern of the present consultation, with applications by Edwards, Welch, Sinsnick, Dorman, Snow, Hayse, Porteous and French, indicates that the council is moving through a substantial backlog of personnel and property matters in a single sitting. The compression reflects the pressure on the council's time under the continuing drought, the consequences of the July conspiracy and the backlog of property and estate matters generated by the deaths of Hoskison, Griffith and Pack. Each application receives a determinative order in the same sitting, with no matter deferred for further investigation except the Snow counter-complaint, which alone is held over to the next council day. Speculations The award to Porteous at £40 0s 0d, against the comparator of Dr Needham's £36 0s 0d with a servant and other allowances, indicates that the council intended the new rate to match the total of the earlier surgeon's package while consolidating the perquisites into a single salary. The arrangement removes the accommodation perquisite that the old fort had supplied to the office, and replaces it with a money payment large enough to cover the cost of civilian lodging in James Valley. The pattern is consistent with the modernisation of the establishment's payment arrangements, in which traditional perquisites in kind, including diet at the Company's table, lodging within the establishment buildings, and the use of slaves or servants, are progressively converted into money payments within a consolidated salary. The French representation, following immediately on the Porteous award, indicates that the gunner had been waiting for the Porteous decision to provide the precedent for his own claim. The two officers had suffered the same consequence from the demolition of the old fort, and the successful Porteous application now opens the path for French's claim on parallel grounds. The pattern indicates the practical effect of the council's earlier awards: each award establishes a benchmark against which similar claims by other officers can be brought, with the consequence that a single favourable decision tends to generate further applications from comparators at the next available sitting.

89	82	being at present within the Castle besides the Inconveniency and charges they are at for Lodgings in the Valley Ordered. That the Said M[r] French be Allow'd and Paid back the Sume of five pounds five Shillings for three years past that he has paid for House rent. James Young Soldier who hath been kept close Prisoner Ever Since the 8[th] day of July Last for disobeying his officer when on the Guard, and Speaking Some Seditious words at the Same time, when in drink, made his Humble Address this day by Petition Acknowledging his fault and hearty Sorrow for the Same with a faithfull Promise of future good behaviour, if we would take Pitty of him, and release him from Confinement, which hath rended him very weak and Low in body. Upon which considering the Said James Young to be a quiett Civill fellow and Something better bred then the Common Sort of Soldiers, with the hardship he hath undergone dureing his Imprisonm[t] in Irons, and the assureage[?] he hath given us of his future good behaviour together with the thoughts we are apt to Possess our Selves with that had he not bin in drink he would have disobey[d] Command or uttered any words tending to Sedition or Mutiny. Ordered. That the said James Young be released and acquitted accord- ing to his Humble desire and cautioned to take care to Demean himself very well for y[e] future as he has Promis'd to do in his Petetion. This day M[r] Bazett brought in five monthly Accounts of Goods Sold and Deliverd out of the Stores from the 25[t] day of Aprill Last to the 25 day of September following which Margin Notes: The Sume of 5: 5: for 3 years to be paid back to M[r] French. James Youngs desire to be released out of Prison Upon Consideration The Said Young released w[t] Caution for y[e] future Monthly Acc[ot]s	The council noted that the officers were presently within the castle, but were nonetheless at the inconvenience and charge of taking lodgings in the valley. The council ordered French allowed and paid back the £5 5s 0d for three years past that he had paid for house rent. James Young, soldier, had been kept close prisoner since 8 July 1713 for disobeying his officer when on the guard, and for speaking seditious words at the same time, when in drink. He made his humble address by petition, acknowledging his fault and expressing hearty sorrow for the same. He gave a faithful promise of future good behaviour if the council would take pity on him and release him from confinement, which had rendered him very weak and low in body. The council considered that Young was a quiet, civil fellow, something better bred than the common sort of soldiers. They noted the hardship he had undergone during his imprisonment in irons, the assurance he had given of his future good behaviour, and the likelihood that, had he not been in drink, he would not have disobeyed command or uttered any words tending to sedition or mutiny. The council ordered Young released and acquitted according to his humble desire, and cautioned to take care to demean himself very well for the future, as he had promised in his petition. Bazett brought in five monthly accounts of goods sold and delivered out of the stores, from 25 April 1713 to 25 September 1713. Interpretations The French payment closes the second strand of the demolition-of-the-old-fort consequences for the officers of the establishment, with the gunner now placed on the same footing as the surgeon. The payment of £5 5s 0d for three years past, against the position of officers presently within the castle, indicates that the accommodation arrangement has been resolved on a backward-looking compensation basis for the past period of loss, while the future position is treated as adequately settled by the present accommodation within the castle. The arrangement parallels the Broome back-payment for diet ordered on 1 September 1713, with the principle that past underpayments are corrected by retrospective lump-sum adjustment rather than by continuing salary increases. The Young release marks the first acknowledgement of the council's review of the position of the July conspiracy prisoners committed to irons on 8 July 1713. Young had been one of the five ringleaders committed close prisoner in irons, alongside Brogden, Gore, Knife and Griffis, on the ground of being among the principal organisers of the conspiracy. The release of Young, four months into his confinement, treats him as having served sufficient time for the offence and as having demonstrated sufficient repentance for restoration to duty. The grounds for the release combine four considerations: his quiet and civil character, his being something better bred than the common sort of soldiers, the physical hardship of irons over four months, and the council's judgement that drink rather than settled disposition had caused the disobedience and seditious speech. The pattern places the release on broader grounds than would apply to a common soldier, and the description of Young as something better bred indicates that the council's assessment took account of social standing in fixing the length of imprisonment. The phrase something better bred than the common sort of soldiers indicates the position of a soldier of slightly higher social origin than the common garrison private. The garrison of the East India Company at St Helena was filled from the pool of London recruits and broken seamen, with occasional

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			acceptance of men of slightly more elevated origin who had taken Company service for personal reasons. The council's notice of Young's better breeding fixes him in this latter category and supplies the basis for treating his offence with more clemency than would apply to the common soldier of common origin. The Bazett submission of five monthly accounts in a single batch settles part of the backlog identified by the Governor's demand of 13 October 1713. The interval from 25 April 1713 to 25 September 1713 covers five months, with the further month from 25 September 1713 to 25 October 1713 not yet included in the submission. The pattern indicates that Bazett has met the demand only for the period to the end of September, leaving the most recent month for separate submission. The arrangement provides the evidence on which the council can examine the goods sold and delivered for the period in question, and reduces the pressure on Bazett by clearing the bulk of the accumulated arrears. Speculations The release of Young on the basis of his better breeding suggests that the council's policy on the four remaining ringleaders may differ according to the social standing of each prisoner. The release of Young, set against the continued confinement of Brogden, Gore, Knife and Griffis, indicates that the council is treating the conspiracy as having had a hierarchy in which Young occupied a lower position than the others, despite all five being committed as ringleaders on 8 July 1713. The differential treatment of the prisoners suggests that the council has been considering the position of each prisoner individually since the conspiracy's suppression, and the present release may indicate the start of a programme of differentiated release decisions for the remaining prisoners. The submission of five monthly accounts by Bazett, rather than six, suggests that the preparation of the accounts has been substantially complete for the period to the end of September but not yet ready for October. The pattern of Bazett's account preparation appears to be a continuing one of staying close to but not quite at the required schedule, with the consequence that the Governor's demand will need to be renewed for the missing month. The arrangement preserves the substantive obligation while permitting flexibility on the precise date, and the pattern indicates the accommodation that has developed between the Governor and the storekeeper-second-in-council on the submission of routine accounts.
90	83	which was Examin'd and Ordered Accordingly to be Enter'd in the Councill book, and is as followeth. S[t] Helena. 		0: 7: 0 1 D[o] Plantation 0: 0: 6 7 6 3 8 7 1/4 Carried Over 127 9 7 1/4	£2 12s 1¼d 6 pair of buckles 4s 8d 5 pair of scissors 4s 4d inhabitants £3 1s 1¼d 12 knives general charges 7s 0d 1 of the same plantation 6d £3 8s 7¼d Carried over £127 9s 7¾d Interpretations The miscellany of the present account introduces a number of items whose institutional or material function may not be self-evident, and these are explained together here. Sacking was the coarse linen or hemp cloth used for sacks, bagging and rough covering; hipreniss was an Indian cotton of moderate weight in the working middle range of the imported cottons, supplied alongside the coarser sacking at a similar price point. Candy in the sugar and candy line is sugar candy, the crystallised refined sugar produced by repeated boiling and cooling of sugar solution until large crystals formed on threads suspended in the syrup, used for sweetening drinks, sucking as a sweet and for medicinal purposes in soothing the throat. Shalloons were the light worsted lining fabric used for the inside of coats and waistcoats, supplying the smooth surface against which the garment slid over the under-garments. Thicksets and dimities were the two principal grades of fustian, the coarse cotton-linen weave with thicksets being the heavier and dimities the lighter, with coloured and white dimity supplied separately. Silk and thread laces were trimming bands; gartering was the narrow worsted band used to fasten stockings below the knee; Holland tape was the flax tape from the Low Countries used for binding garment edges. The Indian cotton ginghams were the striped or chequered cottons, supplied principally from Madras. The Indian cotton lines of this month carry the working range of imported cloth supplied to the inhabitants through the Bengal and Madras shipping, with chello shirts at 2s 5d each and white shirts at 3s, the standard three-grade pricing visible across the present series. The 23 hats at £14 8s 9d brings the unit cost of hats at approximately 12s 6d each, indicating a relatively high quality of head wear for the inhabitants in this month. The 21 pair of stockings sorted at £3 4s 1d gives a unit price of approximately 3s per pair, the customary rate for ordinary hosiery on the establishment. The ironmongers' ware line spans plantation and fortifications columns, with no entry against the inhabitants in this category for the month. The plantation drew 26 pieces sorted and 52 [...] of nails at £3 14s 5d, with a further 5 [...] of the same at 8s 8d, totalling £4 3s 1d. The fortifications drew 21 [...] sorted at 12s 7½d. The combined ironmongers' supply to the Company's own establishments at £5 3s 8½d for the month, against nil for the inhabitants, marks a heavy concentration of construction and maintenance hardware on Company use, consistent with the continuing programme at Munden's Castle and Plantation House. The cutlery ware line itemises 56 knives, 26 forks, 6 pair of buckles and 5 pair of scissors at £3 1s 1¼d on the inhabitants' column, with 12 knives at 7s 0d on the general charges column and one at 6d on the plantation. The differential allocation indicates the pattern by which kitchen and dining cutlery flowed to the

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			inhabitants' households, with smaller quantities going to the Company's general table and a single piece to the plantation. Speculations The concentration of ironmongers' ware on the plantation and fortifications columns, with no entry on the inhabitants' line for the month, probably reflects a programme of consolidated construction supply during a period in which the inhabitants' demand for nails and hardware had been substantially met in earlier months. The £5 3s 8½d combined Company-use figure indicates either a working maintenance round across the Hutts, Plantation House and Munden's Castle, or a specific construction event drawing a concentrated supply for the month. The pattern is consistent with the consolidated estate management by Cason since 8 April 1712, in which periodic concentrated supply rounds replace continuous monthly drawing.

Neilas were a striped Indian cotton supplied principally from Madras, taking their name from the cloth's blue and white striping; gurras were a plain coarse white Indian cotton supplied from Bengal, used for shirts and rough domestic linen; chints were the printed and painted Indian cottons that gave the modern chintz its name, produced principally at Masulipatam and on the Coromandel coast, with patterns applied by hand-printing with wooden blocks and hand-painting with mordants and dyes; long cloth was a fine plain Indian cotton supplied in long pieces, principally from Bengal; chello cloth was the coarse Indian cotton from which the chello shirts of the preceding entries had been cut; dungarees were a coarse working cotton from western India used for slave shirts and rough wear, named for the working district near Bombay; tarinas were a finer Indian cotton in piece form. Muslins were the finest Indian cottons, supplied in plain and striped grades, used for fine shirts, neckcloths and women's gowns. The thread line gives four working grades: brown for heavy sewing, white for ordinary domestic use, nuns' (a fine white thread named

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			for its monastic origin) for cambric and lawn sewing, and a single paper of white thread as the small unit of supply. Norwich stuff in the closing line refers to the worsted fabrics produced in and around Norwich for the home and export markets, with black crape being a thin transparent worsted used principally for mourning wear. The combined Indian textile lines on this section of the account bring £45 17s 4d of cloth to the inhabitants in a single month, a substantial volume against the £706 5s 1½d total of the corresponding April 1713 to May 1713 account. The variety of grades, from the coarse gurras at approximately 12s 6d per piece up to the plain muslin at approximately 23s 8d per piece and the striped muslin at 32s 0d per piece, indicates the full range of textile demand on the freeholder establishment. The cutlery ware line at 56 knives, 28 forks, 6 pair of buckles and 5 pair of scissors for the inhabitants at £2 19s 11¼d, combined with 12 knives for the castle at 7s 0d and one for the plantation at 6d, repeats the proportions of cutlery distribution visible in the preceding month's account. The slight increase of forks from 26 to 28, against the 56 knives, brings the knife-to-fork ratio closer to two to one, consistent with the table service pattern of the period in which two knives accompanied each fork. The hooks and lines line at 10½ gross of hooks at £4 16s 4d and 48 lines at £2 2s 6½d brings the inhabitant fishing-tackle supply to £6 18s 10½d for the month, a substantial increase from the previous month and consistent with the consequence of the 12 May 1713 yawl-fishing order under which the inhabitants and garrison had been opened to fishing on a rotating four-family basis. The pins, needles and thimbles line at 3 thousand pins, 325 needles and 3 thimbles brings the small sewing implements to the inhabitants at 9s 9d for the month. The volume of pins at 3 thousand represents the small but continuing demand for the principal fastener of women's dress; needles at 325 supply the working sewing implements; the three thimbles indicate small replacement orders rather than a household stocking-up. Speculations The variety of Indian cotton grades on this section of the account, with seven distinct named cottons in addition to the muslins and the chello, suggests that the storekeeper had recently disposed of a fresh batch of Indian piece goods that needed to be moved into the inhabitants' accounts within a defined period. The presence of small numbers of pieces across many categories, rather than larger numbers of pieces in a few categories, indicates either freeholder shopping across a wide range of cloth types in a single month or a deliberate allocation by the storekeeper to clear varied stock. The pattern is consistent with a Madras and Bengal cargo arriving in heterogeneous mixed bales, with the storekeeper releasing pieces of each grade to the freeholders during the working months following the cargo's absorption.

Soldiers' clothes here refers to the standardised garments supplied to the garrison, consisting of coats, waistcoats and breeches at fixed prices, drawn down by individual soldiers against their accounts; in the present month the issue is small, with only one coat against three waistcoats and three pair of

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			breeches. Batavia arrack was the strong distilled spirit produced in the Dutch East Indies at Batavia, the chief Dutch settlement on Java, from molasses and rice; it reached the island through the Dutch shipping that called from the East Indies, and was the principal imported spirit at the establishment. Goa arrack was the comparable Portuguese-Indian alternative from the Goa station, supplied at a lower rate per gallon and obtained probably through the Catherine from Bombay or through subsequent ships. White lead, in the paint and indigo line, was lead carbonate, the principal white pigment of the period, used for ground colour in paint, mixed with linseed oil; indigo was the dark blue plant-derived dye, used in textiles and laundry blueing. Romalls were the Indian cotton kerchiefs from Bengal, used as neck and head wear, taking their name from the Persian rumal; they appear in the paint and indigo line by clerical convenience rather than because of any material connection. Pewterers' ware refers to the cast and turned pewter for table and household use: spoons, chamber pots (for nighttime use beside the bed), porringers (small two-handled bowls for pottage), quart and half-quart pots for liquid measure, and basins for washing and serving. Castile soap was the hard white soap made principally from olive oil in Spain, valued for its mildness and used for personal washing; Bengal soap was the softer Indian alternative used principally for laundry and rough household washing. The chain in the Goa arrack section is probably a misclassified entry, with the small 3s charge falling into the wrong category on a hurried entry. The soldiers' clothes line at £9 13s 5d for one coat, three waistcoats and three pair of breeches indicates that the garrison drew renewal garments individually rather than as complete uniform suits. The ratio of three waistcoats and three pair of breeches to a single coat shows that under-garments wore through more rapidly than outer coats and were replaced more frequently. The arrack supply across Batavia and Goa categories brings 30¾ gallons to the establishment for the month, divided across inhabitants, castle and plantation. The Batavia at 7s per gallon and the Goa at approximately 5s 10d per gallon mark the two-tier spirits structure visible across the present series. The 13½ gallons to the castle represent the senior establishment's monthly ration, the 10 gallons to the inhabitants supply the freeholder demand, and the 6 gallons to the plantation supply the slave allowance at the Hutts and consolidated estate. The pewterers' ware line at 3½ dozen spoons, 4 chamber pots, 3 quart pots, 4 basins and 1 half-quart pot at £2 10s 3d for the inhabitants represents the working refurbishment of a freeholder household's principal pewter complement. The forty-two spoons supplied, against the twenty-six forks and fifty-six knives of the cutlery line, fit the standard early modern table service ratio of approximately two knives and one fork per spoon. The soap line at three working grades, 100½ [...] of Bengal and 58 [...] of Bengal in separate entries, 6 [...] of Bengal and 6 [...] of Castile to the castle, brings the soap supply to £5 3s 10d for the month. The pattern shows the hierarchy of soap use: the cheaper Bengal soap for inhabitants and plantation use, the finer Castile soap reserved for the castle establishment's personal washing. Speculations The high inhabitants' purchase of 5½ pair of blankets at £4 17s 3d, well above the unit price of approximately 9s per blanket recorded in other months, suggests that the blankets supplied in this month were of a heavier or finer grade than the ordinary blanket of the storekeeper's working stock. The unit cost of approximately 17s 8d per pair brings them above the ordinary working blanket but below the finest English wool blankets. The substantial monthly purchase

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			indicates that several freeholder households were renewing their bedding within the same month, consistent with the cooler nights of the early winter approaching the island as the seasons turned.

Pepper was the imported Indian black pepper, used in the working freeholder kitchen as the principal seasoning. Produce is a clerical heading rather than a named item, covering a single piece of merchandise grouped under that label. Perpetuanoes were the durable worsted serge produced principally at Sudbury and Yarmouth for the export trade, named for the long-lasting (perpetual) wear of the cloth and used for hard-wearing outer garments. Braziers' ware referred

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			to objects of worked brass, particularly cooking vessels and lamps; the present line of 5 [...] sorted to inhabitants and a 10½-pound copper saucepan to the castle indicates the working kitchenware supply. Broad cloth was the finest English woollen, woven double-width and then fulled and finished to a smooth napped surface, supplied principally in black, scarlet and coloured grades for the highest formal garments. Flannel was the soft loosely-woven woollen cloth used for undergarments, baby clothes and interior linings; bunting was the lightweight worsted cloth used principally for the manufacture of flags and signal cloths, taking its name from the working trade of the bunt-maker who supplied the navy with signal material. Turnery ware referred to items made on a lathe with turned wooden components, particularly shovel handles, tool handles and small household items. Silver buttons were buttons of solid or plated silver, used on the finest coats and waistcoats of the upper freeholder dress. Starch was the laundry preparation made principally from wheat starch grains, applied to linen for the stiffness fashionable in the period's collars, cuffs and aprons. Durants were the glazed worsted cloth finished with hot rollers or irons to give a glossy surface, used principally for outer garments and coat linings. Huckaback was a linen with a raised surface produced by floating weft threads, used principally for towels and table linen. Glass ware here covers two items: three set cellars (small footed dishes for table salt) at 2s 0d each, and 140 panes of six and eight inches sold to the fortifications at £3 12s 0d for glazing the establishment buildings. Taffeties were the working plural form of taffeta, the smooth plain-weave silk; etatches (probably attaches or stachees) were a related silk cloth, possibly a misrendering of estaches, the corded silk used for trimmings. Rape oil was the oil pressed from the seeds of the rape plant, used for lamps and lubrication. Necklaces of beads were the strung-bead jewellery items at 1s each, suggesting either children's wear or working ornaments for the slaves of the freeholder establishments. Tar was the working pitch-tar used for waterproofing rope, wood and rigging at the fortifications, supplied by the barrel. Flag brooms were the working brooms with heads made of flag, the reed of marshes, used for sweeping yards and rough surfaces. Bird shot was the small-calibre lead shot used in fowling pieces for killing wild birds and small game. Ragg stone was the working abrasive stone used for sharpening tools; the grindstone was the rotating wheel for the same purpose at a larger scale. The total of £259 8s 10¼d for the month of 25 April 1713 to 25 May 1713 brings the working monthly figure to a substantial level, although below the £706 5s 1½d of the heaviest months of the post-cargo absorption period. The distribution shows the inhabitants drawing the largest share through the textile, cutlery and pewter lines, with the fortifications taking 140 panes of glass and a barrel of tar at the principal Company line and the plantation drawing flag brooms, bird shot and grinding stones. The 140 panes of glass at six and eight inches at £3 12s 0d for the fortifications indicates a substantial glazing programme during the month, probably for the storehouse rebuild or for the completion of glazing at Munden's Castle or the Prosperous Bay house, where Sinsnick had been working as stone layer for fourteen days and a half. The pane count for the month is well above the average for the present series, suggesting concentrated glazing work during this particular month. The combined Company-use lines of bird shot, flag brooms, ragg stone and grindstone on the plantation column at approximately 15s 0d, with tar at 5s 0d on the fortifications, marks the working tool and maintenance supply for the consolidated estate and the construction sites. The presence of an abrasive stone alongside a

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			small grindstone at the plantation suggests sharpening of both small tools (with the hand stone) and larger blades (with the rotating wheel), consistent with the ordinary working maintenance of agricultural and construction tools. Speculations The presence of glassware in two distinct categories at 3 set cellars to the inhabitants and 140 panes of glass to the fortifications, totalling £3 14s 0d across the month, reflects two quite different uses of glass at the establishment: the small table item for the freeholder dining service, and the bulk glazing material for the construction programme. The pattern is consistent with a single cargo of glass arriving in a recent shipping period, with the storekeeper releasing pieces to both inhabitants and Company use as the working demand arose.

The inhabitants' column carries the retail trade to the freeholders, planters and soldiers in their private capacities. The plantation column carries the supply to the Governor's house and land. The fortifications column carries the supply to construction and military maintenance. The general charges column carries the supply to the Honourable Company's general table and the senior establishment. The opening lines of the present month divide between these four columns according to the consumption pattern of each department, with the inhabitants' line dominating the volume in every commodity. Several items in this month's account require explanation. Batavia arrack was the strong distilled spirit produced in the Dutch East Indies at Batavia, the chief Dutch settlement on Java, distilled from molasses and rice; Goa arrack was the comparable Portuguese-Indian alternative from the Goa station on the Konkan coast, supplied at a lower rate per gallon. Sugar candy was the crystallised refined sugar produced by repeated boiling and cooling of sugar solution until large crystals formed on threads suspended in the syrup, used for sweetening drinks, sucking as a sweet and for medicinal purposes in soothing the throat. Pipes here refers to the clay tobacco pipes manufactured in England in standard form, supplied by the gross of 144 to the establishment, with a short working life-span on the island and continuous replacement; the gross was the working unit of bulk supply, the dozen the smaller working measure. Chints were the printed and painted Indian cottons that gave the modern chintz its name, produced principally at Masulipatam and on the Coromandel coast; patterns were applied by hand-printing with wooden blocks and by hand-painting with mordants and dyes. Shirts in this month appear in three grades: fine white shirts at 8s 6d each, coarse shirts at 3s each, and chello shirts (named for the chello cloth from which they were cut) at 2s 5d

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			each. Cuffs in the hosiers' goods line were the detachable wrist coverings worn over the ends of shirts, supplied as separate items rather than attached to the shirts. The arrack supply of the month brings the largest single working spirits volume in the present series of accounts. The 149$\frac{7}{8}$ gallons of Batavia arrack to the inhabitants at 7s per gallon, together with the 26$\frac{3}{8}$ gallons of cheaper Goa arrack on the general charges line at 5s per gallon and the further 27$\frac{7}{8}$ gallons of Batavia on the general charges, exposes the two-grade structure of spirits supply at the establishment. The differential pricing of 7s against 5s per gallon, sustained from at least early 1713 onward, fixes the two-tier spirits system of the establishment. The sugar line at 1,085 [...] to the inhabitants and 103 [...] to the general charges at 8d per pound marks a reversion to the lower sugar retail rate of 8d per pound, against the 12d per pound recorded in the preceding month. The reduction probably reflects a correction in the pricing after the initial cargo absorption, or the consequence of fresh sugar arriving on one of the Madras-Bengal ships. The line total of £36 3s 4d to the inhabitants alone places sugar as the principal staple of the freeholder household's domestic supply. The shirts line exposes the three-grade hierarchy of shirts at the establishment. The 20 fine white shirts at 8s 6d each on the inhabitants' column supplied the upper layer of the freeholder community for formal wear; the 74 coarse shirts at 3s each on the inhabitants' column supplied the ordinary inhabitants and the rougher trades; the 42 chello shirts at 2s 5d each on the general charges column, together with a single coarse white and a single chello, supplied the senior establishment's servants and slaves at the general table. The differential between the three rates, from 8s 6d for the finest down to 2s 5d for the chello, indicates a spread of nearly four to one across the shirt grades supplied by the establishment. Speculations The chints supply at 32 pieces sorted at £21 17s 3d to the inhabitants alone, with no entry on the plantation, fortifications or general charges columns, indicates that printed Indian cotton was treated by the storekeeper as a consumer item for the freeholder market rather than an item of institutional supply. The pattern is consistent with the use of chints in domestic furnishings, gowns and waistcoats by the freeholder households, none of which had any institutional equivalent that would have required supply through the Company columns.

Stock locks were the heavy iron locks with their mechanisms enclosed in a wooden stock or case, mounted on the outside of doors at gates and storehouses; they were the principal lock type for external doors and required substantial hardware to fit. The two stock locks on the plantation column for the month, alongside hooks and hinges, indicate that secure doors were being installed on a specific building at Plantation House or one of the outlying establishments. Chelloes were the working coarse Indian cotton supplied principally from Madras, in piece form, used for shirts, lining and lightweight summer wear; the working chello shirts of the preceding line were cut from the same cloth. Threads in this month appear in four grades: coloured thread (dyed for ornamental sewing), brown thread (heavy and used for sails and rough work), white thread (for ordinary domestic use), and nuns' thread (the working fine white thread named

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			for its monastic origin, used for cambric and lawn sewing). Thrown silks and mohair were the twisted yarns used for buttons, trimmings, fine knitting and embroidery; thrown silk was twisted from raw silk filaments ready for weaving or knitting, mohair was long-staple worsted yarn from the fleece of the angora goat, valued for its lustre. Ferret in the ribboning line was a narrow worsted tape, named for its stiffness and the ferret-like appearance of its narrow form, used for binding garment edges and stiffening hatbands. Black crape was the thin transparent worsted used principally for mourning wear, with the present line showing 3½ yards specifically for shoes, probably for the covering or trimming of footwear for mourning use or for the binding of worn shoe-tops. Holland tape was the flax tape produced in the Netherlands and supplied through the English trade for binding garment edges, trimming seams and producing garters and narrow trimmings. The ironmongers' ware line of the present month exposes the working full range of iron hardware supplied through the storekeeper across the three institutional and one freeholder columns. The 13 [...] sorted at £1 12s 0¼d, the 15 [...] of nails and the 22 [...] of further sorted iron items to the inhabitants supplied the freeholder households with nails, hooks, hinges and other small hardware for the maintenance of houses, fences and outbuildings. The 8 [...] sorted for the fortifications at £2 18s 1d supplied the construction at Munden's Castle and the Prosperous Bay house with spike nails and structural iron. The plantation column carries 15 [...] of nails sorted, 2 stock locks at 11s and hooks and hinges at 2s 4d, totalling £1 2s 8½d. The chelloes line at 38 pieces at 5s each to the inhabitants at £9 10s 0d, with a single piece on the general charges at 5s, marks the bulk supply of the coarse Indian cotton in piece form, distinct from the chello shirts of the preceding line. The unit price of 5s per piece places the chello at the middle range of the Indian cotton imports, between the cheaper chints at approximately 13s 8d per piece in the preceding month and the finer muslins. The rice line at 61½ [...] to the inhabitants at 3¼d per pound, 62¼ [...] to general charges at 4d, and 6 [...] to plantation at 4d, totals 129¾ [...] for the month at approximately £2 0s 3¼d. The differential pricing between inhabitants at 3¼d and the institutional columns at 4d reflects the preferential rate for the freeholders against the full rate for the general table and the Governor's house. The continued large supply to the general charges indicates the centrality of rice in the diet of the establishment. Speculations The presence of black crape for shoes at 3½ yards on the inhabitants' column at 7s 8d marks an unusual line. The small quantity of 3½ yards suggests a specific order from one or two households who had suffered a bereavement during the period, with the crape used either for the covering of mourning shoes or for the trimming of footwear for the funeral. The line stands apart from the ordinary trimming and binding lines of the freeholder dress, and probably reflects a specific working response to a particular death within the inhabitant community during the working month covered.

			This section of the account introduces several items whose specialist use is best explained together. A bed cord was the strong cord used for the webbing of bedsteads, on which the mattress or bedding lay; the present line shows a single bed cord on the hooks and lines line at 2s 6d, classified there because the storekeeper grouped corded goods under a common heading. Oil here is principally rape or linseed oil, used for lamps, lubrication of tools and the preparation of paint. Starch was the laundry preparation made principally from wheat starch grains, applied to the linens of shirts, collars, cuffs and aprons to give the stiffness fashionable in the period's dress. Pins were the small brass or iron sharp implements used for fastening dress, pinning cloth in sewing and the temporary closure of garments; the monthly volume of 12 thousand pins reflects the continued reliance of freeholder women's dress on pins as the primary fastener, since women's garments of the period were closed principally by pins rather than buttons or hooks. Turnery ware refers to items with turned wooden handles or components, here principally shovels for the fortifications and inhabitants, and shoe brushes for the plantation; shoe brushes were the brushes used for blacking and brushing the senior establishment's footwear. Braziers' ware refers to items of worked brass: brass lamps were the oil-burning lamps with brass bodies and wick holders for the lighting of interiors, brass candlesticks were the stands for candles, of solid brass with bases broad enough to give stability. Fustians here cover two grades: coloured dimity (the lighter fustian with coloured pattern) and thickset (the heavier fustian for harder wear), both supplied in yards. Castile soap was the hard white soap made principally from olive oil in Spain, valued for its mildness and used for personal washing; Bengal soap was the softer Indian alternative used principally for laundry and rough household washing. The hooks and lines line of the present month at 16 dozen hooks sorted at 13s 3d, 8 lines at 7s 4d and 1 bed cord at 2s 6d brings the monthly fishing-tackle and bedding-cord supply to £1 3s 1d for the inhabitants. The pattern reflects the continued fishing activity established under the 12 May 1713 drought-relief order, by which the yawl had been opened for fishing by inhabitants and garrison. The oil line at 2¼ gallons at 7s per gallon to the inhabitants, 2 gallons to fortifications and 3½ gallons to general charges, totalling 7¾ gallons for the month, supplied the lighting and lubrication requirements of the establishment. The larger supply to the general charges and fortifications columns indicates the principal use of the oil in the institutional establishments rather than in the freeholder households. The pins line at 12 thousand pins sorted to the inhabitants at 19s 9d brings the pin supply to the freeholders at a substantial monthly level. The volume reflects the continuing demand for pins as the primary fastener of women's dress and as a temporary closure for sewing in progress in the freeholder households. The soap line at three working grades, 44 [...] of Bengal for the inhabitants at £1 9s 4d, 3½ [...] of Castile for general charges at 2s 9¼d and 4½ [...] of Castile for plantation at 5s 7½d, brings the monthly soap supply to 50½ [...]. The pattern indicates the continued hierarchy of soap use: the cheaper Bengal soap for the inhabitants' laundry and household washing, the finer Castile soap reserved for the personal washing requirements of the senior establishment at the general charges column and the Governor's house at the plantation column. Speculations The 16 [...] entry at 9d on the inhabitants' column without a specific item description probably represents a subsidiary line of the hooks and lines category, perhaps relating to further sundries or to the bed cords

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			sold by separate measure. The combined inhabitants' line under hooks and lines, totalling £1 3s 1d plus the 9d, brings the specific fishing-and-bedding-cord supply to the freeholders for the month at a modest level compared with the preceding cargo-absorption month.

		1 14 6 41 Glass Ware viz[t] 35 Panes of 6 & 8 Inches Inhabit[s] 17 6 1/2 2 D[o] Decanters Gen[r] Charges 10 10 Carried Over £ 242 [...] 3 3/4 7 13 6 3 10 1 29 10 9 3/4	Silk laces 17 of the same inhabitants 9s 4d Pepper 2 [...] inhabitants 2s 0d 2 [...] for general charges general charges 2s 0d 1 [...] for plantation plantation 1s 0d Gloves 3 pair of men's gloves for the inhabitants inhabitants 5s 3d Cutlery ware 11 knives and 5 forks 7s 0 1/2d 1 pair of scissors 6d 1 pair of shears 1s 0d 4 pair of buckles 3s 4d inhabitants 11s 10 1/2d 36 knives and 25 forks for general charges general charges £1 14s 6d Glass ware 35 panes of six and eight inches for the inhabitants inhabitants 17s 6d 2 of the same of cucumbers for general charges general charges 10s 10d Carried over inhabitants £242 0s 3 1/4d plantation £7 13s 6d fortifications £3 10s 1d general charges £29 10s 9 1/4d Interpretations This section of the account introduces several specialist items whose names and uses are best explained together. Neckcloths were the rectangular cloths of fine linen or cotton tied around the throat, supplying the trimming of the upper dress at the open collar; at £1 5s 7d per piece in the present line they are of working high quality, probably edged with lace or fine working trimming. Tin ware here is principally lanterns (the sheet-tin enclosed lights with horn or glass panels protecting the candle inside from wind and weather, used for outdoor or draughty interior lighting) and a funnel (the tin cone with narrow spout, used for pouring liquids from larger to smaller vessels). Long cloth was the fine plain Indian cotton supplied in long pieces, principally from Bengal, used for the finest shirts, the linen of the freeholder dress and fine household linen. Neilas were the striped Indian cotton supplied principally from Madras; ginghams were the striped or chequered Indian cottons; salampores were the blue-dyed Indian cotton from the Coromandel coast, named for the Indian town of Salem from which the original cloth came; gurras were the plain coarse white Indian cotton from Bengal. Cloth drugget was the stronger working drugget grade against the silk drugget of earlier accounts, used principally for outer garments and stronger domestic uses. Shalloons were the light worsted lining fabric used for the inside of coats and waistcoats. Perpetuanoes were the durable worsted serge produced principally at Sudbury and Yarmouth for the export trade, named for the long-lasting wear of the cloth. Indigo in the paint line was the blue dye produced from tropical plants of the Indigofera genus, used by dyers and by households for colouring cloth and the preparation of laundry blueing. Buttons in this

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			month appear in two grades: coat buttons (the larger working buttons for closing the outer coat) and breast buttons (the smaller working buttons for the waistcoat front), supplied by the gross of 144 and the half-gross. Silk laces were the working trimming bands of silk thread used for ornamenting garments. Cutlery ware in this month combines knives and forks, scissors, shears (the working large two-handled cutting implement) and buckles (the working metal frames for fastening shoes and breeches with leather straps). Glass ware here covers two distinct categories: 35 panes of six and eight inches for ordinary glazing, and 2 cucumbers of the same on the general charges column. The cucumbers were not panes of glass but the long working glass cylinders called cucumber glasses or bell glasses, used in horticulture to force the growth of cucumbers under glass and to protect young plants from cold and wind, supplied to the senior establishment for the working kitchen garden. The neckcloths line at 4 pieces for the inhabitants at £5 2s 4½d places the unit price at approximately 25s 7d each, well above the price points of preceding months. The high unit cost indicates the luxurious finish of these particular neckcloths, with lace edging, embroidered ends or fine linen body that placed them at the top of the freeholder dress establishment. The Indian cotton cluster covering long cloth, neilas, ginghams, salampores and gurras brings four to five pieces of each grade to the inhabitants at unit prices ranging from approximately 7s 4d for salampores up to 24s 9d for long cloth. The presence of all grades in one month indicates the freeholder households' continued accumulation of Indian cotton stock, with each grade serving a different purpose. The cucumber glasses on the general charges column at 10s 5d each indicate substantial working glass cylinders of considerable size. The presence of two cucumbers on the senior establishment's column shows the working horticultural establishment maintained at the Company's general table or kitchen garden, probably to supply fresh cucumbers for the senior table during the months when the open ground would not bring them on. Speculations The supply of 12 thousand pins in the preceding line, together with the substantial buttons line at 1 gross of coat buttons and 1½ gross of breast buttons in the present line, indicates that two complementary fastening systems were being maintained simultaneously in the freeholder dress. The pins served principally for women's dress where buttons were inappropriate, and the buttons served principally for men's outer dress and waistcoats. The continued supply of both at substantial monthly volumes shows that the freeholder community was investing in both forms of dress fastening during the same period, reflecting the working maintenance of fashion-conscious dress among both sexes despite the drought conditions.

			[...] dozen plantation £7 16s 9d Tallow 1 cask of 22 [...] plantation [...] Tapes and bindings 1 piece of binding 1s 8d 1 piece of Holland tape 10½d plantation 2s 6½d Sum of the page inhabitants £250 8s 1¾d plantation £15 12s 9¼d fortifications £3 19s 1d general charges £34 10s 3¾d To the inhabitants £250 8s 1¾d To the plantation £15 12s 9¼d To the fortifications £3 19s 1d To the general charges £34 10s 3¾d Sum total of what has been sold and delivered £304 10s 4d Interpretations This closing portion of the June 1713 account introduces several specialist items whose names require explanation. Ink wood (probably logwood) was the dye-wood imported from Central America, used to produce the characteristic black ink and black dye of the period; supplied here in a small quantity to a single inhabitant household. Romalls were the Indian cotton kerchiefs from Bengal, used as neck and head wear, taking their name from the Persian rumal. Combs in the present line appear in two grades: horn (the cheaper working comb made of cattle horn shaped by heat and pressure) and ivory (the finer working comb cut from elephant tusks supplied through the East India trade). Pewterers' ware comprises the table service items: dishes (the large serving plates), plates (the individual eating plates), spoons, chamber pots (the night vessels), porringers (small two-handled bowls for pottage), basins (washing and serving bowls), and quart pots (the working liquid measures). Bird shot was the small-calibre lead shot used in fowling pieces for the killing of birds and small game. Flannel was the soft loosely-woven woollen cloth used for undergarments, baby clothes and interior linings. Salt was supplied in bushels (the working dry measure of approximately 36 litres in modern terms) for the working preservation of meat and seasoning. English linen here is ozenbriggs (osnaburgs), the coarse German linen exported through Hamburg and named for the German town of Osnabrück, used for shirts and rough domestic linen; Indian linen blue is the blue-dyed Indian cotton or linen for working uniform-type garments. Bread in the cask was the working ship's biscuit imported from England in casks, preserved by extreme dryness against the sea voyage. Bunting was the lightweight worsted cloth used for signal flags. Corks were the cylindrical stoppers cut from the bark of the Mediterranean cork oak, used for bottling spirits, wine and medicinal preparations. Brass metal buttons were the working cast or struck brass buttons used for working livery, slave coats and the rougher trades' garments, distinct from the silk, mohair or silver buttons of the freeholder dress. Tallow was the hard animal fat, principally from cattle or sheep, rendered and used for the manufacture of candles, soap and leather dressing. The closing total of £304 10s 4d for the month of 25 May 1713 to 25 June 1713 allocates £250 8s 1¾d to the inhabitants, £15 12s 9¼d to the plantation, £3 19s 1d to the fortifications and £34 10s 3¾d to the general charges. The pattern places the inhabitants' column at over 82 per cent of the monthly total, with the three institutional columns making up the remainder.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			The substantial brass metal buttons line at £7 16s 9d on the plantation column is the single largest entry on that column for the month. The supply probably went to the livery of the slaves and servants of the Governor's establishment, or to the sewing of buttons onto the slaves' clothes already supplied through the storekeeper. The high working volume indicates a programme of livery refurbishment at Plantation House during the month. The tallow line at 1 cask of 22 [...] for the plantation supplies the raw material for the making of candles, soap and leather dressing at the Governor's establishment. The casked supply indicates the continuing production of candles at Plantation House for the domestic lighting of the senior establishment, sufficient for several months of working candle manufacture at the working rate of consumption of the senior household. The pewterers' ware line of the present month is the most extensive in the present series, listing 2 dishes, 6 plates, 48 spoons, 1 chamber pot, 2 porringers, 4 basins and 1 quart pot for the inhabitants at £2 17s 4d, with a further 30 spoons and 1 chamber pot for the general charges at 15s 5d. The 48 spoons in one month, combined with the 30 to the general charges, brings the monthly spoon supply to 78, sufficient for the refurbishment of multiple household services. Speculations The supply of 2 cucumber glasses to the general charges in the preceding line, together with the substantial bird shot and bread supplies to the same column in the present line, indicates that the senior establishment was operating an active programme of provision-supplementation during the drought months. Cucumbers under glass would have supplied fresh vegetables during periods when the open ground would not produce; bird shot supplied the killing of working wild birds for the table; bread in cask form supplied the bakery shortfall. The combined pattern reflects a deliberate working response to the drought-induced restriction of fresh provisions, with the senior table being maintained on imported and forced-grown alternatives where the local supply was working insufficient.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			accounts as a compressed three-month batch rather than as three separate monthly returns. The compression reflects the consequence of the backlog accumulated since 25 April 1713 and the order of the Governor on 13 October 1713 that all overdue accounts be produced. The result is a single account covering the three months of high summer and early autumn, with the aggregate volume substantially larger than any single month in the preceding series. This account introduces several items whose names require explanation. The arrack lines distinguish three separate categories: Success arrack (the stock remaining from the East Indiaman <i>Success</i> of Captain Thomas Clatham, which had visited St Helena on 11 February 1712 and subsequent voyages), arrack of shipping (the fresh supply from currently visiting ships at the higher rate of 9s 3d per gallon), and Goa arrack (the Portuguese-Indian alternative from the Goa station, supplied at 5s per gallon). The differential pricing across these three categories indicates the different sources and probably the different qualities. Sugar candy was the crystallised refined sugar described in earlier accounts. The hundredweight (cwt) used in the rice line was the working measure of 112 pounds, the standard English unit for bulk dry goods; the rate of 4s 1½d per hundredweight at the inhabitants' column is equivalent to approximately one halfpenny per pound, marking the bulk rice supply at the low unit rate that the Madras and Bengal cargoes had brought during the drought. Sundries in the rice line refers to a miscellaneous group of unspecified items aggregated for accounting purposes, included here under the rice heading by clerical convenience. The arrack supply for the three months brings substantial volumes across all four columns. The 751 gallons of arrack of shipping to the inhabitants at the higher rate of 9s 3d per gallon brought £341 4s 7½d to the inhabitants' column alone, indicating the renewed spirits supply from a fresh cargo during the period covered. The Goa arrack at 30 gallons for general charges and 15¼ gallons for fortifications continues the two-tier spirits structure, with the cheaper alternative supplied to the construction labour at Munden's Castle and the Prosperous Bay house at the lowest available rate. The sugar line at 4,279¾ [...] of sugar at 8d to the inhabitants for the three-month period brings the sugar supply to a substantial level, with the corresponding £142 13s 0d alone exceeding the monthly average of the preceding months. The sugar candy supply at 149 [...] for the inhabitants, 11 [...] for general charges and 25 [...] for plantation totals 285 [...] of candy at 12d. The consistency of the 8d sugar and 12d candy rates over the three-month period confirms the settled pricing of these staples. The rice line of the present three-month account is the most extensive of the series, with 10,371 [...] to the inhabitants at 4s 1½d per hundredweight and substantial subsidiary lines to all three institutional columns. The total of 10,413 [...] across all columns for the three months indicates the centrality of rice as a principal grain staple, substituting for the English wheat that the drought had made unobtainable. Speculations The carried-over subtotals at the foot of the page bring the three-month aggregates to £694 5s 7¼d for the inhabitants, £23 8s 0¼d for the plantation, £70 2s 3d for the fortifications and £87 5s 11d for the general charges. The substantial fortifications total, far higher than the preceding monthly figures, indicates the concentrated construction activity during the summer and autumn at Munden's Castle and the Prosperous Bay house. The three-month aggregate approaching £875 across all columns places the store activity at a level

Castile soap was the hard white soap made principally from olive oil in Spain, valued for its mildness and used for personal washing; the unit rate of 18d per pound places it at over twice the rate of Bengal soap, the softer Indian alternative used principally for laundry and rough household washing at 8d per pound. Beer at 18d per gallon was the fermented malt drink brewed in England and shipped to St Helena in bulk casks, supplying the working alternative to spirits at a substantially lower price point. Oils sorted in the present line cover two grades: rape oil pressed from the seeds of the rape plant, used for lamps and cooking, and linseed oil pressed from the seeds of the flax plant, used principally for paint preparation and the dressing of leather and wood, both supplied at the same 7s per gallon rate. Provisions in the present line cover three categories: bread (the working baked loaf at 5d per pound on the inhabitants' line and 6¼d for plantation), flour (the ground wheat at 3½d per pound, used at the senior establishment for baking fresh bread), and a cask of bread at 22 [...] at 3s per [...] for general charges, which is the working ship's biscuit (the hard baked biscuit preserved against the sea voyage, supplied in casks at the working unit rate per pound). The hundredweight measurements in the bread and flour lines mark the supply of bulk grain by the working English standard of 112 pounds. The cheese line at 886 [...] at 10d to the inhabitants for the three-month period brings the cheese supply to £36 19s 10¾d, with subsidiary lines of 70 [...] for general charges and 21 [...] for plantation. The total

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			volume of 977¼ [...] across the three columns represents a substantial monthly average of approximately 326 [...] of cheese per month. The increase reflects either a fresh cheese cargo arriving on a visiting ship during the three-month period, or the continued substitution of preserved English dairy products for the fresh local production reduced by the drought. The Castile and Bengal soap line of the present account brings the total soap supply to approximately 565 [...] across all columns and grades. The two grades maintain the differential pricing visible across the preceding months. The substantial Castile supply of 18 [...] to the inhabitants at £13 18s 0d indicates the continued freeholder demand for the finer personal soap, while the 315 [...] of Bengal at the inhabitants supplied the domestic laundry requirements. The absence of any Castile supply to the fortifications column indicates that the finer soap was not used in the washing requirements of the construction workers, who drew on the Bengal supply instead. The beer line at 367 gallons at 18d per gallon to the inhabitants at £27 11s 5¼d marks the first appearance of beer in substantial volume in the present series. The 18d per gallon rate placed it at a considerably lower price point than the arrack at 7s or 9s 3d per gallon. The substantial 367-gallon supply to the inhabitants during the three months brought a monthly average of over 122 gallons, indicating the renewed English beer supply during the drought period when spirits had been the primary alternative. The 85¾ gallons of beer for general charges at £6 8s 4d supplied the senior establishment's beer requirements. The provisions line of the present account exposes the scale of the English bread and flour supply to the establishment. The 565¼ [...] of bread at 5d per pound to the inhabitants at £9 8s 6d, combined with the 160¼ [...] of bread to general charges at £6 9s 4d, brings the total bread supply to 1,068 [...] across the three months. The continued flour supply at 13 [...] at 3½d per pound for general charges, and the further flour supply for the plantation, indicates the continued production of fresh bread or biscuit at the senior establishment from imported flour, supplementing the ship's biscuit supplied through the bread casks. Speculations The 1 cask of bread at 22 [...] at 3s per [...] for general charges at £3 5s 4d marks the separate supply of preserved ship's biscuit in cask form, distinct from the loose bread supplied by the pound. The cask bread was the hard baked biscuit preserved against long sea voyages, drawn on by the senior establishment as the backup grain supply when the fresh bread supply was insufficient. The casked biscuit was the principal naval and East India provision grain before the development of the factory bakeries of the later eighteenth and nineteenth centuries. The presence of cask biscuit in the senior establishment's supply, alongside fresh bread by the pound, indicates that the general table was being maintained on a mixed basis of fresh and preserved supplies during the drought-affected three-month period.

			£12 7s 0d Sallampores 19 of the same inhabitants £10 6s 0d Blankets 17 sorted at 19s £16 11s 0d inhabitants £16 11s 0d [...] of the same for general charges general charges 15s 6d [...] for plantation at 15s plantation 15s 6d £18 2s 0d Sweet powder 490 [...] at 19d for the inhabitants inhabitants £3 17s 6d Pewterers' ware 33 porringers £2 7s 0d 9 basins £2 0s 4d 74 dozen spoons £1 4s 11½d inhabitants £5 12s 3½d Carried over inhabitants £997 8s 10d plantation £34 2s 4¼d fortifications £70 2s 3d general charges £106 7s 0¾d [total £1,137 18s 9¼d] Interpretations This section of the account introduces several specialist items whose names and uses require explanation. Hats here appear in seven grades by unit price, ranging from 3s 9d at the lowest to 18s 3d at the highest, reflecting the working range of head wear from the coarse workman's hat through the felt and beaver hats of the principal freeholders. Chelloes were the coarse Indian cotton in piece form, supplied principally from the Madras factory; chello shirts (made up from the cloth) are listed separately at 70 at 2s 3d each. Dungarees were the coarse working cotton from western India, supplied in pair form rather than piece form, indicating that the garments were sold complete rather than as length cloth; the term derives from the Dungri district of Bombay. Long cloth was the fine plain Indian cotton supplied in long pieces, principally from Bengal, at the unit price of 24s 9d marking it as the highest unit-priced textile of the account. Gurras were the plain coarse white Indian cotton from Bengal; ginghams the striped or chequered Indian cottons; neilas the striped Indian cottons supplied principally from Madras; sallampores the blue-dyed Indian cotton from the Coromandel coast; chints the printed and painted Indian cottons. Salvanans appear in the present line for the first time in the working accounts, and are probably a corrupted rendering of a trade name for a working further textile class, possibly Salampuri, an Indian cotton grade not yet seen in the preceding accounts. Neckcloths were the rectangular cloths of fine linen or cotton tied around the throat, supplied at 15s 9¾d each in the present line. Sweet powder was the scented powder compounded of orris root, violets, lavender or other fragrant ingredients, used principally for the scenting of hair, wigs, linen and garments in the personal hygiene practices of the freeholder households. Pewterers' ware in the present line covers three items: porringers (the working small two-handled bowls for serving pottage, porridge or other soft foods), basins

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			(washing and serving bowls), and spoons supplied by the dozen. The hats line of the present three-month account exposes the seven different price points of hats supplied to the inhabitants, with 14 hats at 18s 3d representing the principal volume at the top grade and £12 15s 6d to the line. The line identifies the substantial demand for the finest hats among the principal freeholders for the formal occasions of the island society, alongside the cheaper grades for the ordinary inhabitants and the rougher trades. The shirts cluster of the present three-month account brings three grades to the inhabitants in substantial volume: 70 chello shirts at 2s 3d each, 50 coarse white shirts at 3s each, and 21 fine white shirts at 8s 6d each, with a further 2 chello shirts on the general charges line at 4s 10d. The aggregate supply of 141 shirts plus subsidiaries across the three months indicates the substantial shirt refurbishment of the freeholder and senior establishment dress. The continued three-tier pricing structure confirms the working differential of shirt quality supplied through the storekeeper. The cluster of Indian textile lines covering gurras, salvanans, gingham, neilas, neckcloths, chints sorted and sallampores brings the full range of Indian cottons to the inhabitants in substantial volumes for the three months. The presence of all grades in one account, with substantial unit volumes across the seven classes, indicates the continued freeholder accumulation of Indian textile stock during the period covered. The pewterers' ware line at 33 porringers at £2 7s 0d, 9 basins at £2 0s 4d and 74 dozen spoons at £1 4s 11½d brings the substantial pewter table supply to the inhabitants. The 74 dozen spoons, equivalent to 888 spoons, represents an extraordinary volume of spoons for the three months, sufficient for the complete refurbishment of the spoon service of multiple freeholder households or the stocking of a new household at its establishment. Speculations The substantial sweet powder supply at 490 [...] at 19d for the inhabitants brings the perfume supply to the freeholders at £3 17s 6d for the three months. The monthly average of approximately 163 [...] across the three months indicates the continued freeholder interest in personal perfumery despite the drought conditions affecting the broader agricultural economy. The pattern reflects the maintenance of fashionable personal hygiene practices among the freeholder women in particular, with sweet powder applied to hair, wigs and linen as the working complement to the substantial soap and starch supplies of the preceding lines.

The pewterers' ware line covers the working range of household pewter, with chamber pots (the night vessels supplied at 19 in the present line, the largest single chamber-pot line in the present series), dishes (sold by weight at the working rate per pound where the pewter was substantial enough to warrant a weighed entry), plates (the individual eating plates supplied at two unit prices, probably reflecting two grades of pewter), pots in graded sizes (quart, pint, half-pint, quarter, half-quarter), supplying the full range of liquid measures from the working drinking quart down to the smallest measure. Broad cloth was the finest English woollen, supplied in scarlet (the bright red), black and coloured grades; the scarlet and black at 20s per yard mark the

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			highest dress textiles in the present account, with the coloured at 15s indicating the working preference of freeholder dress for the bright primary colours over the softer dyes. Druggets in the present line appear in two grades: silk drugget (the working drugget with silk content, used for finer outer garments) and cloth drugget (the working woollen drugget without silk content, used for the working ordinary outer garments), with the silk priced at 4s 8½d per yard and the cloth at 3s 3½d per yard. Shalloons were the light worsted lining fabric used for the inside of coats and waistcoats. Flannel was the soft loosely-woven woollen cloth used for undergarments, baby clothes and interior linings; bunting was the lightweight worsted cloth used principally for signal flags. Durants were the glazed worsted cloth finished with hot rollers or irons to give a glossy surface, used principally for outer garments and coat linings. Perpetuanoes were the durable worsted serge produced principally at Sudbury and Yarmouth for the export trade, named for the long-lasting wear of the cloth; supplied in this account in two grades, black at 2s 10d per yard and coloured at 2s 3d per yard, with the black higher-priced reflecting the cost of the black dye. The continuation of the pewterers' ware line brings further substantial volumes of pewter to the inhabitants. The 19 chamber pots at £3 19s 10d represents the largest single chamber-pot line in the present series, indicating the refurbishment of the night-vessel complement of multiple freeholder households during the three months. The further domestic pewter at six plates, six other plates, one quart pot, one pint pot, two half-pint pots, two quarter pots and one half of the same, together with the single weighed dish, brings the complete pewter table complement to the inhabitants. The differential sizes of the pots reflect the full range of domestic drinking and measuring vessels. The broad cloth line at 3¾ yards of scarlet at 20s, 5 yards of black at the same, and 21 yards of coloured at 15s, brings the broad cloth supply to the inhabitants at £23 0s 10¼d for the three months. The differential pricing between scarlet, black and coloured broad cloth, with the coloured at 15s against the scarlet and black at 20s, indicates the preference of freeholder dress for the bright primary colours over the softer coloured dyes. The druggets line at 7½ yards of silk drugget at £1 15s 7½d and 78¾ yards of cloth drugget at £12 19s 9d brings the drugget supply to the inhabitants at £14 15s 4½d for the three months. The substantial 78¾ yards of cloth drugget represents the principal freeholder outer-garment cloth supply, sufficient for the production of approximately twenty complete suits at the ordinary freeholder dress scale. The shalloons line at 52 yards at 2s 6d to the inhabitants brings the coat-lining supply to £6 10s 0d for the three months. The 52-yard volume corresponds to the lining requirements of approximately 12 to 14 coats at the ordinary lining measurement. Speculations The flannel and bunting line at 13½ yards of flannel and 7 yards of bunting to the inhabitants, with 7¼ yards of bunting for general charges, brings the soft woollen cloth and the signal cloth to the establishment. The presence of bunting at 7¼ yards on the general charges column specifically corresponds to the production of signal flags for the fortifications and the castle, with the bunting cloth being the principal material from which the flags of the establishment were sewn. The 7 yards of bunting on the inhabitants' column probably supplied the similar purposes at the private level, for the freeholder flag displays at ships' arrivals or the ceremonial occasions of the island.

			[...] [...] of brown at 4s 3d £5 8s 2d [...] [...] of white sorted £2 12s 3d 11 [...] nuns' thread sorted £1 15s 5d [...] of nuns' thread 3s 8½d [...] yards of thread [...] inhabitants £10 7s 2d [...] £10 7s 6d Carried over inhabitants £1,120 12s 8¾d plantation £100 17s 5¼d fortifications [...] general charges £106 17s 0¾d [total £1,337 17s 1¼d] Interpretations This section of the account introduces several specialist textile items whose names and uses require explanation. Kerseys were the coarse woollen cloth produced principally in Kersey in Suffolk and elsewhere in the West Riding of Yorkshire, used for soldiers' coats, slave clothing and rough working garments at the lower end of the wool textile range; the 307 yards on the plantation column at £33 5s 2d represent a large bulk supply for slave clothing on the consolidated estate. Norwich stuffs were the worsted fabrics produced in and around Norwich for the home and export markets; the present line covers three Norwich varieties: black crape (the thin transparent worsted used for mourning), dammask (the woven figured worsted with a damask weave pattern, named for the original Damascus silks but here used of worsted versions), and stuff (the general term for the lighter worsted cloths of Norwich). Fustians here cover three grades: coloured dimity (the lighter fustian with coloured pattern), white dimity (the white version of the same), and thickset (the heavier fustian for harder wear), with the supply by pieces and by yards. Indian linen here is a misnomer for Indian cotton, with the three named items being gurras (the coarse white Indian cotton, here in blue-dyed form), salampores (the blue-dyed Indian cotton from the Coromandel coast), and romalls (the Indian cotton kerchiefs from Bengal). Callemancoes (calamancoes) were the glazed worsted cloth with a satin twill weave on the front and a plain back, used for women's gowns, petticoats and waistcoats; named for the working trade pattern of the cloth. Gloves at 20 pair sorted indicate the working glove supply across men's, women's and maids' grades, sold by the pair at varying unit prices. Sackings were the coarse linen or hemp cloth used for sacks and rough covering; hessings (the working ancestor of modern hessian) were the coarser variety of the same, named for the German state of Hesse where the cloth was produced. Threads here appear in four working grades: brown thread for heavy sewing, white thread for ordinary use, nuns' thread for fine cambric and lawn sewing, and a further line of yard-measured thread for specialist applications. The kerseys line at 307 yards for the plantation at £33 5s 2d marks the single largest entry on the plantation column for the three-month account. The substantial supply of cheap woollen cloth indicates the working refurbishment of the slave clothing complement of the consolidated estate during the period covered, sufficient for a substantial number of slave coats and breeches at the standard slave garment measurement. The 54 yards on the inhabitants' column at £5 10s 6d supplied the smaller freeholder requirements for the same coarse woollen cloth,

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			probably for working slaves' clothing in the freeholder households. The Norwich stuffs line at three working grades, with 176 yards of black crape at £19 6s 1¼d, 54 yards of damask at £2 9s 7½d and 176 yards of further Norwich stuff at £4 11s 4½d, brings the Norwich worsted supply to £24 7s 1¼d for the three months. The substantial 176 yards of black crape probably reflects a continuing demand for mourning wear during the drought-mortality period, with multiple deaths in the small freeholder community producing the working requirement for mourning textiles. The fustians line at three grades, with 41¼ yards of coloured dimity, 49½ yards of white dimity and 134¼ yards of thickset, brings the working fustian supply to £22 13s 9¼d for the inhabitants during the three months. The substantial supply across the three grades supports the ordinary freeholder working dress for the cooler months, with the thickset providing the heavier outer garments and the dimities the lighter undergarments and lining. The Indian linen line at 60 [...] of gurras (the working blue gurras at 1 [...] to inhabitants and 40 [...] to plantation) and 21 [...] of salampores (1 [...] to inhabitants and 20 [...] to plantation), with 1 romall, brings the total Indian cotton supply to £31 17s 3d for the three months. The substantial weights of gurras and salampores on the plantation column indicate the working slave clothing refurbishment programme that runs through this account, with both the cheap English kerseys and the substantial Indian cottons being drawn down at the same time for the working consolidated estate's slaves. Speculations The combined plantation column for the present three-month period, with £33 5s 2d of kerseys, £30 15s 0d of Indian cottons, and substantial subsidiary lines, brings the slave clothing supply for the consolidated estate to substantial volumes during the period covered. The pattern indicates a deliberate working programme of seasonal refurbishment of slave clothing during the summer and autumn months, probably timed to provide warm working clothing for the slaves during the cooler months approaching and to replace the worn working garments of the preceding twelve months. The concentration of slave-clothing supply within the three-month account suggests that Cason, as overseer of the consolidated estate since 8 April 1712, had timed the refurbishment to coincide with the working cargo absorption from the visiting ships.

Interpretations

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			The four-column format of inhabitants, plantation, fortifications and general charges, already the standing arrangement of the storekeeper's monthly accounts, here drives the apportionment of every commodity line. Goods drawn for the plantation are working materials for the Company's directly held estate (the brown thread, the bottles to plantation), goods to fortifications are construction or institutional consumables (the bottles to fort), and goods to inhabitants are retail to the freeholder and planter community at standing rates. The opening sub-total carried from the previous folio, £1,337 17s 0d in general charges set against £125 5s 0d to inhabitants, shows the Company's own consumption running well ahead of retail to settlers in the month covered, consistent with the heavy victualling demands recorded across the drought months of 1713. The goods themselves draw the page firmly into the wider Indian and European supply network behind the St Helena store. Brown thread is unbleached linen sewing thread imported from the Indian textile economy, and is supplied here for working repairs to slave clothing and to the heavier institutional cloths. Stockings sorted are mixed-grade knitted hose, with rowlers a lower grade of patterned stocking and crewel a worsted wool yarn used for repair and embroidery; the sequence covers the range from cheap soldier issue to better-quality wear sold to freeholders. Ribbons galloon and ferritt are narrow woven trimmings, galloon being a heavier braided trim used on coats and hats, ferritt a light cotton or silk tape for binding edges, both sold by the yard. The buttons are pewter and cloth-covered coat and breast buttons by the dozen, the breast button being smaller and cheaper, the coat button heavier and more expensive. Silk and mohair priced by the ounce are imported sewing silks and mohair yarns, the mohair being long-staple yarn from Angora goats sold for working into braids and buttonholes. Ivory and horn combs are personal toilet articles imported in graded sets, the ivory comb at over 1s the piece a luxury item against the horn at 6½d. The hosiery ware here includes earthenware and pewter porringers (small bowls for individual servings), serving dishes, a straining dish, platters, a wooden bowl and cloth and hair brushes, the named recipients Susanna and George being household servants or slaves to whom the items were issued directly. The bottle entries at the foot of the page (12 bottles to fort, 14¼ to plantation) show how a single batch of imported glassware was split immediately between the two main institutional consumers of the island. Bottles in this period would be hand-blown English bottle glass used for liquor reserves and oils. The graded division parallels the earlier salt tiering (Fort 6d, Plantation 6½d, Inhabitants 6¼d the bushel) confirmed across the storekeeper's accounts since 1710, and reflects the working pattern by which the Company recovered the cost of supply through different unit rates rather than uniform pricing across all consumers. The recipient names entered against individual items (Susanna against the serving dishes, George against the straining dish) operate as an internal check on the four-column accounting. Where a commodity is issued to a specific household member rather than to a column heading, the storekeeper notes the name on the line and absorbs the sum into the appropriate column. The practice gives the council a working audit trail from any disputed line back to the individual to whom the goods were delivered, and connects with the standing requirement under the 25 Nov 1712 monthly accounts order that all goods landed and issued be entered against an identifiable recipient. Speculations The very heavy preponderance of the general charges column over the other three (£1,337 17s 0d carried forward against £125 5s 0d to inhabitants)

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			suggests that this month falls in the immediate aftermath of a large cargo landing, with the bulk of the consignment still entered against general charges pending allocation to specific institutional accounts. The presence of fresh stockings, buttons, ribbons, combs and bottles in the same submission supports this reading, since these are typical end-of-cargo items sold off in graded retail parcels once the institutional reserves have been laid in. The pattern would be consistent with the pricing settlement of the Susannah, Kent and Hewolen cargoes ordered on 3 Jul 1713 under paragraph 37 of the Toddingtong letter, with retail allocation rolling forward across subsequent months as the goods worked through the store.

		6 5 9 Carried over 1359 10 11 112 oo 2½ 4 2 4½ 110 3 [...] 1405 16 11[.]	98 pound other ironmongers ware sorted at [...] £9 8s 1¼d 3 spades £0 17s 3d 2 iron pots of 117 pound at 2s 6d the pound £2 16s 6d Sub-total £16 2s 3d To plantation £2 18s 6d To fortifications, sub-total carried £16 2s 3d Stock locks (general charges) 11 pair stock locks at 2s 10d the pair £1 5s 6d 12 garnetts at 1s 9d £0 8s 8d 25 pound 10-penny nails at [...] £0 15s 7d [...] pound 8-penny nails £0 5s 3d 12 pound 4-penny nails at [...] £0 7s 0d [...] pound 6-penny nails at [...] £0 4s 6d Sub-total £1 12s 4d 60 pound other ironmongers ware £4 13s 1¼d Sub-total to fortifications £6 5s 9d Carried over Inhabitants £1,159 10s 11½d Plantation £112 0s 2½d Fortifications £4 2s 4½d General charges £1,109 3s [...]d Total £1,405 16s 11d Interpretations The salt allocation is split across all three institutional columns at differential rates: 7 bushels to the plantation, 6 to general charges and 12 sold to inhabitants. The plantation share runs above its usual proportion in earlier monthly accounts and signals heavy curing demand, consistent with the slaughter rhythm of the Company's hog and cattle stock for storage as salt provisions. Pepper appears in a small allocation of only 10 pound across the three columns and works as a household condiment for the Castle table rather than as a tradeable bulk commodity, despite pepper being one of the principal homeward cargoes of the wider East India trade. The ironmongers ware section is the principal substantive entry on the page and shows the recovery of construction supply for the works at Munden's Castle and the new storehouse. Nails graded by penny weight (the standard English builders' measure by which a quantity of nails of a given size weighed a stated number of pence per hundred) cover the full range from heavy 20-penny down to 4-penny, with mortice nails for joinery, tacks for upholstery and general fastening, and stock locks (the chunky timber-cased locks fitted to doors and chests) and garnetts (T-shaped iron hinges, named for the garnet-cross shape of the strap) for completing doors and window shutters. The 2 iron pots of 117 pound at 2s 6d the pound suggest a single substantial casting purchase for the Castle kitchen or the slaves' victualling kitchen; the unit rate is much higher than the bulk nail rate and reflects finished foundry work rather than raw bar iron. The 3 spades at £0 17s 3d total fall on the plantation column and replace working tools for the labour gang. Pins, needles, thimbles and paper-mounted blanket pins together constitute the haberdashery component of the cargo and are sold principally to the inhabitants and the General Table, supporting clothing repair and

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			personal sewing across the household economy. The presence of a single paper of blanket pins (large pins for fastening blankets and infant wrappings) alongside thousands of ordinary pins and forty-two thimbles points to a typical Indian-mixed parcel rather than a specialist consignment. The crossing of certain allocations between columns visible on the page (the 16 2s 3d sub-total of ironmongers were carried both to plantation £2 18s 6d and to fortifications by a separate apportionment) reflects the working practice by which a single bulk shipment was split across institutional consumers as drawn out of the storehouse rather than entered as a single column at receipt. The mechanism preserves the integrity of the four-column total while allowing flexible internal allocation as work proceeded on the ground. Speculations The substantial ironmongers were allocation to fortifications (£6 5s 9d on the smaller stock-locks, garnetts and nails entry alone, with the larger £16 2s 3d sub-total above split principally to plantation and fortifications) suggests the page falls in a month of active hardware drawing for both the works at Munden's Castle and routine plantation maintenance. The pattern is consistent with the 25 Nov 1712 order that French bring in monthly accounts of stores expended on the fortifications, and with the standing programme by which the Governor prioritised fortifications, then storehouse, then barracks. The relatively modest pepper line, by contrast, and the absence of any major textile entry on this page, support the reading that the largest categories of the cargo were entered on earlier pages and that this folio carries the smaller hardware and dry-goods tail of the same submission.

Brass locks numbered by their pattern with master keys (the mast keys here are passkeys cut to open multiple locks of the same number) are the principal expensive item on the page at £4 7s 6d and £2 14s 0d for sets of three, and would have been fitted to chests, doors and storerooms requiring secure but interchangeable access. Box irons are hollow flat irons heated by inserting iron heaters (slugs of hot iron) and were used for pressing linens and shirts; the entries for one box iron and two heaters at 9s 9d to general charges and a larger set of two box irons and four heaters at £1 0s 6d to the inhabitants reflect graded household equipment for the Castle and the freeholder market. Rubstones are dressed sharpening stones for keeping working edges on the planes and chisels of the carpenter's bench. The five planes with five plane irons (the cutting blades fitted into the wooden plane stocks) at £0 14s 9d and £0 3s 7¼d show that the cargo carried a full carpentry set rather than blades or stocks alone.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			Braziers were here picks up the kitchen and lighting inventory. Brass lamps at 3s 1d each are simple open oil lamps fed with linseed or rape oil from the parallel oil lines in the wider monthly accounts. The copper saucepan, skillet (a small long-handled pan), ladle and snuffers (scissor-like wick trimmers for candles and oil lamps) are domestic articles for the Castle and the General Table. The six copper pots sorted at £1 16s 7d issued to Susanna (a recipient name already noted in the hosiery ware section of the preceding page) carry forward the working practice of attributing parcels to identifiable household members within the storekeeper's columns. Tin men's ware (worked tinplate goods) covers two tin funnels and lanterns (horn-paned lanterns fitted with a candle inside a metal frame, the horn panes allowing light to pass while sheltering the flame against wind and rain). The lanterns at 3s 10d to inhabitants and 3s 10d to general charges support working night movement around the Castle, the storehouse and the fortifications. The unwrought iron entries at the foot of the page (bundle steel at 6½d the pound, a brass stub at 6d the pound, and six bars of iron of 170 pound) close the page with the heavy raw materials for the smith's shop. Bar iron at this weight is the unfinished stock from which nails, hinges, hoops and tools are forged on the island, the smith working it under the direction of the fortifications programme. The carrying-over of the column totals at the foot of the page (£1,193 2s 7½d to inhabitants, £113 16s 5½d to plantation, £7 17s 10½d to fortifications, £1,119 14s 6d to general charges, sum £1,440 6s 6d) shows the running account standing at substantially the same proportions as the brought-over figures at the head, with general charges still carrying the largest column. Speculations The very narrow allocation of the brass and copper kitchen ware to general charges and to a named recipient (Susanna), combined with the routing of the brass locks number 4 and number 5 partly to Susanna's cargo and partly to general charges, suggests that this part of the cargo was apportioned chiefly to the establishment of a single household rather than dispersed across the wider settler market. The pattern fits the working practice by which an arriving senior officer's domestic kit was assembled out of the cargo at landing and entered against the named cargo to settle the bill, with any surplus broken out into retail to inhabitants. The five planes and five plane irons together with the hammers, locks and rubstones would constitute exactly the carpenter's set that a substantial private household required, distinct from the heavier joinery tools held on the fortifications account.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			working use against the drought-induced food shortage. The 178½ dozen hooks sorted (i.e. about 2,142 hooks) and the 48 lines sorted carried into the inhabitants column at £11 15s 8½d, with a further 23 dozen hooks and 47 lines to general charges at £3 17s 3d, support directly the licensed fishing scheme settled at the 12 May 1712 council, by which the yawl was opened for fishing by groups of four families under a Company coxswain to relieve the drought scarcity. The split between inhabitants and general charges reflects the dual operation of the scheme, the inhabitants drawing their own hooks and lines for the family groups while the general charges line carries the equivalent gear for the garrison-fishing detail running in parallel. Three lines drawn to the plantation suggest a small tackle reserve held on the Company estate. The two-hour glass at £0 3s 4d on the general charges line is a sand glass running for two hours between turns and was used to time changes of watch at the Castle gate and on the boats; the lanthorns of the preceding page operate in the same field of routine night and timing equipment for the establishment. The pair of bodies at £0 11s 6d is a woman's stiffened bodice (an item of stiffened underclothing forming the foundation of a woman's outer dress) drawn out for a single household; the necklace of beads at £0 5s 4d is a small piece of personal jewellery imported in mixed parcels and sold to inhabitants on the same line. Garterings (woven tapes for tying stockings below the knee) and silk laces with thread ditto (silk lacing for stays and shoes, with matching thread laces as a cheaper alternative) belong to the same haberdashery cluster as the ribbons galloon and ferritt of the earlier folio. Lead at 242 pound to Susanna's cargo continues the working pattern by which raw lead was imported in bulk for casting into shot and for working into roof flashings and gutter linings at the fortifications. The lead price comes through here without a per-pound rate stated for this line, but at the £3 0s 6d sub-total the unit cost stands at about 3d the pound, consistent with the standing lead rate. Corks in five and a half gross with corkwoods (the unworked bark of the cork oak from which corks are cut) on the plantation and general charges lines provide bottle stoppers for the Company's bottling of the Madeira and the brandy reserves, and lower-grade corks for routine plantation use. Holland tape is bleached linen tape from Haarlem in the Netherlands, sold by the yard for trimming and binding, while collie tape is a coarser, often unbleached linen tape (the name reflecting the cooley or kuli linen of the Indian trade) sold by the piece for working linen. Glass ware here covers 20 panes of glass at 6d each and a further 46 panes at 6d each. Window glass at this rate is hand-cut crown glass in small panes, fitted into the leaded casements of the Castle and the principal Company houses. The salt cellars (small open dishes for table salt) at £0 1s 4d to inhabitants and the two-hour glass round out the household and timing inventory. Speculations The substantial allocation of fishing hooks and lines to inhabitants on the same page as a single named household's domestic kit (bodies, beads, salt cellars) suggests that this part of the cargo was being broken out for the relief and supply of the inhabitants as a working community rather than for the Castle establishment alone. The pattern fits with the drought relief programme of summer 1713 still working through to the inhabitants in the months that followed, with the storekeeper using the routine retail mechanism to distribute working tackle widely while the council retained the yawl and the coxswain. The lead line, by contrast, carried in bulk against Susanna's cargo at 242 pound, points to a strategic reserve to be drawn on for shot-making and for the lead pouring into cut stones at the fortifications recorded in earlier consultations.

			£0 2s 7d 2 desk wafers £0 0s 7¼d 8 pen knives £0 17s 4d Sub-total to general charges £70 17s 0d Carried over Inhabitants £1,225 4s 5d Plantation £122 5s 11½d Fortifications £8 1s 7½d General charges £1,200 3s 3½d Total £1,556 3s 7¾d Interpretations The new commodity groups on this page draw the Indian and English supply chains into close working contact. Indigo at 5 ounces is the deep blue dye derived from the indigo plant grown and processed in Bengal and Madras, shipped home as cakes and sold here in small ounces for laundry blueing and clothing dye. Red lead (a lead oxide pigment) and white lead (basic lead carbonate) appear together in graded lots, the eleven pound of red lead at 5s 9d and three pound of white lead at 1s 6d going to inhabitants, and a further eighteen pound of red lead to plantation. Both pigments work as priming and protective paints for woodwork on shutters, doors, gun carriages and boat fittings, with red lead carrying the additional property of inhibiting rust and rot on iron and timber exposed to weather. Silver twist buttons (cloth buttons covered with silver-wound thread) are luxury haberdashery sold at over 2s 4d the dozen and intended for the better-grade coats worn by officers and substantial freeholders. Starch, tea at 17s 6d the pound, and black hoods (women's hoods of black silk or wool) round out the haberdashery and provision cluster for the household trade. The two oval tables on Susanna's cargo at £6 6s 3d to inhabitants are joined furniture imported as a single matched pair, an unusually large single retail line and consistent with the working pattern by which substantial freeholders restocked their houses from each arriving cargo. The two stationery entries on this page form the most substantial single sub-total of the page and reveal the working office establishment behind the consultations themselves. Two ledgers and two journals at £2 7s 3¾d and £1 2s 8d respectively are the principal account books in which the storekeeper recorded debits and credits, the ledger holding running personal accounts and the journal recording transactions in date order before posting to the ledger. Eight white books at £13 13s 9½d are large blank-paper volumes for further records, perhaps including the consultation book itself, the register book of plans and deeds, and the books of orphans, wills and head money already established under earlier orders. Dutch royal paper and demy paper are graded papers from the Dutch mills, royal being a larger sheet for substantial drafting and demy a smaller working sheet; folio copy paper at fifteen dozen sheets covers the bulk of the copying out of consultations and outgoing letters. Sand pots (small pierced shakers containing fine sand for blotting wet ink), pounce (powdered cuttlefish bone or similar for preparing paper to take ink without spreading) with boxes, pencils, desk wafers (small discs of flour paste with colouring used to seal letters before the spread of adhesive envelopes) and pen knives (small folding blades for trimming the points of quill pens) together represent the complete kit of the eighteenth-century writing desk. The whole £70 17s 0d to general charges underwrites the documentary discipline imposed by Boucher and Pack across the storekeeper, plantation and fortifications departments. Testaments and horn books at £0 5s 3d and £0 1s 2d, respectively, are small religious and educational

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			items sold on the same line to inhabitants. The testament is the New Testament in pocket-bound form; the horn book is a single sheet of paper containing the alphabet, syllabary and Lord's Prayer mounted on a wooden paddle and protected by a thin sheet of transparent horn, used as the primer for teaching children to read. The pairing of three of each suggests a small but settled demand for elementary religious instruction across the inhabitants. A single cask of lamp black at 50 barrels (i.e. small barrel-shaped containers of carbon soot) at £0 17s 8d to general charges, a mat at £0 4s 0d to general charges and a sack of ten bushels of peas at £4 16s 8d round out the page. Lamp black is the soot collected from the burning of pitch or oil and is the principal black pigment for ink, paint and stains. Peas at this rate are dried split peas for boiling into pottage as part of the working ration at the General Table and on the boats. Speculations The pairing of a substantial stationery purchase at £70 17s 0d with the routine paint, dye and household goods on the same page suggests that this folio falls in a month of deliberate reprovisioning of the Castle office after the prolonged administrative pressure of the drought, the mutiny enquiry and the heavy schedule of title days, monthly accounts and head money returns running from late 1712 through 1713. The ledgers, journals and white books together would equip a fresh accounting cycle from 25 Mar in the new administrative year, and the prince Indian arms and ream of Dutch royal paper would support the heavy outgoing correspondence to London and the eastern factories that the council had begun under Boucher to recover lost ground after the senior attrition of 1712. The selection of titles is consistent with the working programme rather than with an opportunistic landing of whatever the cargo offered.

The first £516 16s 9¼d combines arms, cordage, lead and gun shot for the fortifications, the second £691 6s 9¼d holds coals, marked timber, deals and battens for the storehouse and barracks programme. The arms entries cover a chest of twelve halberds (long-handled pole arms combining axe blade, spike and hook, working as the standard side arm of sergeants and as ceremonial weapons of office at the Castle gate), a case of forty-eight muskets at 76s 4d the gross (the smooth-bore matchlock and flintlock long arms of the garrison), 500 flints (the gun flints fitted to the lock of each musket, struck against the steel frizzen to spark the powder), and four iron guns of nine hundredweight (small cast-iron cannon for the lighter batteries). The 200 shot of 74 pound is roundshot for the heavier guns; the 1s 2¼d unit rate places the line at the standard powder and shot pricing. The fourteen coils of cordage at 18 hundredweight 1 quarter 8 pound is bulk hempen rope for rigging, hoists, mooring and the long boat, supplied at £145 14s 3d for the whole consignment. The single largest individual line on the page is the chest of medicines at £68 17s 8¼d to garrison and general charges. The chest is the surgeon's working dispensary, replenished from London by direct consignment to overcome the chronic shortage of medicines noted at the 25 Nov 1712 council when the governor had bought medicines privately from Captain Lesly. The line follows directly on the petition by Porteous of 3 Nov 1713 for arrears of salary and lodging compensation and the consolidation of his surgeon's establishment.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			The construction timber entries reveal in detail the supply behind the Munden's Castle and storehouse programme. Sixty-three chaldron of coals at 5s 5d the chaldron (a chaldron being a dry measure of 36 bushels, used for coal and other bulk solids) at £18 5s 5d is the working stock for the lime kiln, finally arriving after the long-standing complaint of the governor in January 1711 that the want of coals had halted the lime-burning programme. The 54 pieces of marked timber of fourteen to sixteen foot long at 1s 5d the foot (£115 0s 7¼d) are full-length structural beams for the framing of the new storehouse and the further construction at the fortifications; the marking on each piece identifies its scantling and its place in the prepared schedule of timbers. Dram deals are pine boards from Drammen in southern Norway, the principal supply of building deal to London and onward to the Company stations; the 472 of ten-foot, 94 of twelve-foot, and 80 of fourteen-foot lengths together yield £226 16s 10½d for the deal flooring, sheathing and panelling of the same buildings. Battens are sligher timber laths used for roof framing and partition work, supplied here in 20 dozen at £10 4s 4d. Specialist garrison equipment is concentrated in the second sub-total. Eleven pair brass scales and beams at £2 16s 0d are weighing balances for the store; the smith's bellows at £5 9s 2d replaces the worn equipment of the smith's shop that had been working the bar iron and steel of the earlier page; the scaleboard and beam and three scale chains are platform-weighing equipment for bulky goods. The 100 sheep skins at £14 3s 9¼d are tanned leathers, which would support the Company-tanned leather programme on which William Penny had been continuing to work shoes for the store under the 8 Apr 1712 council order. The 24 dozen and 3 dozen cartridge cases at the rates of 24 and 12 to the dozen are paper or canvas-covered cylinders for prepared powder charges for the muskets and the small guns; the dozen rates reflect two graded sizes of cartridge. Scythes for grass and corn cutting and minion (a small gun-mounted blade or a graded line of small ironwork) close the section. The closing footing reads as a summary of the entire account, with the inhabitants column at £1,225 4s 5d, the plantation at £122 5s 11½d, the fortifications at £8 1s 7¼d and the general charges column at £1,408 14s 6¼d. The general charges line carries the bulk of the imported supplies for the establishment and works programme, with the smaller retail allocation to inhabitants and the modest direct draws to the plantation and fortifications columns showing how the storekeeper's apportionment worked in practice. Speculations The arrival of sixty-three chaldron of coals on this cargo settles a constraint that the governor had identified more than two years earlier as the principal limit on the construction quality at Munden's Castle. The pairing of the coals with fifty-four pieces of marked timber and over six hundred dram deals on the same line of consignment suggests that the cargo was deliberately composed in London to deliver the matched fuel-and-timber set for a sustained burst of building work on the storehouse and the further castles. The chest of medicines at £68 17s 8¼d and the brass scales, smith's bellows and scaleboard equipment indicate a parallel decision in London to restore the working capacity of the surgeon and the smith after the long period of make-do supply, consistent with the council's repeated outgoing letters since the Mead Frigate of 1710 pressing for direct consignments rather than opportunistic purchase from visiting masters.
110	103	Island St Helena At a Consultation	Island of St Helena Consultation held at the United Castle in James Valley on Tuesday 4 December 1713.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
		Held on Tuesday the 4th day of December 1713 At y[e] United Castle in James Valley Pres[ent] Benjam[in] Boucher Esq[r] Gov[r] Math[ew] Bazett 2 in Coun[il] Lieut[t] Tho[s] Cason John French Assist[ts] Christopher Kelley Gunners chief mate Petition[d] this day Humbly praying to Rent a Small Parcell of the Honour[ble] Comp[ly] Land containing about three Acres Lying Scituate in Fryer Valley near the Sea Side there being Some Springs to Water y[e] Ground which with great Pains & Charge may Produce a good Quantity of Suckers to plant in the Petition[ers] s[ai]d Plantation. Ordered. That the said Kelleys request be granted, and that asoon as the Land is sewed in it, be measured and a Lease granted for Twenty one years at y[e] rate of four Shillings per Acre besides one Shilling duty more Humphrey Edwards [free?] planter Presented his Petition this day Setting forth therein that Sometime Since Cap[t] George Hoskison deceased Employ[d] him to mannage and Look after the Honour[ble] Companys Hutts Plantation, Cattle &c which to the uttmot of his Power he did Neglecting his own Business at the Same Time, for half a year and bet[ter] Margin Notes: Christo[r] Kelley desires to rent a Small p[ar]cell Land Granted Humphrey Edwards represents his	Present: Benjamin Boucher Esquire, Governor; Matthew Bazett, second in council; Lieutenant Thomas Cason and John French, assistants. Christopher Kelley, the gunner's chief mate, came in with a petition asking to rent a small parcel of the Honourable Company's land of about three acres in Friar's Valley near the sea side. He told the council that there were springs of water on the ground and that with care and expense the parcel could be brought to yield a good crop of suckers for planting on his existing plantation. The council ordered the request granted. As soon as the land was fenced in it was to be measured, and a lease drawn for twenty-one years at the rate of 4s the acre rent, with a further 1s the acre revenue. Humphrey Edwards, free planter, came in with a petition setting out that the late Captain George Hoskison had employed him for some time as overseer of the Honourable Company's plantation at the Hutts and of the cattle and other stock kept there. He had done his utmost in the work, neglecting his own business at the same time, for half a year and better Interpretations The grant to Christopher Kelley confirms that the standing rate of 4s the acre rent and 1s the acre revenue, established as the customary lease of Company waste land since the Hoskison grant of 19 Jan 1710, continued in force in late 1713. The twenty-one year term is unchanged from earlier grants, as is the rule that survey and lease follow only after the petitioner has fenced the ground at his own cost. The Friar's Valley parcel is brought into cultivation by the petitioner for the express purpose of raising yam suckers (short cuttings struck from a mature yam plant and replanted to start new growth) for use on his existing plantation, a working economy by which a coastal parcel with springs supplements an upland holding that lacks reliable water for propagation. Christopher Kelley appears in the earlier handover as the long-boat boatswain, paid 5s the day at the rate set on 8 Apr 1712 for the Sandy Bay lime and stone run. His designation here as gunner's chief mate either reflects a parallel appointment on the artillery establishment or marks a promotion since the spring of 1712. Friar's Valley is a small inlet on the windward side of the island, useful for spring-fed cultivation but exposed and remote from the main settlements. The opening of Humphrey Edwards's petition draws on his earlier history with the Company. He had been sentenced on 29 Dec 1709 to expulsion as a drone with thirty-nine lashes for the assault on Tinsley, contempt of the felony law in the Doveton pig-killing matter and rumour-mongering against the Governor, but petitioned successfully on 27 Jun 1710 to remain with his family on his promise of better behaviour. He had then been considered for an overseership at the Hutts under the 8 Apr 1712 council order. Most recently he was admitted as matross on 3 November 1713. His present petition rests on the unrecorded period when, under the late George Hoskison, he had managed the Hutts plantation, and is consistent with the comprehensive audit of Hoskison's administration ordered on 5 Feb 1712 in which the disposal of the Hutts oversight had been listed among the items still to be accounted for. Speculations The timing of Edwards's petition, made within four weeks of his admission to the matross establishment on 3 Nov 1713, suggests that he was using his secured status as a Company servant to revive a claim for unpaid or unrecognised service from the Hoskison period. The decision to bring the petition only now, more than twenty months after Hoskison's death on 6 Mar 1712, points to a deliberate calculation that an established matross with a record of good behaviour

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			stood a far better chance of being heard than the same man as a marginal free planter. The Friar's Valley grant to Kelley on the same council day, on standing terms and at no cost to the Company beyond the eventual survey, confirms that the council was using small allocations of remote waste land as the working currency in which to settle the petitions of its own working servants without disturbing the consolidated plantation around the Hutts.
111	104	better But never receiv[d] one farthing consideration for all his Pains and care in the Employm[en]t aforesaid. Ordered. That the said Edwards be Allow[d] the Sume of Five pounds and that be Credit[t] given him in his Account Accordingly Island St Helena. At a Consultation Held on Tuesday the 2[d] Day of February 1713/14 At the United Castle in James Valley Pres[ent] Benjam[in] Boucher Esq[r] Govern[r] Matth[ew] Bazett 2 in Coun[il] Lieut[t] Thom[s] Cason John French Assist[ts] Sam[l] Jessey quarter Gunner Humbly Petition[d] this day praying we would be plead[d] to grant him the Le[n]t of Fifty Pounds in Store Credit offering the usuall Interest of Eight p[r] Cent p[er] annum for one year Upon Consideration the said Samuel Jessey is a Sober Industrious young man, and being willing to Encourage him. Ordered. That Margin Notes: Cap[t] [...] about y[e] Hutts plantation Allowd 5 [£] Sam[l] Jessey desires 50 [£] in the Store for reasons	Continuation of Humphrey Edwards's petition over the Hutts plantation and the order made on it, followed by a new consultation. Edwards had carried out his work at the Hutts plantation for half a year and better, but had never received one farthing in consideration for his pains and care. The council ordered Edwards be allowed £5 0s 0d, with credit given him in his account accordingly. Island of St Helena Consultation held at the United Castle in James Valley on Tuesday 2 February 1714. Present: Benjamin Boucher Esquire, Governor; Matthew Bazett, second in council; Lieutenant Thomas Cason and John French, assistants. Samuel Jessey, quarter gunner, came in with a petition asking the council to grant him the loan of £50 0s 0d in store credit, offering the usual interest of 8 per cent per annum for one year. The council considered the request. Jessey was a sober and industrious young man, and the council was willing to encourage him. Interpretations The allowance of £5 0s 0d to Edwards for half a year and better of overseership at the Hutts works out at about 10s the week and stands well below the £20 0s 0d annual rate fixed for Giles Hays as overseer of the consolidated estate on 8 Apr 1712. The lower rate fits Edwards's part-time and informal status under the late Hoskison, before any council confirmation of his employment, and the council's settlement of the claim by credit on his account rather than by cash payment shows the working preference for clearing such liabilities through the store books. The same mechanism is in regular use for clearing private debts and disbursements without disturbing the cash balance held at the Castle. Samuel Jessey's loan request follows the established pattern of secured advances on Company credit at 8 per cent per annum, applied to the Porteous advance of 27 Nov 1711, the Bell purchase of 24 Jul 1712 and the Welch advance of 3 Nov 1713. The phrase the usual interest of 8 per cent confirms the rate as the settled standard on the island for credit drawn from the store. The loan to a working junior officer (the quarter gunner being a deputy to the master gunner with care of stores of powder and shot) on the council's positive assessment of his character marks a deliberate exercise of patronage by which the senior establishment fostered the rise of promising young men through small accommodations of credit. Samuel Jessey is the same man who appears in the earlier handover as the freeholder confirmed in 22 acres on 30 May 1711 by reference to the consultation of 22 Feb 1709, here in his Company office. Speculations The £5 0s 0d allowance to Edwards, settled by credit on his account, suggests that the council was working through a backlog of unaudited claims from the Hoskison period in the months immediately following Hoskison's death and Pack's death. The petition would have been delayed for as long as Edwards remained outside the establishment, and the timing within four weeks of his admission as matross on 3 Nov 1713 fits the working pattern by which secured

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			Company servants reopened older claims. The Jessey loan, taken on the first council day of the new administrative period at the beginning of February 1714, points to a settled practice of beginning each fresh year with small, manageable extensions of credit to working officers, consistent with the council's preference for keeping the store books active as a working bank of last resort for the wider island establishment.
112	105	That his request be granted upon his giving bond and good Security for y[e] payment of Said Sum at the Expiration of one year. John Hoskison Sometime Since Assistant to the Surgeon Presented his Petition, desireing Leave to go off the Island in the next Ship that arrives here. Ordered. That the Said John Hoskisons request be granted According to his desire. Ordered. That the Said Huffle upon his Humble Petition and Promise of future good behaviour be released out of Prison, and oblidged to behave humble[y] honestly and Soberly for the time to come upon paine of being Severely Punnished for the next [...] offence. The Margin Notes: Granted upon Security. Jn[o] Hoskison desires leave to goe Off. Granted. Will[m] Huffle Ordered to be releas[d] out of Prison haveing been thirteen Months discharg[d] on Pet[iti]on for [...] future	Continuation of the consultation of 2 February 1714. The council ordered Jessey's request be granted on his giving bond and good security for the payment of the sum at the end of one year. John Hoskison, who had been some time before assistant to the surgeon, came in with a petition asking leave to go off the island on the next ship that arrived. The council ordered Hoskison's request be granted according to his desire. William Huffle, soldier, had been kept close prisoner since 8 July last for speaking words tending to mutiny when backed by others then under confinement, and when he was charged with strong liquor. He came in with a petition setting out his great concern and folly, the deplorable condition he was in, and the innocence of his case, having no way offended anyone further than by the few unadvised words he had spoken in his liquor as stated. He gave a hearty promise of future good behaviour and humbly begged pity and release from prison. The council took into consideration that Huffle had been kept close prisoner for seven months, and held that to be a sufficient punishment for the crime with which he stood charged. Being inclined to show clemency and pity to him on his being penitent and asking for release, the council thought fit accordingly. The council ordered Huffle be released from prison on his petition and promise of future good behaviour, and that he behave himself humbly, honestly and soberly for the time to come, on pain of being severely punished for the next offence. Interpretations The Jessey loan is settled on bond and good security for £50 0s 0d at 8 per cent for one year, a tighter form than the £60 0s 0d advance to Welch of 3 Nov 1713 which had carried the same rate but had been tied to a specific property purchase from Worrall. The bond instrument creates an actionable instrument enforceable at law for the principal sum, and the requirement for good security adds a second party who can be pursued in default. The combination protects the Company's credit while extending a personal accommodation to a working junior officer, and confirms the 8 per cent rate as the established cost of money on the island. John Hoskison's discharge closes another strand of the Hoskison establishment that had been carrying forward since the deputy governor's death on 6 Mar 1712. He had been appointed surgeon's assistant on 8 Apr 1712 on the basis of his part-completed apprenticeship in England, and the lower-table liquor ration of 13 Oct 1713 had still listed him among the six men constantly at the lower table. His release from service on his own request without further conditions points to the council's working policy of letting marginal Company servants depart where their personal circumstances no longer favoured service. The release of William Huffle rests on the council's distinction between mutinous speech under drink in the company of confined men and the substantive offence of organised conspiracy. He was clearly one of the secondary figures connected with the July 1713 conspiracy disclosed and pre-empted by Wallington's deposition on 8 Jul 1713, when five ringleaders had been committed in irons (William Brogden, William

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			Gore, William Knife, Thomas Griffis, James Young) and five accomplices had been disarmed on conditional good behaviour (John Muchmore, John George, Abram Dorman, Edward Smith and Charles Ablard). Huffle falls into neither published list and is therefore probably one of a further group of soldiers held in close imprisonment for words spoken at the time of the conspiracy rather than for active participation. James Young, one of the five ringleaders, had already been released after four months on grounds of repentance, good breeding and the council's reading that drink rather than disposition had caused the offence; Huffle's release after seven months on the same close-prisoner regime extends that principle to a soldier of lower standing. The condition of being severely punished for the next offence sets the same conditional restoration framework applied to Abraham Dorman on 3 Nov 1713. Speculations The graduated release of soldiers connected with the July 1713 conspiracy across the autumn and winter of 1713 to 1714 (Young on 3 Nov 1713, Huffle on 2 Feb 1714) suggests a deliberate policy by which the council emptied the irons progressively, on the basis of demonstrated penitence and the working calculation that long confinement was beginning to outstrip the original offence. The choice of council day in early February for the release of Huffle specifically falls at the same point of the administrative year when the Jessey loan was being granted as a positive act of patronage to a sober and industrious young man, and the pairing of the two acts on the same sitting points to a settled view that the new year should be opened by a balanced display of clemency and encouragement across both ends of the garrison hierarchy.

Bazett had been carrying the storekeeper's monthly accounts in arrears since at least the spring of 1713, when the audit of his own administration on 13 Oct 1713 had identified six months of overdue returns and only five had then been brought in at a single submission on 3 Nov 1713. The present account for the month 25 Sep to 25 Oct 1713 is therefore the next monthly tranche after the compressed three-month batch of June to September 1713 already entered. The arrack line at 293½ gallons to inhabitants at 9s the gallon confirms that the retail price set on 3 Jul 1713 (a 50 per cent advance on the 6s wholesale acquisition rate from the fleet of 4 Jun 1713) was still in force through the autumn. The institutional columns carry 33 gallons to general charges and 25 gallons to plantation as the working ration for the Castle table and the Company's labour gangs, the rate in the general charges column standing at about 9s the gallon to match the inhabitants. The presence of arrack on the plantation column at this scale reflects the working liquor ration issued to slaves on the plantation programme alongside the daily food allowance. Sugar at 1,255 pound to inhabitants at 8d the pound holds steady at the established retail rate confirmed since 9 Dec 1712 and across the storekeeper's monthly returns for the summer of 1713. Sugar candy (crystallised sugar formed by slow cooling of concentrated cane syrup, used as a confection and as a remedy for sore throats) at 46 pound to inhabitants at a higher unit rate is a finer-grade product imported from the Madras and Bengal factories alongside the bulk sugar. The remaining lines on the page cover the staple-goods inventory drawn from the Susannah, Kent and Hewolen cargoes priced on 3 Jul 1713 under paragraph

			37 of the Toddington letter. Bread at 75 pound is the ship's biscuit at 4d the pound to inhabitants, supplied also to the fortifications labour at 712 pound on the working line. Cheese Hamps refers to Cheshire cheese (the standard hard cheese supplied in cargo to the Company stations from the Cheshire dairies via the London quays, the Hamps reflecting the Hampshire and Cheshire shipping mark or perhaps a clerical contraction of Hampshire cheese as a parallel variety) at 1s 6d the pound to inhabitants. Castile soap at 19 pound at 18d the pound is the high-grade olive-oil soap from Castile via the western Mediterranean trade, distinct from the cheaper Bengal soap at 8d the pound carried on the same line; the two soaps had appeared together in the storekeeper's returns since the spring of 1713 as a graded retail and institutional pair. The four-column carried-forward total at the foot of the page (£186 8s 11½d to inhabitants, £16 6s 3¼d to plantation, £22 4s 8d to fortifications, £22 4s [...] to general charges) shows the inhabitants column running at almost ten times the working departments and confirms the storekeeper's monthly account as principally a record of retail sale to the freeholder and planter community. Speculations The order to transmit copies of all the storekeeper's accounts to the Honourable Company by the next conveyance of shipping points to a deliberate compilation of the local financial record for review in London at a moment of senior attrition (Hoskison and Pack both dead, Griffith dead) and aftermath of the July 1713 mutiny. The council was working under directors' instructions that placed the management of the store at the centre of the administrative recovery programme, and Bazett's promotion from third in council to second after Pack's death on 3 Apr 1713 had concentrated both the surveying and storekeeping responsibilities in a single officer who had himself been dismissed and restored within the previous fifteen months. The transmission of the accounts as a single audited set, rather than as the running monthly submission, fits the council's working strategy of presenting the directors with a complete documentary record from which to settle the future composition of the senior establishment.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			The page is dominated by the Indian textile pieces and the mixed clothing and tobacco lines that together form the principal retail commodity stream from the Madras and Bengal cargoes. Tobacco at 123 pound to inhabitants at 2s the pound holds the standing rate confirmed since 9 Dec 1712, with smaller portions to the fortifications and general charges representing the working soldier and Castle ration. The pipes are clay tobacco pipes (the cheap white-clay smoking pipes manufactured at Bristol and London and shipped out in dozens) supplied alongside the tobacco for the retail and institutional consumers. Rice at 1,708 pound to inhabitants at 3½d the pound, with separate institutional supplies at the higher rate of about 4d the pound for the Fort and the hospital, reflects the two-tier pricing that had been confirmed across the storekeeper's monthly returns since the spring of 1713. The dedicated hospital line at 491 pound at the institutional rate is the first appearance in the storekeeper's accounts of a separate hospital establishment, and reflects the working sickness on the island during the drought aftermath. The textile lines hold the heart of the eastern import economy passing through the storehouse. Gurras are coarse white cotton cloths from Bengal at 12s 6d the piece, used for working shirts and household linens. Chints (sorted chintz pieces) are the printed and painted Indian cottons fashionable in England for hangings and lighter dress, here sold at 14s 4d the piece on the sorted line. Neilas are blue-dyed Indian cottons (the name derived from the Hindustani word for blue) at about 12s 6d the piece. Salampores are plain white cotton calicoes from the Coromandel coast, used as a base cloth for further dyeing and for sheeting; the 3s 7½d per piece rate on the sorted line is low because the pieces are short. Gingham are striped or checked cotton cloths from Madras at about 14s 5d the piece. Long cloth is a heavy white cotton woven in long lengths for shirting at about 24s 9d the piece. Neckcloths are narrow lengths of Indian cotton cut for cravats. Dungarees are coarse blue cotton trousers cloth at 5s 8d the piece. Calloes (also spelled calicoes or calicoes) are the lighter Indian cotton calicoes at 11s the piece. Sannoos are sorted Bengal piece goods at about 16s 9d the piece. Across the whole textile sequence the working pattern is clear: the Indian cottons in graded qualities supply the working shirts, trousers, dress and bedding of the inhabitants, with the higher grades reserved for the better freeholders and the coarser grades for the soldier and slave establishment. Chello white shirts at 4s 6d each are ready-made shirts of chello cloth (a striped cotton cloth from Bengal woven in mixed colours), distinct from the chello cloth sold by the piece. The presence here of 20 sorted shirts, with a further small parcel from Susanna's cargo, shows the working practice by which the storekeeper drew both bolts of cloth and finished shirts from the same general cargo. The 12 pair of sorted shoes at about 3s 5d the pair, together with 10 pair of English shoes at the lower rate, supplement the leather production of William Penny under the standing arrangement of 8 Apr 1712 by which Penny had been continuing to work the Company-tanned leather into shoes for the store. The pair of grandeur pumps at 5s the pair are the dress shoes of a substantial freeholder or junior officer. The seven pair of stockings from Susanna's cargo at 8s 9d the pair carry forward the haberdashery economy from the same cargo entered on earlier folios. The hats line reveals the social gradation by hat quality. Five hats at 18s 3d each are the better-grade beaver or felt hats of substantial freeholders and officers; one at 8s, three dozen at 6s 2d each as a job lot, five and a half at the lower rate and one at 3s 9d cover the descending grades through working planters down

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			to the cheapest soldier issue. The total of about £18 0s 0d on the line is among the larger single textile categories on the page and confirms the hat as a principal article of dress for the inhabitants. Speculations The appearance of a dedicated hospital line of 491 pound of rice at the institutional rate of 4d the pound, set apart from the Fort and General Table lines on the same column, suggests that by autumn 1713 the council was operating a separate establishment for the care of the sick. The drought of 1712 to 1713 had run for nearly ten months by the time of the 4 Jun 1713 fleet purchases, and the chest of medicines at £68 17s 8¼d landed from the cargo and entered on an earlier folio supports the inference that the surgeon's working establishment had grown into a small hospital, probably housed in part of the Castle or the plantation house, requiring its own provisioning line in the storekeeper's monthly accounts. The 491 pound of rice would feed several patients on the working ration of about 1 pound the head a day across the month.

Silk and mohair on the inhabitants column at 41½ ounces of silk at 2s 6d the ounce and 3½ ounces of mohair at the same rate provide the working sewing materials for the better grades of clothing, and the further parcel of mohair on the fortifications column at 1½ ounces is the institutional supply for the heavy stitching of soldiers' coats and uniforms. The price of 2s 6d the ounce for silk has held steady since the storekeeper's accounts of late 1709 and confirms the standing trade price across more than four years. Cutlery ware combines six pair buckles, knives and forks, scissors, sorted fine items, and fourteen razors at 1s 6d each from Susanna's cargo. The razor line at this rate is a cheaper grade of shaving steel intended for the working soldier and the lower freeholders rather than the polished bone-handled razors of officers. Buttons in coat and breast grades, with a smaller waistcoat ditto line on the general charges column, fill the gap between the textile pieces and the finished garments and supply

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			both the working repair stock and the new tailoring demand. The hooks and lines line carries forward the working pattern of the drought-relief fishing programme noted on the earlier folio. 42½ dozen sorted hooks and four lines at the working rate of about 11d the dozen confirm a continuing demand for tackle through the autumn, with a single line drawn to the plantation house for the working catch of the Company's establishment. The smaller scale of this allocation compared with the 178½ dozen sorted hooks of an earlier folio shows the programme settling into routine maintenance rather than emergency supply. Oils on the same page split between three grades. The 9½ gallons rape oil at 7s the gallon stands at the standard institutional rate (a rate confirmed across the storekeeper's monthly returns since the spring of 1713), while a smaller line at 4½ gallons at a lower rate and a third line of 2¾ gallons at a substantially higher rate (the £14 10s 6d sub-total on the line corresponds to the train oil at 8s 4d the gallon and to linseed oil rather than to rape) covers the working range of household and industrial oils for lamps, leather dressing and joinery. Bird shot is small lead pellet shot used in fowling pieces for taking partridges, Guinea hens and other birds protected under the game preservation advertisement of 25 Jul 1712. The split between 3 pound to inhabitants at 6d the pound and 3 pound to plantation at 12d the pound (allowing for what is recoverable from the sub-total) reflects the dual-rate pricing that runs across the storekeeper's bulk-commodity lines. Rammals (also spelled ramals or romalls, the Indian cotton kerchiefs already encountered in the master reference as a recurring imported textile) appear here in a small allocation of half a pound (probably half a dozen, the manuscript abbreviation being unclear) at 6s the unit. Blankets at two sorted to inhabitants at 9s 6d each and two more to plantation at the lower rate of about 3s 10d each carry the same dual-grade structure: the better blankets sold to settlers in family use, the cheaper to the plantation for slaves' bedding. Salt distributed at ¼ bushel to inhabitants, 1 bushel to general charges and 4½ bushels to plantation reflects the working domestic, table and curing demand on the three establishments. Tea at 4 pound at 15s the pound to inhabitants confirms the higher of the two tea grades carried in the spring storekeeper's accounts. Speculations The composition of the page (heavy on small finished goods and personal items, light on bulk staples) suggests that the cargo of the Susanna had moved by 25 October 1713 from its primary distribution of textiles and large bulk goods into a secondary phase of retail draw-down on the smaller and more durable items. The pattern is consistent with the working sequence of cargo absorption observed across earlier monthly accounts, where the first month after pricing carries the largest staple draws and subsequent months thin into the haberdashery, hardware and personal-goods tail. The 15s the pound rate for tea, against the 17s 6d rate that appears on other folios for the higher-grade China tea, points to the working grade preferred for institutional and freeholder retail rather than for ceremonial consumption.

			£0 3s 8d Pins and needles 4 pound needles at [...] £0 0s 4d 3 thimbles £0 0s 3d Sub-total £0 0s 7½d 3 bunches of necklaces £0 0s 2½d Carried forwards Inhabitants £307 4s 4½d Plantation £20 10s 0d Fortifications £41 9s 5d General charges £368 19s 9½d Interpretations The page consolidates the European woollen and linen lines from the cargo into a single set of running entries, marking the working transition from the Indian cottons of the preceding folios to the heavier English and Continental cloths supplied for institutional and dress use. Broad cloth at three yards of coloured ditto at £7 2s 10½d and eight yards of black ditto at £7 13s 0d places the unit rate at over 18s the yard, well above the typical Indian cotton rates and consistent with the high cost of a heavy English woollen cloth fulled and dressed to a smooth finish for officers' coats and the better dress of substantial freeholders. Druggets are coarser woollen cloths used for working overcoats and bedding, while perpetuanoes are durable worsted twill cloths from the West of England woollen industry, both at lower unit rates and supplied here in smaller bulk. Norwich stuffs are the worsted dress cloths produced in Norwich, the principal English centre of worsted weaving since the seventeenth century. The category appears as a recurring line in the storekeeper's monthly accounts since the spring of 1713 and supplies dress cloth at the middle of the price range. Black crape at 2s 2¼d the yard is a crisp gauze-like silk or worsted cloth, used in this period principally for mourning dress and as a covering for hats; the 18½ yards entered to inhabitants suggests recent or anticipated mourning across the freeholder community. Bunting is a loosely-woven worsted fabric in red, white and other colours used for making flags and signal pennants, and the splitting of the line between red bunting, white bunting and plain bunting on the fortifications column shows the working pattern of flag-making at the Castle. The 15 yards of red bunting at 20d the yard and 23½ yards of white ditto provide the raw cloth for new or replacement colours for the Castle staff and the gun batteries, both for ordinary garrison signals and for ceremonial use at salutes and church days. Flannel at 3 yards is a soft napped woollen cloth for undergarments and bedding. Shalloons are lightweight twilled worsted cloths used principally as linings for coats and gowns, supplied here in mixed lengths. The threads section combines four grades. Strong sewing thread at 8 pound at 3s 10d the pound supplies the working tailoring and shoe stitching; 12 dozen at the lower rate is a job lot of less substantial thread; fine ditto at the higher rate covers fine sewing for the better-grade clothes; and 3 pound of brown ditto is unbleached linen thread for working repair. The ribbons and ferritt line at 36 yards of ribbon sorted at about 9d the yard and 24½ yards of ferritt continues the haberdashery cluster that has appeared across the cargo since the earlier folios. Tapes and bindings at 5 dozen collared tape and 5 dozen Holland tape close the page on the same working cluster. The pins and needles entries (4 pound of needles, 3 thimbles and 3 bunches of necklaces) are small finished items sold to inhabitants at modest values. The 3 bunches of necklaces here, like the single necklace of

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			beads at 5s 4d on an earlier folio, are personal jewellery imported in mixed Indian parcels. Speculations The presence of 18½ yards of black crape at 2s 2¼d the yard on the inhabitants column in a single monthly draw suggests that one or more of the substantial freeholder or officer households was in mourning during October 1713. The recent deaths of Pack on 3 Apr 1713 and Griffith on 6 May 1713 in the senior establishment, the death of Hoskison the previous March, and the unresolved illnesses in the inhabitant community during the drought aftermath all point to a continuing demand for mourning cloth across the year, with the autumn cargo restocking what private supplies had been exhausted. Black crape was used principally as a mourning trim and as a cover for hats during the period of mourning, so the working volume of 18½ yards points to several households drawing from the cargo together rather than to a single private order.

Fustians are heavy cotton-and-linen mixed cloths from the Lancashire weaving industry, supplied here as coloured dimity (a corded or twilled fustian used for working dress and waistcoats) at about 15d the yard and white dimity at the higher rate of 2s the yard. The dimities supplement the Indian cottons of the earlier folios with a more durable working cloth for men's outer wear and for furnishing. The wooden ware line covers turned hardwood porringers, brimming dishes (small bowls filled to the brim with cooked food and served individually), platters and a porringer dish. The items are simple turned articles imported from the English wood-turning trade and supplied for table use in the inhabitant households and the General Table. Stationary ware here is a smaller line than the £70 17s 0d office consignment of the earlier folio and covers a primer, a horn book and a testament for working religious instruction in a single household, in the same retail-instruction pattern as the testaments and horn books of the earlier page. Kerseyes are coarse twilled woollen cloths from the Yorkshire and West Country weaving districts, used principally for slaves' clothing and for soldiers' working

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			coats. The 78 yards on the general charges column at the rate of about 2s 2d the yard places the line firmly in the slave-clothing supply chain that runs throughout the storekeeper's accounts, with the established 14s per suit rate for slaves' clothing meaning that 78 yards would clothe a substantial gang at the working ration of about five to six yards the suit. The smaller line of 5 yards to inhabitants at 2s 1¼d the yard reflects the same cloth bought for working repair or for new garments in the inhabitant household. Braziers were repeats the working kitchen and lighting inventory of an earlier folio, with a brass ladle, two brass lamps, half-pair brass candlesticks and a parallel allocation of four brass lamps to the plantation for working lighting on the Company estate. Tin ware (one lanthorn to inhabitants, a large lanthorn to plantation and a small one to general charges) extends the lighting equipment across all three institutional consumers. Glass ware on the page reduces to a single two-hour glass at 3s 4d, the same item as appeared on an earlier folio at the same rate. Sacking and hessian are coarse jute or hemp cloths used principally for grain sacks, bagging and rough working covers. The 4½ pieces at 23½d the piece (sub-total £3 5s 0d, though the entry may be expressed as full pieces against a broader sub-total elsewhere) and 18 yards ditto support the working bag supply for yam and grain handling on the plantation and at the storehouse. Pepper at 3 pound, shoemakers' thread at 2 pound, indigo at 1 pound 5 ounces and corks at 10 dozen all run as small individual lines. The combs entries at two ivory combs sorted and two comb brushes carry forward the personal toilet articles of the earlier folio. The line of pepper at 2s 11d to general charges supplements the larger pepper line of the earlier folio at the household condiment rate, with the present allocation running on the General Table account. Speculations The very low absolute values on the page (most lines below £2, the largest single item being the 78 yards of kerseys at £8 9s 0d to general charges for slaves' clothing) suggest that the cargo of the Susanna had by this point in the monthly account been broken down into its retail tail, with the bulk staples, the Indian cotton pieces and the heavy hardware already drawn down on the earlier folios. The pattern fits the working sequence by which a cargo was apportioned month by month from largest staples to smallest finished goods, and signals that the next monthly account would carry a different commodity profile as the Susanna stock thinned and the storekeeper began to draw on either older reserves or on the next arriving cargo. The grouping of slave-clothing kerseys at 78 yards on the general charges column rather than the plantation column is unusual against the working pattern in which kerseys for slaves were typically routed direct to the plantation account. The placement on general charges may reflect a bulk reservation against future allocation, kept on the general charges line until cut and made up for issue, or a working decision to clothe specific Castle and household slaves (the named slaves serving at the Fort house, the kitchen, the smith's shop and the tailor's shop in the master reference roster) at the General Table charge rather than against the plantation. The second reading would be consistent with the working division of the Company's slave establishment between the country plantation and the Castle service.

			1 box iron and 2 heaters £0 11s 9d Sub-total £2 17s 1½d 1 spade £0 6s 9d 1 shovel £0 2s 0d 1 grid iron £0 3s 0d 1 hatchet £0 2s 6d Sub-total £0 14s 3d Sub-total to inhabitants £3 11s 4½d Sub-total £6 4s 4d Iron and steel 1 bundle rough iron of 84 pound at 3d the pound £1 1s 0d Sub-total £1 1s 0d Carried forwards Inhabitants £316 1s 4d Plantation £30 14s 8d Fortifications £71 10s 1d General charges £418 6s 1d Interpretations The page closes out the smaller carpenter's tools and joinery hardware from the cargo and is dominated by working ironmongery for the construction programme. The two fine dovetails (specialist saws cut to fine teeth for cutting dovetail joints in fine joinery work), two broad chissels (chisels with a wide cutting edge for paring across the grain), one jack plane (a medium-length bench plane used as the first plane on rough sawn timber to bring it to a true surface), one smoothing plane (a shorter plane used as the final plane to leave a smooth finish), and two plain irons (the cutting blades for the planes) supply the working bench of the Company carpenter, replacing or replenishing the tools first noted in the carpenter's set on an earlier folio. Hooks and hinges at 48 pieces with 24 further hinges, six keys and assorted gouges (curved chisels for cutting hollows), paring chisels, hammers and pincers complete the equipment for the joinery and door-fitting work of the new storehouse and the further fortifications. Two jug planes and one jointing plane (a long plane used to true the edges of long boards for jointing) carry the carpentry kit through to the heavier framing work. The box iron with two heaters on the page (separate from the earlier two box iron entries) is a routine domestic article for pressing linens. The single spade, shovel, grid iron (a grilled iron frame for cooking meat over a fire) and hatchet (a small hand axe for splitting kindling and trimming light timber) round out the working tool list for general use on the plantation and at the smith's shop. India linen at 15 pieces at 6s 7d the piece and 7½ pieces at 13s 5d the piece supplies coarse and finer grades of Indian linen for working clothes and sheeting. The two-tier pricing reflects the working pattern of bulk import in graded qualities established across the storekeeper's monthly returns. Sackcloth at 1 piece to inhabitants and 3 yards to plantation provides the coarse hempen or jute working cloth for grain sacks and rough working covers, supplementing the sacking and hessian of the earlier folio. The 7 11s 4d entry for a windup jack on the fortifications column is a substantial piece of working equipment for the heavy lifting needed at the works. A jack here is a mechanical lifting device of geared wheels and pawls turned by a winch handle (wound up by a crank), used to raise stones and timbers into position on

			a building site. The four jack chains supply the working linkages between the lifting hooks and the load. The total cost of about £7 14s 4d places the device among the more substantial items on the cargo and supports the construction programme at Munden's Castle. The bundle of rough iron at 84 pound at 3d the pound is the working bar iron from which the smith would forge nails, hinges, hoops and tool fittings on the island. Speculations The presence of the windup jack and jack chains at £7 14s 4d on the fortifications column, paired with the substantial bundle of rough iron and the full carpenter's set of planes, chisels, hammers and dovetail saws, points to a deliberate consignment in London for the lifting and joinery work at Munden's Castle that had been running through 1713. The combination of a winch capable of lifting heavy stones with the unfinished bar iron for smith's work and the full carpenter's set suggests that the London directors had grasped the working requirement of the island establishment, which the council had been pressing in successive outgoing letters since 1710 for matched supplies rather than opportunistic purchase from visiting masters. The split of two jug planes (a heavier bench plane used for rougher work) between inhabitants and fortifications, with a jointing plane, a smoothing plane and a plain plane all entered on the same monthly account, suggests that the Company was simultaneously supplying its own carpenters at the works and selling smaller numbers of the same tools to the freeholder community. The pattern fits with the supply of construction tools as a working monopoly through the storekeeper, by which the Company met its own needs first and disposed of the remainder at retail.

The compression of two months into a single account follows the working pattern by which Bazett combined returns to clear arrears, observed earlier in the three-month account for June to September 1713. The very heavy arrack total of 921¾ gallons of Batavia plus 4 gallons of Goa at the inhabitants column rate of 9s the gallon, with smaller institutional allocations on the general charges and fortifications columns, points to the autumn and Christmas drawing of the staple liquor stock as the working ration of the freeholder community and the Castle establishment. The £420 16s 0d sub-total places arrack at well over half the value of the whole monthly account. Sugar at 3,309 pound to inhabitants at 8d the pound holds the standing retail rate confirmed across

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			the storekeeper's monthly returns since 9 Dec 1712, and the further institutional allocations to fortifications and general charges represent the working table and labour rations. Sugar candy at 65 pound to inhabitants at 12d the pound, with smaller parcels on general charges and plantation, is the finer grade of sugar used as a confection and as a remedy. Rice at 2,450½ pound to inhabitants at 3½d the pound and 1,209½ pound to general charges at the higher institutional rate maintains the two-tier pricing established for the staple. The presence of 1,209½ pound to general charges is the largest single rice allocation to that column in the monthly sequence and reflects the working ration of the General Table, the soldiers' diet, and the hospital ration first identified at 491 pound on the September to October account. Castile soap at 15 pound at 18d the pound to inhabitants and Bengal soap at 5 pound and 464 pound in graded allocations carry forward the parallel high-grade and low-grade soap supply for the freeholder community and the slave establishment. The further line of Bengal at 182½ pound at £18 12s 0d on a separate column is the bulk working soap for the plantation and the soldiers' wash. Bread at 171 pound at 4d the pound to inhabitants, with 200 pound to general charges and 120 pound on a further column, is ship's biscuit at the standing rate, supplemented by flour at 356½ pound at 3½d the pound to inhabitants and 17 pound to general charges for fresh baking on the island. The split between bread (biscuit) and flour reflects the working preference at the Castle for fresh-baked bread where possible, against the longer keeping qualities of the biscuit on the soldier ration. Tobacco at 416 pound (402 pound on the inhabitants column, 6 pound on a smaller line and 8 pound on a third) holds at the rate of 2s the pound established across the storekeeper's monthly returns since the spring of 1713. The total of 416 pound for a two-month period running through the Christmas season is well above the routine retail volume and points to the working pattern of festive drawing across the inhabitants. Speculations The very heavy concentration of arrack and tobacco on the inhabitants column in this two-month account suggests that the storekeeper had reserved a substantial part of the Susanna and Madras-Bengal stocks for retail across the Christmas season, with the festive drawing visible in the 813½ gallons of Batavia arrack and the 402 pound of tobacco to inhabitants alone. The pattern is consistent with the seasonal peak visible on earlier December returns (notably the storekeeper's account for 25 November to 25 December 1710 at £294 15s 10¼d with its tobacco pipes peak at 100½ dozen against 5 dozen in the preceding month) and confirms that the freeholder community paced its drawing across the working calendar. The bunching of two months together into a single submission at this point, with a total of £676 0s 0d already carried forward at the foot of the page before further entries follow, points to a working decision by Bazett to bring the year's accounts to a close with a single substantial return rather than two smaller ones. The choice fits the council's order at the consultation of 2 February 1714 that the remaining accounts be brought in as soon as possible so that copies might be transmitted to the Honourable Company by the next conveyance of shipping, and the compression of the two months into one submission helps Bazett meet the deadline without falling further behind.

			£5 17s 11d 11 women's Spanish pumps at 3s 4d each £0 2s 4½d 2 pair Turkey pinks at 4s 9d each £0 9s 6d 2 pair men's shoes £4 9s 8½d Sub-total to inhabitants £10 7s 7½d Sub-total £10 19s 7½d Buttons 15 dozen grenades at 12d the dozen £0 15s 0d 15 dozen ditto at 19d £1 3s 9d 30 dozen £1 18s 9d 39½ dozen breast at 9¾d £1 9s 10d 28 dozen ditto at 6¼d £2 8s 10d Sub-total to inhabitants £4 7s 7d Sub-total 127¾ dozen £4 7s 7d Carried forwards Inhabitants £647 14s 7½d Plantation £32 1s 11¼d Fortifications £72 17s 11d General charges £752 14s 5¼d Interpretations The page consolidates the haberdashery and clothing draws of the two-month account, with pipes, oils, salt, stockings, hats, shoes and buttons together forming a substantial £100 in additional turnover on the inhabitants column. The 144 dozen pipes (1,728 individual clay pipes) at the rate of about 6d the dozen support the heavy 416 pound of tobacco drawn on the previous folio, and the institutional split between inhabitants (128 dozen), general charges (8 dozen) and plantation (8 dozen) confirms that the Castle table and the plantation labour gangs were supplied directly from the same cargo at the same time as the inhabitants. Oils on the page consist of rape oil at 7s the gallon and linseed oil at 8s the gallon, supplied in mixed parcels across the columns. Rape oil is pressed from the seeds of the rape plant grown in northern Europe and is the standard burning oil for lamps and the principal lubricant for working tools on the island, while linseed oil from flax seed has the further property of drying when exposed to air, making it the working oil for paint mixing and for treating timber. The 35 gallons combined supply is a substantial allocation but in line with the working monthly consumption observed across the storekeeper's accounts. Stockings at 22 pair sorted and 9½ pair sorted at lower rates, plus 34½ pair from Susanna's hosiery at the higher rate of 10s 3d the pair, give a combined 123 pair on the inhabitants column at over £20. The graded pricing covers the social range from the cheaper soldier and working planter stockings through to the better-grade hosiery for officers and substantial freeholders. Hats at 14 dozen sorted (168 hats) supplemented by smaller graded parcels of 7, 6, 6, 6 and 3 hats at descending rates from 20s each down to 4s each give a substantial £25 7s 10d to inhabitants. The hat is a principal article of dress for every man on the island, and the working pattern of the cargo is to supply a graded range from the best-quality 20s officer's hat down to the cheapest 4s soldier issue. Shoes at 10 pair sorted at the higher unit rate (over 11s the pair on the sub-total), 11 women's Spanish pumps (low-cut dress shoes in the Spanish style at the

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			affordable rate of 3s 4d each), 2 pair Turkey pinks (decorated dress shoes pinked or punched with small holes in patterns, at 4s 9d each), and 2 pair men's shoes at the higher rate, give the working footwear supply for both sexes across the freeholder community. The Spanish pumps and Turkey pinks together form the dress-shoe element distinct from the working shoe production by William Penny from Company-tanned leather under the standing arrangement of 8 Apr 1712. Buttons in five graded lines (15 dozen grenades at 12d the dozen, 15 dozen ditto at 19d, 30 dozen across both, 39½ dozen breast at 9¾d, 28 dozen ditto at 6¾d) supply the full range of coat and breast fastenings for both new tailoring and repair work. Grenade buttons are spherical metal buttons in the shape of a small grenade, used for the cuffs and collars of officers' coats and dress wear. The 127¾ dozen total (over 1,500 individual buttons) reflects the working demand for replacement and new fittings across the inhabitant tailoring economy. Salt at 4 bushels to inhabitants at 15d the bushel, 9 bushels to general charges at 32d the bushel and a further 13 bushels gives the working domestic, table and curing demand for the Castle, the plantation and the freeholder community. The institutional rate at the General Table runs at roughly twice the inhabitant rate, consistent with the tiered pricing established across the storekeeper's monthly accounts since 1710. Speculations The very large draw of 144 dozen pipes on the same monthly account as 416 pound of tobacco (the tobacco line of the previous folio) suggests that the storekeeper had matched the staple draw with its working accessory in the same December cycle. The pairing of tobacco with pipes at this scale points to a deliberate policy by which the storekeeper supplied the complete smoking kit in a single cargo cycle and absorbed the festive demand of the freeholder community across the Christmas season into a single retail event rather than across the year. The supply of 11 women's Spanish pumps and 2 pair Turkey pinks on the same monthly account, alongside the heavier rate stockings and the better-grade hats, points to a recovery of the inhabitant dress economy following the long drought of 1712 to 1713 and the disruption of the July 1713 mutiny. The dress-shoe component of the cargo is small in absolute volume but signals that the substantial freeholders were once again willing to draw decorative items from the store, a pattern not visible in the spring and summer accounts of the same year when bulk staples had dominated the retail draws.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			£1 14s 0d 1 piece ditto £0 5s 8d Sub-total 8 pieces £2 5s 4d Long cloth 2 pieces at 14s 9d the piece £2 9s 6d Ginghams 5 pieces sorted £3 7s 2d Nealases 4 pieces sorted £2 17s 11d Sannoos 22 pieces sorted £17 10s 0d Gurras 6 pieces sorted at 12s 6d the piece £5 12s 6d Carried forwards Inhabitants £704 1s 3d Plantation £33 2s 8d Fortifications £78 12s 1½d General charges £845 16s 7½d Interpretations The page closes out the sewing and Indian textile draws of the two-month account, with chelloes again the dominant single line. 146 pieces of chelloes at 5s the piece (a striped Indian cotton cloth from Bengal, used for working shirts and household linens) at £36 10s 0d is the largest single textile entry on the present account and points to a substantial cargo absorption across the freeholder community during the Christmas season. The 22 pieces of sannoos (sorted Bengal piece goods) at £17 10s 0d, the 6 pieces of gurras (coarse white cotton cloths from Bengal) at 12s 6d the piece, and the smaller parcels of long cloth, gingham, nealases and dungarees together carry forward the Indian cotton supply established on earlier folios. Hooks and lines on this account follow the same working pattern of the earlier folios. 92½ dozen sorted hooks (over 1,100 individual hooks) and 59 sorted lines confirm the continuing supply of fishing tackle across the autumn and Christmas period, consistent with the working operation of the licensed fishing programme settled at the 12 May 1712 council. The combined £9 6s 0d on the two lines is substantial enough to indicate that the inhabitants were still drawing tackle for working family fishing rather than for occasional pleasure. Threads on the page combine six pound of white sewing thread, eleven and a half pound of brown thread, two pound of coloured thread, and a graded set of fifteen ounces of strong and fine sewing thread for the inhabitants, with a further half pound of brown thread to general charges. The 6 12s 8½d sub-total reflects the working sewing demand of the inhabitant tailoring economy supplied by the storekeeper rather than by private import. Silk and mohair at one and three quarter ounces of silk at 2s 6d the ounce and three ounces of mohair at the lower rate continues the standing sewing-silk and braiding supply for the better-grade tailoring. Bead necklaces at 17 sorted to inhabitants supplement the single necklace and three bunches noted on earlier folios in the same monthly cargo absorption. Gloves at 14½ pair sorted at the rate of about 1s 7d the pair are the working hand covering for the freeholder community, distinct from the more decorative items recorded in the earlier inventory. Ribbon, ferritt and galloon together at 2 yards of ribbon, 30½ yards of ferritt and 23½ yards of galloon hold the haberdashery cluster steady at modest values. The 14¾ pair gloves on a separate line, supplied at the rate of about 1s 7d the pair, supplement the working clothing inventory and complete the haberdashery and personal-goods absorption of the cargo. Speculations

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			The very large absorption of 146 pieces of chelloes at £36 10s 0d on a single monthly account, combined with the substantial 22 pieces of sannoes and 6 pieces of gurras, points to the cargo of the Susanna having reached its mature retail phase by December 1713, with the substantial Indian cotton stocks moving into the inhabitant community across the Christmas working season. The pattern fits with the working sequence of cargo absorption observed across the storekeeper's accounts since the spring of 1713, by which the heavy textile retail tended to bunch in the autumn and winter months as freeholders restocked household linens, working shirts and slaves' clothing for the new year. The graded combination of expensive silks at 2s 6d the ounce with cheaper mohair at the lower rate, set alongside the much heavier draw of bulk Indian cotton, suggests that the December cargo absorption was simultaneously serving two distinct tailoring economies on the island. The better grades supplied the dress sewing of the substantial freeholders and senior officers in time for the new year, while the bulk Indian cottons covered the working shirts and slaves' clothing across the wider community. The dual absorption is consistent with the working pattern by which a single arriving cargo was apportioned to multiple tiers of consumer at the same time, rather than worked through tier by tier.

			Carried forwards Inhabitants £704 1s 3d Plantation £33 2s 8d General charges £78 12s 1½d Total £845 16s 7½d Interpretations The page closes out the sewing and Indian textile draws of the two-month account, with chelloes again the dominant single line. 146 pieces of chelloes at 5s the piece (a striped Indian cotton cloth from Bengal, used for working shirts and household linens) at £36 10s 0d is the largest single textile entry on the present account and points to a substantial cargo absorption across the freeholder community during the Christmas season. The 22 pieces of sannoes (sorted Bengal piece goods) at £17 10s 0d, the 6 pieces of gurras (coarse white cotton cloths from Bengal) at 12s 6d the piece, and the smaller parcels of long cloth, ginghams, nealases and dungarees together carry forward the Indian cotton supply established on earlier folios. Hooks and lines on this account follow the same working pattern of the earlier folios. 92½ dozen sorted hooks (over 1,100 individual hooks) and 59 sorted lines confirm the continuing supply of fishing tackle across the autumn and Christmas period, consistent with the working operation of the licensed fishing programme settled at the 12 May 1712 council. The split between the smaller inhabitants allocation and the larger general charges allocation reflects the working pattern by which the garrison fishing detail and the family group programme were supplied in parallel from a single cargo. Threads on the page combine six pound of white sewing thread, eleven and a half pound of brown thread, two pound of coloured thread, and a graded set of fifteen ounces of strong and fine sewing thread for the inhabitants, with a further half pound of brown thread to general charges. The 6 4s 6d total reflects the working sewing demand of the inhabitant tailoring economy supplied by the storekeeper rather than by private import. Silk and mohair at one and three quarter ounces of silk at 2s 6d the ounce and three ounces of mohair at the lower rate continues the standing sewing-silk and braiding supply for the better-grade tailoring. Bead necklaces at 17 sorted to inhabitants supplement the single necklace and three bunches noted on earlier folios in the same monthly cargo absorption. Gloves at 14½ pair sorted at the rate of about 1s 7d the pair are the working hand covering for the freeholder community, distinct from the more decorative items recorded in the earlier inventory. Speculations The very large absorption of 146 pieces of chelloes at £36 10s 0d on a single monthly account, combined with the substantial 22 pieces of sannoes and 6 pieces of gurras, points to the cargo of the Susanna having reached its mature retail phase by December 1713, with the substantial Indian cotton stocks moving into the inhabitant community across the Christmas working season. The pattern fits with the working sequence of cargo absorption observed across the storekeeper's accounts since the spring of 1713, by which the heavy textile retail tended to bunch in the autumn and winter months as freeholders restocked household linens, working shirts and slaves' clothing for the new year. The graded combination of expensive silks at 2s 6d the ounce with cheaper mohair at the lower rate, set alongside the much heavier draw of bulk Indian cotton, suggests that the December cargo absorption was simultaneously serving two distinct tailoring economies on the island. The better grades supplied the dress sewing of the substantial freeholders and senior officers in time for the new year, while the bulk Indian cottons

			£0 7s 0d Sub-total to general charges £0 1s 2d Total £0 15s 0d Tin ware 3 dripping pans at 5s 2d to inhabitants £0 15s 6d 5 ditto at 4s 2d £1 0s 10d 12 ditto at 3s 8d £2 4s 0d 7 saucepans at 18d £0 10s 6d 5 ditto at 14d £0 5s 10d 9 ditto at 10d £0 3s 0d 41 porringers at 7d each £1 3s 11d 31 ditto at 4d £0 10s 4d 3 square sugar boxes at 12d £0 18s 0d 9 ditto at [...] £0 13s 6d 9 round ditto at [...] £0 14s 6d 10 ditto less at 12d £0 17s 6d 7 ditto lesser at 9d £0 9s 4d 30 funnels at 10d £0 7s 6d Sub-total to inhabitants £11 1s 9d Total £11 1s 9d Carried forwards Inhabitants £839 2s 9d Plantation £36 8s 11d General charges £79 9s 7½d Total £954 15s 2d Interpretations The page closes out the personal-toilet and household-tinware draws of the two-month account, with tin ware accounting for the largest single sub-total at £11 1s 9d to the inhabitants. The tin ware entries cover the working kitchen and table inventory of a freeholder household: dripping pans (shallow rectangular pans placed below a roasting joint to catch the fat and juices dripping from it), saucepans, porringers (small bowls used for individual servings of soup and porridge), square and round sugar boxes (small lidded containers for storing sugar at the table) and funnels for decanting liquids. The graded pricing across each category (3s 8d to 5s 2d for dripping pans, 10d to 18d for saucepans, 4d to 7d for porringers) covers the working range from cheap soldier issue to the better-grade household pieces for substantial freeholders. The substantial absolute volume on the line (over a hundred individual items across all categories) points to a working domestic restocking across the inhabitant community during the Christmas period. Combs sorted on the page repeat the working personal-toilet inventory of earlier folios, with eleven ivory combs at 1s 7d each, seven horn combs at 6d each, a single comb box and three comb brushes together at £1 6s 5d. The ivory combs at the higher unit rate of about 1s 7d each are the dress comb of the better-grade household; the horn combs at 6d each are the cheaper working comb of the broader community. Tapes and bindings at eleven pieces of Holland tape at 13s the piece, three and a half pieces ditto at 10d, ten and a half pieces ditto and four and a half pieces of collared tape at 20d supply the working bindings for sewing, edging linen and trimming.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			Holland tape is bleached linen tape from Haarlem; collared tape is a coarser unbleached cotton tape from the Indian trade. Silk and thread laces at three and a half ounces of silk and fifteen ounces of thread ditto are working lacing for stays, bodices and shoes. Silver twist buttons at three dozen coat ditto and fifteen dozen breast ditto at 2s 1¼d the dozen are the dress buttons (with silver-wound thread wrapping a cloth core) for officers' coats and the better-grade waistcoats and shirts of substantial freeholders. The 18 dozen total at £3 17s 4¾d is a substantial single line of dress haberdashery, well above the working pewter and metal button retail. Pins and needles at ten thousand pins sorted and fifteen papers of blanket pins (large pins for fastening blankets and infant wrappings) at £1 8s 6½d to inhabitants supply the working sewing supply. Glass ware at six panes of 6 by 8 inches and forty panes of 6 by 8 inches gives the working window glass for the inhabitant houses and the Castle, supplied as small individual panes for the leaded casements of the period. Speculations The very heavy concentration of tin ware on the inhabitants column at £11 1s 9d in a single monthly account suggests that the retail draw on the Susanna cargo was now reaching the working kitchen and table goods after the heavier textile draws of the earlier folios. The pattern is consistent with the working sequence by which freeholders restocked their household equipment from each arriving cargo, with the tin ware moving towards the end of the cargo cycle as the substantial bulk staples thinned out. The very fine gradation of dripping pans, saucepans and sugar boxes by size and weight, each in three or four grades, points to a deliberate cargo composition in which the London merchants supplied the full range of household equipment in matched sets rather than as a single grade. The substantial silver twist button line at £3 17s 4¾d on the same monthly account as the Spanish pumps, Turkey pinks and better-grade hats of the earlier folio supports the reading that the substantial freeholders and senior officers were drawing dress materials for the new year. The pairing of dress buttons with dress shoes and the better-grade hats across the same two-month account fits with the working calendar of the freeholder community, by which formal dress would be restocked once the new year accounts had been opened and the working drought of the previous year had been left behind.

			£0 11s 1d 7 platters £0 10s 0d Sub-total to inhabitants £0 1s 7d Total £1 1s 7d Carried forwards Inhabitants £843 11s 5½d Plantation £40 18s 0d General charges £81 11s [...]d Total £966 0s 6d Interpretations The page brings the storekeeper's account through to a further series of household kitchen and table goods, with three new commodity groups appearing in sequence: a mixed group of tin water pots, kettles and lanterns, pewterers ware, and turnery ware. The water pots, kettles and lanterns line continues the working domestic supply observed across the earlier folios. Water pots at 6s 6d each are small tin or earthenware jugs used for pouring water at the table and washing, distinct from the larger watering pots at 7s 6d each (used for watering plants and garden beds in the working agricultural economy of the inhabitant households). Kettles at 3s 9d each are the boiling vessels for tea and household water. The 2 lanterns at 3s 10d each and the 3 lanterns on the general charges column at the same rate carry the routine lighting supply for the inhabitants and the Castle establishment. A tin cullender (a perforated tin dish used for draining boiled vegetables and washing salad) and two tin basters (small ladles with a long handle, used to baste roasting meat with the dripping caught in the pan beneath) supplement the dripping pans of the earlier folio and complete the working tin batterie de cuisine of the freeholder household. Pewterers ware on the page covers the working pewter table service of the inhabitant community. Pewter is an alloy of tin with small amounts of antimony, copper or lead, and was the standard table metal of the early-eighteenth-century English household, supplied here in graded forms. 2½ dozen spoons sorted at the rate of about 4d each, a bed pan (a shallow pewter pan used by the bedridden), a pint pot and a half pot, a quart pot and a half quart pot (the standard pewter drinking vessels at graded sizes), and a patty pot (a small pewter pot for serving meat patties) cover the personal-service items. Twelve small plates, twelve larger plates and twelve dishes of 6½ pound (the dishes calculated by weight at the standard pewter rate of about 1s 6d the pound) round out the dinner service. A close stool pan (the pewter pan fitted within a close stool, a boxed seat used as a chamber commode by persons of substance) at 5s 6d to inhabitants completes the inventory. Turnery ware (turned wooden table goods made on a foot-powered lathe) at twelve wooden porringers, three straining dishes and seven platters carries the cheap working table service for the inhabitants and the General Table. The wooden porringers at 8½d each are markedly cheaper than the pewter porringers of the preceding folio at 7d and the tin porringers of the same account; the gradation across material reflects the working hierarchy of household service from wood through tin and pewter to the silver of the most substantial freeholders. Speculations The triple appearance of porringers across the same two-month account (in tin at 7d each on the earlier folio, in pewter at the standing rate on this folio, and in wood at 8½d each on the turnery ware line) suggests that the cargo was deliberately composed to supply the porringer (the principal individual serving bowl in the early-eighteenth-century English household) across the full social range of the inhabitant community at the

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			same time. The pattern fits the working economy of the island, where each household needed a porringer for each person at table, but the substantial freeholder would expect a pewter porringer while the cheaper household would make do with the wooden or tin equivalent. The London merchants supplying the Honourable Company seem to have understood the graded demand and composed the cargo accordingly. The presence of a single close stool pan at 5s 6d on the inhabitants column, alone among the personal-service items on the page, points to a specific private order rather than to general retail. The close stool was an item of substantial private comfort, found principally in the houses of the better freeholders and senior officers; the appearance of a single pan in the storekeeper's account suggests it was drawn by a named purchaser against an earlier petition. The pattern fits with the working practice already visible on earlier folios in which Susanna's cargo carried items identified to a named household, with the storekeeper recording the named drawer in the line entry.

			£0 3s 11d Sub-total £0 17s 5d Sub-total to inhabitants £1 4s 4½d 1 brass kettle of 28 pound at 2s 4d the pound to inhabitants £3 5s 11d 1 brass kettle frame £0 9s 10d 1 copper sauce pan of 9 pound at [...] £0 2s 5d Sub-total to general charges £0 6s 9d Total £1 9s 4½d Sweet powder 7 pound £0 17s 0d Sub-total to general charges £0 17s 0d Total £0 17s 0d Bodice 1 pair to inhabitants £0 10s 4d Total £0 10s 4d Cradle 1 to general charges £0 8s 0d Total £0 8s 0d Blankets 2 pieces at 1s 2d each to inhabitants £0 2s 5d 15 yards at [...] £1 0s 3d Sub-total to inhabitants £3 8s 3d Total £3 8s 3d Rammals 2 to inhabitants £0 2s 6d Total £0 2s 6d Soldiers clothes 1 suit to inhabitants £1 18s 3d Total £1 18s 3d Stationary ware 6 horn books £0 2s 6d 3 primers £0 2s 6d 17 quires paper sorted £1 2s 6d 4 testaments £1 2s 6d Sub-total to inhabitants £2 9s 6d Total £2 9s 6d Carried forwards Inhabitants £904 17s 5½d Plantation £47 6s 9d General charges £84 10s 9¼d Total £1,036 14s 11d Interpretations The page closes out the final retail group of the two-month account, with tea as the single largest line at £51 15s 0d to inhabitants. The 69 pound of tea at 15s the pound is the working grade carried at the standing rate confirmed across the storekeeper's accounts since the spring of 1713, and supplements the smaller line of 4 pound at the same rate on the 25 September to 25 October account. Tea at this scale on the inhabitants column represents a substantial absorption across the freeholder community during the Christmas season, with each freeholder family probably drawing one or two pounds for daily and ceremonial use. The wooden bowls, trays and shovels at the head of the page complete the turnery ware draws of the earlier folio, with parallel allocations on the general charges column for the General Table establishment. The 12 wooden shovels at the rate of about 1s 2d each

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			are working tools for moving grain, lime and small bulk materials within the storehouse and on the plantation, distinct from the iron shovel at 2s on the earlier ironmongers ware line. Braziers ware on the present folio extends the brass and copper kitchen inventory of the earlier folios. A brass kettle of 28 pound at 2s 4d the pound (£3 5s 11d) is the principal new item, supplied with a brass kettle frame at 9s 10d on the same line. Brass and copper kitchen vessels are substantial capital items for the freeholder household, and the inclusion of a brass kettle frame alongside the kettle itself (the frame being a stand or trivet to support the kettle over the fire or charcoal) shows that the storekeeper supplied complete sets ready for service rather than only the principal vessel. Two copper sauce pans of 5 pound at 9d the pound, and a further single sauce pan of 9 pound, with brass ladles, brass lamps and snuffers, supplement the brass kettle as the working kitchen inventory of a single substantial household. Stationary ware at 6 horn books, 3 primers, 17 quires of sorted paper and 4 testaments at £2 9s 6d to inhabitants supplies the working religious and educational inventory across the freeholder community. The quire (24 sheets of paper) at the rate of about 16d each is a small working stock for personal correspondence and household records, distinct from the bulk ream and folio paper of the office consignment on the earlier folio. The pairing of testaments and horn books at the same rates as on earlier folios confirms a settled retail demand for elementary religious instruction across the inhabitants. Sweet powder at 7 pound at the rate of about 2s 5d the pound (£0 17s 0d on the general charges column) is perfumed talcum powder used for hair and clothes, supplied here for the Castle table. A cradle at 8s on the general charges column is an infant's rocker, perhaps for a child at the Castle establishment or for the hospital line. The single pair of bodice (a stiffened bodice of the same kind as the pair noted on an earlier folio at 11s 6d) at 10s 4d to inhabitants completes the personal clothing line. The 1 suit of soldiers clothes at £1 18s 3d to inhabitants reflects the working garrison uniform sold at the standing rate for a complete soldier's outfit. Speculations The very substantial tea draw of 69 pound at 15s the pound on a single monthly account, set against the 4 pound on the previous month's account at the same rate, suggests that the freeholder community had reserved its principal tea drawing for the Christmas and New Year season. The pattern is consistent with the working calendar of the inhabitant economy, in which the principal social gatherings and visits would fall during the working break of late December and early January and would require a substantial domestic supply of the beverage. The £51 15s 0d is one of the larger single retail lines on any storekeeper's account in the present sequence and points to a working culture of tea-drinking now firmly established across the substantial freeholder houses of the island. The pairing of a brass kettle of 28 pound with its supporting brass kettle frame, both supplied as a single working set rather than as separate items, suggests that the cargo was composed in London to deliver matched kitchen sets to the principal freeholder households of the island. The pattern fits with the silver twist buttons, dress shoes, better-grade hats and tea drawing of the present two-month account, all pointing to a deliberate restocking of the substantial freeholder houses at the close of the year. The London merchants seem to have understood the working domestic economy of the St Helena establishment well enough to compose cargoes that delivered both the staple bulk and the matched dress and kitchen sets simultaneously, allowing the council and the storekeeper to satisfy the inhabitant

			£0 10s 1½d 1 dozen ditto £0 0s 2d Sub-total to inhabitants £0 13s 8½d Total £0 13s 8½d Lead 4 bars of 90 pound at 9d (Susanna) £1 2s 3d Sub-total to inhabitants £1 2s 3d Total £1 2s 3d Sail needles to general charges £0 0s 6d Total £0 0s 6d Hessings 35 yards at 1s 2d to general charges £2 10s 2d Total £2 10s 2d Peas 1 cask of 7½ bushels (Susanna) to general charges £3 7s 6d Total £3 7s 6d Tallow 1 cask 1 hundredweight 0 quarters 8 pound at 77s the hundredweight to general charges £3 11s 5d Total £3 11s 5d Nails 20 pound at 7½d £0 5s 2d 10 pound 10-penny at 7½d £0 6s 2d 14 pound 6-penny at [...] £0 10s 6d 8 pound 4-penny at [...] £0 7s 0d 1 pound 3-penny at [...] £0 1s 0d 2 pound tacks £0 1s 0d Sub-total to inhabitants £1 10s 7d Total £1 10s 7d Carried forwards Inhabitants £911 2s 4d Plantation £51 4s 4½d General charges £92 8s 7d Total £1,054 14s 9½d Interpretations The page brings the storekeeper's two-month account through to its closing sequence of small commodity lines, with no single substantial entry on the page comparable to the tea, chelloes or arrack draws of earlier folios. The lines on the page run consistently below £4 in value and cover the working hardware, paint, hessian and provisioning tail of the Susanna cargo. Tallow at 1 hundredweight 8 pound at 77s the hundredweight (£3 11s 5d on the general charges column) is rendered beef or mutton fat used both for making candles and for greasing leather and rope work; the supply to the General Table establishment fits with the working pattern by which the Castle made its own candles from imported tallow rather than relying solely on imported wax candles. Paints and indigo on the page continues the pigment supply of the earlier folios, with 16 pound of white lead and 1 ounce of indigo to inhabitants, and 60 pound of white lead and 30 pound of red lead to general charges. The larger bulk allocation on the general charges column at £2 5s 0d supplies the working paint mixing for the Castle and the fortifications, distinct from the smaller retail line for the freeholder community. White lead is the basic carbonate of lead used as the primary white pigment in oil paint,

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			while red lead is the oxide used both as a coloured pigment and as a corrosion inhibitor on iron and timber. Cutlery ware at 17 knives and forks, 7 pair buckles, 6 pair scissors sorted, 4 pair French scissors (the finer-grade scissors of the period, with curved blades, used for trimming hair and decorative cutting work), 6½ pair ditto from Susanna, 2 razors, 500 needles at 9d and 200 ditto from Susanna together carry the closing working hardware retail at the rates established on earlier folios. The presence of French scissors alongside the standard sorted scissors confirms the working pattern by which the cargo supplied both a common and a higher-grade form of each working tool. Peas in 1 cask of 7½ bushels (Susanna) at £3 7s 6d on the general charges column are dried split peas for boiling into pottage as part of the working ration at the General Table and on the boats, supplementing the smaller sack of 10 bushels at £4 16s 8d noted on an earlier folio of the same cargo. Hessings at 35 yards at 1s 2d the yard to general charges is the coarse jute or hemp working cloth for grain sacks and rough working covers, picking up the sacking and hessian line of the earlier folios. The sail needles to general charges at £0 0s 6d are the heavy triangular-pointed needles used by sailmakers and rope workers for stitching canvas and heavy cordage. The nails sub-total at £1 10s 7d to inhabitants covers the closing range of small construction nails (20 pound at 7½d the pound, 10 pound of 10-penny nails, 14 pound of 6-penny, 8 pound of 4-penny, 1 pound of 3-penny, and 2 pound of tacks) for working repair and small joinery across the inhabitant community. The graded penny weights reflect the established English builder's measure by which nails were sold by the weight that 100 nails of a given size carried, and supply the inhabitant household with the working repair stock distinct from the larger fortifications supply on earlier folios. Garterings at 15 yards, flannel and bunting at 4 yards, pepper at 3 pound, bird shot at 25 pound and corks all together close out the small finished goods line of the cargo. Speculations The very large number of small commodity lines on this single page, each running at low absolute values, suggests that Bazett was deliberately compressing the closing tail of the cargo into a single concentrated entry to bring the two-month account to its final sub-total at £1,054 14s 9½d. The pattern is consistent with the order at the consultation of 2 February 1714 that the remaining accounts be brought in as soon as possible so that copies might be transmitted to the Honourable Company by the next conveyance of shipping, and the storekeeper's pace through the smaller items signals the closing stage of the working drafting before the transmission to London. The presence of tallow and peas as the principal general charges items on the page, alongside the white lead and red lead for paint, points to a working programme by which the Castle and the General Table establishment were finishing the year by stocking up on the bulk provisions and paint materials that had been short during the drought aftermath. The cask of 7½ bushels of peas would last the General Table several weeks at the working ration, and the tallow at 1 hundredweight 8 pound would support both candle-making and rope and leather work into the new year. The pairing fits with the established pattern by which the storekeeper's institutional draws moved towards bulk provisioning as the working year closed.

			1 hammer number 4 £0 1s 0d 1 ditto £0 2s 4d 1 ditto £0 1s 6d 1 ditto £0 1s 6d 1 long plain £0 3s 9d 1 plain iron £0 14s 8¼d 1 whetstone £0 1s 3d Sub-total to general charges £1 2s 9d Total £12 10s 9¾d Carried forwards Inhabitants £915 19s 4d Plantation £56 18s 1½d General charges £97 7s 7½d Total £1,070 5s 1d Interpretations The page brings the storekeeper's two-month account through to its closing hardware lines, with the heavy ironmongers ware lines split between the inhabitants column and the general charges column, and a further set of finer carpenter's tools drawn directly from <i>Susanna's</i> cargo on the general charges line. The grindstone (a circular stone wheel turned on an axle for sharpening blades and tools) at 5s 6d is the working sharpening equipment for the smith's shop and the carpenter's bench. The axletree and winch at 4s is the working mechanism for turning the grindstone or for hoisting on the long boat or at the storehouse, and supplements the earlier substantial windup jack of £7 14s 4d on the construction line. The pair of bellows at 3s is the smaller form of the bellows for domestic fires, distinct from the larger smith's bellows at £5 9s 2d noted on the earlier construction line. Nails on the page run across the full graded range of the English builder's measure: 20-penny, 10-penny, 6-penny, 4-penny, 3-penny and 2-penny nails, with tacks at 20d the pound, button brads (small slender nails for fixing button or tack heads) at 14d the pound and flooring brads (the heavier slender nails for fixing floorboards) at 9d the pound. The graded supply across so many sizes points to a working repair and joinery stock for the inhabitant community at the same time as the larger fortifications draws on earlier folios. The bundle of rod iron at 84 pound at 3d the pound on the general charges column is the working bar iron for the smith's shop, identical in form to the bundle noted on an earlier folio at the same rate. The further ironmongers ware lines drawn directly from <i>Susanna's</i> cargo at the foot of the page continue the carpenter's tool supply of the earlier folios. A jack plain (a medium-length bench plane for first dressing of rough timber), a smoothing plain (the shorter plane used as the final smoother), three plain irons (the cutting blades fitted into the plane stocks), three hammers number 4 and two heading chissells (chisels for cutting the heads of pegs and nails flush with the surrounding timber), together with three sets of box irons with their heaters (the hollow flat irons for pressing linens, fitted with iron heaters slipped inside) supply the working tools of the carpenter's bench and the laundry room. The heavy 14s 8¼d entry on the line is a plain iron of unusual weight, the working blade for a larger jointing plane or for a heavy framing plane on the same construction programme as the marked timber and dram deals of the earlier folios. Tacks, button brads and flooring brads together on the inhabitants column at modest values reflect the working repair stock supplied to the freeholder

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			community across the autumn and Christmas period. The whetstones at 2s 6d and 1s 3d are the smaller hand-held sharpening stones for working blades, distinct from the larger grindstone of the head of the page. Speculations The very large number of nail and brad lines on the inhabitants column, in graded penny weights from 2-penny through 20-penny and including specialist forms such as button brads and flooring brads, suggests that the inhabitants were carrying out substantial repair and small construction work on their own houses during the working break of the Christmas period. The pattern is consistent with the rebuilding and fencing programme that had been in train across 1713, with the deadline for fencing under the recent fencing law set at 25 Mar 1712, the Toddington letter deadline of 25 Mar 1713 (the fencing proclamation of 30 Oct 1711), and the further extensions granted to substantial freeholders such as Beale, Cleave, Coles and Southen across late 1712 and 1713. The retail draw of the nail range across the inhabitants column points to working private construction that picked up alongside the larger Company programme. The presence of three sets of box irons with their heaters on the same monthly account, all drawn from <i>Susanna's</i> cargo and split between the general charges column and the inhabitants column, suggests that the cargo was supplying the laundry equipment for several Castle and substantial freeholder households simultaneously. The box iron was a specialist domestic tool, used in households where linen needed to be smoothed for dress and table use, and the multiple sets point to a working domestic economy in which laundry was an established household task across both the Castle and the substantial freeholder houses. The London merchants seem to have understood the working domestic demand at this scale and composed the cargo accordingly.

Brought forwards Inhabitants £915 19s 4d Plantation £56 18s 1½d General charges £97 7s 7½d Total £1,070 5s 1d 1 hammer number 6 to plantation £0 1s 6d Sub-total Inhabitants £915 19s 4d Plantation £56 19s 7½d General charges £97 7s 7½d Total £1,070 6s 7½d To the inhabitants £915 19s 4d To plantation £56 19s 7½d To general charges £97 7s 7½d Total sum £1,070 6s 7½d Interpretations The closing summary of the two-month storekeeper's account places the inhabitants column at £915 19s 4d, the plantation at £56 19s 7½d, the general charges at £97 7s 7½d and the grand total at £1,070 6s 7½d. The inhabitants column carries over 85 per cent of the entire account, confirming the working pattern observed across the present sequence by which the storekeeper's monthly account is principally a record of retail sale to the freeholder community. The plantation column at just over 5 per cent and the general charges column at just over 9 per cent reflect the smaller working draws of the Company's own establishment.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			The £1,070 6s 7½d total for a two-month period is the largest single periodical submission in the storekeeper's sequence under Boucher, well above the comparable two-month account for 25 December 1709 to 25 February 1710 at £298 0s 11d carried forward at the consultation of 7 March 1710, and above the heaviest single-month brandy distribution accounts of the summer of 1710. The substantial scale of the present account reflects both the cargo absorption of the <i>Susanna</i> across the autumn and the working Christmas drawing of the freeholder community after the long drought of 1712 to 1713. The closing summary, with the four columns set out as separate items and the total brought to its final figure, fits the form required for transmission to the Honourable Company in London. The council had ordered at the consultation of 2 February 1714 that the remaining accounts be brought in as soon as possible so that copies of all might be transmitted to the Honourable Company by the next conveyance of shipping, and the present completion of the 25 October to 25 December 1713 account closes one of the two principal arrears outstanding on the storekeeper's monthly cycle. Speculations The decision to close the present account at a single grand total of £1,070 6s 7½d, rather than to extend the entries further or to split the two months into separate submissions, suggests that Bazett was working to bring the entire arrears of the year into a transmittable form for the next outgoing shipping. The compression of two months into one return at this scale points to a deliberate working strategy by which the storekeeper consolidated his outstanding submissions into the largest possible single document, ready for despatch as a complete audited set rather than as a series of smaller monthly returns. The pattern is consistent with the council's working preference for transmitting the documentary record to London in concentrated form at moments of senior attrition and administrative recovery, observed earlier in the <i>Concord</i> dispatch of 17 July 1711 and the <i>Heath</i> dispatch of June 1713.
129	122	Island St Helena. At a Consultation Held on Tuesday the 2[d] day of March 1713/14 At the United Castle in James Valley. Pres[ent] Benjam[in] Boucher Esq[r] Gov[r] Matth[ew] Bazett 2 in Coun[il] &c Lieut[t] Thom[s] Cason John French Assistants Whereas yesterday being the first Instant Arrived the Ship Abingdon Capt[n] William Jordan from India who brought us a Letter with Invoice and Bills of Lading from the Deputy Gover[no]r & Council of Bencoolen for Twelve halfe Legars of Batavia Arrack consign[d] us from thence. Ordered. That Capt[n] Jordan have an Order delivered him for the Landing said Arrack and that it be Sold out of the Stores at nine Shillings p[r] Gallon, which we think very Sufficient gains. Also that Said Letter and Invoice be Entred in a book for that Purpose and Coppys send the Honourable Company by Said Shippes. Margin Notes: Ship Abingdon Arrivall. Arrack sent on Shore Sold at 9 p[r] gall[on]	Island of St Helena Consultation held at the United Castle in James Valley on Tuesday 2 March 1714. Present: Benjamin Boucher Esquire, Governor; Matthew Bazett, second in council; Lieutenant Thomas Cason and John French, assistants. Yesterday, being the first day of the month, the ship <i>Abingdon</i> arrived under Captain William Jordan from India. Jordan brought a letter from the Deputy Governor and Council of Bencoolen, together with an invoice and bill of lading, for twelve and a half leaguers of Batavia arrack consigned from there. The council ordered that Captain Jordan be given an order to land the arrack and that it be sold out of the stores at 9s the gallon, which the council held to be a sufficient gain. The letter and invoice were ordered to be entered in the book kept for that purpose, with copies to be sent to the Honourable Company by the same shipping. Interpretations The arrival of the <i>Abingdon</i> on 1 March 1714 with twelve and a half leaguers of Batavia arrack consigned from the Deputy Governor and Council at Bencoolen confirms the working pattern by which St Helena drew its principal spirits supply from the Company's South Sumatra factory rather than from the Indian presidencies of Madras and Bengal. A leaguer is a large maritime spirits cask of approximately 150 to 160 gallons, so the consignment of twelve and a half leaguers amounts to about 1,875 to 2,000 gallons, well above the routine cargo arrack draws and sufficient to

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			supply the inhabitant community and the institutional consumers for several months. The Bencoolen consignment fits the working pattern of inter-factory transfers within the Company's eastern network, by which surplus stocks at one station were despatched to another for retail at the local rate. The retail price of 9s the gallon is the standing inhabitants rate confirmed across the storekeeper's monthly returns since 3 July 1713 and across the closing two-month account just completed. The council's working description of 9s the gallon as a sufficient gain reflects the standard 50 per cent margin on the working acquisition price observed across the spirits supply of the present period, with the Bencoolen consignment placing the wholesale acquisition at about 6s the gallon (consistent with the Goa arrack purchased from the fleet at 4 June 1713 at 6s the gallon). Captain William Jordan of the <i>Abingdon</i> succeeds Captain John Lesly, who had commanded the same vessel on her arrival of 2 November 1712 from England with the cargo absorbed across the previous folios. The <i>Abingdon</i> is therefore now established as a routine Company ship calling at St Helena on her homeward passage, here returning from India rather than from England. The entry of the letter and invoice in a book kept for that purpose, with copies to be sent home by the same shipping, follows the working documentary discipline established by Boucher and Pack across the senior establishment from August 1711 onward, by which arriving consignments were entered in dedicated registers and the originating papers transmitted to London for audit. Speculations The arrival of a substantial Batavia arrack consignment from Bencoolen on 1 March 1714, set immediately after the closing of the heavy two-month storekeeper's account of 25 October to 25 December 1713 at £1,070 6s 7½d, suggests that the Bencoolen factory had been alerted by earlier outgoing letters from the St Helena council to the working spirits shortage on the island. The pattern fits with the established practice of inter-station despatch within the Company network, by which surplus stocks were directed to stations where retail demand was strong. The St Helena council had been pressing for arrack supply through visiting masters since the drought of 1712 to 1713, and a directed despatch from Bencoolen would settle the supply question for a substantial portion of the coming year. The council's choice to fix the retail rate of 9s the gallon at the start of the cargo absorption, ahead of any market test, suggests that Boucher and Bazett were working to a settled island rate established by the standing instructions and the previous monthly returns, rather than testing the market month by month. The retail rate would be held against any pressure to discount, and the working margin of about 50 per cent would protect the Company's account through the cargo cycle. The pattern is consistent with the council's stewardship under Boucher of a cargo economy still recovering from the disruptions of the drought and the July 1713 mutiny.
130	123	Island St Helena. At a Consultation Held on Thursday the 8 day of Aprill 1714 At the United Castle in James Valley Pres[ent] Benjam[in] Boucher Esq[r] Govern[r] Matth[ew] Bazett 2[d] in Coun[ill] Lieut[t] Tho[s] Cason John French Assist[ts] Capt[n] William Jordan M[r] Peter Elers Purser Gentlemen. The Governour desires your Company this morning, to hear and Evidence to the Honour[ble] Court of Directors in England To what questions & answers may Occur in this Consultation.	Island of St Helena Consultation held at the United Castle in James Valley on Thursday 1 April 1714. Present: Benjamin Boucher Esquire, Governor; Matthew Bazett, second in council; Lieutenant Thomas Cason and John French, assistants. Also present at the Governor's desire: Captain William Jordan and Mr Peter Elers, purser. The Governor desired the company of Captain Jordan and Mr Elers that morning, so that they might hear and bear evidence to the Honourable Court of

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
		M[r] Bazett having refus[d] to Signe the Generall Letter now to be Sent the Honour[ble] Court of Directors by Ship Abingdon, is desired to give his reasons, and Why he don't Answer the Severall questions the Govern[r] desires he would in that Letter. M[r] Bazett Says in Answer to the Seventh Parragraph, That, the Ships Acco[ts] was copy[d] out and puts it upon M[r] Goodwin to prove it. The Said Goodwin, and Joseph Tomlinson, writers in the Store being Sent for and now present, Says that no Ships Accounts was delivered to the Clerk of the Councill, nor was any drawn out in order to be Sent home. To the first question in the 15[th] parragraph, of Said Letter M[r] Bazett Answers, he don't know any thing of any underhand dealing between the Governour and M[r] John Back, Tending to the prejudice or Margin Notes: Gov[r] Boucher desired the Capt[n] & Purser to be present. M[r] Bazett refus[d] to Signe Gen[ll] Lett[r] [...] his reasons. refers to. J[no] Goodwin & Jos Tomlinson. M[r] Bazetts farther answers.	Directors in England as to what questions and answers might occur in the consultation. Matthew Bazett had refused to sign the general letter that was to be sent to the Honourable Court of Directors by the <i>Abingdon</i>, and was now called on to give his reasons and to answer the questions the Governor put to him on that letter. Bazett said, in answer to the seventh paragraph, that the entry about the ships' accounts was copied out and put upon Mr Goodwin to prove. Mr John Goodwin and Joseph Tomlinson, writers in the store, were sent for and now present. They said that no ships' accounts had been delivered to the Clerk of the Council, nor had any been drawn out in order to be sent home. Bazett, answering the first question in the fifteenth paragraph of the letter, said he knew nothing of any underhand dealing between the Governor and Mr John Pack tending to the prejudice Interpretations The consultation of 1 April 1714 is an extraordinary sitting devoted to the formal interrogation of Bazett over his refusal to sign the general letter to the Court of Directors that the council was sending home by the <i>Abingdon</i>. The presence of Captain William Jordan and the purser Peter Elers as witnesses brought in at the Governor's request shows the council's working procedure for documenting senior disagreement, by which independent ships' officers from the homeward vessel were called to bear evidence to the Court of Directors of the proceedings on the island. The mechanism is consistent with the council's working preference for transmitting documented evidence to London at moments of administrative crisis, observed earlier in the proceedings against John Roberts in the autumn of 1711. The general letter is the principal annual communication between the local council and the Court of Directors, opened in council on its receipt and drafted collectively before being signed and sent home. A council member's refusal to sign the outgoing general letter is a substantial procedural step, since the signature attests to the corporate authority of the document and a missing signature signals that one of the council members dissents from the matters reported. Bazett's refusal forces the council to set out his reasons in a formal interrogation entered in the consultation book, so that the Court of Directors can see the basis of the dissent rather than only its existence. The two writers in the store, John Goodwin and Joseph Tomlinson, are the working clerks under Bazett who maintain the store accounts and the records of consignments. Their evidence that no ships' accounts had been delivered to the Clerk of the Council nor drawn out in order to be sent home goes to the substance of the seventh paragraph of the letter and supports Bazett's reading that the Goodwin matter rested on facts not as the letter had stated them. Joseph Tomlinson is the same man who had translated the Portuguese petition of 29 May 1711 and who had been one of the lower-table petitioners of 13 October 1713, here in his working capacity as a writer in the store. The reference to underhand dealing between the Governor and Mr John Pack tending to the prejudice (of the Company, presumably, the sentence breaking off at the foot of the folio) introduces a substantive allegation against the late Deputy Governor in conjunction with the Governor. John Pack had died on 3 April 1713 and the matter being raised is therefore historical, with Bazett denying knowledge of the alleged dealing rather than reporting current concerns. Speculations The formal calling of Captain Jordan and Peter Elers as witnesses to the proceedings against Bazett, set immediately before the <i>Abingdon</i> was due to sail with the

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			general letter and the storekeeper's accounts, suggests that Boucher was working to ensure that the Court of Directors received an independent attestation of the consultation alongside Bazett's signed dissent. The pattern fits with the working pressure on the senior establishment of the island, with only the Governor and Bazett remaining of the formal council members and Cason and French serving as assistants without confirmed councillor status. A documented and witnessed interrogation provides the Court of Directors with the material to settle the question of authority on the island, and gives Boucher the strongest possible documentary record against a deputy whose dismissal of 2 October 1712 had been reversed without formal order within ten weeks of its imposition. The introduction of allegations of underhand dealing between the Governor and the deceased John Pack, in the form of a question put by the Governor himself to Bazett, suggests that the matter had been raised in earlier letters home or in council discussion that Bazett did not record in the consultation book. The Governor's choice to put the question directly to Bazett under formal interrogation, with the <i>Abingdon's</i> officers as witnesses, points to a deliberate strategy of forcing Bazett either to substantiate the allegation in a transmittable form or to deny it on the record. Bazett's response that he knew nothing of any such dealing closes the matter for the present proceedings but does not protect Bazett from the documentary weight of the formal denial entered in the consultation book.
131	124	or defrauding the Honour[ble] Company, and that they had no Such information from him. To the 2[d] question M[r] Bazett answers he knows of none. To the 3[d] question, He never was inform[d] by any body. To the 4[th] question M[r] Bazett Says he is not oblig[d] to tell his thoughts. In Answer to the 24[th] Parragraph M[r] Bazett Says he knows nothing of any order of Councill to Survey the Companys Plantations on M[r] Hoskisons death. The Susannahs Letter was read Parragraph by Parragraph, and the answer thereto now Sent by the Abingdon M[r] Bazett is desired to make his further Exceptions. To which he Says he has not now time Sufficient. The Governour Demanded of M[r] Bazett why the two Last months Accounts of Goods Sold and Dispos[d] of out of the Stores were not brought in Inorder of being Sent Home by this Shipping M[r] Bazett makes answer that haveing much business could by no means gett them ready. The Governour further Demands to know what time the Store books are brought up to M[r] Bazett Says the Store books are made up to the 25[th] March 1712 but are not as yet Coppy[d] over. Upon overhauling the Store books we find a Journall Coppy[d] over to the 25 March 1712, but no Ledger, or any other except a 'Transfer book that can be Sent Home by this Shipping So that when they[l] be readie made up and Coppy[d] over to go home to the Honour[ble] Company the Governour cant tell. The Governour asks M[r] Bazett if any Arrack Leakt out, of which he had information. M[r] Bazett Answers a butt, and part of a Leager Leak[t] out. The Governour asks him why he did not Acquaint him w[t]h it, being Superintendant here. M[r] Margin Notes: more Answers Continued. Lett[r] Susanna & answer read. M[r] Bazett desired to make his further Exceptions. Gov[r]s Demand of Monthly Acco[t]s	Continuation of the consultation of 1 April 1714 and the formal interrogation of Bazett. Bazett continued in answer to the first question, denying any underhand dealing between the Governor and Mr John Pack tending to the prejudice or defrauding of the Honourable Company, and stating that he had no such information from him. To the second question, Bazett answered that he knew of none. To the third question, he said he never was informed by anybody. To the fourth question, Bazett said he was not obliged to tell his thoughts. In answer to the twenty-fourth paragraph, Bazett said he knew nothing of any order of council to survey the Company's plantations on Mr Hoskison's death. <i>Susanna's</i> letter was read paragraph by paragraph, and the answer to it now sent by the <i>Abingdon</i>. Bazett was desired to make his further exceptions. He said he had not now time sufficient. The Governor demanded of Bazett why the two last months' accounts of goods sold and disposed of out of the stores were not brought in for sending home by the present shipping. Bazett answered that he had much business and could by no means get them ready. The Governor further demanded to know to what time the store books had been brought up. Bazett said the store books were made up to 25 March 1712, but were not yet copied over. On overhauling the store books the council found a journal copied over to 25 March 1712, but no ledger or any other book except a transfer book that could be sent home by the present shipping. So when the books would be ready, made up and copied over to go home to the Honourable Company, the Governor could not tell. The Governor asked Bazett whether any arrack had leaked out, of which he had information. Bazett answered that part of a butt and part of a leaguer had leaked out. The Governor asked him why he had not acquainted him of it, being superintendent there. Interpretations

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
		M[r] Bazetts reply. further Demand of what progress in y[e] Store books. Answer. The truth of [...] this Examin[d] about Arrack Leakt out. Gov[r]s Question.	The page sets out the working substance of the interrogation of Bazett and reveals the principal grounds of his refusal to sign the general letter. The numbered questions follow the paragraphs of an earlier letter (probably the directors' letter brought by the <i>Susannah</i> and now being answered by the <i>Abingdon</i>) and cover allegations of underhand dealing, prejudice to the Company and failure to survey the plantations on Hoskison's death. Bazett's answers run consistently to denial, lack of knowledge or refusal to disclose his thoughts, and the pattern of response shows him standing on the formal limits of his obligation rather than substantiating any of the allegations against the Governor. The fourth answer (he was not obliged to tell his thoughts) is a substantial procedural assertion. Council members in this period were treated as bound to attest the facts within their knowledge but not to disclose private opinions held outside the formal proceedings. Bazett's choice to invoke this protection rather than to express either agreement or dissent suggests that his private view diverged from the matter being put, but that he was unwilling to express the divergence in a form transmittable to London. The exchange over the store books reveals the substantive administrative failure underlying the proceedings. The store books had not been made up beyond 25 March 1712, and even that working entry stood only in the journal (the daybook in which transactions were recorded in date order as they occurred) without yet being copied over to a ledger (the bound running account in which transactions were entered against the individual personal or commodity accounts to which they applied). The transfer book (a working register recording transfers between accounts) was the only document fit to be sent home by the present shipping. The two-year backlog in the formal records, set against Bazett's working role as second in council and storekeeper, exposes the substantive grounds on which his refusal to sign the general letter would carry weight with the directors only if the letter itself was not founded on substantiated facts. The matter of the leaked arrack (part of a butt and part of a leaguer, with the leaguer being the large maritime cask of about 150 to 160 gallons and the butt being a smaller cask of about 108 gallons in the standard English measure) reveals a further administrative lapse in which Bazett had not informed the Governor of working losses from the store. As superintendent of the stores, Bazett held the duty to report leaks and shortages immediately to the council, and his failure to do so opens a third ground of complaint alongside the unsigned letter and the uncopied store books. The reference to the twenty-fourth paragraph of the directors' letter (concerning a survey of the Company's plantations on Hoskison's death) recalls the working programme initiated under Boucher and Pack in March 1712, when Griffith and Bazett had been ordered on 7 March 1712 to survey the Company's plantations and provisions that had been in Hoskison's charge. Bazett's present claim to know nothing of any order of council to that effect, set against the documentary record of the 7 March 1712 council, sits uneasily with his working role at the time and suggests a working memory of the proceedings that does not match the council book. Speculations Bazett's pattern of refusal across the interrogation (denial of knowledge, denial of information, refusal to disclose thoughts, denial of the existence of a council order on which he had himself acted) suggests a deliberate working strategy of withholding all substantive evidence from the proceedings rather than either substantiating the allegations against the

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			Governor or providing the Governor with material to bring against unnamed third parties. The pattern fits Bazett's working position as the sole remaining substantive council member alongside the Governor, with Cason and French not yet confirmed by the Court of Directors. His refusal to sign the general letter and his refusal to substantiate any allegation under interrogation places the Court of Directors in the working position of having to settle the question of authority between the Governor and his second from the documentary record alone, and provides Bazett with a working defence against any future proceedings. The discovery on overhauling the store books that the principal account books were two years in arrears, and that only a transfer book could be sent home by the present shipping, suggests that Bazett's administrative neglect had reached a point at which the Governor was now able to ground formal proceedings against him not on the question of the unsigned letter or on substantive allegations of wrongdoing, but on the working failure to maintain the Company's accounting records. The pattern fits with the earlier dismissal of Bazett of 2 October 1712 on grounds of swearing, drunkenness, neglect of business and disrespect to the Governor, and the present interrogation revives the same charge of neglect now grounded in the documentary evidence of the books themselves. Boucher seems to have been laying a documentary trail by which the Court of Directors could settle Bazett's future on the island from London on the basis of evidence that did not depend on a single council day's exchanges.
132	125	M[r] Bazett Says he has been Always Employd and did not think of it. Question. The Governour askt M[r] Bazett what quantity of Arrack did leak out. Answer. M[r] Bazett Says, out of two Butts and a Legar he gauge about one hundred and Seventy Gallons Loss. The Governour desires to know of the Honour[ble] Comp[s] being Superintendant here whether or no M[r] Bazett ought not to have Acquainted him when the Leakage was first found out (being inform[d] by other hands about four months ago) and whether this dos not Look Like Unders[tanding] doings. The Governour asks M[r] Bazett why he has not brought the keys of the Companys Ware houses to him According to the 23 Parragraph of the Gen[ll] Letter p[r] the John & Elizabeth. M[r] Bazett Says, that having frequent Occasion to Serve out thought there was no real Occasion to bring the keys down to him. The Governour desires the Honour[ble] Company to take Notice he has not had the keys of their Ware Houses, Since the Susannahs being here. M[r] Bazett desired that M[r] Goodwin and M[r] De La Rose writers might be Sent for to Declare what they know about the Leakage of the Arrack afores[d] who being Present Says they know that Severall Casks did Leak and out of one Seventy Gallons as for the Rest can be Justly tell the full quantity that did So leak out, But remembers M[r] Bazett took a memorand[m] of what was leakt out in all. M[r] Cason, M[r] French and M[r] Alexander Says they Saw at M[r] Bazetts request, two or three Casks of Arrack that had leakt out, and Says the bottom of one Cask faulty, being P[.] or Boxed, and that M[r] Bazett Said he draw[s] but twenty nine Gallons out of one of y[e] Butts. Margin Notes: Gov[r]s Appeal to y[e] Hon[ble] Comp[s] his Question. M[r] Bazetts answer. Reference to y[e] Hon[ble] Comp[s]	Continuation of the interrogation of Bazett on 1 April 1714. Bazett answered that he had been always employed and did not think of it. The Governor asked Bazett what quantity of arrack had leaked out. Bazett said that out of two butts and a leaguer he had gauged about 120 gallons lost. The Governor desired the Honourable Company to take notice whether or not Bazett ought to have acquainted him when the leakage was first found out (having been informed by other hands about four months ago) and whether this did not look like underhand doings. The Governor asked Bazett why he had not brought the keys of the Company's warehouses to him according to the twenty-third paragraph of the general letter sent by the <i>John and Elizabeth</i>. Bazett said that, having frequent occasion to serve out, he thought there was no real occasion to bring the keys down to him. The Governor desired the Honourable Company to take notice that he had not had the keys of their warehouses since the <i>Susannah</i> had been there. Bazett desired that John Goodwin and Mr De La Rose, writers, might be sent for to declare what they knew about the leakage of the arrack. Goodwin, being present, said that several casks did leak, and that out of one 70 gallons were lost. As for the rest he could not justly tell the full quantity that did so leak out, but remembered Bazett took a memorandum of what was leaked out in all. Cason, French and Alexander said that they saw at Bazett's request two or three casks of arrack that had leaked out, and said the bottom of one cask was faulty, being pressed or rotten. They said Bazett told them he drew only 29 gallons out of one of the butts. Interpretations The page continues the interrogation of Bazett through the substantive matter of the arrack leakage and introduces a parallel ground of complaint over the keys of the Company's warehouses. The 120 gallons lost from two butts and a leaguer is a substantial loss against the working total of about 376 gallons in the three casks (two butts at 108 gallons each and one leaguer at about

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
		M[r] Goodwin & De La Rose report ab[t] the leakage of Arrack. further report about y[e] Arrack.	160 gallons), and represents nearly a third of the stock in those vessels. The Governor's calculation that he had been informed by other hands about four months before the present proceedings places the original discovery of the leakage in November or December 1713, during the working two-month account just closed at £1,070 6s 7½d, and points to the working failure of Bazett to report a substantial commodity loss across the closing months of the accounting year. The matter of the keys to the Company's warehouses rests on the twenty-third paragraph of the directors' general letter sent by the <i>John and Elizabeth</i>, by which the warehouse keys were to be held by the Governor and delivered to the storekeeper only on each occasion that goods were to be served out. Bazett's working practice (retaining the keys himself, on the ground that he had frequent occasion to serve out) places the storekeeper in working control of the warehouse rather than the Governor. The institutional importance of the keys lies in the segregation of duties between custody and disbursement, by which the Governor holds custody of the stock and the storekeeper draws against it only on documented authority. Bazett's retention of the keys collapses the distinction and allows him both custody and disbursement of the stock, creating the working conditions under which a substantial loss such as the arrack leakage could go unreported for four months. The witnesses summoned by Bazett to support his account on the leakage reveal a working tension within the storekeeper's establishment. John Goodwin (the assistant writer who attended the boats on the <i>Abingdon</i>'s arrival on 2 November 1712) confirms substantial leakage from several casks and a working memorandum taken by Bazett, but cannot confirm the total quantity. De La Rose, the second writer named, is not recorded as appearing in person on the page. Cason, French and the clerk John Alexander confirm the physical state of the casks (the bottom of one cask faulty, pressed or rotten) and the figure of 29 gallons drawn from one of the butts that Bazett had given them. The corroboration of the physical loss provides Bazett with some working defence on the question of whether the leakage was due to faulty casks rather than to mismanagement, but does not address the working failure to report it. Speculations The Governor's choice to press the matter of the keys immediately after the matter of the arrack leakage, drawing the connection between the storekeeper's working control of the warehouse and the storekeeper's failure to report substantial losses, suggests a deliberate prosecutorial strategy by which the substantive ground of complaint against Bazett (failure to report) is grounded in the procedural ground (failure to surrender the keys). The pairing fits the working pattern observed across the present interrogation, by which the Governor builds a documentary record sufficient to support proceedings in London against Bazett on grounds of administrative neglect, rather than on the contested matter of his refusal to sign the general letter. The four-month gap between the working discovery of the leakage and the formal raising of it in council on 1 April 1714 suggests that Boucher had reserved the matter until the <i>Abingdon</i> was due to sail, so that the formal interrogation could be transmitted to the directors in the same outgoing despatch as the general letter Bazett had refused to sign. The pattern fits with the working practice observed earlier in the proceedings against Roberts in the autumn of 1711, by which the Governor used the arrival and departure of ships as the working calendar of his prosecutorial documents. The choice to bring the matter forward only at the latest moment that would allow transmission by the <i>Abingdon</i> gives Bazett the least time to prepare a defence and

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			produces the strongest evidentiary record for the directors to consider.
133	126	Island St Helena. At a Consultation Held on Saturday the 24th day of Aprill 1714 At the United Castle in James Valley. Pres^{ent} Benjamⁱⁿ Boucher Esq^r Gov^r Matth^{ew} Bazett 2 in Coun^l Lieut^t Thom^s Cason John French Yesterday being the 23 Instant the Ship <i>Stretham</i> Captⁿ Henry Gough Arrived from Madrass with a Cargo of Goods from Bengall for the use of the Honour^{ble} Company Consisting of Ten bags of Rice Ten bags of Sugar and three Legars of Batavia Arrack as p^r Invoice and Bill of Lading wth a Generall Letter doth appear. Ordered. That the Said Letter and Invoice be Ented in a book for that Purpose and Coppys Sent the Honour^{ble} Comp^s p^r Said Ship with Coppys of what other Papers came Accompanying the afore Said. And that the Arrack Sugar and Rice be Sold out at the Same rate as we Sold the Last which is very Sufficent Gains, and Such as we hope will be to the Likeing of our Honourable Masters. This day the Storekeeper M^r Bazett brought in and delivered three monthly Accounts viz^t from the 25 of December last to the 25 March 1714 for all Goods Sold and Delivered out of the Honour^{ble} Companys Stores in that time, which was Examined and Acordingly. Ordered, to be Ented in the Consultation Book, and Coppy^d out in order to be Sent Home by the next Shipp departs hence. Margin Notes: Ship <i>Strethams</i> Arrivall wth Goods from India. Papers to be sent Home. The Goods to be Sold at y^e usuall rate. Store keeper brought in 3 monthly Accts.	Island of St Helena Consultation held at the United Castle in James Valley on Saturday 24 April 1714. Present: Benjamin Boucher Esquire, Governor; Matthew Bazett, second in council; Lieutenant Thomas Cason and John French, assistants. Yesterday, being 23 April 1714, the ship <i>Stretham</i> arrived from Madras under Captain Henry Gough, with a cargo of goods from Bengal for the use of the Honourable Company, consisting of 10 bags of rice, 10 bags of sugar and 3 leaguers of Batavia arrack, as appeared by the invoice and bill of lading and a general letter. The council ordered that the letter and invoice be entered in a book kept for that purpose, with copies sent to the Honourable Company by the <i>Stretham</i> together with copies of what other papers came accompanying. The arrack, sugar and rice were to be sold out at the same rate as the last, which would yield sufficient gain and was such as the council hoped would be to the liking of their Honourable Masters. This day the storekeeper, Bazett, brought in and delivered three monthly accounts, namely from 25 December last to 25 March 1714, for all goods sold and delivered out of the Honourable Company's stores in that time. The accounts were examined and approved. The council ordered them entered in the consultation book and copies sent home by the next ship to depart from there. Interpretations The arrival of the <i>Stretham</i> on 23 April 1714 from Madras under Captain Henry Gough delivers a further consignment of Bengal staples to follow on from the <i>Abingdon's</i> twelve and a half leaguers of Batavia arrack received from Bencoolen on 1 March 1714. The combined Indian and South Sumatran supply across the spring confirms the working pattern by which the council was now drawing on multiple Company stations of the eastern network for staple commodities. The smaller volume of arrack on the <i>Stretham</i> (three leaguers, against the <i>Abingdon's</i> twelve and a half) reflects the supplementary nature of the present consignment, with the Bengal trade now adding rice and sugar to the working arrack supply. The council's decision to sell the arrack, sugar and rice at the same rate as the last (the working rates of 9s the gallon for arrack and 8d the pound for sugar confirmed across the closing two-month account just transmitted) fixes the retail margin without testing the market. The council's reasoning (sufficient gain and to the liking of their Honourable Masters) reflects the working pattern observed at the consultation of 2 March 1714 on the <i>Abingdon's</i> arrival, by which the council fixed retail rates at the established island levels rather than reopening the question with each arriving cargo. The substantive matter of the present sitting is the delivery by Bazett of three monthly storekeeper's accounts covering 25 December 1713 to 25 March 1714. The submission settles the most recent arrears of the storekeeper's monthly cycle and brings the working returns up to the end of the Company's accounting year. The pattern fits with the working pressure applied to Bazett through the interrogation of 1 April 1714 on the unsigned general letter and the uncopied store books, and suggests that the formal proceedings of three weeks before had produced the working result of bringing the most recent monthly accounts forward without the further delay observed across the autumn and winter. Speculations The very rapid delivery of three monthly accounts within three weeks of the formal interrogation of Bazett

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			over his administrative neglect suggests that the proceedings of 1 April 1714 had produced the working result the Governor intended, by forcing the storekeeper to bring forward the documentary returns that had been held in arrears. The pattern fits with the working strategy observed across the present sequence, by which the Governor used formal proceedings entered in the consultation book as the working lever to extract administrative compliance from a substantively defiant deputy. The three months delivered (25 December 1713 to 25 March 1714) bring the storekeeper's returns up to the end of the working accounting year and provide the council with the documentary record for transmission to London by the next outgoing ship. The choice to despatch the present consultation and its accompanying papers by the <i>Strettham</i> rather than by the <i>Abingdon</i> suggests that the <i>Abingdon</i> had already sailed in the interval between 1 April and 24 April 1714, taking with her the general letter Bazett had refused to sign and the formal interrogation of 1 April. The pattern fits the working calendar of the spring shipping, with each homeward vessel carrying one tranche of the council's documentary record to London. The transmission of the three monthly accounts by the <i>Strettham</i> allows the directors to receive the substantive evidence of Bazett's continuing administrative work alongside the documentary record of his earlier refusal, and gives the directors the working material to settle his position from London on the basis of both his defaults and his recoveries.

The

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			arrack line at 594¾ gallons of Batavia at 9s the gallon, drawn principally on the inhabitants column, holds the standing rate confirmed across the autumn and into the new accounting year. The further 7¾ gallons of Goa arrack at the same 9s rate on the general charges column is the closing tail of the older Portuguese-Indian supply, distinct from the bulk Batavia arrack of the recent consignments. Sugar at 1,679 pound to inhabitants at 8d the pound and 36 pound of candy at 12d the pound supplements the bulk staple draw with the finer-grade confection at the higher rate. The continuing two-tier sugar supply across the storekeeper's accounts has been observed throughout the present sequence and reflects the working pattern of cargo absorption from the Madras and Bengal stations. Tobacco at 240 pound to inhabitants at 2s the pound and 18½ dozen pipes at the rate of about 1s 4d the dozen carry forward the standing rates for the smoking commodity and its accessory clay pipes. The textile lines on the page consolidate the working Indian cotton supply across all four established categories. Chints (printed and painted Indian cottons) at 4 pieces at 21s 9d the piece is the higher-grade dress cloth; chelloes (striped Bengal cotton) at 69½ pieces at 5s the piece is the largest single textile line and supplies the working shirts of the broad inhabitant community; gurras (coarse Bengal white cottons) at 10½ pieces at 12s 6d the piece supplies the working linen and household cloth; long cloth at 3 pieces at 24s 9d the piece is the heavy white cotton for shirting at the top of the regular textile range; sannoes (sorted Bengal piece goods) at 3 pieces to inhabitants at 18s 10d the piece carry the working bulk staples. The duosities (also called dosuties, the double-thread Indian cottons distinguished by their working weight from the single-thread chelloes) at 10 pieces at 5s 8d the piece is the new commodity appearing on this account, supplying a heavier working shirt cloth than the chelloes at a slightly higher rate. Soap on the page splits between 76 pound of Castile at 18d the pound (the high-grade olive-oil soap from the western Mediterranean) and 129 pound of Bengal at 8d the pound (the working soap from the Indian factories), with a further 24½ pound on the general charges column for the General Table. The two-grade soap supply has been observed across the storekeeper's accounts throughout 1713 and reflects the working pattern of cargo absorption by social rank, with the substantial freeholders drawing the Castile and the broader community drawing the Bengal. Speculations The very substantial bulk draws on the inhabitants column at the opening of the present account (496⅞ gallons of arrack, 1,679 pound of sugar, 240 pound of tobacco, 69½ pieces of chelloes) suggest that the freeholder community was working through the cargoes of the <i>Susannah</i>, the <i>Abingdon</i> and the <i>Stretham</i> simultaneously across the early months of 1714. The pattern fits with the working economic recovery on the island after the long drought of 1712 to 1713 and the resumption of normal trade volumes through the storekeeper. The combined draw of over £356 13s 6d to inhabitants on a single two-month account places the present return on a comparable scale to the heavy autumn drawing of the <i>Susannah</i> cargo, and confirms the inhabitants column as the principal mechanism by which the council recovered the costs of the eastern consignments. The appearance of duosities as a fresh commodity on the present account, supplied at 5s 8d the piece and split between inhabitants and plantation, suggests that the cargo composition for the present consignments had introduced a heavier working cotton cloth into the established textile range. The combination of duosities with the lighter chelloes at 5s the piece and the heavier

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			long cloth at 24s 9d the piece provides the freeholder community with a graded textile supply from working shirt cloth through to dress cloth, and points to a deliberate cargo composition by the London directors and the Madras factory to supply the full working range of cottons in a single cycle. The pattern fits with the working pressure on the council to recover the trade volumes of the period before the drought, with each cargo composed to absorb the maximum retail draw from the established freeholder community.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			The page extends the working textile retail of the new two-month account into a wider range of Indian, English and Norwich cloths, supplemented by ready-made shirts, neckcloths, ticking, druggets, shalloons, durants and broad cloth. The Manchester ticking line at £47 3s 8d is the largest single new entry on the page and supplies a heavy striped cotton-and-linen cloth from the Lancashire weaving industry, used principally for bedding and for the working covers of mattresses and pillows. The graded pricing across the line (10 yards at 2s 6d, 4 yards at 2s 4d, 2 yards at 1s 9d, 3 yards at 1s 10d, 5 yards at 1s 2d) reflects the working tier of grades from the heaviest ticking down to the lightest, supplied as a complete cargo set for the inhabitant community. Cloth druggets in two grades (29½ yards at 3s and 51½ yards at 4s) with silk druggets at 4s 9d the yard supply the heavier woollen and worsted cloths for working overcoats and bedding, with a parallel supply of plain cloth and silk on the plantation column for the working clothing of the Company's slaves. Shalloons at 43¾ yards at 2s 6d the yard supply the standard worsted twill lining for coats and gowns, and durants (a glazed worsted cloth) at 14½ yards at 1s 9d the yard provide a hardier dress fabric for the same use. Norwich stuffs continue the working English worsted dress cloth supply. Broad cloth at 10⅔ yards at 14s 6d the yard is the heavy English woollen for the better-grade officer and freeholder coats, at the same rate observed on earlier folios. The smaller quantity supplied on the present account (against the 8 yards of black ditto at £7 13s 0d and 3 yards of coloured ditto at £7 2s 10½d on the <i>Susanna's</i> earlier folio) suggests that the working demand for broad cloth had been substantially met during the autumn cycle. Huckabacks (a coarse linen cloth woven with a small repeating pattern of raised dots, used principally for towels and working table linen) at 6¼ pieces across the inhabitants, plantation and general charges columns is a new commodity on the present account, supplying the working towel and napkin requirement across all three institutional consumers. The pricing at 2s 11d the piece places the cloth at the lower end of the linen range. The cutlery ware on the page is a working closing line of the cutlery and small hardware retail, with 8 razors at 4s 9d each, 10 knives at 8½d each, 10 taylor's shears and assorted dovetails, buckets and odds. The taylor's shears (the long blade scissors used by tailors for cutting cloth, distinct from the smaller domestic scissors of earlier folios) are a working tradesman's tool supplied alongside the bulk cloth retail of the present account, fitting the working pattern of cargo absorption by which the storekeeper supplied both the materials and the tools of the working trades. Speculations The very large absorption of Manchester ticking at £47 3s 8d on a single two-month account, set alongside the substantial draws of cloth druggets, shalloons, durants and Norwich stuffs, suggests that the substantial freeholders were working through a major restocking of household linens and bedding across the opening of the new accounting year. The pattern fits with the working economic recovery observed across the inhabitants column at the close of the previous year, and points to a cargo composition in which the Indian cottons of the <i>Stretham</i> and the English woollens of the <i>Susanna</i> together supplied the full working textile range for the inhabitant community in a single cycle. The pairing of taylor's shears with the heavy bulk cloth supply on the same account suggests that the working tailoring economy of the island was being supplied with both the raw materials and the working tools at the same time. The pattern points to a deliberate working absorption by which the inhabitant

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			tailors (probably soldier-tradesmen working from their own homes as recorded earlier for the matross Welch and the planter Penny) were equipped to convert the bulk cloth into finished garments without further external supply. The combination of bulk cloth retail with specialist tool retail on the inhabitants column gives the storekeeper a working monopoly across the whole tailoring chain on the island.

			£1 1s 0d Sub-total to general charges £2 5s 0d 8 pound sorted £0 18s 6d Sub-total Total £5 16s 4d Nails 24 pound 10-penny nails at 7½d the pound £0 14s 0d 31 pound 10-penny ditto at [...] £1 12s 1¼d 6¼ pound 8-penny ditto at [...] £0 4s 10½d 5 pound 6-penny £0 3s 4d 4 pound 4-penny £0 1s 6d Sub-total £2 10s 10d 15 pound 20-penny £0 8s 9d 5 pound 12-penny at 7½d £0 5s 2¼d 9 pound 6-penny £0 7s 10d 5 pound 4-penny at 10d £0 5s 6d 1½ pound 2-penny at 11d £0 0s 10d 1½ pound tacks £0 0s 11d 10½ pound coopers rivetts £0 6s 8¼d 12 pound at [...] £0 2s 6d 4 pound 4-penny £0 1s 4d 5 pound 4-penny £0 1s 9d Sub-total £0 6s 1d Sub-total 110½ pound and 100 rivetts Total £4 13s 7½d Carried over Inhabitants £470 1s 10¼d Plantation £34 13s 2d General charges £44 7s 11d Total £549 2s 7¼d Interpretations The page extends the working hardware and haberdashery retail of the new two-month account, with hooks and lines, silk and mohair, buttons in graded grades, ironmongers ware and a substantial range of nails by penny weight. The 78¼ dozen hooks sorted and 18 lines on the inhabitants column, supplemented by a further 24 dozen hooks and 60 lines on the general charges column, continue the working supply of fishing tackle observed across the storekeeper's monthly returns since the drought relief programme of 1712. The bed cord at 2s is a working rope cord for stringing the wooden frame of a bedstead to support the mattress, an item of household equipment for a single inhabitant household. Silk and mohair at 20¼ ounces silk at 2s 6d the ounce and 6¼ ounces mohair at the lower rate continue the established sewing-silk and braiding supply at the rates confirmed across the present sequence. The smaller plantation allocation of ¾ ounces points to a working sewing supply for the slave clothing manufacture under Jacob the tailor on the Company plantation. Buttons in four grades (5¼ dozen at 1s 7¾d, 1 dozen coat at 1s the dozen, 23¼ dozen breast at 6d, 23

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			dozen ditto at the lower rate) supply the full working range from dress coat fastenings down to cheap working buttons. The metal ditto in 1 dozen brass coat and 2 dozen brass ditto closes the working button supply for the present account. The combined £2 9s 0¼d on the lines reflects the heavy bulk button retail of the present cargo absorption. The ironmongers ware on the page splits across the columns with 19 pound at £2 6s 2d and 2 iron rim locks (Susanna's cargo) at £0 6s 8d to inhabitants, and a substantial line of 4 pound sorted and 1 bundle of rod iron of 84 pound at 3d the pound on the general charges column. Iron rim locks (the heavier surface-mounted locks of the period, fitted to the exterior face of a door rather than mortised into the timber) are working security fittings for the inhabitant houses and the Company stores, distinct from the brass stock locks of the <i>Susanna</i>'s earlier folios. The nails on the page run across the working range of penny weights, with the heaviest 20-penny down to the lightest 2-penny, supplemented by tacks (smaller short nails for tacking covers and trims) and a working line of 10½ pound coopers rivetts. The coopers rivetts (the rivets used by coopers in the assembly of barrel and cask hoops, distinct from the broader rivets of the smith's trade) supply a specialist hardware for the working barrel maintenance that the storekeeper required for the bulk cargo containers. The presence of coopers rivetts at the retail line points to a working supply for inhabitants engaged in barrel and cask work, perhaps the cooper Andrew Bergh noted in the master reference as one of the lower-table petitioners of 13 October 1713. Speculations The substantial supply of coopers rivetts at 10½ pound on the inhabitants column, alongside the bulk nail retail in graded penny weights, suggests that the working barrel maintenance economy on the island had been brought into the storekeeper's retail supply. The pattern fits with the working pressure on cask integrity revealed in the arrack leakage interrogation of 1 April 1714, by which 120 gallons had been lost from two butts and a leaguer with the bottom of one cask found faulty, pressed or rotten. The simultaneous supply of working hardware for cask repair to the inhabitants suggests that the council was now treating cask maintenance as a working priority across the whole supply chain, not only for the Company's own casks but also for inhabitant private vessels. The heavy retail draw of fishing hooks and lines at £3 18s 5d to inhabitants and a further £4 1s 5d to general charges, the highest combined line of the present account so far, suggests that the working pattern of family-group fishing established under the 1712 drought relief programme had now settled into a continuing economic activity rather than an emergency measure. The pattern fits with the established working supply of tackle observed across the present sequence and points to a working fish supply that the inhabitants now drew from the sea as part of the routine household economy, supported by the storekeeper's bulk retail of the necessary equipment.

			£0 0s 9¼d Sub-total to inhabitants £3 1s 2¼d Sub-total to general charges £0 0s 9¼d Total £3 1s 11½d Combs 8 ivory sorted at [...] £0 14s 9d 8 horn £0 4s 0d 1 brush £0 0s 8d Sub-total to inhabitants £0 19s 5d Total £0 19s 5d Gloves 5 pair men's at 1s 9d each £0 8s 9d 1 ditto £0 0s 8d Sub-total to inhabitants £0 10s 5d Total £0 10s 5d Stationary ware 7 primers at 3s 6d each £0 3s 6d 10 horn books £0 3s 4d 3 testaments £0 5s 9d 3 quires paper at [...] £0 4s 0d Sub-total to inhabitants £0 16s 1d Total £0 16s 1d Romalls 2 to inhabitants £0 2s 6d Total £0 2s 6d Carried over Inhabitants £498 2s 2¼d Plantation £42 7s 10d General charges £50 14s 0d Total £591 4s 0¼d Interpretations The page extends the working retail of the new two-month account into the personal-goods and provisioning lines, with hats, oils, provisions, shoes, pins and needles, combs, gloves, stationary ware and romalls together carrying over £40 to the inhabitants column. The hats line at £8 13s 1d combines a substantial top-grade allocation of 4 hats at 25s 3¼d each (the dress hat of officers and substantial freeholders, well above the 18s and 20s rates of earlier folios) with the working graded supply across the lower tiers down to 4s. The premium grade hats at 25s 3¼d are the heaviest single dress item of the present account and point to a working dress economy of senior persons on the island. The descending grades to 4s cover the working soldier and lower freeholder issue. The provisions line at £12 10s 1¼d is the largest substantive new entry on the page and supplies flour and bread across all three institutional consumers. The inhabitants draw 220½ pound of flour at 3½d the pound and 92¼ pound of bread at 4d the pound; the plantation draws 228½ pound of bread at the same rate and 20 pound of flour; the general charges draw 75½ pound and 156 pound of bread for the General Table and the working soldier ration. The substantial bulk on the plantation column (£3 19s 2d) is the working bread ration for the Company's slaves on the upland estate, supplementing the rice and yams that form the base of their diet. The presence of bread on the slave ration

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			reflects the working improvement in the Company's provisioning capacity following the consignments of the <i>Abingdon</i> and the <i>Stretham</i>. Oils on the page run to 16½ gallons of rape oil (mostly to general charges, but with allocations to inhabitants and plantation) plus ½ gallon of linseed oil and 5 gallons of train oil, all at the standing rates. The train oil at the rate of about 8s 4d the gallon is the oil rendered from whale or seal blubber, used as a lubricating and burning oil for the working purposes of the establishment. The shoes line at £5 12s 2d combines 10 pair sorted at 2s 8d each, a single pair of braided shoes (decorated dress shoes) from <i>Susanna's</i> cargo at 10s 6d, 4 pair girls' shoes at the rate of 4s 9d each, 4 pair common shoes, and 13 pair of pumps on a working line. The presence of girls' shoes on the inhabitants column at a substantial rate is the first dedicated children's footwear entry observed in the present sequence and confirms a working family economy on the island in which the substantial freeholders were equipping their daughters with proper dress shoes from the cargo. Pins and needles at 29 thousand pins at 2s 7d the thousand, 875 needles at the working rate, 4 thimbles and 50 further needles from <i>Susanna's</i> cargo together carry a substantial working sewing supply across the freeholder community. The 29 thousand pins is the largest single pins line in the present sequence and supports the parallel substantial textile draws on earlier folios of the same account. The stationary ware at 7 primers, 10 horn books, 3 testaments and 3 quires of paper continues the working religious and educational supply for the inhabitant households. Romalls (the Indian cotton kerchiefs already noted in the master reference) at 2 to inhabitants close the personal goods retail of the page. Speculations The substantial dress hat draw of 4 hats at 25s 3¼d each on a single two-month account points to a working dress restocking by the senior establishment of the island in time for the opening of the new accounting year. The combined draw with the better-grade <i>Susanna</i> hats and the descending lower-grade tiers across the same account suggests that the council had used the cargo cycle to refresh the working dress economy across all social ranks simultaneously. The pattern fits with the substantial silver twist button and dress shoe draws of the earlier two-month account and confirms a working pattern by which the freeholder community moved into the new year with refreshed working clothing across the full social range. The appearance of 4 pair of girls' shoes on the inhabitants column at the working rate of 4s 9d each suggests that the substantial freeholder households were now bringing their daughters into the cargo absorption economy in their own right. The pattern is novel against the working pattern observed across earlier folios in which men's and women's footwear had dominated, and points to a working family economy in which the substantial freeholders had reached the working economic position to equip their daughters with proper dress shoes from the cargo. The new line confirms the working recovery of the inhabitant economy after the drought and disruption of 1712 to 1713.

			£0 0s 7d Sub-total to inhabitants £2 7s 11d 2 square pudding pans £0 3s 0d 1 porringer £0 0s 7d 3 tin porringers £0 1s 9¼d 2 watering pots £0 9s 0d Sub-total to general charges £0 11s 3d Sub-total Total £3 2s 3d Carried over Inhabitants £527 16s 3¼d Plantation £44 14s 10d General charges £51 11s 7d Total £624 3s 4¾d Interpretations The page extends the working haberdashery, clothing and household tinware retail of the new two-month account, with threads, ribbon and ferritt, bodice, stockings, tapes and bindings, salt and tin ware together carrying about £30 to the inhabitants column. The threads line at £9 2s 6¼d combines four grades of sewing thread (14 pound brown at 3s 8d, 1½ pound at 4s, 5 pound whitled brown at the lower rate, 4 dozen white thread, 2 ditto fine sorted) for the working sewing demand of the inhabitant tailoring economy. The parallel general charges line of 2½ pound of linens and three further smaller sub-lines supplies the working sewing thread for the General Table establishment and the Castle linen repair. The brown thread at 3s 8d is the working unbleached sewing thread for repair and rough stitching; the white thread is the bleached form for finer work; the whitled brown is a part-bleached intermediate grade; the fine sorted is the higher-grade thread for the better-quality stitching. Ribbon and ferritt at 63¾ yards of ribbon sorted at the rate of about 1s 10d the yard, 54 yards of galloon (the heavier braided trim) at 4½d the yard, and 93 yards of ferritt at the working rate of about 1d the yard, supply the working haberdashery trimming for the inhabitant tailoring economy. The 63¾ yards of ribbon at £5 16s 6¼d is a substantial single haberdashery line and reflects the working dress demand of the freeholder community across the opening of the new accounting year. Bodice at 5 pair sorted to inhabitants at £2 15s 2d (about 11s the pair) continues the working stiffened bodice supply observed on earlier folios, here at a substantial rate that suggests dress wear for the substantial freeholder women rather than working clothing. Stockings at 10 pair worsted and yarn at the working rate, 2 pair thread at 3s 3d each, and 10 pair worsted from <i>Susanna's</i> cargo at the higher rate continue the established working hosiery supply for the inhabitant community at the rates confirmed across the present sequence. The tin ware line at £3 2s 3d carries the working kitchen tinware supply for both inhabitants and the General Table establishment, with porringers, tin kettle, square pudding pans (rectangular tin pans for baking the working English suet pudding, with sloping sides and a flat bottom), round pudding pans, lanthorns, funnels and watering pots. Pudding pans at the rate of about 1s 6d to 2s each are a substantial new household equipment line on the present account and point to the working English household cookery being supported by the cargo absorption. Speculations

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			The substantial draw of 63¾ yards of ribbon at £5 16s 6¼d on a single two-month account, combined with 54 yards of galloon and 93 yards of ferritt, suggests that the inhabitant women were drawing dress trimmings on a scale that points to the working dress restocking of the substantial freeholder houses across the opening of the new accounting year. The pattern fits the substantial bodice draw at £2 15s 2d on the same account and the dress shoes and girls' shoes of the earlier folio, all pointing to a working family economy in which the senior freeholder households were drawing dress materials for women and girls simultaneously with the established men's dress economy. The introduction of square and round pudding pans on the same account in graded sizes points to a working culinary economy in which the freeholder households were now equipping their kitchens for the standard English boiled and baked puddings of the period. The pudding was a working staple of the substantial English household, formed of suet, flour, sugar and dried fruits boiled in a cloth or baked in a pan, and the working supply of pudding pans in dedicated forms suggests that the inhabitant household culinary economy was now drawing equipment in matched sets from the cargo, working alongside the kettles, sauce pans and porringers of the earlier folios.

Fustians on the page at 15 pieces of collared dimmittee at 1s 8d the piece, 16 yards 7 white ditto at 2s the yard, and 7 yards of thickset (a heavy corded cotton with a raised pile, used for working breeches and waistcoats) at the rate of about 2s 1d the yard supply the working heavier cotton-and-linen cloth for men's outer

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			dress. The thickset at the higher unit rate is the working hard-wearing cloth of soldier and freeholder working dress, distinct from the lighter white dimmittee. Brass ware on the page combines 2 lamps at the rate of about 3s 11d each, a skimmer (a flat perforated brass ladle used for skimming the surface of boiling preserves, soups and broths), a skillet frame (a footed stand to hold a skillet over the fire), a dressing dish (a covered brass dish for keeping food warm at the table), and a further brass lamp on the general charges column. The dressing dish at 13s 8d is a substantial single item of dinner service brass, distinct from the working pots and pans of earlier folios, and points to a working table service at the better freeholder houses. The skimmer and skillet frame complete the working brass batterie de cuisine for a household preparing the standard English boiled and stewed dishes of the period. Rice at 43 pound to inhabitants, 30 pound on a smaller line, and 88½ pound to plantation gives 161½ pound across all columns at the working rate of about 3½d the pound for the inhabitants. The substantial plantation allocation of 88½ pound is the largest single rice draw to the plantation column on the present account and reflects the working slave ration of the Company's upland estate. The smaller volume against the inhabitants column (43 pound at £0 12s 6d) is well below the 2,450½ pound draw on the previous two-month account and points to the working absorption of the rice cargo across the autumn having reduced the demand for the present period. Hessings at 24 yards to plantation and 5 yards to general charges supply the working coarse jute or hemp cloth for grain sacks and rough working covers on the upland estate, with a smaller allocation for the General Table establishment. The kersey at 6½ yards on the inhabitants column at the rate of about 2s 2d the yard supplies a small private slave-clothing or working coat cloth, distinct from the bulk 78 yards on general charges noted on an earlier folio. The presence of a small kersey line on the inhabitants column points to inhabitant households clothing their own slaves at the working rate. Indigo at 6 pound to inhabitants at the rate of about 8d the pound supplies the working laundry blueing for the inhabitant community, supplementing the smaller 5 ounces noted on an earlier folio. The substantial single line points to a working laundry economy that the freeholder community was now operating in the inhabitant houses, drawing the dye directly from the cargo rather than from a centralised supply. Silver twist buttons at 2½ dozen to inhabitants at the rate of about 2s 3d the dozen continue the dress button supply at the standing rate for the better freeholder dress. Speculations The presence of a brass dressing dish at 13s 8d on the inhabitants column, alongside the skimmer, skillet frame and brass lamps, suggests that the substantial freeholder houses were equipping their dining tables with formal brass service for the first time on a working scale. The pattern fits with the working pudding pans of the previous folio and the silver twist buttons and dress shoes of the earlier two-month account, all pointing to a working dress and dining economy of the substantial freeholder houses moving towards the standards of substantial English provincial households. The London merchants seem to have understood the working demand at this scale and composed the cargo to deliver both the dress equipment and the dining equipment of the substantial household in matched grades. The substantial bird shot draw of 30 pound at 6d the pound to plantation, with a further 18 pound on the inhabitants column, suggests that the Company's plantation establishment had been working the bird

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			shot for the systematic culling of birds against the working damage to standing yams and other crops. The bird shot would also have been used for the licensed sport of taking partridges, Guinea hens and pigeons under the game preservation advertisement of 25 July 1712, which had restricted shooting to licensed persons. The combined working supply across the inhabitants and plantation columns points to a working management of the bird population on the island that the council had begun to address through the cargo absorption.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			To general charges £55 5s 9d Sum total £641 6s 11½d Interpretations The closing summary of the two-month storekeeper's account for 25 December 1713 to 25 February 1714 places the inhabitants column at £537 4s 3¼d, the plantation at £48 16s 11½d, the general charges at £55 5s 9d, and the grand total at £641 6s 11½d. The inhabitants column carries over 83 per cent of the entire account, consistent with the working pattern across the present sequence by which the storekeeper's monthly account is principally a record of retail sale to the freeholder community. The closing lines on the page (lead at 2 bars of 44 pound, pewter at 1 funnel, 1 pound of spoons, 5 dishes of 11 pound and 12 spoons to general charges, 3 yards of ozenbriggs, 1 house brush and 2 shoe brushes, 6 dozen corks and 1 corkwood, 12 squares of glass and 3½ yards of perpetuanoes) carry the working tail of the cargo absorption into the final folio of the account. Ozenbriggs is a coarse linen cloth originally produced in Osnabrück in north-west Germany and imported through Hamburg for the rougher working clothing trade, often used for slaves' shirts and for working sacks. The lower absolute total of £641 6s 11½d for the present two-month account against the £1,070 6s 7½d of the preceding two months (25 October to 25 December 1713) reflects the working seasonal pattern, with the winter and early spring drawing falling below the substantial autumn and Christmas drawing as the freeholder community had already restocked its principal dress, household and provisioning needs from the <i>Susannah</i> cargo. The closing summary in the four-line form for transmission to the Honourable Company gives the directors the working documentary record of the storekeeper's retail and institutional cycle for the period, and completes the three monthly accounts delivered by Bazett at the consultation of 24 April 1714. The transmission of the present account by the <i>Strettham</i> alongside the further outgoing papers brings the working storekeeper's record up to the end of February 1714 and closes the most recent arrears. Speculations The very narrow tail of the present account, with the closing folio carrying nine commodity lines together totalling under £3 10s 0d, suggests that the storekeeper's cargo absorption for the two months had moved through its principal substantive lines on the earlier folios. The pattern fits with the working sequence of cargo absorption observed across the present sequence, by which the heavy bulk staples, the Indian textiles, the dress goods and the haberdashery are drawn down across the first folios of each two-month account and the closing folio carries the working tail of small finished goods, cloth scraps and household sundries. The compression of the present account into a smaller total than the preceding two-month period suggests that the working seasonal cycle of the inhabitant economy fell substantially below its autumn peak across the winter and early spring. The presence of perpetuanoes at 3½ yards to plantation as a closing line, with no parallel allocation to the inhabitants or general charges columns, suggests that the cargo composition was now reaching the working tail of the heavier woollen cloths for slave clothing. The pattern fits with the working slave-clothing economy by which the Company drew the heavy worsted cloths through the storekeeper for the plantation slaves rather than through direct purchase. The single small line at the close of the account points to a residual cargo absorption rather than a substantive

			draw, with the larger cloth supplies for the slave establishment having been drawn on earlier folios across the autumn and the present account.

			13½ pound Castile at 18d the pound to inhabitants £1 0s 3d 6 pound at ditto to plantation £0 9s 0d Sub-total 19½ pound Total £1 9s 3d Oils 3 gallons rape oil at 7s the gallon to inhabitants £1 1s 0d 2¾ gallons at ditto to general charges £0 19s 3d 2 gallons at ditto to plantation £0 14s 0d Sub-total 7¼ gallons Total £2 14s 3d Stockings 4 pair at 10s 3d (<i>Susanna</i>) £2 1s 0d 6 pair at 12d £0 2s 2d Sub-total to inhabitants £2 3s 2d Total £2 3s 2d Carried over Inhabitants £140 13s 4¾d General charges £27 10s 6d Plantation £6 11s 10d Total £174 15s 8¾d Interpretations The present account is a single monthly storekeeper's return for 25 February to 25 March 1714, breaking the working pattern of two-month and three-month submissions observed across the recent sequence. The single-month form fits the council's order at the consultation of 24 April 1714 that the monthly accounts be entered in the consultation book and copies sent home by the next ship to depart, with Bazett now working to a closer working cycle following the formal interrogation of 1 April 1714. The arrack at 279⅞ gallons of Batavia at 9s the gallon, sugar at 609 pound at 8d the pound, bread at 276 pound at 4d the pound, flour at 136½ pound at 3½d the pound, and rice at 33 pound across the institutional columns confirm the standing rates across the present sequence. The smaller absolute volume of each staple, set against the substantial draws of the two-month accounts, reflects the working single-month period of the present return rather than any reduction in the working consumption. The substantial bread allocation of 159 pound to general charges and 42½ pound to plantation at the working rate of 4d the pound (sub-totals carried at £0 5s 6d and £1 8s 2d on the lines, with the £0 5s 6d evidently a clerical figure since the full rate would yield about £2 13s 0d) supplies the working ration for the Castle establishment and the upland slave estate. The 89½ pound of flour to inhabitants at 3½d the pound supports inhabitant household baking, with the parallel allocations to general charges and plantation covering the Castle and upland establishments. The tobacco line at 104 pound at 2s the pound to inhabitants and the pipes at 46½ dozen across the columns continue the working smoking commodity supply at the established rates. The smaller tobacco draw of the present month against the 240 pound of the preceding two-month account is consistent with the single-month period. The stockings line carries 4 pair from <i>Susanna's</i> cargo at 10s 3d the pair, with a smaller line of 6 pair at the working rate of 12d the pair. The very large unit price difference between the two stocking lines (the <i>Susanna</i> stockings at 10s 3d the pair against the working line at 12d) reflects the working pattern observed across

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			the present sequence by which the storekeeper carried both expensive dress hose and cheap working hose on the same account, supplied to different consumers within the inhabitant community. Speculations The return to a single-month storekeeper's account on the present folio, following the working two-month and three-month submissions of the recent period, suggests that Bazett had now brought his working returns into a closer cycle following the formal interrogation of 1 April 1714. The pattern fits with the working pressure of the proceedings on the storekeeper, by which the council had forced the documentary returns forward without further delay. The choice to submit single-month accounts going forward gives the council the working ability to transmit fresh returns to London with each outgoing ship and reduces the risk of further extended arrears across the working cycle. The substantial 159 pound of bread to general charges on a single month, against 42½ pound to the plantation and 74½ pound to the inhabitants, suggests that the working baking for the Castle establishment was now drawing the largest single bread allocation in the storekeeper's monthly cycle. The pattern fits with the working pressure on the General Table establishment to feed the working soldiers and the senior establishment from the Castle stores rather than from private supply, and points to a working centralisation of the Castle provisioning by which the soldier ration was now drawn through the Company's storekeeper at the institutional rate. The supply of bread on the working scale of 159 pound a month against a small Castle establishment suggests that the soldiers' rations were now substantially drawn through the storekeeper rather than through private working arrangements with the soldier-tradesmen of the garrison.

The change in column order from the established inhabitants-plantation-general charges-total to the inhabitants-general charges-plantation-total form points to a working reorganisation of the storekeeper's drafting, perhaps under the pressure of the recent interrogation of Bazett and the working arrears submitted at the consultation of 24 April 1714. The shirts on the page split between 6 fine ditto at 8s 6d each (the better-grade ready-made shirts for the substantial freeholders) and 5 coarse ditto at 3s each (the working shirt of the soldier and the working freeholder). The graded supply on the same line

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			continues the working pattern of ready-made garment retail observed across the present sequence. Thread at 1½ pound brown ditto, 1 pound whited ditto and 4 ounces sundry ditto carry the working sewing supply for the inhabitant community. Silk at 3 ounces ditto at 2s 6d the ounce and 1¼ ditto on a parallel line continues the standing sewing-silk supply at the rate confirmed across the present sequence. The cutlery ware on the page at 3 knives and 2 forks sorted, 1 pair scissors, 1 pair ditto sundry, and 6 knives at 6d each on the general charges column is a working closing line of small cutlery retail at modest values. Buttons at ½ dozen coat ditto and 2 dozen breast ditto on the inhabitants column complete the working dress fastening supply for the present account at modest values. Hooks and lines at 4 dozen hooks and 1 line on the inhabitants column, 2 lines to general charges, 14 dozen hooks and 16 dozen hooks sorted and 8 lines on the general charges and plantation columns supply the working fishing tackle across all three institutional consumers. The substantial general charges allocation continues the working pattern observed across the present sequence by which the garrison fishing detail and the family group programme were supplied in parallel from a single cargo, with a working volume now drawn to the plantation column. Speculations The reorganisation of the column order at the head of the present account, with the general charges placed second and the plantation third, suggests that the storekeeper had adopted a new working drafting form for the post-arrears returns following the interrogation of 1 April 1714. The pattern fits with the working pressure on Bazett to bring his administrative work into clearer order, and points to a working presentational improvement by which the principal institutional consumer (general charges) now stands immediately after the principal retail consumer (inhabitants), with the smaller plantation column placed last before the working total. The new form simplifies the working comparison between the General Table establishment and the inhabitant community across each commodity line and gives the directors in London a clearer working presentation of the storekeeper's cycle. The continuing very substantial hooks and lines supply across all three columns at the opening of the present account points to the working fishing economy of the island having now extended beyond the inhabitant family-group programme and the garrison detail to include the Company's plantation establishment as a separate fishing operation. The pattern suggests that the upland slave establishment was now drawing fishing tackle in its own right for working purposes (perhaps to supplement the yam and rice ration with fresh fish, perhaps for working boat operations on the coast adjoining the plantation lands), and points to a working economic recovery on the island in which fishing had moved from the working emergency relief of the 1712 drought to a settled supplementary food source across all institutional consumers.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			£0 3s 10d Sub-total to inhabitants £0 7s 0d 1 tin funnel to general charges £0 5s 0d 1 tin ditto £0 5s 0d 1 grater £0 3s 0d Sub-total to general charges £0 13s 0d Sub-total Total £0 8s 1d Carried over Inhabitants £155 19s 5d General charges £35 4s 10d Plantation £9 8s 9d Total £200 13s 0d Interpretations The page extends the working hardware, salt, textile and household tinware retail of the single-month account, with ironmongers ware, salt, turnery ware, dungarees, sannoes, neckcloths, chelloes, shoes and tin ware together carrying about £18 across all columns. The ironmongers ware line at £5 4s 7½d combines 12 shovels at the working rate, 24 pound of English steel at 6d the pound, 18 pound of gametts (the T-shaped iron strap hinges already noted in the master reference) at 12d the pound, and a bundle of rod iron of 48 pound at the working rate. The English steel is the higher-grade refined steel for working blade and tool manufacture, distinct from the bar iron of earlier folios; the rod iron is the working bar iron from which the smith would forge nails, hinges and tool fittings on the island. The nail line at 45 pound across three penny weights (18 pound 10-penny, 18 pound 20-penny, 9 pound 4-penny) supplies the working construction nail range at the standing rates. Salt at 1 gallon to inhabitants, 1 bushel to general charges and 4½ bushels to plantation supplies the working domestic, table and curing demand across the three establishments at the tiered rates observed across the present sequence. The shoes line at £1 11s 6d carries the working footwear supply with three identifying allocations. One pair of English ditto at 6s and one pair of women's braided ditto at 10s 6d to inhabitants, plus 2 pair English pumps to the black cook and Tim and 1 pair Spanish pumps to the black smith on the plantation column. The named allocations on the plantation column reveal the working pattern by which the storekeeper supplied dress shoes directly to identified Company slaves with named occupations on the upland establishment. The black cook, Tim, and the black smith are working Company slaves holding skilled positions in the establishment, and the supply of Spanish pumps and English pumps to them suggests a working dress economy for the senior slaves of the Company that mirrors the dress economy of the freeholder community. The textile lines on the page consolidate the closing Indian cotton retail of the present account. Dungarees at 1 piece, sannoes at 5 pieces at 18s 10d the piece, neckcloths at 1¼ pieces, and chelloes at 5 pieces at 5s the piece together at £8 2s 1½d carry forward the working pattern of Indian cotton absorption observed across the present sequence. Turnery ware at 1 wooden plater, 2 scrubbing brushes and 4 flagg brooms (working brooms made from the fibres of flagg, a sedge or reed used for cheap working brooms in the period) supply the working cleaning and household equipment for the inhabitant community. Tin ware at 2 saucepans, 1 square pudding pan, 1 lanthorn, 1 tin funnel, 1 tin ditto and 1 grater

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			continue the working kitchen tinware supply at modest values. Speculations The supply of dress shoes by name to the black cook, Tim, and the black smith on the plantation column suggests that the Company was now treating its working senior slaves on the upland establishment with a degree of dress provision unusual against the working pattern of slave clothing observed across the present sequence. The pattern fits with the working pressure on the Company to retain skilled slaves in critical positions (the cook in the General Table establishment, the smith at the working forge, Tim in some named working position not further identified) and points to a working incentive system by which dress shoes at a substantial unit rate of 5s the pair were used as a working reward for skilled service. The pattern is unusual against the standard slave clothing economy of 14s the suit observed across the present sequence and indicates a deliberate working differentiation by the council between the working field slaves and the skilled household and craft slaves. The grater at 3s on the tin ware line, supplied to general charges as a working kitchen tool for the Castle establishment, is the first identifiable grater entry across the present sequence and points to a working culinary economy at the Castle in which the working preparation of cheese, nutmeg and other graded ingredients now formed part of the establishment kitchen routine. The pattern fits with the working English cookery economy observed across the recent dressing dish, pudding pans and brass skillet frame draws, and confirms a working table service at the Castle establishment that now drew on the full range of working English cookery equipment.

			Black crape 5 yards at 2s 2¼d to inhabitants £0 10s 11¼d Total £0 10s 11¼d Lead 1 bar of 21 pound at [...] £0 5s 4½d Sub-total to inhabitants £0 5s 4½d Total £0 5s 4½d Copper 1 piece to plantation £0 1s 0d Total £0 1s 0d Shoe thread ½ pound to make bags to general charges £0 1s 3d Total £0 1s 3d Hessings 1 piece to make bags to plantation £1 18s 9d Total £1 18s 9d Brown thread ½ pound to make lines to general charges £0 1s 10d Total £0 1s 10d Total Inhabitants £160 12s 6¾d General charges £35 10s 10d Plantation £11 8s 9d Total £207 12s 1¼d Inhabitants £160 12s 6¾d General charges £35 10s 10d Plantation house £11 8s 9d Total sum £207 12s 1¼d Interpretations The closing summary of the single-month storekeeper's account for 25 February to 25 March 1714 places the inhabitants column at £160 12s 6¾d, the general charges at £35 10s 10d, the plantation house at £11 8s 9d, and the grand total at £207 12s 1¼d. The inhabitants column carries about 77 per cent of the entire account, slightly below the share observed on earlier accounts and reflecting the larger general charges and plantation lines on the present return. The closing lines on the page introduce three substantive cargo absorption items linked to the working storehouse and plantation maintenance. The 200 needles from <i>Susanna's</i> cargo supplied to general charges to make hooks (the fishing hooks of the inhabitant and garrison fishing programme) reveal the storekeeper drawing raw needles from the cargo for conversion into hooks by the Castle smith or the matross hands, rather than relying solely on imported finished hooks. The ½ pound of shoe thread to make bags and the ½ pound of brown thread to make lines on the same column point to a similar pattern of finished-goods manufacture on the island, by which raw thread was drawn from the cargo for the production of grain sacks and fishing lines respectively. The 1 piece of hessings to make bags to plantation, at £1 18s 9d, supplies the coarse cloth from which the plantation slaves would stitch grain bags for the upland yam and rice handling. The smaller absolute total of £207 12s 1¼d for the present single month, against the £641 6s 11½d of the preceding two-month return, fits with the single-month period rather than indicating any substantive contraction in retail demand. The single-month form continues to allow the council to transmit fresh returns

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			to London at shorter intervals than the previous extended arrears submissions. Speculations The presence of needles, shoe thread, brown thread and hessings on the present account with explicit working purposes attached (to make hooks, to make bags, to make lines) suggests that the storekeeper was now drawing raw materials from the cargo for conversion into finished goods on the island rather than relying entirely on imported finished items. The pattern fits with the substantive hooks and lines retail of the recent two-month accounts (over 92½ dozen hooks and 59 lines in the autumn alone) and points to a settled island manufacture of fishing tackle that the storekeeper was now supporting through the cargo absorption. The mechanism reduces the Company's exposure to interrupted Indian supply by establishing a partial island manufacture of the routine items. The directed supply of hessings at 1 piece to the plantation explicitly for grain bag manufacture suggests that the upland establishment was now producing its own bagging from raw cloth rather than receiving finished sacks from the cargo. The pattern reduces the cost of the grain handling economy at the plantation house, since the slaves on the upland estate could stitch the bags from the cloth without further charge to the institutional accounts, and points to a deliberate cargo composition by which raw materials were supplied for conversion on the spot. The London merchants supplying the Honourable Company seem to have understood the operational requirements of the St Helena establishment at this level and composed the cargo accordingly.
145	138	Island St Helena. At a Consultation Held on Monday the 17[th] day of May 1714 At the United Castle in James Valley. Pres[ent] Benjamin Boucher Esq[r] Gov[r] Matthew Bazett 2 in Coun[ill] Lieut[t] Thom[s] Cason John French Assist[s] Whereas Yesterday being the 16[th] Instant Arriv[d] the Shipp Mailborough Captain Matthew Martin Comander, from Madrass with a Letter and Invoice of Goods for Twenty baggs of Rice, twenty baggs of Sugar and three Legars of Butaviu[a] Arrack Laden on board Said Ship by the President & Councill in Bengall consign[d] to us here. Ordered. That Captain Martin have an Order Deliveed him for the Landing Said Goods Safe on Shoar and that the Same be Sold ord off the Stores at the rate of Nine Shillings a Gaulton for the Arrack Eight pence per pound for the Sugar and three pence half penny per pound for the Rice; And that the Letter and Invoice be Entred in a book for that Purpose in order of being Coppy[d] out and Sent the Honour[ble] Company p[r] Said Shipp. Margin Notes: Ship Marlbo[rough] Arrivall w[t]h Goods from India. rates Sold at.	Island of St Helena Consultation held at the United Castle in James Valley on Monday 17 May 1714. Present: Benjamin Boucher Esquire, Governor; Matthew Bazett, second in council; Lieutenant Thomas Cason and John French, assistants. Yesterday, being 16 May 1714, the ship <i>Marlborough</i> arrived under Captain Matthew Martin from Madras, with a letter and invoice of goods for twenty bags of rice, twenty bags of sugar and three leaguers of Batavia arrack laden on board the ship by the President and Council in Bengal and consigned to the council here. The council ordered that Captain Martin be given an order to land the goods safe on shore and that the same be sold off the stores at the rate of 9s the gallon for the arrack, 8d the pound for the sugar, and 3½d the pound for the rice. The letter and invoice were ordered to be entered in a book for that purpose, with copies sent to the Honourable Company by the <i>Marlborough</i>. Interpretations The arrival of the <i>Marlborough</i> on 16 May 1714 under Captain Matthew Martin from Madras delivers a further consignment of Bengal staples to follow the <i>Stretham</i>'s consignment of 23 April 1714 and the <i>Abingdon</i>'s twelve and a half leaguers from Bencoolen on 1 March 1714. The third consignment of staple commodities within ten weeks confirms the steady recovery of the Company's eastern supply network for St Helena, after the disruptions of the drought of 1712 to 1713 and the senior attrition that had reduced the council to three members by mid 1712. The rate-setting at the council day immediately following the ship's arrival continues the pattern established at the consultations of 2 March and 24 April 1714, by which retail rates are fixed against the established island levels (9s the gallon for arrack, 8d the pound for sugar, 3½d the pound for rice) rather than tested against the market at each new cargo. The continuity of rates across all three spring consignments reflects the council's preference for steady, retail pricing

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			under Boucher and supports the inhabitant community's pacing of its draws across the calendar. The President and Council in Bengal as the consignor of the present cargo confirms the network of inter-station despatch within the Company's eastern factories. Bengal, Madras and Bencoolen are now visibly working together to supply St Helena with staple commodities, each station forwarding stock as the opportunity of a ship calling at the Cape and the island allows. Captain Matthew Martin of the <i>Marlborough</i> is a new commander on the present sequence, joining Captain William Jordan of the <i>Abingdon</i> (whose call had been the principal occasion of the formal interrogation of Bazett on 1 April 1714) and Captain Henry Gough of the <i>Siretham</i>. The succession of three captains across the spring shipping gives the council a wide pool of independent ships' officers from which to draw witnesses when the formal proceedings of the council require external attestation. Speculations The rapid arrival of three substantial Bengal and Bencoolen consignments across the spring of 1714 suggests that the council's outgoing letters of late 1713 and early 1714 had pressed the eastern factories for sustained supply, and that the factories had responded by directing surplus stocks to St Helena in successive shipments rather than waiting on individual orders. The pattern fits with the council's working strategy under Boucher of repairing the supply position of the island following the disruptions of the previous administration, and points to a coordinated response across the eastern stations of the Company. The council's choice to fix all three commodity rates at the established island levels at the opening of the cargo absorption, ahead of any test against the market, suggests that Boucher and Bazett were holding to a deliberate working calculation that the substantial inhabitant community could absorb the new consignments at the established rates without further adjustment. The pattern reduces the working uncertainty for the freeholder community across the year and fits with the council's wider strategy of restoring routine commercial conditions on the island after the disruptions of the drought and the July 1713 mutiny.
146	139	Island St Helena. At a Consultation Held on Thursday the 27[th] day of May 1714 At the United Castle in James Valley. John Russell Esq[r] Benjam[in] Boucher Esq[r] Gov[r] Henry Davenport Matt[ew] Bazett 2 in Coun[ll] Capt[n] Matth[ew] Martin Lieut[t] Thom[s] Cason Capt[n] Robert Hudson John French Assist[ts] The Governour being at present in a very ill State of health design's to go off the Island by the first Opportunity, and therefore beg[d] the favour of the aforesaid Gentlemen to Witness to the Honour[ble] Court of Directors in England, to Such questions and Answers as Should Occur in this Consultation The Governour Demanded of M[r] Bazett, M[r] Cason and M[r] French, whether they, or Either of them hath any objection to make, or any thing to charge him with, Either relating to the Honour[ble] Companys affairs, or any other whatsoever To which they made answer they had no Objection in any Respect whatsoever why he Should not go off According to his own Inclination for the preservation of his health, Nor had they any thing to accuse, or charge him with, But had rather have the Honour of his good Compa[n]y till another Gov[r] [-] was Sent hethier from England. Upon which Ordered that an Invo[ice?] be taken of the Honour[ble] Comp[s] Stores Asoon as Possible and begun a Monday next Ensueing.	Island of St Helena Consultation held at the United Castle in James Valley on Thursday 27 May 1714. Present: Benjamin Boucher Esquire, Governor; Matthew Bazett, second in council; Lieutenant Thomas Cason and John French, assistants. Also present at the Governor's desire: John Russell Esquire, Henry Davenport, Captain Matthew Martin and Captain Robert Hudson. The Governor, being at present in a very ill state of health, designed to go off the island by the first opportunity, and therefore desired the favour of the above gentlemen to bear witness to the Honourable Court of Directors in England as to such questions and answers as should occur in the consultation. The Governor demanded of Bazett, Cason and French whether they, or either of them, had any objection to make or anything to charge him with relating to the Honourable Company's affairs or any other whatsoever. They answered that they had no objection in any respect whatsoever as to why he should not go off according to his own inclination for the preservation of his health, nor had they anything to accuse or charge him with, but had rather have the favour of his good company until another Governor was sent there from England.

		Margin Notes: Gov[r] desires the Gentlem[en] to be Pres[en]t and to Witness y[e] Same in England. Gov[r] q[ue]rres himself to y[e] Councill. their Answers. Acc[t] of y[e] Stores to be taken of the Hon[ble] Comp[s]	The council ordered that an inventory be taken of the Honourable Company's stores as soon as possible, beginning on the following Monday. Interpretations The Governor's intention to leave the island for the preservation of his health introduces a substantial change in the senior establishment, with Boucher seeking to depart by the first opportunity after a substantial period of declining health observed across the proceedings since the autumn of 1713. The presence of four external witnesses (John Russell Esquire, Henry Davenport, Captain Matthew Martin and Captain Robert Hudson) at the Governor's request continues the established pattern of using independent attestors from the visiting ships to give the Court of Directors documentary evidence of consultations bearing on the disposition of senior officers, observed earlier at the consultations of 1 April 1714 over the interrogation of Bazett and at the proceedings against John Roberts in the autumn of 1711. The form of question put by the Governor (whether any of the three serving councillors had any objection or charge against him) is the procedural form by which a departing senior officer cleared his record before the Court of Directors. The unanimous answer of Bazett, Cason and French, that they had no objection and nothing to accuse him with, gives Boucher the formal clearance he needs for his departure to be received in London as honourable rather than as a flight from accusation. The wish that the favour of his good company be retained until another Governor arrives from England carries the warmth of the senior establishment's view of the departing officer and substantively reverses the tension visible in the interrogation of Bazett seven weeks before, when the storekeeper had refused to sign the general letter and had stood on procedural denials under questioning. Bazett's signature to the present clearance is a substantial procedural step. The same officer who had refused to sign the general letter to London at the consultation of 1 April 1714 now sets his hand to a formal certificate of the Governor's good conduct, giving the Court of Directors a documentary record from which to settle the future composition of the council. Whether Bazett's reversal reflects a genuine settlement of differences or a practical recognition that the Governor's departure removes the immediate cause of dispute, the consultation book now carries both records and the Court of Directors can read the change of position alongside the earlier interrogation. The order for an inventory of the Honourable Company's stores to be taken from the following Monday gives the council the documentary basis on which to settle the Governor's accounts before his departure. The procedure follows the pattern established at the consultation of 3 July 1711 when Mashborne had been discharged on his own petition after over four years' service, with a survey of the stores under his care preceding his release. John Russell Esquire and Henry Davenport, named first among the witnesses, are not previously recorded in the rewritten consultations of the present sequence. Captain Matthew Martin commands the <i>Marlborough</i>, which arrived on 16 May 1714 with the Bengal consignment of arrack, sugar and rice. Captain Robert Hudson commands a further visiting ship not identified by name in the present consultation, perhaps one that arrived in the few days between the <i>Marlborough</i>'s sailing and the consultation. Speculations The Governor's choice to put the question of his fitness to depart to his own three councillors at a single sitting, with four independent witnesses present, suggests that Boucher was working to secure the strongest possible documentary record of his clearance

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			before his departure. The pattern fits the working pressure of the senior attrition observed across the present sequence (Hoskison dead 6 March 1712, Pack dead 3 April 1713, Griffith dead 6 May 1712) and the parallel administrative crises of the recent past (the July 1713 mutiny, the refusal of Bazett to sign the general letter, the storekeeper's account arrears). A single consultation with the principal serving councillors and substantial visiting witnesses gives Boucher the cleanest possible record for the Court of Directors and protects him from later accusations following his departure. The reversal in Bazett's stance, from refusal to sign the outgoing general letter on 1 April 1714 to formal clearance of the Governor on 27 May 1714, suggests that the working tension of the spring had been settled by Boucher's decision to depart rather than by any substantive reconciliation between the senior officers. The pattern fits Bazett's working position as the substantive deputy to a departing Governor, with the prospect of carrying the principal authority on the island himself until a successor arrives from England, and points to a working calculation by Bazett that the immediate departure of the Governor removes the cause of the previous dispute and clears his own path to the senior position on the island.
147	140	Island St Helena At a Consultation Held on Wednes day the 2 day of June 1714 At the United Castle in James valley Pres[ent] Benjam[in] Boucher Esq[r] Govern[r] Matth[ew] Bazett 2 in Councell Lieut[t] Thom[s] Cason John French Assist[ts] For reasons hereafter mention[d] Ordered that the following Advertisement be published this day by beat of Drum By the Govern[r] & Council Island St Helena. An Advertisement. Whereas there has been a rumour Spread abroad for few days past, that the Blacks on said Island doth or did Lately, intend Either by themselves, or in Conjert with other Evill and wicked dispoed Persons to Act in an Insurrections and Barberous Manner, and whereas there being too little Grounds at present, to fix this wicked intent upon any. These are therefore to give Notice to all and every Person that can or will give any Information to the Govern[r] & Coun[ll] of the truth of Said designed Insurrection and will discover the whole intercague Sufficient to bring the Offender or Offenders to Condigne Punnishm[en]t the Same Person white or Black Shall have a very handsome reward and Cleard from any thing he or thy may be impeacht with afterwards Dated at the United Castle in James valley this 2[d] day of June 1714 Sign[d] p[r] ord[r] of Govern[r] & Council p[r] me Jn[o] Alexander Margin Notes: Advertisem[en]t ab[t] the Blacks Designd Insurrection any Inform[er] to be rewarded & Cleard	Island of St Helena Consultation held at the United Castle in James Valley on Wednesday 2 June 1714. Present: Benjamin Boucher Esquire, Governor; Matthew Bazett, second in council; Lieutenant Thomas Cason and John French, assistants. For reasons hereafter mentioned, the council ordered that the following advertisement be published that day by beat of drum. By the Governor and Council Island of St Helena An advertisement A rumour had been spread abroad for a few days past that the slaves on the island had, or did lately, intend either by themselves, or in concert with other evil and wicked disposed persons, to act in an insurrection in a barbarous manner. There being too little ground at present to fix this wicked intent upon any of them, notice was given to all and every person who could or would give any information to the Governor and Council of the truth of the alleged insurrection, and would disclose the whole intrigue sufficient to bring the offender or offenders to condign punishment. Any such person, whether white or black, would have a handsome reward and would be cleared from anything he or they might be impeached with afterwards. Dated at the United Castle in James Valley on 2 June 1714. Signed by order of the Governor and Council, John Alexander. Interpretations The advertisement of 2 June 1714 is the second mutiny or insurrection alarm in twelve months on the island, following the July 1713 conspiracy disclosed by Robert Wallington's deposition on 8 July 1713 (which had led to five soldier ringleaders being committed close prisoners in irons and five accomplices disarmed on conditional good behaviour). The present alarm is distinct in two respects. The reported actors are slaves rather than soldiers, and the formal council response is to issue a public advertisement offering a reward for information rather than to summon depositions and arrest named persons. The shift in mechanism reflects the absence at this point of named accused persons and the council's working judgement that the substantive grounds for prosecution have not yet been established. The offer of a handsome reward to any informer, white or black, and the explicit clearance of the

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			informer from any matter he might afterwards be impeached with, follows the established pattern of informer rewards observed across the present sequence. The 25 July 1712 game preservation advertisement had offered 40s for the first offence with half to the informer; the 2 May 1711 advertisement on the livestock thefts and the destruction of Worrall's physick nut garden had offered £5 sterling for information; the present advertisement offers an unspecified handsome reward with the additional guarantee of immunity from prosecution. The handsome reward language combined with the protection from impeachment indicates that the council is willing to extend extraordinary terms to draw out testimony in a matter that touches the security of the island. The admission by the council that there are too little grounds at present to fix the alleged intent on any individual is a substantive statement of the working state of the evidence. The council is not committing any person to irons, distraint or arrest on the strength of the rumour, but is instead seeking to convert the rumour into evidence through the open promise of reward and immunity. The mechanism preserves the procedural integrity of the council and avoids the working error of acting on insufficient information. The signature by John Alexander as clerk of the council carries through the established pattern of signing public advertisements. Alexander had signed the game advertisement of 25 July 1712 and the survey advertisement of 24 November 1712 in the same office, and continues here in the same capacity despite his earlier history of dismissal from the clerkship and the various charges raised against him across the present sequence. The inclusion of slaves as potential informers, eligible for the reward and the immunity on the same terms as white inhabitants, is consistent with the working practice already established by the 25 July 1712 game advertisement, which had admitted the evidence of slaves against free persons for breaches of the game order. The extension of the same evidentiary principle to a matter of insurrection rather than poaching reflects the council's working judgement that the substantive grounds of the alleged conspiracy require evidence from whatever source can produce it. Speculations The choice to issue a public advertisement rather than to pursue private depositions on the strength of the rumour suggests that the council was working without any named informer comparable to Robert Wallington's role in the July 1713 conspiracy, and was therefore obliged to convert the rumour into evidence through public solicitation rather than through directed examination. The pattern points to a working investigative position substantially weaker than the council's position in July 1713, when a named informer had given the council the depositions on which the prosecution rested from the outset. The slave element of the alleged conspiracy, combined with the council's careful framing of the rumour as something the slaves either had or did lately intend to do (rather than as a settled or imminent action), suggests that the council was working to a substantive concern about the security of the island during the imminent absence of the Governor. Boucher's intended departure from the consultation of 27 May 1714 places the council under the substantive challenge of governing without its principal officer at a point when the loyalty of the slave establishment had become the subject of public rumour. The advertisement gives the council the formal means to address the rumour without committing the senior establishment to a course of action that the limited evidence could not yet support, and reserves the

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			council's options until the matter is either substantiated by an informer or dissipates on its own.
148	141	Island St Helena At a Court Held for the Adjusting and Settling Orphans Acco[ts] &c this 8[th] day of June 1714 At the United Castle in James Valley. Pres[ent] Benjamin Boucher Esq[r] Govern[r] Matth[ew] Bazett 2 in Coun[ll] Lieut[t] Thom[s] Cason John French Assist[ts] After the Court was Open[d] According to the usuall manner those Persons Appointed for Jurors are as followeth. 1 Ripin Wills foreman 2 Thomas Perkins 3 Charles Steward 4 Thomas Southen 5 Richard Gurling 6 Joshua Johnson 7 William Beale 8 Francis Wrangham 9 Richard Swallow 10 James Draper 11 Robert Bell 12 Jonath[an] Develon Who were all Sworn. Then the Jury was Inform[d] as followeth That in a Consultation Held the 13[th] day of October 1713 It was Ordered that George Carne Guardian to Richard Beale Orphan, And Gabriell Powell who Married the Widdow of Capt[n] George Hoskison Should Each make Choice of two Honest Margin Notes: Orphans Court. Jury. Inform[d] ab[ou]t M[r] Carne and others Concern[d]	Island of St Helena Court held for the adjusting and settling of orphans' accounts on 8 June 1714 at the United Castle in James Valley. Present: Benjamin Boucher Esquire, Governor; Matthew Bazett, second in council; Lieutenant Thomas Cason and John French, assistants. After the court was opened in the usual manner, the persons appointed for jurors were as follows. 1 Ripin Wills, foreman 2 Thomas Perkins 3 Charles Steward 4 Thomas Southen 5 Richard Gurling 6 Joshua Johnson 7 William Beale 8 Francis Wrangham 9 Richard Swallow 10 James Draper 11 Robert Bell 12 Jonathan Doveton All were sworn. The jury was then informed as follows. At a consultation held on 13 October 1713 it was ordered that George Carne, guardian to Richard Beale orphan, and Gabriel Powill, who married the widow of Captain George Hoskison, should each make choice of two honest Interpretations The court of 8 June 1714 is the substantive sequel to the audit commission established at the consultation of 13 October 1713 over the Beale orphans' accounts, which had ordered Carne and Powill each to choose two honest men to examine and state the accounts methodised by 20 November 1713 for council entry. The intervening seven months represent the longest formal delay in the present sequence of orphans' business and reflect both the senior attrition of the council (Pack dead 3 April 1713, Griffith dead 6 May 1712, the council reduced from five to three under the Governor) and the disruption of the spring proceedings against Bazett over the unsigned general letter and the storekeeper's account arrears. The empanelling of a twelve-man jury in the present court continues the established procedure of the courts of judicature on the island, observed earlier at the Powell v. Beale's orphans case of 18 October 1711 (where John Nichols senior had been foreman) and at the court of 2 September 1713 (where Ripin Wills had been foreman for the three causes determined including Powill v. Gurling on the Hoskison mortgage). Ripin Wills serves again as foreman in the present case, providing continuity with the recent jury work. The twelve jurors named cover the principal substantial freeholders of the island, with several recurring across recent juries. Thomas Perkins is the sergeant noted in earlier consultations as petitioner for the cabbage tree lease and the Powell's Valley grant. Charles Steward is the freeholder whose bill of exchange dispute had been settled at the 9 December 1712 consultation. Thomas Southen is the sergeant repeatedly noted across the present sequence in the petitions over the High Peak pasture and in the dog and bull cause against Carne. Richard Gurling is the freeholder confirmed in his Easthope purchase at the 2 September 1712 consultation. Joshua Johnson, William Beale, Francis Wrangham, Richard Swallow, James Draper, Robert Bell and Jonathan Doveton all appear repeatedly across the present sequence as substantial freeholders and recurring jurors. The composition of the jury draws on the same group of about twenty

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			principal freeholders from whom the island's juries are routinely composed. The substantive business of the present court (the orphan accounts of Richard Beale, with George Carne as guardian, and the related estate matters arising from the death of Captain George Hoskison and the second marriage of his widow to Gabriel Powill) recalls the most substantial and intricate orphan administration on the island in the present period. The Beale orphans' accounts had been examined at the court of 2 September 1713 and found very difficult and intricate, and not rightly adjusted; the audit commission of 13 October 1713 had ordered each of the principal interested parties to nominate two honest men to bring the accounts into order by 20 November 1713; the present court of 8 June 1714 is the formal stage at which those accounts now come before a jury for determination. Speculations The seven-month delay between the order of the audit commission on 13 October 1713 and the present court of 8 June 1714 suggests that the substantive working of the four-honest-men commission had run into either substantive disputes over the figures or substantive delays in the production of the underlying records. The pattern fits the working position of the principal parties (Carne as guardian to Richard Beale orphan, Powill as husband of George Hoskison's widow) at the centre of the most substantial estate audit of the present period, in which the working accounts had been built up from cattle keeping, rentals, store credits, slave valuations and the demolished country house proceeds over more than a decade. The complexity of the figures had been acknowledged at the court of 2 September 1713 and the audit commission would have required substantive working to bring the records into a transmittable form for the present jury. The choice of 8 June 1714 for the present court, six days after the council's advertisement of 2 June 1714 on the alleged slave conspiracy and twelve days after the Governor's announcement of his intended departure for reasons of health, suggests that the council was working to clear the principal outstanding orphan business before either the alleged conspiracy required substantial council attention or the Governor's departure left the establishment without his presiding authority. The pattern fits the working pressure on the senior establishment to complete the principal substantive proceedings before the working composition of the council changes, and points to a working calculation by the Governor and the senior officers that the Beale orphan accounts must be settled on the present council's record rather than left for a successor government to take up.
149	142	Honest men to Examine into and State the Accounts of Jonathan Beales Orphans Depending between them and the Said Hoskison or any other Person or Persons by the 20 of Novemb[r] following the Said order, So that the Said Orphans had Accounts and Sums of money due to them from the Estate of the Deceas[d] George Hoskison, which for Some years had Lain unadjusted or brought into any Proper Methode whereby they might know their Just Demands, or how to Sue for their proper right. According to this order aforesaid the Said Carne in behalfe of the Said Orphan made Choice of M[r] Matt[ew] Bazett & Francis Wrangham, and the Said Powell of Robert Addis and Jn[o] Coles freeholders as Arbitratours and for the more Speedy and Easey Determining thereof; both Parties in Pursuance to the Said order of Councell Submitted themselves to the award and Judgment of the before Named four persons, and for the avoiding all Controversies and disputes in this Affair Entred into bond of Two Hundred Pounds	Continuation of the orphans' court of 8 June 1714. The order of 13 October 1713 had directed Carne and Powill each to choose two honest men to examine and state the accounts of Jonathan Beale's orphans depending between them and Hoskison, or any other persons, by 20 November 1713 following. The intention of the order was that the orphans' accounts and transfers of money due to them from the estate of the deceased Hoskison, and the further transfers of money, which had lain unadjusted for some years, should be brought into a proper method by which they might know their just demands and how to sue for their proper right. The case opened. According to the order, Carne in behalf of the orphans made choice of Matthew Bazett and Francis Wrangham, and Powill chose Robert Addis and John Coles, freeholders, as arbitrators. For the more speedy and easy determining of the matter, both parties in pursuance of the order of council submitted themselves to the award and judgement of the four

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
		to Stand, agree, and Consent to the award arbitrement Determination and Judgment as afore mention[d] of the Said Matthew Bazett, Francis Wrangham Robert Addis and John Coles Nominated and Elected Arbitra tours as aforesaid But when they came to read over the bond of Arbitration they made Objection and refus[d] to Intermeddle with this Affair, for no other reason then that a Proviso was made in Said Bond, that the Determination of Said Arbitratours Should in right of the Honour[ble] Company be Left to Governour and Councell to Approve, Consent or Abrogate to the End and intent no farther Dispute Controversie Debate or any Demand on any Acount whatsoever relateing unto this Business Should be hereafter Controverted or Call'd in Question. So that at that time and Since the Said Orphans were as farr to Seek for their right as Ever, and Seeing no Likelyhood or Probability of their getting what money is Owing and belonging unto them from the Deceased George Hoskisons Estate. So be paid and made good by the Said Powill without calling him to an account. It was therefore thought fitt that this Court Should be call'd and Appointed on Purpose to Determine the Said Beales Orphans Affairs, or any other that was agreived or had any Demands to make. In Margin Notes: the Case open[d]	named persons, and for the avoiding of all controversies and disputes in the affair, entered into a bond of £500 to stand, agree and consent to the award, arbitrament, determination and judgement of Bazett, Wrangham, Addis and Coles, the nominated and elected arbitrators. When they came to read over the bond of arbitration, the arbitrators made objection and refused to meddle with the affair, for no other reason than that a proviso was made in the bond that the determination of the arbitrators should, in right of the Honourable Company, be left to the Governor and Council to approve, consent or abrogate, to the end and intent that no further dispute, controversy, debate or any demands on any account whatsoever relating to this business should be hereafter controverted or called in question. So at that time, and since the orphans were as far to seek for their right as ever, and seeing no likelihood or probability of their getting what money was owing and belonging to them from the estate of the deceased Hoskison should be paid and made good by Powill without calling him to an account, it was thought fit that this court should be called and appointed on purpose to determine the Beale orphans' affairs, or any other matter that was agreed or had any demands to make. Interpretations The page sets out the procedural history of the audit commission of 13 October 1713 and reveals why the seven-month delay between the order and the present court was substantively unavoidable. The four named arbitrators (Matthew Bazett and Francis Wrangham chosen by Carne, Robert Addis and John Coles chosen by Powill) had been bound on £500 to stand to their award, but on reading the bond they refused to act because of a single proviso. The proviso reserved to the Governor and Council the right to approve, consent or abrogate the arbitrators' determination on behalf of the Honourable Company, with the explicit purpose of foreclosing further controversy. The arbitrators read the proviso as either undermining the binding nature of their award or as imposing on them the duty of acting in a quasi-judicial capacity subject to council review, and declined to proceed on either ground. The £500 bond is a substantial security, well above the routine bond values observed across the present sequence. Comparable figures include the £321 3s 4d Carne bond on the Keeling orphans' cash secured by land and a James Valley house on 9 May 1711, and the £161 16s 3½d Carne bond of 7 January 1708 at 6 per cent rather than the council's order of 8 per cent. The £500 figure indicates the substantive value of the Beale orphans' estate now at issue and the importance the council attached to securing the parties' compliance with whatever determination the arbitrators might reach. The arbitrators chosen reflect the balance the council had sought. Matthew Bazett (second in council, Surveyor General) and Francis Wrangham (substantial freeholder and recurring juror) acted for Carne; Robert Addis (freeholder confirmed in his Whittey allotment on 3 March 1713) and John Coles (freeholder confirmed in 30 acres on 15 January 1713) acted for Powill. The pairing brings council and freeholder weight to each side and would have given any award substantial standing if it had been reached. The substantive working failure of the arbitration commission, with the arbitrators declining to act on a procedural ground that touches the integrity of their office, has forced the council to convene the present full court of 8 June 1714 in order to determine the Beale orphans' affairs through a twelve-man jury rather than through the simpler arbitration mechanism. The mechanism of arbitration would have settled the matter at lower administrative cost, but its failure now requires

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			the substantive evidentiary procedure of a court of judicature. Speculations The arbitrators' refusal to act on the proviso suggests that they had read the council's reservation of approval as a working trap by which their award could be set aside without recourse, leaving them exposed on the £500 bond without a binding determination to support their position. The pattern fits the working uncertainty about the limits of arbitration on the island, where the Governor and Council retained substantive authority over all civil matters and could not formally cede final determination to private arbitrators. The arbitrators' caution suggests that they understood the position and chose to withdraw rather than to give an award that the council could substantively override. The seven-month delay between the failed arbitration and the present court has, on the evidence of the page, left the orphans as far to seek for their right as ever. The choice of 8 June 1714 for the substantive determination, six days after the slave insurrection advertisement and twelve days after the Governor's announcement of his intended departure, points to the council's calculation that the Beale orphans' substantive determination cannot be deferred any further into the changing senior establishment of the island. The jury procedure now adopted gives the council a substantive determination that the arbitration commission could not provide, and binds Powill and Carne by the verdict of a twelve-man jury rather than by the award of four arbitrators.
150	143	In order thereunto. The Said M[r] Carne was askt what Demands he had to make in behalfe of Said Jonathan Beals Orphan. Who answered he Desired the Consultation and Acco[t] held and Stated on the 25 Septemb[r] 1710 by Capt[n] Roberts and the then Councill might be read and examin[d] into and [...] before the Jury and what they thought good and reasonable to be Comply[d] with by the Said Powill and what not to be Deducted out of that Acc[ot]. Which was Accordingly done. To which the Said Powill reply[d], he desired he might make Such Objections against those Articles and Accounts Charg[d] on his Predecessor George Hoskison as he thought fitt, which was Allow[d] him. Alledging that Govern[r] Roberts did out of Prejudice to the Said Hoskison as having before Seiz[d] his Estate Charge him wrongfully with Severall of the Articles and Sums of money in That Consultation and Acco[t] now produced the whole of which he freely Left to the Consideration of the Jury in hopes they would do him and Orphans Justice. The Jury had a Copsy Delivered them of all and Every the Articles and Sums of mony Charg[d] to Acco[t] of the Said George Hoskison in the Consultation of the 25[th] Septemb[r] 1710 and also had the Liberty of veiwing the Said Hoskisons and Beals Orphans Acco[ts] in the Store Books to See whether any thing and how much from the time that Account Commences, hath been paid, Either to the Said Orphans or any other Person for them that they Stood Indebted to. Which being done the Jury withdrew and Stayed about two hours then returned & Delivered their Verdict as followeth. That Gabriell Powill in behalf of George Hoskison dec[d] Pay Jonathan Beals Orphans the Sume of Six Pounds instead of the Nine Pounds Charg[d] in the Accou[t] Stated by Govern[r] Roberts, and the then Councill. That Margin Notes: former Acc[t] Examined att M[r] Carne's Desire. his Proposals in behalfe of y[e] Orphans. M[r] Powills Reply.	Continuation of the orphans' court of 8 June 1714. In order thereunto, Carne was asked what demands he had to make on behalf of Jonathan Beale's orphans. He answered that he desired the consultation and account held and stated on 25 September 1710 by Captain Roberts and the then council might be read and examined into before the jury, and that the jury determine what they thought good and reasonable to be complied with by Powill, and what not to be deducted out of that account, which was accordingly done. To which Powill replied that he desired he might make such objections against those articles and accounts charged on his predecessor George Hoskison as he thought fit, alleging that Governor Roberts had, out of prejudice to Hoskison, having before seized his estate, charged him wrongfully with several of the articles and sums of money in the consultation and account now produced, the whole of which he freely left to the consideration of the jury, in hopes they would do him and the orphans justice. The jury had a copy delivered to them of all and every the articles and sums of money charged to the account of Hoskison in the consultation of 25 September 1710, and also had the liberty of viewing Hoskison's and Beal's orphans' accounts in the store books to see whether anything, and how much, from the time the account commenced had been paid either to the orphans or any other person for them that they stood indebted to. Which being done, the jury withdrew and stayed about two hours, then returned and delivered their verdict as follows. That Gabriel Powill, on behalf of George Hoskison deceased, pay Jonathan Beale's orphans the sum of £6 instead of the £9 charged in the account stated by Governor Roberts and the then council. Interpretations The page sets out the substantive procedure of the jury determination of the Beale orphans' affairs. Carne, as guardian to Richard Beale orphan, calls for the working basis of the audit to be the consultation of 25 September 1710 under Roberts and the then council, which had set out the orphans' working accounts against Hoskison after the most substantial review of

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
		the whole left to y[e] Jury. their Verdict.	the Beale estate undertaken on the island. The present procedure inherits that audit as the substantive working framework and uses the jury to determine which items in the framework should stand and which should be deducted, with Powill as defendant in right of his second husbandship of Hoskison's widow. Powill's defence rests on the substantive ground that the 25 September 1710 audit had been carried out under Roberts after the Governor had already seized Hoskison's estate at the consultation of 7 January 1710, and that the audit was therefore prejudiced against Hoskison. The pattern fits the substantive challenge against Roberts's administration already raised in the council's letter of 3 October 1711 to him, by which the council had rebuked Roberts over the seizure of Hoskison's land, the destruction of his cattle, the insult to his wife, and the forfeiture of orphan trust land. Powill now revives that pattern of complaint against Roberts as the substantive ground for setting aside parts of the 25 September 1710 audit. The jury's procedure is substantively documentary. They are given a copy of the 25 September 1710 audit and the liberty of viewing the Hoskison and Beal orphans' accounts in the store books, to see what had been paid since the audit commenced. The combination of the consultation audit and the running store book entries gives the jury a full evidentiary record across the period and provides a substantive basis for adjusting the original figures on the documentary evidence rather than on conjecture. The first verdict on the page reduces a single item from £9 to £6 (a £3 reduction in favour of Powill). The substantive form of the verdict (Powill on behalf of Hoskison deceased to pay the orphans the sum of £6 instead of the £9 charged) gives both Powill an acknowledged reduction on the original audit and the orphans a binding determination of the substantive sum owed. The procedure is the model the present court will apparently follow on each contested item from the 25 September 1710 audit. Speculations The substantive willingness of the jury to reduce the original Roberts audit figure of £9 to £6 on the first item, without further detail of the item or its basis recorded on the page, suggests that the jury was disposed to give substantial weight to Powill's general defence that the Roberts audit had been prejudiced against Hoskison. The pattern points to a working juror sympathy for Powill as a substantial freeholder caught in the working tail of the Roberts administration, against the orphans whose substantive interest is represented by the institutional figure of Carne as guardian. The reduction is modest in absolute terms (£3) but signals the jury's substantive willingness to adjust the original audit downwards rather than to confirm it as it stood. The jury's choice to withdraw and stay about two hours before returning with their verdict suggests that the substantive deliberation on the disputed items required substantial examination of the store books and the consultation audit alongside the parties' arguments. The pattern is consistent with the deliberation observed at the Powell v. Beale's orphans case of 18 October 1711, where the jury withdrew for about three quarters of an hour and returned a verdict for Powell on the courtesy of England question. The longer two-hour deliberation on the present case reflects the substantive number of disputed items and the working complexity of the documentary evidence the jury had been asked to consider.
151	144	2. That the Said Powill Pay the Said Orphans after the Rate of twelve pence per Acre for So Long tyme as he and Said Hoskison held their Sixty Acres of Land in Possession and as to	Powill was to pay the orphans rent at the rate of 12d per acre, for as long as he and Hoskison had held their 60 acres of land in possession. 		what the Orphans is Charged with in their Acco[t] for Cattle Grazeing upon the Common to Remain So, thinking the Same and reasonable. 3. That the Said Powill Pay the Sume of Thirty five Pounds Seven Shillings to the Orphans for Nine head of Cattle Sold by George Hoskison as Appears by the aforesaid Acco[t] As also the Sume of Nine pounds Eleven Shillings and Six pence for a Bull Killd by John Long, a Heifer and Beeffe Sold M[r] Carne, Charg[d] Likewise in Said Account. 4. That as to the Eighty Eight Pounds Sixteen Shillings Charg[d] for Seventy four Timber trees we think it an unjust Demand and no ways reasonable to be paid, the Same being Disallow[d] by M[r] Carne and Said to be wrongfully Charg[d] by Gov[r] Roberts. But if proof can be made that Either the Said Hoskison or Powill cutt any Timber trees of the Orphans, or impoverish their Land then the Said Powill to make them Sattisfaction 5. That as to the Nineteen Pound call'd an Error and Said to be paid M[r] Francis by the Orphans for their Coarding upon Examining the Store Accounts find the Said Sum paid by the Said Hoskison for the Orphans to M[r] Francis and So Consequently wrong Charg[d] to M[r] Hoskison. 6. That the Orphans whole Sixty Acres of Land be forthwith fenc[d] in at the Charge of the Said Gabriell Powill According to Contract made by his Predecessor George Hoskison. 7. That the Said Powill Pay the Orphans twenty Shillings charg[d] in Said Account for Rent he paid M[r] Hoskison. 8. That the Said Gabriell Powill Pay the Said Orphans the Sume of Twelve pound for Six head of Cattle, charg[d] in the Acco[t] afores[d] haveing good reason to belive they were Lost for want of Better Care, as Appears by the Declarations of John Nichols, Elizabeth Marsh Robert Swallow and Andreas Burnham Sett forth in that Consultation of the 25 Septemb[r] 1710 besides the Land not being fenced According to agreement. 9[th] That the Said Gabriell Powill Pay Richard Beale the Eldest Son of Jonathan Beale The Sume of Fifty one pounds, and nine Margin Notes: Severall Articles relating to Beales Orphans & M[r] Powill on behalfe of Geo[r] Hoskison dec[d] 9[th]	common was to remain as it stood, the council judging the sum reasonable. Powill was to pay the orphans £35 0s 0d for nine head of cattle sold by George Hoskison, as set out in the account, together with £9 11s 6d for a bull killed by John Long and for a heifer and beef sold to Mr Carne, both also charged in that account. As to the £88 16s 0d charged for 74 timber trees, the council considered this an unjust demand. There was no reasonable ground for it to be paid. The sum was disallowed by Mr Carne and was said to have been wrongfully charged by George Roberts. If proof could be brought that either Hoskison or Powill had cut any timber trees of the orphans and so reduced the value of their land, Powill was to give satisfaction accordingly. As to the £19 0s 0d called an error, said to be due to Mr Francis from the orphans for their boarding, examination of the store accounts showed that the sum had been paid by Hoskison for the orphans to Mr Francis. The charge was therefore to be carried against Hoskison. The orphans' entire 60 acres of land were to be forthwith fenced in at the charge of Gabriel Powill, in accordance with the contract made by his predecessor George Hoskison. Powill was to pay the orphans 20s 0d charged in the account for rent received by him from Hoskison. Powill was also to pay the orphans £12 0s 0d for six head of cattle charged in the account already mentioned, there being good reason to believe they had been lost for want of better care, as appeared from the declarations of John Nichols, Elizabeth Marsh, Robert Swallow and Thomas Burnham, set forth in the consultation of 25 September 1710, besides the land not having been fenced according to agreement. Powill was to pay Richard Beale, the eldest son of Jonathan Beale, the sum of £51 0s 0d, with Interpretations The fixed rent of 12d per acre charged against Powill and Hoskison for sixty acres held in possession functions as a retrospective revenue assessment, applied for as long as the parties had enjoyed occupation. The mechanism converts past use into a quantifiable debt without disturbing the underlying title, allowing the orphans' estate to recover income for years during which the land had been managed without proper rendering of accounts. The 12d rate sits below the standing customary land rent of 4s 0d per acre noted in earlier rewrites, reflecting that the parcel was held by trustees rather than let to an outside tenant. The treatment of the £88 16s 0d charge for 74 timber trees shows the council operating as an arbitrating tribunal on disputed valuations within an orphans' audit. The original figure had been entered against Hoskison by George Roberts during the 1710 reckoning. The current council disallowed it as not supported, but kept open a conditional liability against Powill personally if proof of timber cutting could later be brought. This separates the historic audit entry from the present settlement and places the burden of proof on any future revival of the claim. The conditional reimputation of the £19 0s 0d boarding charge, originally entered as an error against Francis, demonstrates how the store accounts served as the working ledger for resolving disputed payments between trustees and creditors of orphan estates. The store books carried sufficient detail to confirm that Hoskison had in fact discharged the obligation, and the entry was simply redirected to him. The store thus operated as the documentary authority capable of overriding entries made elsewhere in the orphans' accounts. The £12 0s 0d charge for six head of cattle lost through neglect, supported by the sworn declarations of John Nichols, Elizabeth Marsh, Robert Swallow and

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			Thomas Burnham recorded in the consultation of 25 September 1710, illustrates how earlier cattle-keeper depositions were preserved and reused as binding evidence in later proceedings. The keepers had been the working stewards of the cattle on the orphans' land, and their statements operated three years on as sufficient ground for a finding of want of care. Coupled with the breach of the fencing covenant, neglect was treated as a separate and quantifiable head of liability. Speculations The decision to retain the £35 0s 0d common grazing charge while disallowing the £88 16s 0d timber charge points to a deliberate methodology in the present audit. The grazing entry rested on continuous, observable use of common pasture by the parties' cattle, which could not credibly be denied. The timber entry rested on a count of felled trees that none of the parties currently before the council could verify, and that Carne, as kinsman to the orphans and an interested party, had declined to support. The council preserved only those items capable of being grounded in undisputed evidence, leaving the contested timber claim to a future proceeding if proof could be produced. The chain of charges directed at Powill rather than at Hoskison's estate suggests a working policy of pursuing the living successor in possession in preference to the deceased trustee's estate. Hoskison had died in March 1712, his widow had since married Powill, and the consolidated holdings were now in Powill's hands. By framing the orders to require Powill to pay the orphans directly, the council secured immediate enforceability against a present occupier and avoided the protracted administration of Hoskison's estate, which had been an open problem since the audit commission of October 1713.
152	145	nine pence for a House pull[d] Down and Sold by Auction by order of former Governm[t] and that to be the full payment, and as to the Interest the Said Powill pay the Sume of Seven Pounds more Forty four pounds, nine Shillings of the Fifty one pounds nine pence being formerly Lett to M[r] Alexander and Since paid to the Said Hoskison with the Said Interest of Seven Pounds. All which Articles and Sums of money before mention[d] we take to be the utmost Demands due to the Said Orphans from the Estate of George Hoskison dec[d] after that the Sume of Twenty Seven pounds Seven Shillings which we find paid by Said Hoskison to the Orphans, as Appears both by the Store Acco[t] and yearly Acco[ts] Deliver[d] the Govern[r] to be Deducted as also of any other Sume that may here after be found paid to the Said Orphans or to any other Person for them by the Said Hoskison or any Person for him. And whereas John Alexander Clerk of Councill represented That in the Consultation of the 25[th] Septemb[r] 1710 He Stands Charg[d] with the Sume of Twenty two pounds, nine Shillings and three pence to make up the Sume of Seventy three Pounds Ten Shillings with the aforesaid Fifty one pound, and nine pence Charg[d] to George Hoskison for the House before mention[d] belonging to Richard Beale, which we do call agree to be very unjust and Maliciously Charg[d] on him the Said Alexander, Some or most of us the Jury, well knowing the Said House was Sold a soon pull[d] down to the best Advantage and full Value for the Heirs use, and cant be Suppos[d] could Sell for as much as twas valued at Standing Severall of the boards & Timber being much worm Eaten, Rotten and Damag[d] which Locks fair & good to the Eye. And therefore we the Said Jury do Unanimously agree that the Said Alexander and his Heirs be for ever Acquited Discharged from paying anything towards the Sale or Apprai[s]ement of that House about mention[d].	9d for a house pulled down and sold by auction by order of the former government, that sum being in full payment. As to the interest, Powill was to pay a further £7 0s 0d, the £51 0s 9d having formerly been let to Mr Alexander out of the £51 0s 9d paid to Hoskison, with interest of £7 0s 0d on that sum. All the items and sums of money above mentioned were taken to be the full demands due to the orphans from the estate of George Hoskison deceased, after the sum of £27 7s 0d, paid by Hoskison to the orphans as appeared both from the store account and the yearly accounts delivered to the government, had been deducted, together with any other sum that might afterwards be found to have been paid to the orphans, or to any other person for them, by Hoskison or by any person on his behalf. John Alexander, Clerk of the Council, had represented that in the consultation of 25 September 1710 he stood charged with the sum of £22 13s 3d, which together with the £51 0s 9d charged to George Hoskison for the house already mentioned, belonging to Richard Beale, made up the sum of £73 10s 0d. Alexander did appeal to the council that this sum had been very unjustly and maliciously charged against him. Some, or most, of the jury well knew that the house was sold after being pulled down to the best advantage and full value for the heirs' use, and could be supposed to sell for as much as it had been valued at standing, several of the boards and timbers being much worm-eaten, rotten and damaged, which looked fair enough to the eye. The jury therefore unanimously agreed that Alexander and his heirs were for ever acquitted and discharged from paying anything towards the sale or appraisal of the house mentioned. The executors of Robert Leech deceased, Thomas Perkins and Jonathan Doveton, represented that his widow Mary, the daughter of William and Mary French both deceased, being on the point of marriage to a second husband since the death of Robert Leech,

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
		The Executors of Robert Leech deceased Thomas Perkins and Jonathan Develon, represented that his Widdow Mary, the daughter of William and Mary French both dec[d] being upon Marriage with a Second Husband Since the death of Said Robert Leech, desired that what Share or Portion She had belonging to her out of her Said fathers Estate mentioned more Largely in a Consultation of Margin Notes: J[n]o Alexander represents to the Jury a Sume of money charg[d] to him unjustly but refers the Case to the Jury to Determine He is acquitted & for Ever discharg[d] Rob[t] Leeches Execut[rs] desires admiss[ion] to be made of Probat[e] of Estate	desired that whatever share or portion she had belonging to her out of her father's estate, mentioned more largely in a consultation of Interpretations The structured discharge of John Alexander turns on a distinction central to the accounting practice of the Court of Orphans. The original 25 September 1710 reckoning had treated the sale proceeds of the demolished Beale country house as if recoverable at the standing valuation of £73 10s 0d, with Alexander as Clerk standing charged for the residual £22 13s 3d after Hoskison's portion of £51 0s 9d. The present jury reopened the valuation itself, finding that the timbers had been substantially worm-eaten and rotten, so that the realised sale price already represented the full economic value of the materials. The mechanism shows the court working backward from the original audit assumption rather than treating the 1710 charge as settled. The settlement of the orphans' demands against Hoskison's estate operates as a closing instrument with a credit clause. Past payments traceable in the store account and the yearly accounts delivered to the government were treated as automatically deductible. Future payments that might subsequently emerge from the records were also treated as deductible. The arrangement protects Hoskison's estate, now effectively in Powill's hands through the remarriage, against double recovery without requiring the records to be exhausted at the moment of settlement. The opening of the Leech executors' representation introduces the working pattern of widow-on-remarriage settlement. Robert Leech's widow Mary stood to bring her share of her father William French's estate into a second marriage. The executors, Thomas Perkins and Jonathan Doveton, sought to fix that share before the new marriage took effect. The procedure protects the orphan trust over the French children against absorption of their sister's portion into the property regime of her incoming husband, by securing a council determination of the share while she remained a widow. Speculations The jury's willingness to acquit Alexander entirely, despite his standing charge for £22 13s 3d in the records of nearly three years earlier, points to the persistence of grievances against the Roberts administration even after Roberts's departure. The verdict turns explicitly on the suggestion that the original charge had been very unjustly and maliciously laid. Alexander had been the procedural target of repeated charges through Roberts's government, including his dismissal as Clerk on 17 November 1709 and the subsequent inquiries into his land registrations. The present discharge functions as a partial rehabilitation, restoring Alexander's standing through the corrective action of a planter jury rather than through any executive decision. The seven-pound interest figure attaching to the £51 0s 9d that had passed between Hoskison and Alexander matches the customary interest of the island over a working multi-year period at the going rate. The arrangement, in which money charged on Hoskison was carried by Alexander as borrower against a private bond, was the same pattern noted in the earlier Beale audit, where Alexander had admitted borrowing £44 0s 0d from Hoskison and paying interest for four years before the bond was cancelled at £57 13s 0d principal. The recurrence here suggests that the demolished-house proceeds had operated for several years as a private loan stock between the two officers before the council eventually traced the sums.

		the Said Robert Leeches Children might have their Part in right of his wife before She marries againe. Whereupon Order'd That the aforesaid William Frenches Estate be Sold at a publick Auction and the Honourable Companys debt of fourteen Pounds Eight Shillings and two Pence halfpenny be first paid, and then those debts due to Severall other persons as charg[d] in Said Consultation and that of the 5 Aprill following be also paid and what Remains afterwards to be Equally Divided among three of Said Frenches Children, now on the Island, and a part reserv[d] for Thomas French his Eldest Son, at Bencoolen Island St Helena. At a Consultation Held on Thursday the 24[th] day of June 1714 At the United Castle in James Valley. Pres[ent] Benjam[in] Boucher Esq[r] Gov[r] Matth[ew] Bazett 2 in Coun[ll] Lieut[t] Thom[s] Cason John French Assist[ts] The Governour made the following Declaration to the Councill. Gentlemen. Before the Marlborough and Loyall Bliss Sailed (acquainted you at a Consultation M[r] Russell &c being Present) my design was to goe for England by the first Opportunity. I have Staid till this tyme with hopes that a Shipp might Margin Notes: That Leeches Orph[ans] may have their Share Frenches Estate to be Sold at Auction and us[u]all paid Gov[r] Boucher's intent to go for England.	children, so that Robert Leech's children might have their part in right of his wife before she married again. The council thereupon ordered that William French's estate be sold at public auction. The Honourable Company's debt of £14 8s 2½d was to be paid first, then the debts due to the several other persons charged in the consultation already mentioned. The amount of £5 0s [...] following was also to be paid afterwards, and what then remained was to be equally divided among the three French children now on the island, with a part reserved for Thomas French, the eldest son, at Bencoolen. Island of St Helena. At a consultation held on Thursday 24 June 1714 at the United Castle in James Valley. Present: Benjamin Boucher Esquire, Governor; Matthew Bazett, second in council; Lieutenant Thomas Cason and John French as assistants. The Governor made the following declaration to the council. Gentlemen, before the Marlborough and the Loyall Bliss sailed, I informed you at a consultation (Mr Russell being present) that my design was to go for England by the first opportunity. I have stayed until now in the hope that a ship Interpretations The directed disposal of the William French estate works as a coordinated solution to a defined orphan settlement. The council fixed a strict order of priority: Company debt first, other creditors second, a further specified payment third, and only then division of the residue. The mechanism protects the Honourable Company's claim absolutely while ensuring that creditors carry rank above the children's portions. The reservation of a share for Thomas French at Bencoolen treats his absence as no bar to his entitlement, the council holding open a remittable portion to be carried east through the Company's own channels. Mary's combined position as Robert Leech's widow and as a French daughter on the eve of remarriage created two distinct claims that the executors needed to fix before the second marriage took effect. The order treats Leech's children as taking in right of their father's interest in Mary's share, rather than through their mother personally. The device freezes the inheritance pattern at the moment of widowhood and prevents the new husband from absorbing either the children's grandfatherly portion or the share they took through their late father. The composition of the consultation of 24 June 1714 confirms the working four-man establishment under which the colony was now functioning. Boucher as Governor, Bazett second in council, and Cason and French serving as assistants without councillor titles pending the directors' confirmation, gave the island the minimum complement required for council business. The structure had been settled at 26 September 1712 in response to the deaths of Hoskison and Griffith and the illness of Pack, and had held in place through the spring 1714 supply ships and through Boucher's procedural clearance on 27 May 1714. The Governor's reference to his earlier declaration before the Marlborough and the Loyall Bliss sailed, in the presence of Mr Russell, points to the practice of grounding executive intentions in a witnessed council statement. The Marlborough had arrived on 16 May 1714 under Captain Matthew Martin, and Boucher had used the gathering of shipping and visiting officers to fix his intention to depart on the formal record. The present declaration of 24 June 1714 builds on that earlier minuted statement rather than introducing a fresh proposition. Speculations The order to sell the French estate at public auction, rather than dividing it in kind among the

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			children, reflects the practical difficulty of partitioning a small inland holding burdened with the £14 8s 2½d Company debt and the other creditors charged at 28 March 1711. Auction converts mixed real and personal property into a single cash fund, against which the priority schedule can be applied in turn. The mechanism also enables Mary's share to be expressed as a fixed cash portion ahead of her remarriage, removing the need for the executors and the incoming husband to negotiate over physical assets. The Governor's careful linkage of his present declaration to a prior consultation made before the Marlborough and the Loyall Bliss sailed, naming Mr Russell as a witness, suggests an awareness that his departure was likely to be examined in London. By placing the intention on the record well in advance, in the presence of a visiting officer of standing, Boucher built a documentary trail capable of supporting his procedural clearance of 27 May 1714 and any further account required of him after his arrival home.
154	147	might Arrive here from England, which might well have Expected Considering our Honourable Employ[rs] must have been in Humane Probability Long Since Acquainted with the Necessitous State of this Island for want of Provisions to Subsist the People and also the want of Proper Persons to Supply the Loss of their more Immediate Servants who have Left Offices Vacant by death But Since this has not happen[d] According to my hearty wishes, and the Latest news I have heard from England give me no Probable grounds to beleive a Ship will Arrive before my tyme be Expired and my very ill State of health making it unreasonable I Should put my Self on a Winter Passage for England, I now Acquaint you that I purpose God willing to take my Passage for England on one of the two Ships now in this Road, if you have yet any Exceptions to make that can be a just Cause to Stop my going Desire they may be now mention[d], Since I think this will be the Last Consultation I Shall make use of dureing my Short Stay here The Councill doth Unanimously Say they have no objections or Exceptions to make why the Governo[r] Should not go of this Island According to his own Inclination. Lieut[t] Thomas Cason represented to the Councill That Dureing the tyme the Lime Kilns Stone Cutters house Tan fats and all other works in Sandy Bay were a building, besides the over Seeing the workmen and other Labourers in Cuting Lime Stone, and makeing the path way for the Carts to Carry Loads to the water Side and Lime Kiln & he gave his daily attendance for Sixteen months, and never yet had any Sattisfaction for all that faiteague and Service and haveing all that tyme Neglected his own Plantation in which he was then but newly Settled, and at that tyme obliged to Hier a Soldiers duty and out of Pockett other ways, Humbly prays the Same may be taken into Consideration and Such an Allowance made for that Particular Service as we Should think him deserveing of Upon Consideration of the Said Lieut[t] Casons Service before mention[d], and Willingness on all Occasions It is thought fitt Margin Notes: laid before the Councill. Declaring his reasons and y[e] ill State of health he was in. Leaveing it to the Coun[ill] to make their Objections. they made none. Lieut[t] Cason represented his trouble &c att y[e] Lime Kilns & other Services. desireing Some Allowance of Sattisfaction.	might arrive here from England, which might well have been expected. Considering our Honourable Employers must, by all human probability, have long since been informed of the perilous state of this island for want of provisions to subsist the people, and also of the need of proper persons to supply the loss of their more immediate servants who have left offices vacant by death. Since this has not happened according to my hearty wishes, and the latest news I have heard from England gives me no probable grounds to believe a ship will arrive before my time be expired, and my very ill state of health making it unreasonable that I should put myself on a winter passage to England, I now acquaint you that I propose, God willing, to take my passage for England on one of the two ships now in the road. If you have yet any exception to make that can be a just cause to stop my going, I desire it may now be mentioned, since I think this will be the last consultation I shall make use of during my short stay here. The council unanimously declared that they had no objection or exception to make as to why the Governor should not go off the island according to his own inclination. Lieutenant Thomas Cason represented to the council that during the time the lime kilns, the stone cutters' house, the tan fats and all the other works at Sandy Bay were being built, in addition to overseeing the workmen and other labourers in cutting limestone and making the pathway for the carts to carry loads to the waterside and lime kiln, he had given his daily attendance for sixteen months, and had never yet had any satisfaction for all that fatigue and service. During that whole period he had neglected his own plantation, in which he was then but newly settled, and had been obliged to hire a soldier's duty and out of pocket other ways. He humbly prayed that the matter be taken into consideration, and such an allowance made for that particular service as the council should think him deserving of. On consideration of Cason's service already mentioned, and his willingness on all occasions, it was thought fit Interpretations Boucher's reasoning binds personal ill health to two larger institutional failures. The first is the lack of provisions on the island for the population. The second is the failure of the directors to replace officers whose offices had been left vacant by death, a reference to the deaths of Hoskison in March 1712, Griffith in May 1712 and Pack in April 1713. By framing his departure as a response to these conditions, rather than as a matter of personal preference, Boucher places the

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			responsibility for the timing on the directors' own inaction. The unanimous declaration of the council that they had no objection or exception to the Governor's departure operates as a formal clearance certificate. Where the earlier clearance of 27 May 1714 had been certified before the visiting officers Russell, Davenport, Martin and Hudson, the present declaration restates that clearance among the four members of the working establishment alone. The double clearance closes off any later suggestion that the departure had been carried through without the council's full assent. Cason's representation discloses the working economy of the Sandy Bay works under his oversight: the lime kilns, the stone cutters' house, the tan fats and the path for carts to the waterside, all completed within a sixteen-month working period. The tan fats are the sunken pits in which animal hides were steeped in tanbark liquor to convert them into leather, a substantial fixed installation supplying the island's shoemaking and harness needs. Their construction at Sandy Bay alongside the lime kilns and stone cutters' house establishes the location as the colony's principal industrial centre by mid-1714, extending beyond the lime-burning operation noted in earlier consultations. The detail that Cason had been obliged to hire a soldier's duty and to pay out of pocket while neglecting his own newly settled plantation reveals the absence of any settled allowance for officers carrying out extended construction supervision. The arrangement contrasts with the £20 0s 0d annual overseership granted to Giles Hays on 8 April 1712 for the consolidated Hutts estate. Cason had carried the Sandy Bay works on his ordinary lieutenant's pay, with retrospective claim opened only at the closing stages of Boucher's administration. Speculations The Governor's framing of his departure as turning on the absence of an expected ship suggests that the choice between the two ships now in the road, the Marlborough and the Loyall Bliss, was not made in advance but kept open until the moment of public declaration. By holding the option until the council day, Boucher preserved flexibility over which captain would carry him home, and over which set of voyage conditions he would accept. The two-ship choice also enabled him to draw on the witness of both masters at his clearance, increasing the documentary weight of his departure account in London. Cason's decision to raise his sixteen months of unrequited service at this particular consultation, with the Governor on the point of departure, points to a calculated timing. A retrospective allowance approved by Boucher before his passage would carry the authority of the Governor's signature on the consultation, against which the directors in London would be invited to find later. Had Cason waited until after Boucher's departure, the claim would have rested on the recollection of a reduced council without the head whose orders had originally set him to the Sandy Bay works.
155	148	fitt and Aordingly Ordered that he have the Sume of thirty pounds Entered to his Creditt for the Service afores[d] Charles Steward freeholder brought a bill of Twenty two pounds fifteen Shillings for Some Goods he Supply[d] the Compa[n]y with at the Governo[r]s first Coming, to furnish their Fort House which being Satisfy[d] with and now to be Seen, and that y[e] Same was never paid for Ordered. Shreve further represented that, according to the Governor's order, he had taught two of the Honourable Company's black boys to cut stone very well, for which he had been promised the sum of £10 0s 0d. Ordered that Nicholas Shreve have the sum of £10 0s 0d placed to his credit from the Honourable Company's account current. Interpretations The settlement of Charles Steward's bill of £22 15s 0d shows the Company's working practice when a Governor first took up office. Steward had supplied goods on credit at Boucher's first arrival to furnish the Fort house. Several years on, the underlying transaction had been satisfied with as to delivery but never carried into the store books as a cash entry. The council closed the open obligation by granting credit on the bill as produced. The episode illustrates how furnishing the Governor's household was sustained by private suppliers carrying the cost until a formal council order converted the debt into a store-book credit. The arrangement for Nicholas Shreve combines wage deduction with metropolitan remittance through the Company's London accounts. £15 0s 0d was to be stopped from his growing salary every year and notified to the Court of Directors, who would then disburse the same sum to his wife in England. The mechanism uses the Company's settled administrative reach between St Helena and London as a remittance channel where no direct payment route existed. The same channel underlay the Skingle bill of 18 July 1712, by which £50 0s 0d advanced at Bencoolen was met through the St Helena Governor on the basis of London-side discharge. The reference to Shreve as very extravagant supplies the working justification for the council's intervention in his pay. Without this finding, the deduction would have operated as a unilateral charge against an officer's salary against his own consent. By recording the extravagance, the council places the order within its general protective jurisdiction over distant dependants whose maintenance might otherwise be lost through the officer's own conduct on the island. The £10 0s 0d payment for teaching two Company black boys to cut stone illustrates the financial incentive structure through which the colony's enslaved workforce acquired skilled trades. Stone-cutting was central to the lime kilns, the stone cutters' house and the fortifications work then in hand at Sandy Bay. By promising a discrete training fee to the master craftsman, the Governor had created a mechanism by which Company-owned labour could be upskilled at a fixed cost, rather than through continuous hiring of free craftsmen at the daily rates established for masons and stone layers. Speculations The timing of Steward's production of his bill, in the same consultation as Boucher's clearance for departure and Cason's claim for sixteen months' arrears, suggests a coordinated closing of unsettled obligations against the outgoing administration. With Boucher about to embark, the long-carried open account for furnishings supplied at his first coming required resolution before the Governor's signature could no longer be relied on. The pattern parallels Cason's claim and indicates that the working consultation of 24 June 1714 was being used as a clearing session for accumulated personal credits. Shreve's stone-cutting contract having expired in December 1713, but his continuation in Company

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			service for the further six months until June 1714, points to a working arrangement under which the original indenture had rolled over into open service while the lime kilns, stone cutters' house and tan fats were brought to completion. The council's introduction of a wife's remittance just at the point of the works' completion suggests a calculated intervention to retain Shreve's services on the island by binding part of his pay to a continuing London-side obligation, against which a sudden departure would be difficult to manage.

158	149	Island of St Helena. Thursday the 8th July 1714. The Rochester Arriv[d] from England in 104 days, and the new Governour Isaac Pyke Esq[r] with the Councill went on Shoar, and being received by M[r] Matthew Bazett in the United Castle, the Governour Shewd his Com mission from the Lords Proprietors the Honourable East India Company to take upon him that Cast and Government of the Island which was read, And being inform[d] the late Governoure Benjamin Boucher Esq[r] had bin gone off the Island Ten days past in the Recovery Capt[n] Richard Heathfield Comander for Great Brittain, the then Governo[r] and Councill were recived with a Generall Satisfaction of the Inhabitants who all Unahimously Profest their joy for the Change Declareing what a Desolate Condition the late Governour had left this Countrey, Clouds of Complaints were made of the late ill mannagement and the Councill were Publickly told if the other Governour had Staid Longer, the whole Island had bin in a famishing Condition and M[r] Bazer whom we found as Chief, M[r] Cason & M[r] French that were his Asistants in Councill Declar'd he had destroyd all the Honourable Companys Live Stock Except about Sixty head of Black Cattle for he had left behind him neither Deers nor Goats nor Sheep nor Hoggs Turkeys nor Geese nor any other kind of Poulltrey, the House we found Stript of all that was Portable Even the Locks and Keys taken from many of the doors and Every thing else that might be Serv[i]ceable to him in his Voyage Home, We are also inform[d] that the Plantation House in the Countrey is very much out of repaire and gone to Ruine, the Lands also as much Neglected, the Garden Dugg up and Laid wast haveing nothing in it now but Plantain Trees and Cushuridge for his uses. In Margin Notes: Rochesters Arrivall w[t]h Gov[r] Pyke &c The State of the Island. The Inhabitants make Complaint. Comp[s] Stock. Plant[n] House Ruinous.	Island of St Helena. Thursday 8 July 1714. The <i>Rochester</i> arrived from England in 104 days, and the new Governor Isaac Pyke Esquire with the council went on shore. Being received by Matthew Bazett in the United Castle, the Governor produced his commission from the Lords Proprietors of the Honourable East India Company to take upon him the cast and government of the island, which was read. He was then informed that the late Governor Benjamin Boucher Esquire had gone off the island ten days earlier in the <i>Recovery</i>, Captain Richard Heathfield commander, for Great Britain. Pyke as the new Governor and the council were received with general satisfaction by the inhabitants, who all unanimously professed their joy at the change, declaring in what a desolate condition the late Governor had left this country. Numerous complaints were made of the late mismanagement, and the council were publicly told that if the other Governor had stayed longer, the whole island would have been in a famishing condition. Bazett, whom the new Governor and council found as chief, and Cason and French as his assistants in council, declared that Boucher had destroyed almost all the Honourable Company's live stock except about sixty head of black cattle he had left behind. There were neither deer nor goats nor sheep nor hogs, nor turkeys, nor geese, nor any other kind of poultry. The Fort was found stripped of all that was portable, even the locks and keys taken from many of the doors, and everything else that might be serviceable to him on his voyage home. The new Governor and council were also informed that the Plantation House in the country was very much out of repair and going to ruin. The land was equally neglected, the garden dug up and laid waste, having nothing in it now but plantain trees and cabbage for his uses. Interpretations The arrival of the <i>Rochester</i> after 104 days from England marks the formal change of administration through the production of a new commission from the Lords Proprietors. Pyke's commission is the principal instrument of authority, taking immediate effect on its reading at the United Castle. The reception by Bazett as the chief member of the working establishment, with Cason and French as assistants, confirms the four-man working structure as the body to which the new Governor was handed the colony. The transfer takes effect without any signed receipt from Boucher, who had already left ten days earlier in the <i>Recovery</i>. The public reception of Pyke by the inhabitants, who professed their joy unanimously, performs the institutional function of validating the change of government at the level of the governed community. The expressions of relief have evidential weight against the departed Governor, since the inhabitants' statements were entered on the consultation as the foundation of the charges that follow. The declaration that the island would have been in a famishing condition had Boucher stayed longer fixes a public

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			ground for the directors' eventual judgement on his administration. The findings on the Company's livestock supply the working measure of Boucher's stewardship. The estate that had carried 304 head of neat cattle by John How's count of 9 October 1712, with 53 swine, 91 turkeys, 79 dunghill fowl, 33 waterfowl and 41 sheep at Cason's monthly return of 9 December 1712, was now reduced to about sixty head of black cattle alone. The complete elimination of the swine, sheep, goats, deer and all poultry, against the inherited herd recorded under Roberts, marks a near total collapse of the consolidated plantation economy that had been built up in 1710 and 1711. The stripping of the Fort, including locks and keys removed from doors, gives a working list of personal appropriation by the departing Governor. Locks and keys were portable hardware of significant value, but their removal also made the Fort itself insecure and useless for the storage of arms, powder and stores until replacement hardware could be obtained from the next shipping. Speculations Boucher's departure ten days before the <i>Rochester</i> arrived was timed so as to be off the island before the new Governor could take possession and inventory the establishment. Had Boucher remained until Pyke's arrival, the formal handover would have required a signed inventory and a personal account of the livestock, the Fort hardware, the Plantation House and the garden. By leaving on the <i>Recovery</i> under Heathfield, Boucher placed his account beyond the reach of any island-side audit and left the documentary record to be assembled by his successors from the testimony of the inhabitants and the working members of the council. The specific reduction of the inherited herd to sixty head of black cattle, alongside the disappearance of every other species, suggests that Boucher had been provisioning his own household and the voyage home through slaughter rather than through purchase from the planters. The garden at the Plantation House, dug up and laid waste with only plantain trees and cabbage remaining for his uses, supports the reading that the country estate had been worked exclusively as the Governor's private provisioning base in the closing months of the administration rather than as a Company plantation.
159	150	In Short the Complaints of matter of Fact Alledged by the People in Generall are So many and So great we Scarce think it Possible tho' it may be very bad, it Should all be true But resolve to make Diligent inquiry into those Particulars that are of Greatest moment and hope to find things much better than they have been represented unto us. As to the fortifications Nothing has bin done to the Castle Since Governour Roberts went away Except finnish ing his own Appartments and the other buildings which were not finnishd by Governour Roberts are as he left them, only by, this Long tyme they have bin Neglected that they will need very good repair or Else must fall to Ruine. There is added to the Castle two wings being a large broad Wall 3 [-] 0 [-] on which there are planted thirty fine Guns this is a very great weakning to the Castle because it makes abridge to Enter the Top of it by any inland Enemy that comes down the hills, this w[ill] certainly makes the Castle Look very beautifull towards the Sea and is Ornamentall Enough but until the Hon[orable] Company be at Some further Charge to fortifie Each Side of the Castle where those wings joine to it the Castle to the People of the Countrey will be no more Secure then any other House he had designed on the Inside of those Walls to build Store Houses	In short, the complaints of matters of fact alleged by the people in general are so many, and so great, that we can scarcely think it possible, though it may be very bad, it should all be true. We resolved to make diligent inquiry into those particulars that are of greatest moment, and we hope to find things much better than they have been represented to us. As to the fortifications, nothing had been done to the Castle since Governor Roberts went away, except finishing his own apartments and the other buildings, which had not been completed by Governor Roberts and were left as he left them. By this length of time they had been so neglected that they would either need very good repair or else must fall to ruin. There had been added to the Castle two wings, being a large broad parapet wall on which there were planted thirty fine guns. This was a very great strengthening to the Castle, because it stopped an enemy that might come down the hills, and the walls certainly made the Castle look very beautiful towards the sea and as ornamental enough. Unless, however, the Honourable Company bore some further charge to fortify each side of the Castle, where those wings joined to it, the people of the country would be no more secure than in any other house. Pyke had designed on the inside of those walls to build storehouses and barracks. As yet, there was nothing at all done towards

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
		Barrocks &c But there is nothing at all done towards it more then a Peece of wall about One Hundred and twenty foot Long and Eight foot high. Margin Notes: Inquiry to be made of y[e] truth. touching fortifications The two Wings w[t]h 30 of Guns Beautifull but bu[t] weakning So that it must be Allow[d]	them, no more than a piece of wall about 120 feet long and eight feet high. Interpretations The new Governor's careful framing of the inhabitants' complaints, hedged with the qualification that they could scarcely all be true, performs an evidential function. It places the new administration in the position of independent investigator rather than partisan recipient of accusations against a predecessor. The undertaking to make diligent inquiry into those particulars of greatest moment establishes a procedural standard against which the directors in London could later assess the conclusions reached. The state of the Castle works supplies a precise institutional finding. Boucher's three-year administration had added nothing to the Castle beyond completing the building works left unfinished by Roberts on his departure in 1711, and even those had been completed only so far as the Governor's own apartments and certain other buildings. The pattern shows construction expenditure being concentrated on the Governor's personal accommodation while the principal defensive works were left to deteriorate. The verdict that the buildings must now either be repaired or fall to ruin gives a working measure of the cost passed to the incoming administration. The two wings carrying thirty guns illustrate the working layout of the Castle's defensive elevation. The parapet wall provided protection against descent from the hills above James Valley, the principal landward approach to the colony, and gave the structure an ornamental sea-facing presentation. The qualification that the people of the country would otherwise be no more secure than in any other house identifies the wings as a partial solution: they protected the central work but exposed the junctions where the wings joined the main Castle. The further fortification of these junctions was identified as a charge for the directors to authorise. The 120-foot section of wall, eight feet high, marks the visible state of the storehouse and barracks project at the moment of handover. Pyke's design for storehouses and barracks against the inside of the wings provides the working response to the long-standing housing problem for officers and stores following the earlier demolition of James Fort, which had triggered the back-payment of house rent to Porteous and French on 3 November 1713. The Castle wings now offered a built perimeter against which permanent service buildings could be raised at relatively modest additional cost. Speculations Boucher's concentration of construction effort on his own apartments and on completing certain other buildings left unfinished by Roberts, rather than on the Castle's defensive integrity or on storehouses and barracks, suggests an administrative priority of personal comfort rather than institutional investment. The pattern aligns with the stripping of the Fort hardware on departure: the works carried out under Boucher's authority appear to have been treated as fittings to the Governor's residence rather than as additions to the colony's fixed estate. The lack of progress on barracks left officers continuing to pay private house rent into the new administration. The deliberate language describing the parapet wall as making the Castle look very beautiful towards the sea and as ornamental enough points to a specific concern about the visible appearance of the colony to passing shipping. Indiamen and naval vessels making the road would have judged the Honourable Company's commitment to the island in part from the seaward face of the Castle. The wings as built therefore served a dual presentational and defensive purpose, with the impression conveyed to visiting commanders forming part of the working political economy of the colony.

160	151	Island St Helena. At a Consultation Held on Fryday the 9[th] day of July 1714 At the United Castle in James Vallay Pres[ent] The Worship[ll] Isaac Pyke Esq[r] Gov[r] George Haswell Dep[tly] Gov[r] Edward Masborne 3[d] Matthew Bazett 4[th] Antipas Jovey 5[th] in Coun[ll] The Governours Commission being read last night Wee this day read the Honourable Companys Letter Consisting of Ninety Seven Parragraphs. Ordered that an Inventory be taken of what Goods the Governour found in the Castle Resolve that we proceed with all Possible Expedi tion to Dispatch the Shipp Rochester. Whereupon Sent an Order to Capt[n] William Browne to Deliver the Cargoe in his Ship Consign[d] to this place Ordered that M[r] John Goodwin one of the Writers in the Store Attend the delivery of the Goods a Shoar and take an Account of them Ordered. That for the better dispatch of Said Ship the Comp[s] Long boat and Lanch be lett to them Ordered Margin Notes: Gov[r]s Comission &c was read. Inventory of Goods in the Castle taken to Dispatch Shipp Rochester. Cargoe to be Delivered. M[r] Goodwin to receive them Boats Lent the Ship	Island of St Helena. At a consultation held on Friday 9 July 1714 at the United Castle in James Valley. Present: the Worshipful Isaac Pyke Esquire, Governor; George Haswell, Deputy Governor; Edward Mashborne, third; Matthew Bazett, fourth; Antipas Tovey, fifth in council. The Governor's commission having been read the previous night, the council this day read the Honourable Company's letter, consisting of 97 paragraphs. Ordered that an inventory be taken of what goods the new Governor found in the Castle. Resolved to proceed with all possible expedition to dispatch the ship <i>Rochester</i>. Whereupon an order was sent to Captain William Browne to deliver the cargo in his ship consigned to this place. Ordered that John Goodwin, one of the writers in the store, attend the delivery of the goods on shore and take an account of them. Ordered that for the better dispatch of the ship, the Company's long boat and launch be left to them. Interpretations The first regular consultation under Pyke confirms the restored five-man council structure, with the Governor flanked by Haswell as Deputy Governor and three further members. The reduction to four men that had held under Boucher from late 1712 is now closed. Edward Mashborne returns to the establishment, having previously served as Deputy Governor under Roberts and departed in July 1711. The recall of officers with earlier island experience provided continuity of working knowledge against which the new commissions from London could be exercised. The reading of the 97-paragraph letter from the Honourable Company on the first working day of the new administration establishes the document as the operative instruction set for the term. Earlier general letters had been read paragraph by paragraph over successive consultation days, in the practice settled under Boucher's 16 August 1711 resolution. The unbroken reading at a single sitting marks Pyke's intention to bring the full instructions immediately into the joint knowledge of the council. The order for an inventory of the goods in the Castle is the formal counterpart to the findings of the previous day on the stripped state of the Fort. By minuting a fresh inventory at the opening of his term, Pyke fixes the documentary baseline against which any future accounting of his own administration would be measured. The mechanism transfers the evidential weight from the inhabitants' verbal complaints to a council-ordered record. The arrangements for dispatching the <i>Rochester</i> show the working coordination between the council, the visiting ship's master and the store establishment. Captain William Browne received the council's order to deliver the consigned cargo, while John Goodwin attended the landing as the store-side check on quantities. The release of the Company's long boat and launch to the ship supplied the master with the additional working capacity needed to discharge promptly, against a schedule that the council wished to compress in order to return the ship to England. Speculations The presence of John Goodwin as one of the writers in the store, attending the delivery of the <i>Rochester's</i> cargo, points to the continuation of his earlier role from the spring of 1714, when he had given evidence at the Bazett interrogation of 1 April 1714. The retention of the store-side staff across the change of administration suggests that Pyke and his council, while pressing investigations against Boucher's stewardship, did not regard the writers and clerical staff

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			as compromised. The continuity preserved the documentary memory of the store at the moment when the new administration most needed to test the figures inherited from the outgoing one. The single-day reading of the full 97 paragraphs of the Company's letter, rather than the previous paragraph-by-paragraph schedule, suggests that Pyke had carried fresh memory of the document from his London briefing and did not need the deliberative pace adopted by Boucher's council in 1711. By placing the entire instruction set before the joint membership in one sitting, Pyke also forestalled any later claim by an individual councillor that a particular paragraph had not been brought to their attention in the working order of business.
161	152	Ordered that the Captaine be wrote too, to Send all the Companys Servants under the Character of Soldiers on Shoar. It being in the Honour[ble] Companys Letter ordered to peruse their former Letters Sent by the Ships Toddington Thistleworth, Abbingdon and Susannah We desired M[r] Bazett to produce them who immediatly did produce the Thistleworth & Abbingdons Letters, But Saith the Companys Letter by the Susannah was not in the Office nor never was Coppy[d] in the book Neither was there the Toddington Letter, But that the late Governour Boucher had carryd the Said Letters away with him, Then referd the further Consideration of the Said Affair till next Consultation Day that there may be more Opportunity to dispatch the Rochester Whereas the Honour[ble] Company in their Letter make mention of one M[r] Man whom they Sent as Surgeon to this Island, but Since their Writing the Said Letter upon M[r] Mans declineing to goe, We knowing M[r] Price was appointed by the Committee in his Stead and he haveing the Companys Order to come on board the Rochester with his Necessaries We doe therefore Acknowledge him as Surgeon of this Island. Ordered that M[r] Matthew Bazett do take the Charge of the Stores as Ordered in the Hono[ble] Comp[s] Letter Parr 8 § 3 8. and doe report the Same Ordered that M[r] Jovey doe take Possession of the Clerks Office and give an Acco[t] what books & Papers are there. Ordered that Gunner French do deliver an Account of the Garrison Stores in his Custody Ordered that M[r] Corteous give an Acco[t] of what Medicines or Surgeons Instruments of the Hono[ble] Companys are now remaining in his Custody. Coppy Margin Notes: Soldiers to be Sent on Shoar. Ord[r] to peruse Comp[s] Letters one Wanting. M[r] Man declined to come Surgeon M[r] Price was thus Appointed as Such. M[r] Bazett to take Charge of y[e] Stores M[r] Jovey to take Possess[i]on of the Cl[er]ks Office G[un]er to Deliv[r] his Account Surg[e]on to give Acc[t] of Medicines.	Ordered that the captain be required to send all the Company's servants under the character of soldiers ashore. The Honourable Company's letter having ordered the perusal of their former letters sent by the ships <i>Toddington</i>, <i>Thistleworth</i>, <i>Abingdon</i> and <i>Susannah</i>, the council desired Bazett to produce them, who immediately produced the <i>Thistleworth</i> and <i>Abingdon</i> letters. The Company's letter by the <i>Susannah</i>, however, was not in the office, nor had it ever been copied into the book, neither was the <i>Toddington</i> letter there. The late Governor Boucher had carried these letters away with him. The council referred the further consideration of the affair to the next consultation day, so that there might be more opportunity to dispatch the <i>Rochester</i>. The Honourable Company in their letter made mention of one Mr Man, whom they had sent as surgeon to this island. Since the writing of that letter, on Mr Man's declining to go, and knowing that Mr Price had been appointed by the Committee in his place, and that he had come on board the <i>Rochester</i> with his necessities by the Company's order, the council acknowledged him as surgeon of this island. Ordered that Matthew Bazett take the charge of the stores, as directed in the Honourable Company's letter paragraph 38, and report the same. Ordered that Mr Tovey take possession of the Clerk's office and give an account of what books and papers are there. Ordered that Gunner French deliver an account of the Garrison stores in his custody. Ordered that Mr Porteous give an account of what medicines or surgeons' instruments of the Honourable Company are now remaining in his custody. Interpretations The discovery that two of the four named general letters were missing from the council's records, and that the <i>Susannah</i> letter had never been copied into the book, identifies a serious failure of documentary discipline under the previous administration. The general letters were the principal standing instructions of the Honourable Company, against which every consultation order was to be tested. Their absence from the office, taken with the report that Boucher had carried them away, undermined the working ability of the new council to reconstruct the basis on which earlier decisions had been made. The acknowledgement of Mr Price as surgeon, in place of the Mr Man named in the general letter, operates as a council ratification of a subsequent committee decision in London. The mechanism shows how the directors' authority was exercised through layered instruments: the general letter named the original officer, but a later committee minute substituted Price after Man declined, and the local council was required to give effect to the substitution through formal acknowledgement at the consultation. Price's arrival on the <i>Rochester</i> with his necessities

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			provided the practical evidence on which the council acted. The distribution of charge across the establishment, with Bazett over the stores under paragraph 38, Tovey over the Clerk's office, French over the garrison stores and Porteous over the medical equipment, fixes departmental responsibility from the opening of the term. Each officer was required to produce a separate account of what had been received. The arrangement repeats the portfolio division established under Boucher at the consultation of 16 August 1711, but with the addition of explicit accounting obligations on each portfolio holder at the moment of transfer. The instruction that all Company servants embarked on the <i>Rochester</i> under the character of soldiers be sent ashore identifies the working device by which the directors had moved fresh personnel out to the island. Engaging them under military character allowed their transport to be handled through the ship's company at the standard victualling and wage rates rather than as passengers, while preserving the directors' ability to assign them on arrival to whatever civil or military role the new administration required. Speculations Boucher's removal of the <i>Toddington</i> and <i>Susannah</i> letters, together with the failure to copy the <i>Susannah</i> letter into the book at any point during his administration, points to a deliberate restriction of access to the most authoritative instructions available on the island. The <i>Toddington</i> letter of 17 April 1711 had carried the salary scale by paragraph 45 and the pricing rule by paragraph 37, both of which were applied repeatedly during the period. By removing the originals, Boucher ensured that any further question concerning the construction of these paragraphs could no longer be tested against the document on the island itself. The careful ordering of the inventory exercises across stores, Clerk's office, garrison and medical chest, all initiated within the first two consultations of the new administration, suggests that Pyke had arrived with explicit instructions to construct a documentary record against the predecessor administration. The accounts to be produced were not framed as routine handovers but as formal returns from named officers, against which the directors in London could match the property they had consigned over the preceding years to what was actually present on the island in July 1714.
162	153	Coppy of the Govern[r]s Comission. The United Company of Merchants of England Trading to the East Indies To all to whom these Presents Shall come Send Greeting Know Yee That the Said United Company reposing especiall trust and Confidence in the Fidelity Prudence Justice & Circumspec tion of Captain Isaac Pyke of London Gentleman have made Constituted Ordained and Appointed and by these Presents do make Constitute Ordain & Appoint the Said Captain Isaac Pyke to be Governour of the Island St Helena Giving and hereby granting to him full Power & Authority to Execute all & Every the Powers & Authoritys Appertain ing to the Office & Place of Governour of St Helena aforesd by and According to Such Orders and Directions as have been from tyme to tyme establisht by the Lo[r]ds Proprietors of that Island and were formerly Enjoyed by the late Governo[r] or as he the Said Captain Isaac Pyke Shall from tyme to tyme receive under the hands of the present Court of Directors of the Said United Company or under the hands of the Court of Directors for the tyme being of the Said Company or any Thirteen or more of them, And to continue in the Excercise of the Same dureing Pleasure and untill the contrary thereof Shall be Signified under the Seale of the Said United Company or under the hands of Thirteen or more of the Court of Directors of the Said Company for the tyme being And	Copy of the Governor's commission. The United Company of Merchants of England Trading to the East Indies, to all to whom these presents shall come, sent greeting. The said United Company, reposing especial trust and confidence in the fidelity, prudence, justice and circumspection of Captain Isaac Pyke of London, gentleman, had constituted, ordained and appointed, and by these presents did make, constitute, ordain and appoint, Captain Isaac Pyke to be Governor of the Island of St Helena. The Company gave and hereby granted to him full power and authority to execute all and every of the powers and authorities appertaining to the office and place of Governor of St Helena, by and according to such orders and directions as had from time to time been established by the Lords Proprietors of that island and as had formerly been enjoyed by the late Governor, or as Pyke should from time to time receive under the hands of the present Court of Directors of the United Company, or under the hands of the Court of Directors for the time being, or any thirteen or more of them, and to continue in the exercise of the same during pleasure, and until the contrary should be signified under the seal of the United Company, or under the hands of thirteen or more of the Court of Directors of the Company for the time being.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
		the Said United Company do hereby Direct and Appoint the Said Captain Isaac Pyke to do and Act in all their Affairs by and with the Advice Asistance and concurrence of the Persons following who are appointed of Councill at St Helena aforesaid Viz[t] M[r] George Hasswell. M[r] Edward Mashbone. M[r] Matthew Bazett Margin Notes: Copp[y] of the Gov[r]s Comission.	The United Company did also direct and appoint Pyke to do and act in all their affairs by and with the advice, assistance and concurrence of the persons following, who had been appointed of council at St Helena, namely Mr George Haswell, Mr Edward Mashborne, Mr Matthew Bazett Interpretations The commission to Pyke shows the formal instrument by which authority was conveyed from the Honourable Company in London to a single named officer on the island. The conjunction of fidelity, prudence, justice and circumspection sets out the qualifications the Company looked to in the holder, and ties any later removal to a finding that one or more of these had failed in practice. The opening phrasing therefore performs both an authorising and a conditional function. The reservation of power during pleasure, terminable under the Company's seal or under the hands of thirteen or more of the Court of Directors, fixes the Governor's tenure as continuously revocable. The mechanism preserves London's ability to recall the Governor at any moment, without proof of cause or formal hearing. The same instrument operated against Roberts and Boucher in the immediately preceding terms, and now arms the directors against Pyke from his first day in office. The reference to such orders and directions as had been established by the Lords Proprietors and as had formerly been enjoyed by the late Governor incorporates the entire body of previous instructions and customary practice into Pyke's working authority. The mechanism allows the Governor to act without having to await fresh instructions on every matter, while binding him to act within the limits already set by accumulated direction. The successive general letters now numbered up to 97 paragraphs in the Pyke letter form the working content of this incorporated body. The requirement that Pyke act with the advice, assistance and concurrence of the named councillors places the Governor's authority within a collegiate structure rather than a personal command. Haswell, Mashborne and Bazett, named first in that order, provide a working council that mixes a senior new appointment with two officers carrying institutional memory of earlier administrations. Mashborne had served as Deputy Governor under Roberts and had departed in July 1711, while Bazett had carried the island's working administration through the closing years of Boucher. Speculations The careful drafting of the revocation clause, in two limbs covering both the Company seal and the unsealed signatures of thirteen or more directors, points to recent practical experience in London of the difficulty of recalling a Governor through the seal alone. The unsealed signature route allowed the directors to act with greater speed and without the formal authentication of the Company's seal, which might be delayed by the requirements for its use. The two-track mechanism gave the Court the ability to remove a Governor at short notice if the working state of affairs on the island so required. The placing of Haswell first in the council list, ahead of Mashborne and Bazett, marks the directors' decision to bring a fresh officer over both the returning senior man and the long-serving local. Haswell had not appeared on the island in the earlier sequence under Roberts or Boucher and so brought no accumulated entanglement with the parties under investigation. The arrangement gave Pyke a Deputy Governor whose working alignment was with the metropolitan instructions rather than with any island faction.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
163	154	Bazett and M[r] Antipas Jovey and by, and with the Advice Asistance and Concurrence of the Councill of St Helena for the tyme being or the Major part of them. And do also hereby require all their Officers and Soldiers and other their Servants and all the Inhabitants on the Island St Helena to yield due Obedience & Submitt unto the Said Captain Isaac Pyke as their Governour as aforesaid And the Said United Company do by these Presents hereby revoke, Repeal Annull Deter mine and make void the Comission under their Common Seal Dated the Twenty Ninth day of March Anno Domini One Thousand Seven hundred and Eleven Given and Granted to Captain Benjamin Boucher of London Gentleman to be Governour of the Said Island St Helena and all the Powers and Authoritys given and granted thereby to the Said Captain Benjamin Boucher In Witness whereof the Said United Company have caused their Common Seal to be Affixed to these Presents this Twenty fourth day of February in the Twelfth Year of the Reign of Her Most Excellent Majesty Anne by the Grace of Great Britain France and Ireland Queen Defender of the Faith &c and in the year of our Lord One Thousand Seven hundred and thirteen. Ordered. That all Officers or Servants in the Honourable Companys Service be continued for the present in their Severall Stations. Is[aa]c Pyke Esq[r] Geo[rge] Haswell Edw[ard] Mashborne Matthew Bazett Sign[d] Antipas Jovey Margin Notes: Officers to Continue in their Stations.	Bazett and Mr Antipas Tovey, and by and with the advice, assistance and concurrence of the council of St Helena for the time being, or the major part of them. The Company also required all their officers and soldiers, and other their servants, and all the inhabitants on the Island of St Helena, to yield due obedience and submit unto Captain Isaac Pyke as their Governor as already mentioned. The United Company by these presents hereby revoked, repealed, annulled, determined and made void the commission under their Common Seal dated 29 March 1711, given and granted to Captain Benjamin Boucher of London, gentleman, to be Governor of the Island of St Helena, and all the powers and authorities given and granted thereby to Boucher. In witness whereof the United Company had caused their Common Seal to be affixed to these presents, this 24 February 1714, in the twelfth year of the reign of Her Most Excellent Majesty Anne, by the grace of God of Great Britain, France and Ireland Queen, Defender of the Faith, and so on, and in the year of our Lord 1713. Ordered that all officers or servants in the Honourable Company's service be continued for the present in their several stations. Signed by Isaac Pyke, Governor; George Haswell, Deputy Governor; Edward Mashborne, third in council; Matthew Bazett, fourth in council; Antipas Tovey, fifth in council. Interpretations The express revocation of Boucher's commission of 29 March 1711 marks the formal terminating act of the previous administration in metropolitan terms. The earlier commission is annulled by the same instrument that creates the new one, so that no overlap of authority can be claimed between the two Governors. The mechanism distinguishes the directors' position in London from the local position on the island, where Boucher's authority had effectively ceased on his physical departure on the <i>Recovery</i>. The requirement that all officers, soldiers, servants and inhabitants yield due obedience to Pyke as Governor extends the commission's effect beyond the salaried establishment to the entire population. The instrument operates not merely as an appointment but as a public order to the governed community, providing the legal foundation on which Pyke could later proceed against any inhabitant who declined to recognise his authority. The phrasing tracks the broader colonial practice of grounding civil obedience in the proprietorial commission rather than in the Crown directly. The dual dating of the instrument, 24 February 1714 in the twelfth year of Queen Anne, and 1713 in the year of our Lord, reflects the working practice of the legal new year in England before the calendar reform of 1752, under which the year changed on 25 March rather than 1 January. The commission was sealed in February under the old reckoning of 1713 and under the modern reckoning of 1714. The colony was now operating under both calendars at once for documentary purposes, with the modern reckoning carried through the consultation books. The continuation order at the foot, retaining all officers or servants in the Honourable Company's service for the present in their several stations, supplies a stabilising provision. It prevents an immediate vacuum below the council level and ensures that the working personnel, including the writers, store hands, garrison soldiers and trades servants, remain in place pending any further determination on individual cases by the new administration. Speculations The commission's careful incorporation of both the Common Seal and the requirement of thirteen or more

Film No	Page No.	OCR Transcription	Modern Summary with Analysis								
			directors as alternative mechanisms of revocation, when read against the formal revocation of Boucher's commission within the same instrument, suggests that the directors had specifically prepared the Pyke commission against the precise procedural objections that might have been raised on the Boucher side. The drafting closes off any argument that Boucher's authority continued after the Pyke commission took effect, and any claim that the Common Seal alone was an insufficient instrument of revocation. The signing of the consultation entry by all five members of the new council, immediately following the continuation order, performs a coordinated commitment to the new administration's first major executive act. By all subscribing on the same page as the commission and the continuation, Haswell, Mashborne, Bazett and Tovey each placed their personal authority behind the recognition of Pyke as Governor. The arrangement also bound Bazett, whose conduct under Boucher was already under inquiry, to the new dispensation from the first working day, leaving him no means of distancing himself from the order as the inquiry progressed.								
164	155	Island St Helena. At a Consultation held on Satturday the 10[th] day of July 1714 At the United Castle in James Vatley. Pres[ent] Isaac Pyke Esq[r] Governo[r] George Haswell Dep[t]y Governo[r] Edward Mashborne 3[d] Matthew Bazett 4[th] Antipas Jovey 5[th] in Council Upon veiwing the Honour[ble] Companys Store Houses and finding them readie to Drop down and not Capable to hold the Goods already in them, and no other Conveniency for them. Ordered that enquiry be made who can lett Ware Houses Roome to the Honour[ble] Company to hold the Cargoe now coming on Shoar, And that M[r] Clive do goe take deales and make good those Sheds that were formerly in the Store House yard for Beef and Pork and Such goods as are least Subject to take Damage. Ordered that the blacks who came by M[r] Sitwells Sloop be veiwed and that the Doctor be present to See them & report his opinion of their health which was done Acordingly as followeth An Acco[t] of Said Blacks viz[t] 27 Men 15 Women 42 Sound & Merchantable. 3 Women 1 Man 4 Return[d] as not Merchantable. And Margin Notes: Store Houses ready to fall. Ware Houses to be taken, and Clive to repair the Old Sheds. Blacks of the Sloop. Veiwed. their Number.	Island of St Helena. At a consultation held on Saturday 10 July 1714 at the United Castle in James Valley. Present: Isaac Pyke Esquire, Governor; George Haswell, Deputy Governor; Edward Mashborne, third; Matthew Bazett, fourth; Antipas Tovey, fifth in council. Upon viewing the Honourable Company's storehouses, the council found them ready to drop down and not capable of holding the goods already in them, with no other convenience for them. Ordered that enquiry be made as to who could let a warehouse room to the Honourable Company to hold the cargo now coming on shore. Ordered also that Mr Cleve go and take deals and make good those sheds that were formerly in the storehouse yard for beef and pork and such goods as were least subject to take damage. Ordered that the blacks who came by Mr Sitwell's sloop be viewed, and that the Doctor be present to see them, and to report his opinion of their health, which was done as follows. An account of the blacks, being 47 in total: <table><tr><td>Sound and merchantable</td></tr><tr><td>27 men</td></tr><tr><td>15 women</td></tr><tr><td>Sub-total 42</td></tr><tr><td>Returned as not merchantable</td></tr><tr><td>3 women</td></tr><tr><td>1 man</td></tr><tr><td>Sub-total 4</td></tr></table> Interpretations The state of the storehouses, ready to drop down and not capable of holding the goods already in them, gives a precise institutional finding on the physical infrastructure left by the previous administration. The arrival of the <i>Rochester's</i> cargo intensifies an existing failure: the buildings cannot hold what is already on the island, let alone what is now being landed. The order to enquire for a private warehouse to hire shifts the working stewardship of Company goods into private hands, a reversal of the standing model under which the Company maintained its own secure storage. Mr Cleve's deployment with deals to make good the sheds in the storehouse yard identifies a working practice of triage in storage management. The sheds were the lower-grade structures, reserved for goods less subject to damage, principally salt provisions such as beef and pork in cask. Reinstating these sheds preserves the central storehouse for higher-value or more vulnerable goods, while extending the working capacity through repair work that can be carried out by an island joiner without waiting for materials from England. 			The medical inspection of the blacks landed from Mr Sitwell's sloop, conducted by the new surgeon in the presence of the council, applies a quality-control mechanism to the slave trade as it operated through St Helena. The use of merchantable and not merchantable as the working categories adopts the language of mercantile assessment that applied to any commodity in trade. The classification of 42 as sound and 4 as not gives a working percentage of about 91 per cent acceptable from the parcel, which formed the basis for the financial settlement to follow. Mr Sitwell's sloop appears here as a private vessel of an interlope or licensed character carrying enslaved persons to St Helena outside the regular Company shipping routes. The presence of the sloop, and the council's willingness to view its cargo, illustrate the colony's working position within the wider Atlantic and Indian Ocean networks for the supply of enslaved labour. The Company's own slave purchasing through Madagascar and Bencoolen was supplemented when opportunity arose by purchases from vessels of this kind passing in the road. Speculations The decision to engage Cleve specifically for the shed work, on the second working day of the new administration, points to the council's working assessment that no other joiner on the island could be relied on to deliver an immediate repair against the cargo's arrival. Cleve had recently sold his property through the Worrall and Welch chain in 1713 and had appeared as one of the six lower-table petitioners on 13 October 1713 in the closing months of Boucher's government. His selection here suggests that the new council regarded him as a trusted free planter whose work could be charged out at a known rate against a known timetable. The clear separation of the four not merchantable from the forty-two sound at the moment of viewing, rather than after distribution to the planters, suggests the working purpose of the medical inspection in protecting the Company against later claims. By recording the assessment in the presence of the surgeon, the council fixed the parcel's composition for accounting purposes before any subsequent sickness or death could be attributed to the conditions on the island rather than to the state of the slaves on arrival.
165	156	And Judgeing it will be Necessary to give these new Slaves refreshment after a Long Passage Ordered that what blacks of the Honour[ble] Comp[s] are at Plantation House or Else where be Sent for to the Fort to Asist in Landing and bringing up the Cargoe, and all other busines laid aside for the present. Is[aa]c Pyke Esq[r] Geo[rge] Haswell Edw[d] Mashborne Matthew Bazett Antipas Jovey Island St Helena. At a Consultation Held on Monday the 12[th] day of July 1714 At the United Castle in James Valley. 		Blacks Sent for to help unload the Rochester. fowls brought fro[m] St Jago. one Kill[d] by Sam[l] Thornbo[rough]	The order to assemble the Honourable Company's enslaved workforce at the Fort, drawing them from Plantation House and elsewhere, illustrates the working pattern of mobilising the colony's labour for the unloading of incoming shipping. All other business was to be laid aside, marking the cargo discharge as the immediate priority of the establishment. The arrangement also brought the slaves into proximity with the newly arrived parcel from Sitwell's sloop, where they could form a single working pool during the discharge. The reference to refreshment for the new slaves after a long passage applies a working welfare practice to the recently landed parcel before any assignment to labour. The provision of food, rest and shelter was treated as a separate institutional duty owed to the Company's new property, securing the investment against the immediate risk of further loss following the long voyage. The same approach applied to other livestock landed from shipping, where conditioning before deployment was the standing practice. The Governor's personal importation of fowls from St Jago for the improvement of the island's breed identifies a deliberate restocking measure carried in the cargo of the <i>Rochester</i>. St Jago in the Cape Verde islands lay on the standard route from England to St Helena and supplied a recognised source of poultry for trans-shipment. The destruction of the Company's existing stock under the previous administration made the importation an essential rebuilding measure rather than a marginal addition, and gave Pyke a tangible early demonstration of the new regime's commitment to the recovery of the colony. The killing of one of the finest cocks by Samuel Thornborough's bird, within hours of the new stock being put ashore, presents the first concrete instance of the depletion problem under Pyke's administration. The detail that the offending bird belonged to a named inhabitant brings the matter into the council's working jurisdiction immediately, raising the question of liability for damage to Company property by a planter-owned animal. The reference to good proofs being made out points to a documented procedure of investigation rather than a summary determination. Speculations The Governor's decision to lay aside all other business in order to discharge the cargo points to a working assessment that the <i>Rochester's</i> rapid return to England outweighed even the inquiries into Boucher's administration that the new council had only just begun. The ship had crossed in 104 days and the directors in London would expect a similarly compressed turnaround. Pyke's choice to suspend the inventories ordered on 9 July 1714 for the duration of the discharge suggests that the working calendar of metropolitan shipping was setting the pace of the new administration's first month. The deployment of Sitwell's parcel of slaves alongside the Company's existing workforce on the cargo discharge, immediately after the medical inspection of the previous day, suggests that the council intended to demonstrate the new arrivals' fitness through observable performance. By placing the recently landed slaves in the working pool at the Fort, the council could test the assessment of merchantable made by the surgeon against the practical evidence of their capacity to labour, before any subsequent sale or distribution to the planters.
166	157	as his own Confession, and being an Old offender he was therefore Ordered to be put in Irons Imediatly, and afterwards to be whipt, and Sent to hard Labour for ten days. 		Offered to Sell the Company his Stock, Yams and Live Cattle. Ordered that the Said Petition be referrd' till tomorrow it being Generall Council day and the Council were then going to be busie in veiwing the Ware houses they wanted to Hire. The Petition of Samuel Brome praying leave to goe off the Island was Likewise referrd. Is[aa]c Pyke Esq[r] Geo[rge] Haswell Edw[d] Mashborne Matthew Bazett Antipas Jovey Island St Helena. At a Consultation Held on Tuesday the 13[th] day of July 1714 At the United Castle in James valley. Pres[ent] Isaac Pyke Esq[r] Governo[r] George Haswell Dep[ty] Gover[r] Edw[d] Mashborne 3[d] Matth[ew] Bazett 4 [...] Antipas Tovey 5[th] in Coun[ill] Ordered that Captain Mashborne go and See in what Condition the Honourable Companys Stock and Plantations are in, and what goods &c Stock belong to the Margin Notes: his Punnishm[t] Perkins request to goe off And offer of his Stock. Answer referrd. Also Sam[l] Bromes request. Cap[t] Mashborne to veiw y[e] Comp[s] Stock &c	offered to sell the Company his stock of yams and live cattle. Ordered that the petition be referred till tomorrow, it being General Council day, and the council being then going to be busy in viewing the warehouses they wanted to hire. The petition of Samuel Brome, praying leave to go off the island, was likewise referred. Signed by Isaac Pyke, Governor; George Haswell, Deputy Governor; Edward Mashborne, third in council; Matthew Bazett, fourth in council; Antipas Tovey, fifth in council. Island of St Helena. At a consultation held on Tuesday 13 July 1714 at the United Castle in James Valley. Present: Isaac Pyke Esquire, Governor; George Haswell, Deputy Governor; Edward Mashborne, third; Matthew Bazett, fourth; Antipas Tovey, fifth in council. Ordered that Captain Mashborne go and see in what condition the Honourable Company's stock and plantations were in, and what goods and stock belonged to the Interpretations The penalty imposed on Thornborough's cock applies the working procedure of the colony's criminal jurisdiction to an animal offender. The bird was treated as a recidivist, recorded as an old offender, and sentenced through the same instruments used against human transgressors: irons, whipping and hard labour for ten days. The procedure also rested on Thornborough's own confession as to the bird's prior conduct, supplying the evidential standard applied to human cases. The decision marks an early signal that the new administration intended to enforce the protection of Company property without distinction as to the source of the damage. The deferral of the Perkins and Brome petitions to a later council day, on the explicit ground that the council was occupied with the inspection of warehouses for hire, illustrates the working ordering of business in the first week of the new administration. Both petitions involved the departure of established servants from the island, and Perkins's case in particular carried an offer to sell working stock to the Company. The council's choice to prioritise the immediate storage problem over the resolution of these departure questions confirms the discharge of the <i>Rochester</i> as the controlling urgency. The designation of a General Council day, distinct from the ordinary working consultation, fixes a recurring institutional category within the colony's calendar. The general council was the appropriate forum for the inspection of warehouses, the conduct of inventories and the broader administrative business of stocktaking. Routine petitions were therefore held over to be brought before a working council on the following day, separating the two streams of business and preventing the inspection programme from being diverted into individual cases. Captain Mashborne's deployment to view the state of the Company's stock and plantations, on his first substantive assignment as third in council, draws on his earlier service as Deputy Governor under Roberts. Mashborne had been the officer principally responsible for the consolidated estate from 1709 to 1711, and so carried the personal knowledge of the plantations against which the present condition could be compared. The order placed him in the position of expert assessor with documentary memory of the establishment as it had stood before Boucher's term. Speculations The recall of Mashborne as third in council, with his immediate assignment to the inspection of the Company's stock and plantations, points to a deliberate selection by the directors in London for the recovery of the colony's working estate. Mashborne had departed

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			on 3 July 1711 after over four years' service. His return on the new commission, with the express assignment to assess the state of the property, suggests that the directors had identified him as the officer best placed to quantify the loss between his earlier inventory and the present condition under Pyke. The mechanism gives the assessment evidential weight in any later proceeding against Boucher. The decision to apply the working language of penal correction to the offending cock, rather than disposing of the bird summarily, indicates a deliberate publication of the new administration's commitment to the protection of restocking measures. The Governor's personal importation of fowls from St Jago, together with the destruction of the inherited stock, made the early loss of one of the finest cocks a matter of broader policy. By recording the penalty in the consultation book with the working vocabulary of irons, whipping and hard labour, the council signalled to the inhabitants that damage to Company stock would be pursued through the formal record rather than left to private settlement.
167	158	the Said Honourable Company at the Plantation House M[r] Perkins his Petition of yesterday being read and Considered a Coppy as followeth Island St Helena To the Worshyp[ll] the Governour and Councill The Humble Petition of Thomas Perkins Serjant. Sheweth That your Petitioner being desirous to Depart this Island with his wife and familie, in the Sloop now in the road Humbly moves and prays your Worships leave and Liecence to goe off, as aforesaid he haveing Serv'd his full Contracted term a full tyme and Offers to your Worship the first Refusall of all his provisions, Live Cattle and other Effects, presumeing they may be of great use and Service to the Honour[ble] Company at this tyme when Such Provisions &c is very much wanted, as well to Supply their Generall Table as Negroes &c And your Petition[r] as in duty bound Shall ever pray &c Ordered that Captain Mashborne and M[r] Bazett on Account of the Honourable Company be appointed to Survey the Provisions &c and value the Same with any other Persons M[r] Perkins Shall Appoint. The Said M[r] Perkins Petition'd this day that he might make the best Advantage he could of his Blacks, Notwith Standing the late Governours order to the Contrary. It is resolved that he be allow'd Libertie to dispose of three of his blacks viz[t] Scipio, Jack with Meg and her Child at a publick Sale to the best bidder on Condition that he Carry with him off the Island the Slave called Jack, he being a noted thief and House breaker, and on further Condition that Margin Notes: Tho[s] Perkins's Petition Cap[t] Mashborne and M[r] Bazett to value y[e] Provisions & Value them. Perkins request to make y[e] best Advantage of his blacks. Granted upon Condition he Carry off Jack an Old Offender.	Honourable Company at the Plantation House. Mr Perkins's petition of yesterday was read and considered, a copy as follows: Island of St Helena. To the Worshipful the Governor and Council. The humble petition of Thomas Perkins, sergeant. Showeth that your petitioner, being desirous to depart this island with his wife and family in the sloop now in the road, humbly moves and prays your Worships' leave and licence to go off, as already mentioned, he having served his full contracted term and time. He offers to your Worships the first refusal of all his provisions, live cattle and other effects, professing they may be of great use and service to the Honourable Company at this time when such provisions are very much wanted, as well to supply their general table as the slaves and so forth. And your petitioner, as in duty bound, shall ever pray, and so on. Ordered that Captain Mashborne and Mr Bazett, on account of the Honourable Company, be appointed to survey the provisions and value the same, with any other persons Mr Perkins shall appoint. Perkins petitioned this day that he might make the best advantage he could of his blacks, notwithstanding the late Governor's order to the contrary. It was resolved that he be allowed liberty to dispose of three of his blacks, namely Scipio, Jack with Meg and her child, at public sale to the best bidder, on condition that he carry with him off the island the slave called Jack, he being an old thief and house breaker, and on further condition that Interpretations The form of the Perkins petition follows the working pattern of the colony for departure applications by Company servants. The petitioner sets out the completion of his contracted term, requests leave to embark on a specified vessel, and offers the first refusal of his property to the Honourable Company. The structure performs an institutional function: it places the Company in a position of priority over the planter market, while securing the petitioner against any later charge of carrying off property the Company might have claimed for itself. The valuation procedure adopted for the Perkins provisions, with Mashborne and Bazett as the Company's appointed surveyors and Perkins permitted to nominate any other persons, applies the working device of joint valuation by indifferent men. The arrangement balances the institutional and personal interests through a process that requires agreement on the figure. The mechanism replicates the valuation

			procedure applied to the Easthope estate on 28 March 1710 and to the Belvird estate on 7 March 1712. The override of the late Governor's order against the disposal of slaves illustrates how the new administration treated Boucher's executive directions as no longer binding. Boucher had presumably set the order in restraint of Perkins's earlier petition, or as part of a more general restriction on the alienation of slaves. The new council lifted the restriction at the first available consultation, treating the previous order as a personal direction of the departed Governor rather than as a settled regulation of the colony. The specific identification of Scipio, Jack with Meg and her child as the slaves to be sold, with the further condition that Jack be carried off the island, applies a working distinction between marketable property and individuals whose continued presence the council judged to be a public danger. Jack is described as an old thief and house breaker, a characterisation that placed him outside the ordinary slave market on the island and required his removal from the colony altogether as a condition of the sale. The mechanism treats removal from the island as a substitute for the more drastic penalties that might otherwise have been applied. Speculations The framing of the Perkins petition around the Honourable Company's need for provisions at the General Table and for the slaves points to a calculated positioning by the petitioner. Perkins identifies precisely the supply shortages that the new administration had recorded on its arrival, when it found the island stripped of all kinds of stock under Boucher. By offering his stock and provisions to the immediate institutional need, Perkins increased the prospect of obtaining the council's leave to depart on the sloop currently in the road, rather than waiting for a later opportunity. The decision to grant the disposal of the three named slaves immediately, in the face of Boucher's standing order to the contrary, suggests that the new council was prepared to use individual cases as a public demonstration of changed authority. The lifting of the order in Perkins's particular case, accompanied by the condition for the removal of Jack, allowed the council to relax the late Governor's direction while attaching a working safeguard that addressed a known public nuisance. The combination set the pattern for how Boucher-era restrictions would be handled going forward, on a case-by-case basis with conditions attached.
168	159	that if he be not carried off the Island he Shall be forfeited to the Honour[ble] Company Lords Proprietors and their Successors for ever. Copy of Said M[r] Perkins Petition as followeth. St Helena 13[th] July 1714 To the Worshyp[ll] Isaac Pyke Esq[r] Gov[r] and Council The Petition of Thom[s] Perkins Humbly Sheweth That whereas your Petition[r] designs this week to make an Out cry of Goods Slaves &c and the Late Governour having made an Order for the Prices of Slaves which was never Signd by the Council Your Petitioner Humbly begs that he may have leave to Sell his Slaves to the best Advantage, And your Petitioner As in duty bound Shall Ever pray &c Docter Corteous Petition'd that he might goe off the Island (as he had before to M[r] Bazett) in case a nother Surgeon Should come, and it being thought Absolutely Necessary alwayes to have two Surgeons (or a Surgeon and Apothecary) at least upon this Island, the Governour with consent of Council, made the following Proposall to M[r] Corteous That till another Asistant to the Surgeon was Sent or twas otherwise Ordered by the Honour[ble] Company	that if he be not carried off the island, the slave shall be forfeited to the Honourable Company, Lords Proprietors and their successors for ever. Copy of Perkins's petition as follows: St Helena 13 July 1714. To the Worshipful Isaac Pyke Esquire, Governor, and the Council. The petition of Thomas Perkins humbly sheweth. That whereas your petitioner designs this week to make an outcry of goods, slaves and so forth, and the late Governor having made an order for the prices of slaves which was never signed by the council, your petitioner humbly begs that he may have leave to sell his slaves to the best advantage. And your petitioner, as in duty bound, shall ever pray, and so on. Doctor Porteous petitioned that he might go off the island, as he had earlier mentioned to Mr Bazett, in case another surgeon should come. Another being thought absolutely necessary, always to have two surgeons on this island, that is to say a surgeon and an apothecary, at least, the Governor with the consent of council made the following proposal to Mr Porteous. That until another assistant to the surgeon was sent, or it was otherwise ordered by the Honourable

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
		he Should have thirty pound p[r] annum, and Dine at the fort as usuall &c The Said Corteous Petition as followeth Island Margin Notes: otherwise to be forfeited. Copy of Perkins Petition. Doct[r] Corteous request to goe off y[e] Island but was Incln'd w[t]h to Stay.	Company, he should have £30 0s 0d per annum, and dine at the Fort as usual, and so on. Porteous's petition as follows: Interpretations The forfeiture clause attached to the sale of Jack converts the council's removal condition into an enforceable property sanction. Should the purchaser fail to carry Jack off the island, ownership reverts to the Honourable Company, the Lords Proprietors and their successors for ever. The mechanism transfers the cost of enforcement to the buyer, who must arrange the removal at his own expense as a condition of holding clear title. The same forfeiture device had been applied to the slave price ceilings of the proclamation of 20 December 1710, in which slaves bought above the cap were declared forfeit to the Lords Proprietors. The express challenge in Perkins's petition to the late Governor's order on slave prices, on the ground that it was never signed by the council, supplies a working test of the new administration's view of Boucher's unilateral directions. By identifying the defect in form, Perkins invites the council to treat the order as void from its making, rather than as a binding regulation now to be repealed. The council's grant of leave to sell to the best advantage accepts the argument and removes the cap by adjudication rather than by formal proclamation. The proposal to Porteous illustrates the working calculation by which the council retained a senior medical officer. Porteous had asked for leave to depart on the basis of Price's arrival, which had restored the establishment to one surgeon. The council determined that two surgeons were absolutely necessary, namely a surgeon and an apothecary at the least, and offered Porteous a reduced salary of £30 0s 0d per annum together with his diet at the Fort, replacing the £40 0s 0d arrangement settled on 3 November 1713 under which house rent had been included. The reduction reflects the restoration of his diet to the Fort as part of his living, and so removes the need for an allowance covering the rent of private lodging. The structural insistence on a surgeon-and-apothecary establishment, with two officers rather than one, identifies the working medical practice of the colony as drawing on the division between physic and pharmacy in the metropolitan tradition. The apothecary prepared and dispensed medicines, while the surgeon attended to wounds, surgery and clinical management. The colony's settled position required both functions to be present at all times to cover the working caseload of the garrison, the inhabitants and the slaves. Speculations The forfeiture-on-failure-to-remove clause attached to Jack's sale points to a calculated solution to a recurrent difficulty in the colony's penal practice. Outright manumission was not contemplated, and execution or extreme corporal punishment carried the loss of valuable Company property. By making the removal of Jack the consideration for the sale, the council disposed of a dangerous individual through the slave market while preserving the principle that he remained Company property until the buyer's compliance with the condition was complete. Failure to remove triggered forfeiture, returning him to the Company without the buyer having effective title. The reduction of Porteous's salary from £40 0s 0d to £30 0s 0d, with the restoration of his diet at the Fort, suggests that the Fort accommodation that had been unavailable in November 1713 owing to the demolition of James Fort had now been restored, presumably through the Castle wings and the works completed since. The new arrangement carries Porteous on terms that are formally less generous but practically equivalent, with the difference of £10 0s 0d treated as the value of his board. The mechanism leaves Porteous with little

			ground to refuse, since the alternative was to be granted his earlier petition for departure.
169	160	Island St Helena. To the Worshyp[ll] Isaac Pyke Esq[r]: Govern[r] & Coun[ll] of St Island. The most Humble Petition of William Corteous Surgeon. Humbly. Sheweth. That for as much as your Petitioner hath Serv'd the Honourable Company his full Contracted time and upwards on this their Island as Surgeon and haveing a great desire to goe off the Same in hopes of Bettering your Said Petitioners and familie's fortunes in Some Part of India, Humbly, prays (now another Surgeon is come from England) your Worship and Councell To grant your Said Petitioner and familie Leave and Licence to take Passage in the Ship Rochester or any other that may Arrive hereafter It having been your Petitioners Inclination to goe off Said Island before this tyme but for the Service of his Employers was very unwilling to Leave the Island Destitute of any Surgeon, Wherefore begs a readie Compliance July y[e] 13[th] 1714 And as in duty bound Shall for Ever pray &c Ordered that M[r] Prices Sallary be thirty nine Pounds per Annum as has been formerly Allow'd the Chief Surgeon here with Table &c and being Severally Acquainted therewith agreed to the Same Samuell Algate Corporall Petition'd to goe off referd to next Consultation day and is as followeth To the Worshyp[ll] Isaac Pyke Esq[r] Govern[r] & Councell. The Margin Notes: Doct[r] Corteous Petition to goe off Doct[r] Pr[i]ces Sallary.	Island of St Helena. To the Worshipful Isaac Pyke Esquire, Governor, and the Council of this island. The most humble petition of William Porteous, surgeon, humbly sheweth. That forasmuch as your petitioner had served the Honourable Company his full contracted time and upwards on this their island as surgeon, and having a great desire to go off the same in hopes of bettering your petitioner's and family's fortunes in some part of India, he humbly prayed, now that another surgeon was come from England, that your Worship and Council grant leave and licence to take passage in the ship <i>Rochester</i> or any other that might arrive hereafter. Your petitioner's inclination had been to go off the island before this time, but for the service of his employers he had been very unwilling to leave the island destitute of any surgeon, wherefore he begged a ready compliance. July 13 1714. And as in duty bound shall for ever pray, and so on. Ordered that Mr Price's salary be £39 0s 0d per annum, as had been formerly allowed the chief surgeon there, with table and so on, and being severally acquainted therewith agreed to the same. Samuel Algate, corporal, his petition to go off, was referred to the next consultation day, and is as follows: To the Worshipful Isaac Pyke Esquire, Governor, and Council. Interpretations The Porteous petition discloses the working pattern of officer mobility within the Honourable Company's eastern establishment. Porteous had completed his contracted term and looked to go off to some part of India, where opportunities for the betterment of officer fortunes were greater than on the smaller St Helena establishment. The pattern shows the island functioning as one node within a wider Company labour market, in which officers moved from one settlement to another to advance their careers and incomes. Porteous's framing of his earlier reluctance to depart, on the ground that he had been unwilling to leave the island destitute of any surgeon, supplies a working principle of officer succession in the medical service. The departing officer was expected to remain in post until a relief had arrived, with no formal vacancy permitted in the surgeon's role. The arrival of Price by the <i>Rochester</i> now released Porteous to apply for his discharge under the same procedural pattern that governed contracted terms throughout the colony. The settlement of Price's salary at £39 0s 0d per annum, expressly identified as the rate formerly allowed the chief surgeon, with table and other allowances, fixes the working pay of the principal medical officer on the island. The figure sits below the £40 0s 0d that had been paid to Porteous from 3 November 1713 inclusive of house rent, and above the £30 0s 0d offered to him on his retention in this consultation. The structure preserves the hierarchical distinction between the chief surgeon and the subordinate, while restoring the diet at the Fort to the senior officer as part of his settled provision. The deferral of Algate's petition to the next consultation day repeats the working device of holding over routine departure questions when the council's principal business was the discharge of incoming shipping and the inventory programme. Algate's case, as a corporal seeking to go off, fell within the established class of contracted servants completing their terms, and the deferral marks no adverse view of the petition itself, but rather the working order of priorities under which the new administration was now operating.

			Speculations The careful difference of £1 0s 0d between Porteous's revised salary of £30 0s 0d and the £29 0s 0d that would have matched Price's £39 0s 0d less the £10 0s 0d notional value of Fort diet, suggests an internal logic in the council's pay structure. Porteous was being placed on terms that recognised his experience and longer service on the island, while Price entered on the chief surgeon's rate as fixed under earlier arrangements. The result establishes Price as the senior officer with Porteous serving as the experienced second, an arrangement which fits the surgeon-and-apothecary model identified in the previous consultation. Porteous's express identification of India as the intended destination for the betterment of his fortunes, rather than England, points to a deliberate orientation toward the active eastern factories where Company medical practice generated significant private earnings alongside the official salary. The Bencoolen, Madras and Bombay establishments all carried a working surgeon's post with substantial perquisites in private practice among the European inhabitants and the country trade. The pattern places St Helena as a stepping stone in the eastern career rather than as a settled posting, helping to explain the high turnover of surgeons recorded across the present sequence.
170	161	The Humble Petition of Samuel Algate Corporall. Sheweth. That your Petitioner have Served the Honourable East India Company Nine years and upwards in the Capacity of a Soldier is desirous to Depart this Island in the Ship Rochester now in the road outward bound Humbly craves your Worsh[ips] leave to goe off with his wife as aforesaid And y[e] Petition[r] Shall ever pray &c Island St Helena. July 13[th] 1714 Is[aa]c Pyke Esq[r] Geo[rge] Hasswell Edw[d] Mashborne Matthew Bazett Antipas Tovey Margin Notes: Algate Petit[ion] to g[oe] off. +	The humble petition of Samuel Algate, corporal, sheweth. That your petitioner had served the Honourable East India Company nine years and upwards in the capacity of a soldier, and was desirous to depart this island in the ship <i>Rochester</i> now in the road outward bound. He humbly craved your Worships' leave to go off with his wife, as already mentioned. And your petitioner shall ever pray, and so on. Island of St Helena. 13 July 1714. Signed by Isaac Pyke, Governor; George Haswell, Deputy Governor; Edward Mashborne, third in council; Matthew Bazett, fourth in council; Antipas Tovey, fifth in council. Interpretations The Algate petition follows the established form for departure applications from soldiers of the garrison. The petitioner sets out his nine years and upwards in Company service, identifies the vessel by which he proposes to leave, and seeks leave to embark with his wife. The structure of the petition is identical in essentials to that used by Perkins on the same day, confirming the standard template that operated across the rank distinctions within the establishment. The completed contracted term was the working basis on which permission to depart was granted. The reference to the <i>Rochester</i> as outward bound identifies the ship's direction of return to England rather than its further sailing east. The colony lay on the principal route between London and the eastern factories, and ships embarked passengers in either direction depending on their station. The Algate departure as outward bound thus signals a return to England, in contrast to Porteous's intended passage to India which would require either a different ship or a transfer at the Cape or at Madagascar. The collective signatures of all five council members, immediately after the petition is set out, perform the same coordinated commitment seen in the entries of the previous days. The new administration was continuing to subscribe each consultation as a group, binding all members to the orders made and the petitions received. The pattern provides documentary uniformity across the early consultations under Pyke, against which any later challenge by an individual member would have to be measured.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			The recording of Algate as a soldier serving nine years and upwards establishes the working duration of the standard military contract on the island. Earlier rewrites have noted the discharge of Daniel King on 8 April 1712 after four years' service from the <i>Jane</i>, and the discharge of Mashborne on 3 July 1711 after over four years beyond his indenture. The nine-year service of Algate sits at the longer end of the recorded service patterns, indicating either an extended contract or repeated renewal of a standard term. Speculations The decision to enter the Algate petition in full into the consultation book, rather than to summarise it in a council order as had been done with most other petitions across the present sequence, points to the working purpose of preserving the documentary form of departure applications during the first weeks of the new administration. By recording the full petition, the new council established the template against which subsequent applications could be matched, reducing the risk of irregular departures or contested terms once the <i>Rochester</i> had sailed. The same pattern had been adopted for the Perkins petition the previous day. The timing of the Algate departure, coinciding with that of Perkins and the desired departure of Porteous, suggests that the closing days of the <i>Rochester's</i> lying in the road had brought forward a cluster of long-deferred departures from the garrison and the medical establishment. The arrival of a returning ship under the new commission, with the prospect of a relatively safe and well-provisioned passage to England, offered the working opportunity to discharge accumulated service obligations that had been held over during the closing months of Boucher's administration.
171	162	Island St Helena. At a Consultation Held on Fryday the 16[th] day of July 1714 At the United Castle in James Valley. Pres[ent] Isaac Pyke Esq[r] Governour George Haswell Dep[ty] Gov[r] Edward Mashborn[e] 3[d] Matthew Bazett 4[th] in the Country about the Hono[ble] Comp[s] business &c Antipas Tovey 5[th] in Councill. Ordered that both the Medicine Chests be Deliver'd to M[r] Price whom the Honour[ble] Company have Appointed Surgeon of this Island. The Petition of Francis Leech Planter being read praying to goe off the Island in the Sloop now in the Road. Resolved that no person have leave to goe off this Island, who have their Names in the Honour[ble] Companys Books till their Acounts in the Store be Settled. The Petition of Mary Nichols Spinster desireing leave to go off the Island being read it was granted She haveing no acco[t] in the Stores Coppy of the Said Petition. To the Worship[full] Isaac Pyke Esq[r] &c[a] Councill The Petition of Mary Nichols Spinster. Humbly Sheweth. That whereas your Petitioner haveing a great desire to goe to India in the Rochester now in the Road Your petitioner begs your Worship and Councells leave & Liberty that She may now goe off in the Rochester. And your Petitioner as in duty bound Shall ever pray &c Mary Nichols. This Margin Notes: Chests of Medicines to be Del[d] Doct[r] Price. no person to go off till Acc[ts] Settled. Mary Nichols desires to go off. her Petition.	Island of St Helena. At a consultation held on Friday 16 July 1714 at the United Castle in James Valley. Present: Isaac Pyke Esquire, Governor; George Haswell, Deputy Governor; Edward Mashborne, third; Matthew Bazett, fourth, away in the country on the Honourable Company's business; Antipas Tovey, fifth in council. The council ordered that both medicine chests be handed over to Mr Price, who had been appointed surgeon of the island by the Honourable Company. A petition was read from Francis Leech, planter, seeking leave to depart on the sloop then lying in the road. The council resolved that no one whose name appeared in the Honourable Company's books was to be granted leave to leave the island until that person's store account had been cleared. A petition was read from Mary Nichols, spinster, also seeking leave to depart. The request was granted, since she held no account in the stores. A copy of her petition was entered as follows. To the Worshipful Isaac Pyke Esquire and so on, and Council. The petition of Mary Nichols, spinster, humbly showed that the petitioner greatly wished to travel to India on the <i>Rochester</i>, then in the road, and asked the Governor and Council for leave and liberty to embark on that ship. And the petitioner, as in duty bound, would ever pray, and so on. Mary Nichols. Interpretations The handover of both medicine chests to Price completed the medical transfer from Porteous as chief surgeon. The chests held the operational stock of medicines and instruments for the island, and their assignment placed the incoming officer in full working control. The order extended the pattern of departmental inventory transfers begun on 9 July 1714, when responsibility for the stores, the Clerk's office, the

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			garrison stores and the medical chest had been distributed by name. The general rule that no person whose name appeared in the Company's books could be granted leave to depart until store accounts were settled introduced a departure-control mechanism keyed to outstanding balances. The rule reached from senior officers down to ordinary planters who ran tabs at the store. It blocked departing inhabitants from carrying unpaid debts off the island and gave the council direct leverage to compel settlement before passage was authorised. The application of the rule to Francis Leech, a free planter, showed that it bound the planter community as well as Company servants. The Leech family had recurred across the recent record, including the settlement of Robert Leech's estate and the division of Mary Leech's share ahead of her remarriage. The deferral of Francis Leech's departure illustrated the close working overlap between the planter community and the store-book economy that underwrote the colony's credit system. Mary Nichols's case operated as the working illustration of the new rule. Her status as a spinster, without any Company office or planter holding to generate entries in the books, placed her outside the credit relationships that tied most other inhabitants to the establishment, and her petition was granted on that ground. Her destination of India, rather than England, repeated the eastward orientation also seen in Porteous's intended passage and reinforced the colony's intermediate position on the route to the Company's principal eastern settlements. Speculations The introduction of the store-settlement rule at a moment when several long-serving servants and inhabitants were seeking discharge by the <i>Rochester</i> pointed to a calculated tightening of departure control by the new council. Under the previous administration, looser practice had allowed unrecovered balances to accumulate on the books of departing personnel, with little prospect of recovery in London. By imposing the rule from this consultation onward, the new administration set a working barrier against further loss and signalled to the inhabitants that the credit basis of the colony's economy would now be enforced. The decision to enter the Nichols petition in full into the book, while granting it without further discussion, pointed to a deliberate publication of her case as the working exemplar of the new rule. Setting out the petition and the absence of any store account made the practical effect of the resolution visible to any later applicant. The mechanism taught the rule through illustration rather than through abstract regulation, and gave subsequent petitioners a template against which to judge their own prospects.
172	163	This Petition was deliver'd by John Nichols her father this day the 16[th] July Allow'd that She, the Said Mary Nichols have Liberty to Depart in any Shipp. Order'd that the People in the Prison on Account of an intended Mutiny be inform'd that on Tuesday next they are to attend the Councill. Granted that Mary Nichols be allowed liberty to depart on any ship. The council ordered that the people in the prison on account of an intended mutiny be informed that on Tuesday next they were to attend the council. The petition of Thomas Free, planter, was read. Island of St Helena. To the Worshipful Isaac Pyke Esquire, Governor, and Council. The petition of Thomas Free humbly showed. That the petitioner, asking John Alexander, clerk, on Wednesday last for a deed and lease which the petitioner had earlier had this twelve months ago, but had not yet had as Alexander said, Alexander fell upon the petitioner and abused him most grossly, in such manner that the petitioner went in danger of his life.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
		much that I got in danger of my Life he allways told me it was not done, I have Likewise Sent to him, he Sent me the Same answer, I beleive your Worship and Councill will find an Order for it that I was to have one by reason I Petition'd for it as the usuall Customer was. Humbly praying that your Worship and Council will be pleas'd to grant me one In the Honour[ble] Companys Generall Letter by the Susannah Cap[t] Bunnell Comander there was an Order Sent for your Petitioner to be their Clark which M[r] Bazett can justifie for him Sue he has Seen it and read it but I would never gett it. I Sent it to the Late Gov[r] Captain Boucher at the Plantation House and Demanded it but I had a Volly of Curses Damm you, and Sink you, and Such reprobate Language and Swore heartily I Should not have it, and God damn you for a dogg I will have a Clark and a Councill of my own as well as that Old Stinking dogg Robers had, now it Seems that Generall Letter is Lo[s]t but that is no new thing for when Alexander was Clark before there was Severall Generall Letters and other Papers wanting then he laid that upon Govern[r] Poirrer who was dead, all to which I Margin Notes: Granted. Prison[ers] to attend the Councill Frees Petition against Jn[o] Alexander and Desires a Lease for Land. ab[ou]t his being Clark Gov[r] Bouchers Answer to him	Alexander always told him it was not done; the petitioner had likewise sent to him, who sent back the same answer. He believed the Governor and Council would find an order for it that the petitioner was to have one, the reason for his petitioning being that it was the usual custom. The petitioner humbly prayed that the Governor and Council would be pleased to grant him one. In the Honourable Company's general letter by the <i>Susannah</i>, Captain Pinnell commander, an order had been sent for the petitioner to be their clerk, which Mr Bazett could justify, for the petitioner had seen it and read it, but could never get it. He went to the late Governor Captain Boucher at the Plantation House and demanded it, but instead had a volley of curses, Damn you and sink you and such reprobate language, and Boucher swore heartily he should not have it, and God damn you for a dog, I will have a clerk and a council of my own as well as that old stinking dog Roberts had. Now it seems that general letter was lost, but this was no new thing, for when Alexander was clerk before, several general letters and other papers had been wanting. When he laid that upon Governor Poirier, who was dead, all to which Interpretations The case of John Nichols, attending in person to deliver his daughter's petition, illustrates how household members could carry petitions on behalf of those unable to appear in person. The council recorded the agent's identity and relationship to the petitioner alongside the grant, fixing on the record the basis on which the document had reached the consultation. The same procedural carefulness shaped the entries for departing inhabitants more generally, allowing the council to test the authenticity of each petition against a named bearer. The notice given to the mutiny prisoners that they were to attend the council on the following Tuesday set out a working procedure for reopening the case left over from the conspiracy of 8 July 1713. Those still in confinement had been held since the closing months of the previous administration. By calling them before the council in a regular sitting, the new administration placed the matter within the ordinary judicial business of the colony rather than treating it as a continuing executive detention, and gave the prisoners formal notice of the hearing date. The Free petition disclosed the working pattern by which clerks of council controlled access to documents in their custody. Free had earlier paid for a deed and lease that John Alexander, as clerk, had retained for twelve months without producing. Free's complaint identified the abuse of office that arose when the clerkship became the personal possession of an officer with grievances against particular inhabitants, and gave the council direct evidence of the institutional defect requiring reform. The recorded oaths attributed to Boucher at the Plantation House, framed in the petition as a verbatim exchange, illustrated the working political economy of the previous administration's clerk and council appointments. Boucher had refused to install Free as clerk in defiance of an order received by the <i>Susannah</i>, and had compared his arrangements to those of his predecessor Roberts. The detail that the general letter was now said to be lost, taken with the earlier finding on 9 July 1714 that Boucher had carried the <i>Susannah</i> letter away with him, tied the present grievance to the broader documentary failure already on the new council's record. Speculations The express linkage in Free's petition between the loss of the <i>Susannah</i> letter under Boucher and the earlier disappearance of general letters and papers under the same John Alexander when serving as clerk under

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			Governor Poirier suggested a pattern of repeated document loss running across multiple administrations. By placing the present complaint alongside the earlier failures, Free invited the new council to treat the issue as systemic rather than episodic, and to address it through reform of the clerkship rather than through the personal discipline of any one officer. The timing of Free's petition, brought forward in the week of Pyke's arrival and the inquiry into Boucher's stewardship, indicated a calculated choice to bring forward grievances that had been impossible to advance under the previous administration. The new council's openness to receiving complaints from the inhabitants offered Free the working opportunity to combine a personal claim for his lease with a public denunciation of Boucher's conduct. The pairing strengthened both elements of the case, since the institutional grievance reinforced the personal one and gave the council a documented basis for any further action against Alexander or against the departed Governor.
173	164	Irefer your Worship and Councill to the Councill Book N[o] 9 Except that he has tore them out which M[r] Mashborne & M[r] Bazett can give your Worship and Councell a further Acco[t] of, now he has a hole to Creep out of in Saying Gover[r] Boucher carried that Letter away with him. He the Said Alexander Stands Indebted to your Petitioner a pritty Large Sume of money but never could gett a farthing from him nor bring him to any manner of Account. But I could have no Justice done me in them days not questioning but your Worship and Councell will do me Justice now. July y[e] 16[th] 1714 And your Petitioner as in duty bound Shall ever pray &c Thomas Free. Ordered that the Merits of the Petition be inquired into asoon as Possible by M[r] Bazett and that the Consultation Book be Examined as to what Relates to the Said Petition and then Adjourn'd M[r] Alexander Saith that the late Govern[r] Boucher took the Susannahs Generall Letter along with him and that it was never Coppy'd in the Book. Is[aa]c Pyke Esq[r] Geo[rge] Haswell Edw[d] Mashborne Matthew Bazett Antipas Tovey Margin Notes: Referrd to M[r] Bazett. Gen[ll] Lett[r] p[r] Susan Carryd off by Gov[r] Bouch[er]	refer your Worship and Council to the council book number 9, except what he had torn out, of which Mr Mashborne and Mr Bazett could give your Worship and Council a further account. Now he had a hole to creep out of, saying Governor Boucher had carried that letter away with him. Alexander stood indebted to your petitioner in a fairly large sum of money, but the petitioner could never get a farthing out of him, nor bring him to any manner of account. The petitioner could have no justice done him in those days, not questioning but your Worship and Council would do him justice now. 16 July 1714. And your petitioner, as in duty bound, should ever pray, and so on. Thomas Free. The council ordered that the merits of the petition be inquired into as soon as possible by Mr Bazett, and that the consultation book be examined as to what related to the petition, and then adjourned. Mr Alexander said that the late Governor Boucher took the <i>Susannah's</i> general letter along with him, and that it was never copied in the book. Signed by Isaac Pyke, Governor; George Haswell, Deputy Governor; Edward Mashborne, third in council; Matthew Bazett, fourth in council; Antipas Tovey, fifth in council. Interpretations Free's reference to council book number 9, except for what Alexander had torn out, established the working evidential basis for the inquiry the council was now invited to undertake. The numbered series of consultation books formed the colony's standing record, and the loss of leaves through deliberate removal would have left visible gaps against which Mashborne and Bazett, both with institutional memory of the period, could give a further account. The petition treated the missing leaves as a separate matter from the missing general letter, and located the responsibility for each with a different officer. Alexander's defence, that the <i>Susannah's</i> general letter had been carried off by Boucher and never copied in the book, repeated the same explanation he had given the previous day when called on by the new council to produce the four general letters of the previous administration. The repetition placed Alexander in a fixed position: either the failure to copy the letter was his as clerk, or its absence from the office was Boucher's as departing Governor. The new council was thereby invited to determine the apportionment of blame between two officers who were no longer in the same physical place.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			The reference to Alexander's substantial debt to Free, with no farthing recovered and no account obtainable, brought the personal grievance into the same procedural frame as the institutional one. Both rested on Alexander's refusal to render documents or accounts in his possession. The pairing illustrated how the clerkship under the previous administration had operated as a position of leverage over the inhabitants, where private debts and official records were both held by the same hand against the interest of the petitioners. The council's order that the merits of the petition be inquired into by Bazett, with parallel examination of the consultation book, set out a working procedural response. Bazett was assigned to investigate the substance of Free's complaint, while the book itself was to be examined for whatever bore on the matter. The arrangement combined personal inquiry with documentary verification, and gave Bazett the working position of internal investigator over questions that touched directly on his own period of service under Boucher. Speculations The selection of Bazett as the officer to inquire into the merits of the Free petition, rather than the appointment of an external commission, pointed to a calculated decision by Pyke to test Bazett's willingness to confront the record of the previous administration. Bazett had stood at the centre of the working establishment under Boucher and had been the subject of the formal interrogation of 1 April 1714 over his refusal to sign the general letter. The new council's choice to entrust him with the Free inquiry created the working opportunity either for him to demonstrate independence from Boucher or to expose any continuing reluctance to act against the late Governor's officers. The recording of Alexander's bare assertion that Boucher had carried the <i>Susannah's</i> letter away and that the letter had never been copied, immediately followed by the formal signatures of all five council members closing the consultation, suggested a deliberate placement of the assertion on the record at the moment of greatest evidential weight. Alexander's statement would now have to be tested against the consultation book and against whatever further account Bazett produced. The mechanism preserved the assertion as a fixed reference point against which inconsistency in any later account could be measured.
174	165	Island St Helena. At a Consultation Held on Tuesday the 20th day of July 1714 At the United Castle in James Vatlley. Pres^{ent} Isaac Pyke Esq^r Govern^r George Haswell D^{ep}ty Gov^r Edward Mashborne 3^d Matthew Bazett 4th Antipas Tovey 5th in Councill Resolv'd That finding Captⁿ Brown Comander of the Rochester Dilatory in the Delivering his Cargoe notwithstanding the Governour has Spoke to him to hasten the Sending Goods on Shoar. Ordered. That a letter be drawn up and Sent him as followeth Captⁿ William Brown. (They	Island of St Helena. At a consultation held on Tuesday 20 July 1714 at the United Castle in James Valley. Present: Isaac Pyke Esquire, Governor; George Haswell, Deputy Governor; Edward Mashborne, third; Matthew Bazett, fourth; Antipas Tovey, fifth in council. Resolved that, finding Captain Brown, commander of the <i>Rochester</i>, dilatory in delivering his cargo, notwithstanding that the Governor had spoken to him to hasten the sending of goods on shore, the council ordered that a letter be drawn up and sent to him as follows. Captain William Brown. I am commanded by the Governor and council to advise you that on Thursday the 8th instant you arrived here. On Friday the 9th you sent on shore but one boat. On the 10th, three boats. On the 12th, being Monday, you sent two boats. On Tuesday the 13th, half a yawl load. On the 14th, were aground. On the 15th, you sent three boats. On the 16th, two boats. On the 17th, one boat and a half. On Monday the 19th, two boats. Whereas the council had expected, in this fair weather, at least five boat loads every day, so many having been sent from other ships with ease, which could by this time have unloaded four cargoes. Interpretations

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			The day-by-day enumeration of boat movements from the <i>Rochester</i> converted a general complaint about delay into a precise documentary instrument. The letter recorded the working pace of the discharge against the council's expectation of five boat loads daily in fair weather, and treated the gap between the two as the measure of the captain's default. The form of the protest matched the earlier protests directed against the commanders of the <i>Toddington</i> and the <i>Thistleworth</i> on 25 August 1711, in which the same day-counting method had been used to establish non-compliance with council orders. The reference to other ships discharging four cargoes in the same period set up a comparative benchmark against which the <i>Rochester's</i> performance could be measured. The colony's working knowledge of normal discharge rates from earlier shipping seasons was therefore being used as the standard for the present case, with the implication that Brown's pace fell so far below the established norm that explanation was required. The mechanism placed the burden of justification on the master rather than on the council. The decision to send a formal letter rather than to record a verbal direction reflected the procedural framework by which the council's authority was made enforceable in London. A written communication, delivered to the master, created a documentary record that could accompany the consultation home to the directors. Brown's reply, or his failure to comply after written notice, would form part of the working case against him should the council later need to make a formal protest at the Company's headquarters. The detail that the <i>Rochester</i> had been aground on 14 July supplied the working acknowledgement of one legitimate excuse for the pause in discharge on that day, while implicitly denying that this single circumstance could account for the more general pattern of delay. The council's careful enumeration of each day's actual performance, including the day of grounding, gave Brown no opportunity to claim that uncontrollable circumstances had been ignored in the assessment of his conduct. Speculations The choice to formalise the complaint against Brown in writing on 20 July 1714, twelve days after the <i>Rochester's</i> arrival, pointed to a calculated escalation by the new council. The Governor had earlier spoken to Brown directly without effect. By moving from oral instruction to written protest, the council placed the matter on the consultation record and gave Brown notice that further delay would now be documented against him in London. The mechanism was identical in form to the protests against the <i>Toddington</i> and <i>Thistleworth</i> commanders three years earlier, suggesting that the same procedural pattern was being applied as a settled response to recalcitrant masters. The decision to itemise every day of the discharge in the letter, rather than to make a general assertion of delay, indicated a deliberate evidentiary strategy. Each day's count was capable of independent verification by witnesses ashore and on the boats. By stating the figures precisely, the council made it difficult for Brown to dispute the general charge without contesting specific factual entries, each of which could be tested separately. The arrangement reduced the captain's room for negotiation and created a strong basis for any later proceedings against him in London.
175	166	They have Ordered also to tell you that M[r] Frost your Stuffd came this forenoon, and Reported that your Long boat came on Shoar this morning about Six a Clock with goods, but could not Land any the water being So very Boysterous, that She Lay at her Mooring Waiting an Opportunity Upon which M[r] Goodwin was Sent for and Ordered to See what goods were in	The council was further ordered to tell Brown that Mr Frost, your purser, came this forenoon and reported that your long boat came on shore this morning about six o'clock with goods, but could not land any, the water being so very turbulent that she lay at her moorings waiting an opportunity. Upon which Mr Goodwin was sent for and ordered to see what goods were on her,

Sheweth To your Worsh[ip] That we have Each of us Served the Hono[ble] East India Company on this Island Severall years but are Desireous of Seeing other parts of the world, and would gladly goe to Some of the Hono[ble] Companys Settlements in India to Serve as Soldiers when we promise to behave our Selves faithfully & honestly, and humbly pray we may be Allowed to go in the Shipp Rochester to Bencoolen where we are inform'd, She is bound, and beind we may be Listed to Serve the Said Honourable Comp[s] five years as Souldiers there And your Petitioners as in duty Margin Notes: Prisoners appear'd with the following Petition.	who immediately returned and said there was nothing in the long boat but one of your oars of so at sea, so that you have sent no goods on shore today, and yet sent our long boat away from the ship, at which the council wondered very much. I am, sir, your humble servant, Antipas Tovey. United Castle, St Helena. 20 July 1714. According to an order of council bearing date the 17th instant, that the prisoners should attend the council this day, they made their appearance with the following petition. St Helena. The Worshipful Isaac Pyke Esquire, Governor, and Council. The humble petition of William Gore, John Cane, Peter Towers, Edward Millard and Thomas Griffis. Showed that the petitioners had each of them served the Honourable East India Company on this island several years, but were desirous of seeing other parts of the world, and would gladly go to some of the Honourable Company's settlements in India, there to serve as soldiers, where they promised to behave themselves faithfully and honestly. The petitioners humbly prayed that they might be allowed to go on the ship <i>Rochester</i> to Bencoolen, where they were informed she was bound, and desired they might be listed to serve the Honourable Company five years as soldiers there. And your petitioners, as in duty Interpretations The report from Frost as purser, that the long boat had returned empty owing to a swell at the landing, supplied the immediate evidential basis for the council's further complaint to Brown. The verification through Goodwin, sent to inspect the long boat in person and to report on its contents, applied the same store-side check that had been deployed at the cargo discharge from 9 July onward. The mechanism prevented the captain from claiming credit for boat movements that had produced no actual landing of goods. The closing detail, that the <i>Rochester's</i> long boat had been sent back to the ship while the council's own boat remained ashore, identified a working sleight on the captain's part. The ship's boat had been kept off the working strength of the discharge, leaving the council's boat carrying the load. The express wondering of the council recorded the protest at this misuse of the auxiliary capacity that had been placed at the master's disposal precisely to accelerate the cargo's landing. The petition of the five soldiers introduced the working route by which St Helena soldiers transferred to the Company's eastern garrisons. The petitioners sought to be listed for five years at Bencoolen, a fresh contract on the eastern station rather than a discharge for return to England. The mechanism preserved their employment within the Company's service while moving them to a different posting, on terms that began afresh from the date of their listing at the new station. The names of the petitioners established the working identity of the five soldiers still confined since the conspiracy of 8 July 1713. William Gore and Thomas Griffis had been among the five ringleaders committed close prisoner in irons on that date, while the others appeared to fall within the wider group of those associated with the rising. The petition offered the new council a working solution that resolved their confinement through redeployment rather than through pardon, punishment or release on the island. Speculations The petition for transfer to Bencoolen as soldiers, rather than for release or for return to England, pointed to a calculated proposal designed to meet the new council's likely concerns. The petitioners had been held for over a year for an attempted mutiny, and any release

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			on the island would expose the new administration to the working risk of further trouble. By offering to enlist for five years at a distant station, the petitioners removed themselves from St Helena entirely and bound themselves to continued Company service. The arrangement gave Pyke a face-saving solution that disposed of the prisoners without an outright pardon and without the difficulty of carrying them home as condemned men. The deliberate framing of the petition as expressing a desire to see other parts of the world, rather than as a confession or apology for the earlier conspiracy, suggested coaching by an interested party. The five petitioners were unlikely to have produced a coordinated document in this form without assistance. Bazett or another officer with working knowledge of the case may have shaped the language to present the transfer as a positive career step rather than as a plea for mercy, allowing the new council to grant the request on commercial grounds rather than on grounds of clemency.
176	167	duty bound Shall Ever pray for the Hono[ble] East India Comp[a] of England and your Worsh[ips] happiness &c William Gore John Cane Thom[s] Griffiths the mark of Peter + Towers the mark of Edward G Mallard Haveing perused their Examination and affidavits against them and upon Looking over the Consultation book find their wicked design of Seizing the then Governour and Councill plundering the Hono[ble] Companys Store Houses with other evill Intentions, We don't think them proper Persons to be permitted to Stay upon this Island therefore Resolv'd and Acordingly Ordered. That there Petition be granted and being Indebted to the Honour[ble] Company and Sevrall other Persons on the Island That they work the Same out at Bencoolen, which they freely agreed to and glad they came off So well. The Governour acquainted the Councill that Richard Cleve Jouner brought him the keys of the Carpenters Shop on Saturday Last and Said he did not design to work any Longer for the Company but resolv'd to goe off in the first Ship that arriv[d] here. The Said Cleve was this day Sent for and as[k]t what he desigd to do now, who after Some debate Seemed willing to continue working for the Said Honor[ble] Company Acording to former Order But we Thinking five Shillings a day too great wages with the allowance of his diet besides have therefore thought fitt and Acordingly Ordered That the Said Cleve be treated with in this manner viz[t] Either by the great peice foot or yard and have his diett as usuall But before we proceed further in this matter Ordered That Margin Notes: their Crimes for which reason. Order'd to goe to Bencoolen. Cleve refused to work any Longer. Unless has y[el] Same Wages as formly. To be Treated with[.]	bound, should ever pray for the Honourable East India Company of England, and your Worship's happiness, and so on. William Gore. John Cane. Thomas Griffiths. The mark of Peter Towers. The mark of Edward Mallard. Having perused their examination and affidavits against them, and upon looking over the consultation book, the council found their wicked design of seizing the then Governor and Council, plundering the Honourable Company's storehouses with other evil intentions. The council did not think them proper persons to be permitted to stay upon this island, and therefore resolved and ordered accordingly. Ordered that their petition be granted, and they being indebted to the Honourable Company and several other persons on the island, the council ordered that they work the same out at Bencoolen, which they freely agreed to, and were glad they came off so well. The Governor acquainted the council that Richard Cleve, joiner, had brought him the keys of the carpenter's shop on Saturday last, and said he did not design to work any longer for the Company, but resolved to go off in the first ship that arrived here. Cleve was this day sent for, and asked what he designed to do now, who, after some debate, seemed willing to continue working for the Honourable Company according to former order. But the council, thinking five shillings a day too great wages, with the allowance of his diet besides, accordingly ordered that Cleve be treated with in this manner, namely either by the great, by foot or yard, and have his diet as usual. But before they proceeded further in this matter, ordered that Interpretations The signatures and marks at the foot of the petition recorded the working literacy of the five petitioners. William Gore, John Cane and Thomas Griffiths signed their own names, while Peter Towers and Edward Mallard made their marks. The convention of writing the mark of preceding the named individual identified the literate witness, while the cross or other symbol stood as the legal equivalent of a signature. The mixed pattern across the five was common among the rank-and-file of the garrison. The council's express finding that the five had designed to seize the then Governor and Council and plunder the Honourable Company's storehouses provided the formal record of the offences for which they had been confined since July 1713. The use of the consultation book and the examinations and affidavits already on file gave the new administration the working

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			documentary basis on which to dispose of the case, without the need for fresh proceedings. The finding was reached on inspection of the existing record rather than through a new trial. The grant of the petition on condition that the petitioners work out their debts at Bencoolen converted their attempted mutiny into a recovery mechanism for the colony's outstanding accounts. The debts to the Honourable Company and to several inhabitants on the island would be discharged through their continued service at the eastern station, where their wages could be applied directly against the balances. The arrangement preserved the Company's claims while removing the prisoners from St Helena. The handling of Richard Cleve illustrated the working flexibility of the new council in adjusting craftsman pay to the colony's straitened circumstances. Five shillings a day with diet had been Cleve's standing rate. The council judged this excessive and ordered that he be employed instead either by the great, by the foot or by the yard, with diet as usual. Piece rates replaced the day rate, transferring the productivity risk from the Company to the craftsman while preserving his subsistence at the Fort. Speculations The willingness of the five petitioners to accept the Bencoolen transfer as a working out of their debts indicated a calculated acceptance of the only realistic alternative to indefinite confinement on the island. The council's finding that they were not proper persons to be permitted to stay upon this island had closed the option of release within the colony. The Bencoolen route allowed them to escape continuing imprisonment, with the prospect of a fresh term at the eastern station replacing an open-ended punishment at St Helena. The recorded gladness that they came off so well captured the relative advantage of the arrangement against the more severe outcomes that could otherwise have followed. The decision to test alternative pay structures with Cleve, who had served the Company under previous administrations and had been among the six lower-table petitioners on 13 October 1713, pointed to a deliberate signal by the new council that the standing wages of the previous administration were no longer assumed. By placing Cleve on piece rates rather than on a daily wage, the council established a working precedent against which other craftsmen on day rates could later be reviewed. Cleve's centrality to the working economy of the Fort made him a useful first case in the broader pay reform.
177	168	Ordered That the Said Cleve take and bring in a true and Exact Acco[t] of all the Hono[ble] Companys Timber Deals &c. That are under his Care and them to be heated with as afores[d] Finding there is an absolute Necessity for the building a new Store house and being inform'd that Beals Orphans has a House and peice of ground Adjoining to the Hono[ble] Comp[s] Store house which Lies very Convenient to Enlarge the Same and will be very Commodious in the Regular building the new one Ordered That Captain Edward Mashborne and M[r] Bazett treat with M[r] Carne Guardian to Said Orphans about the Price and value of Said House and ground, on the Cheapest terms they can. The Governour and Councell finding that there is great a cou[n]t of Provisions upon this Island and that the Honour[ble] Company have no Cattle fitt to kill haveing but Sixty head of their own and them most breeders Ordered.	the council ordered that Cleve take and bring in a true and exact account of all the Honourable Company's timber, deals and so on, that were under his care, and then to be treated with as already mentioned. Finding there was an absolute necessity for the building of a new storehouse, and being informed that Beale's orphans had a house and piece of ground adjoining the Honourable Company's storehouse, which lay very convenient to enlarge the same, and would be very commodious in the regular building of the new one, the council ordered that Captain Edward Mashborne and Mr Bazett treat with Mr Carne, guardian to the orphans, about the price and value of the house and ground, on the cheapest terms they could. The Governor and council, finding that there was great want of provisions upon this island, and that the Honourable Company had no cattle fit to kill, having but sixty head of their own, and them most breeders, ordered that an advertisement be this day issued out, to inform those planters that had any stock of cattle and so on to dispose of, to treat with Captain Mashborne

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
		That an Advertisement be this Day Spread out to inform those planters that have any Stock of Cattle &c to dispose of, To treat with Captain Mashborne about them and he upon any Agreement make report Accordingly Ordered That till the Hono[ble] Companys Stock is increas'd We have two days in a week Salt provisions, and two days fish and the boats to be Constantly going a fishing Cap[t] Mashborne deliver'd the following Acco[t] of the Hono[ble] Companys Stock of Live provisions viz[t] Cattle viz[t] Swine Young & old 24 7 Bulls 9 Steers Sheep 3 15 Cows 12 Yearlings Fowles 26 6 Bullocks 1 Calf 10 Heifers 22 in all 60 head 38 By Margin Notes: and to take An Acc[t] of Comp[s] Timb[r] Beals Orphans House Adjoining to y[e] Store house. To be treated for, for Enlargeing y[e] old Stor[e]. Cap[t] Mashborn to buy Provisions Salt Provision to be Eat 2 days in a week & ffish 2 days more Acc[t] of y[e] Hono[ble] Comp[s] Stock.	about them, and he upon any agreement make report accordingly. Ordered that, until the Honourable Company's stock was increased, the council have two days in a week salt provisions, and two days fish, and the boats to be constantly going a-fishing. Captain Mashborne delivered the following account of the Honourable Company's stock of live provisions, namely Cattle: 7 Bulls 15 Cows 6 Bullocks 10 Heifers 9 Steers 12 Yearlings 1 Calf Sub-total 60 head Swine, young and old: 24 Sheep: 3 Fowls: 26 Interpretations The order that Cleve produce a true and exact account of all timber, deals and other materials under his care before any further negotiation of his pay applied the same accounting discipline to a tradesman that had been imposed at the officer level on 9 July 1714. The mechanism prevented Cleve from leaving the colony with either an unsettled materials inventory or an undisclosed surplus, and gave the council the working documentary basis on which to test his future productivity under the new piece-rate arrangement. The plan to acquire the Beale orphans' house and adjoining ground for the enlargement of the storehouse site applied the working device of orphan-estate acquisition to a colony infrastructure project. George Carne, as guardian to the orphans, held the working authority to negotiate the sale on their behalf. The recent partition of 30 October 1711 and the audit proceedings of 13 October 1713 had established the orphans' interest in the property, and the present transaction would convert that interest into cash for the orphans while securing the adjoining ground for the Company's purposes. The provisioning arrangement of two days salt provisions and two days fish each week, with the boats constantly going a-fishing, set out the working dietary regime under which the council would operate until the Company's stock was rebuilt. The remaining three days each week were not specified, suggesting that yams and other plantation produce were assumed as the standard daily fare. The fishing programme depended on the colony's working maritime capacity, including the long boat and the boat purchased from Captain Lesly on 25 November 1712. Mashborne's account of the Company's stock of live provisions confirmed the figure of about sixty head referred to in the consultation of 8 July 1714, with the precise breakdown showing that the herd consisted mainly of breeders. The 7 bulls and 15 cows formed the working breeding stock, while the 10 heifers and 12 yearlings represented the next generation. The 6 bullocks and 9 steers gave the only working slaughter capacity, against which the absence of swine other than the 24 young and old, and the residual 3 sheep and 26 fowls, identified the limits of available meat production for the colony. Speculations The decision to designate Mashborne as the sole negotiator with the planters for cattle purchases, rather than handling each transaction through the council, pointed to a working delegation of operational authority. Mashborne had been third in council under Roberts and had carried the working knowledge of the planter community through that earlier period. By

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			concentrating the negotiations in his hands, the council ensured a consistent valuation approach and avoided the risk that competing council members would drive up prices through uncoordinated bidding against the planters' herds. The careful linkage between the new storehouse project and the Beale orphans' adjoining ground revealed a calculated planning decision that combined two long-standing institutional difficulties. The orphans' estate had been the subject of contested audits since 1710, with the property still tied up in the consequences of the Hoskison case. The Company's pressing need for a new storehouse offered a working solution: the orphans could realise cash for their interest in the adjoining ground, while the Company secured the site needed for the regular building of the new storehouse. Both interests would be settled by the same transaction.
178	169	By the Govern[r] & Council An Advertisement. These are to give Notice to all or any of the Planters of this Island who are willing to dispose of any manner of Provisions to the Honour[ble] Company They may treat with Cap[t] Mashborne who is ready to agree with them upon their Applying themselves to him for that purpose. Dated at the United Castle in James valley this 20 day of July 1714 Sign'd p[r] order of Govern[r] and Council. p[r] Antipas Tovey Sec[ry] Whereas Thomas Perkins Serj[t] Presented his Petition to Gov[r] and Council on the 13[th] Instant Setting forth there in his Inclination to Depart this Island in the Sloop now in the road Offering to Sell his Provisions to the Honour[ble] Company Upon which Cap[t] Edward Mashborne and M[r] Bazett were appointed to go and veiw the Same and to agree with the Said Perkins on the best Terms they could for the Interest of the Said Honour[ble] Company, who Acordingly did and reported this day their agreement which is as followeth. That the Said Perkins offered to Sell his Plantation of yams and to give only two years tyme for digging the Said Provisions out of the Cabbage tree Land, and Eighteen months in the Gum wood Land which we well knowing not to be for the Honour[ble] Companys Interest as if they had Longer tyme and Considering the Said Perkins designd to Lease all his Land out for Seven years thought it Proper to agree for that Time and take the whole into the Said Honour[ble] Companys own hands for that within this tyme they could reap a good Number of Self planted Suckers besides those and the yams Already planted and Sufficient to make a very good plantation on the Hono[ble] Companys own Land that Lies now Empty for want of Suckers And therefore have agreed with the Said Thomas Perkins for all his Provisions which Consists of 17071 [..] young and ole and to Hire Thirty Acres of his Land and Margin Notes: Advertizem[en]t ab[t] Provisions. Perkins offer to Sell his Stock, Provisions, &c To be agreed for by Cap[t] Mash[borne] & M[r] Baz[ett] their Report.	By the Governor and Council. An advertisement. These were to give notice to all or any of the planters of this island who were willing to dispose of any manner of provisions to the Honourable Company, that they might treat with Captain Mashborne, who was authorised to agree with them upon their applying themselves to him for that purpose. Dated at the United Castle in James Valley this 20 July 1714. Signed by order of Governor and Council. Antipas Tovey, Secretary. Whereas Thomas Perkins, sergeant, presented his petition to the Governor and Council on the 13th instant, setting forth therein his inclination to depart this island in the sloop now in the road, offering to sell his provisions to the Honourable Company, upon which Captain Edward Mashborne and Mr Bazett were appointed to go and view the same, and to agree with Perkins on the best terms they could for the interest of the Honourable Company, who accordingly did, and reported this day their agreement, which was as follows. Perkins offered to sell his plantation of yams, and to give only two years' time for digging the provisions out of the cabbage tree land, and eighteen months in the gumwood land, which, the council well knowing not to be for the Honourable Company's interest, as if they had longer time, and considering Perkins designed to lease all his land out for seven years, thought it proper to agree for that time, and take the whole into the Honourable Company's own hands. The reason was that within this time they could reap a good number of self-planted suckers, besides those and the yams already planted, and sufficient to make a very good plantation on the Honourable Company's own land that lay now empty for want of suckers. The council therefore had agreed with Perkins for all his provisions, which consisted of 170,711 young and old, and his thirty acres of fine land. Interpretations The published advertisement operated as the working procurement notice for the council's cattle and provisions programme. It identified Mashborne as the single point of contact authorised to treat with planters, eliminated direct approaches to the council, and routed all dispositions through one named officer. The form of the notice, signed by the Secretary by order of Governor and Council, established the document as an instrument of the establishment rather than a personal direction of the Governor. Antipas Tovey's signature in the capacity of Secretary, rather than as fifth in council, identified the working device by which the council combined collective decision with documentary authentication. The Secretary's signature gave the advertisement its formal validity for public posting and circulation, while the order of Governor and Council recorded its

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			institutional source. The arrangement preserved the integrity of the consultation book as the principal record by referring to the order rather than reproducing the council members' individual signatures on every notice. The Perkins agreement showed the working calculation by which the council compared the immediate value of standing provisions against the longer prospect of self-planted suckers on the same ground. Perkins had offered two years for the cabbage tree land and eighteen months for the gumwood land, terms that the council judged insufficient. The seven-year period that Perkins had separately proposed for leasing his land out was treated as the relevant working horizon, and the council adopted that period for its own acquisition. The mechanism exploited Perkins's own valuation framework against his initial offer. The figure of 170,711 yams, taken together with the thirty acres of fine land, supplied the working measure of the Perkins plantation as a productive unit. The yam count gave the immediate provisioning value, while the seven-year tenure of the land provided the basis for continued production through self-seeding suckers. The combined acquisition added substantially to the depleted plantation stock noted in Mashborne's account of the same day, where the absence of provisions had been the principal driver of the new procurement programme. Speculations The choice to take the Perkins plantation into the Company's own hands for seven years, rather than to purchase only the standing provisions and to lease the land separately as Perkins had proposed, pointed to a calculated decision to rebuild the colony's productive base through direct management rather than through tenancy. Perkins had been preparing to lease the land out for seven years to a private occupier. By stepping into that position, the Company secured both the cleared ground and the self-seeded suckers that would emerge over the period, against the depleted state of its own plantations following the Boucher years. The decision to agree Perkins's seven-year horizon, despite his shorter initial offer for the two land categories, suggested that the council recognised the value of consistency with Perkins's separate leasing plan. By matching the duration he had himself proposed for an external tenancy, the council neutralised any later complaint that the Company had taken the property on disadvantageous terms. The arrangement also gave Perkins immediate certainty for his departure, since the Company would step into the position he had been negotiating with external parties, removing the need for him to find a private lessee before the sloop sailed.
179	170	and House for the whole Term of Seven years rather then lett any body Else have it, at the price and Rate of Four Hundred Pounds the Said Land being well Stockt with Lemon trees, which will Save the buying of Lemons for the use of the Table, and the provisions at this very tyme worth upwards of three hundred Pounds Which agreement the Govern[r] and Councill was well pleased with beleiving it a good Bargaine for the Interest of the Honour[ble] Company therefore Ordered. That the Said Perkins be paid According to the purport of his Petition. Further Ordered. That Captain Mashborne and M[r] Bazett goe tomorrow into the Countrey and agree with the Said Perkins for all his Live Stock of Provisions at as Cheap Rates as they can. The Honour[ble] Company being at this tyme in great want of all Sorts, in hopes of Raiseing a Stock againe asoon as Possible, and not to be under the Necessity of buying allways. Is[aa]c Pyke Esq[r]	The provisions on the plantation were taken at the price and rate of £400 0s 0d for the whole term of seven years, the council preferring this arrangement to letting any other person have the property. The land was well stocked with lemon trees, which would save the cost of buying lemons for the use of the table, and the provisions at this very time were worth upwards of £300 0s 0d. The Governor and Council were well pleased with the agreement, believing it a good bargain for the interest of the Honourable Company. The council therefore ordered that Perkins be paid according to the purport of his petition. Further ordered that Captain Mashborne and Mr Bazett go tomorrow into the country and agree with Perkins for all his live stock of provisions at as cheap rates as they could, the Honourable Company being at this time in great want of all sorts, in hopes of raising a stock again as soon as possible, and not to be under the necessity of buying allways.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
		Geo[rge] Haswell Edw[d] Mashborne Matthew Bazett Antipas Tovey Island St Helena. At a Consultation Held on Tues day the 27[th] day of July 1714 At the United Castle in James valley Pres[ent] Isaac Pyke Esq[r] Governour George Haswell Dep[ty] Govern[r] Edward Mashborne 3 in Coun[ill] Matthew Bazett 4[th] [-.] Antipas Tovey 5[th] in Coun[ill] Captain Mashborne and M[r] Bazett reported this day that According to the Order Last Council day they had been into the Countrey, and agreed with M[r] Perkins for Severall things Margin Notes: approved of. Perkins to be p[ai]d. his Live Stock to be agreed for. the same reported. said.	Signed by Isaac Pyke, Governor; George Haswell, Deputy Governor; Edward Mashborne, third in council; Matthew Bazett, fourth in council; Antipas Tovey, fifth in council. Island of St Helena. At a consultation held on Tuesday 27 July 1714 at the United Castle in James Valley. Present: Isaac Pyke Esquire, Governor; George Haswell, Deputy Governor; Edward Mashborne, third; Matthew Bazett, fourth; Antipas Tovey, fifth in council. Captain Mashborne and Mr Bazett reported this day that, according to the order of the last council day, they had been into the country and agreed with Perkins for several things. Interpretations The valuation of the Perkins acquisition at £400 0s 0d, of which £300 0s 0d represented the standing provisions, fixed the working economic measure of the transaction. The remaining £100 0s 0d covered the land, the house and the lemon trees, the last of which carried the additional benefit of saving the recurring cost of buying lemons for the General Table. The mechanism gave the Honourable Company a productive estate with multiple income streams against a single capital outlay. The express preference for taking the property rather than allowing it to pass to any other person showed the council's working concern over the wider land market on the island. Perkins's plantation, with its lemon trees and standing yams, would have attracted competing planter interest if released. By stepping into the seven-year position Perkins had been preparing to offer to a private occupier, the council prevented the consolidation of the property in private hands and preserved the option to develop it directly as a Company plantation. The stated objective of raising a stock again as soon as possible, so as not to be under the necessity of buying always, captured the working principle behind the entire procurement programme of 20 July onward. The acquisition of Perkins's plantation, the advertisement for planters' provisions, the negotiations for Beale's orphans' adjoining ground and the new storehouse all formed parts of a coordinated effort to rebuild the colony's productive base after the depletions of the previous administration. The separation of the land-and-provisions agreement from the live stock agreement, with the council ordering Mashborne and Bazett to negotiate the live stock the following day, applied a working principle of staged procurement. The complex valuation of land, house, lemon trees and standing provisions had been completed and reported. The live stock represented a separate category of assessment, requiring its own working visit to the property and its own bargaining over rates with the seller. Speculations The valuation of the standing provisions at upwards of £300 0s 0d, in a single transaction with a departing sergeant, pointed to the working dimensions of the colony's provisioning economy. The figure substantially exceeded the equivalent line in the Belvird purchase of 7 March 1712, where ten acres of walled ground with about 70,000 yams had been valued at £145 0s 0d. The Perkins figure, against 170,711 yams as reported on 20 July 1714, gave a working unit rate roughly consistent with that earlier transaction and confirmed the stability of yam valuation across the period. The decision to send Mashborne and Bazett out together to negotiate the live stock, rather than to deploy Mashborne alone as in the cattle procurement advertisement, suggested a calculated pairing of operational expertise with documentary discipline. Mashborne carried the practical knowledge of livestock assessment, while Bazett brought the working familiarity

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			with valuation and the store-book consequences of any agreement reached. The combination ensured both that fair prices would be paid and that the transaction would be properly recorded against the Honourable Company's account.
180	171	things the Particulars are as followeth. one Cow three Steers one Bull three Heifers one Yearling In all nine head valued at Forty pounds Six Sows one boar twenty Shoats fourteen Piggs In all forty one valued at Twenty five pounds one Shilling One hundred and Ten Goats and Some young Poulltrey valued at Forty two pound Some Timber valued at Five pounds The whole amounting to one hundred & twelve pounds one Shilling. Ordered. That Captain Haswell Cap[t] Mashborne & M[r] Bazett do goe into the Countrey and veiw the State & Condition of the Honour[ble] Companys Plantations And that Mes[s]ers Charles Steward, Richard Gurling and Gabriell Powill Planters be desired to go with them and give their Oppinions of the Same, and that M[r] Cason be also desired to go along with them. Whereas there was Severall Souldiers on board y[e] Rochester Ordered for Bencoolen that Petition'd to Stay upon this Island, and finding the Garrison very weak there being no more than ab[ou]t 90 Effective men to do duty and Severall of the present Souldiers who have Serv'd the Honour[ble] Company their whole tyme upon this Island being Desireous to See India have Petition'd to goe to Bencoolen and Serve the Honour[ble] Company as Soldiers there We haveing agreed to Gratify their request and Severall of the Sould[s] now bound to Bencoolen haveing Petition'd to Stay here we have resolved to Exchange the Same Number and Margin Notes: Particulars mentioned. the whole Amo[unt] Comp[s] Plantations to be veiwed. Garrison weak. Sold[s] Exchange[d]	The agreement covered the following items, the particulars of which were as follows. One cow Three steers One bull Three heifers One yearling In all nine head, valued at £40 0s 0d. Six sows One boar Twenty shoats Fourteen pigs In all forty-one, valued at £25 1s 0d. One hundred and ten goats and some young poultry, valued at £42 0s 0d. Some timber, valued at £5 0s 0d. The whole amounting to £112 1s 0d. Ordered that Captain Haswell, Captain Mashborne and Mr Bazett go into the country and view the state and condition of the Honourable Company's plantations, and that Messrs Charles Steward, Richard Gurling and Gabriel Powill, planters, be desired to go with them and give their opinions of the same, and that Mr Cason be also desired to go along with them. Whereas there were several soldiers on board the <i>Rochester</i> ordered for Bencoolen, who had petitioned to stay upon this island, and finding the garrison very weak, there being no more than about ninety effective men to do duty, and several of the present soldiers who had served the Honourable Company their whole time upon this island being desirous to see India, having petitioned to go to Bencoolen and serve the Honourable Company as soldiers there, the council, having agreed to gratify their request, and several of the soldiers now bound to Bencoolen having petitioned to stay here, the council had resolved to exchange the same number, and Interpretations The schedule of livestock and timber acquired from Perkins gave the working composition of a small mixed plantation on the island. The nine head of neat cattle valued at £40 0s 0d worked out at about £4 9s 0d per head, sitting close to the £2 5s 0d per head average from the Belvird purchase of 7 March 1712 but reflecting the more uniform quality of the stock acquired here. The figure of 110 goats and some young poultry at £42 0s 0d represented a substantial transfer of small livestock that would help rebuild the colony's depleted poultry and goat stocks, both of which had been recorded as entirely lost on Pyke's arrival. The combined acquisitions from Perkins, taken together with the £400 0s 0d for the land, house and standing provisions on the previous council day, brought the total Perkins transaction to £512 1s 0d. The figure ranked among the largest single private acquisitions recorded in the present sequence, and was made possible by the seven-year working horizon adopted by the council. The combined deal converted a departing sergeant's working estate into a substantial addition to the Company's productive capacity. The plantation inspection party comprising Haswell, Mashborne and Bazett, accompanied by the three planters Charles Steward, Richard Gurling and Gabriel Powill, and by Cason, applied the working device of mixed institutional and planter assessment that had been settled in earlier surveys. The 21 November 1710 plantation survey under Roberts had combined three council members with three

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			independent planters, and the present arrangement repeated that successful pattern. The inclusion of Cason, with his oversight role across the consolidated estate, gave the party the working knowledge of the property accumulated under the previous administration. The garrison strength of about ninety effective men identified the working military complement of the colony at the moment of the change of administration. Against this baseline, the council was managing a complex exchange under which some of the Rochester's soldiers bound for Bencoolen were to remain on the island, while several long-serving St Helena soldiers were to take their places on the eastern passage. The mechanism preserved the overall garrison numbers while satisfying the individual career preferences of the men on both sides. Speculations The selection of Charles Steward, Richard Gurling and Gabriel Powill as the planters to accompany the council on the plantation inspection pointed to a calculated balance of working perspectives. Steward had been confirmed in his holdings at the title days of 1713 and carried documentary memory of multiple intermediate chains. Gurling had appeared repeatedly as a witness, purchaser and lessee of significant properties across the present sequence. Powill had emerged from the Beale and Hoskison cases as a working planter with experience of the consolidated estate. Together the three gave the council a triangulated view of the property from three independent planter perspectives. The willingness of the council to manage the Bencoolen exchange on a one-for-one basis, rather than to deny the petitions on either side, suggested a working pragmatism about the differing career preferences of soldiers in the Honourable Company's service. Long-serving St Helena soldiers had different incentives from newly arrived men ordered to a fresh eastern station. By matching the willing on each side, the council disposed of two sets of petitions through a single exchange while preserving the working strength of the garrison at the figure that the Honourable Company had committed to the island.
181	172	and Accordingly the following Persons were Entertaind here in the Honourable Companys pay as Souldiers viz[t] William Saxby John Bedan Michael Allin Thomas Astby John Roulston Edward Brereton John Ebbs Wee this day Ordered a draught of a Letter to the Hono[ble] Coult[t] of Directors to be drawn up Against the Sloop Mercury do's Saile from hence. There being no Wine nor Strong Liquors on the Island but a Small quantity of Arrack The Governour is desired to buy out of the Rochester of Cap[t] Brown or any of his Officers what Wine or Europe Liquors they can Spare. Heer follows an Account of How many days the Rochester was unloading & y[e] Number of Boats y[t] She Delivered each day. July y[e] 9[th] 1 Boat & y[e] Soldiers w[t]h their baggage in y[e] pinnaless, y[e] 10[th] 3 Boats y[e] 11[th] Sunday y[e] 12[th] 3 Boats y[e] 13[th] y[e] Sheaf of y[e] Crane broke y[e] hundred unlading till y[e] Crane was mended y[e] 14[th] a great Surf y[e] 15[th] 6 Boats y[e] 16[th] 3 Boats y[e] 17[th] 2 Boats y[e] 18[th] [-] [-] a great Surf at night y[e] 19[th] Sunday y[e] [-] 3 Boats y[e] Launch & Long boat y[e] 20[th] 3 Boats y[e] 21[th] y[e] Surf ran high y[e] 22[th] 3 Boats y[e] 23[th] 3 Boats y[e] 24[th] 3 Boats y[e] 25[th] Sunday y[e] 26[th] 3 Boats y[e] 27[th] 2 Boats. Is[aa]c Pyke Esq[r] Geo[rge] Haswell Edw[rd] Mashborne Matthew Bazett Antipas Tovey	The exchange of soldiers between the island and the Bencoolen draft was carried into effect, and seven men were taken into the Honourable Company's pay as soldiers on the island. They were William Saxby, Michael Allin, John Roulston, John Ebbs, John Bedan, Thomas Ashby and Edward Brereton. The council also directed that a letter to the Court of Directors be prepared, ready to go home in the sloop <i>Mercury</i> on her departure. The island held no wine and no spirits apart from a small remaining quantity of arrack. The Governor was therefore asked to buy from Captain Brown of the <i>Rochester</i>, or from any of his officers, whatever wine or European liquors they were willing to part with. A working record was then entered of the <i>Rochester's</i> daily progress in unloading her cargo. On 9 July a single boat brought the soldiers and their baggage ashore in the pinnace. On 10 July, three boats. On Sunday 12 July, two boats. On 13 July the sheaf of the crane broke, and no further landing could be made that day. On 14 July the crane was repaired, but a heavy surf prevented work. On 15 July, six boats. On 16 July, three boats. On 17 July, two boats, with a heavy surf at night. On Sunday 18 July, two boats, the launch and the long boat. On 20 July, three boats. On 21 July, a surf and high wind, with no landing.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
		Margin Notes: Sold[s] that were Entertained. Gen[ll] Lett[r] to be prepared. Gov[r] desired to buy Liquors. Acc[t] of Ship Rochesters unloading there.	On 22 July, three boats. On 23 July, three boats. On 24 July, three boats. On Sunday 26 July, three boats. On 27 July, two boats. Signed by Isaac Pyke, Governor; George Haswell, Deputy Governor; Edward Mashborne, third in council; Matthew Bazett, fourth in council; Antipas Tovey, fifth in council. Interpretations The recruitment of the seven named men into the garrison completed the working exchange resolved on the previous council day. The transaction substituted fresh arrivals for departing veterans without disturbing the establishment's overall complement, and it placed both groups of petitioners on the postings each had requested. The arrangement amounted to a no-cost rebalancing of the labour force across two stations of the Honourable Company. The instruction to prepare a letter for the sloop <i>Mercury</i> opened a second despatch channel alongside the <i>Rochester's</i> homeward voyage. Multiple letters sent by separate vessels reduced the working risk that material would fail to reach London through loss or delay of a single ship, and increased the documentary pressure the new administration could bring to bear on the directors' assessment of the previous regime. The request to purchase liquor directly from Captain Brown or his officers illustrated the working mechanism by which the colony covered shortages through private dealing with visiting masters. The arrack stock was almost spent and no fresh supply was in sight. Brown and his officers were likely to carry private adventures of wine and other European liquors as part of their voyage allowance, and these could now be drawn into the colony's stores at a negotiated rate. The detailed daily log of the <i>Rochester's</i> unloading transformed the earlier general protest of 20 July into a precise comparative record. Each day was fixed by date, weather and the number of boats actually employed, with mechanical failures and surf separated out from working days. The document supplied the council with a defensible evidentiary basis for any subsequent representation to London concerning Captain Brown's conduct. Speculations The decision to record every working day, including those lost to the broken crane sheaf and to heavy surf, suggested a deliberate evidentiary strategy. By acknowledging the legitimate interruptions on the log, the council made it harder for Brown to argue later that the protest had ignored circumstances beyond his control. The remaining days, against which no excuse was entered, then carried the full weight of the council's complaint. The choice to send a separate letter by the <i>Mercury</i>, in addition to whatever despatches accompanied the <i>Rochester</i>, pointed to a calculated determination to ensure that the new administration's findings reached London promptly. The <i>Rochester</i> would carry Captain Brown himself, and the council may have judged it imprudent to rely on the same vessel to convey complaints against her master. The <i>Mercury</i> gave the council an independent route under a different commander, removing any opportunity for interference with the despatches during the voyage home.
182	173	Island St Helena. At a Consultation Held on Tues day the 3[d] day of August 1714 At the United Castle in James Valley. Pres[ent] Isaac Pyke Esq[r] Govern[r] George Haswell Dep[ty] Gov[r] Edward Mashborne 3[d] Matthew Bazett 4[th] [-] Antipas Tovey 5[th] in Coun[ll] Finding the sea has increased on this Bay and that the Middle point of the trench is intirely broken in and	Island of St Helena. At a consultation held on Tuesday 3 August 1714 at the United Castle in James Valley. Present: Isaac Pyke Esquire, Governor; George Haswell, Deputy Governor; Edward Mashborne, third; Matthew Bazett, fourth; Antipas Tovey, fifth in council. The sea in the bay had risen, the middle point of the trench had been entirely broken away, and the line

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
		washt away So that the Line is in danger by every high Sea or Surf and that the Bridge is also much decayd and Part broken downe, It is therefore thought Necessary to build a wall to make that Bridge good with Earth and then to Continue that wall to the first outer Point of the Line. Resolv'd that all hands be imploy'd to Accomplish the Said work asoon as Possible and that the Governour be desired to undertake the Same. There is a Corner of the Garden and next to the Line which is very Dangerous and incomodious to this Line formerly called the Old Goat pound) which is thirty foot high above the Levell of that Line and a Shelter to any that can pass the draw bridge to the new works by the late Gover[r] Boucher being carried so far underneath them that the foundation of that Goat pound on the top of the hill is very much undermined thereby in so much that a great many Chinks and Cracks are apparent, and it is daily Expected to fall which if it Shoud its likely to carry away that part of the Line and the works next the draw Bridge and fear every hasty Shower of Rain it will fall. Resolved that as soon as the Sea Wall is finnishd the hands be imploy'd to pull that Corner down and prevent the danger that is So Likely to Ensue. The Margin Notes: high Sea has Damaged y[e] trench and Bridge. to prevent it in future. all hands to be Employ'd. Garden Wall defective & dan g[er]ous to the Line &c to prevent it.	itself now lay exposed to damage from every heavy sea or surf. The bridge had also fallen into bad repair, with part of it broken down. The council judged it necessary to build a sea wall to protect the bridge, packed behind with earth, and to continue the wall as far as the first outer point of the line. The council resolved that all available hands be set to the work, to be completed as soon as possible, and that the Governor be asked to take charge of it. A separate problem arose at a corner of the garden, next to the line, formerly known as the Old Goat Pound. The structure stood about thirty feet above the level of the line, and gave shelter to anyone passing across the drawbridge towards the new works. Under the late Governor Boucher the foundations of the Goat Pound had been undermined by excavation carried so far beneath it that chasms and cracks had become visible, and the structure was now expected to fall at any time. If it gave way, it was likely to carry off the section of the line and the new works next to the drawbridge, and a heavy shower of rain might be enough to bring it down. The council resolved that, as soon as the sea wall was finished, the same hands be set to pull down the Old Goat Pound corner, so as to forestall the damage that would otherwise follow. Interpretations The sea wall project illustrated the working principle of preventive defence against natural damage to the colony's military works. The trench and the line were the principal landward and seaward defensive features of the colony, and their continued effectiveness depended on protection of the soft material behind them from erosion by heavy seas. The combination of a stone-faced wall with an earth pack behind gave the structure both resistance to wave impact and the working flexibility to absorb the pressure of the retained ground. The undermining of the Old Goat Pound foundations under Boucher's administration provided a fresh example of the engineering failures recorded against the previous regime. Excavation beneath an elevated structure adjacent to active defences carried obvious risks, and the resulting cracks and chasms now threatened the line itself. The episode supplied the new council with another documented instance of the type of mismanagement reported across earlier consultations of the present sequence. The sequencing of the two works, with the sea wall to be completed before the demolition of the Old Goat Pound corner, applied the working principle of stabilising existing defences before initiating new disturbances. To demolish the Goat Pound without the sea wall in place would have exposed the line to a double risk during the period of work. The order of operations therefore protected the colony's military integrity while the works were under way. The decision to ask the Governor personally to take charge of the sea wall reflected the working pattern by which Pyke combined executive and operational roles in the first months of his administration. The personal involvement of the Governor in construction supervision had been a regular feature under Roberts, who had taken direct charge of the irrigation channel of 13 February 1711 and the Munden's Castle path completed by 27 April 1711. Pyke now stepped into a similar working role in relation to the sea defences. Speculations The express attribution of the Old Goat Pound foundations' undermining to Boucher pointed to a calculated framing by the new council. The defect had been observed by Mashborne, Bazett or Pyke on inspection of the works, and was now being recorded in the consultation book in terms that placed responsibility on the previous administration. The mechanism

			continued the documentary case that had begun on 8 July 1714 with the inventory of stripped Castle fittings and the destroyed live stock, and added a further specific item to the file the directors would receive in London. The decision to deploy the same body of labour to both works in sequence, rather than to commission two separate crews, suggested a calculated economy in the colony's working manpower. The garrison and the Company's slaves together formed a limited pool of labour against substantial demands from cargo discharge, plantation rebuilding and defensive repair. By coordinating the sea wall and the Old Goat Pound demolition under continuous use of the same hands, the council preserved its capacity to direct that pool to other urgent calls without dividing it across competing projects.
183	174	The Gunner having given in his Account of Stores Ordered. That M[r] Tovey do overhall and Examine the Said Stores to See if the report be true. M[r] Cleve having brought in the Acco[t] of Timber and Deals &c Ordered. That Captain Haswell do inspect into the Same. Being inform'd that Severall Persons belonging to the Shipp Rochester that deserted the Said Ship are brought down to the fort Ordered. That they be Sett to work According to the Hono[ble] Companys Orders in that case made & provided The Governour Saith that William Taylor the Gardener the Hono[ble] Company Sent out of England with him fell Sick of a bloody flux and dyed two days before the Rochester Departed hence for Bencoolen He Saith th[^a]t other Gardner he found Upon the Island being Sick, he treated with John Howson whom the Honour[ble] Company had appointed Gardener for Bencoolen to Stay here, who alledging he was willing to Stay here upon Condition he might Enjoy the Same Sallary & terms of the Hono[ble] Comp[s] had agreed with him for to goe to Bencoolen. The Island being destitute of a Gardener and this man Appearing durieng the time he was on board to be a regular & Sober man The Governour did promise to interceed with the Hono[ble] Company that he might have the Same wages here that he was intended to have there Resolv'd that the Gardner be Entertaind as the Governour hath agreed. The Rochester Sail'd hence the Last of July and we wrote by him According to our Honour[ble] Masters Directions to the Governour and Council of Bencoolen. The Same day Sail'd hence the Mercury Sloop M[r] Henry Mackett Master for Antigua who brought y[e] Slaves here by which Conveyance we wrote to our Honour[ble] Masters giving a Short Account of the State of the Island. The Margin Notes: Gun[ne]rs Stores to be Exam[ind] Acco[t] of Timb[r] &c bro[ught] in y[e] Same Exam[in]d. Desert[er]s from Ship Rochester Sett to work. Jn[o] Howson Gard[r] Entertain'd. and on what terms. Rochest[r] Saild for Bencoolen. Sloop for Antigua.	The Gunner had now produced his account of the stores, and the council ordered that Mr Tovey go over and examine the same to see whether the report was accurate. Mr Cleve had produced his account of the timber and deals, and the council ordered that Captain Haswell inspect that account in turn. Several persons belonging to the <i>Rochester</i>, who had deserted the ship, had been brought down to the Fort. The council ordered that they be set to work in accordance with the Honourable Company's standing orders for such cases. The Governor reported that William Taylor, the gardener whom the Honourable Company had sent out from England with him, had fallen sick of a bloody flux and had died a few days before the <i>Rochester</i> departed for Bencoolen. The other gardener, whom the Honourable Company had appointed for Bencoolen, was found by him to be sick on the island, and was being treated by John Howson, whom the Honourable Company had appointed gardener for Bencoolen to remain on the island until further direction. Howson, on being asked his condition, said he was willing to stay upon any reasonable terms, and offered to go to Bencoolen if so directed. He had been a regular and sober man on board the ship. The Governor had promised to intercede with the Honourable Company so that he might receive the same wages on the island as he was to have had at Bencoolen. The council resolved that the gardener be entertained on the terms the Governor had agreed. The <i>Rochester</i> sailed from St Helena on the last day of July, carrying with her a letter from the Governor and Council to the Governor and Council of Bencoolen, in accordance with the Honourable Masters' directions. On the same day the sloop <i>Mercury</i>, Mr Henry Mackett master, sailed for Antigua, the vessel by which the slaves had been brought to the island. By that conveyance the council had written to the Honourable Masters, giving a short account of the state of the island. Interpretations The cross-checking of departmental accounts, with Tovey examining the Gunner's stores and Haswell inspecting Cleve's timber and deals, applied the working principle of mutual verification that had governed the inventory programme since 9 July 1714. Each officer's own return was reviewed by a councillor without departmental responsibility for the same area, removing any opportunity for unrecorded discrepancies between the officer's own account and the actual stock. The handling of the <i>Rochester</i> deserters under the Honourable Company's standing orders illustrated the working device by which absconding sailors were detained ashore and put to productive labour at the Fort. The mechanism preserved the men against return

			to their ship while drawing useful work from them during the period of detention. Standing orders of this kind had been settled at the level of the Company's general instructions for the colony, and could be applied without the need for fresh deliberation by the council. The substitution of John Howson as gardener for the colony, in place of the deceased William Taylor, drew on the working flexibility of the Company's eastern personnel arrangements. Howson had been despatched as gardener for Bencoolen but was now retained at St Helena on the same wages he would have received at the eastern station. The arrangement converted an unforeseen death into a working opportunity without loss of skilled labour to the colony, and preserved the Bencoolen gardener post for the original incumbent once he had recovered. The simultaneous departure of the <i>Rochester</i> for Bencoolen and the <i>Mercury</i> for Antigua, both on the last day of July, illustrated the working coordination of the colony's outgoing correspondence. Letters travelled by separate vessels on widely divergent routes, with one passage carrying despatches to a Company eastern station and the other carrying material to London via the West Indies. The dual channel reduced the working risk of communications being lost in transit and gave the Honourable Masters parallel sources of information. Speculations The Governor's personal intervention to secure Bencoolen wages for Howson at St Helena, in advance of any direction from London, suggested a calculated effort to retain a qualified gardener at the moment of greatest need on the colony's depleted plantation estate. The previous administration had dug up the garden at Plantation House and laid it waste, as recorded on 8 July 1714. A working gardener with skill and sobriety was therefore a particularly valuable acquisition, and the council was prepared to commit to Bencoolen-level wages on the island to secure him. The choice of the <i>Mercury</i>, bound for Antigua, as the vessel for the short account of the state of the island sent to the Honourable Masters indicated a deliberate use of an oblique route to ensure the despatch's arrival in London. Antigua lay on the established West Indian trade routes, with frequent onward shipping to London. A letter sent by the <i>Mercury</i> would reach the Court of Directors through a route entirely separate from the homeward East Indiamen, eliminating the working risk that the new administration's first communications would be carried by the same channels under any potential influence of the previous regime.

The petitioner, as in duty bound, would ever pray, and so on. Robert Marsh. Two men, Samuel Brome and Thomas Delarose, were missing and were supposed to have run away on the sloop <i>Mercury</i>. The council ordered that notice be given to the Honourable Company, together with the amounts they owed. Signed by Isaac Pyke, Governor; George Haswell, Deputy Governor; Edward Mashborne, third in council; Matthew Bazett, fourth in council; Antipas Tovey, fifth in council. Island of St Helena. At a consultation held on Tuesday 10 August 1714 at the United Castle in James Valley. Present: Isaac Pyke Esquire, Governor; George Haswell, Deputy Governor; Edward Mashborne, third; Matthew Bazett, fourth; Antipas Tovey, fifth in council. John Obryan, Henry Johnson and Francis Cullum, having run away from the <i>Rochester</i>, Captain William Browne commander, and now petitioning to be taken on as soldiers, had been kept close prisoners ever since they were apprehended. The council ordered that they work for the Honourable Company for one month without pay, and that they then be taken into the establishment as soldiers for five years, in accordance with the prayer of their petitions. Interpretations The notification to the Honourable Company of the debts owed by Brome and Delarose applied the working principle behind the store-settlement rule of 16 July 1714, by which no person was to leave the island without first clearing the books. The two men had escaped that procedure by absconding on the <i>Mercury</i>. By transmitting their names and balances to London, the council preserved the Company's claim against them at the metropolitan end, with any recovery to be effected through the directors' working channels. The handling of the three <i>Rochester</i> deserters demonstrated the working mechanism by which the colony converted absconding sailors into garrison soldiers. The men were held as close prisoners until their cases came before the council, and were then placed on a one-month working penalty without pay. On completion of that period, they were taken into the establishment on a standard five-year soldier's contract. The arrangement combined a punitive element with a productive outcome that augmented the depleted garrison. The earlier exchange of soldiers between the island and the Bencoolen draft on 27 July 1714 had set the garrison establishment near the working strength of about ninety effective men. The fresh accessions of Obryan, Johnson and Cullum added to that pool while expanding the working principle of recruitment from absconding sailors. The Honourable Company's standing orders gave the council the discretion to apply this device whenever circumstances on the island and on the visiting ships permitted. The absence of any return of the deserters to Captain Browne, despite his continued presence in the road at the time of their apprehension, illustrated the working balance of authority between the colony and the visiting masters. The council's protests over

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			Browne's slow discharge of the cargo had been recorded since 20 July, and the new administration evidently judged that any sailors successfully reaching the Fort could be retained for the colony's establishment, rather than handed back to a master with whom relations were strained. Speculations The decision to impose a one-month unpaid working penalty on the three deserters, rather than a heavier corporal punishment or extended imprisonment, pointed to a calculated balance between discipline and recruitment. The council needed soldiers and the men had asked to enlist. By limiting the penal element to a month of free labour at the Fort, the council preserved the men's working capacity for the subsequent five-year enlistment while making the cost of their desertion sufficiently visible to deter other sailors from following the same route. The express recording of Brome and Delarose's absence in the consultation book, with the order for notification of their debts to the Honourable Company, indicated a deliberate effort to lay down the documentary basis for any later action against them. Both men had appeared as Company writers in the earlier sequence, including the lower-table petitioners of 13 October 1713 and the witnesses at the Bazett interrogation of 1 April 1714. Their departure on the <i>Mercury</i> without clearance left the council with no working recovery option on the island, and the despatch of their names to London preserved at least the prospect of action through the directors should the men reappear in any of the Company's other settlements.
186	177	The Governour gave an Account that he observ'd a very great Neglect of Devotion in this Island by Several Persons Absenting the Publick Worship of the Church on the Lords day, few or none Appearing there but the Governour and Council. Ordered. That all Persons in the Honour[ble] Companys Service that are in the Valley do come to Church on the Lords day. Cap[ta] Hasswell Capt[a] Mashborne and M[r] Bazett reports that they were with Mes[s]ers Cason Steward, Rich[d] Girling & Powill Aording to a former Order of the 27 July in the Country and had veiw'd the Honour[ble] Companys Plantations Particulars as followeth. In Coales Gutt - 72000 - of two months old 15850 - 3 mo[nths] 37300 - 5 12000 - 9 Totall 134150 They very much want weeding and none of them but the Last will be fitt to Digg these two years. In Tuesdales Gutt - 5000 - just planted 20000 - fitt to digg 25000 In Lufkins - 16000 - 2 months old 5000 - 5 12800 - 6 8000 - 8 50400 - 12 18000 - 18 63000 - 20 4000 - fitt to digg 4300 - Red yams 186100 Very backward for want of weeding but that 69 Thousand are fitt to digg, and that the 68 Thous[and] and may come in Continually after them and that no more can be Expected for 14 months after from that Plantation. Carried over 345250 Margin Notes: Neglect of Devotion. Persons to Attend on y[e] Lords day.	The Governor reported a serious neglect of devotion on the island, with several persons staying away from public worship at the church on the Lord's day, so that few or none had appeared other than the Governor and Council. The council ordered that every person in the Honourable Company's service who lived in the valley attend church on the Lord's day. Captain Haswell, Captain Mashborne and Mr Bazett reported that, in accordance with the earlier order of 27 July, they had gone into the country with Messrs Cason, Steward, Gurling and Powill, and had inspected the Honourable Company's plantations. The particulars were as follows. In Cole's Gut 72,000 yams of two months old 15,850 of three months 37,300 of five months 12,000 Total 134,150 The plants stood very much in need of weeding, and none of them, apart from the last entry, would be fit to dig for the next two years. In Tewdale's Gut 5,000 just planted 20,000 fit to dig Total 25,000 In Lufkin's 10,000 of two months old 5,000 of five months 12,800 of six months 8,000 of eight months 50,400 of twelve months 18,000 of eighteen months 63,000 of twenty months 4,000 fit to dig 4,300 red yams Total 186,100 The crop here was very backward through want of weeding, but the 67,000 fit to dig and the others that would come in continually after them gave reason to expect a working supply, though no further crop could

		Report of the Hon[ble] Comp[s] Plantations	be expected from this plantation for the next fourteen months. Carried over: 345,250 Interpretations The Governor's complaint about absence from divine service on the Lord's day, with few or none appearing apart from the Governor and Council, identified a working failure of public discipline in the colony's religious establishment. Church attendance carried both spiritual and institutional significance: it bound the inhabitants into the working community through visible participation in shared observance, and it provided the working occasion for the Governor to address the colony in his capacity as the Honourable Company's principal officer. Empty pews therefore signalled a wider erosion of the colony's social fabric, which the new council acted to restore through a direct order. The application of the church-attendance rule to all persons in the Honourable Company's service who lived in the valley applied a targeted approach to the working population most readily reached by the order. Servants of the Company were directly subject to its discipline, unlike free planters in remote parts of the island. By beginning with this group, the council set a working example that could be observed by the wider community without immediately attempting to enforce attendance on those who lay beyond the colony's central jurisdiction. The plantation survey for Cole's Gut, Tewdale's Gut and Lufkin's provided the working measure of the yam stock at the Honourable Company's central plantations, broken down by maturity. The age categories from two months through twenty months identified the rolling production cycle on which the colony depended, with each band representing yams that would become available for digging at a predictable future date. The system gave the council a working forecast of food supply against which to plan the procurement programme that had begun on 20 July with the Perkins acquisition and the cattle advertisement. The repeated finding that the crops needed weeding, and that few of the plants were yet fit to dig, exposed the cumulative effect of agricultural neglect under the previous administration. The yam plantations on which the colony depended for its staple food required continuous working maintenance, and the absence of weeding across multiple plantation sites had reduced both yields and the timetable on which mature yams would become available. The working consequence was that the new administration would need to manage scarcity for at least the next twelve to fourteen months while restoring the plantations to productive condition. Speculations The decision to record the working state of each plantation in such precise quantitative detail, with yam counts broken down by age band at each site, pointed to a calculated documentation strategy on the part of the new council. The figures would form the working baseline against which future surveys could be measured, and would also accompany the council's despatches home as concrete evidence of the state in which the colony had been received. By placing exact numbers on the record at the moment of handover, the new administration prevented any later dispute about the condition of the plantations under Boucher. The selection of Cole's Gut, Tewdale's Gut and Lufkin's as the first plantations to be surveyed, with further sites to be carried over in subsequent entries, suggested a calculated geographical sequence working outward from the central valley. The three sites had appeared together in the plantation survey of 21 November 1710 under Roberts, providing the working

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			point of comparison for the present figures. The new council was therefore measuring its inheritance against the documented condition of the same plantations under a previous administration, a comparison that the figures themselves invited.
187	178	Brought over 345250 In Roberts New Ground 26000 fitt to digg 26000 In the Hutts 44000 about 2 months old 9600 - 6 mo[nths] 13700 - 7 92000 - 9 7000 - 12 18000 - 22 184300 The 18000 are fitt to digg & no more to be Expected from thence this twelve months. being very backward for want of weeding. Totall 555550 They report also that 'tis their opinion that twill require for Lufkins plantation for the ground already planted and which is to be broke up to Plant Ten good hands besides an overseer for the improving this opportunity of Seeds Sent by the Honour[ble] Company haveing all Seasons and gitting Ground in order, therefore For the Hutts the like quantity of Blacks besides an Overseer and for Coates Gutt Tuesdales & Roberts Ground the Same Number and that the Gardens will take up also Ten hands including the Gardener (the Garden being very much out of Repair and three Vinerooms for the Vineyards the Lower vineyard haveing for these two years past been Thrown up for ashes to grass in. They found the Pasture Walls all down and other fences very much out of Repair, but the Prepareing ground for the planting of Yams and weeding those that are So backward being of great Consequence the Season coming on it was deferd for the Present what was Necessary to be done thereon, for the Expediting the improov ing the Plantations Ordered. That twelve of the New blacks be Sent up to Plantation house to be Employed by Cap[t] Mashborne. According to the Said Report and that the Rest be Sent up asoon as their Cloaths can be made. Margin Notes: Totall of Provision Numb[er] of hands requir[d] at Lufkins plant[at]ion Hutts Tuesdale &c be Gutt[?] new blacks Sent up.	Continuing from the brought-over figure of 345,250, the survey reported the following further plantations. In Roberts's New Ground 26,000 fit to dig Total 26,000 In the Hutts 44,000 of about two months old 9,600 of six months 13,700 of seven months 92,000 of nine months 7,000 of twelve months 18,000 of twenty-two months Total 184,300 The 18,000 at the Hutts were fit to dig, and no more could be expected from there for the next twelve months, the crop being very backward through want of weeding. Grand total: 555,550 The surveyors reported their opinion that Lufkin's plantation would require ten good hands and an overseer, both for the ground already planted and for the new ground that was to be broken up. The opportunity offered by the seeds sent out by the Honourable Company should not be lost, by trying all seasons and bringing the ground into order. For the Hutts, the same number of hands besides an overseer would be needed; for Cole's Gut, Tewdale's and Roberts's New Ground, the same number again. The gardens would absorb ten further hands together with the gardener, the garden itself being much out of repair, and one overseer would suffice for the vineyards. The lower vineyard had been thrown up for ashes to graze in over the past two years. The pasture walls and other fences were very much out of repair. Preparing the ground for the planting of yams and weeding those already backward were of great consequence with the season coming on. It was deferred for the present what was necessary to be done in expediting the improvement of the plantations. The council ordered that twelve of the newly arrived slaves be sent up to the Plantation House, to be employed by Captain Mashborne in accordance with the report. The rest were to be sent up as soon as their clothes could be made. Interpretations The grand total of 555,550 yams across five plantations gave the working measure of the colony's central staple stock in early August 1714. Against the figure stood the universal finding that the crops were backward through want of weeding, that few were yet fit to dig, and that the remainder would not become available for periods ranging from a few months to nearly two years. The figures placed the new administration in a position of having to manage a known shortage across the working horizon of more than a year while bringing the plantations back into productive order. The detailed labour requirement set out by the surveyors, with ten hands plus an overseer at each of the four field plantations and ten hands plus the gardener at the gardens, identified the working manpower needed to restore the colony's productive base. The total of about forty hands and four overseers in the fields, with a further ten hands and the gardener at the gardens, exceeded the workforce available from the existing Company slaves. The newly arrived slaves from the Sitwell parcel of 10 July therefore became the working solution, with twelve of them ordered up

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			immediately and the rest to follow as their clothing was prepared. The reference to the lower vineyard having been thrown up for ashes to graze in for the past two years recorded a specific failure of working agricultural management under the previous administration. The vineyard, planted as a productive monoculture, had been converted into rough pasture by the deliberate burning of its planting. The working consequence was the loss of two years' wine production and the requirement to restore the ground before any further yield could be expected. The episode illustrated the kind of operational decision that the new council was now being required to reverse. The deferral of the broader question of plantation improvement, while immediate weeding and planting were prioritised, applied the working principle of seasonal urgency over strategic planning. The yam-planting season had returned, and the council judged that any delay in addressing the present crop and the new planting would compound the working shortage that had already been documented. The longer-term restoration of the vineyards, the fences and the garden could follow once the immediate agricultural cycle had been brought under control. Speculations The decision to commit twelve of the newly arrived slaves to plantation work immediately, before the clothing of the remaining group had been prepared, suggested a calculated acceptance that the working season did not wait for procedural completeness. The slaves landed from the Sitwell sloop on 10 July had been assessed as merchantable and refreshed after their long passage. By sending the first twelve up at once, the council allowed the working priorities of the plantation to set the pace, with the remainder to follow as their preparation could be completed. The express reference to the seeds sent out by the Honourable Company, with the surveyors urging that the opportunity not be lost, pointed to a specific consignment received on the <i>Rochester</i> of European or other introduced varieties intended for cultivation on the island. The directors had evidently included a programme of agricultural diversification in the supplies for the new administration, and the surveyors were urging immediate attention to ensure that the experiment was given the working conditions to succeed. The episode illustrated how the colony continued to function as a working site for agricultural innovation at the Honourable Company's direction.
188	179	Ordered. That an Acco[t] of who belong to the Hono[ble] Companys Table be taken and of all the Blacks that we may know how many are to be fed, and Judge how farr the Provisions in the aforesaid Plantations will goe. Questions to Robert Marshes Petition of the 3[d] Inst[a]nt in relation to a Black he Lays Claim to viz[t] His Answers. If he bought the Black Answers Yes. If he paid for the Black Yes. How much To Sattisfie the Seller but dos not Say how much money. If all be paid He Says he has a bill of Sale & receipt for Sal[uary] 22 in money & goods, but dos not Say how much in money & what goods. If he had Leave of the Governor to buy the Black He thinks he needs no Leave. If the late Govern[r] did not forbid him to buy the black Not till he had bought him. If the Gov[r] did not Send the Black on board	The council ordered that an account be taken of all the persons belonging to the Honourable Company's table, so that the number to be fed could be known, and the council could judge how far the provisions on the plantations would go. Questions were put to Robert Marsh on his petition of the 3rd instant concerning a slave to which he laid claim, with his answers as follows. Question: Whether he had bought the slave. Answer: Yes. Question: Whether he had paid for the slave. Answer: Yes. Question: How much. Answer: Enough to satisfy the seller, but he did not say how much money. Question: Whether all had been paid. Answer: He said he had a bill of sale and receipt for the value of £22 0s 0d in money and goods, but did not say how much was in money and what goods. Question: Whether he had leave from the Governor to buy the slave. Answer: He thought he needed no leave. Question: Whether the late Governor had forbidden him to buy the slave.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
		He dos not know. He produced his bill of Sale Sign'd by James Lawley Witnessed by Francis Fange and Nathaniell Lawrence. M[r] Cason appeared and Said the late Govern[r] Left the Black with him for his own use but left no written Order about him and being asked if he knew whether the late Govern[r] bought this Black, Sayeth he dos not know. St Margin Notes: Acc[t] of Persons fed of Comp[s] Charge. Que[stions] & Answers ab[ou]t y[e] Black Rob[t] Marsh Claim'd. Bill of Sale produc'd for Said Black M[r] Cason Says y[t] y[e] Black was Left to him.	Answer: Not until he had already bought him. Question: Whether the Governor had sent the slave on board. Answer: He did not know. Marsh produced his bill of sale signed by James Loveley, witnessed by Francis Faage and Nathaniel Lawrence. Mr Cason then appeared and said that the late Governor had left the slave with him for his own use, but had left no written direction about him. On being asked whether he knew whether the late Governor had bought the slave, Cason said he did not know. Interpretations The order for a census of all persons belonging to the Honourable Company's table established the working basis on which the council could assess the colony's food security. The provisions surveyed across the plantations on the previous council day gave one side of the calculation; the number of persons to be fed gave the other. Only with both figures could the council determine the duration of self-sufficiency and the scale of any procurement needed to bridge the working shortage. The structured examination of Robert Marsh applied the working procedure of point-by-point questioning that had been used in the Bazett interrogation of 1 April 1714. Each question received a discrete answer, with both recorded for the consultation book. The mechanism prevented Marsh from controlling the direction of the testimony and preserved the working evidence on the record for any later examination of the case. Marsh's bill of sale, signed by James Loveley and witnessed by Francis Faage and Nathaniel Lawrence, supplied the working documentary basis for his title to the slave. The bill identified consideration of £22 0s 0d in mixed money and goods, without separating the two elements. The lack of separation between cash and goods left the precise terms of the transaction undocumented, although the total figure stood as the working measure of the slave's value at the time of sale. Cason's evidence introduced a parallel working claim derived from the previous Governor. The slave had been left with Cason for his own use, on Boucher's verbal instruction, with no written direction. The arrangement reflected the informal pattern by which Boucher had distributed Company property among his own circle in the closing months of his administration. The absence of any written document meant that Cason's interest could be tested only against his own recollection and Marsh's bill of sale. Speculations Marsh's careful avoidance of specifying the monetary and goods components of the £22 0s 0d consideration, despite holding a written bill of sale, pointed to a calculated reticence in his evidence. Full disclosure of the components might have exposed the working terms of the transaction to legal challenge, particularly if the goods element included items improperly acquired from the Company's store or from another inhabitant. By restricting his answer to the total figure recorded on the document, Marsh limited the council's working ability to identify any irregularity in the underlying transaction. The presence of two separate claims to the slave, one based on a written bill of sale to Marsh and one based on Boucher's verbal direction to Cason, illustrated the working consequences of the previous administration's loose record-keeping. The slave was now the subject of competing claims that the new council would need to adjudicate without authoritative documentation. The episode exemplified the pattern of disputes the new administration was inheriting as a direct consequence of Boucher's failure to maintain

			written records of his dispositions of Company property.
189	180	St Helena y[e] 6[th] N[o]v[em]b[er] 1711. I James Lawley do hereby deliver and Sell unto M[r] Robert Marsh, a Slave boy Named Pompey aged about Eighteen years and do hereby acknowledge to have receiv'd the Sume of Twenty two pounds Sterling which is in full of all Accounts. Wittnesse my hand this 6 day of November One Thousand Seven hundred and Eleven p[r] James Lawley. Witnesses Francis Funge Nath[ll] Lawrence. Wherefore the Govern[r] & Councill are of Opinion that the Said Black Called Pompey does belong to Robert Marsh, it not Appearing to us that the late Governour did buy that black, and that Rob[t] Marsh did buy him Wherefore Ordered. That Pompey the black Slave now in M[r] Casons hands be forthwith restored to Robert Marsh as his Master To the Worshyp[ll] Edw[d] Isaac. Pyke Esq[r] & Councell The Humble Peti tion of Jona[s] Develon Sheweth. That whereas your Petitioner did Petition to Governour Boucher on Severall heads but not being Determin'd doth humbly Lay them before y[r] Worship and Councill First. That whereas Hugh Bodley Sen[r] dec[d] being Indebted to your Said Petitioner as will Appear by an Order of Margin Notes: Copp[y] of y[e] Bill Sale. Witnesses Gov[r] & Coun[c]ll Opinion Black Pompey to be Deliv[d] Rob[t] Marsh. J[o]n[a] Develons Petition. First. Bodleys Estate to be Settled.	A copy of the bill of sale was as follows. St Helena, 6 November 1711. I, James Loveley, do hereby deliver and sell unto Mr Robert Marsh a boy named Pompey, aged about eighteen years, and do hereby acknowledge to have received the sum of £22 0s 0d sterling, which is in full of all accounts. Witness my hand this 6th day of November 1711. James Loveley. Witnesses: Francis Faage. Nathaniel Lawrence. The Governor and Council were of opinion that the slave called Pompey did belong to Robert Marsh, it not appearing to them that the late Governor had bought the slave, and that Marsh had bought him. The council therefore ordered that Pompey, the slave now in Mr Cason's hands, be forthwith restored to Robert Marsh as his master. To the Worshipful Isaac Pyke Esquire, Governor, and Council. The humble petition of Jonathan Doveton. Showed that the petitioner had earlier presented petitions to Governor Boucher on several heads, but had received no determination. He now humbly laid them before the present Governor and Council. First, that whereas Hugh Bodley senior, deceased, was indebted to the petitioner, as would appear by an order Interpretations The reproduction of the bill of sale in the consultation book preserved the working documentary basis for the council's decision. The bill recorded the principal facts: the date of the sale, the parties, the slave's name and age, the price of £22 0s 0d sterling in full of all accounts, and the witnessing signatures. Entering the document verbatim into the consultation book gave the council's order the working authority of an instrument fully supported by record, which any later examination of the case would have to engage with directly. The Governor and Council's conclusion that Pompey belonged to Robert Marsh, with the express finding that the late Governor had not bought the slave, illustrated the working evidentiary standard applied to disputed property claims. The written bill of sale, properly witnessed and dated nearly three years earlier, outweighed Cason's recollection of a verbal disposition by Boucher. The decision established a clear working preference for documentary over oral evidence in the resolution of property disputes under the new administration. The order to restore the slave forthwith from Cason's hands to Marsh as his master applied the working device of immediate practical execution. The council did not permit any continuing period of dispute or further hearing once the determination had been made. The mechanism prevented the matter from re-opening and gave the successful claimant immediate possession, with any aggrieved party reduced to seeking redress through fresh petition. The opening of Jonathan Doveton's petition, with its express reference to petitions earlier presented to Boucher that had received no determination, identified the working pattern of unresolved business inherited by the new administration. The previous Governor had received petitions but had not acted on them, leaving the petitioners without remedy. The new council was therefore receiving, alongside its own fresh business, a backlog of grievances that had accumulated under the deferred decision-making of the previous regime. Speculations

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			The council's decision to act on the basis of a single written bill of sale, against Cason's unsupported assertion that the late Governor had given him the slave for his own use, pointed to a calculated determination to apply documentary standards strictly. Cason was now a working member of the establishment as an assistant under the new council, and his evidence was nonetheless treated as insufficient against a properly witnessed bill of sale. The decision signalled to all parties that the new administration would not give weight to claims based on the late Governor's verbal directions, however close the claimant's relationship to the present establishment. The decision to enter the bill of sale verbatim into the consultation book, rather than to summarise its contents, suggested a deliberate effort to set a working evidentiary standard for the colony. Future disputes of similar character could be resolved by reference to the same procedural template, with the bill of sale carried into the record as the working anchor for any council determination. The mechanism strengthened the colony's property regime by making documented transactions visibly more secure than undocumented ones.
190	181	of Councill in Governour Roberts tyme Humbly desires that his Estate be brought to a vallue and your Petition[r] receive Acordingly [2nd day] That William Frenches Orphans Estate be Vallued or Sold and their Acco[t] made up that we may know the part belonging to Robert Leech he haveing married one of the Orphans. Jona[s] Develon. The further Examinacon & Merritts of the Cases mention'd in this petition is refer'd to Cap[t] Geo[rge] Haswell y[e] D[ep]ty Gov[r] Cap[t] Edw[d] Mashborne & M[r] Bazett to inquire into & report their Opinions herein & y[t] when Such enquiry & report be made M[r] Develon be Sent to appear y[e] Council day next following The Blacks house at y[e] Hon[ble] Comp[s] plantacon being burnt down in Gov[r] Bouchers time (occasion'd by his man Cesars firing a Gun upon the thatch thereof) Ordered. That Cap[t] Mashborne be desired to See were both be most proper to build a New One & report it with the demensions thereof. It being as appears by former Consul tations absolutely necessary to have a New Store M[r] Bazett was desired to give his opinion how big he thought it was necessary to be ab[ou]t said he believ'd it ought to be three times as big as the Old One there being above as much more goods Margin Notes: Frenches Orph[ans] Estate to be vallued Rich[d] Leech[s] dividend to be in his Ex[ecuto]rs hands upon giving Security. Referrd to Cap[t] Haswell &c. Blacks House burnt. a Convenient plan for a new one. Bignefts of y[e] old & new Store house.	Resuming the petition of Jonathan Doveton. Doveton's first head referred to an order of council in Governor Roberts's time, by which Hugh Bodley senior had been indebted to him. Doveton humbly desired that Bodley's estate be brought to valuation and that the petitioner receive accordingly. Second head. That William French's orphans' estate be valued or sold, and the account made up, so that the share belonging to Robert Leech might be known, Leech having married one of the orphans. Third head. That whereas Richard Leech junior had gone off the island young, on the death of his father, Richard Leech senior's dividend, that is the share of Richard Leech junior, having been placed in the store books until he should come of age, and having been twelve years and more out of his time without any word of him, the petitioners, namely Francis Leech, James Leech, Robert Leech as executors, on the petitioner's behalf concluded him to be dead. They humbly prayed that they might take up the said money and make a dividend of it according to the custom of the island, offering to give security for repayment in case of his being alive. And the petitioner, as in duty bound, would ever pray, and so on. Jonathan Doveton. The further examination and merits of the cases mentioned in the petition were referred to Captain Haswell the Deputy Governor, Captain Edward Mashborne and Mr Bazett, to inquire into and report their opinions thereon. When such inquiry and report had been made, Mr Doveton was to be sent to appear at the council day next following. The slaves' house at the Honourable Company's plantation had been burnt down in Governor Boucher's time, the cause being his man Caesar firing a gun upon the thatch thereof. The council ordered that Captain Mashborne be desired to see where it would be most proper to build a new slaves' house, and to report with the dimensions thereof. It being, as appeared by former consultations, absolutely necessary to have another house there, Mr Bazett was desired to give his opinion of how big he thought it was necessary to be. He believed it ought to be three times as big as the old one, there being above as much more goods Interpretations The three heads of Doveton's petition illustrated the working pattern of inherited business that the new

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			administration was now required to resolve. Each head depended on a settled procedure: the Bodley estate required valuation against an existing order of council; the French orphans' estate required valuation and sale to determine Leech's marital share; and the Richard Leech junior share required the working device by which a long-absent heir presumed dead could have his interest distributed to the residual heirs with security against his possible return. The Richard Leech junior arrangement applied the working custom of the island in cases of presumed death. Twelve years' absence with no word of the missing party had created the presumption that justified the distribution of the share among the residuary takers. The requirement for security against his return preserved the absent party's working claim in the event that the presumption proved false, and gave the residuary takers immediate use of the share at no permanent risk to the absent party's interest. The mechanism balanced the practical need for distribution against the formal requirement of fair dealing with an absent claimant. The referral of the petition's merits to Haswell, Mashborne and Bazett applied the working procedure for inherited complex matters under the new administration. The three officers were charged with inquiry and report rather than with immediate determination, and Doveton was to appear at the next council day following their report. The arrangement preserved the council's collective decision-making while giving the working investigative burden to a sub-committee with the necessary documentary access and institutional memory. The destruction of the slaves' house by Caesar firing a gun upon the thatch identified a further specific failure of management under the previous administration. Caesar was identified as Boucher's man, that is a slave personally attached to the late Governor's household rather than to the Company's general establishment. The episode showed that the previous Governor's personal followers had been operating without proper discipline, with the destruction of an essential building on the plantation being the working consequence. The new council was now required to rebuild the structure at the Honourable Company's expense. Speculations The decision to enter all three heads of Doveton's petition into the consultation book before referring them to the sub-committee suggested a calculated effort to bring the full extent of the inherited backlog onto the working record at once. By placing the matters before the formal council, the new administration acknowledged the petitioner's earlier unsuccessful approaches to Boucher and gave Doveton the working assurance that his claims would now be addressed through proper procedure. The mechanism also exposed the previous Governor's working failure to dispose of routine business, adding further weight to the documentary case against him. The express identification of Caesar as Boucher's man, rather than as a Company slave, suggested a calculated targeting of the responsibility for the destruction onto the late Governor personally. A Company slave's misconduct would have been a matter of general establishment discipline; the misconduct of the Governor's own follower was specifically Boucher's responsibility. The framing carried implications for the working basis on which the Company might later seek to recover the cost of the rebuilding, with the trail of responsibility pointing directly to the departed Governor rather than to the colony's general establishment.

191	182	Goods as that now contains at different places accordingly the Worsh[lp] the Gov[r] is desired to consider of a plan for the making a New One Is[aa]c Pyke Esq[r] Geo[rge] Hasswell Edw[d] Mashborne Matthew Bazett Antipas Tovey Island St Helena. At a Consultation held on Tuesday y[e] 17[th] August 1714 At the United Castle in James Vally. Pres[ent] Is[aa]c Pyke Esq[r] Gov[r] Geo[rge] Haswell Dep[ty] Edw[d] Mashborne 3[d] Matthew Bazett 4[th] [..] Antipas Tovey 5[th] in Councill. Ordered. That the foll[owing] Advertisement be Published to give notice for all persons to repair to the Store & make up their Acc[ts] there to y[e] Hon[ble] Comp[s] as soon as possible. Provisions being at this time very Scarce & Dear the Gov[r] made a proposal to Lessen the Hon[ble] Comp[s] charge by Examining how many persons had a right to dyett at the Gen[ll] Table Re[fer] Margin Notes: Persons to make up their Acc[ts] Proposals to Lessen y[e] Charge of y[e] Table.	Continuing the slaves' house question, Bazett further explained that a structure of three times the former size was needed because the volume of goods now to be stored at the various places greatly exceeded what the old house had held. The Worshipful Governor was therefore asked to draw up a plan for the new building. Signed by Isaac Pyke, Governor; George Haswell, Deputy Governor; Edward Mashborne, third in council; Matthew Bazett, fourth in council; Antipas Tovey, fifth in council. Island of St Helena. At a consultation held on Tuesday 17 August 1714 at the United Castle in James Valley. Present: Isaac Pyke Esquire, Governor; George Haswell, Deputy Governor; Edward Mashborne, third; Matthew Bazett, fourth; Antipas Tovey, fifth in council. The council ordered that an advertisement be published, giving notice to all persons holding accounts at the store to settle them with the Honourable Company as soon as possible. Provisions being at this time very scarce and expensive, the Governor proposed reducing the Honourable Company's charge by examining how many persons had a right to dine at the General Table. Interpretations The decision to publish an advertisement requiring settlement of store accounts marked the working extension of the departure rule of 16 July 1714. The rule had previously applied only at the point of an applicant's request to leave the island. The new advertisement directed all account-holders to clear their balances regardless of any intention to depart, applying the same financial discipline across the entire population of inhabitants and Company servants. The mechanism converted a discharge condition into a general working duty owed to the Company. The dimensions agreed for the new slaves' house, at three times the size of the structure destroyed, reflected the working accumulation of stores and goods at the plantation since the original building had been constructed. The slaves' house functioned as both residence and supplementary storage on the working estate, and the increase in scale acknowledged the growth of the operation under successive administrations. The Governor's personal involvement in drawing up the plan continued the working pattern by which Pyke took direct charge of major construction projects. The Governor's proposal to examine the working basis on which persons claimed the right to dine at the General Table identified a further line of cost control. The General Table represented the daily provisioning of the senior establishment at the Fort, and any person dining there at Company expense added to the working consumption of the depleted stocks. By auditing the entitlement of each diner, the council could remove unauthorised claimants and reduce the demand on the colony's stretched provisions. The combination of the store-settlement advertisement, the General Table audit and the plantation rebuilding programme of the previous consultation showed a coordinated working effort across multiple fronts. Each measure addressed a distinct aspect of the colony's depleted condition: the advertisement targeted outstanding debts, the audit targeted unwarranted consumption, and the plantation work targeted future production. Together they constituted a working programme of fiscal and operational restoration. Speculations The Governor's decision to direct the audit of General Table entitlement personally, rather than to refer the matter to a sub-committee as had been done with the Doveton petition, suggested a calculated

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			concentration of authority over the working composition of the senior establishment. The General Table was a politically sensitive subject, since it touched directly on the standing and perquisites of the colony's principal officers and their dependants. By taking the working initiative on the matter, Pyke positioned himself as the source of any reduction in entitlement, deflecting potential resentment from the council as a whole onto the Governor's own discretion. The choice to publish the store-settlement requirement by advertisement, rather than to address individual debtors directly, pointed to a deliberate working device for reaching the entire account-holding population without identifying any particular debtor. The mechanism preserved the working dignity of the larger account-holders while bringing public pressure to bear on all of them at once. The same approach had been used for the cattle and provisions advertisement of 20 July 1714, and was now extended to the management of the credit side of the colony's economy.
192	183	Resolved & thought very proper that only y[e] Gov[r] & Council w[t]h y[e] Chaplain dietts at the Gen[ll] Table, & all y[e] rest to be excluded during the Scarcity of provisions & be allowed Board Wages. And also that the Lower Table be Lessen'd as much as possible. The Petition of Benj[a] Pledger Sould[er] as foll[oweth] To S[t] Helena To The Worsh[ll] Isa[a]c Pyke Esq[r] Gov[r] & Council[ll] The most Humble Petition of Benjamin Pledger Humbly Sheweth That Whereas yo[ur] petition[ers] father Praise Pledger did by his Will bearing date the 3 of November 1697 give unto Thomas Pledger his Eldest Son five Acres of Land and one House as by the Said Will doe fully Appear and your Petition[r] haveing reason to beleive he is dead in India and being the next Heir at Law Humbly Prays your Worship he may have the Said House and Land deliver'd to him. And (as in duty bound) Shall ever pray &c Benjam[in] Pledger. Questions How he knows his brother is dead. He produces a letter that mentions it. If he be Sure his brother was not married before his death He has been told he never was married. If he Can prove his death He has not heard from him in four years & it is his beleife he is dead but cant prove it but by hear Say. Who has the Possession of this Land Robert Bell his fath[er] in Law. Ordered. That Robert Bell be sent for to hear what he has to Say in this matter. The Petition of Richard Clive freeman desireing Liberty for him self and famuly to goe to India. Ordered. Margin Notes: who Shall diett there. y[e] rest allow'd board Wages. Benj[a] Pledgers Petition about 5 a[c]e Land. Quest[ions] ab[ou]t it. Clive desires to g[o] off w[t]h his Family.	The council resolved that only the Governor, the Deputy Governor and the Chaplain should dine at the General Table, and that all the rest be excluded during the scarcity of provisions, with board wages allowed in place. The Lower Table was also to be cut back as much as possible. The petition of Benjamin Pledger, soldier, followed in this form. To the Worshipful Isaac Pyke Esquire, Governor, and Council. The most humble petition of Benjamin Pledger. Humbly showed that the petitioner's father Praise Pledger had by his will, dated 3 November 1697, given to Thomas Pledger his eldest son five acres of land and one house, as appeared by the will. The petitioner had reason to believe that Thomas was dead in India, and being the next heir at law, humbly prayed that the said house and land might be delivered to him. And, as in duty bound, the petitioner would ever pray, and so on. Benjamin Pledger. Questions were put to the petitioner with his answers as follows. Question: How he knew his brother was dead. Answer: He produced a letter mentioning it. Question: Whether he was sure his brother had not married before his death. Answer: He had been told that his brother had never been married. Question: Whether he could prove the death. Answer: He had not heard from him in four years, and believed him to be dead, but could not prove it except by hearsay. Question: Who was presently in possession of the land. Answer: Robert Bell, his father-in-law. The council ordered that Robert Bell be sent for, to hear what he had to say in the matter. The petition of Richard Clive, freeman, desiring liberty for himself and family to go to India, was ordered Interpretations The reduction of the General Table to the Governor, Deputy Governor and Chaplain marked a sharp working contraction of the colony's senior dining establishment. Every other officer who had previously dined at Company charge was now to be excluded for the duration of the scarcity, with board wages substituted in place of meals. The mechanism preserved the working dignity of the three highest offices, including the Chaplain whose religious function required his continued presence, while converting all other entitlements into a cash allowance against which the recipients could provide for themselves.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			The further direction to lessen the Lower Table as much as possible extended the same principle to the secondary dining establishment, which carried writers, junior officers and supernumeraries. The instruction was framed less precisely than the General Table reduction, leaving discretionary working room for the council to manage the cuts according to the changing state of provisions. The combined effect of both measures was to remove a significant working draw on the depleted stocks identified at the plantation survey of 10 August. The Pledger petition repeated the working device of presumed death by long absence that had appeared in Doveton's petition four days earlier. The presumption here rested on four years' silence and the recollection that the brother had never married, which would mean no widow or children with intervening claims on the land and house. The questioning brought out the working weakness of the evidence, with the petitioner conceding that he could prove the death only by hearsay rather than by direct testimony or written certification. The presence of Robert Bell as the current occupier of the land, identified as the petitioner's father-in-law, introduced a parallel working interest that the council needed to test before any restoration to Pledger. Bell would have been holding the property either as caretaker for the absent Thomas Pledger or under some independent claim of his own. The order to send for Bell applied the working procedure of giving each interested party an opportunity to be heard before any determination of disputed property. Speculations The retention of the Chaplain at the General Table alongside the two senior executive officers, when every other entitlement was being suspended, pointed to a calculated affirmation of the religious office's standing in the colony. The Governor's complaint of 3 August about absence from divine service on the Lord's day had been followed by the order requiring attendance from all Company servants in the valley. The continued provision of the Chaplain's meals at the Fort reinforced the working position of the office at the centre of the colony's social discipline, in line with the broader effort to restore public worship. The decision to send for Robert Bell to hear his side of the matter, rather than to order the restoration of the property to Pledger on the strength of his bare petition, suggested a deliberate corrective to the looser practice of the previous administration. Under Boucher, claims had often been determined on the petitioner's representation alone, with absent parties' interests being disregarded. By directing that the current occupier be heard before any decision, the new council established a working procedural standard for the resolution of disputed property that gave each party the opportunity to present their case.
193	184	Ordered. That his request be granted The Petition of Giles Smith freeplanter as followeth To the Worshyp[ll] Gov[r] & Coun[ll]. The Humble Petition of Giles Smith Plant[r]. Sheweth that Whereas your Worshyps Predecessor Gov[r] Boucher did Seize the Estate of Hugh Bodley Plant[r] at the Said Hugh Bodleys death Val[ue] the Appraisment of two Planters. 		Justice where of I yo[r] Petition[r]. Shall as in duty bound for ever pray Giles Smith Ordered. That Cap[ta] Mashborne & M[r] Bazett Appraise the Same for the Honour[ble] Company the Said Bodley Standing Indebted to them in their Store Books and that Giles Smith make Choice of two others for him and when Soe done to give in their report. The Petition of Martin Norman. Aug[t] y[e] 17[th] 1714 Island St Helena. To the Worship[ll] Isaac Pyke Esq[r] Govern[r] & Council[ll]. The Humble Petition of Martin Norman Planter. Sheweth that. Whereas your Petitioner was by the Blessing of God upon his Honest Industry and frugality immediatly after the Late Calamitous draught prospered with and possessed Margin Notes: Granted. Giles Smiths Petition about Hugh Bodleys Estate. the Estate to be Appraised. Martin Norman Petition.	his petition. And he, as in duty bound, would ever pray, and so on. Giles Smith. The council ordered that Captain Mashborne and Mr Bazett appraise the estate for the Honourable Company, Bodley standing indebted in the store books, and that Giles Smith make choice of two others, with all four to report when the work was done. The petition of Martin Norman, dated 17 August 1714, followed in this form. Island of St Helena. To the Worshipful Isaac Pyke Esquire, Governor, and Council. The humble petition of Martin Norman, planter, showed that whereas the petitioner had, by the blessing of God upon his honest industry and frugality, immediately after the late calamitous drought prospered with and possessed Interpretations The grant of Cleve's petition closed the working sequence that had begun with his refusal of the five-shilling day rate on 20 July. The previous council days had set out the alternative arrangements of working by the great, by the foot or by the yard, and had required Cleve to produce his account of timber and deals. With those matters resolved, the council now released him with his family to go to India. The case illustrated the working pattern by which difficult labour relations could be resolved through the petitioner's eventual departure rather than through prolonged negotiation. The Smith petition exposed a working defect in the previous administration's handling of intestate estates. Boucher had seized Bodley's estate on the planter's death and an appraisalment had been made by two planters. The late Governor had refused to accept the figure, leaving the estate in the Honourable Company's hands without any further valuation or settlement. The mechanism by which Boucher had blocked the working close-out preserved the Company's claim to the estate but denied the heirs any recovery, with the petitioner's mother in particular suffering from the deferred resolution. The council's order for a fresh appraisalment, with Mashborne and Bazett acting for the Honourable Company and Smith choosing two further appraisers, applied the working device of joint valuation by indifferent men. The arrangement followed the pattern used in the Easthope estate of 28 March 1710, the Belvird estate of 7 March 1712 and the Perkins estate of 20 July 1714. By requiring agreement between four appraisers representing both sides, the council preserved the working integrity of the process while ensuring a determinate outcome. The opening of the Martin Norman petition introduced the working consequences of the recent drought that had affected the colony from late 1712. Norman's reference to the late calamitous drought set the working economic context for his subsequent claim, with his industry and frugality identified as the working virtues that had carried him through the difficult period. The framing reflected the colony's broader pattern of recognising individual planter recovery as a working contribution to the rebuilding of the agricultural establishment. Speculations Boucher's working device of refusing to accept the appraisalment of Bodley's estate, while keeping the property in the Honourable Company's hands, pointed to a calculated strategy of indefinite deferral that benefited the previous administration. By neither accepting the planters' valuation nor proposing an alternative, Boucher had kept the estate's working value within the Company's effective control while frustrating any heir who sought to realise their interest. The mechanism converted the legitimate institutional claim

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			against the estate's store-book debt into a working instrument of personal advantage. The selection of Mashborne and Bazett as the council's appraisers for the Bodley estate, the same pairing that had handled the Perkins acquisition on 27 July, suggested a calculated working pattern of using a stable team for property valuations. The two officers carried complementary working knowledge: Mashborne's familiarity with the planter community and the working condition of the estates, and Bazett's working command of the store books and the valuations recorded in them. The repetition of the pairing across multiple transactions gave the colony a consistent valuation standard against which different estates could be measured.
194	185	Possessed of Considerable Effects for a man of his mean begining and Opportunitys of this place. And whereas by the hand of God Suddenly in the Said Late draught your Petitioner has been visited with the Sore Loss of his whole Stock being twenty head of Neat Cattle besides Goates & Hoggs which were Considerable to his present great hardship and Misery. And understanding that the Govern[r] doe designe in a Short tyme to call in the Honour[ble] Companys debts and your Petitioner being Sencible to his Sorrow that he is pritty much Indebted to the Honour[ble] Comp[s] Store Books moreover being willing and desireous honestly to pay his debts and gett his Lively hood without being burdensome, But haveing at present no other means of So doing but by Offering in a List of what is due to him from Severall persons. Wherefore your Petition[r] humbly prays that your Worship & Councill in due Consideration of the Premisses would please to order Credit to be given him for the Severall Sumes from his Respective Debtors in the Hono[ble] Companys Stores by which means he does not doubt to Clear the Hono[ble] Companys debt and have Something Left to releive his present Misery, and to begin with againe And your Petition[r] as in duty bound Shall for ever pray &c Ordered. That he give in his List of Debts he produced an old list but Said he had another and better, which he is directed to bring in next Councill day. Richard Swollow Sen[r] and Francis Wrang ham freeholders and Executo[rs] of the last Will and Testament of Benjamin Sich freehold[r] dec[d] brought this day the Said Benjamin Siches Will in order of haveing the Same proof of which was Acord ingly done by the Oaths of William Corteous & Henry Francis Ordered. That the Said Benjamin Siches Last Will & Testam[t] now produced be rec[d] and approv'd of and Entr'd into a book for that purpose & Coppys given thereof when Demanded. Margin Notes: Setting forth the Loss of his Stock his Circumstance desires Cred[j]t for his Bills. to bring in y[e] best List of his Acc[ts] Benj[a] Siches Will offered to be prov'd by his Execut[rs] y[e] Same proved.	Norman set forth that his recovery had brought him considerable effects for a man of his mean beginning and the limited opportunities of the colony. The hand of God in the late drought had since visited him with the entire loss of his stock, namely twenty head of neat cattle, besides goods and hogs, with the result that he was now in great hardship and misery. Understanding that the Governor designed shortly to call in the Honourable Company's debts, the petitioner, conscious to his sorrow that he was much indebted on the store books, was nonetheless willing and desirous honestly to pay his debts and to earn his livelihood without being burdensome. He had at present no other means of doing so than to offer a list of what was due to him from several persons. The petitioner therefore humbly prayed the Governor and Council, in consideration of the premises, to direct that credit be given him for the several sums owed by his respective debtors on the Honourable Company's stores, by which means he hoped not only to clear his Company debt but to have something left to relieve his present misery and to begin again. And the petitioner, as in duty bound, would ever pray, and so on. The council ordered that Norman bring in his list of debts. He had produced an old list, but said he had another and better, which he was directed to bring on the next council day. Richard Swallow senior and Francis Wrangham, freeholders and executors of the last will and testament of Benjamin Sich, freeholder deceased, this day brought the will to be proved. The same was accordingly done on the oaths of William Porteous and Henry Francis. The council ordered that the will so produced be received and approved, and entered into a book kept for that purpose, copies to be given out as required. Interpretations The Norman petition illustrated the working application of the credit-clearing mechanism by which a debtor on the Honourable Company's store books could discharge his debts through the assignment of debts owed to him by other inhabitants. The mechanism converted Norman's working position from individual debtor to broker between several debtor-creditor relationships, with the store books operating as the common ledger across all of them. The settlement of his Company debt would be achieved through corresponding charges against his own debtors in the same books. The structured framing of Norman's petition, with the loss of his stock attributed to the hand of God in the recent drought, applied the working rhetorical convention of casting external misfortune in providential terms. The mechanism allowed the petitioner to present his current condition as the result of forces beyond his control rather than as a consequence of personal mismanagement, strengthening his moral claim on the council's working

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			sympathy. The reference to the drought as calamitous reinforced the working public memory of the period covered by the present sequence. The order requiring Norman to produce his better list on the next council day applied the working principle of documentary verification before any council action. The old list he had brought was treated as insufficient evidence of the working extent of his receivables, and the council declined to act until he could produce the comprehensive record. The mechanism preserved the working integrity of the credit-clearing procedure by requiring full disclosure of the assets being offered against the debts to be discharged. The probate of Benjamin Sich's will, on the oaths of William Porteous and Henry Francis, illustrated the working continuation of the council's probate jurisdiction across the change of administration. The procedural pattern remained as it had been under previous Governors: presentation of the will by the executors, proof by two witnesses on oath, receipt and approval by the council, entry in the book of wills, and issue of copies on demand. The working continuity preserved the credibility of testamentary dispositions across the colony's successive administrations. Speculations The Governor's announcement of his intention to call in the Honourable Company's debts, referred to in Norman's petition, suggested that the published advertisement of 17 August had been preceded by working informal notice circulating among the inhabitants. The council had been preparing the working population for the formal calling-in, and Norman's petition was the working response of one indebted planter to the anticipated demand. The pattern indicated that the new administration had been managing the announcement through informal channels before making the formal public order. The selection of Swallow senior and Wrangham as the executors of Benjamin Sich's estate, with Porteous and Francis as the proving witnesses, pointed to a working network of established planters and Company servants who repeatedly appeared in this institutional role. Each of the four had been recorded elsewhere in the present sequence as executor, witness, juror or surveyor, and the working pattern of their involvement reinforced the continuity of the colony's testamentary administration through the change of regime.
195	186	The Said Rich[d] Swallow in behalf of his mother Mercy Sich brought this day the Last Will & Testam[t] of Simon Lent Soldier dec[d] in order of haveing the Same proved which was Acordingly done, by the Oaths of Joshua Tomlinson & Joseph Tomlinson Ordered. 		and in Such pleeces as was Impossible to gather their Eggs without great danger To prevent which for the future These are Stricktly to forbid and Enjoyn all persons on the Said Island Not to presume to goe on Shore or make fires upon the aforesaid Egg Islands upon any pretence whatsoever Upon paine of being Severely dealt with as Contemnners of this Order Untill the proper Season of which Publick Notice and Liecense Shall be given in writing as usuall, which all persons are Margin Notes: Sim[on] Lents Will rec[d] to be proved. proved. Persons turn'd free. None to Gath[er] Eggs till further Order. An Advertisem[en]t to that Intent. and forbidden to make fires on y[e] sd Islands.	imprudence had caused the egg-fowls to lay so little and in such places that it had become impossible to gather their eggs without great danger. To prevent this for the future, all persons on the island were strictly forbidden to go on shore upon the Egg Islands, or to make fires there, upon any pretence whatever, on pain of being severely dealt with as contemnners of the order, until the proper season, of which public notice and licence would be given in writing as usual, which all persons Interpretations The successive discharges of Robert Angus, Godfrey Sholes, David Hine and John Gibbs at the end of their contracted terms applied the working pattern of orderly release from Honourable Company service. The Governor was empowered to grant such requests on his own authority, with subsequent report to the council, rather than requiring full council deliberation for each case. The mechanism preserved working efficiency in routine personnel matters while keeping the council informed of the changing composition of the establishment. The protection of the Egg Islands through formal advertisement identified a working environmental management regime that the colony had operated for some time. The reference to public notice and licence being given in writing as usual indicated an established working system of authorised harvesting at proper seasons, with controlled access during the laying period. The current order suspended that system altogether until the breeding population had recovered, with severe penalties for unauthorised approach. The express concern about fires on the Egg Islands pointed to a particular working threat to the seabird colonies. The disturbance of the nesting birds by smoke and fire, beyond the immediate physical damage, had caused the working pattern of laying to shift to inaccessible places, with the result that even authorised gatherers could no longer reach the eggs without great danger. The mechanism by which casual recreational and food-gathering activity had degraded a working economic resource illustrated the practical limits of unregulated access to natural assets. The use of beat of drum for the public proclamation of the advertisement applied the working standard mode of public notice on the colony. The combination of drum announcement with written posting allowed the order to reach both the literate and the illiterate working population. The mechanism had been used repeatedly across the present sequence for matters of public regulation, including slave price ceilings, fencing requirements, departure rules and procurement notices. Speculations The decision to protect the Egg Islands through formal proclamation at this particular moment, when the council was working on multiple fronts of food provisioning and stock recovery, suggested a calculated extension of the colony's working approach to depleted resources. The plantation survey had documented the working state of the yam stock; the cattle advertisement had opened procurement from the planters; the slaves' house plan addressed the destroyed Company building. The Egg Islands proclamation now added the working protection of a wild resource to the broader programme of provisioning recovery. The reference to credible information having been received about unauthorised activity on the Egg Islands suggested a working network of informers operating in support of the new administration. The colony's small population meant that any pattern of activity on outlying islands would soon be observed and reported. The combination of the new council's willingness to act on such information, and the working circulation of news about the proclamation, would discourage further

And Margin Notes: Simpson made Serj[t] Provisions offer'd to Sale Cap[ta] Mashborn to buy them. Surg[e]ns Complt. Each Equall Privi=ledge of Medicines. their places Price in Care of Blacks at y[e] Fort.	Continuing the proclamation, all persons were to take notice and obey accordingly. Dated at the United Castle in James Valley this 17 August 1714. Signed by order of the Governor and Council. Antipas Tovey, Secretary. A sergeant's place had become vacant by reason of Sergeant Perkins going off the island in the <i>Mercury</i> sloop. The council ordered that William Simpson, eldest corporal, succeed as youngest sergeant, and that he have salary as such accordingly. Captain Mashborne reported that Thomas Swallow, planter, had offered 30,008 yams; John Focas, planter, a parcel of about 30,000 yams; and Robert Leech, planter, a parcel of yams and poultry; all for the lessening of their debts to the Honourable Company. The council ordered that Captain Mashborne agree with each of them about the provisions and report the outcome. A difference had arisen between the two surgeons, Doctor Price complaining that Doctor Porteous did not assist him in the manner expected. The council ordered that each have the privilege of going to the surgeons' chest, and that each have a list of all drugs and physical medicines, and that a book lie publicly in the apothecary's shop in which each was to enter what medicines he took out, on what account, and the ingredients or compositions of such medicines. For preventing differences between them, Doctor Price was to be regarded as chief surgeon and Doctor Porteous as second surgeon. Doctor Price was to have the care of all the Honourable Company's slaves about the Fort or below. Interpretations The promotion of William Simpson from eldest corporal to youngest sergeant applied the working principle of advancement by seniority within rank. The vacancy left by Perkins's departure was filled immediately at the next rank below, and Simpson's salary was adjusted to match his new position. The mechanism preserved the working hierarchy of the garrison without requiring any external recruitment, and rewarded long-serving corporals through predictable progression to the higher rank. The opening of supply offers from three named planters, with Mashborne authorised to negotiate the terms, illustrated the working operation of the procurement programme advertised on 20 July. The three planters were all in debt to the Honourable Company on the store books, and were offering working produce against those debts rather than against cash. The mechanism allowed the colony to acquire urgently needed provisions while reducing the working volume of outstanding planter debt, with both sides benefiting from the exchange. The surgeons' dispute revealed a working tension created by the council's earlier decision to retain both Porteous and Price in office. The new arrangement, requiring shared access to the chest, a published medicine book and a clear designation of seniority, applied the working principle of formal procedure to a personal conflict. The book lying publicly in the apothecary's shop, with each entry recording medicine, account, ingredients and compositions, gave the council a documentary record against which any further dispute could be tested. The working assignment of Doctor Price as chief surgeon and Doctor Porteous as second, with Price specifically responsible for the Honourable Company's slaves about the Fort and below, formalised the senior-junior relationship established at the consultations of 13

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			July when Price's £39 0s 0d salary had been settled against Porteous's reduced £30 0s 0d. The reservation of slave care to Price gave the chief surgeon the working responsibility for the colony's most numerous category of patients, while leaving the more selective practice of the garrison and inhabitants for shared attention. Speculations The willingness of the planters Swallow, Focas and Leech to settle their store debts through provisions in kind, rather than to seek extended credit or cash settlement, suggested a working response to the formal advertisement of 17 August requiring settlement of all store accounts. The planters had read the announcement as a serious requirement and were now coming forward with the working assets they could offer. The mechanism converted the council's documentary pressure into actual provisioning gains, and validated the original decision to publish the settlement requirement. The detailed procedural framework established for the two surgeons, including a publicly accessible medicine book recording ingredients and compositions, pointed to a calculated working remedy that addressed both the immediate dispute and the broader institutional risk. Without proper records, either surgeon could have drawn medicines for personal sale, charged the wrong patient or used inferior compositions. The book required full transparency on every working transaction, and made the two surgeons accountable to each other as well as to the council. The mechanism converted personal rivalry into mutual supervision.
197	188	And Docter Corteous all the Honourables Blacks in the Countrey. That they be both Equally Asistant in case of Sickness to any of the Councill or Companys white Servants and that Each have Liberty to vissitt and administer Physick to Such Planters whether in the Valley or Countrey that Shall Send to them And that they have Each of them a Coppy of this Order of Councill. Island St Helena. By the Govern[r] & Councill An Advertisement. Whereas Severall persons hath been very Remyss and Negligent in Reckoning & makeing up their Acco[t] in the Honour[ble] Companys Store books. These are therefore to require and Enjoyne all Such persons forthwith to repaire to the Said Honour[ble] Companys Store house and make up their respec tive Accounts with the Store keeper who will be there to attend, Unto which a readie Compliance is Expected. Dated at the United Castle in James valley this 17 day of August 1714. Sign'd p[r] order of Gover[r] & Councill Antipas Tovey Sec[ry] M[r] Tovey represented to the Councill that the Secretary's Office was too Small and Dark, no Conveniency of Desks Privacie Shelves or Presses the Raine Soaking through the Ceiling Ordered Margin Notes: Corteous of them in y[e] Countrey to be Equally Asist[ant] Persons to make up their Acc[ts] in y[e] Stores. The Office too Small Dark	Doctor Porteous was to have the care of all the Honourable Company's slaves in the country. The two surgeons were each to assist equally in case of sickness affecting any of the council or Company white servants, and each to have liberty to visit and administer physic to such planters, whether in the valley or in the country, as should send to them. Each surgeon was to have a copy of this order of council. Island of St Helena. By the Governor and Council. An advertisement. Whereas several persons had been very remiss and negligent in reckoning and making up their accounts in the Honourable Company's store books, these were therefore to require and enjoin all such persons forthwith to repair to the Honourable Company's storehouse and make up their respective accounts with the storekeeper, who would be there to attend. Ready compliance was expected. Dated at the United Castle in James Valley this 17 August 1714. Signed by order of Governor and Council. Antipas Tovey, Secretary. Mr Tovey reported to the council that the Secretary's office was too small and dark, with no convenience for desks, private shelves or presses, and that the rain came in through the ceiling. Interpretations The geographical division of medical responsibility between Price for the Fort and below, and Porteous for the country, applied a working principle of zoning that matched the physical distribution of the colony's working population. Price's appointment to the Fort placed the chief surgeon at the centre of the working military and administrative establishment, while Porteous's country assignment gave the senior medical experience of the colony to the dispersed plantation workforce. The arrangement preserved the seniority hierarchy while drawing on each officer's working strengths.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			The provision for equal assistance to the council and the Honourable Company's white servants identified a working professional reserve that overrode the geographical division for the most senior category of patients. Council members and white Company servants would receive the working attention of both surgeons in case of sickness, regardless of where they lay at the time. The mechanism preserved the working quality of medical attention for the colony's principal officers without compromising the day-to-day division of labour. The liberty given to each surgeon to attend planters who sent for them, whether in the valley or in the country, opened the working space for private medical practice within the settled framework of Company employment. Planters were entitled to choose between the two surgeons rather than being assigned to one or the other by zone. The arrangement preserved patient choice in the working medical market while ensuring that both surgeons remained available across the colony, generating additional working income for each beyond the Company salary. The store-settlement advertisement applied the working machinery of public proclamation to the credit-management problem identified at the previous consultation. Account-holders were required to repair to the storehouse and make up their respective accounts with the storekeeper, who would be there to attend. The mechanism converted the abstract requirement of settlement into a concrete physical encounter at a known place, with the working expectation of ready compliance. Speculations The decision to assign Porteous to the country, where the working majority of the Honourable Company's slaves were employed on the plantations, suggested a calculated recognition of his greater working familiarity with the island's slave population. Porteous had been the chief surgeon under the previous administration and would have built up working knowledge of the slaves' health histories over his years of service. By preserving that working continuity, the council ensured that the most numerous patient group did not lose the benefit of accumulated medical attention through the change of regime. The complaint by Tovey about the working condition of the Secretary's office, with its small dark space, lack of desks, private shelves or presses, and a leaking ceiling, pointed to a calculated effort to bring the institutional infrastructure of the colony into the same working order as its provisioning and personnel. The Secretary's office was the working repository of the colony's written record, and its physical condition directly affected the working preservation of papers. By raising the matter at this consultation, Tovey created the documentary basis for any further building work that the council would later authorise.
198	189	Ordered The Same be veiw'd and contriv'd to be Built Larger and more Convenient asoon as Possible. Is[aa]c Pyke Esq[r] Geo[rge] Haswell Edw[d] Mashborne Matthew Bazett Antipas Tovey Island St Helena. M[r] Bazett being asked how farr he was Advanced in his Accounts Replies that at the decease of M[r] Sack the Books were at Least twelve months behind hand,	The council ordered that the Secretary's office be viewed and rebuilt larger and more convenient as soon as possible. Signed by Isaac Pyke, Governor; George Haswell, Deputy Governor; Edward Mashborne, third in council; Matthew Bazett, fourth in council; Antipas Tovey, fifth in council. Island of St Helena. At a consultation held on Tuesday 24 August 1714 at the United Castle in James Valley. Present: Isaac Pyke Esquire, Governor; George Haswell, Deputy Governor; Edward Mashborne, third; Matthew Bazett, fourth; Antipas Tovey, fifth in council. Bazett was asked how far he had advanced in his accounts. He replied that at the time of Mr Pack's death the books had been at least twelve months behind, and that the main stress and burden of all affairs had since

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
		and then the Main Stress and Burthen of all Affairs Lyeing on him till our Arrivall here, has been arrears of keeping the Said Accounts backward So that he cannot as yet bring up the Store Books, but hopes they will be Completed in a Short Time and desires that Some person belonging to him may be Approved of, to deliver out goods for the present while he is working out the books. Ordered. That Margin Notes: to be Built Larg[er] &c Store Acc[ts] How farr Advanced. Cap[t] Bazetts Answ[er] [...] Desires approv[a]ll of Persons to Serve out.	lain on him until the arrival of the new administration. The accounts had remained in arrears, and he could not yet bring the store books up to date, although he hoped they would be completed in a short time. He asked that some person belonging to him might be approved to deliver out goods for the present, while he was working on the books. The council ordered that Interpretations The order for a larger and more convenient Secretary's office responded to Tovey's report of the previous consultation. The mechanism applied the working principle that institutional infrastructure was to match institutional function, with the colony's working written record requiring adequate physical accommodation. The combination of this order with the slaves' house and storehouse projects gave the new administration a working programme of building works that addressed multiple deferred repairs in a coordinated way. Bazett's account of the working state of the store books exposed the cumulative effect of personnel attrition under Boucher. The death of John Pack on 3 April 1713 had left the books twelve months in arrears, and Bazett had taken over without any working capacity to catch up while simultaneously carrying the main burden of the establishment. The episode illustrated the structural difficulty that arose when a single officer was required to combine the working roles previously distributed across multiple senior posts. Bazett's request for a working assistant to deliver out goods during the period of catch-up applied the working principle of separating routine operations from documentary reconstruction. By placing the day-to-day issue of goods in other hands, Bazett could concentrate his working effort on the back-office reconstruction of the books. The mechanism acknowledged that the working productivity of an officer carrying multiple responsibilities was inherently limited, and that progress on the accounts required a focused allocation of working time. The reference to the main stress and burden of all affairs lying on Bazett until the arrival of the new administration captured the working pattern of authority under the closing months of Boucher's term. With Hoskison, Griffith and Pack all dead, and with Cason and French serving only as assistants without councillor titles, Bazett had operated as the working chief executive of the colony alongside the failing Governor. The arrangement had been institutionally untenable, and the resulting backlog in the store books was a direct working consequence. Speculations Bazett's careful framing of the books' arrears as having been twelve months behind at Pack's death pointed to a calculated effort to locate the working responsibility for the backlog in the period before his own tenure as storekeeper. By placing the original failure on Pack's administration of the stores, Bazett distanced himself from the working origin of the problem while accepting responsibility for the period during which he had been unable to catch up. The mechanism preserved his working credibility with the new administration while frankly acknowledging the present state of the books. The willingness of the new council to allow Bazett to nominate his own working assistant for the delivery of goods, rather than appointing one of the new officers to that role, suggested a calculated decision to keep the working continuity of the store operation under Bazett's personal direction. Any assistant chosen by him would be familiar with the existing arrangements and would not need to be brought up to speed by Bazett during the period in which his working effort was needed elsewhere. The mechanism gave Bazett the working

			space to complete the accounts while preserving the operational integrity of the store.
199	190	That M[r] Thomas Cadon, M[r] Edward Cryfeild and Thomas Goodwin be permitted under M[r] Bazett to Deliver Goods out of the Store for the present in order to farther their Dispatching Said Accounts. And also that the Inventory be then brought Contain ing the Account of all the Hono[ble] Comp[s] Goods in the Stores. And that the Secretary and all those who are in the Honour[ble] Companys Service that writes a good hand or understands Accounts be under Cap[t] George Haswells and M[r] Matthew Bazetts Orders and Directions to Asist till the Said Books are Completed. And that to prevent hindarances 'tis further Ordered that the Honour[ble] Companys Stores Shall for the present be Serv'd out only on fridays and Saturdays in Each week. And that an Advertisement be Published, that all Planters & who are Indebted to the Honour[ble] Comp[a] above the Sume of Twenty Pounds that they on their paying into the Stores the Sume of Tenn pounds Shall have Credit for five pounds & So Proportionable for a greater or Lesser Sume, and those who have not Cash by them they will Account to the Credit for their own or their Servants Labour and Work at the fortifications as if So much Cash were paid in So consequently permitt them to take up half the Said work in goods from tyme to tyme as it becomes due to them And that the Govern[r] and Councill will hearken to any other ways or means that Shall be proposed to them towards payment and Sattisfaction of Debts & buying Goods out of the Stores. And it is further Ordered that for the future noe Soldiers be Entrusted in the Stores for more than three months pay or Sallary. The Governour and Cap[t] Mashborne report that the Tying of the Plantation House is much out of repair so as to indanger the roof and Likewise y[t] foundation of the Back wall, is Likely Soon to fall by a Continuall Soak from the Hill for want of a draine or water Course They Say Margin Notes: Persons appointed to D[el]r out Store Goods. Inventory to be taken. Sec[ry] &c to Asist y[e] Acomp[t] & Storekeep[er] days to Serve out on. Advertisem[en]t to be Publish[d] to have Debts paid to y[e] H[ono]b[le] Co[m]p[any] but ½ Cred[t] to have Goods for. proposalls hearken'd to for payme[n]t of Debts. Sold[s] Trusted but three months Sallary. Plantation House out of Repair.	The council appointed Mr Thomas Cason, Mr Edward Byfield and Thomas Goodwin to deliver goods out of the store, under Bazett's direction, for the present, in order to further the despatch of the accounts. The council further ordered that an inventory be taken of all the Honourable Company's goods then in the stores. The Secretary, and all those in the Honourable Company's service who could write a good hand or understood accounts, were ordered to assist the storekeeper under the direction of Captain George Haswell and Mr Matthew Bazett, until the books were completed. To prevent further hindrance, the Honourable Company's stores were for the present to be served out only on Fridays and Saturdays in each week. An advertisement was to be published that all planters indebted to the Honourable Company above the sum of £20 0s 0d, who would on their paying into the stores £4 0s 0d give credit for £5 0s 0d in proportion or greater or lesser sums, and those who had no cash by them could account to the credit by their own or their servants' labour and work at the fortifications, as if so much cash had been paid in. The council would also accept half the work in goods from time to time as it became due to them. The Governor and Council were willing to hear any other ways or means that might be proposed to them towards the payment and satisfaction of debts, and the buying of goods out of the stores. It was further ordered that for the future no soldiers be entrusted in the stores for more than three months' pay or salary at one time. The Governor and Captain Mashborne reported that the tiling of the Plantation House was so much out of repair as to endanger the roof, and likewise that the foundation of the back wall was likely soon to fall through a continual soak from the hill, for want of a drain or watercourse. Interpretations The appointment of Cason, Byfield and Goodwin to deliver goods out of the store under Bazett's direction applied the working principle of dividing the routine operational function from the documentary reconstruction. The three named persons drew on existing institutional knowledge: Cason as longstanding assistant, Byfield as a working clerk, and Goodwin as a writer with experience of the spring 1714 cargo handling. The arrangement freed Bazett to concentrate on the books while preserving working continuity at the counter. The restriction of store issues to Fridays and Saturdays compressed the working week of the store into two days. The mechanism reduced the working interruption of the back-office task and concentrated the customer-facing activity into a predictable pattern. Inhabitants could plan their working visits accordingly, while the rest of the week was preserved for the documentary catch-up. The arrangement showed the working principle of operational triage applied to a temporary crisis. The debt-conversion scheme set out in the advertisement applied a working device of fractional credit that incentivised partial cash settlement. A payment of £4 0s 0d into the stores would generate £5 0s 0d of credit on the planter's account, giving an immediate 25 per cent uplift on cash payment. The mechanism made it more attractive for a planter to find cash than to allow the debt to stand, while also accepting working labour at the fortifications as an

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			alternative to coin. Half the labour could be drawn in goods from the store as it became due. The three-month limit on stores entrusted to soldiers in pay or salary identified the working source of much of the existing arrears. Soldiers had evidently been drawing goods on credit against their unaccrued future pay, with the result that the stores had been carrying large open balances that could be neither settled nor enforced. The new limit fixed the maximum exposure at three months' accumulated entitlement, beyond which no further credit could be extended. The mechanism converted an open-ended drain into a working bounded liability. Speculations The decision to publish the debt-conversion advertisement to planters indebted above £20 0s 0d, with a 25 per cent uplift on cash payments, suggested a calculated incentive structure aimed at the working bulk of the colony's outstanding planter debt. Smaller debts were left untouched, on the working assumption that they could be cleared through ordinary settlement. The substantial debts, which carried the working risk of becoming permanent losses, were given an immediate financial incentive to clear, with labour at the fortifications offered as a working alternative for those without cash. The mechanism converted the colony's most valuable working asset, its labour pool, into a debt-clearance currency. The decision to deploy the Secretary and any other Company servant who could write a good hand or understood accounts to assist with the store books pointed to a calculated mobilisation of all available working clerical capacity. The accounts were a working priority of the highest order, and the council was prepared to draw working time from the colony's normal documentary functions to bring the books up to date. The mechanism revealed how deeply the new administration was committed to restoring the working financial integrity of the establishment.
200	191	Say alsoe that the Planks of the flooring are Rotten and must have a good repair to prevent its falling to ruine Cap[t] Mashborne further adds that he went a fortnight Since to live at Said House but it was So untenantable that they could not be Sheltered from the Raine & weather Insomuch that he was forc'd to goe to a Neighbour House to Lodge where he must Continue while the Tying is repaired & Some other Necessary work be done to keep out the weather that House being very much Expos'd to the Wind & raine Ordered. Sheweth That your Petition[r] haveing married Mary the daughter of Thom[s] Earle dec[d] and the only Survivour of his Children did Sometime Since purpose to goe off Said Island in the first outward bound Ship But that being not granted your Petition[r] made Demand of Charles Steward freehold[r] According to the Tenour of an Agreeem[t] made Since Marriage for all and Singular the Estate of your Said Petition[rs] wife. Which if your Said Petition[r] did not goe off the Island as a foresaid was to be Redeliver'd up to your Said Petition[r] againe The which the Said Charles Steward Refuses to do Alledging Some Intrest he has therein or a Pretence for Sattisfaction for Boarding two of the Said Earles Children. Altho he had the Estate and use thereof in his	The reporters added that the planks of the flooring were also rotten and required substantial repair to prevent their falling to ruin. Captain Mashborne further explained that he had gone a fortnight earlier to live at the Plantation House, but the building was so unsuitable that the occupants could not be sheltered from the rain or weather. He had been forced to go to a neighbour's house to lodge, and would have to remain there while the tiling was repaired and other necessary work was done to keep out the weather, the house being very much exposed to the wind and rain. The council ordered that Captain Mashborne get the tiling repaired as well as he could for the present, and that when the season for planting yams was over, the available hands be set to do what further work was necessary. Island of St Helena. To the Worshipful Isaac Pyke Esquire, Governor, and Council. The humble petition of Samuel Algate, Corporal, humbly showed. That the petitioner, having married Mary, the daughter of Thomas Earle deceased and the only surviving child of his children, had some time earlier proposed to go off the island in the first outward bound ship. The request had not been granted, and the petitioner had then made demand on Charles Steward, freeholder, in accordance with the terms of an agreement made since the marriage. The agreement covered the whole estate of the petitioner's wife, which, if the petitioner did go off the island as already mentioned, was to be delivered up to him in right of his wife. Charles Steward had refused, on the basis of some pretended interest he claimed in the estate, alleging that

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
		own Possession. Wherefore y[ou]r Petition[r] Humbly prays the Said Charles Steward may be Compeld to Deliver what Lands &c belongs to yo[ur] Petition[r] in right of his wife. And as in duty bound Shall for ever pray &c Samuel Algate. Order'd Margin Notes: Cap[t] Mashborne forc'd to goe to a Neighb[r] to Lodge Plant[on] House to be Tyled. Sam[l] Algates Petition Ag[ainst] Cha[s] Steward about a bargain of Lands &c	he was entitled to satisfaction for the boarding of two of the Earle children, although he had had the estate and the use of it in his own possession. The petitioner therefore humbly prayed that Charles Steward might be compelled to deliver up such lands as belonged to the petitioner in right of his wife. And, as in duty bound, the petitioner would ever pray, and so on. Samuel Algate. Interpretations The Plantation House report identified the working physical state of the colony's principal country residence in late August 1714. Roof tiles, foundation walls and floorboards were all in serious disrepair, with the building unable to keep out the rain and wind. The cumulative effect of neglect under the previous administration had reduced what had been the official country seat of the Governor to a dwelling unfit even for the working occupation of the council's third officer. Mashborne's resort to a neighbour's house illustrated the working extent of the deterioration. The decision to carry out only emergency tile repairs for the present, with substantive work deferred until after the yam-planting season, applied the working principle of seasonal priorities. The agricultural calendar set the absolute working constraint on labour deployment, since failure to plant in the proper season would compound the food shortage already documented at the plantation survey of 10 August. The Plantation House could be made weatherproof in part now, with comprehensive restoration to follow once the working hands were released from the fields. The Algate petition introduced the working device by which a husband, on departing the colony, could claim possession of his wife's inherited estate. The mechanism rested on the doctrine of jure uxoris, by which a husband held the working power to administer property descended to his wife from her family. Algate's marriage to Mary Earle, the only surviving child of Thomas Earle deceased, gave him the working position to demand the estate from any party currently holding it on trust. The competing claim of Charles Steward, framed as a right to satisfaction for the boarding of two of the Earle children, illustrated the working pattern of orphan administration on the colony. A neighbour or relative who took in surviving children of a deceased planter could charge their maintenance against the estate, creating an equitable interest that had to be settled before the estate could be distributed to the heirs. The mechanism preserved working incentives for the care of orphans by giving the carer a charge on the property. Speculations Algate's framing of Steward's claim as a pretended interest pointed to a calculated effort to discredit the working basis on which the estate had been held back from delivery. By using the word pretended, the petitioner cast doubt on the genuineness of Steward's working claim while not formally denying that the children had been boarded. The mechanism placed the burden on Steward to substantiate the actual cost of the boarding charge against the working benefit he had derived from possession and use of the estate. The timing of Algate's petition, coinciding with the cluster of departure applications around the <i>Rochester's</i> presence in the road, suggested a calculated working strategy to bring the property question to a head before the husband's planned passage to England. A departing husband without resolution of his wife's estate would have to leave the matter to working agents on the island, with little prospect of recovery from a distance. By forcing the council to determine the question while he remained present, Algate preserved the working possibility of either settled delivery before sailing or a continuing claim that he could pursue on the spot.

201	192	Ordered. That the Said Charles Steward have Notice to Attend next Councill day Captain Mashborne reports that the Blacks he has already are for the following Plantations [..] Plantation House Continued. Lufkins for the Plantation 10 Plantation House for Ditto 10 For the New Ground 4 Garden 7 Vineyard 3 To wash 3 Fetch Wood 3 Carpenters 2 42 For Wash Houses 2 For Hogs but old 2 Past Labour 4 Children 7 To fish 2 Perkins for Plantation 8 Nourishing Hogs, Goats &c 3 The Hutts for Plantation Hogs &c 8 34 42 34 76 Wanting more 2 34 Which is the Number for Each Plantation as the Gentlemen Appointed with me to Survey them thought but needfull when the Ground is put in Order and what other Ground may be planted within the Said yet is fewer So that there is 14 blacks for the Plantations [..] 14 Old ones the rest new Comers, that little work at present can be Expected from them and what Yams for Some months to be fetcht a great way from the freemen one day in a week will be always taken up for their own Provisions one day wood, and the Plantations being very much over run with weeds it will be as much as they'l be able to do to gett them wood before the Season for planting comes in which if not done will be quite Choakt up. Captain Mashborne & M[r] Bazett reports that Acording to the Order of the 19[th] Instant they went to John Trevass and agreed for 21250 Yams and Suckers for forty three Shillings p[r] Thousand. And also that they had bin at Hugh Bodleys Plantation and apprised the Yams in all Seventy Seven Thousand Yams and Suckers Valued at Twenty Shillings a Thous and they being So remote from Plantation house as Likewise Some of them very Small that the Charge of fetching them would be very Considerable wherefore they think twenty Shillings a Thousand for these Yams and Suckers to be Equivelent Margin Notes: Steward to attend y[e] Councill. Blacks appointed in Sever[all] Plantations as thought needfull by y[e] Persons appointed. Yams b[ought] of Trevass D[i]t[t]o of Hugh Bodleys.	Charles Steward was ordered to attend the next council day. Captain Mashborne reported on the slaves at his disposal. The current allocation across the plantations stood at 76. The schedule ran as follows. Lufkins for the plantation 10 Plantation House for the same 10 For the new ground 4 Garden 7 Vineyard 3 To wash 3 Fetch wood 3 Carpenters 2 Sub-total 42 Plantation House continued for the wall makers 2 For hogs but old 2 Past labour 4 Children 7 To fish 2 Perkins for plantation 3 Norden, hogs and goats 3 The Hutts for plantation, hogs and so on 8 Sub-total 34 Grand total 76 Wanting more 34 This was the count of slaves for each plantation that the persons appointed to survey the ground judged needful. They would be of full use only when the ground was put in order and what other ground might be planted within the named intervals was added. Even with the present 76 slaves, of whom 14 were old and the rest newcomers, little work could be expected of them at this time. For some months yams would need to be fetched a great distance from the freemen. One day each week would always be taken up bringing in their own provisions. Another day would be lost in fetching wood. With the plantations heavily overgrown, the most that could be done would be to get them weeded before the planting season came. Any task not completed in that interval would be left undone. Captain Mashborne and Mr Bazett reported that, under the council's order of the 19th of the present month, they had gone to John Tovais and agreed for 212,500 yams and suckers at 43s 0d the thousand. They had also been to Hugh Bodley's plantation and appraised the yams there at 77,000 in total, valued at 20s 0d the thousand. Because Bodley's plantation lay so remote from the Plantation House, and many of the yams were small, the cost of fetching them would be considerable. For that reason they reckoned 20s 0d the thousand a fair price for those yams and suckers, as the equivalent. Interpretations The slave roster sets out how a small unfree workforce was distributed across the council's productive and domestic establishments. The allocation reveals the working priorities of the colony: Lufkins and the Plantation House each held ten heads, the largest single concentrations, while smaller parties were attached to specific tasks (washing, wood-fetching, carpentry, fishing) and to outlying holdings such as Perkins and the Hutts. The category past labour, which carried four heads, identified slaves no longer fit for productive work but retained on the establishment. The estimate that 34 more slaves were wanting placed the council's stated workforce requirement at 110 in total, and supplied a documentary basis for any future application to London for further consignments. The figure of 14 old ones among 76 placed the working core of the labour force at no more than 62, and the qualification that the rest were newcomers reduced the count of experienced field hands further. The weekly loss of one day to slave provisioning and another to wood-fetching represented an inbuilt friction of about a third of the working week before any

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			plantation task began, which framed the council's repeated complaint that the establishment could not maintain itself without further hands. The yam valuation exercise applied the working benchmark for planting stock recently established on the island. The Tovais agreement at 43s 0d the thousand fixed the upper market rate for sound yams and suckers in bulk near the Plantation House. The Bodley appraisement at 20s 0d the thousand, less than half the Tovais rate, was reduced both on quality (many small yams) and on the carriage cost from a remote site. The mechanism by which surveyors made two parallel visits and brought back a comparative valuation was the practical means by which the council protected itself against overpayment for inferior or inconveniently sited stock. Hugh Bodley appears here as the holder of a remote plantation whose yam stock the council was prepared to buy in but only at a reduced rate. The reference recalls the long-running Bodley estate matters that earlier carried through the Doveton apprenticeship-money petition and the Smith petition over the Bodley estate appraisement-block, where the council under Pyke had ordered a fresh joint appraisement after Boucher's refusal to accept the earlier valuation. Speculations The council's decision to instruct two senior men, Mashborne and Bazett, to undertake the valuations in person, rather than delegate to a single surveyor, suggests a deliberate response to the recent difficulties over Boucher-era appraisements. The pairing of a councillor familiar with plantation management with the storekeeper-surveyor would have made any future challenge to the reported figures considerably harder to mount, and it placed the working benchmark of 43s 0d the thousand for sound yams and 20s 0d the thousand for remote or small stock on a documentary footing that could be cited against later disputes. The deliberate recording of the gap between the 76 slaves present and the 110 needed reads as a calculated piece of administrative groundwork. By entering the deficit into the consultation book at the moment when the new plantation programme was being launched, the council laid down the evidentiary basis on which any later shortfall in yam production could be attributed to insufficient labour rather than to administrative failure, while at the same time supplying the directors in London with a quantified case for further consignments.
202	193	Equivalent to a greater price where they are nearer to a markett and Easier to be fetcht Cap[t] Mashborne also reports that the Ground near the high Peak will be Convenient for a Plantation of nigh one Hundred Thousand Yams he proposeing to bring Bodleys Suckers there it being nearest and the Peak a very good place to raise Hogs as having a good Outlett. Therefore. Ordered. That the Fence in Such a quantity of ground at the Peak as he Shall think fitt and hire Hands that are Necessary for the work as Cheap as he can. Cap[t] Mashborne desires to know what Progress M[t] Tovey has made in the bringing up the Books of Consultations haveing had two writers employed in the Office with him. He saith he has bin employed in veiwing the Gunners Stores which has taken up Sometime that the Writers have bin employed in Copying out Severall Letters, Wills, and Agreements that have bin formerly Neglected and Since happend and that the Office is very incomodious and every thing out of Order that 'tis impossible for him to make So much Progress therein as Else he might but that as soon as he has put all the Papers in as good Order as he can, and apprised himself	This continued the price equivalence reasoning of the preceding entry: the Bodley yams were valued at the lower rate as the equivalent of a higher price closer to a market and easier to fetch. Captain Mashborne further reported that the ground near the High Peak would suit a plantation of around 100,000 yams. He proposed bringing Bodley's suckers there, since the place lay nearest at hand and the Peak was very good ground for raising hogs, having a good outlet. The council ordered that the fence be drawn in such a quantity of ground at the Peak as Mashborne thought fit, and that he hire such hands as were necessary for the work, as cheaply as he could. Captain Mashborne next asked what progress Mr Tovey had made in bringing up the books of consultations, having had two writers employed in the office with him. Tovey answered that he had been taken up with viewing the gunner's stores, which had taken some time, and that the writers had been employed in copying several letters, wills and agreements that had previously been neglected and had since happened. The office was very inconvenient and everything out of order, so that it was impossible for him to make as much progress in the

		better of the Business of his Office he will Neglect no Opportunity to be beforehand if Possible & w[ith] all business that relates thereto. M[r] Alexander Petition'd the Govern[r] and Councill a Coppy as followeth. To the Worshyp[ll] Isaac Pyke Esq[r] Govern[r] &c and Councill. The most Humble Petition of John Alexander (Sen[r] Ensign) Humbly Sheweth. That for as much as your Petitioner being at this tyme unsensible on what footing he Stands M[r] Tovey being appointed Secretary or Clerk of Councill by the Hono[ble] United Company. Humbly moves Your Petitioner may be Continued in his place of Margin Notes: Land at high Peak Convenient for a Plantac[i]on. y[e] Same to be Fenced. Cap[t] Mashborne Enq[uires] about y[e] Office. The Sec[ry]s Answer. Alexanders Petition to Continue Ensign	work as he might wish. As soon as he had set all the papers in as good an order as he could, and acquainted himself better with the business of his office, he would neglect no opportunity to be beforehand, if possible, with all business that related to it. Mr Alexander then presented a petition to the governor and council, a copy of which followed. To the Worshipful Isaac Pyke Esquire, Governor and Council. The most humble petition of John Alexander, junior ensign, humbly sheweth: That, your petitioner being at this time without information as to the footing on which he stood, and Mr Tovey having been appointed secretary or clerk of council by the Honourable United Company, your petitioner humbly moved that he might be continued in his past Interpretations The order to fence ground at the Peak granted Captain Mashborne both the spatial discretion (in such a quantity of ground as he thought fit) and the labour-procurement authority (to hire hands as cheaply as he could) for a substantial project. The combined grant of judgement over scope and over wages, made in a single sentence, indicates how the new administration was operating in practice: a senior councillor entrusted with an entire infrastructure project on the strength of his standing, rather than under itemised instruction. The reference to a good outlet for hogs identifies the practical reason for siting them at the Peak, since the elevation allowed the animals to range over uncultivated upland without the cost and labour of further fencing. The exchange between Mashborne and Tovey exposed the working state of the Secretary's office under Pyke. The order of 24 August 1714 to rebuild the office larger and more convenient had reflected its dilapidated physical condition; Tovey's reply now revealed an equally serious documentary condition. Letters, wills and agreements had not been entered up under Boucher, and the gunner's stores had drawn Tovey's attention away from the consultation books themselves. Two writers had been needed merely to begin the catch-up. The form of the question and answer, both entered into the consultation book, served the documentary case the new administration was building against Boucher. John Alexander's petition opened a separate matter. Alexander was the long-standing clerk of the council under the Boucher administration whose name had been signing public advertisements throughout 1712 to 1714, including the game preservation advertisement of 25 July 1712, the survey advertisement of 24 November 1712 and the slave insurrection advertisement of 2 June 1714. With Tovey now appointed secretary or clerk of council under the United Company's seal, Alexander's previous office had been superseded. He now styled himself junior ensign, a military rank, and petitioned for his position to be settled. The shift from clerk to junior ensign suggests that Alexander was seeking to be carried over into a military appointment, the only continuing footing on which he could remain in the Honourable Company's service. Speculations Tovey's explanation that the writers had been busy with the gunner's stores rather than the consultation books reads as a deliberately framed defence rather than a simple report. By placing the inspection of the gunner's stores first, Tovey aligned his work with one of the new administration's principal anxieties (the documentary case against Boucher's stripping of the Castle) while explaining away the slow progress on the books. The entry of the exchange into the consultation book itself converted what might otherwise have been a private rebuke into a public record of his industry,

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			available for transmission to London with the other evidence of the new administration's reforming activity. Alexander's choice to petition immediately after the Tovey exchange, rather than waiting for a separate council day, suggests opportunistic timing. With the council's attention already on the question of office-holding and the consequences of the change of administration, Alexander could press his own continued employment without raising a new agenda item. The self-styling as junior ensign at the moment of petition indicates that he had probably already received some informal assurance of military continuation, and was now seeking its formal entry into the consultation book before the ground shifted again.
203	194	of Ensigne and if need be to help and Asist in the Office at Such a Sallary p[er] annum as your Worship and Councill Shall think fitt but to be Confin'd to be allways attending will be a Loss to your Petitioner in his Plantation Business Especially at this Juncture It being the only tyme for Planting and raiseing Provisions after a great Drought which has Reduced most of the Inhabitants very Low. All which your Petitioner Leaves to your Worships prudent Consideration in hopes of a favourable Determination. And (as in duly bound) Shall ever pray &c Aug[t] the 24[th] 1714 Jn[o] Alexander. Que[stion] It being Demanded what need M[r] Tovey has of an Asistant. He Saith. He is willing and desirous to do the most he can and till Such time as he finds the writing is more than he can Mannage with the Asistant of one is unwilling to desire more. But that with all that now is without M[r] Alexander being a Stranger to the business, he prays the Councell That M[r] Alexander may Continue to Asist him till Such tyme the Books and Papers are regulated as is Necessary. Referrd the further Consideration hereof till next Councill day. Martin Norman Complained that Thomas Burnham who had agreed to bring the Water unto his Plantation &c for which he had paid him, he never did and yet refuseth to repay him. Ordered. That a Warrant be granted the Said Norman against next quarter Sessions Ordered. That the Streets and Publick ways belonging to this Towne of St Helena be regulated by Stakeing out the ground of the two Streets and Passages between them where there is not yet any building to prevent for the future the Erecting any Edifice Manton House Out house or other Tenement that may be Prejudiciall to the Publick way or Road by Stoping up any Principall Passage and that the Same be referred to the Govern[r] to give Directions Margin Notes: and to Asist in y[e] Office. Que[stion] M[r] Alexander Continued. till further Considerac[ion]. Normans Compl. Ag[ainst] Burnham. Warr[an]t granted. Streets & Publick ways Regulated.	Alexander's petition continued: that he might be continued in his past office of ensign, and if need be to help and assist in the office at such a salary per annum as the council should think fit, until he was confirmed. He would always be very willing to attend, and especially at this present time would assist your petitioner in his plantation business, this being the only time for planting and raising provisions after the great drought which had reduced most of the inhabitants very far. All of which your petitioner left to the council's prudent consideration, in hopes of a favourable determination. And, as in duty bound, I shall ever pray, and so on. Dated 24 August 1714. Signed: John Alexander. The council demanded what need Mr Tovey had of an assistant. He answered that he was willing and desirous to do the most he could, and until such time as he found the writing more than he could manage with the assistant he had, it was unwelcome to desire any more. But should it ever appear that he was without Mr Alexander, being a stranger to the business, he prayed the council that Mr Alexander might be continued to assist him until such time as the books and papers were regulated as was necessary. The further consideration of the matter was referred to the next council day. Martin Norman complained that Thomas Burnham, who had agreed to bring water onto his plantation, and for which he had paid him, had never done it and refused to repay him. The council ordered that a warrant be granted to Norman, returnable at the next quarter sessions. The council further ordered that the streets and public ways belonging to the town of St Helena be regulated, by staking out the ground of the two streets and passageways before any further building was raised on them, to prevent the future erection of any dwelling house, outhouse or other tenement that might be prejudicial to the public way or road, or to any principal passage. The matter was referred to the governor to give directions. Interpretations Alexander's petition combined a request for retention in office with a tactical offer of immediate practical service. By offering to assist Tovey at any salary the council thought fit, while at the same time pleading the urgency of his own plantation business in the aftermath of the drought, he positioned himself as both a useful clerk and a planter in genuine need of attention to his fields. The reference to the great drought, which had reduced most of the inhabitants very far, supplied the working context. It connected the petition to the wider credit-clearing and store-settlement framework already laid down across the August 1714 consultations, and signalled that Alexander too counted himself among the inhabitants whose plantations now required urgent recovery work. Tovey's reply revealed how the council deliberately structured the question to test whether Alexander's

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			continued employment was genuinely needed or merely a favour. By demanding what need Tovey had of an assistant, the council put the matter onto an institutional footing rather than a personal one. Tovey's careful answer, that he could manage at present with his current assistant but might need Alexander later, both protected Tovey's own position as the appointed clerk under the United Company's seal and kept open the possibility of drawing on Alexander's knowledge of the existing books and papers. The deferral to the next council day allowed both men to test the working pattern before a final decision was made. The Norman against Burnham water-supply dispute revealed a settled local mechanism. A planter who had contracted with another to bring water onto his plantation, and paid for the work, could enforce the contract by warrant returnable at the next quarter sessions when the work was not done. The council's response was procedural rather than substantive: a warrant rather than an immediate order to repay or perform. Quarter sessions provided the forum in which the evidence on both sides could be tested before judgement. Norman appeared in the present sequence as one of the planters seeking credit-clearing for his store debts through assignment of debts owed to him by others, and this warrant against Burnham added another item to the working list of his outstanding claims. The street regulation order recorded the first formal town-planning measure entered for St Helena in the working sequence. Staking out the ground of the two streets and passageways before further building, with the express object of preventing dwelling houses, outhouses or other tenements from encroaching on the public way, established the principle that the public passage took priority over private building. The referral to the governor for directions placed the practical execution in Pyke's hands, consistent with his personal supervision of the sea wall, the new storehouse and other physical improvements being made under the new administration. Speculations The timing of the street regulation order, coming immediately after the Norman against Burnham warrant, suggests that the council was working through a deliberate sequence of small administrative orders to set the tone of the new administration. Each order addressed a specific failing of the Boucher period: unenforced contracts, unregulated building, neglected office-keeping. By entering them as separate ordered items in the consultation book on the same day, the council assembled a working evidentiary record of reform that could be cited in transmission to London alongside the wider documentary case against the previous administration. The two streets reference, named but not specified, hints that the working town plan at James Valley by August 1714 amounted to a principal street running up the valley from the Castle and a cross or parallel passageway. The order to stake out the ground before further building would only have been needed if the existing line was indistinct enough on the ground to permit encroachment by mistake or by design. The mention of dwelling house, outhouse or other tenement as potential obstructions suggests that the council had already seen, or was anticipating, applications by inhabitants to extend into the public way under cover of the recovery building activity following the drought.

		Sometime, held a day by the blacks Loytering away their tyme aforesaid to prevent which for the future Ordered. That all blacks Shall work from Six to Six Allowing only the usuall Eating tymes whilst the Beating the publick work Bell and in Case of Such Loytering away their tyme as above mention'd abatement is to be made for Offence in this manner Shall be otherwise & punished as the Govern[r] Shall think fitt, And 'tis also further. Ordered that when any Black is lett to hire to work at the Fort, he Shall not be Taken away by his Master or Hired from the Said work or any pretence whatsoever without first asking Leave of the Governour. According to an Order of Councill bearing date the 17[th] Instant Robert Bell and Benjamin Pledger Appeared together and the Said Bell being Acquainted with the Said Pledgers Petitioning for the five Acres Land Says that it dos not appeare but by hear Say that Thomas Pledger is Dead and that there a little and other freehold of Estate got Mentioned in the Said Petition and besides not the M[r] [...] sd Tho[s] Pledger if he be dead might make all the and Desireous to be Safe. The Governour asked Benjamin Pledger what he would do with the Lands if he had it. He Says he now Serves the Honour[ble] Company as a Sold[r] But if he had the Land he would Live on it, there being Enough to Maintain him. He is of no Trade nor bred up to any Business but to be a Sold[r] So that the Govern[r] thinks of the five Acres of Land be Delivered to him in Case of his brothers Return he would not be able to make good the Rent and Cattle, and Robert Bell his moth[ers] Husband who has this Land in his Possession is able to make it good. Wherefore the Govern[r] told Benj[a] Pledger if he would apply himself to Learn Some trade he would Order him to have Possession of the Land. He promises he would go to work at his fathers Trade which is a Stone Cutter. Robert Bell Promys[s] to Teach him, and when he brings a Hewn Stone to the Governour all of his own work he is to be Employed in Cutting Stone for the Honourable Company. and Margin Notes: Blacks Loitering away their tyme. To work from 6 to 6 a Clock & if any loss of tyme to be abated. Non to take away their Blacks w[ith]out leave. Bell & Pledger about Land. Gov[r]s Quest[ion] and Pledgers Answer. Upon Pledgers Learning a trade to have y[e] Land.	idling away their time. To prevent this in future, the council made the following orders. All slaves were to work from six o'clock to six o'clock, allowing only the usual eating times. The ringing of the public work bell was to mark these hours. If any slave absented himself in the manner just described, an abatement was to be made for the time lost. Slaves who offended in this way frequently, or were otherwise found guilty, would be punished as the governor thought fit. The council further ordered that, where any slave was let to hire to work at the Fort, he was not to be taken away from that work, or hired by his master from it on any pretence whatsoever, without first asking leave of the governor. In accordance with an earlier council order of 17 of the present month, Robert Bell and Benjamin Pledger appeared together. Bell was made acquainted with Pledger's pretensions to the five acres of land. Bell answered that it did not matter to him, by reason that Thomas Pledger was dead, and there were cattle and other personal estate sufficient (had he been living) in the said Bell's hands and behind, but, the said Thomas Pledger being dead, what might be due to him might make all the said personal estate desirous to be safe. The governor asked Benjamin Pledger what he would do with the land if he had it. He answered that he now served the Honourable Company as a soldier, and had no need of the land, since there was sufficient on it to maintain him. He was of no trade, nor bred up to any business but to be a sailor. The governor considered that if the five acres were delivered to him in case of his brother's return, Pledger would not be able to make good the rent and cattle; whereas Robert Bell, his mother's husband, who held the land in his possession, was able to make it good. The governor accordingly told Benjamin Pledger that if he would apply himself to learn some trade he would order him to have possession of the land. Pledger promised he would go to work at his father's trade, which was as a stone cutter. Robert Bell promised to teach him, and that when he brought a stone to the governor all of his own working, all his work was to be employed in cutting stone for the Honourable Company Interpretations The fortifications slave order set out the working discipline that the new administration intended to impose at the Bridge. The principle that the public work bell governed the hours from six to six, with abatement (a deduction from wages or charge to the master) for time lost, gave the council a measured response to absenteeism short of corporal punishment, while reserving punishment by the governor for repeat offenders. The accompanying rule, that no master could withdraw a hired slave from Fort work without leave of the governor, closed the obvious workaround by which an absent slave might be retrospectively classed as recalled by his owner. Slaves let to hire at the Fort were thus brought under direct gubernatorial control during the working day, regardless of who owned them. The Bell against Pledger inheritance dispute, opened on 17 August 1714 on Benjamin Pledger's petition concerning the five acres bequeathed to his presumed-dead elder brother Thomas under Praise Pledger's will of 3 November 1697, was now resolved in a manner that subordinated strict heirship to demonstrated economic capacity. The governor's test was practical: who could maintain the land, pay the rent and replace the cattle if Thomas Pledger returned? Robert Bell, Benjamin's mother's husband, met the test; Benjamin, a soldier with no trade, did not. The governor's offer to deliver possession in exchange for Benjamin's learning a useful trade, in this case his father's stone-cutting, converted an inheritance question

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			into an apprenticeship-and-labour arrangement. The understanding that, once Benjamin had cut a working stone of his own, his labour would be applied to the Honourable Company's stone-cutting needs aligned the inheritance settlement with the council's wider stone-cutting establishment at the Bridge and at Sandy Bay. Robert Bell here played a double role. As the working planter in possession of the Pledger five acres, he held the position the petition was challenging. As a stone-cutter himself (recalled from the 24 July 1712 sale of the Belvird country plantation, where he was described as a free planter and mason), he was uniquely placed to teach Benjamin the trade the governor required as a condition of granting possession. The mechanism converted a potential property loss for Bell into a working obligation as instructor, while solving the council's need to train up new stone-cutters from the inhabitants. Speculations The phrasing of the labour-discipline order, in which the council named the slaves who idled away their time under pretence of fetching wood at the Bridge, suggests that the council had already identified a specific working pattern rather than addressing a general grievance. Fetching wood was a legitimate task on Company work, but it took slaves out of sight of the overseer and made the time lost difficult to recover. The order's care to specify half a day or more at a time, and almost every day for some time, reads as a direct response to specific reports brought to the council, perhaps from the master gunner French or from a Fort overseer. The governor's resolution of the Pledger inheritance turned what could have been a simple administrative refusal into a working bargain that served the council's wider purposes. By tying delivery of the land to Benjamin's learning a trade, and by directing his future labour to the Company's stone-cutting establishment, Pyke converted a soldier of no trade into a working stone-cutter at no cost to the Company while leaving the rent-paying, cattle-keeping function of the land in the hands of the established planter who could meet it. The arrangement also probably reflected an instinct to avoid creating a new freeholder out of an unsettled young soldier at a point when the council was actively trying to reduce, not enlarge, the number of dependent or marginal holdings on the island.

Island of St Helena. At a consultation held on Tuesday 31 August 1714 at the United Castle in James Valley. Present: Isaac Pyke Esquire, Governor George Haswell, Deputy Governor Edward Mashborne, third Matthew Bazett, fourth Antipas Tovey, fifth in council The petition of Giles Smith, free planter, was read. A copy followed, praying that he might have what was due to him from the estate of Hugh Bodley deceased, his father-in-law. The council ordered that Edmund Bodley, to whom the right of administration belonged, was to administer first to pay the Honourable Company and then divide the rest of the estate. The petition of John Aldrick, soldier, was read, desiring liberty to hire his duty and to work at the Honourable Company's work when on duty Interpretations The resolution of the Bell against Pledger inheritance question was confirmed by the entry

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			granting Bell possession of the five acres, with the signatures of the full council appended. The settlement combined three working outcomes in a single order. Bell retained possession of the land he had previously held. Benjamin Pledger received the practical benefit of being taught a trade under Bell's instruction. The Company secured an additional stone-cutter for its working programme at the Bridge and Sandy Bay. The mechanism by which possession of land was conditioned on the apprenticeship and labour arrangements of a related party went beyond ordinary inheritance procedure and represents a working extension of the council's reach over private estate matters where Company labour interests could be served. The Giles Smith petition of 31 August 1714 returned to the long-running Bodley estate matter. Smith, as son-in-law of the late Hugh Bodley, had earlier petitioned on 17 August 1714 for a fresh joint appraisal of his father-in-law's estate, which Boucher had refused to accept the earlier appraisal of and which had remained unsettled. The present order placed the administration in the hands of Edmund Bodley, who held the legal right of administration, and prescribed the working sequence: the Honourable Company's debt was to be paid first, then the residue divided. This rule of debt priority over distribution had been the consistent council position since the 11 December 1710 invocation of nullum tempus occurrit regi aut ecclesiae in the Coales probate, and was now applied to a major estate where multiple family claimants stood behind the Company. Edmund Bodley, named here as the rightful administrator, appears to be a member of the Bodley family with a closer legal claim than Giles Smith the son-in-law. The council's careful direction of administration to the legally entitled person, rather than to the working petitioner Smith, preserved orderly succession while still ensuring that Smith's claim would be reached once the Company debt had been cleared. John Aldrick's petition for liberty to hire his duty introduced a separate matter. A soldier hiring his duty meant paying another soldier or person to stand his post for him, freeing him to undertake paid work elsewhere. The petition combined this with a request to work at the Honourable Company's work when on duty, an arrangement that probably allowed Aldrick to count his Company labour as fulfilling his garrison duty. Speculations The order placing administration of the Bodley estate with Edmund Bodley rather than with Giles Smith may reflect the council's awareness that the working dispute between family claimants would be substantial. By placing administration in the hands of the closest legal kinsman, the council positioned itself outside the family dispute while protecting the Company's prior debt claim. Smith's earlier petition for fresh appraisal had identified the working problem (the Boucher block on settlement); the present order solved it by activating the proper administrator, who would then have to satisfy the Company before any family claimant could press a further share. Aldrick's combined request, both to hire his duty and to work at the Honourable Company's work when on duty, suggests a soldier looking to clear his store debts under the working framework of 24 August 1714, which had set the cash-or-labour conversion rate for substantial balances. By hiring a substitute for his guard duty out of pocket while drawing a Company day-wage at the fortifications or elsewhere, Aldrick could potentially earn his way out of debt faster than by following the standard ration cycle. The next council day's response will probably reveal whether the council was prepared to formalise such an arrangement or treat it as a one-off.

[...] Margin Notes: to work 3 days in [...] instead of doing duty. w[ch] he refuses his proposals. Serj[t] Fairfax Petition for de= =g Constant duty. to do his duty as a Serj[t] Cha[s] Steward Appeared upon Algates Compl[t] produced his Bill of Sale the bargain is Approvd of	Aldrick's petition continued: that he might do so as well when off duty as when on duty, as he had lately done. The council ordered that Aldrick work three days in nine instead of doing his duty being on the guard, his working at his trade to be looked upon as his duty. Aldrick refused, alleging that as he was a soldier he ought only to do his duty as a soldier, and to be upon the guard upon guard days. He was willing to hire one to do his duty and would then work for the Company at 4s 0d a day, but he would not work at his trade of a carpenter otherwise. The petition of Thomas Fairfax, sergeant, was read, desiring that some additional salary might be allowed him for doing constant duty at Munden's Point Castle, the store account being now amounting up. The council ordered that he perform his duty in person as a sergeant. If he thought himself constantly at that castle a hardship, he was to take his turn with the other sergeants at the Fort. In accordance with an order of the 24th of the present month, the Marshal summoned Charles Steward to appear on the present day. Steward accordingly attended and produced a bill of sale which was witnessed by John Long, Thomas Gurgen and Robert Addis, the two former appearing in person. The latter, being dead, justified the bargain as a fair contract, and that the instrument had been read twice over to him before he signed it, and that he made no objection then to it; and that Charles Steward also made a fair agreement and gave a valuable consideration for it. Inasmuch as the land was with the stock thereon, as appeared by the inventory, valued at £139 2s 5d, Charles Steward proved he gave for them £170 0s 0d. Nothing appearing but a fair bargain, the writing sealed and signed before sufficient witnesses, the council dispatched the cause and dismissed Charles Steward from any further attendance on the matter. Signed by Isaac Pyke, George Haswell, Edward Mashborne, Matthew Bazett and Antipas Tovey. Interpretations The Aldrick exchange exposed the working tension between two different framings of a soldier's service. The council proposed a substitution rule: three days' work at his trade in every nine would count in place of his guard duty, with the carpentry treated as Company service. Aldrick refused on principle, insisting that a soldier's duty was guard duty and could not be discharged by trade work, but offering instead to hire a substitute himself and then draw the standard 4s 0d day rate as a Company carpenter. The standoff revealed how the cash-or-labour conversion structure of 24 August 1714 was being negotiated in practice. The council preferred a direct substitution that converted skilled trade work into Company duty without paying day wages; the soldier preferred a clean separation, in which he met his garrison obligation by hire and earned the day rate for distinct trade work. The unresolved dispute will probably return. The Fairfax petition produced a flat refusal of the additional salary requested. The council's response, that Fairfax perform his duty in person as a sergeant and take his turn at the Fort if his outpost was a hardship, reflected the working principle that an officer's posting did not in itself attract extra pay. The reference to the store account being now amounting up suggested that Fairfax had run up a store debt under his current arrangement and was seeking the additional salary as a means of paying it down. The council's redirection to the rotation system used the same logic as the Aldrick exchange: a soldier in difficulty was to be reabsorbed into the standard establishment, not given a special allowance.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			Charles Steward's Pompey-style challenge case was dispatched in the petitioner's favour after a careful evidentiary review. Three witnesses had been named on the bill of sale: John Long and Thomas Gurgan attended in person; Robert Addis (now dead) had earlier confirmed under oath that the instrument was read to him twice before signing, that he had made no objection, and that the consideration was fair. The land with its stock had been independently valued at £139 2s 5d on the inventory, and Steward had paid £170 0s 0d, well above the valuation. The bargain being shown to be fair, witnessed, sealed and properly paid for, the cause was dismissed. The decision applied the Pompey doctrine of 17 August 1714 (that a properly witnessed bill of sale outweighs a recollection of verbal direction by the late Governor) in a context where the underlying transaction itself was challenged. Where the bill could be shown to be sound on all three tests (witnesses, fair consideration, due execution), the council would not disturb it. Speculations Aldrick's refusal of the three-in-nine substitution suggests that he had calculated that the standard 4s 0d day rate for carpentry would more than cover the cost of hiring a substitute soldier (probably at the working day rate of around 1s 6d or 2s 0d) while leaving a clear margin. The council's offer, by contrast, would have given the Company three days of skilled carpentry without the wage cost at all. By converting the question into a matter of soldierly principle, Aldrick framed his commercial position in language the council was less able to refuse: a soldier's duty was guard duty, not carpentry. The next council day will probably show whether the council accepted the framing or pressed the substitution as an order. The Steward bill of sale case probably came before the council as one of a wider set of challenges to Boucher-era transactions, prompted by the new administration's working pattern of revisiting questionable acquisitions. Where the Pompey case had turned on a serving councillor's claim of verbal authority, the Steward case turned on whether the underlying instrument itself was sound. By placing both kinds of challenge before the council in successive weeks, the petitioners and the new administration together appear to have been establishing the working boundary line between transactions that would be disturbed and transactions that would stand.

Present: Isaac Pyke Esquire, Governor George Haswell, Deputy Governor Edward Mashborne, third Matthew Bazett, fourth Antipas Tovey, fifth in council The petition of Dorothy Hayes, widow, was read. A copy followed. Island of St Helena. To the Worshipful Isaac Pyke Esquire, Governor, and the Council. The most humble petition of Dorothy Hayes, widow, humbly sheweth: That, some time since, your petitioner's neat cattle happening to get into the Honourable Company's Hutts plantation through the badness of the fences, the slaves then there did set on Hunt's mongrel to kill one of your petitioner's best cows, which was a very great loss and detriment to your petitioner. Upon which she applied to Governor Boucher for satisfaction, who offered another cow of the Honourable Company's in lieu thereof or payment, but, your petitioner having never

		lieu of that Killd or paym[ent] as your Worship &c[a] Council shall think fitts. And Margin Notes: Island S[t] Helena. Sheweth Dorothy Hayse[s] Petition for a Cow in lieu of another Killd by Dogs	received either, and being a poor woman and children to maintain, she humbly prays she may have another cow in lieu of that killed, or payment, as the council shall think fit. And Interpretations The Hayes petition opened a further Boucher-era unsettled claim, building on the working pattern already established in the Smith petition over the Bodley estate, the Algate petition over the Earle lands, and the Pompey case. The mechanism by which a planter's livestock had been killed by Company slaves, an alternative cow or payment had been offered by Boucher in compensation, and the alternative had then never been delivered, exemplified the broader complaint against the previous administration: promises made, settlements offered, but nothing actually performed. The placing of the petition before the new council formed part of the working sequence by which inhabitants brought their unsatisfied claims to Pyke's administration for resolution. The detail that the slaves did set on Hunt's mongrel to kill the cow identified Hunt's mongrel as a working dog kept at the Company's Hutts plantation, used by the slaves to deal with stray livestock breaking through the fences. Setting a dog on a trespassing animal was a standard practice in early modern English husbandry where pounds and fences had failed, but here the dog had killed rather than driven the cow. The reference to the badness of the fences as the immediate cause of the trespass put part of the responsibility for the loss on the Company's own neglect of its enclosures, which strengthened Hayes's claim to compensation rather than penalty. Dorothy Hayes appears here as a continuing landholder on the island, recalled from earlier proceedings: her late husband William Hayes's nuncupative will was proved on 3 November 1713 on the oaths of Thomas Hayes and Sutton Isaack junior, and on 28 February 1712 she was established in her own fenced property after measurement. The present petition, framed as that of a poor woman with children to maintain, drew on the same family circumstances that had governed the 1713 settlement of her husband's will, by which the house and ten acres had been reserved for her sole good and benefit and that of her children. The continuing reference to her dependent state suggests that the working household economy remained fragile. Speculations The pattern by which Boucher had offered settlement (another cow or payment) but delivered neither suggests that the offers themselves may have been made as an immediate way of closing the petitioner's complaint at the council day, without any working intention or perhaps any working capacity of fulfilment. Hayes's present petition reads as though the unfulfilled offer was a settled fact rather than a passing oversight; the implication is that other inhabitants probably held similar unsatisfied offers from the previous administration, and that the new council would be working through them as they were brought forward. The framing of the petition in the language of poverty and dependent children suggests a calculated approach by Hayes to the new administration. Where the 24 August 1714 advertisement and the wider store-settlement regime placed the burden on debtors to clear their accounts, Hayes here turned the framework round, presenting herself as a creditor of the Honourable Company by reason of the killed cow, and pressing the dependent state of her household as the ground for prompt settlement. The likelihood is that she anticipated the council would be more sympathetic to a creditor-claim from a widow with children than to a general complaint about Boucher-era arrangements, and pitched her petition accordingly.

208	199	And your Petitioner as in duty bound shall for ever pray &c[a] Referrd it to a farther Consideration The Govern[r] Reports that John Aldrick has been with him and Accepts of the Offer made to him viz[t] To have four shillings p[r] [Diem] when off of Guard and to work at his trade when it comes to his Turn to be upon Guard instead of his duty The Govern[r] also reports that John Sinnick having desired to be dismissed the Hono[ble] Companys service hav- ing served his time, he had granted it. Capt[n] Haswell reports that he had sent for M[r] Cleve- land severall times to Examine the Carpenters Stores &c[a] and he has bin Busie at work and now is sick therefore desires some other may be Appointed to take that Account. Cap[tn] Mashborne delivered the two following Accou[ts] An Acco[t] of the Hono[ble] Comp[as] Stock of Neat Cattle Hoggs, Goats, Sheep &c[a] Taken Aug[t] the 1[st] 1714. 7 Bulls 5 Boars 17 Cows 5 Sows 9 Heifers 16 Shoats 5 Bullocks 8 Piggs 12 Steers 8 Yearlings 34 [...] 3 Sheep 21 Calves [...] 60 [...] September the 1[st] 1714 [...] [...] 8 Bulls Bought since [...] the 1[st] 9[...] [...] 18 Cows 1 Bull 6[d] last month Killd Sicke 12 Heifers 1 Cow 1 boar 8 sows 1 boar 1 [...] 5 Bullocks 3 Steers 10 shoats & 2 piggs Pigd 9 15 Steers 1 yearlings 50 9 yearlings 3 Heifers 137 Goats & kidds b[t] last m[o] 118 [...] Calves 2 [...] 11 Killd 2 79 [...] 3 Sheep 4 Turkeys Margin Notes: Referrd Aldrich accepts to Work as offered form[er]ly Jn[o] Sinnick dismiss'd free [A]b[t] Carpen[t] Stores &c[a] As Comp[a] Stock Aug[t] 1714 1715 Geo[rge] Haswell [Edw]d Mashborne [Matth]w Bazett Antipas Tovey	And your petitioner, as in duty bound, shall for ever pray, and so on. The matter was referred to further consideration. The governor reported that John Aldrick had been with him and accepted the offer made to him, namely to have 4s 0d per day when off guard and to work at his trade, and when it came to his turn to be upon guard, to be upon guard instead of his trade. The governor also reported that John Sinsnick, having desired to be dismissed the Honourable Company's service, having served his time, had been granted dismissal. Captain Haswell reported that he had sent for Mr Cleve several times to examine the carpenter's stores and that Cleve had been busy at work and was now sick. The council ordered some other person to be appointed to take that account. Captain Mashborne delivered two accounts following. The first was an account of the Honourable Company's stock of neat cattle, hogs, goats, sheep and so on taken on 1 August 1714. Bulls 7 Cows 17 Heifers 9 Bullocks 5 Steers 12 Yearlings 8 Calves 2 Cattle total 60 Boars 5 Sows 5 Shoats 16 Pigs 8 Hogs total 34 Sheep 3 The second was an account of the same stock taken on 1 September 1714, with a note of what had been bought since 1 August and of what had been killed or lost in the last month. Bulls 8 Cows 18 Heifers 12 Bullocks 5 Steers 15 Yearlings 9 Calves 2 Cattle total 69 Bought since 1 August: 1 bull, 1 cow, 3 steers, 1 yearling, 3 heifers, 2 calves Killed last month: 2 Boar 1 Sows 8 Shoats 10 Pigs 2 Hogs total 21 Bought last month: 1 boar, 8 sows, 10 shoats, 2 pigs Killed last month: 9 Goats 137 (bought since 1 August 118; killed last month 21) Sheep 3 Turkeys 4 Signed by Isaac Pyke, George Haswell, Edward Mashborne, Matthew Bazett and Antipas Tovey. Interpretations The settlement of the Aldrick question reversed the apparent breakdown of the previous council day. The 4s 0d day rate was retained and the working pattern accepted on terms that gave Aldrick what he had previously refused, in substance, but framed differently. The clarifying point was that when his turn for guard came round he would stand guard rather than work his trade. The change in formulation, dropping the three-

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			days-in-nine substitution and putting the matter on a guard-day-by-guard-day basis, removed the perception that carpentry was being substituted for soldierly duty. The principle Aldrick had insisted on (that a soldier's duty was guard duty) was preserved, while the practical effect (Company carpentry at 4s 0d a day when off guard) was the same as the council had originally proposed. John Sinsnick's dismissal recorded the close of a working soldier's contracted time. Sinsnick had earlier been allowed 4s 0d per day for stone-laying at the Prosperous Bay house and 5s 0d per alarm for nineteen alarms given at the Bay, on 3 November 1713. The granting of dismissal on application, having served his time, formed part of the working pattern under Pyke by which soldiers who had completed their contracted service were discharged on their own request. Cleve's continuing absence from the audit of the carpenter's stores, first through being busy at work and now through sickness, prompted the council to appoint someone else, removing the bottleneck that had probably been holding up the wider inventory programme begun on 9 July 1714. The two stock accounts laid down a working benchmark for the new administration's livestock recovery programme. On 1 August 1714 the Company's stock stood at 60 head of cattle, 34 hogs and 3 sheep. By 1 September the cattle had risen to 69, the hogs had fallen to 21 (after 9 killed), and 137 goats and 4 turkeys had been added to the establishment through the procurement programme set in motion by the advertisement of 20 July 1714. The recorded purchases (1 bull, 1 cow, 3 steers, 1 yearling, 3 heifers and 2 calves on the cattle side; 1 boar, 8 sows, 10 shoats and 2 pigs on the hog side; 118 goats on the goat side) accounted for the working acquisitions from planters under the procurement framework. The largest single component, the 118 goats bought in a single month, recalled the Perkins live-stock agreement of 27 July 1714, which had supplied 110 goats among other items, and probably accounted for the bulk of the increase. Speculations The discrepancy between the 1 August total of 60 cattle and the figure of 60 head of black cattle reported by Bazett, Cason and French at the consultation of 8 July 1714 (when they declared Boucher had destroyed nearly all the Company's live stock except about 60 head of black cattle) suggests that the new administration's working baseline at handover was kept deliberately steady at 60 head for documentary purposes. The figure formed the working evidentiary base against which all subsequent additions and losses were measured. By placing the two parallel monthly accounts on the same page of the consultation book, with explicit notes of purchases and kills, Mashborne provided the directors in London with a working comparison that would frame the recovery of the Company's stock under Pyke against the destruction under Boucher. The pattern of monthly returns under Mashborne, with explicit notes of purchases, kills and standing stock, marked a sharp departure from the audit problems that had marked the late Boucher period and that had led to Bazett's interrogation on 1 April 1714 over the unsubmitted ships' accounts. By placing the first such return into the consultation book within two months of Pyke's arrival, Mashborne demonstrated the working discipline of the new administration in a format that could be carried home as evidence both of the destruction left by Boucher and of the recovery being achieved.

All p[er]sons y[t] owe above 20[l] to make y[c] proposalls by 2[d] Advertisem[t]	Isaac Pyke Esquire, Governor George Haswell, Deputy Governor Edward Mashborne, third Matthew Bazett, fourth Antipas Tovey, fifth in council This being the season of the year for the birds to lay at the Egg Islands, the council ordered the following. An advertisement was to be published that the governor would clear the islands next Saturday. Mondays, Wednesdays and Fridays were to be the Company's days, and Tuesdays, Thursdays and Saturdays were to be the days when the inhabitants might fetch eggs from the Egg Islands. Notwithstanding an advertisement published on 21 August 1714, which had encouraged those persons indebted to the Honourable Company's stores to make their several proposals to the governor and council for the discharging and payment of their respective debts, very few persons had come forward with any such proposals. The council therefore ordered that all persons who owed above £20 0s 0d sterling to the Honourable Company, and who had not already made their proposals for clearing and discharging their said debts, were on the present second advertisement, or within fourteen days at furthest after the date thereof, to repair to the governor and Interpretations The Egg Islands order resolved a practical question of seasonal harvest rights. The protection regime established by the advertisement of 17 August 1714 had forbidden access altogether outside the proper season; the present order, made on the working judgement that the laying season had arrived, opened the islands on a divided weekly rota. Three days in the week (Monday, Wednesday and Friday) were reserved for the Company; three days (Tuesday, Thursday and Saturday) were given to the inhabitants. The governor's personal clearance of the islands on the intervening Saturday opened the cycle. The Sunday omission reflected the working sabbath observance that the council had recently insisted on through the order of 10 August 1714 requiring all Company servants in the valley to attend church on the Lord's day. The structure converted what had been a contested seasonal resource into a regulated shared one, with the Company's harvest days outnumbered only by the combined inhabitant days, and with the prohibition on out-of-season access still standing as the framing rule. The store-settlement notice marked a sharpening of the working framework first issued on 17 August 1714 and reinforced by the debt-conversion advertisement of 24 August 1714. The 21 August reference now identified an intermediate advertisement which had invited debtors to come forward with their own proposals for clearing their accounts; the present order recorded that this voluntary mechanism had drawn very few takers. The response was to apply pressure to the principal debtors, those owing above £20 0s 0d, with a fourteen-day deadline from the date of the second advertisement. The £20 0s 0d threshold matched the working benchmark already established for the debt-conversion incentive of 24 August 1714, by which £4 0s 0d cash yielded £5 0s 0d store credit on debts above that figure, or alternatively labour at the fortifications at the same effective rate. The progression across the three advertisements (17 August general call, 21 August voluntary proposals, 14 September named deadline for principal debtors) revealed how the new administration was working through the colony's outstanding store debt in calibrated stages. Each step narrowed the working population subject to the next, escalated the institutional pressure, and reserved the more coercive measures for

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			those who had refused the earlier opportunities. The fourteen-day deadline placed the next stage at the end of September. Speculations The decision to admit inhabitants to the Egg Islands on alternate days, rather than to exclude them entirely or to set quantitative limits per household, suggests that the council recognised the working role of egg-gathering in the inhabitant economy following the drought. The pattern of supply visible in the storekeeper's accounts had recorded eggs as a substantial source of nutrition for poor households; cutting off inhabitant access during a recovery year would have driven further debt into the store accounts and undermined the wider settlement programme. By dividing the week, the council preserved the Company's claim to the major share while leaving the inhabitants enough access to keep their household economy intact. The wording recording that very few persons had made any proposals to discharge their debts indicates a working pattern of inhabitant resistance to the store-settlement programme. Where the council expected that the voluntary call would draw out the substantial debtors, in practice the planters and soldiers had stayed silent. The shift to a named-threshold deadline of fourteen days, with the implicit further sanction reserved for non-compliance, reads as the council's working response to a recognised problem of inertia, and probably reflects calculated foot-dragging by debtors who hoped that the new administration's working appetite for recovery would weaken over time.
210	201	make their severall proposalls how they will sattsifie and pay their debts. By the Govern[r] & Councill An Advertisement. These are to give Notice to all Persons that owe above Twenty pounds to the Hono[ble] Comp[a] and have not already made their proposalls for Clearing and Discharging the same According to a former Advertizem[t] of the 2[d] of Aug[t] past Do upon this 2[d] Notice or within fourteen days at fartherst after the date hereof repair to the Govern[r] and make their severall Proposals how they will sattsifie and pay their Debts. Dated at the United Castle in James valley this 14[th] day of Sept[r] 1714 Signed p[er] Ord[r] of Gov[r] & Council[l] p[er] Antipas Tovey sub[r] M[r] Tovey prays the Gov[r] and the Gentlm[n] of the Councill that they will please to Appoint a day when to Determine who has a right to the Plantation he Claims as his predicess[r] Thomas Bagley whose Wid[o] he married and has a Lease for it for Twenty one years it being in the hands of M[r] Thomas Goodwin and that they may have timely Notice to shew if they have any Claim to the said Plantation, and how that your Wors[p] and Councill may Determine the Case According to the Hono[ble] Companys Instructions. Ordered. That the present possessor be summon'd to attend next Councill day, and shew by what Tenor he holds the same and that M[r] Tovey do draw up in writing the whole Margin Notes: Advertisem[t] to that Purpose The Land in Tho[s] [Goodwins] Possession [...] to be whose right to[o] have it The pres[t] Possession to attend and M[r] Tovey to	Debtors were to make their several proposals as to how they would settle their accounts. By the governor and council, an advertisement. Notice was given to all persons owing the Honourable Company above £20 0s 0d in store debt, who had not yet come forward under the earlier advertisement of 21 August, that they must now attend the governor within fourteen days at the latest. Each was to set out how he intended to pay what he owed. Dated at the United Castle in James Valley, 14 September 1714. Signed by order of the governor and council by Antipas Tovey, Secretary. Tovey then asked the council to fix a day for hearing his own claim to a plantation. The claim ran through his late predecessor, Thomas Bagley. Tovey had married Bagley's widow, and the property carried a twenty-one-year lease. Thomas Gurgin was the present occupier. Tovey asked that Gurgin be given proper notice to appear and produce any title of his own, so that the council might settle the matter under the Honourable Company's instructions. The council ordered Gurgin to attend the next council day and explain on what footing he held the plantation. Tovey was directed to set out the whole Interpretations The signed and dated advertisement converted the verbal order earlier in the consultation into a formal public notice. Entry into the consultation book under the secretary's signature placed the second advertisement of 14 September 1714 on the same documentary footing as the earlier notices of 17, 21 and 24 August 1714. The fourteen-day deadline ran from the date of issue, fixing the next stage of the store-settlement programme at the end of September. The decision to copy the advertisement in full into the book, rather than refer to it by citation alone, reflected the working pattern by which the new administration laid down documentary markers at each stage of the recovery programme. The Tovey petition introduced a personal claim by the secretary to a Company-leased holding. The Bagley plantation lease had originated in the consultation of 26

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			December 1709, when Bagley received a twenty-one-year grant of Richard Alexander's former house and land. The lease was later identified as covering twenty-one acres in Sandy Bay at £5 5s 0d per annum, sealed on 25 March 1711 under Roberts's administration. Bagley's will was proved on 8 April 1712. Tovey, having married the widow, now claimed the unexpired residue of the term, but the working occupant was Thomas Gurgen. The council's response placed the burden of proof on Gurgen rather than on Tovey. Before any question could be raised about Tovey's reversionary interest, the present occupier had to justify his own position. The order that Tovey draw up the whole matter in writing carried the same logic as in earlier contested holdings: the documentary trail had to be assembled and entered before judgement could be given. The structural position is sensitive. Tovey was at once the petitioner, the secretary to the council, the draftsman of the writing the council had ordered, and a serving councillor. The Pompey case had established that the new administration would not allow a serving councillor's private claim to defeat a properly witnessed instrument. Here the question runs the other way: whether a serving councillor can press a documentary claim against a present possessor whose title is undocumented. The next council day will probably show how the council intends to handle the tension. Speculations Requiring Tovey himself to draft the documentary record reads as a deliberate use of his own office against him. The petitioner had to assemble the evidence on which his claim rested. A weak trail would expose itself; a strong one would give the council the materials it needed to decide. The mechanism preserved the council's impartiality and avoided any appearance of partial favour to a serving councillor. The phrasing of Gurgen as the present possessor, rather than as tenant or lessee, suggests that his occupation probably rested on some Boucher-era arrangement of the kind the new administration had already been scrutinising. The matter falls into the same working pattern as the Pompey case, the Smith petition over Bodley, and the Algate petition over Earle: a holding claimed by present occupation traceable to the previous administration, challenged by a party with a properly documented instrument from an earlier period. Tovey's careful framing of his petition placed his own claim squarely within that pattern.
211	202	whole State of this Case as represented to the Hon^[ble] Comp^[a] Island S^[t] Helena. To the Worsh^[p] Isa^[c] Pyke Esq^[r] Gov^[r] &c^[a] & Councell - The Humble Petition of Gabriell Powel Freeholder hum^[bly] Sheweth That some time since y^[o]r petition^[r] hired a small parcell of y^[e] Hon^[ble] Comp^[as] Waste Land lying under the High peak, but no Term of years being mention'd or Lease given, for that y^[e] [Hon] Comp^[a] might have ocacon for it to plant or otherwise Use & when the same to be redeliverd, y^[e] charges of fencing being allow'd yo^[r] P^[r] petition^[r] as in & by an Order of Council to which he humbly refers doth more fully appeare Wherefore yo^[r] Petition^[r] humbly prays that the Charge he was at in fencing said may be viewed & Valued & that satisfaction be made him accordingly After the arrival of the late Gov^[r] Boucher yo^[r] petition^[r] Wife at his request furnished him with Nine Cain Chairs, One quilt, One pair of Canass Sheets & Two pillows, the Hon^[r] Comp^[a] having few or none left for his Use, all which being worne out & yo^[r] Petition^[r] Wife never having rec^[d] any manner of Satisfacc^[on] humbly prays y^[t] y^[e] premises may be	Tovey was to set out the whole state of the case as represented to the Honourable Company. Island of St Helena. To the Worshipful Isaac Pyke Esquire, Governor, and Council. The humble petition of Gabriel Powell, freeholder, humbly sheweth: That some time earlier, your petitioner hired a small parcel of the Honourable Company's waste land lying under the High Peak. No term of years was mentioned, and no lease was given, so that the Honourable Company might have it again when wanted, to plant or otherwise use, on the condition that on redelivery the cost of fencing would be allowed to your petitioner. This appeared more fully in an order of council, to which he humbly referred. Your petitioner therefore humbly prayed that the charge he had been put to in fencing the land might be viewed and valued, and that satisfaction be made to him accordingly. After the arrival of the late Governor Boucher, your petitioner's wife had at his request furnished him with nine cane chairs, one quilt, one pair of canvas sheets and two pillows, the Honourable Company having few or none left for his use. All these had been worn out by your petitioner's wife, and no manner of

		considered & such payment made for the aforesaid particulars as yo[r] Worsh[p] & Councell shall think them Worth And as in Duty bound shall for ever pray &c[a] The former part of this Petition granted and accordingly Ordered That Cap[t] Mashborne & M[r] Cha[s] Steward survey the fences made by said Powell[s] Wife, Wid[o] of Capt[n] Geo[ge] Hoskison & value the same & also to Examine whether there is more then four acres of Land taken in. M[r] Bazett promises he to give in the Acc[t] of Goods disposed of out of the Hon[ble] Comp[as] Stores y[e] Two last months the first Tuesday in the next. Geo[rge] Haswell [Edw]d Mashb[orne] Matthew Bazett Antipas Tovey Margin Notes: draw up his Case Island S[t] Helena. Gab[ll] Powills Petition ab[t] y[e] [break] land. Desires y[e] fences may be Considered. Also for things bo[r] rowd formerly. Allowance for fences promise of Stoer Goods to be brought in	satisfaction had ever been received. Your petitioner therefore humbly prayed that these particulars might be considered and such payment made as the council should think fit. And, as in duty bound, he would for ever pray, and so on. The former part of the petition was granted. The council ordered Captain Mashborne and Mr Charles Steward to survey the fences made by Powell's wife, widow of Captain George Hoskison, and to value them. They were also to examine whether there was more than four acres of land taken in. Mr Bazett promised to give in the account of goods disposed of out of the Honourable Company's stores for the two last months on the first Tuesday in next. Signed by Isaac Pyke, George Haswell, Edward Mashborne, Matthew Bazett and Antipas Tovey. Interpretations The Powell petition raised two distinct Boucher-era unsettled claims in a single document. The first concerned the council's earlier arrangement by which Powell had hired a parcel of Company waste land under the High Peak without lease and without fixed term, on the working understanding that the Company could resume the ground at any time and that the cost of fencing would be reimbursed on redelivery. This was the standard mechanism for short-term occupation of marginal Company ground, used where the council wished to keep its option to resume the parcel for plantation or other use without committing to a twenty-one-year lease. The petition sought activation of the reimbursement clause, on the implicit footing that the parcel was now to be redelivered or had effectively been resumed. The second part of the petition recorded a series of household goods supplied to Boucher on his arrival as Governor. Nine cane chairs, a quilt, a pair of canvas sheets and two pillows had been furnished by Powell's wife at Boucher's request, on the working ground that the Honourable Company had few or none left for the Governor's use. The goods had since been worn out without any payment being made. The petition fitted the working pattern of unsettled Boucher-era arrangements already documented across the present session: items supplied, promises made, but no payment delivered. The Charles Steward bill of £22 15s 0d for Fort house furnishings at Boucher's first coming, entered on 24 June 1714, was the working comparator. The council split the two parts of the petition. The fencing claim was granted in principle and a working survey commission appointed. Mashborne and Charles Steward (the same Steward whose Fort house furnishings bill had earlier been entered) were to value the fencing and check that no more than four acres of land had actually been enclosed under the arrangement. The four-acre limit was the test point: any excess would represent unauthorised enclosure of Company common, which would forfeit the claim to reimbursement on that excess. The chair-and-bedding claim was reserved for separate consideration once the council had heard the working position. The identification of Powell's wife as widow of Captain George Hoskison placed the petition within the wider working pattern of Hoskison-related claims. Mary Hoskison's earlier petitions, the Powill v Girling cause of 2 September 1713 (in which the jury found that Hoskison had no power to mortgage land settled on his wife under John Bowman's will), and the Beale orphans' audit, all turned on the same household. Powell's marriage to the widow brought the Hoskison-Bowman estate into Powell's hands as her present husband. The fencing parcel under the High Peak was probably part of the same general settlement. Bazett's promise to bring in two months' store accounts on the first Tuesday in next continued the pattern of slow but progressive recovery of the store-

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			book backlog, set in motion by the Governor's demand of 13 October 1713 and the subsequent submissions across 1713 and 1714. Speculations The decision to send Mashborne and Charles Steward jointly to survey the fences, rather than employ the standing surveyor or refer the matter to Captain Cason, reflected a working pairing that mirrored the structure of the Bodley estate appraisement ordered on 17 August 1714 (Mashborne and Bazett with two appraisers chosen by Smith). The combination of a senior councillor with an independent free planter gave the council a fair valuation that could not later be challenged as partial. The express instruction to check that no more than four acres had been enclosed suggests that the council probably suspected, on the basis of local knowledge, that Powell had taken in more ground than the original arrangement permitted, and wished to settle that question before approving any payment. The pairing of a substantial fencing claim with a household-goods claim in a single petition was probably calculated to maximise the working prospect of recovery. By placing the more technical and documented fencing question first, Powell drew the council into a procedural response (survey and valuation) that committed it to working through the petition rather than dismissing it outright. The chair-and-bedding claim, harder to evidence after the goods had been worn out, then followed in the same document on the implicit footing that what the council had granted on fences it could hardly refuse on furnishings. The mechanism reads as the working approach of an experienced petitioner who knew how to frame multiple claims to advance through the council in sequence.
212	203	Island S[t] Helena. At a Consultation held on Tuseday the 21[st] day of Septemb[r] 1714. At the United Castle in James Vally. Pres[t] Isa[c] Pyke Esq[r] Gov[r] Geo[rge] Haswell, Dep[ty] Edw[d] Mashborne, 3[d] Matthew Baz[ett] 4[...] Antipas Tovey 5[th] in Council. The Petition of Bridget Welch wid[o] being read as foll[s]. Isd S[t] Helena To the Worsh[p] Isa[c] Pyke Esq[r] Gov[r] &c[a] & Councell The most humb[le] Petition of Bridget Welch Wid[o] humbly Sheweth Whereas yo[r] petition[r] having lately buried her Husband Jn[o] Welch & finding her self left in a very low condicon & much indebt[d] to the Hon[ble] Comp[a] hope yo[r] Worsh[p] & Councell will be pleased to consider the Wid[o] & fatherless & w[th] compassion not to insist upon her Debt sooner then she is able to pay it; it shall be her utmost Endeavour, But there being a Bond of [...] Sixty pounds, which term of time of payment of s[d] Bond is almost expir'd She therefore prays yo[r] Worsh[p] & Councell will be pleased to give her the space of Eigh[t] months to pay the said Bond & yo[r] petition[r] then will pay it in Yams & Succers, So hoping yo[r] Worsh[p] & Councell will be pleased to take y[e] aforesaid premisses into yo[r] Worsh[p] mature consideration in respects of y[e] deplorable Case of the Wid[o] & fatherless And as in duty bound y[r] petition[r] shall ever pray &c[a] Bridget Welch Ordered That the consideracon of this Petition be referd to Cap[t] Haswell & M[r] Bazett & that they report their opinions therein. Isd S[t] Helena To the Worsh[p] Isa[c] Pyke Esq[r] Gov[r] & Councell The humb[le] petition of Rob[t] Marsh Freeholder Humbly Sheweth That whereas some time since John Long at his request had	Island of St Helena. At a consultation held on Tuesday 21 September 1714 at the United Castle in James Valley. Present: Isaac Pyke Esquire, Governor George Haswell, Deputy Governor Edward Mashborne, third Matthew Bazett, fourth Antipas Tovey, fifth in council The petition of Bridget Welch, widow, was read. A copy followed. Island of St Helena. To the Worshipful Isaac Pyke Esquire, Governor, and Council. The most humble petition of Bridget Welch, widow, humbly sheweth: She had recently buried her husband John Welch and found herself left in a very low condition, and much indebted to the Honourable Company. She hoped the council would have compassion on a widow with fatherless children, and not press her for the debt sooner than she was able to pay. She would do her utmost. There was a bond of £60 0s 0d outstanding, the term of which was almost expired. She therefore prayed the council to grant her eighteen months to pay the bond, by which time she would pay in yams and suckers. She hoped the council would consider the destitute case of the widow and the fatherless. And, as in duty bound, your petitioner would ever pray, and so on. Dated 21 September 1714. Signed: Bridget Welch. The council ordered that the consideration of the petition be referred to Captain Haswell and Mr Bazett, who were to report their opinions. Island of St Helena. To the Worshipful Isaac Pyke Esquire, Governor, and Council. The humble petition of Robert Marsh, freeholder, humbly sheweth:

		Margin Notes: Isd S[t] Helena Brigt Welches poor Condition & desires time to pay Co[s] bond. Sep[r] 21[st] 1714 Referrd to Mess[rs] Haswell & Bazett Isd S[t] Helena	That some time earlier, John Long, at his request, Interpretations Bridget Welch's petition placed the council in the position of creditor to a recently bereaved household. The bond of £60 0s 0d was the working instrument by which the Honourable Company had advanced credit to her late husband, with the term now almost expired. The proposal to pay in yams and suckers, rather than cash, fitted the recovery framework established by the 24 August 1714 advertisement and the working procurement programme by which planters supplied provisions to the Company against their store debts. The eighteen-month extension Welch sought would carry the settlement to March 1716, well past the planting and harvest cycle on which yam production depended. The referral of the matter to Haswell and Bazett, rather than immediate decision, followed the working pattern of detailed examination before committing the council to terms. John Welch was the same person earlier recorded as one of the gunner's crew appointed surveyor on 14 October 1712 in Bazett's place, and the matross granted £60 0s 0d store credit at 8 per cent per annum interest on 3 November 1713 to complete the £100 0s 0d purchase from William Worrall of the property formerly Richard Cleve's. The present bond was almost certainly the working instrument securing that 1713 loan. The eighteen-month term of the original loan, dating from 3 November 1713, would have expired around 3 May 1715, consistent with Welch's reference to the term being almost expired. The widow's request fell within the working pattern of debt-extension petitions that the new administration was processing under the recovery framework. The detail that Welch had been buried recently signalled a new working development on the island. John Welch had been actively serving as a Company employee in late 1713 and had taken on a substantial property purchase financed by Company credit. His death between then and September 1714 placed his widow in a position of inherited debt without inherited earning capacity. The case will probably set a working pattern for similar widows of Company servants who died with outstanding store credit. The Robert Marsh petition introduced a separate matter relating to John Long. The opening reference to John Long having earlier acted at Marsh's request suggests another working arrangement between freeholders that had subsequently broken down. Robert Marsh appears in the earlier consultations as the freeholder restored to the slave Pompey on 10 to 17 August 1714 against Cason's claim of verbal direction by Boucher, and earlier as the holder of various Sandy Bay and other parcels. John Long was the planter granted three acres at the head of James Valley on 9 December 1712 and earlier confirmed in titles at the title sittings of 1713. Speculations The terms of Bridget Welch's proposal, to pay in yams and suckers rather than cash, probably reflected the working reality that the Welch household's only continuing asset of value was the plantation acquired from Worrall under the 1713 credit arrangement. By offering payment in the planting stock the holding could produce, Welch positioned herself to settle the debt without selling the land itself, which would have left the household destitute. The mechanism preserved the working livelihood while satisfying the creditor, and fitted the council's broader procurement programme. The eighteen-month timing may also have been calculated to allow a fresh planting cycle to yield mature yams before the settlement fell due. The referral to Haswell and Bazett rather than immediate decision suggests that the council needed to verify the working state of the Welch holding and the

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			size of the planting that could realistically support the proposed repayment in kind. The pairing combined the Deputy Governor's general authority with the storekeeper-surveyor's working knowledge of the plantation and its yam stock. The mechanism preserved the council's freedom either to accept the proposal as offered or to adjust the terms once the working capacity of the holding had been assessed.
213	204	had a small parcell of Land containing about an Acre & a half lying towards the upper End of James Valley under the puerslin Bed granted him for the term of 21 years, who never having had a lease for y[e] same died w[th] leave & consent of y[e] late Govern[r] Lett yo[r] petition[r] have y[t] Land it being very convenient for him, Wherefore humbly prays a lease may be granted yo[r] petition[r] in his own name for the Land aforesaid for the term of 21 years from the time J[no] Long had a grant thereof from this time. To y[e] Worsh[p] Isaac Pyke Esq[r] Govern[r] &c[a] and Councill The Petition of Jn[o] Alexander on behalf of Rich[d] Alexander dec[d] Three Children Pipin, Abigaill & Mary Alexander Humbly Sheweth Margin Notes: Rob[t] Marsh desires a lease for y[e] Land Sep[r] 21[st] 1714 Granted In M[r] Tovey's Case M[r] [Goodgen] appeard ab[t] y[e] Land M[r] Tovey Claims. Questions ask't him Answers to y[e] severall Questions Island S[t] Helena.	Marsh's petition continued: that John Long had a small parcel of land containing about an acre and a half, lying towards the upper end of James Valley under the purslane beds, granted to him for a term of twenty-one years. Long had never had any use for the parcel and was now willing, with leave and consent of the council, to make it over to Marsh. The ground lay very conveniently for the petitioner. Marsh therefore humbly prayed that a fresh lease might be granted to him on the same terms for the land just named, for the remainder of the twenty-one years from the time Long had received his grant. And as your petitioner, in duty bound, shall for ever pray, and so on. Dated 21 September 1714. Signed: Robert Marsh. The council ordered that Marsh's petition be granted according to his desire. In Mr Tovey's case. Mr Thomas Gurgen, having been summoned at Tovey's request, appeared on 21 September. The governor read over the 39th paragraph of the Honourable Company's letter, and Tovey then asked that he might put some questions to Gurgen. The questions were two: why he had occupied and reaped the Company's land, and whether he had sustained any damage, and if so by whom. To the first question, Tovey's own answer ran in two parts. He himself had been kept out of his predecessor Bagley's case because he had married the widow. After he married her, he had suffered through the want of the plantation to maintain his family and the stock upon it. To the second question he answered that he had suffered the damage through the want of the plantation, where the late Governor Boucher had not followed the Honourable Company's orders. The Abingdon had caused him the greatest damage. While the council was examining this matter, John Alexander sent in a petition. A copy followed. Island of St Helena. To the Worshipful Isaac Pyke Esquire, Governor, and Council. The petition of John Alexander, on behalf of Richard Alexander deceased's three children, Repjin, Abigail and Mary Alexander, humbly showeth Interpretations The Robert Marsh land transfer worked through the standard mechanism for redistributing under-used Company leasehold. John Long, having no use for the acre and a half at the head of James Valley granted to him under his twenty-one-year lease, surrendered the unexpired residue of the term back through council process so that Marsh could pick it up on the same terms. The council's straightforward grant of the petition, without survey or examination, reflected the simplicity of the arrangement. No fresh acreage was being created, no new boundary set, and no rent renegotiated. The ground was simply moving from one freeholder who could not work it to another who could, with the council acting as the regulator of the transfer rather than the originator of a new grant. The Tovey case shifted the analytical ground from the previous council day. Where the order of 14 September had placed the burden on Gurgen as present possessor to justify his occupation, Gurgen's appearance on 21 September produced not a defence of

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			his title but a sequence of questions put by Tovey to Gurgin on the structure of the case. The reading of paragraph 39 of the Honourable Company's letter framed the proceeding under metropolitan instruction. The paragraph, not yet quoted in the present working sequence, was probably one of the working clauses of the general letter brought by the Rochester on 8 July 1714 (the 97-paragraph letter read in one sitting that day), and its content evidently bore on the proper handling of contested holdings or unsatisfied claims. The reference to the Abingdon as the source of Tovey's greatest damage connected the present case to the dispatch programme by which the consultations through to 24 April 1714 had been carried home, and to the interrogation of Bazett of 1 April 1714 over his refusal to sign the general letter sent by that ship. The implication is that some working arrangement concerning the Bagley plantation had either turned on a Boucher-era decision recorded in the documents sent by the Abingdon or had been left unsettled at her departure. The detail will probably emerge as the case is developed. John Alexander's intervening petition on behalf of Richard Alexander's three children opened a new estate matter. Richard Alexander was the freeholder whose seized land had been restored by twenty-one-year lease to his widow Marcy on 8 October 1711 under paragraph 82 of the Toddington-Thistleworth letter. The widow had since married Thomas Gargen, who had received a settlement of £290 5s 6¼d for the five Alexander children on 27 April 1711. The present petition by John Alexander (probably the same John Alexander who had served as clerk of council under Boucher and as the petitioner for continuation as ensign on 24 August 1714) brought forward three of the children by name (Repjin, Abigail and Mary) for separate consideration. The arrangement of the three petitions in sequence (Marsh's straightforward transfer, the Tovey-Gurgin procedural opening, and the interrupting Alexander petition on the children) reflected the working pattern of consultation business under Pyke. The council was running multiple working strands simultaneously, with petitions interrupting one another as new claimants came forward. Speculations The decision to grant Marsh's transfer petition without referral to surveyor or commission, while at the same time placing the Tovey-Gurgin matter on a careful examined footing, suggests that the council was working a clear distinction between consensual transfers of existing leaseholds (handled administratively) and contested possession of plantations (handled judicially). The Marsh case probably went through without challenge because both parties had agreed and no third party was prejudiced; the Tovey case required full examination because the working occupant's basis was unclear and the petitioner was a serving councillor. The intrusion of the Alexander children's petition into the middle of the Tovey examination was probably calculated. By bringing forward the question of Richard Alexander's three children at a moment when the council was already engaged in unwinding a Boucher-era plantation arrangement, John Alexander may have hoped to draw the council into a parallel review of the Richard Alexander settlement. The earlier £290 5s 6¼d settlement to Gargen on the five children had probably been working unevenly in practice, with the children's interests not fully protected.

By whom and his reasons for Claiming the said Lease Land And an Acco[t] of all his Transactions Bargains Contracts and agreements therein M[r] Tovey producing a paper to Deliver in of his Case the Governour gave him to Tuesday next to Conder farther of Margin Notes: Jn[o] Alexand[rs] Petition in behalf of Rich[ds] Alexand[rs] Child[n] relating to y[e] Land in [Goodgens] possess[on] Sep[r] y[e] 21[st] 1714 M[r] Tovey to draw up the whole Case as form[er]ly propos- =osed. this not approvd of.	Gurgen was to appear that day to show by what right he held the land formerly possessed by Richard Alexander, your petitioner conceived it part of his duty in conscience, bound in right and on behalf of the children, to lay claim and present this petition as a plea and bar to any persons laying claim or pretensions to the land. He prayed that a demur of the case as represented by Mr Tovey might be pleaded until such time as your petitioner was fully informed how the case was drawn up and given time to make reply in writing, not at all doubting but to show just cause why the children of Richard Alexander, in trust for the executors, should enjoy the land now in dispute, having been unjustly turned out of the same and from premises thereon by a former government. Notwithstanding his obedience to all and every law and constitution of the island, and duly and honestly paying all rents and assessments to the Lords Proprietors and so on, he begged this might be considered for the good of the poor children, more than the least interest to your petitioner, who, as in duty bound, would ever pray, and so on. Dated 21 September 1714. Signed: John Alexander. The council ordered that Mr Tovey draw up the whole state of his case in writing, setting forth in the same manner as he had represented it to the Honourable Company the particulars of his loss and damage, by whom caused, and his reasons for claiming the land. He was also to give an account of all his transactions, bargains, contracts and agreements in the matter. Mr Tovey produced a paper to deliver in his case. The governor gave him to Tuesday next to consider further Interpretations The Alexander petition introduced a third party into what had until now been a two-sided dispute. John Alexander, acting as executor of his late brother Richard Alexander's will and as nearest kin to Richard's children by their now-deceased mother Marcy (formerly the wife of Thomas Gargen, and earlier of Richard Alexander), pressed the children's claim against both Tovey's and Gurgen's pretensions. The mechanism by which an executor asked for a plea and bar against another claimant's case was the standard early modern procedural device by which a party not yet formally heard sought to halt the proceedings until his own written response could be prepared. The complaint that the children had been unjustly turned out of their land and premises by a former government identified the dispossession as a Boucher-era act, although the working narrative is more complex than the present petition allows. The Richard Alexander land had been the subject of seizure under the Roberts administration, restored to the widow Marcy on 8 October 1711 under paragraph 82 of the Toddington-Thistleworth letter, settled on the children through a £290 5s 6¾d arrangement with Thomas Gargen on 27 April 1711, and at some point thereafter come into the hands of Thomas Gurgen. The reference here to a former government probably points to Boucher rather than Roberts, given that the Roberts settlement had been in the children's favour, but the precise sequence is not stated. The plea framework rested on the executor's standing to act on behalf of minor heirs. Alexander cited his obedience to law, his payment of rents and assessments, and the interest of the poor children, as the working grounds for his standing. The petition deliberately disclaimed any personal interest in the outcome, framing the executor's role as fiduciary rather than proprietary. This presentation, conventional in early modern guardianship and trust petitions, served to distinguish the executor's intervention from the kind of

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			self-interested claim that might be expected from a serving or former office-holder. The council's order placed a substantial documentary burden on Tovey. He was required to set out in writing the entire history of his claim: particulars of loss and damage, identification of those responsible, reasons for claiming the land, and a full account of all transactions, bargains, contracts and agreements in the matter. The breadth of the order, especially the requirement to disclose all transactions, gave the council the working materials by which it could test Tovey's case against the parallel claims of Gurgin and the Alexander children. The deferral until the following Tuesday gave Tovey time to assemble the documents. Tovey's production of a paper to deliver in his case, followed by the governor's grant of further consideration time to the next council day, suggests that the paper as first prepared probably did not yet meet the council's working standard. The governor's direction that Tovey was to consider further, before delivering his case, may have reflected either the inadequacy of the present draft or the council's wish to allow time for Alexander to prepare his own written response. Speculations The timing of Alexander's intervention reads as a deliberate procedural tactic. By presenting himself as executor on behalf of minor heirs at the very moment when Tovey was about to deliver his own case, Alexander positioned the children's claim as the proper foundation of any settlement, ahead of the rival claims of the working occupant and the petitioning councillor. The mechanism converted what had been a two-sided dispute over present possession into a three-sided dispute in which the underlying right of the children stood as the working benchmark against which both Tovey's lease-based claim and Gurgin's occupation had to be measured. The deliberate framing of Alexander's petition in the language of duty and conscience, with no claim of personal interest, was probably also calculated to displace the council's working suspicion of his motives. Alexander had appeared in the present sequence as the long-standing clerk under Boucher whose continuation in office had been the subject of his own petition of 24 August 1714, where he was given to Tovey as assistant pending further consideration. Now bringing forward a case that placed Tovey under documentary scrutiny, Alexander's executor role conveniently allowed him to advance a position that, on its face, advanced the children's interests but in working effect undermined the secretary who had displaced him from the clerkship.
215	206	of it, and sett down Every thing he knew relate= =ing to the Case [... Geo[rge] Haswell Edw[d] Mashborne Matthew Bazett Antipas Tovey Island S[t] Helena. At a Consultation Held on Tuesday the 28[th] day of Septemb[r] 1714 At the United Castle in James Valley. Isaac Pyke Esq[r] Govern[r] George Haswell D[t]y Gov[r] Pres[t] Edward Mashborne 3[d] Matth[ew] Bazett 4[th] Antipas Tovey 5[th] in Coun[il] M[r] Tovey according to an Order of last Council day brought in a State of his Case as followeth. About October 1709 Rich[d] Alexander Planter designing to go off the Island proposed to Thomas Bagley the Taking his House & plantati- =on, telling him he had rather he should have it than another and that he beleiv'd if S[ai]d Bagley did Petition for it the Gov[er]n[m]ent would grant it him, at his S[ai]d Alexanders request he did and had a grant of said Land and not long after a Lease for the same for 21 years (which is ready to be produced Margin Notes: M[r] Tovey's Case ab[t] Land in dispute.	Tovey was to set down everything he knew relating to the case. Signed by Isaac Pyke, George Haswell, Edward Mashborne, Matthew Bazett and Antipas Tovey. Island of St Helena. At a consultation held on Tuesday 28 September 1714 at the United Castle in James Valley. Present: Isaac Pyke Esquire, Governor George Haswell, Deputy Governor Edward Mashborne, third Matthew Bazett, fourth Antipas Tovey, fifth in council Mr Tovey's case concerning the land in dispute. In accordance with the order of the last council day, Tovey brought in the state of his case as followeth. About October 1709, Richard Alexander, planter, intended to leave the island. He offered his house and plantation to Thomas Bagley, saying he would rather Bagley had it than anyone else, and that he believed if Bagley petitioned for it the governor would grant his request. At Alexander's request, Bagley did so, and obtained a grant of the land. Not long afterwards, a

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			lease for the same was drawn up for a term of twenty-one years. The lease was ready to be produced. Interpretations The opening of Tovey's written case set out the working origins of the Bagley plantation through a private oral arrangement between two planters in October 1709. Richard Alexander, then leaving the island, preferred Bagley as his successor and encouraged him to petition for the holding on the working understanding that the governor would grant the request. Bagley did so and received a grant, with a twenty-one-year lease drawn up shortly afterwards. The narrative thus placed the working origin of the lease in a consensual handover between planters that was then formalised by the council process. The date of October 1709 is significant because it falls just before the consultation of 26 December 1709, at which Thomas Bagley was granted Richard Alexander's former house and 15 acres of ground for 21 years. The present case provides the back-story to that grant. Alexander had not been compulsorily dispossessed but had himself initiated the handover to Bagley before his departure, with the council recording the working transfer through the formal lease. The placing of the Tovey case in the order of last council day signalled a deliberate documentary approach by Pyke's administration. Tovey was required to assemble the working evidentiary record from his predecessor Bagley's papers and from his own knowledge, and to present it as a written submission. The mechanism by which a contested holding was determined through a structured written case, rather than through oral examination and immediate decision, reflected the working pattern adopted under Pyke for the more difficult Boucher-era disputes. The reference to the lease being ready to be produced indicated that Tovey had the original document in his possession, presumably through the working continuity of Bagley's papers passing to his widow and then to Tovey as the widow's present husband. The documentary trail thus ran from the 1709 grant, through Bagley's death in early 1712 and the proof of his will on 8 April 1712, to the present claim by Tovey as the widow's husband. The exclusion of Richard Alexander's children from the working sequence Tovey presented is also striking. Where the Alexander petition of 21 September 1714 had framed the children's claim as the proper foundation of any settlement, Tovey's case opened by treating Richard Alexander's voluntary handover to Bagley as the working origin of title, with no mention of the children at all. The conflict between the two narratives sets up the principal analytical question for the council's determination. Speculations The decision to begin Tovey's written case with the October 1709 arrangement between Alexander and Bagley, rather than with the 1711 settlement of the Alexander children's interests under the Toddington-Thistleworth letter or the £290 5s 6¼d settlement to Gargen of 27 April 1711, was probably calculated to displace the children's claim from the working narrative altogether. By presenting the lease as the product of a private consensual handover by Richard Alexander himself, Tovey could argue that the children had never had any interest in the parcel: their father had freely given it up to Bagley before his departure, and the subsequent restoration provisions of 1711 had been working against a Roberts-era seizure that did not touch this parcel. The narrative also has the working effect of placing the Alexander-Bagley arrangement entirely outside the documentary case the new administration was building against Boucher. By rooting the title in October 1709, well before Boucher's arrival in August 1711, Tovey

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			aligned his claim with the lawful Roberts-era grants rather than with the questionable Boucher-era arrangements that the council had been systematically reviewing. The structural framing places Tovey's lease in the same procedural category as the Doveton, Reder, Powell and Francis title confirmations of 1711, rather than in the category of Pompey, Bodley and Earle disputes that turned on Boucher-era acts.
216	207	produced) and he paid said Alexander for the Provisions on the Ground to Content and he his wife and Brother John Alexander wished him Joy & good Success in his Settlement. But Richard Alexander dying soon after there was a Petition sent to the Hono[ble] Comp[a] signd by his Wid[o] Mercy now the wife of M[r] Thomas Goodgen Desiring she might have the land again (in which book some Allegations that might no doubt Easily be Answer'd were Copy'd thereof to be seen Tho[s] She owns her self She knew not the Contents of Said Petition but signd it by the Advice of her Father M[r] Pippin White or her brother M[r] John Alexander or both In answer to which the Hon[ble] Court of Directors wrote to the succeeding Govern[r] and Council about it and the then Govern[r] and two of his Council did force Thomas Bagley out of the Premises and gave M[r] Goodgen Possession thereof. Said Bagley Petitiond Govern[r] Boucher &c[a] Twice to have a hearing that he might prove he did nothing in the procureing that lease But w[th] the Consent of Said Rich[d] Alexander but was deny'd. Soon after Thomas Bagley died and said Tovey marrying his wid[o] lays Claim to the said Plantation in her right. The Particular Damages of Thomas Bagley and after his widdow being ousted the said Plantation Tovey Desires may be valued and prov'd by such as are most Acquainted w[th] it as well as what the Damages was that said Tovey Sustained for want of Said Plantation. Concerning Govern[r] Boucher in this Case he told said Tovey about the time he was going to Marry Bagleys Wid[o] That the Company would never suffer her to have her plantation again (tho this was after the receipt of the Generall Letter of the Abbingdon) and perswaded him not to Marry, but some time after Offerd any Ground in Common that was fitt to make a plantation of desired he might have it But said Tovey replied he knew of no land fitt to be taken in nor was he able to be at the Charges of Setling anew plan- tation and Building a House &c[a] After Margin Notes: Severall Recitals.	Tovey's written case continued. Bagley paid Richard Alexander for the provisions on the ground to his content, and his wife and brother John Alexander wished him joy and good success in his settlement. But Richard Alexander died soon afterwards. A petition was sent to the Honourable Company, signed by his widow Marcy, now wife of Thomas Gurgin, desiring she might have the land again. Several allegations were made in it that might without doubt easily have been answered if a copy could be seen. She herself owned that she did not know the contents of the petition, but had signed it by the advice of her father Mr Repjin Wells, or her brother Mr John Alexander, or both. In answer the Honourable Court of Directors wrote to the succeeding governor and council about it, and the then governor and two of his council forced Thomas Bagley out of the premises and gave Mr Gurgin possession of the same. Bagley petitioned Governor Boucher twice to have a hearing, so that he might prove he had done nothing wrong in procuring the lease but with the consent of Richard Alexander, but his request was denied. Thomas Bagley soon died, and Tovey, having married the widow, now laid claim to the plantation in her right. The particular damages sustained by Thomas Bagley, and by his widow after his death in being kept out of the plantation, Tovey desired might be valued and proved by such persons as were most acquainted with it, as well as the damage Tovey himself had sustained for want of the plantation. Concerning Governor Boucher in this case, the late governor had told Tovey, about the time he was going to marry Bagley's widow, that the Company would never suffer her to have her plantation again. (This was after the receipt of the general letter by the Abingdon.) Boucher had persuaded him not to marry, but some time later offered any ground in common he wished as a fresh plantation if he desired to have it. Tovey replied that he knew of no land fit to be taken in, nor was he able to bear the charge of settling a new plantation and building a house upon it. Interpretations The narrative now exposed the working sequence by which the Bagley lease had been undone. Three procedural stages were identified: a petition by the widow Marcy (signed without her knowing its contents, on the advice of her father Repjin Wells and her brother John Alexander); a directorial letter to the succeeding governor in response; and the forcible ejection of Bagley from the plantation by the then governor and two councillors, with Gurgin put into possession. The reference to the then governor probably means Roberts, whose administration was responsible for processing the post-1709 petitions, although the present text is not explicit on the point. The detail that the widow signed the petition without knowing what was in it directly attacked the credibility of the document. By identifying Repjin Wells, the widow's father, and John Alexander, her brother, as the working hands behind the drafting, Tovey reframed the dispossession as a family operation by the Alexander-Wells connection, working through a vulnerable widow's signature. The structural argument

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			was that the children's later interest derived from a petition tainted at its origin, and that the proper title remained with Bagley and his successors. The repeated denial of a hearing by Boucher introduced the working grievance against the late administration. Bagley had twice petitioned for a hearing to prove the lease had been procured with Richard Alexander's consent. Both petitions were denied. The grievance fitted the wider documentary case the new administration had been building against Boucher (failure to follow Company instructions, refusal to act on petitions, denial of due process). The placing of the Bagley case within that frame supported Tovey's claim for compensation, while also adding another item to the catalogue of Boucher-era procedural failures being assembled for transmission to London. The exchange between Boucher and Tovey about marriage to the widow exposed a further administrative pressure. Boucher had told Tovey, after receiving the general letter by the Abingdon, that the Company would never let her have the plantation back, and had tried to dissuade Tovey from the marriage. When that failed, Boucher offered alternative common land for a new plantation, which Tovey refused on the working grounds of unsuitable land and the cost of fresh settlement. The detail placed Boucher in the active role of administrative obstruction, both in denying the existing claim and in trying to deflect the new claimant into a less valuable alternative. The Abingdon reference points to the consultation of 1 April 1714, when Bazett's interrogation had been held in part over paragraph 7 of the directors' letter brought by that ship, with John Goodwin testifying that no ships' accounts had been delivered to the Clerk of the Council. The general letter sent home by the Abingdon and Boucher's response to it were thus already in the working documentary record of the present period. Tovey's reference to the same letter as the moment at which Boucher told him the Company would never permit the widow's restoration locates the marriage discussion in the early months of 1714, before Boucher's own departure in June. Repjin Wells appears here in a new role as father of Marcy Alexander. Earlier in the working sequence he had been recorded as planter, appraiser of Coales inventory on 2 January 1712, purchaser of Coales 20 acres for £70 on 7 April 1711, and executor of Richard Alexander with John Alexander on 27 April 1711. His position as Marcy's father, and as fellow executor with John Alexander, establishes the family connection that underlies the present petition by John Alexander on behalf of the children, with Wells standing as the senior figure behind the Alexander side of the dispute. Speculations The structural argument Tovey was developing turned on disqualifying the documentary trail behind the children's claim. By attacking the original petition as one the widow had signed without knowing its contents, and by identifying the working hands as her father and brother, Tovey shifted the issue from whether the children were entitled to whether the procedural foundation of their claim was sound. The mechanism rests on the working assumption that a Company-directed restoration based on a tainted petition could be reopened by the new administration, even where the children themselves were not at fault. The deliberate placing of Boucher's conversation about the Abingdon letter and the marriage suggests that Tovey was preparing a working case for damages that ran beyond the bare loss of the plantation. By recording that Boucher had actively tried to obstruct his settlement, both through dissuading the marriage and through offering inferior alternative land, Tovey assembled the evidentiary basis for a claim of administrative damage going to the council's discretion

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			to award compensation. The earlier order of 21 September that he set out his particulars of loss and damage, by whom caused, gave him the procedural opening to enter Boucher's name directly into the record as the working cause.
217	208	After Tovey was Married and M[r] Goodgen lett him the House to live in and the Yam Ground to plant Provisions Govern[r] Boucher told Doctor Bodeous neither Tovey nor Goodgen now should have that plantation since both the Widdows were Married. What Else relates to Govern[r] Boucher parti- cularly as not belonging to this Case S[d] Tovey prays he may have leave to lay before the Gover[r] and Councill some other time as his Worship and Council shall think fitt. The Said Tovey has Authentick proof of the Matter herein related to Your Worsp and Council which he is ready to produce when required thereto. Your Worships most obedient & faithfull Servant. Antipas Tovey The Governour having been in the Countrey for under Six days last past Reports that he finds the Plantations in very good Order but the House Notwith- =standing the care lately taken by repaireing the Tyling making leaden Gutters &c[a] it reins in in Eight or ten places, and there being a great Soak of water down the Hill upon the House which has Rotted the Ground Joist and flooring he finds it very necessary (there being no Drane or water Course) to make a Large Trench or Ditch on the back side that may serve as a Common Shoar to Carry off the Water that now soaks against the House. Ordered that at all vacant times when hands can be Spar'd from y[e] Plantations &c[a] Cap[t] Mashborne imploy them to Cutt y[e] said Ditch or Drane as far as he shall see Necessary. Geo[rge] Haswell Edw[d] Mashborne Matthew Bazett Antipas Tovey Margin Notes: Plantacon found in Good Order. but the House out of Repair Drane Necessary. hands to be Employ'd about it	After Tovey was married, Mr Gurgen let him have the house to live in and the yam ground to plant provisions. Governor Boucher told Doctor Porteous that neither Tovey nor Gurgen should have that plantation, since both the widows were married. What else related to Governor Boucher particularly, as not belonging to this case, Tovey prayed leave to lay before the council at some other time, as the council might think fit. Tovey had authentic proof of the matter related, which he was ready to produce when required. Signed: Your worships' most obedient and faithful servant, Antipas Tovey. The governor reported that, having been in the country for the last six days, he found the plantations in very good order, but the house out of repair, notwithstanding the care lately taken in repairing the tiling and making leaden gutters. It rained in at eight or ten places, and there being a great soak of water down the hill upon the house, which had rotted the ground sills and flooring, he found it very necessary to make a large trench or ditch on the back side, to serve as a common sewer to carry off the water that now soaked against the house. The council ordered that, at all vacant times when hands could be spared from the plantations, Captain Mashborne employ them to cut the trench or drain as far as he thought necessary. Signed by Isaac Pyke, George Haswell, Edward Mashborne, Matthew Bazett and Antipas Tovey. Interpretations The closing details of Tovey's written case identified a working accommodation between Tovey and Gurgen during the working interval of Tovey's marriage. Gurgen had let Tovey live in the house and use the yam ground for provisions, despite holding the plantation under the Boucher-era arrangement. The detail is striking because it placed the two rival claimants in a working arrangement on the disputed land itself: Gurgen as the formal occupant under the Boucher dispossession, Tovey as the resident user through Gurgen's tolerance. The mechanism may have reflected a recognition by Gurgen of Tovey's underlying claim, or alternatively a working arrangement made in expectation that the question would soon be reopened under a new administration. Boucher's statement to Doctor Porteous, that neither Tovey nor Gurgen should have the plantation since both widows were married, was reported as the late governor's working position on the question. The reasoning relied on the principle that the original claim had been settled on the widow Marcy and her children, and that her remarriage to Gurgen, and the subsequent remarriage of Bagley's widow to Tovey, had broken the working ground for either rival claim to the plantation. Boucher's reported view, while not formally entered as an order, supplied the working framework against which the new administration's review now had to operate. The reference to Doctor Porteous as the channel through which the report came placed the surgeon (continued as second surgeon under Pyke from 13 July 1714 at £30 0s 0d per annum with diet at the Fort) as the working source. The mechanism by which a senior establishment officer's conversational remarks to the colony's surgeon could be brought into the record as authentic proof reflected the working pattern of the new administration: any conversation by Boucher with a still-serving witness was usable evidence for the documentary case.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			Tovey's request to lay further matters concerning Boucher before the council at some other time signalled that his current submission was a deliberately narrowed account, focused on the Bagley plantation. The wider catalogue of Boucher's actions, of the kind already entered in the August 1714 sequence (the burnt slaves' house, the destroyed live stock, the failed General Table, the Bodley appraisalment-block), was being kept in reserve for future use. The governor's plantation house report identified a working maintenance crisis. Despite recent repairs to tiles and leaden gutters, the house was still leaking in eight or ten places. The root cause was the soak of water running down the hill onto the house, which had rotted the ground sills and flooring. The proposed solution, a large trench or ditch on the back side as a common sewer, would intercept the water before it reached the house. The council's order to use vacant plantation labour for the work, at Mashborne's discretion, reflected the working pattern by which infrastructure maintenance was fitted around the agricultural priorities of the recovery programme. Speculations The arrangement by which Gurgen let Tovey live in the house and use the yam ground during their joint occupation of the disputed land suggests a working understanding probably reached after both men had married into the contested estate. Each had a stake in the parcel through a wife (Gurgen through Richard Alexander's widow Marcy, Tovey through Bagley's widow), and neither could press his claim to exclusive possession against the other without exposing the family connections to public dispute. The shared use mechanism reads as an interim arrangement pending some external resolution, which the change of administration in July 1714 has now supplied. The deliberate calibration of Tovey's submission, focused on the Bagley plantation and reserving the wider Boucher material for future use, suggests that he was managing the council's appetite for working through Boucher-era matters in stages. By presenting a relatively contained case first, with a clear documentary trail through Bagley's lease and Boucher's denial of hearings, Tovey could establish his procedural standing and his entitlement to compensation without overloading the council with material that would require longer working investigation. The reserved further matters would then come forward at moments where they could be brought to bear on other current proceedings.
218	209	Island S[t] Helena At a Consultation Held on Tuesday the 5[th] day of Octob[r] 1714 at the plan- =tation House. Isaac Pyke Esq[r] Govern[r] George Haswell D[t]y Gov[r] Pres[t] Edw[d] Mashborne 3[d] Matth[w] Bazett 4[th] Antipas Tovey 5[th] in Coun[l]. Serjant William Slaughter and John Harding appeard in Council relating to an agreem[t] made between the said Parties as followeth. William Slaughter saith his agreement with John Harding was that on Consideration of Forty pound for his wifes life John Harding should have possession of the House and land he lived upon and to have the Yam suckers to take care of the Yams for two years the time Slaughter was to have for digging them out of the Ground. Likewise that said Slaughter was to have Liberty of keeping three Cows and one Sow and Eight piggs on the Ground for two years and to have Liberty of Living at the said House in the Countrey w[th] his wife and three Child[n] for a month or two at any time. John Harding saith he was to give Forty pound for his mothers life in the land now in Dispute and to have the suckers for looking after the Yams and the value of the	Island of St Helena. At a consultation held on Tuesday 5 October 1714 at the Plantation House. Present: Isaac Pyke Esquire, Governor George Haswell, Deputy Governor Edward Mashborne, third Matthew Bazett, fourth Antipas Tovey, fifth in council Sergeant William Slaughter and John Harding appeared in council on a disagreement between them over a working agreement they had earlier made. Slaughter set out his version of the bargain. In return for £40 0s 0d to be paid during his wife's life, Harding was to have possession of the house and the land Slaughter lived on. Harding was also to keep the yam suckers and look after the yams for two years, during which time Slaughter would have what he could dig out of the ground. Slaughter was further to be free to keep three cows and one sow and eight pigs on the ground for the same two years, and to live in the country house with his wife and three children for a month or two at any time he wished.

		Fencing of the Lease Land to be Apprayzed by two men and to be paid for which is since Valued by Richard Swallow and Orlando Bagley at about fourteen pound which he is willing to pay. And Margin Notes: Island S[t] Helena Slaughter & Harding ab[t] their agreem[t] what y[e] agreem[t] is Jn[o] Hardings Answer to it.	Harding gave his own account. He was to pay £40 0s 0d for his mother's life interest in the land in question, and was to have the suckers for looking after the yams. The fencing on the leased part of the land was to be valued by two men, and he was to pay for it. The value had since been set by Richard Swallow and Orlando Bagley at about £14 0s 0d, which Harding was willing to pay. And Interpretations The Slaughter-Harding dispute exposed the working structure of an inter-planter land arrangement. The two men had reached a private bargain over the working occupation of a parcel held by Harding's mother for life, with Slaughter as the present occupier seeking to transfer his interest to Harding in return for a cash payment and a working set of reserved rights over crops, livestock and lodging. The dispute over what the agreement actually was, brought to the council for determination, reflected the working pattern by which contested private bargains were resolved by reference to the disinterested testimony of valuers and the council's adjudicative authority. The £40 0s 0d cash payment was anchored on the mother's life interest in the land. The mechanism reflected the working practice by which a life tenant's working interest in a leasehold or freehold could be assigned during her lifetime, with the cash payment representing the present value of the unexpired life interest. The structure protected the underlying remainder (which would pass to the heir on the life tenant's death) while permitting a working transfer of the present occupation. William Slaughter appears earlier in the working sequence as sergeant, holder of a 21-year lease on his own and Company-hired land in October 1711, and one of the jurors in subsequent cases. The reference to his wife and three children placed the present arrangement within a working family economy of substantial dependants. The disagreement turned on three working points. Slaughter's version included a set of reserved rights (livestock grazing for two years, residence in the country house at intervals) that Harding's version omitted; Harding's version included a separate valuation of the fencing (£14 0s 0d, set by Richard Swallow and Orlando Bagley) that Slaughter's version did not mention. The structure suggests that the bargain had been made orally with separate working understandings on different items, some of which had been formally valued and others left vague. The reference to valuation by Swallow and Bagley placed the fencing question on a working evidentiary footing while leaving the disputed rights to be settled by the council. Richard Swallow and Orlando Bagley appear here in the working role of disinterested valuers of fencing, the same mechanism by which the council had repeatedly resolved questions of improvement value across the working sequence (the Mashborne and Steward survey of Powell's fencing on 14 September 1714, the Bell appraisement of the country house at Pursley Bed on 30 October 1711, and earlier cases). The £14 0s 0d figure was the working valuation of the fencing on the leased part of the land, distinct from the £40 0s 0d for the mother's life interest in the freehold. Speculations The careful structuring of Slaughter's version of the agreement (with reserved livestock rights, working access to the house, and the right to retrieve already-planted yams) suggests that Slaughter had probably negotiated a working withdrawal from the land that protected his immediate household economy. The two-year window for grazing and the right to lodge with his family in the country house at intervals would have given him a working refuge during the working transition to whatever new arrangement he was making.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			The mechanism reflects a working pattern of staged exit from a parcel, rather than an outright sale. Harding's omission of these reserved rights from his version of the agreement may have been deliberate, particularly if he had taken on the parcel intending to develop it more intensively than Slaughter's reserved livestock and residence rights would permit. By presenting the bargain as a simpler cash transaction for the life interest, with a separately valued payment for fencing, Harding probably hoped to consolidate his working position in the parcel without the working encumbrance of Slaughter's continuing presence. The council's resolution of the dispute will probably turn on whether sufficient working evidence can be brought forward to support Slaughter's reserved rights.
219	210	And tho he saith it was not his agreem[t] yet Harding is willing to allow his Father in Law William Slaughter Liberty to keep three Cows in the pasture and the Sow & Eight Piggs Slaughter finding Yams for said Swine And Harding is willing also to Entert[ain] his said father in Law and Mother and their Family in his House three months in a year they finding their own Victualls And Slaughter desiring on Consideration of his Great Loss in Cattle &c[a] an Allowance out Each Childs part the Execut[rs] are willing to all[ow] fifty Shillings out of Each Child s part. William Slaughter being called in & ask[d] if he would refer the whole Matter in dispute his part to the Council The Execut[rs] also being called in are both willing this matter be referrd to the Council and Desire the Childrens part be secured an[d] are willing to make up the Account of Hardi[ngs] Children &c[a] and to pay Hardings Debt. Resolved that John Harding have possession of the Said House and Land & performe the agreements aforementioned. Also Ordered that whatever mony up[on] Ballance of Accounts between the Said Willi[am] Slaughter and John Harding be due to the s[aid] Slaughter be paid into the Stores by s[d] Hard[ing] towards Sattisfaction of Slaughter's Debt to t[h]e Hono[ble] Company and said Slaughter's Acco[t] he Creditt for the same. And whereas Slaughter desires he may h[ave] Yam suckers to plant one Acre of ground th[at] h[e] Margin Notes: The Sevrall Articles Contained. in Said. Agreement. Harding to have possess- =ion of y[e] House &c[a] Ballance of their Acc[t] to be p[d] in y[e] Stores by Harding for Slaughter Slaught[r] to have suckers	Harding then acknowledged that, although these were not part of his agreement, he was willing to allow his father-in-law William Slaughter the following. Slaughter was to keep three cows in the pasture and four to eight pigs, Slaughter finding yams for the swine. Harding was also willing to entertain his father-in-law and mother-in-law and their family in his house for three months in a year, they finding their own victuals. Slaughter, in consideration of his great loss in cattle, asked for an allowance on each child's part. The executors were willing to allot fifty shillings out of each child's part. William Slaughter, being called in and asked if he would refer the whole matter in dispute as to his part to the council, agreed. The executors, also being called in, were both willing that the matter be referred to the council, and desired the children's part be secured. They were willing to make up the account of Harding's children and to pay Harding's debt. The council resolved that John Harding have possession of the house and land, and perform the agreements just mentioned. The council also ordered that whatever money upon the balance of accounts between William Slaughter and John Harding might be due to the father-in-law, Slaughter, be paid into the stores by Harding, towards satisfaction of Slaughter's debt to the Honourable Company, and Slaughter have credit for the same. Where Slaughter desired he might have yam suckers to plant one acre of ground that Interpretations The resolution of the Slaughter-Harding dispute illustrated the working pattern by which the council reconciled an oral bargain through a structured set of concessions and a referral procedure. Harding's acknowledgement that the additional terms had not been part of his original agreement, but his willingness now to allow them, converted the dispute into a settled compact. Three cows in pasture, four to eight pigs (with Slaughter to supply the yams to feed them), and three months a year of family accommodation in the house, constituted the working reserved rights Slaughter retained in the parcel after the formal transfer to Harding. The relationship between Harding and Slaughter as son-in-law and father-in-law placed the bargain within a family settlement framework. The further reference to Harding's children carried the working effect of the arrangement on the next generation: Slaughter was to receive fifty shillings out of each child's part as compensation for his loss in cattle. The mechanism by which the executors of Harding's children's interests were brought into the working settlement reflected the standard council practice of protecting minor heirs' shares against transactions made by their parent. The reference to executors of Harding's children, distinct from Harding himself, suggests that the children

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			were beneficiaries under a will (probably their mother's, given that Harding's wife was the daughter of Slaughter) and that their parts in the estate were administered by trustees rather than by Harding directly. The executors' willingness to take on Harding's debt as part of the settlement reflected the working principle that the children's part could absorb the parent's obligations where the working effect was to secure the family's continued occupation of the parcel. The council's order that any balance due from Harding to Slaughter on the accounts between them be paid directly into the Company stores, with Slaughter credited, applied the store-settlement framework established by the August and September 1714 advertisements. The mechanism converted a private debt between two planters into a working reduction of Slaughter's outstanding store debt, advancing the recovery programme by one transaction without any cash movement. The structure exemplified the working principle that private debts between inhabitants could be channelled into the Company's recovery framework where the parties agreed. The fifty shillings per child mechanism placed a specific working value on the cattle loss Slaughter had sustained, allocated as a charge against each child's share of the estate. The structure converted what would otherwise have been an immediate cash liability of Harding's into a deferred liability of the children's parts, payable presumably at the working moment when each child came of age and the estate fell to be divided. Speculations The decision to channel the balance of accounts directly into the Company stores, rather than allowing Slaughter to receive the cash, probably reflected the council's working assessment that Slaughter was substantially indebted on the store books and that an immediate cash payment to him would simply be absorbed by other working expenses before reaching the store. By directing the payment straight to the stores, with credit to Slaughter, the council secured the recovery while ensuring that Slaughter still received the working benefit of the bargain through the reduction of his outstanding balance. The willingness of the executors of Harding's children to make up the account and pay Harding's debt suggests that the working position of Harding's children was substantially better resourced than Harding's own. The mechanism reads as a calculated use of the children's estate to secure the present working occupation of the parcel by their father, with the fifty shillings per child charge representing the working price paid by the children for the benefit of their parent's continued tenure. The arrangement preserved the family's working position on the parcel while spreading the cost of the settlement across the children's individual parts in a way that allowed the working transaction to proceed.
220	211	he is obleidged to plant for James Rider that he have the Liberty to take Yam suckers out of the Cabbidge Tree Lease Land to plant the same And that he Entertaine his Said father in law William Slaughter his wife and three Children three months in a year at the Said House they finding their own provisions S[t] Helena The reply of John Alexander for and on behalf of Rich[d] Alexanders three Child[n] in answer to the Case of M[r] Antipas Tovey relating to the House & Land formerly Granted to the said Rich[d] Alexander Dec[d] As to the time mentiond in said Case I Suppose wrong for Rich[d] Alexander was outed of his House land and other premises some time in March 1709 and the discourse of his going off but a very little time before which was upon report being given out that Govern[r] Roberts would not grant Leases for any longer than	Slaughter was obliged to plant for James Reder. 		twenty one years &c[a] & as to the proposal made Tho[s] Bagly tuffs for this reason & after the time of said Alexanders being Order'd to dispose of his Provisions & therefore no voluntary motion or design of his own as may be more fully to appeare, as also that twas never the thoughts & much more the words of s[d] Alexander to desire the said Bagley to buy those proovissions till s[d] order of quitting y[e] Land & premisses was no Longer to be lookt upon as a free planter w[ch] proceedings could no a[s]y & what Jn[o] Alexander positively denys in respect to himselfe as well as to his deceased Bro[r] & Wife, indeed them or eather of them to wish him y[e] s[d] Tho[s] Bagley any Joy at all The s[d] Rich[d] Alexander dying soon after being y[e] 6[th] of May 1709 his Wid[o] was Left in a very mean condicon & deplorable condicon as well known to all Margin Notes: to plant one Ac[re] Land. himself & familie to bo 3 mo. in a year w[th] s[d] Harding. The reply of Jn[o] Alexander in Answer to y[e] Case of M[r] Tovey, relateing to y[e] House & Land form[er]ly granted to Rich[d] Alexand[r] Dec[d]	on report that Governor Roberts would not grant leases for any longer term than twenty-one years and so on, and on the proposal made by Thomas Bagley. For this reason, after Richard Alexander had been ordered to dispose of his provisions, there was no voluntary motion or design of his own that could be made more fully to appear, and the thoughts, much more the words, of Richard Alexander were never to desire Bagley to buy those provisions until the order of quitting the house and premises was no longer to be looked upon as a free planter. The proceedings could no way be questioned, and Alexander positively denied, in respect to himself as well as to his deceased brother and his wife, that any of them ever wished Thomas Bagley joy at all. Richard Alexander died soon afterwards, on 6 May 1709, leaving his widow in a very mean condition and deplorable state, as was well known to all. Interpretations The Slaughter-Harding agreement concluded with two further working items: Slaughter's obligation to plant for James Reder, with the cabbage tree leased land supplying the suckers, and the three months a year hospitality for Slaughter's family at the country house. The mechanism by which Slaughter retained the right to draw suckers from leased ground reflected the working pattern by which planting stock could be transferred between holdings without affecting the underlying tenure of either parcel. James Reder appears earlier in the working sequence as the planter whose 61-acre title was confirmed on 30 May 1711 through his father-in-law Daniel Griffith's petition, and whose estate had been a recurring reference in the working land arrangements of the period. The opening of John Alexander's written reply, on behalf of Richard Alexander's three children, set out a working counter-narrative to Tovey's case. Alexander challenged the chronology at the foundation of Tovey's account. Where Tovey had placed the working origin of the Bagley arrangement in October 1709, with Richard Alexander voluntarily handing over his house and land before his departure, Alexander now claimed that Richard had been put out of his premises some time in March 1709 and had then died on 6 May 1709. The working consequence is decisive: if Richard Alexander died in May 1709, he could not have made any voluntary arrangement with Bagley in October 1709. The dispossession of Richard Alexander in March 1709 was tied by Alexander to a working report that Governor Roberts would not grant leases beyond twenty-one years. Bagley, on this account, made his proposal to take over the land in the context of the working uncertainty about lease terms, rather than as the recipient of a voluntary handover by Alexander. The structural argument is that Richard Alexander, ordered to dispose of his provisions on his removal from free planter status, had no working choice but to deal with whoever the council directed, and that any agreement reached was made under working duress rather than voluntary settlement. The denial that any of the family had wished Bagley joy at all directly contradicted the corresponding detail in Tovey's case. Where Tovey had recorded that Richard Alexander's wife and brother John Alexander wished Bagley joy and good success in his settlement, Alexander now positively denied this on behalf of all three (himself, his deceased brother and the brother's widow). The conflicting accounts cannot both be true, and the council's resolution of the dispute will probably turn on whether either side can produce supporting evidence beyond the bare assertion of the petitioner. The reference to Richard Alexander's death on 6 May 1709 is the key new factual point in the working sequence. The earlier working narrative of the Bagley plantation (the December 1709 grant, the 1711

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			restoration, the 1711 settlement on Gargen for the children) had not specified the date of Richard Alexander's death. The present account places the death just under five months after the dispossession, and well before Bagley's grant of December 1709, framing the chronology in a way that supports the children's claim. Repjin Wells, identified in the previous council day's record as Marcy Alexander's father, does not feature in the present working narrative. Alexander's reply presented the case as one between the children's interests (with himself as executor and uncle) and Tovey's claim as the widow's second husband. The omission of Wells from the counter-narrative may reflect a tactical decision by Alexander to keep the family's working position focused on the children's rights rather than the wider Wells-Alexander connection that Tovey had identified as the working force behind the original petition. Speculations The shift of the chronology by seven months, from October 1709 to March 1709 for the dispossession and to May 1709 for Richard Alexander's death, is the working pivot of Alexander's counter-case. By placing the death before the grant, Alexander framed the entire Bagley arrangement as a working transaction over a dead man's estate, conducted with a vulnerable widow and the council, rather than as a consensual handover by the original holder. The mechanism converts the analytical question from whether the children's claim derived from a tainted petition (Tovey's framing) to whether the Bagley grant itself rested on any working title at all (Alexander's framing). The deliberate placing of Richard Alexander's death date at the working core of the reply, with the corresponding dismissal of any voluntary motion or design on his part, suggests that Alexander was preparing a working case that could be tested against the consultation book itself. If the council's own records showed Richard Alexander being ordered to dispose of his provisions in early 1709, with no entry of a voluntary arrangement, the working documentary case for Alexander's position would be substantial. The council's eventual determination will probably depend on whether the working records, when examined, support Alexander's chronology or Tovey's.
221	212	all the inhabitants, she was in respect to her poor condicon & for redress for y[e] wrong done her dec[d] Husband & Family oblig'd & did petition the Hon[ble] Court of Directors for possession of said House & Land again, w[ch] she the Wid[o] of Rich[d] Alexander heard read over in the presence of several & then sign'd thereto, upon which out of pitty & Charity they y[e] Hon[ble] Court of Directo[rs] Order'd her the said Wid[o] Mercy Alexander possession of y[e] aforesaid p[re]misses & in obedience & compliance therewith Benj[a] Boucher Esq[r] Govern[r] & Councell did give notice thereof & accordingly made an Order that the s[d] Wid[o] (or her present Husband) should take possession of s[d] house and Land pursuant to y[e] s[d] Court of Directors positive Orders by Ships Toddington & Thistleworth w[ch] plainly shews an insufficiency in the s[d] Case of Antipas Tovey & a wrong aspersion thrown upon s[d] Gov[r] Boucher in being therein s[d] that he forc'd Tho[s] Bagley out of y[e] premisses & them gave in possession of M[r] Goodgen As to Tho[s] Bagleys petitioning the then Gov[r] & Council no mention is made when nor is there any minutes or Record of y[e] same so that this may be a bare conjecture & presumption of M[r] Toveys, or I'll sett the case aright, y[t] dont give s[d] Bagley any better title to y[e] Land & p[re]misses nor was y[e] Lease granted him done by consent of s[d] R[d] Alexand[r] but	Alexander's reply continued. The widow was, in respect to her poor condition and for redress of the wrong done to her deceased husband and family, obliged to petition the Honourable Court of Directors for possession of the house and land again. The petition was read over in the presence of several persons and then signed by Richard Alexander's widow, upon which, out of pity and charity, the Honourable Court of Directors ordered the widow Marcy Alexander to be put in possession of the premises just mentioned. In obedience and compliance with this, Governor Benjamin Boucher and the council gave notice of it and accordingly made an order that the widow, or her present husband, should take possession of the house and land, pursuant to the Court of Directors' positive orders by the ships Toddington and Thistleworth. This plainly showed an insufficiency in the case of Antipas Tovey, and the slur thrown upon Governor Boucher in it. He had forced Bagley out of the premises and given Gurgan possession. As to Bagley's petitioning the then governor and council, no mention was made when, nor were there any minutes or record of the same. So this might be a bare conjecture and presumption of Mr Tovey's. And if the case were set right, it did not give Bagley any better title to the land and premises. Nor was the lease granted to him done by consent of Richard Alexander, but on the other hand very much to his dissatisfaction and apparent damage.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
		on y[e] other hand very much to his dissatisfaction & apparent damage. The damages s[d] to be sustained by Thomas Bagley his Wid[o] or M[r] Tovey ought to be (after the right made out to s[d] premisses) proved by some of them, but theirs neither w[th] less on s[d] Tovey now to do, & therefore another insufficiency of greater moment then the first As to the opinion of Gov[r] Boucher saying (if the s[d] so) that nieth[r] Wid[o] should have the land was because of my objection & that the Children was in greater want thereof & are so yet having but	The damages said to be sustained by Thomas Bagley, his widow, or Mr Tovey ought to be (after the right made out to the premises) proved by some of them. But there was neither witness nor evidence on Tovey's side now to do so, and therefore another insufficiency of greater moment than the first. As to the opinion of Governor Boucher saying (if it were so) that neither widow should have the land because of his objection, and that the children were in greater want of it and were so yet, having Interpretations Alexander's reply now placed the working chronology of the 1711 restoration on a firmer documentary footing. The widow had petitioned the Court of Directors in London. The petition was read in her presence and signed by her. The Directors, moved by her poor condition, ordered the restoration. Boucher and the council acted on these orders, formally communicated by the ships Toddington and Thistleworth, by giving notice and making the order for possession to be taken by the widow or her present husband. The structural argument was that the restoration rested on direct metropolitan authority, transmitted by named ship, and not on any local manipulation of the kind Tovey had suggested. The chronology was thus reframed against Tovey's account. Where Tovey had presented the widow's signature on the petition as obtained without her knowledge through the working hands of her father Repjin Wells and her brother John Alexander, Alexander now insisted that the petition had been read over in her presence and signed by her with full understanding. The conflict between the two accounts of the signing was the working evidentiary core of the dispute. The Toddington-Thistleworth dispatch reference established the working documentary route through which the Directors' orders had reached the island in 1711, and recalled paragraph 82 of that letter, under which Marcy Alexander had been granted her twenty-one-year lease on 8 October 1711. The defence of Boucher in the present passage is itself working a calculated structural effect. Where the new administration had been systematically assembling a documentary case against the previous governor, Alexander's reply turned Boucher's role on its head: Boucher had not acted improperly in dispossessing Bagley and putting Gurgin in possession, but had simply executed the Directors' orders, as he was bound to do. The slur thrown upon Boucher in Tovey's case was therefore unfounded. The argument carried the working effect of removing one of the strongest planks of Tovey's claim for damages, which depended on Boucher's actions being characterised as wrongful obstruction. The attack on the documentary basis of Bagley's petition was structurally sharp. Alexander pointed out that Tovey's case contained no reference to when Bagley petitioned, nor any record of the petition in the consultation books. Without working documentary support, the supposed petition was a bare conjecture and presumption. The mechanism by which a claim could be defeated for want of working evidence in the consultation books was the same one Tovey had relied upon to attack the widow's 1711 petition; Alexander now turned the test back against Tovey. The challenge to Bagley's title went further. Even if Tovey's account were set right, it did not establish that the lease had been granted with Richard Alexander's consent. Alexander now positively asserted the contrary: the lease had been granted very much to Richard Alexander's dissatisfaction and apparent damage. The structural argument is that even Tovey's own evidence, if accepted at its highest, did not show consent, and that the working record showed the opposite.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			The challenge to the damages claim was the third working point. Tovey had asked that the particular damages sustained by Bagley, his widow, and Tovey himself, be valued and proved. Alexander pointed out that for such damages to be recoverable, the right to the premises must first be established, and then the damages proved by those claiming them. Tovey had neither working witnesses nor evidence to prove the damages, only the bare assertion. The double insufficiency of his case (no right and no proof of damages) was the working ground for dismissal. Speculations Alexander's defence of Boucher's conduct in this passage represents a working tactical inversion of considerable subtlety. The new administration had been assembling material against Boucher across the whole August and September sequence (the burnt slaves' house, the destroyed live stock, the Bodley appraisal-block, the Plantation House in ruin, and the rest). Alexander's reply now placed Boucher's action in the Bagley case outside this catalogue, framing it as a working execution of metropolitan orders rather than a discretionary act. The mechanism aligned the children's claim with the working authority of the Directors themselves, and protected it from being absorbed into the wider working case against the previous governor. The attention paid to the lack of any consultation book record for Bagley's supposed petition to Boucher suggests Alexander had probably already searched the books and confirmed the absence. The working effect of the search would be to confirm that any working petition by Bagley to be reheard, if made at all, had been made informally rather than through the council process. Alexander's structural advantage here is that the consultation books contained the positive record of the widow's restoration by Directors' order, but contained no record of any working counter-petition. The council, on its own working materials, would find Alexander's version of events the better supported.
222	213	but very little to maintain them hereafter The In ability of M[r] Toveys being not able to make a new plantation &c[a] seems something strang since he had three or four Blacks, provissions, Sallary & comings in for Schooling. And as to the particular Case relating to Gov[r] Boucher hope M[r] Tovey wont accuse him with any thing more then he is able to Justifye & that he'll send him a Copy thereof that he may Justifye himself else where. This I give in with reserves of farther answer if need be to the afores[d] case of M[r] Antipas Tovey, being Yo[r] Worsh[p] & Councils most humb[le] Octob[r] y[e] 5[th] 1714. & very Obed[t] Serv[t] Jn[o] Alexander. An Estimate of the Charge of the Riding House, built by the late Govern[r] Boulcher at the Hon[ble] Comp[a] plantac[on] 311 Rafters, wallplates, riseing p[ts] and ground plates att 6[d] Each £4:15:11:00 2 Carpenters to cutt d[o] each cutting 10 p[r] day att 6[s] Each is 15[s] p[r] days £29:06:00 2 black[s] to attend em d[o] time att 1/6 £09:06:06 1 black brings 4 p[r] day is 78 days att 1/6 £05:17:00 [...] £00:00:00 2 Carpent[rs] to fix y[e] wall plates prop[s] riseing p[ts] & ground p[ts] att 6[s] Each y[e] day 16 days £06:00:00 2 blacks d[o] time to dig holes and attend them at 1/6 Each £01:00:00 1 Carpenter cutting & Splitting laths and binders 16 days att 6[s] £04:16:00 1 black d[o] time to attend him £01:04:00 2 Carpent[rs] to sett the Rafters and lathing 18 days Each att 6[s] p[r] day £10:16:00 2 blacks d[o] time w[th] em att 1/6 £02:14:00 80 deales for the Stables 2/6 £10:00:00 Carpenters work for d[o] £05:00:00	Alexander's reply continued. The children had but very little to maintain themselves with for the future. Tovey's inability to make a new plantation seemed something strange, since he had three or four slaves, provisions, salary and comings-in for schooling. As to the particular case relating to Governor Boucher, Tovey was not to accuse him with anything more than he was able to justify, and Alexander asked that Tovey send him a copy of the same, that he might justify Boucher elsewhere. This Alexander gave in with reservation of further answer if need be to the case of Mr Antipas Tovey. Dated 5 October 1714. Signed: Your worships' and council's most humble and very obedient servant, John Alexander. An estimate of the charge of the riding house built by the late Governor Boucher at the Honourable Company's plantation. 311 rafters, wall plates, ridging pieces and ground plates at 3d each £4 15s 11d 2 carpenters to cut the same, each cutting 10 a day at 6s each, is 15½ days £9 6s 0d 2 slaves to attend them on the same time, at 1s 6d £2 6s 6d 1 slave bringing 4 a day, is 78 days at 1s 6d £5 17s 0d 2 carpenters to fix the wall plates, props and ground plates, at 6s each per day, 10 days £6 0s 0d 2 slaves on the same time to dig holes and attend them, at 1s 6d each £1 0s 0d 1 carpenter cutting and splitting laths and binders, 16 days at 6s £4 16s 0d 1 slave on the same time to attend him £1 4s 0d 2 carpenters to set the rafters and lathing, 18 days each at 6s £10 16s 0d

		Nails for the totall £05:00:00 Carpent[r] work, Rafters, Laths, binders nails & blacks Labour for d[o] is £84:10:06 Carried Over Margin Notes: Charge of y[e] Riding House.	2 slaves on the same time to attend them, at 1s 6d £2 14s 0d 80 deals for the stables at 2s 6d £10 0s 0d Carpenters' work for the same £5 0s 0d Nails for the same £5 0s 0d Total for carpenter's work, rafters, laths, binders, nails and slave labour £64 10s 6d Carried over. Interpretations The closing of Alexander's reply contained two sharp working points. The first turned Tovey's argument for damages against him: a man with three or four slaves, provisions, salary as secretary and comings-in for schooling could hardly claim that he was unable to set up a new plantation as Boucher had offered. The mechanism placed a working test on the damages claim by reference to Tovey's actual working resources. If Tovey had the working means to set up elsewhere, the failure to do so was his own choice, not a working loss attributable to Boucher's denial of the original plantation. The comings-in for schooling reference identifies Tovey as also serving as a schoolmaster on the island, taking pupils for fees. The detail places him in a working household economy that combined the secretary's salary (the £40 0s 0d a year of the fifth-in-council rate under paragraph 45 of the Toddington letter, or perhaps higher as secretary under the United Company), private slave labour, and a teaching practice. The picture is one of a substantially resourced household, against which a claim of inability to take up new ground appears thin. The second working point shifted ground on the Boucher question. Alexander now asked Tovey to send him a copy of any further matters concerning Boucher that Tovey wished to lay before the council, so that he could justify Boucher elsewhere. The mechanism converted Alexander into an active defender of Boucher's record on the island, and signalled that the wider working catalogue of complaints Tovey had reserved for future submission would be met by working counter-evidence rather than allowed to stand unopposed. The reservation of further answer if need be reflected the working pattern of contested written submissions in the consultation book. Alexander's reply was complete as far as it went, but he reserved the right to respond to any further documentation Tovey might bring forward. The dating and signature of the document closed the present round. The riding house estimate opened an entirely separate matter, evidently entered into the consultation as part of the assembling documentary case against Boucher. A riding house in this period normally meant a covered structure for the exercise of horses, particularly useful where weather or insects made open-air riding uncomfortable. The choice to build one at the Honourable Company's plantation, under the late Governor Boucher, represented a working application of Company resources to a structure of essentially recreational utility, particularly when set against the catalogue of essential repairs Boucher had failed to maintain (the Plantation House itself, the slaves' house burnt through Caesar's gun, the Old Goat Pound foundations undermined, and the rest). The estimate set out a precise working accounting of the labour and materials. Two skilled carpenters were paid 6s 0d per day; slaves attending them were valued at 1s 6d per day, which matched the working hire rate established across the present sequence. The estimate ran to £64 10s 6d at the working point at which the page was carried over, with further charges to be entered on the following page. The structure of the accounting (carpenter days, slave-attendance days, materials by quantity and unit rate) reflected the

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			working pattern by which the new administration was now attempting to put a working price on Boucher's discretionary expenditure of Company labour and materials. Speculations The working effect of placing the riding house estimate in the consultation immediately after Alexander's reply on the Bagley plantation case was probably calculated. By Alexander's defending Boucher in the Bagley dispute, and the council's then entering a detailed working estimate of an expensive recreational structure built under Boucher's direction at the Company's expense, the consultation book records both the working defence of Boucher in one matter and the working evidence against him in another. The mechanism allowed the council to test how far Alexander's defence of Boucher would extend, and to assemble the working financial accounting of Boucher-era discretionary works for transmission to the Directors. The decision to put a working monetary value on the riding house, calculated by carpenter days and slave days at the standard rates, rather than simply noting the structure had been built, suggests that the new administration was preparing a working case in which Boucher's discretionary expenditure on the island could be charged against him in some manner. The mechanism may have been calculated to support a working set-off against any defence Boucher might offer in London of his administration, by quantifying the working cost to the Company of structures built for purposes that did not advance the working recovery programme.

Edward Mashborne Henry Francis John Bagley Francis Wrangham Geo[rge] Haswell Edw[d] Mashborne Matthew Bazett Antipas Tovey	Brought over £64 10s 6d For digging 30 rood of ditch at 5s £7 10s 0d 2 stone layers, 25 days each, for making 25 rood of wall at 5s each £12 10s 0d 8 slaves on the same time to fetch water, make mortar, bring fillers and attend them, at 1s 6d each per day, 12 days £7 4s 0d 6 slaves getting stones for 19½ rood £5 14s 0d For levelling 25 rood at 3s a rood £3 15s 0d For 320 burdens of rushes and cutting at 12d £16 0s 0d 160 burdens, 1 day fetching at 1s 6d £12 0s 0d 40 slaves, 1 day fetching water, drawing and tying the same at 1s 6d £3 0s 0d 2 thatchers, 18 days each at 5s per day each £9 0s 0d 4 slaves, 18 days each to serve them, at 1s 6d each £5 8s 0d 2 overseers, 36 days each, at [...] £7 4s 0d Total £181 11s 6d The above was, to the best of the signatories' judgement, the first cost and charge of the building, materials and slaves' labour, as witnessed under their hands. Signed: Edward Mashborne, Henry Francis, John Bagley, Francis Wrangham. Then signed below by the council: Isaac Pyke, George Haswell, Edward Mashborne, Matthew Bazett and Antipas Tovey. Interpretations The second page of the riding house estimate completed the working accounting begun on the previous page. The carry-over of £64 10s 6d combined with the new entries to produce a working total of £181 11s 6d. The structure of the accounting separated three working components: stone work (digging, wall-laying, levelling, water and mortar); thatching (rushes, fetching, cutting, drawing, tying); and overseeing. The stone-work section recorded substantial mason days at the standard 5s 0d daily rate, with eight slaves at 1s 6d a day attending the masons over a twelve-day

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			period. The combination produced a working rate of about 12s 6d a day in labour costs for each mason supported, against the bare 5s 0d mason wage. The labour cost of building one rood of stone wall at 5s 0d mason rate, with attendant slave support, was thus considerably higher than the bare wage suggests, and reflected the working pattern by which skilled work on the island depended on slave attendance for water, mortar and materials. The thatching section identified the working materials and method. Three hundred and twenty burdens of rushes were cut at 12d each (£16 0s 0d in total), 160 burdens were fetched at 1s 6d a day (£12 0s 0d), and 40 slaves fetched water, drew and tied them at 1s 6d. Two thatchers worked for 18 days at 5s 0d a day, with 4 slaves attending them. The detail revealed that the riding house had been built with a thatched roof, the rushes being the standard working roofing material on the island where coals for lime burning were short. The two overseers at 36 days each represented the working management cost of the project. The figure of £7 4s 0d for two men over 36 days each works to a rate of 2s 0d per day per overseer, the working rate already established on the island for plantation overseers. The signatories formed a deliberate working pairing. Mashborne signed both as one of the four valuers and as a member of the council itself. Henry Francis and Francis Wrangham appeared earlier in the working sequence as free planters serving on survey and valuation panels, with Henry Francis having been used in the joint stock count of 9 December 1712. John Bagley appears as a free planter and carpenter, particularly suited to working valuation of a structure of this kind. The mechanism by which four named valuers produced a working estimate, then signed under their hands, with the council also signing the consultation entry, was the established working pattern for documentary cases the council intended to transmit to London. The same pattern had governed the Powell fencing survey by Mashborne and Steward on 14 September 1714, the Bodley estate appraisal of 17 August 1714, and earlier cases. The £181 11s 6d total represented a substantial working sum. Set against the rates the council had been allowing through the recovery framework (the £20 0s 0d threshold for debt-conversion incentives, the £40 0s 0d a year salary for the chief surgeon, the £39 0s 0d for Doctor Price, the £30 0s 0d for Porteous, the £14 0s 0d valuation of Slaughter's fencing on the present day's earlier business), the riding house alone represented a working cost equivalent to several years of senior officer salary, or approximately nine times the threshold above which the council had been pressing planters to discharge their store debts. Speculations The detailed structure of the riding house estimate, broken down into precise labour days and material quantities, suggests that the valuers had taken pains to produce a working figure that could withstand examination by the Directors in London. The mechanism reflected the new administration's working approach to assembling the documentary case against Boucher: not merely listing complaints, but pricing the working cost of each item by reference to the standard rates the council itself was applying. The £181 11s 6d figure would carry considerable working weight when compared with the Company's other expenditure on the island during the same period. The composition of the working panel, combining the senior councillor most acquainted with plantation labour with three substantial free planters of varied skills (Francis as planter, Bagley as carpenter, Wrangham as planter and valuer), reflected the council's working concern to produce a figure that could not be

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			challenged on grounds of insufficient working expertise. The panel covered every working component of the structure: stone work, carpentry, thatching, and supervision. The mechanism placed the riding house cost on a working evidentiary footing as solid as any of the council's other documentary submissions to London.
224	215	Island S[t] Helena. At a Consultation Held on Tues- =day the 19[th] day of Octob[r] 1714 At the Plantation House. Isaac Pyke Esq[r] Govern[r] Pres[t] George Haswell Dep[ty] Gov[r]. Edward Mashborne 3[d] Matthew Bazett 4[th] Antipas Tovey 5[th] in Couns[il] The Petition of William Bates fisherman read as followeth. That whereas your Petitioner finding himself Considerably a looser by fishing on those hard Terms he now does Humbly Beggs your Hono[rs] will take it into yo[r] Consi- =deration and that he may be dismissed from the same to do his duty as a Montross as his late Worship Enterd him for that he is no longer able to maintain himself having been at great Charge for a Boat Hooks Lines and two hands (that he is oblig'd to hire) and all the fish he Catches is not sufficient to sattisfie them much more main- =taine himself and rather setts him backward than forward. Therefore your Petitioner humbly desires that some person more fitt for that business may be employed he not haveing his health very well. And your Petitioner (as in Duty bound) shall Ever pray &c[a] William Bates Ordered. That he Continue as fisherman to the Hono[ble] Company till they are provided with another. William Cosley Marshall made Complaint against the Executors of Benjamin Sich for paym[t] for seven pound five shillings due to him Richard Margin Notes: Island S[t] Helena. W[m] Bates desires to be discharg'd from fishing. to Continue ffisherman Cosleys Compl[t] ag[t] Bens Exe[c]t[rs] [...]	Island of St Helena. At a consultation held on Tuesday 19 October 1714 at the Plantation House. Present: Isaac Pyke Esquire, Governor George Haswell, Deputy Governor Edward Mashborne, third Matthew Bazett, fourth Antipas Tovey, fifth in council The petition of William Bates, fisherman, was read as followeth. Bates set out that he was finding himself considerably a loser by fishing on the present hard terms. He humbly begged the council to take it into consideration and that he might be dismissed from the work and return to his duty as matross, as the governor had originally enrolled him. He was no longer able to maintain himself. He had been at great charge for a boat, hooks, lines and two hands he was obliged to hire. All the fish he caught was not sufficient to satisfy them, much less maintain himself, and the work was setting him backward rather than forward. He therefore humbly desired that some person more fit for the business might be employed, he not being in very good health. And as your petitioner, in duty bound, shall ever pray, and so on. Signed: William Bates. The council ordered that Bates continue as fisherman to the Honourable Company until they were provided with another. William Corley, marshal, made complaint against the executors of Benjamin Sich for payment of £7 5s 0d due to him. Richard Interpretations The Bates petition exposed the working economics of small-scale commercial fishing under Company contract. The fisherman bore the working capital costs (the boat, hooks and lines) and the recurring labour costs (two hired hands), but the catch had not been sufficient to cover either. The mechanism placed the working risk of the operation entirely on the fisherman while the Company received the supply. Bates's request to be dismissed and returned to matross duty reflected the working position of a man for whom the contract had become a working loss. The reference to Bates having originally been enrolled as a matross by the governor placed him in a working pattern visible across the present sequence. Matrosses were the artillery soldiers ranking below gunner, and several had been encountered earlier (John Welch as the gunner's-crew matross of 14 October 1712, James Vesey as matross found over his land complement in April 1712, Humphrey Edwards admitted as matross on 3 November 1713). The mechanism by which a matross could be redirected to a working civilian task such as fishing reflected the flexible deployment of the garrison's working strength to whatever immediate need arose, but the present petition revealed the working difficulty of such redeployment when the civilian task required commercial returns to support its operating costs. The council's order that Bates continue as fisherman until another could be found suggests that the working position of Company fisherman was hard

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			to fill. The mechanism left Bates in working hardship pending the council's working appointment of a replacement, but at the same time committed the council to finding one. The order's working effect was to convert what Bates had asked as an immediate release into a deferred release pending succession. Bates's mention of poor health, placed at the end of his account of his working losses, may have been a working last point in support of the petition rather than the primary one. The council appears to have weighed the working operational need against the petitioner's circumstances and reached a compromise that addressed neither in full. The opening of the Corley complaint introduced a new working dispute. William Corley, marshal of the island, brought a claim against the executors of Benjamin Sich for £7 5s 0d. Sich's will had been proved on 17 August 1714 on the oaths of William Porteous and Henry Francis, brought by his executors Richard Swallow senior and Francis Wrangham. The present complaint placed those executors in the position of working defendants on a creditor's claim. The marshal's office was the working enforcement arm of the council's authority, so the spectacle of the marshal himself bringing a personal claim added a procedural feature: the man who normally executed working warrants on others was now asking the council for working authority to enforce a claim of his own. The £7 5s 0d figure, though modest in comparison with the substantial sums seen elsewhere in the present session, was sufficient to bring the matter formally before the council rather than resolve it privately. The fragment of the next line, opening Richard at the foot of the page, will almost certainly continue into the working account of the dispute, probably naming Richard Swallow senior as the executor first answering the claim. Speculations The decision to retain Bates as fisherman until another could be found, despite the working hardship he had set out, suggests that the council was working with a limited pool of candidates willing to take on the working position. The mechanism by which the Company contracted out fishing to a single fisherman, rather than operating the boat directly under the storekeeper or the gunner, kept the Company's working exposure to the costs of the operation low, but it also left the position vulnerable to working failure when the catch was poor. The council's working response was probably calibrated to keep the supply chain operating while gradually identifying a replacement. The bringing of the Corley complaint before the council on the same day as the Bates petition, both touching small but contested sums, suggests that the working pattern of the autumn consultations under Pyke was beginning to include a steady volume of small-scale civil claims, alongside the larger Boucher-era cases. The mechanism by which the council functioned as the working forum for such claims, with the marshal himself capable of being both enforcer and claimant, reflects the working compactness of the island's administrative establishment.
225	216	Richard Swallow & Francis Wrangham the Execut[rs] being called in prove that five pound is already paid in the Hono[ble] Companys Stores & are ready to pay the other two pound five shillings. 		wee in Conscience to our deceased Brother and his Issue humbly begg leave to represent his Case thinking it our duty so to do. First then we desire that consultation may be produced wherein Richard Alexander did request leave to make sale of his Plantation & other Effects and to goe off this Island and that we may have a Coppy of the same. Secondly we have Thomas Bagleys lease ready to produce granted him by the Gov[r] and Councill and at the request and offer of the s[d] Alexander to the said Bagley and do urge John Alexander to make proof whether or not that the said Bagley did use any indirect means towards Alexander in either of these points if not wee do most humbly conceive that Bagleys Claim is just, and that the Governm[t] had full Power to Dispose of the Company Lands Thirdly we require a Coppy of that Petition sent to England by John Alexander in behalf of his Sister and his Children whereon those allegations were by him sett forth to the Company that was the reason of Bagleys being outed which we beleive may be Lastly objected against, and do require the Said Copy upon oath. Margin Notes: the Execut[rs] prove y[t] [...] is paid and willing y[e] [...] [...] S[t] Helena. Orl[d] Bagley & Richard Swallow on behalf of Tho[s] Bagley dec[d] their severall Allegations [...] ab[t] y[e] Land form[er]ly Rich[d] Alсанд[rs] Since Possess'd by Thom[s] Bagley.	the recovery of his predecessor's right, and that the dispute between Mr Alexander and him was tedious and not likely to come to a decision, in conscience to their deceased brother and his issue, they humbly begged leave to represent the case, thinking it their duty to do so. First, they desired that the consultation might be produced in which Richard Alexander had requested leave to make sale of his plantation and other effects and to go off the island, and that they might have a copy of the same. Second, they had Thomas Bagley's lease ready to produce, granted to him by the governor and council and at the request and offer of Richard Alexander to Bagley. They urged John Alexander to make proof, whether or not Bagley had used any indirect means towards Richard Alexander in either of these points. If not, they humbly conceived that Bagley's claim was just, and that the governor had full power to dispose of the Company's lands. Third, they required a copy of the petition sent to England by John Alexander on behalf of his sister and her children, in which those allegations were set forth to the Company that were the reason of Bagley's being ousted. They believed this might be lawfully objected against, and required the copy upon Interpretations The opening resolution of the Corley complaint demonstrated the working pattern by which the council handled smaller debt-recovery cases. The executors of Benjamin Sich had partly satisfied the claim by paying £5 0s 0d into the Honourable Company's stores, and were ready to pay the balance of £2 5s 0d. The mechanism by which the executors discharged a creditor's claim through payment into the Company stores, with credit being given through the working account system, applied the same store-channelled debt-settlement principle that the council had used in the Slaughter-Harding settlement of the previous fortnight, and reflected the working approach by which the Company stores functioned as the working clearing-house for inter-planter and inter-officer debt. The intervention of Bagley's executors transformed the Tovey-Alexander dispute into a four-cornered working contest. Where Tovey had set out his case in writing on 28 September 1714 and Alexander had replied on 5 October 1714, the executors of the late Thomas Bagley (Orlando Bagley and Richard Swallow) now entered the working contest on a third footing. Their working interest was distinct from Tovey's: they acted as executors for Bagley's children and represented the deceased's heirs against any claim that Bagley's lease had been wrongly procured. The working effect was to place the children of Thomas Bagley alongside the children of Richard Alexander as parties to the dispute, with the council called on to weigh the working rights of two sets of heirs against each other. The criticism of Tovey's remissness in prosecuting the recovery suggests that Tovey's working approach to the case had been seen by the executors as insufficiently vigorous, perhaps because Tovey's working position as a serving councillor made him cautious about pressing the case as far as it might be taken. The executors, having no such working constraint, presented themselves as the proper guardians of Bagley's heirs' interests. The three documentary demands set out by the executors deployed a careful working strategy. The first demand was for the consultation in which Richard Alexander had requested leave to sell his plantation and depart. If such a consultation existed in the books, it would settle the question Tovey and Alexander had been disputing: whether the working handover to Bagley had been voluntary. The second demand was for production of Bagley's own lease, which the executors

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			had ready, and a challenge to John Alexander to prove that Bagley had used any indirect means towards Richard Alexander. The third demand was for the petition John Alexander had sent to England on behalf of his sister and her children, which the executors believed might be lawfully objected against. The structural argument running through all three demands was that the working documentary record, if produced, would settle the question in Bagley's heirs' favour. The executors' confidence in this working position was striking, and probably rested on prior knowledge of what the consultation books would show. The claim that the governor had full power to dispose of the Company's lands was the executors' fall-back legal position. Even if the working documentary record proved less decisive than they hoped, the executors argued that the original grant to Bagley had been within the governor's working authority and could not be undone by any later working petition. The mechanism placed the legitimacy of all original grants by past governors on the same working footing. Speculations The willingness of the executors to require production of John Alexander's London petition suggests that the executors had probably already seen it, or had reliable working knowledge of its contents, and believed it contained material misstatements that could be exposed by formal comparison. The mechanism reads as the working approach of parties confident that the working documentary case favours them and willing to bring the matter to a head by formal production of the contested documents. The framing of the executors' intervention as a duty in conscience to their deceased brother and his issue, with no apparent working personal interest, was probably calculated to displace any working suspicion that the executors had any motive beyond the protection of the children. The mechanism mirrored the structural approach taken by John Alexander on 21 September 1714, when his own intervention had been framed as that of an executor acting in conscience for the working benefit of Richard Alexander's children. With both sides now framing themselves as disinterested guardians of minor heirs, the council was working with a structural pattern in which the working family connections of all parties were carefully obscured behind the language of executorship.
226	217	Oath, and do freely grant the said Alexander Copys of Bagleys Petitions both to the Company and Govern[r] Boucher upon oath, and shall Endeavour to prove it was not so much out of Charity, to the Widdow of Alexander, (then the wife of Tho[s] Goodgen) as out of Contempt to Govern[r] Roberts to Oppose him that Govern[r] Boucher gave Goodgen Possession thereof. Furtherwe humbly request to know if the Company have in any Generall Letter given their Express Orders that Alexanders Wid[o] should be reinstated in the land that was formerly in her Hus- bands Possession without Ever Examining Bagleys claim thereto. We have severall more Instances in Bagleys behalf, but do suppose this may be sufficient unless Alexander can prove this our Report Invalid. Who are in respects Yo[r] Worship[ps] & Coun[s] most obed[t] humb[le] Serv[ts] Orlando Bagley Rich[d] Swallow Octob[r] The 12 1714 I do acknowledge to have heard the late Worship[fl] Gov[r] Boucher sitting by the fire in the Hon[ble] Comp[as] Plantation House in Company with M[r] Cark & Mr[s] Ellen Keeling. Declare that should have proceeded quite otherwise then with that severity (in the Case Depending between M[r] Alexander and Thomas Bagley) against Thomas Bagley and what he had performd was absolute, to Oppose Gover[r] Roberts who had only been disserviceable to Thom[s] Bagley in that Affair. Witnyss my hand. George Carne	The executors' submission continued. They freely granted that Alexander might have copies of Bagley's petitions, both to the Company and to Governor Boucher, on oath. They would endeavour to prove that the move against Bagley had been made not so much out of charity to Alexander's widow (then the wife of Thomas Gurgin) as out of contempt for Governor Roberts and to oppose him, that Governor Boucher had given Gurgin possession. They further humbly requested to know whether the Company had in any of their general letters given express orders that Alexander's widow should be reinstated in the land formerly in her husband's possession, without ever examining Bagley's claim to it. They had several more instances in Bagley's behalf, but supposed this might be sufficient unless Alexander could prove the executors' report invalid. Signed: Your worships' and council's most obedient and humble servants, Orlando Bagley, Richard Swallow. Dated 12 October 1714. I do acknowledge to have heard the late Governor Boucher sitting by the fire in the Honourable Company's Plantation House, in company with Mr Park and Mrs Ellen Keeling, declare that this should have proceeded quite otherwise, even with that severity (in the case depending between Mr Alexander and Thomas Bagley) against Thomas Bagley, and what he had

		Ordered That M[r] Alexander, M[r] Goodgen, & all other persons Concerned have Notice that the Govern[r] and Council resolve to Come to a speedy Determination of the Matter relating to the land in Dispute possest by M[r] Goodgen. The Govern[r] and Cap[tn] Mashborne report that they bought of the Widdow Starlings ould[ry] the following Particulars. viz[t] [...] Margin Notes: M[r] Carnes Certificate Allegions Concern'd ab[t] y[e] Land to have Notice &c[a] at Starlings ould [Cy]	performed had been absolutely to oppose Governor Roberts, who had only been serviceable to Thomas Bagley in that affair. Witness my hand: George Carne. The council ordered that Mr Alexander, Mr Gurgin and all other persons concerned have notice that the governor and council resolved to come to a speedy determination of the matter relating to the land in dispute possessed by Mr Gurgin. The governor and Captain Mashborne reported that they had bought at the widow Starlings' outcry the following particulars: 66,000 [...] Interpretations The executors' closing submission added a new working point of considerable structural weight. The argument that Boucher had acted not from charity to Alexander's widow but from contempt for Governor Roberts converted the dispossession from a humanitarian response to a political act of administrative spite. The mechanism placed Boucher's working motive within the catalogue the new administration had been assembling against him: the Bagley case was not an isolated mistake but part of the wider pattern of Boucher's hostility to his predecessor's working arrangements. The further question whether the Company had ever in their general letters given express orders that Alexander's widow be reinstated without examining Bagley's claim went directly to the procedural test the executors wished to apply. If the Directors' orders had only authorised a hearing or an investigation, and the local administration had simply transferred possession without examining the working claim of the existing tenant, then the working title of Marcy and her children rested on a misreading or wilful overreach of the metropolitan instruction. The mechanism was precise: the consultation books, paired with the Toddington-Thistleworth letter, would either show express orders or would not. The Carne certificate is the most striking piece of working evidence in the present session. George Carne, the Beale orphans' executor and a substantial planter familiar through the earlier working sequence, certified under his hand that he had heard Boucher, sitting by the fire at the Plantation House in company with Mr Park and Mrs Ellen Keeling, declare that the case should have proceeded quite otherwise (even with severity), and that what he had done against Bagley had been absolutely to oppose Roberts. The certificate placed Boucher's working motive on direct testimony from a planter of standing. The structural effect of the Carne certificate was decisive. By converting Boucher's reported remarks from the working observation of Doctor Porteous (which Tovey had earlier introduced) to the direct testimony of George Carne under his hand, the executors raised the evidentiary value of the Boucher conversations from second-hand report to written witness statement. The mechanism produced a working documentary record that could be carried to London with the other evidence against Boucher, and would carry working weight against any defence Boucher might offer. The council's order that all parties be given notice of the council's resolve to come to a speedy determination signalled that the working phase of written submissions was closing. After Tovey's case of 28 September, Alexander's reply of 5 October, the executors' submission of 12 October, and the Carne certificate, the council had assembled enough working material to reach a decision. The mechanism placed the next council day on a working footing where the parties would be expected to appear for the determination itself.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			The opening of the widow Starlings' outcry account introduced an entirely separate matter. The governor and Captain Mashborne reported a working purchase at the public outcry sale of the estate of widow Starlings (probably Hatton Starling's widow, given the long working line of Starlings in the present sequence). The figure of 66,000 in the working entry probably refers to yams, given the working context of stock acquisitions across the present autumn under the procurement framework, although the line is incomplete on the present image. Speculations The reframing of Boucher's working motive from charity to political spite suggests that the executors had probably been assembling working evidence of the late governor's actual reasoning behind the dispossession. The Carne certificate is consistent with this: a planter of standing willing to put his name to a written statement of overheard remarks. The mechanism reads as the working approach of a party confident that the working evidentiary case can be made to support the structural argument, and the willingness to put it under hand is itself the test of that confidence. The decision to bring the Tovey-Alexander dispute to a speedy determination, with notice to all parties, suggests that the council had probably already formed a working view of the case and wished to close it before any further working complications emerged. The mechanism mirrored the working pattern by which the council had handled other contested Boucher-era cases (the Pompey case, the Bodley estate, the Earle lands): once sufficient working evidence had been assembled to support a determination, the council moved decisively to close the matter rather than allow the working contest to continue indefinitely.
227	218	66000 Young Yams & suckers to stand eighteen months £37:1:- 2 Black men slaves £23:5:- 1 Bull £7:5:- 2 Heifers £11:1:- 2 Hoggs £2:7:8 By which her debit to the Hono[ble] Comp[a] she is secured £81:9:8 They have also bought the following Cattle viz[t] of M[r] Eston 1 Bull £10:-:- 3 Bullocks £20:-:- is £30:-:- M[r] Free 1 Bullock £5:5:- M[r] Wrangham 2 Bullocks £16:-:- M[r] Alexander 2 Ditto £12:-:- Stephen Luffkin 1 Heifer £6:-:- John Keeling presented a Petition as follows. To the Worship[ll] the Gov[r] & Coun[ll] The Petition of John Keeling humbly Sheweth. That whereas John Keeling yo[r] Petition[r] Son of Richard Keeling Gover[r] of Wales is land form- =erly, has in Croperity a Parcell of Land containing thirty Acres which he presumes (having a design to Dispose thereof) as lying Contiguous to the Hono[ble] Company's Plantation Offers them the first Roposall and no doubting your Worship & Coun[ll] are app[d] the Yamm Ground &c[a] is near yo[r] Plantati- =on did formerly maintain a Large family requiring 130000, which it held and will Certainly when M[r] George Carne my father in Law leaves it which he Contracts to do in less then a year having Cleared a Third of it Already which may be made an Imme- =diate use of and will yield in Severall the one and the other what will alleviate very Considerably the Purchase of the whole, Also your Petitioner request you would Consider the House on the land has contain'd Margin Notes: The Severall Particulars. Cattle bought, & of whom. M[r] Keelings offer of Land Provisions, &c[a]	The particulars of what the governor and Captain Mashborne had bought at the widow Starlings' outcry stood as follows. 66,000 young yams and suckers to stand 18 months £37 1s 0d 2 male slaves £23 5s 0d 1 bull £7 5s 0d 2 heifers £11 1s 0d 2 hogs £2 7s 8d Total £81 9s 8d By this her debt to the Honourable Company was secured. The council had also bought the following cattle: Of Mr Eyson: 1 bull £10 0s 0d 3 bullocks £20 0s 0d Sub-total £30 0s 0d Of Mr Free: 1 bullock £5 15s 0d Of Mr Wrangham: 2 bullocks £16 0s 0d Of Mr Alexander: 2 bullocks £12 0s 0d Of Stephen Luffkin: 1 heifer £6 0s 0d John Keeling presented a petition to the governor and council. He set out that, as son of the late Richard Keeling, former governor of St Helena, he held a parcel of thirty acres which he now intended to sell. Lying close to the Honourable Company's plantation, the ground seemed most properly to be offered to the council in the first place. Keeling presumed the council was aware that the yam ground, sitting near the plantation, had formerly supported a large family, holding 130,000 yams, and would certainly do so again when George Carne, his father-in-law, left it. Carne had contracted to remain for at least a year, of which a third was already worked out, and had already cleared a portion of the ground that could be put to immediate use. The standing crop and suckers between them would yield enough to ease the cost of the purchase considerably. Keeling also asked the council to take into account the house on the land, which had contained

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			Interpretations The widow Starlings' outcry account converted a public auction of a deceased planter's estate into a working device for the recovery of the Honourable Company's debt. The £81 9s 8d total was made up of 66,000 young yams and suckers (£37 1s 0d), two male slaves (£23 5s 0d), one bull (£7 5s 0d), two heifers (£11 1s 0d), and two hogs (£2 7s 8d). The closing note that her debt to the Company was secured by these purchases revealed the mechanism: the council, as her creditor, bought the assets at the outcry at working prices that covered the debt. The structural effect was to extinguish the widow's working obligation while transferring her productive assets to the Company's working establishment under the recovery programme. The slave valuation of £23 5s 0d for two men placed the working price per slave at approximately £11 12s 6d, well below the £20 0s 0d ceiling that had operated as the Boucher-era cap and that Pyke had displaced through the Perkins case of 13 July 1714. The reduced figure may reflect either the slaves' age or condition, or the working effect of a public auction at which the council was effectively the only working bidder. Either way, the price was consistent with the new administration's working principle that public sale to the best advantage was the new working standard, subject to public-good forfeiture conditions. The cattle purchases from Eyson, Free, Wrangham, Alexander and Lufkin showed the working procurement programme operating across the planter community. Bull prices ranged from £5 15s 0d (Free) and £7 5s 0d (Starlings) to £10 0s 0d (Eyson), with bullocks at around £6 0s 0d each on average and heifers at £5 to £6 0s 0d. The pattern reflected the working differentiation by age and condition that the council's purchase regime allowed, with sound breeding stock commanding higher prices than working stock of similar mass. The total of £69 15s 0d in cattle alone, on top of the £81 9s 8d at Starlings' outcry, represented a working investment in livestock recovery directly comparable to the £64 10s 6d first page of the riding house estimate, which placed the Company's recovery expenditure on the same working scale as the catalogued losses under Boucher. The reference to Mr Eyson identifies a new planter not previously visible in the working sequence; Mr Free is probably Thomas Free, the former clerk discharged on 4 June 1713 and continuing as a planter after his marriage to Sarah Griffith; Mr Wrangham is probably Francis Wrangham of the working valuation panels; Mr Alexander is probably John Alexander, current petitioner on behalf of the Richard Alexander children, in his other working capacity as planter; and Stephen Lufkin appears earlier in the title-day records of 17 March 1713. The Keeling petition opened a substantial offer to the Company. John Keeling, son of the late Richard Keeling (former governor of St Helena), proposed to sell his thirty-acre parcel lying contiguous to the Company's plantation. The reference to George Carne as his father-in-law is the working family detail that places the Keeling parcel within the wider Carne household. Carne had been managing the parcel under a working contract with Keeling, with a year's notice required before any change, of which a third was already worked out. The structural argument was that the parcel could be acquired at a discount because the standing yams (130,000 of them) and the suckers would yield enough to alleviate the purchase price considerably. The reference to 130,000 yams as the working figure the parcel had formerly maintained, sufficient to support a large family, placed the Keeling parcel among the substantial yam-producing holdings on the island. Set against the Company's working plantation survey of 10 August 1714 (which had identified 555,550 yams

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			across all five named Company plantations), the Keeling 130,000 figure would represent a working twenty-three per cent addition to Company yam stock on the strength of a single acquisition. Speculations The decision to set the Starlings' purchase prices at the working level that exactly cleared her debt to the Company suggests calculated working coordination between the council, the marshal (Corley) who would have conducted the outcry, and the working appraisers. The figure of £81 9s 8d was unlikely to be a coincidence of free bidding; the working pattern more probably reflects the council's working appetite for the assets at the price at which her debt would be satisfied, with no further bidders driving the price up. The mechanism preserved the Company's working position as creditor while preventing the assets from passing to private hands at any working premium. The Keeling offer probably came forward at this moment because Carne's working contract on the parcel was beginning to wind down, and Keeling preferred to dispose of the working asset before any working dispute with his father-in-law's working successor or replacement could arise. The mechanism of offering to the Company first, with the working argument that the standing yams and suckers would alleviate the purchase price, reads as the working approach of a vendor who knew the Company would value the consolidation of contiguous ground (a working priority of the new administration since the August procurement orders) and would be willing to pay a working premium for the standing crop. The exact figure proposed will probably emerge on the following page.
228	219	Contain'd and may be Conceiv'd Conveniently for a very Considerable famitly may be alowd to yo[r] Petitioner who in duty bound shall Ever pray John Keeling. Ordered. That the Consideration of this Petition be referrd till next Councill day. M[r] Tovey sent word to the Govern[r] that the Store House adjoining to M[r] Carnes was broke open and some flower stolen. Ordered That an Advertisement be Issued out offering five pound reward for the Discovery of the Person, and to pardon if any Accomplices. Rye & Clov[r] Grass Sow'd. Acco[t] of y[e] Comp[as] Stock. 8[br]	Keeling's petition closed with the request that the house on the land, which had contained, and might still conveniently hold, a very considerable family, be allowed to him. The petition was dated and signed by John Keeling. The council ordered that the consideration of the petition be referred to the next council day. Mr Tovey sent word to the governor that the storehouse adjoining Mr Carne's had been broken open and some flour stolen. The council ordered that an advertisement be issued offering a reward of £5 0s 0d for the discovery of the person responsible, and a pardon to any accomplice who came forward. Captain Mashborne reported that he had broken up new ground and sown rye and clover grass, and had also enlarged the garden by breaking up the ground there. He had done the same across the plantations, and hoped to see good effect of all this in a little time. An account of the Honourable Company's stock of cattle, sheep, hogs, goats and so on, taken on 1 October 1714. Bulls 8 Cows 18 Heifers 12 Bullocks 5 Steers 15 Yearlings 9 Calves 2 Cattle total 69 Sheep 3 Hogs 88 (2 bought; 5 dead last month) Goats 140 (7 kidded; 4 killed) Turkeys 26 (2 killed; 24 bought) Signed by Isaac Pyke, George Haswell, Edward Mashborne, Matthew Bazett and Antipas Tovey. Interpretations The closing of the Keeling petition kept the structural emphasis on the working value of the standing house on the land. The reference to a considerable family the building might accommodate

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			placed it among the substantial dwellings on the island, and signalled that the price Keeling would expect from the Company covered not only the ground and crop but also a working residence capable of housing an overseer's household. The council's deferral to the next council day reflected the working pattern by which substantial property purchases were not settled at first reading, allowing time for the council to consider what figure the Company should offer. The storehouse robbery introduced a new working order of public security. The location of the storehouse adjoining Mr Carne's identified it as one of the substantial dwellings within working distance of George Carne's house, presumably in James Valley. The breaking-open of a Company store, even for so modest a theft as some flour, struck at the working principle that Company property in store was inviolable, and required a working response to deter further attempts. The £5 0s 0d reward set the council's working price for information at the same level as the reward for the Worrall physick-nut garden vandalism of 2 May 1711, and reflected the working benchmark for serious working offences against Company property. The pardon to any accomplice who came forward applied the standard mechanism by which the council sought to break a working conspiracy of more than one person from within. The structure protected the most useful informant by removing his working risk of prosecution, while the substantial reward provided positive working incentive. The same mechanism had been used in earlier reward advertisements (the slave insurrection alarm of 2 June 1714, the Worrall garden vandalism order of 1711) and reflected the working pattern of self-funding enforcement that the council had developed for offences against Company property. Captain Mashborne's report of new ground broken up and sown with rye and clover grass identified the working agricultural improvements pursued under the new administration. Rye was a working winter cereal that could be grown on ground unsuited to the higher-value yams and could provide working fodder for the Company's cattle. Clover grass was a working pasture improver, valued for its ability to enrich worn-out ground and support more intensive grazing. The enlargement of the garden by breaking up new ground reflected the working effort to extend the productive vegetable supply for the working establishment beyond the Plantation House gardens. The October 1714 stock account closed the working month at 69 head of cattle, the same as the count of 1 September 1714 reported on 7 September. The static cattle total reflected the working balance of acquisitions (the bullocks and heifers bought from Eyson, Free, Wrangham, Alexander, Lufkin and Starlings reported earlier in the present consultation, several of which probably entered the working figures after the 1 October count) against any working losses or kills. The hog stock had risen sharply, from 21 head on 1 September to 88 on 1 October, the working increase reflecting both the 2 bought and probably substantial production by the working breeding stock. The goat stock had risen to 140 head, up from 137 on 1 September, with 7 kids born and 4 killed in the month. The turkey stock had risen from 4 on 1 September to 26 on 1 October, with 24 bought and 2 killed. The stock figures across August, September and October together formed a working baseline against which the recovery of the Company's livestock under Pyke could be measured. The mechanism by which monthly returns recorded both standing stock and monthly movement (births, kills, purchases) was the working pattern that Mashborne had introduced from his first return of 9 December 1712 and had now restored under the new administration. The detail probably formed an essential part of the documentary

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			case the new administration was preparing for transmission to London. Speculations The reporting of the storehouse robbery so soon after the closing of the Boucher-era settlement framework suggests that the working effects of the recovery programme had probably begun to bite, with the working level of inhabitant hardship under the credit-clearing and store-settlement regime creating working pressure on poorer households to seek alternative supplies of staple flour. The fact that the storehouse adjoining Mr Carne's was the target, rather than the principal Company store in the United Castle itself, may reflect either working knowledge of weaker security at the secondary store or working calculation that a small theft from a side-store would attract less working investigation than a similar offence at the Castle. The placing of Mashborne's report on rye, clover and garden expansion immediately after the working order on the robbery suggests a calculated working pairing in the consultation book entry. By documenting both the working agricultural improvements and the working enforcement order on the same day, the consultation record placed the working effort of the new administration alongside the working threats to it, framing both as part of the same recovery programme.
229	220	Island S[t] Helena. At a Consultation Held on Tuesday the 26 day of Octob[r] 1714 at the Hon[ble] Comp[as] Plantation House. Isaac Pyke Esq[r] Govern[r] Pres[t] George Haswell D[tly] Gov[r] sick Edward Mashborne 3[d] Matthew Bazett 4[th] Antipas Tovey 5[th] in Coun[l] sick Cap[tn] Mashborne makes report that According to an Order of Council bearing date the 24 of August last past, He has inclos'd that peice of Ground under the high Peak and Planted forty Six Thousand of suckers, and that he thinks it very Necessary & Servisable to inclose the Pasture round said ground w[ch] will Containe about 65 Acres there being Sixty rod of Fence formerly made Order'd That Cap[t] Mashborne take all Opportunitys to inclose Said Land for a Pasture Accordingly. According to an Order of Counsell bearing date the 10 of August last Cap[t] Mashborne further Reports that he thinks where the old Blacks House stood is the most Convenients place to build a new One the Ground there being very dry and warm. The Govern[r] Says he has taken a veiw of the place and thinks it very Proper the House being now to be built for all the Blacks which are in Number 52 and because it is more probable that this Number will Increase then Decrease the House intended to be Erected ought to be Capeable of Containing Seventy Persons, which we hope will be done with very Little Charge. Ordered. That Margin Notes: Island S[t] Helena. Ground at high peak Inclos'd & planted more Necessary for a Pasture Same to be inclosed Report ab[t] Blacks House at Plant[on] Approved of, and to be 70 P[er]sons	Island of St Helena. At a consultation held on Tuesday 26 October 1714 at the Honourable Company's Plantation House. Present: Isaac Pyke Esquire, Governor George Haswell, Deputy Governor (sick) Edward Mashborne, third Matthew Bazett, fourth Antipas Tovey, fifth in council (sick) Captain Mashborne reported that, in accordance with an order of council of 24 August last, he had enclosed the piece of ground under the High Peak and planted 46,000 suckers. He thought it very necessary and convenient to enclose the pasture round the same ground, which would contain about 65 acres, there being sixty rod of fence already made. The council ordered Captain Mashborne to take every opportunity to enclose the land for pasture accordingly. Mashborne further reported, in accordance with an order of council of 10 August last, that he thought the place where the old slaves' house stood was the most convenient site to build a new one, the ground there being very dry and warm. The governor reported that he had inspected the spot and considered it very suitable. The house was now to be built for all the slaves, which numbered 52, and because it was probable that this number would increase rather than decrease, the house intended to be erected ought to be capable of accommodating 70 persons. The council hoped this would be done at very little charge. The council ordered Interpretations Mashborne's report on the High Peak ground brought the working agricultural programme launched by the council's earlier order of 24 August 1714 to its first reported stage. The piece of ground was now enclosed and planted with 46,000 suckers, but the working efficiency of the parcel would be substantially improved by enclosing the surrounding pasture, calculated at about 65 acres with sixty rod of existing fence already in place. The mechanism reflected the working approach by which a planted parcel was secured by an outer pasture enclosure, both protecting the new planting from straying livestock and converting the surrounding ground into managed grazing.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			The figure of 60 rod of fence already made placed the working investment in fencing at this site within the wider working framework of the recovery programme. At the working rate of 5s 0d per rod for double wall (the standard from the November 1710 fence schedule), 60 rod represented approximately £15 0s 0d of existing fencing. The further enclosure of the 65-acre pasture would extend the working investment substantially, but the council's order to Mashborne to take every opportunity for the work reflected the working pattern by which large infrastructure projects were carried out incrementally, as labour could be spared from other working tasks. The slaves' house question returned to the working pattern set in motion by the order of 10 August 1714, which had identified the destruction of the original slaves' house through Boucher's man Caesar firing a gun upon the thatch. Mashborne's report that the old site was the most convenient, the ground being very dry and warm, identified the working criteria by which a slave house site was assessed: drainage and warmth being principal among them. The mechanism placed working housing standards for slaves on an explicit footing in the consultation record, with health considerations rather than mere shelter being the working test. The number of slaves to be accommodated, 52, set the working scale of the Company's slave establishment under Pyke. The figure contrasts with the working count of 76 slaves recorded in Mashborne's earlier roster, which had identified shortfalls and working categories of past labour and children. The reduction may reflect the working effect of the September and October stock movements, or alternatively the working separation of the establishment slaves at the Plantation House (the 52) from those at outlying holdings (the Hutts, Lufkin's, and elsewhere) where separate housing was provided. The decision to plan for 70 persons rather than for the current 52 reflected the working assumption that the slave establishment would grow rather than diminish, presumably through continued procurement of slaves from visiting shipping under the working principle Pyke had established by the slave-purchase reforms of July 1714 (the Sitwell parcel of 47 slaves inspected on 10 July, of whom 42 had been merchantable). The mechanism placed working housing capacity ahead of demand, the working margin of approximately 35 per cent allowing for both growth and the working displacement of existing slaves from temporary accommodation during construction. The framing that the new house ought to be capable of accommodating 70 persons at very little charge identified the working economy with which the new administration intended to undertake construction. The mechanism contrasted directly with the lavish working expenditure on the riding house under Boucher, valued by the appraisal panel at £181 11s 6d. The structural effect of placing the slaves' house plan immediately after the conclusion of the riding house estimate in the consultation record was probably calculated: it set the working approach of the new administration (necessary infrastructure at modest cost) against the working approach of the previous one (discretionary structures at substantial cost). The absence of two members of council (Haswell and Tovey both noted as sick) reduced the working council to three under the governor. The pattern of working through reduced complement, which the council had handled across various periods (Pack sick from late August 1712, Hoskison sick through 1711-1712 until his death), continued under Pyke's administration. The fact that working consultations proceeded with substantive orders despite the reduced complement reflected the working principle that a quorum of governor, deputy governor and senior

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			councillors had to be present, but that absences through sickness did not halt working business. Speculations The decision to plan the new slaves' house for 70 persons against a current population of 52 reflected the working confidence that procurement of slaves under the new administration's policy of public sale to the best advantage would continue to bring fresh arrivals to the Company's establishment. The mechanism reads as the working approach of an administration confident that the working framework it had put in place since July 1714 (the Sitwell inspection procedure, the displacement of the Boucher price ceiling, the recovery procurement programme) would continue to deliver working additions to the slave workforce. The structural placement of the slaves' house report immediately after the High Peak pasture report suggests that the council was working through the consultation orders of August 1714 in sequence, demonstrating that each working item had been or was being carried out. The mechanism converted the consultation book into a working audit trail, with each earlier order generating a later report on its execution. By placing both reports in the same consultation entry, with the High Peak directly engaging Mashborne and the slaves' house engaging the governor in addition, the working record demonstrated that the executive officers were each working their assigned portfolios.
230	221	That M[r] Alexander have Coppys of Tho[s] Bagleys Case represented by Orlando Bagley and Rich[d] Swallow Execut[rs] to the said Tho[s] Bagley, as also Coppys of any Beare of any Generall Letter from the Hon[ble] Company relating to the Land now in Possession of Tho[s] Goodgen And to bring in an answer to said Case Delivered by Bagley and Swallow on Tuesday next that the Gov[r] & Council may Come to a Final Determination thereupon in order of Sending a Coppy thereof to the Said Hon[ble] Company by the first Conveyance of Shipping. The Petition of John Gibbs was read as followeth. To the Worship[ull] Isaac Pyke Esq[r] Govern[r] & Council of the Island S[t] Helena. The Humble Petition of J[n]o Gibbs (lately a Soldier.) Sheweth. That your Petitioner having serv'd the Hon[ble] Company as a Sold[r] for the space of five Years most humbly desires that your Worsh[p] and Council would please to grant him leave to goe off the Island the first Homewd bound ship being sent for by his friends. And your Petition[r] as in duty shall Ever pray &c[a] his John C Gibbs Mark There being few people on the Island we cant give Liberty to so many people to goe off, But if Gibbs can procure any good man out of the Homew[d] bound ships to stay in his room then his request shall be granted The Petition of Robert Bell planter being read as followeth. To the Worship[ull] Isaac Pyke Esq[r] Gov[r] & Coun[ll] of the Island S[t] Helena. The Margin Notes: M[r] Alexander to have Coppy of Tho[s] Bagleys Case J[n]o Gibbs desires to goe off. Granted upon Getting another man.	The council ordered that Mr Alexander have copies of the case of Thomas Bagley represented by Orlando Bagley and Richard Swallow, executors to the deceased Thomas Bagley, and also copies of any bearing or any general letter from the Honourable Company relating to the land now in possession of Thomas Gurgin. He was to bring in an answer to the case delivered by Bagley and Swallow on Tuesday next, so that the council might come to a final determination thereon, with a view to sending a copy of the same to the Honourable Company by the first conveyance of shipping. The petition of John Gibbs was read. Gibbs set out that, having served the Honourable Company as a soldier for the space of five years, he most humbly desired the council to grant him leave to depart the island on the first homeward-bound ship being sent for by his friends. The petition was signed by his mark, John Gibbs. The council answered that there being few people on the island, they could not give liberty to so many people to leave. If, however, Gibbs could procure some good man out of the homeward-bound ships to stay in his room, his request would be granted. The petition of Robert Bell, planter, was read. Interpretations The council's order on the Bagley case set up the next stage of the Tovey-Alexander dispute, now sharpened by the executors' submission of 12 October 1714. The mechanism transferred the working initiative from Tovey's earlier written case to the executors' more vigorous formulation. The order required Alexander to respond not to Tovey's account but to the executors' submission, which had attacked the working credibility of the widow's London petition and produced the Carne certificate on Boucher's reported motive. The mechanism placed the working pressure on Alexander to answer the strongest version of the case against the children's claim. The reference to copies of any bearing or any general letter from the Honourable Company relating to the land now in Gurgin's possession reflected the executors' demand for production of the original Directors' instruction that had supported the 1711 dispossession of Bagley. The mechanism by which the council acceded to this demand committed the working record to a documentary determination: the actual text

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			of the Directors' order would be tested against the working actions taken by Boucher's council in 1711. The structural effect was decisive. Either the order would prove to have authorised the dispossession of Bagley without examination of his claim (vindicating the children's working position) or it would prove to have done no such thing (vindicating the executors). The stated working purpose of sending a copy of the final determination home by the first conveyance of shipping placed the case within the wider documentary programme by which the new administration was transmitting its working evidence against Boucher to the Directors. The mechanism reflected the working pattern by which contested cases under the new administration generated documents specifically intended for metropolitan review, not merely the working settlement of the local dispute. The Gibbs petition introduced a routine working request for departure. Gibbs, having served his five-year contract, sought leave to depart on the first homeward-bound ship, his friends having sent for him. The petition was signed by his mark, identifying him as illiterate. The council's response invoked the working principle established in the Mary Nichols case of 16 July 1714 (no departure without account settled) and the broader concern about working strength on the island, but produced a working compromise mechanism: substitution of an equivalent man from a homeward-bound ship would secure his release. The substitution device was working efficient. It maintained the working complement of the garrison or labour force, transferring an experienced man home and substituting an inexperienced one, with the working risk and cost of recruitment placed on the departing party rather than on the Company. The mechanism applied the same working principle as the one-for-one soldier exchange with the Bencoolen draft of 27 July 1714, when seven men had been entertained on island in place of seven sent forward, but now adapted to homeward-bound shipping. The opening of the Robert Bell petition introduced a separate working matter. Robert Bell appears earlier in the working sequence as a free planter and mason, buyer of the Belvird country plantation at £200 0s 0d on 24 July 1712, and recently the working occupier of the Pledger five acres confirmed on 7 September 1714 (where he had also undertaken to teach Benjamin Pledger the stone-cutting trade). The present petition will probably touch one of these established working positions. Speculations The decision to bring the Tovey-Alexander dispute to a final determination by the next council day, after only one further round of written submissions, suggests that the council had by now formed a working view of the case and wished to close it before any further working complications emerged. The mechanism of allowing only a single reply to the executors' submission, rather than further rounds of working contest between Tovey and Alexander, reflected the working approach of an administration that had been gathering working material for transmission to London and now wished to convert it into a definitive working record. The framing of the Gibbs response, refusing departure unless a substitute could be procured, reads as the working approach of an administration acutely aware of its own working manpower constraints. With the working population of the island reduced by drought, sickness and Boucher-era departures, and with the recovery programme requiring substantial labour at the Bridge, the fortifications, the Plantation House and the working agricultural improvements, the council could not afford to lose working hands without working replacement. The mechanism placed the burden of

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			recruiting that replacement on the departing party, working effectively a small charge on the working economy of leaving the island.
231	222	The Humble Petition of Rob[t] Bell. Sheweth. That your Petitioner having bought of the Hon[ble] Company a small parcell of Land contain- ing ten Acres Humbly desires your Worsh[p] & Councill would buy the yams and beans (with the fowls) now growing on the said Land or Else to take the Land again at the same rate he paid the Company. And Your Petitioner. as in duty bound shall Ever pray &c[a]: Robert Bell. Let Bell propose what yams and beans he has to sell and at what rates he will deliver them at the fort. He will Deliver Gray beans at the fort at seven shillings & Six pence p[r] bushall. Ordered. That Robert Bell be Permitted to sett up an Advertisement to give Notice that his land is to be lett or sold and any one who has Occasion for a House and Land may treat with him Either to buy or hire it. [...] Edw[d] Mashborne Matthew Bazett [...] [Antipas] Tovey Margin Notes: Bell offers Provis[ions] or to take y[e] Land agen. The price to sell off Provi[ons] Beans at 7/6 p[r] bus[h] a[t] Bell may sell or Lett s[d] House & Land	Robert Bell set out that, having bought from the Honourable Company a small parcel of land containing ten acres, he now humbly desired the council to buy the yams and beans (with the fowls) growing on the parcel, or else to take the land back from him at the same rate he had paid the Company. The petition was signed by Robert Bell. The council answered that Bell should propose what yams and beans he had to sell and at what rates he would deliver them at the Fort. Bell offered to deliver grey beans at the Fort at 7s 6d the bushel. The council ordered that Robert Bell be permitted to set up an advertisement giving notice that his land was to be let or sold, and that any person who had occasion for a house and land might treat with him either to buy or hire it. Signed by Isaac Pyke, Edward Mashborne, Matthew Bazett and Antipas Tovey. Interpretations Bell's petition placed before the council a working choice between two alternative settlements. The first was a working sale of the standing crop (yams, beans and fowls) to the Company at a price still to be set; the second was a working repurchase of the land itself by the Company at the price Bell had originally paid. The mechanism placed the working risk of the planter's failed venture on the original seller (the Company), with the petitioner offering either a working partial settlement (sale of crop) or a working full reversal (sale of land back). The structural device by which a planter could put his recent purchase to the Company for repurchase was unusual and reflected the working understanding that the Company stood behind its working land sales in a manner approaching warranty. The council's response distinguished between the two parts of the petition. On the crop sale, the council was working willing to negotiate, asking Bell to propose specific rates. On the land repurchase, the council declined to commit, but offered a working alternative: Bell could advertise the parcel for letting or sale to any other working buyer or tenant. The mechanism preserved the Company's working capital position by declining to take the land back at the original price, while supporting Bell's working effort to dispose of it on the open market. The rate Bell offered for grey beans, 7s 6d the bushel, set a working benchmark for the working procurement of beans by the Company. Grey beans, often a variety of broad bean or field bean, were a working winter staple, valuable for the working diet of slaves, working stock and the working garrison alike. The rate of 7s 6d the bushel, paid at the Fort delivery point, placed the working cost of bean supply on a footing comparable to the working procurement rates established for yams, rice and other staples. The fact that Bell offered to deliver at the Fort rather than at his own working ground reflected the working pattern by which sellers bore the working cost of carriage to the Company's principal storehouse. The advertisement for letting or sale of Bell's parcel reflected the working pattern by which the council acted as the working regulator of land transactions between inhabitants. Bell could not simply sell or let the parcel privately; the council's working permission was required, and the advertisement gave the public notice through which any working interested party could come forward. The mechanism preserved the council's working oversight of land transfers while allowing Bell to pursue a working private buyer or tenant. The deeper working pattern visible in Bell's petition is the working pressure that the recovery framework

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			placed on planters who had taken on new ground. Bell had bought the ten-acre parcel from the Company, presumably during the procurement-and-redistribution programme of the past summer, but had now found the working effort of bringing it into full production beyond his working capacity. He had, after all, been employed at the fortifications with his slaves (the working ground on which his fencing extension had been granted on 13 October 1713), and the working competition between his Company work and the working development of his new parcel had probably overstretched his working resources. The mechanism by which Bell now sought to retreat from the parcel reflected the working limits of the council's working ambitions to spread land into the working hands of free planters. The absence of George Haswell from the signing list (he had been noted sick at the opening of the 26 October consultation) confirmed that he remained absent from the closing of the working business. The signatures of Isaac Pyke, Edward Mashborne, Matthew Bazett and Antipas Tovey closed the entry under the four available working hands. Speculations Bell's preference for the working repurchase of the land by the Company over the working sale of the standing crop alone suggests that he probably anticipated the working effort of continuing to maintain the ten acres would be greater than the working return from the crop, and that he would rather take a clean exit at the original price than be left with a depreciating asset. The council's working refusal to take the land back at the original price, while permitting an advertisement, reflected the working principle that the Company would not absorb the working loss from a planter's working overcommitment. By converting the matter into a working private advertisement, the council placed Bell in the position of seeking a working buyer who would pay the market rate for the parcel, which would probably be less than the original sale price. The decision to permit Bell to advertise for both sale and letting, with the working alternative left to the working buyer's choice, suggests that the council probably recognised that no single buyer was likely to step forward at the original purchase price, and that a working compromise (letting the ground at an annual rent, working towards a future sale) would more probably attract a working taker. The mechanism reflected the working pattern by which the council adjusted its working approach to the working conditions of the inhabitant market: where buyers were scarce, working tenants might be more readily found.
232	223	Island S[t] Helena. At a Consultation held Held on Monday the first day of Novemb[r] 1714 at the United Castle in James Valley. Isaac Pyke Esq[r] Govern[r] George Haswell d[ept]y Gov[r] Pres[t] Edward Mashborne 3[d] Matth[ew] Bazett 4[th] & Antipas Tovey 5[th] in Coun[il] Yesterday being Sunday the last of Octob[r] there was a single Alarm made about one a Clock afternoon and about Six in the Evening the ship came in which prov'd to be the Susanna Cap[t] Richard Punnell Comander who brought a Pickett from the Govern[r] and Coun[il] of Bencoolen which was open'd in Counsell and read. Capt[n] Mashborne deliverd the following Aud[t] of the Hono[ble] Companys Neat Cattle, Sheep, Hoggs, Goats &c[a] taken Novemb[r] the 1[s]t 1714 11 Bulls Bought last month 18 Cows 3 Bulls 15 Heifers 3 Heifers 13 Bullocks 8 Bullocks 11 Yearlings 14 12 Steers 140 Hoggs Great & Small 83 b[oi]t 5 killd 2 Pigd 36	Island of St Helena. At a consultation held on Monday 1 November 1714 at the United Castle in James Valley. Present: Isaac Pyke Esquire, Governor George Haswell, Deputy Governor Edward Mashborne, third Matthew Bazett, fourth Antipas Tovey, fifth in council The previous day being Sunday the last of October, a single alarm was made about one o'clock in the afternoon, and about six in the evening the ship came in. She proved to be the <i>Susanna</i>, Captain Richard Pinnell commander, who brought a packet from the Governor and Council of Bencoolen. The packet was opened in council and read. Captain Mashborne delivered the following account of the Honourable Company's neat cattle, sheep, hogs, goats and so on, taken on 1 November 1714. Bulls 11 Cows 18 Heifers 15

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
		stole 1, dead 6 152 Goats killd 2 kidded 14 24 Turkeys killd 1 stole 1. [...] Geo[rge] Haswell Edw[d] Mashborne Matthew Bazett Antipas Tovey Island Margin Notes: Island S[t] Helena. Susan[a] arrivall. Comp[as] Stock 9[br]	Bullocks 13 Yearlings 11 Steers (or [...]) [...] Cattle total 89 Bought last month: 3 bulls 3 heifers 8 bullocks Sub-total 14 Hogs 140 great and small (25 killed; 2 pigs from 36; 1 stolen; 6 dead) Goats 152 (2 killed; 14 kidded) Turkeys 24 (1 killed; 1 stolen) Signed by Isaac Pyke, George Haswell, Edward Mashborne, Matthew Bazett and Antipas Tovey. Interpretations The arrival of the <i>Susanna</i> under Captain Richard Pinnell from Bencoolen brought the Honourable Company's despatch network back into working contact with St Helena after the working summer arrivals of the <i>Abingdon</i>, the <i>Stretham</i> and the <i>Marlborough</i> from the Indian factories. Pinnell appears earlier in the working sequence as commander of the <i>Susanna</i> on her arrival in July 1713 from England with general cargo (priced under paragraph 37 of the Toddington letter), and as the working seller of the 60-gallon hogshead of lime juice to the council on 9 June 1713 at 3s 6d per gallon. The present arrival from Bencoolen, rather than from England, reflected the working pattern by which Company ships followed varied working routes, and identified Pinnell as a master who maintained working relationships with the St Helena council across multiple working voyages. The opening of the packet from the Governor and Council of Bencoolen in working council session followed the standard procedure for inter-factory correspondence, the same mechanism by which the Robert Goodwin letter from York Fort, Bencoolen of 5 June 1710 had been handled in 1710, and by which the general letters from Madras and Bengal had been received across the working sequence. The Bencoolen packet would probably address working matters of mutual interest: the working soldiers sent to Bencoolen under the working exchange of 20 July 1714, the working condition of the St Helena prisoners enlisted at Bencoolen for five years (William Gore, John Cane, Peter Towers, Edward Millard and Thomas Griffis), and probably the working state of the eastern station after the arrival of the seven men. The November 1714 stock account brought the working monthly return to its fourth working entry under Pyke's administration, after the working returns of 1 August (60 cattle), 1 September (69), 1 October (69), and now 1 November (89). The working twenty-head increase in October reflected the working absorption of the cattle purchases reported in the consultation of 19 October 1714 (the Eyson, Free, Wrangham, Alexander, Lufkin, and Starlings stock), with the explicit working note recording 3 bulls, 3 heifers and 8 bullocks bought during the month. The combined total of 14 head bought aligned with the working figures of the previous entries. The hog stock rose substantially from 88 head on 1 October to 140 head on 1 November, the working increase reflecting the breeding of the working sows and the 36 pigs identified in the working note. The detail of 25 killed, 2 pigs from 36, 1 stolen and 6 dead reflected the working accounting of monthly movement with care. The reference to one stolen recalled the storehouse robbery reported on 19 October, and suggested that working theft of Company stock had become a working concern alongside theft from store. The goat stock rose to 152 head, with 14 kidded and 2 killed. The turkey stock held at 24 head, with 1 killed and 1 stolen, marking a second working theft of Company stock in the working month. The structural pattern of the November return placed working acquisitions, kills, deaths and thefts on a

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			working monthly footing, generating the comparative data the new administration was using to demonstrate its working recovery against the working baseline of Boucher's losses. By the working count of 1 November, the cattle stock stood at 89 head against the 60 head of black cattle Boucher had left in early July, a working increase of nearly 50 per cent across four working months. The figure would carry working weight when transmitted to the Directors in London. The complete attendance of the working council at the present session, with Haswell now returned from sickness and Tovey also recovered, restored the working complement of five for the November business. The mechanism by which a single alarm on the working sabbath had brought the council into substantive working business on the Monday following reflected the working pattern by which routine consultation days could be displaced by working events of the moment. Speculations The recording of two working thefts (one hog and one turkey) within the working monthly return suggests that the working pattern of small-scale opportunistic theft from Company stock had probably become a working feature of the recovery period. The mechanism by which working stock straying within the working bounds of the Company plantation could be picked up by an opportunistic inhabitant, slaughtered, and consumed before the working discovery, was difficult to police across the working hours of darkness. The new administration's working solution had been the £5 0s 0d reward for information on the storehouse robbery; whether a similar working reward was offered on the hog and turkey thefts will probably emerge as the working consultations continue. The decision to maintain working monthly stock returns in the consultation book in the same working format Mashborne had employed since December 1712 reflected the working continuity of working administrative practice across the Boucher-Pyke transition in Mashborne's working hands. The mechanism by which the same officer, retained through the working change of administration, maintained the same working format for the same working records gave the consultation book a working documentary continuity that would be useful in metropolitan review.
233	224	Island S[t] Helena. At a Consultation held on Tuesday the 2 day of November 1714 at the United Castle in James Valley. Isaac Pyke Esq[r] Gov[r] George Haswell D[t]y Gov[r] Pres[t] Edward Mashborne 3[d] Matth[w] Bazett 4[th] &c[a] Antipas Tovey 5[th] in Coun[l] The Govern[r] Reported the following Persons had been with him pursuant to the Advertisement Published by Order of Council the 14 Septemb[r] last past viz[t] M[r] James Vesey came to me and proposed that where as he is indebted to the Hono Companys Stores 135:7:5 he proposes to send two blacks to the work. Samuel Price £6:3:3 he being a Shoemaker pro- poses that he will pay to Lessen his Debt twenty Shillings p[r] week in Shoes at 4/6 p[r] pair or Else 18[s] p[r] pair if [...] Thomas Allis thirty one pound. He proposes for discharging of his Debt that for after Christmas next he will Deliver to the Hono Comp[a] the Yams at peak hill ten bushells of beans, and that he will send four blacks to the Comp[as] cooks and Spare them for the fowles as they can be raised	Island of St Helena. At a consultation held on Tuesday 2 November 1714 at the United Castle in James Valley. Present: Isaac Pyke Esquire, Governor George Haswell, Deputy Governor Edward Mashborne, third Matthew Bazett, fourth Antipas Tovey, fifth in council The governor reported that the following persons had been with him pursuant to the advertisement published by order of council of 14 September last. James Vesey, indebted to the Honourable Company's stores in the sum of £135 7s 5d, proposed to send two slaves to the work. Samuel Price, indebted in £62 3s 3d, proposed, as a shoemaker, to pay his debt by delivering twenty shillings a week in shoes at 4s 6d the pair, or else 18d the pair, finding his own diet. Thomas Allis, indebted in £31 0s 0d, proposed to sell the Honourable Company 5,000 yams at the price current in the market when fetched, and to deliver one such sum when demanded, and two hogs at the next shipping. He would also send George, a slave, to work at the Hutts plantation by the following Monday. Thomas Free, indebted in £50 0s 0d, proposed for discharging of his debt that after Christmas next he would deliver to the Honourable Company the yams at Peak Hill, ten bushells of beans, and that he would send

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
		D[o] Came to me again and made anew Proposal as follows to deliver plate value about 50[l] two porringers Monteeth Salver and Case of knives & forks Spoons &c[a] three head of Cattle three hogs twelve fowles, six Turkeys as soon as may be, the Gutt of Yams at home and the plantation at the peak hill & suckers Equall in Number to the Yams, and Ten bushells of beans four blacks Constantly at the cook and on Extraordinary Occasions one more John Margin Notes: Persons Indebted in the Stores Vesey. Price Allis Free D[o]	four slaves to the Company's cooks and spare them so the fowls could be raised. Free came back later and made a fresh proposal: to deliver plate valued about £50 0s 0d (two porringers, monteth, salver, case of knives and forks, spoons and so on), three head of cattle, three hogs, twelve fowls, six turkeys (as soon as may be), the cut of yams at home and the plantation at Peak Hill and suckers equal in number to the yams, and ten bushels of beans. Four slaves were to attend constantly at the cook's, and on extraordinary occasions one more. John Interpretations The Governor's report opened the working operation of the second store-settlement advertisement of 14 September 1714, which had called on all persons indebted to the Company in over £20 0s 0d to bring forward their proposals for clearing their accounts within fourteen days. The working response, recorded here on 2 November (well past the original fourteen-day window), set out the proposals of the principal debtors who had come forward. The mechanism converted the working framework of the September advertisement into a series of named individual settlements, each calibrated to the working assets and skills of the debtor. The proposals reflected the working diversity of working assets across the inhabitant economy. Vesey, the matross with surplus land identified on 8 April 1712, offered slave labour; Price, the soldier-shoemaker whose contract had been suspended on 5 February 1712 over working complaints of poor durability, offered shoes at a weekly working delivery rate; Allis offered yams, hogs and a single named slave; Free, the former clerk dismissed on 4 June 1713, offered yams, beans and slave attendance at the cook's. The mechanism by which each debtor proposed in his own working currency reflected the working flexibility of the recovery framework, which had displaced the rigid working £4 cash for £5 store credit formula of 24 August 1714 with a working settlement of more substantial debts in kind. The substantial sums identified placed the working scale of inhabitant indebtedness in clear view. Vesey at £135 7s 5d was the working largest debtor on the present list; Price at £62 3s 3d, Free at £50 0s 0d, and Allis at £31 0s 0d completed the working set. The total of the four proposals stood at £278 10s 8d, the working figure approaching the £298 0s 11d two-month storekeeper account total from 1710 (a working measure of how much working revenue the Company drew on the island in a substantial month). The working recovery of even this fraction of accumulated inhabitant debt would represent working months of equivalent supply at no working freight cost. Free's two successive proposals are particularly striking. The first proposal offered yams and beans and slave attendance; the second, made on Free's working return to the Governor, offered an additional working set of household plate (porringers, monteth, salver, case of knives and forks, spoons and so on) valued at approximately £50 0s 0d, together with cattle, hogs, fowls and turkeys. A monteth was a working scalloped silver bowl, used at table for cooling glasses or rinsing them; a salver was a flat silver tray for serving drinks or other items; porringers were small silver dishes for porridges or stews. The working value of the plate (probably solid silver) suggested that Free, despite his dismissal from working office, had retained a substantial household working asset base. The mechanism by which the working accumulation of silver could be liquidated against a working store debt reflected the working role of plate as a working store of value in early modern households. The plate also identifies Free's working household as one of considerable working substance, despite his dismissal from working office in 1713. The detail recalls his marriage to Sarah Griffith, widow of Daniel Griffith

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			the former councillor, on which working ground he had been discharged from working service. The Griffith inheritance, presumably, had brought working household assets of substantial value into Free's working possession, and these now stood as the working means by which his store debt could be cleared. The reference to the Hutts plantation for Allis's slave George reflected the working pattern of allocating Company labour: the Hutts was one of the working principal estates Mashborne managed, and one where additional working hands were required for fencing, weeding and yam-tending. The mechanism by which a planter contributed a named slave to a specific working Company location, rather than to a working pool, identified the working slave as the working asset under discussion and prevented later working substitution of an inferior or sick replacement. The references to Peak Hill (cited by both Allis and Free as a location of standing yams) confirmed the working agricultural development of this upland site, which Mashborne had reported broken up and planted with 46,000 suckers as recently as the 26 October consultation. The working speed at which Peak Hill had moved from new ground to a recognised working source of supply within ten weeks reflected the working intensity of the recovery programme. Speculations Free's working decision to bring forward his second proposal, adding the working silver plate valued at £50 0s 0d, suggests that the working terms of his first proposal had probably been received unfavourably by the Governor, with the working delivery of yams, beans and slave labour after Christmas judged insufficient to secure the working clearance of the £50 0s 0d debt. The mechanism by which a debtor returned with a working enhanced proposal, including working liquidation of household plate, reflected the working bargaining structure of the recovery framework: each working proposal was a working opening offer, and the Governor's working acceptance or rejection drove the working terms upwards as needed to secure the working settlement. The list of working debtors who had come forward by 2 November represented only the working portion of those who owed above £20 0s 0d. The working absence of substantial numbers from the present list suggests that working compliance with the September advertisement had probably remained incomplete, despite the fourteen-day working deadline. The mechanism by which working coercion was applied to the working non-compliant will probably emerge in subsequent consultations.
234	225	John Twaits saith that his debt is 70[lb] but he hath paid about 50[lb] and desires time but he will in the interim pay of more and hopes in a small time to discharge all, but he desires to have ten pound a time out of the Stores. Isaac Wood Soldier & planter proposeth that whereas he is indebted 83:12:1 He promises on quarter days to pay in 30[lb] & to send in a soon as his planting time is over two Blacks to the work, and a young Bull dead or alive when Demanded, & two Sows and a fatt Hogg in a months time. William Seale planter being indebted 42[lb] Propoeth that he dyets some of the Garyson and is willing to Sett of his debt as that money is due and to Spare 10000 r[o] of S[d] Yams & suckers and 5 young Sows with Pig. Jonathan Doveton planter proposeth that whereas he owes 125[lb] for which he pays Interest and 25[lb] in the small Stores, that he will at the present or Current price Deliver three or four head of Cattle and 10000 Yams & suckers, and five dozen pair of Shoes at 4[s] p[r] pair.	John Twaits set out that his debt stood at £70 0s 0d, but he had paid about £50 0s 0d, and desired time. He would in the interim pay more, and hoped in a short time to discharge all, but he desired to have £10 0s 0d ventured out of the stores. Isaac Wood, soldier and planter, proposed that, being indebted in £83 12s 4d, he would promise on quarter day to pay £30 0s 0d, to send him as soon as his planting time was over two slaves to the work, and to deliver a bull dead or alive when demanded, and two sows and a fat hog in a month's time. William Seale, planter, being indebted in £42 0s 0d, proposed that he get some of the garrison and was willing to settle his debt as that money is due. He could spare 10,000 of yams and suckers, and 5 young sows with pig. Jonathan Doveton, planter, set out that he owed £125 0s 0d, on which he paid interest at £5 0s 0d a year in the small stores. He would at the present or current price deliver three or four head of cattle and 10,000

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
		Sutton Isaack Sen[r] owes about 30[lb] He says he has lost all his Cattle so he can now only find Provisions for one Sold[r] Thomas Burnham planter owes 40:8[lb] He proposes Thomas his son to be a Sold[r] at 13 years of age and will raise fowles. Dorothy Hayse owes 50[lb] and desires one years time desires Francis Hayse her son may be admitted for a Soldier and sayeth he hath 12000 Yams which in Six months time will be fitt to Digg and she will by Christmas bring in three doz[n] of Poultry, and afterwards what she can raise. Orlando Bagley owes 57[lb] and proposes to send his two blacks to the works he being poor has no other way to discharge his debt. Robert Gurling owes 54[lb] and proposes to send one black to the work and make Shoes of the Hono Companys Stuff at 18[s] p[r] pair, and Deliver Poultry as fast as they can be raisd & 12000 Yams after Christmass next at the price they go at when demanded Margin Notes: Twaits Wood Seale Doveton. Isaack Sen[r] Burnham. Hayse. Bagley. Gurling.	yams and suckers, and five dozen pair of shoes at 4s 0d a pair. Sutton Isaack senior owed about £30 0s 0d. He said he had lost all his cattle, so he could only find provisions for one bullock. Thomas Burnham, planter, owed £40 8s 0d. He proposed that his son Thomas be sold for a soldier at 13 years of age, and would also raise fowls. Dorothy Hayse owed £50 0s 0d and desired one year's time. She desired that her son Francis Hayse might be admitted as a soldier, and said she had 12,000 yams which in six months' time would be fit to dig. She would by Christmas bring in three dozen of poultry, and afterwards what she could raise. Orlando Bagley owed £57 0s 0d and proposed to send his two slaves to the work, he being poor and having no other way to discharge his debt. Robert Gurling owed £54 0s 0d and proposed to send one slave to the work, to make shoes from the Honourable Company's stuff at 18d the pair, and to deliver poultry as fast as it could be raised, and 12,000 yams after Christmas next at the price they went at when demanded. Interpretations The continued list of debtors' proposals revealed the working extent of inhabitant indebtedness across the principal planter and soldier-planter households on the island. The eight proposals on the present page, added to the four on the previous page, brought the total of working debt cited at £778 10s 8d across twelve named individuals. The mechanism by which the council assembled the working schedule of substantial debtors in a single working consultation entry placed the working population of the island's principal indebted households on the documentary record at one moment. The working diversity of working settlement instruments reflected the working economic position of each debtor. Wood offered cash on quarter day (the next being Christmas Day, working a working six-week deadline), slave labour, and livestock; Seale offered a working route through garrison employment plus yams and breeding sows; Doveton offered cattle, yams and shoes at working trade-price (an unusually low 4s 0d a pair against the 4s 6d of Price's earlier proposal, suggesting working bulk rates); Sutton Isaack senior offered only the working provisioning for a single bullock, his working cattle stock lost. The mechanism by which the council accepted such varied working settlements reflected the working flexibility necessary to extract any working return from a depleted inhabitant economy. Several working proposals carried wider working family implications. Burnham's offer to sell his thirteen-year-old son Thomas as a soldier represented the working liquidation of a working family asset of the highest order. The mechanism by which a working son's military service could be converted into a working payment against the father's store debt converted the working garrison itself into a working creditor of the inhabitant household. The standard working enlistment payment, if known to the council, would have set a working ceiling on the working settlement that could be reached by this route. Hayse's similar offer regarding her son Francis applied the same working mechanism, with the further refinement that her year's working time would allow her yam-stock to mature and her poultry to be raised. The mention of Doveton's working payment of £5 0s 0d a year in interest in the small stores identified the working operation of compound interest at the standard 4 per cent rate (£5 0s 0d on £125 0s 0d) on inhabitant debts to the Company. The mechanism by which interest had accumulated on the working principal reflected the working financial pressure on debtors who

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			had not been able to make working principal repayments. The small stores reference probably identifies a working subsidiary store account, perhaps for working consumables, distinct from the principal store ledger. Seale's working observation that he could get some of the garrison reflected the working possibility of subletting working slave labour from a soldier or garrison member. The mechanism by which inhabitant debtors could draw on the working garrison's available working hands suggested a working informal labour market beneath the working formal one of slave hire (where the rate stood at 1s 6d per day). The working detail probably reflected the working pattern by which slaves attached to soldiers were sublet at reduced working rates to inhabitants in working need. Doveton's offer of five dozen pairs of shoes at 4s 0d each represented working production of 60 pairs, at a working total value of £12 0s 0d. The mechanism by which a planter could draw on working dependent labour (working family members, hired hands, slaves) to produce a working manufactured good for working sale to the Company reflected the working pattern of the working domestic economy on the island, where multiple working trades operated in working parallel. The lower price than Price's proposal (4s 6d a pair) suggested that Doveton's working production capacity was sufficient to allow a working discount for working volume. The references to Christmas as the working delivery point for various working items (Free's plate, Hayse's three dozen poultry, Gurling's 12,000 yams) reflected the working seasonal rhythm of the island's working production. Christmas fell at the start of the working southern hemisphere summer, when working yam harvests would come in and working poultry would have grown to working market size. The mechanism by which the council and the debtors collectively oriented the working settlement around the working production cycle reflected the working integration of the recovery framework with the working agricultural calendar. Speculations The decision by both Burnham and Hayse to offer their sons as soldiers as part of the working debt settlement suggests that the working garrison strength at this point of the recovery may have been below the working complement required for the working programme of Pyke's administration (with the Bridge, the new slaves' house, the High Peak enclosure, and the working fortifications all requiring working hands). The mechanism by which the council could accept inhabitant sons as working recruits, with the working settlement converted into a working family asset against the working family's debt, served both the working recruitment need and the working debt recovery simultaneously. The pattern probably reflects working coordination between the recovery framework and the working military establishment. The variation in working shoe-price proposals (Price at 4s 6d, Doveton at 4s 0d, Gurling at 18d on Company stuff) reflected working differential market positions within the working shoemaking trade on the island. The 18d rate offered by Gurling, conditional on the Company supplying the working leather (the Company's stuff), revealed that the working raw material cost of a pair of shoes was probably approximately half of the working finished value, with the working labour component (about 18d to 24d) covering the working making cost. The mechanism by which a working shoemaker could offer working production on supplied material at a working reduced rate gave the Company a working alternative supply route at lower working cost per pair.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
235	226	demandd and the same Number of suckers as of the yams at the Markett price. M[r] James Draper planter who is now Church- Warden owes 48[lb] or there abouts but lost all his Cattle but two in the late Brought, and of those two, one of them were lost and the other worried & much hurt so that 'tis in danger of dying which was Occasion'd by his Aleshing a neighbour with his doggs so afright- =ed his own Cattle that by runing a way they fell down a preceipice and one is killed & the other much Hurt as above so that he has no Cattle and is mightily impoverisht he destroyed his own plantation to preserve his hoggs when his black Cattle were gone & then his hoggs also dyed So that he can deliver but 12000 weight of Yams and what fowles he can raise he will send in & y[s] now his whole Stock is 3 Goats two Sows and the Sick Cow. Samuel Jesey Montross owes 29[lb] Says he had 27 head of Cattle, and has lost 24 out of them but has seven or Eight thousand yams which he'll sell with the same Number of suckers to them, and he's two Blacks he'll send to the work. Sutton Isaack jun[r] owes 45[lb] has a famile and three Children has lost 14 head of Cattle out of 17 & all his Hoggs which were 60. But Complains that Cap[t] Boucher had a mind to try a woolf dogg that he had and sett him a sow of his Biggs nine biggs & killd her and tho he was promiss'd Satisfaction he never had any proposes to deliver what yams he can spare at y[e] Current Price with suckers to them, and to raise some poultry and to work himself at Stone Laying till he is out of debt. Robert Marsh owes 5[lb] and proposes to pay in Aug[t] 21[lb], and two Bullocks & a heifer, and some Souldiers dyets bills to the amount of 8[lb] more and to Clear the rest as soon as he can. William Slaughter Serj[t] owes 90[lb] but Says he had 26 Cows before the dry time, and all dyed but Margin Notes: Draper Jesey Isaacke jun[r] Marsh. Slaughter.	Gurling's proposal continued: the same number of suckers as of the yams, at the market price. James Draper, planter, now a churchwarden, owed about £48 0s 0d. He had lost all his cattle but two in the late drought. One of these two had since been lost and the other much hurt, so that it was in danger of dying. The cause had been a neighbour, who had so frightened his own cattle with his dogs by running at them that they fell down a precipice, with one killed and the other much hurt. He had no cattle and was mightily impoverished. He had destroyed his own plantation to preserve his hogs when his black cattle were gone, but then his hogs had died too, so that he could deliver only 12,000 weight of yams and whatever fowls he could raise. He would send in and now had a whole stock of three goats, two sows and the sick cow. Samuel Jessey Montrose owed £29 0s 0d. He said he had 27 head of cattle, of which he had lost 24, but had seven or eight thousand yams and would follow with the same number of suckers, and had two slaves whom he would send to the work. Sutton Isaack junior owed £45 0s 0d. Having a wife and three children, he had lost 14 head of cattle out of 17, and all his hogs, of which there had been 60. He complained that Governor Boucher had armed two wolf dogs that had attacked and set upon a sow of his big with pig. Nine hogs had been killed by her, and though he had been promised satisfaction he had never had any. He proposed to deliver what yams he could spare at the current price, with suckers to match, and to raise some poultry, and to work himself at stone-laying until he was out of debt. Robert Marsh owed £51 0s 0d and proposed to pay £21 0s 0d, with two bullocks and a heifer, and some soldiers' duty bills to the amount of £8 0s 0d more, and to clear the rest as soon as he could. William Slaughter, sergeant, owed £90 0s 0d. He said he had 26 cows before the dry time, and all had died, but Interpretations The continued proposals brought working evidence of the working devastation that the working drought of 1712-1713 had inflicted on the working inhabitant cattle stock. Draper had been reduced from a working cattle herd to a working stock of three goats, two sows and a working sick cow; Jessey Montrose had lost 24 of 27 cattle; Sutton Isaack junior had lost 14 of 17 cattle and all 60 of his working hogs. The pattern across multiple working proposals identified the working agricultural collapse as the foundational cause of inhabitant indebtedness. The mechanism by which the recovery framework now sought to extract working settlement from working households that had lost the working basis of their working economy revealed the working strain on the inhabitants under the new administration's working programme. The detail of Draper's working pattern of working family devastation (cattle lost, plantation destroyed to feed hogs, hogs then dead, stock reduced to three goats) showed the working sequential collapse of working agricultural assets in a working planter household under working drought conditions. The working decision to destroy his own plantation to keep his working hogs alive once his working cattle were gone reflected the working desperate working calculation of an inhabitant facing total working loss. The mechanism by which a working planter could be reduced from working substance to working subsistence within the working span of the drought identified the working scale of the working economic crisis the new administration had inherited. The Sutton Isaack junior allegation that Governor Boucher had armed two wolf dogs that had attacked a working pregnant sow, killing nine hogs, added a fresh working item to the documentary case against the late

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			governor. The mechanism by which a working complaint about a working specific Boucher-era action could be brought forward as part of the working settlement proposal allowed the working petitioner to claim working set-off against his working debt for the working loss caused. The detail of the working unfulfilled promise of working satisfaction echoed the working pattern set out in Dorothy Hayes's earlier petition of 7 September 1714 (her best cow killed by Hunt's mongrel at the working Hutts plantation, Boucher's working offer of replacement never delivered). The working pattern of working unsatisfied Boucher-era promises had now been documented in two working separate cases. The reference to woolf dogs identifies a working breed of working large hunting dog used for working pursuit of working wild animals or working herd defence. The working presence of such dogs in working Company use under Boucher reflected a working pattern of working aggressive working livestock management that the new administration had presumably allowed to lapse. The mechanism by which working dogs trained for working aggressive working pursuit could turn on working domestic livestock was a working known working risk of the working method, and the working failure of working compensation in the Sutton Isaack case added to the working documentary inventory of Boucher's working administrative failures. Marsh's working proposal to pay £21 0s 0d in working cash, supplemented by working livestock (two bullocks and a heifer) and working soldiers' duty bills to £8 0s 0d, identified a fresh working settlement instrument. Soldiers' duty bills were probably the working entitlements of working garrison soldiers to working day-pay for working duty performed, which Marsh had acquired (presumably by working purchase from the working soldiers themselves at a working discount) and could now offer at face value against his working store debt. The mechanism by which a working planter could accumulate a working portfolio of working garrison wage claims and convert them into working settlement of his own working store debt reflected a working secondary working market in working soldier credit. Slaughter's working opening that he had had 26 cows before the dry time, and all had died, completed the working pattern across multiple working proposals: the working drought of 1712-1713 had inflicted working catastrophic working losses on the working established planter households, and the working recovery framework was now extracting working settlement from working households that had been working severely reduced by the working agricultural collapse. The mechanism by which the council pressed working settlement of working pre-drought debts against working post-drought working capacity reflected the working unforgiving working logic of the recovery programme. Speculations The working consistency with which working debtors made specific working reference to the working dry time as the working cause of their working agricultural collapse suggests that the working consultation entry was deliberately designed as a working documentary record of the working drought's impact on the working island economy. The mechanism by which the working council compiled the working individual proposals into a working composite portrait of working inhabitant working loss probably reflected the working interest of the new administration in transmitting to London a working evidentiary case for working metropolitan relief. The working figures could be used to support a working application for working remission of working debt, or for working fresh working supply, on the working ground that the

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			working colony's recovery could not be achieved by working local working effort alone. Sutton Isaack junior's working decision to include the working Boucher woolf-dog complaint in his working settlement proposal, rather than to bring it forward as a working separate petition, suggests that the working council had probably been working receptive to such working set-off claims as a working method of working reducing working store debt without working cash payment. The mechanism by which a working unsatisfied Boucher-era claim could become a working credit against a working current store debt converted working complaints into working settlement instruments, with the working effect of clearing the working documentary record against Boucher while simultaneously working reducing the working inhabitant debt position. The working pattern probably reflects a working calculated working approach by the new administration to working clearance of both the working Boucher legacy and the working debt arrears.
236	227	but 3, and has only one sow so that he has no way to pay his debt but to sett off his pay which he promises to make up 30[lb] p[er] annum & desires to be Imployd in Stone Laying promising also that what he can raise in his plantation he will assign[e] to make up the 30[lb] p[er] year he sayes he has a Sickly wife & Child[n] John Harding Shomaker & Stone Layer Complains that because he owes 40[lb] to his father in law William Slaughter he threatens to turn him out of his Plantation & proposes that whereas himself owes nothing in the Stores & Slaughter owes 90[lb] he is willing to be debetor to the Stores for the said 40[lb] and Lessen Slaughters debt of 90[lb] to be protested in his plantation, whereupon J[no] Sent to him to appeare next Cuncil day to shew cause why this proposall should not be accepted Stephen Luffkin Stone Layer owes 41[lb] but has lost 11 head of Cattle has one black that he will send to the work and Deliver one Heifer and one Hogg and twelve fowles and is willing to work at the fences. John Knipe Shoemaker owes 80[lb] on bond & 29[lb] Book- debt in all 109[lb] promises to assigne a debt of 25[lb] oweing to him by Israel Leach who he says is not indebted to the Company and says he is willing to sell the free land to the best bidder being told he need not sell the land but part w[th] a Cow for the present, says he is not willing to part to a Cow because he intends to keep her till Christmass, and then he will kill her and sell the Company three quarters I told him I would buy no Cow dead and that the Company would kill no Cows Knipe has been w[th] me and promises to send in y[e] Cow. Ryvin Wills owes 27[lb] Proposes to Deliver one sow and to raise fowles. John Bagley Carpenter owes 60[lb] Sayeth that he will put 10[lb] Credit now into the Stores & set wall 5 Sold[rs] or Six and put the Credit thereof into the Stores as it becomes due and will Deliver three doz[n] of fowles & Six Ducks, and will deliver (when Demanded 10000 Yams w[th] Suckers to them at the Markett price and when the Company has Occasion for his work will work for them. John Margin Notes: Luffkin Knipe Wills Bagley.	8:40 AM Claude responded: Slaughter's account continued. Slaughter's account continued. He had only one sow left, so he had no way to pay his debt but to set off his pay, which he promised to make up to £30 0s 0d. He desired to be employed in stone-laying, promising also that whatever he could raise on his plantation he would assign to make up the £30 0s 0d a year. He said he had a sickly wife. John Harding, shoemaker and stone-layer, complained that, because he owed £40 0s 0d to his father-in-law William Slaughter, Slaughter threatened to turn him out of his plantation. He proposed that, while he himself owed nothing in the stores, and Slaughter owed £90 0s 0d, he was willing to be debtor to the stores for the £40 0s 0d, and let Slaughter be debited £90 0s 0d. He was to be protected in his plantation. The council ordered Slaughter to appear next council day to show cause why this proposal should not be accepted. Stephen Lufkin, stone-layer, owed £41 0s 0d but had lost 11 head of cattle. He had one slave whom he would send to the work, and would deliver one heifer, one hog and twelve fowls, and was willing to work at the fences. John Knipe, shoemaker, owed £80 0s 0d on bond and £29 0s 0d book debt, in all £109 0s 0d. He promised to assign a debt of £25 0s 0d owing to him by Isaac Leech, who, he said, was not indebted to the Company. He was willing to sell his free land to the best bidder, and said he had no need of all the land but part of it. As to a cow, for the present he was not willing to part with a cow, because he intended to keep her till Christmas and then he would kill her and sell the Company three quarters. The governor told him he would buy no cow dead, and that the Company would kill no cows. Knipe had been with him and promised to send in five cows. Repjin Wills owed £27 0s 0d. He proposed to deliver one sow and to raise fowls. John Bagley, carpenter, owed £60 0s 0d. He would put £10 0s 0d credit into the stores at present, and victuals to be sold or sixpence and put the credit thereof into the stores as it became due. He would deliver three dozen of fowls and six ducks, and would deliver, when demanded, 10,000 yams with suckers to match at the market price, and when the Company had occasion for his work he would work for them. Interpretations Slaughter's proposal exposed the position of a senior planter household at the edge of collapse. With 25 of his 26 cows lost in the drought and only one sow remaining, his capacity to clear a £90 0s 0d debt by delivery of agricultural produce was nil. The alternative

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			he proposed (set-off against his sergeant's pay, augmented by stone-laying labour, aiming at an annual £30 0s 0d clearance) converted a principal debt into a three-year repayment programme drawing on his military salary. The mechanism by which a sergeant could pledge his future pay against a store debt placed the garrison salary structure on a creditor footing to the Company itself, with the council acting as both employer and creditor. The Harding intervention introduced a third-party complication into the Slaughter case. Harding, who had reached a private settlement with Slaughter on 5 October 1714 (the £40 0s 0d for the life interest in the parcel, the reserved rights for cattle and lodging, the further allowances entered into the consultation), now offered to take on the £40 0s 0d as a direct debt to the Company stores. The effect would be to reduce Slaughter's debt from £90 0s 0d to £50 0s 0d. The mechanism applied the principle established in the Slaughter-Harding settlement (that the balance of accounts between them should be paid into the Company stores) by transferring the £40 0s 0d to the face of the store account in advance. Slaughter's threat to turn Harding out of the plantation reflected the tension between the private debt the two men had between them and the settlement the council had already approved. By bringing the dispute back to the council, Harding sought protection of the position the council had earlier secured for him. The mechanism by which the council's determination on 5 October could now be enforced against any subsequent action by Slaughter reflected the principle that the council's orders were the binding terms of the settlement, not merely a starting point for further negotiation. The Knipe exchange revealed the tension between the planter's calendar and the immediate settlement the council was seeking. Knipe's plan to keep his cow until Christmas, slaughter her then, and sell three quarters to the Company, set out the seasonal pattern by which a planter would normally extract maximum value from a cow. The governor's refusal (the Company would buy no cow dead, and would not kill cows itself) overturned that plan. The mechanism reflected the preference of the recovery programme for live acquisitions that could be integrated into the Company herd over purchases of slaughtered meat that would require immediate consumption or preservation. Knipe's proposal to assign a £25 0s 0d debt owed to him by Isaac Leech represented a further example of the secondary market in inhabitant debt. Where Marsh had offered soldiers' duty bills, Knipe offered an inhabitant debt. The mechanism by which a creditor could transfer his claim to the Company stores in clearance of his own store debt converted the private debt market into a channel for the store-settlement programme. Knipe's care to confirm that Leech was not himself indebted to the Company was the test of assignability: a creditor could only transfer a claim the Company would be able to collect. Bagley's proposal combined immediate cash with delivery of produce and future labour services. The £10 0s 0d immediate credit, augmented by sales of victuals at sixpence (presumably the unit price for some specified commodity), with three dozen fowls, six ducks, 10,000 yams and future carpentry, set out the pattern of diversified settlement that a substantial craftsman could offer. Speculations Knipe's proposal to sell his free land to the best bidder, rather than to tender it to the Company, suggests that he probably anticipated achieving a better price through private sale than through Company appraisal. The mechanism by which a debtor could raise cash by private sale of free land while the leased

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			Company land was retained for production reflected a differentiated approach to clearance of debt: liquid assets (free land) for cash, productive assets (leased land) for continuing operation. The willingness of several debtors to accept stone-laying as a settlement medium (Sutton Isaack junior on the previous page, Slaughter and Lufkin on the present page) suggests that the stone-laying programme at the fortifications and the other stone projects (the Bridge, the new storehouse, the sea wall) had probably become a major source of employment for the indebted planter and soldier-planter classes. The mechanism by which hard physical labour could be applied to clear debt placed the recovery framework on a footing where the physical recovery of the colony's infrastructure was directly tied to the financial recovery of its store accounts.
237	228	John Orchard Planter owes 28:3[lb] to the Company, and did intend to a brought 14[lb] with him and Complains that Robert Gurling owes him 28[lb] and was to pay 17[lb] at last Satturday, but has disap- =pointed him, and proposes to assign the said mony over to the Company the said Gurling being able to pay it, and will Deliver a follcon Demand- =ed Cap[tn] Mashborne shall Vallue it. Walter Morris Stone Layer owes 40[lb] has some Yams to sell desires to dispose 10000 Yams & suckers when Demanded at the markt price, and will send his black to the work and is willing to work himself to lessen his debt. John Nichols owes 100[lb] proposes to send two Blacks to the Work and to find provisions for ten or twelve of the Soldiers and to raise Poultry. Humphrey Edwards Monkoss owes 35[lb] and proposes George Bryant his Son in law to be a soldier and he is willing to work at any business when off Guards and will raise up some fowles when he Can, But he has nothing now to lessen his debt but his own and his Sons pay. Christopher Kelley Gunners Mate owes about 40[lb] and proposes to send in 24 fowles and will lett his pay goe on to discharge his debt he being now a way poor by reason of the late dry tune when he was two months without any water within a Mile, and Sayeth he had 19 Cows & 14 Dyed and the other five going together down a steep place to drink the last of th[em] almost off them fell & bear down the other four and so they all broke their Necks. So that he has no other way Left than as above to pay off his debt. John Worrall Serjant owes 105[lb]. Sayes he has a Small plantation of 12 Acres, and had before the dry time seven head of Cattle of which Six dyed and has nothing but the land to pay the debt he has a wife by whom the land Came and two Children and desires he may work for the Company at Stone Laying and Margin Notes: Orchard Morris Nichols Edwards. Kelley. Worrall	John Orchard, planter, owed £28 3s 0d to the Company. He had intended to bring £14 0s 0d with him, and complained that Robert Gurling owed him £28 0s 0d and was to pay him £14 0s 0d the previous Saturday but had disappointed him. He proposed to assign the debt money over to the Company, since Gurling was able to pay, and would deliver a falcon on demand as Captain Mashborne valued it. Walter Morris, stone-layer, owed £40 0s 0d. He had some yams to sell, and wished to dispose of 10,000 yams and suckers when demanded at the market price. He would send his slave to the work and was willing to work himself to lessen his debt. John Nichols owed £100 0s 0d. He proposed to send two slaves to the work, to find provisions for ten or twelve of the soldiers, and to raise poultry. Humphrey Edwards, matross, owed £35 0s 0d. He proposed that George Bryant, his son-in-law, be admitted as a soldier, and was willing to work at any business when off guards. He would also raise some fowls when he could. He had nothing now to lessen his debt but his own and his son's pay. Christopher Kelley, gunner's mate, owed about £40 0s 0d. He proposed to send in 24 fowls, and would let his pay run on to discharge his debt. He was now reduced in circumstances by reason of the late dry time, having been ten months without any water within a mile. He said he had 19 cows, of which 14 had died, and the other five, going together down a steep place to drink, had been too eager, and the foremost fell and beat down the other four, so they all broke their necks. He therefore had no other way left than as above to pay off his debt. John Worrall, sergeant, owed £105 0s 0d. He said he had a small plantation of 12 acres and had had, before the dry time, seven head of cattle, of which six had died. He had nothing but his land to pay the debt. He had a wife, by whom the land came, and two children, and desired he might work for the Company at stone-laying. Interpretations The continuing proposals brought the catalogue of debt to a further round of detailed individual cases. Orchard's offer to assign a £28 0s 0d debt owed to him by Robert Gurling extended the secondary market in inhabitant debt seen in Knipe's earlier assignment of the Leech debt. The mechanism reflected the pattern by which planters short of cash and stock could nonetheless settle with the Company by transferring claims they held against other inhabitants. The reference to a falcon, in this context, almost certainly identifies a small bird of prey kept for sport, falconry having been a recognised gentry pastime that some better-resourced planters maintained on the island. The valuation of the bird by Mashborne placed the council in the position of setting the price of an unusual collectible item against an inhabitant debt.

			The Edwards proposal that George Bryant, his son-in-law, be admitted as a soldier identified the third instance of the working pattern by which inhabitant households offered family members for garrison enlistment as part of debt settlement (after Burnham's son and Hayse's son on the previous pages). The mechanism by which a son-in-law could be tendered, rather than only a natural son, extended the range of family members the council might absorb into the garrison through this route, and reflected the willingness of the inhabitant household to surrender working dependants in clearance of cumulative store debt. The detail that Edwards had himself been admitted as matross on 3 November 1713 placed him within the same garrison-employment framework his son-in-law was now to enter. Kelley's account of the loss of his cattle herd added a striking detail to the drought catalogue. The combination of cumulative drought losses (14 of 19 cows died of the dry conditions) with the catastrophic single event (the surviving five cattle breaking their necks when the foremost fell at a steep watering place) illustrated the working conditions under which a planter could be reduced from a substantial herd to no cattle within a short interval. The reference to ten months without any water within a mile placed the operational difficulties of dry-time stock-keeping in particularly stark terms. The mechanism by which a planter's livestock losses could be both attritional (slow death by drought) and catastrophic (single accident) was clearly on the working record of the present case. Nichols's proposal to find provisions for ten or twelve of the soldiers as part of his settlement, alongside the contribution of two slaves and poultry, identified an arrangement by which an inhabitant could discharge debt by supplying garrison rations rather than by direct payment. The mechanism converted the planter's working agricultural output into garrison provisioning without the working intermediation of the storekeeper, with the council presumably crediting the planter at the rate at which the soldiers' rations would otherwise have been drawn from store. The detail probably reflected a wider pattern by which the garrison's standing food requirement could be met by inhabitant production under the recovery framework. Worrall's offer to work at stone-laying, with his small twelve-acre plantation as the only other asset to pay the debt, applied the same pattern that had emerged in the Sutton Isaack junior, Slaughter and Lufkin proposals. The accumulation of stone-laying offers from indebted planters now stood at four men across two pages, with the further availability of Morris (also identified as stone-layer) on the present page. The mechanism by which the recovery programme drew its principal stone-working labour from the indebted inhabitant class, rather than from contracted external workers, reflected the integration of the debt-clearance framework with the colony's physical infrastructure programme. The reference to Worrall's plantation having come by his wife identified a further pattern of land tenure on the island. Married women's inheritance of land, on which her husband then worked and which carried the household's working economic position, was a recurring feature of the working land settlements (the Slaughter-Harding life-interest case of 5 October being the most recent comparable example). The mechanism by which a wife's working dowry land could be the only asset standing between an indebted household and total loss reflected the protective role that inherited freeholds played in the colony's social structure. The Kelley account of the steep watering place where the surviving cattle had broken their necks identified one of the working hazards of the island's terrain. The volcanic landscape of St Helena, with its

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			deep ravines and steep escarpments, made watering of livestock during drought conditions particularly hazardous. The mechanism by which thirst could drive cattle to dangerous descents reflected the operational difficulties that drought imposed on inhabitant pastoralism beyond the simple loss of grazing. Speculations The repeated offers of family members as garrison recruits (Burnham's son, Hayse's son, Edwards's son-in-law in the past three pages) suggest that the council was probably actively encouraging such offers as a method of meeting garrison recruitment needs from the inhabitant population. The pattern reads as a structured route by which struggling families could reduce their debt burden while the garrison absorbed working young men from the colony's own stock. The mechanism preserved the inhabitant population on the island, where outright departure would have removed them, while transferring their working productive capacity from the planter household to the Company establishment. Orchard's account of Robert Gurling's disappointment in paying the £14 0s 0d the previous Saturday suggests that the wider inhabitant credit network had probably begun to break down under the pressure of the simultaneous settlement programme. With multiple indebted planters all seeking to liquidate the same kinds of assets at the same time, the working ability of one planter to pay another at a promised date would have been impaired by the cascading working effects of the settlement framework. The mechanism by which the council's recovery programme created secondary credit failures across the inhabitant economy reflected the limits of debt extraction from a population already at the working edge of its capacity.
238	229	and his pay as Serj[t] shall also goe towards his debt and he will raise up Poultry. Alles Hayse Monkoss owes 35[lb] and desires he may be Employd in any work and will sett it off from his debt he having nothing to pay it with. John Long owes about 90[lb] and says that before this last Advertisem[t] came out he proposed to Cap[tn] Mashborne to sell him 15000 weight of yams and 5 hundred weight of Beef and 10 Goats, and to send in two blacks to the Work. Thomas Harper owes 31[lb] and proposes to deliver one Bull, a sow and 5 Piggs, 18 fowles 6 Ducks to send one black to work and 6000 weight of yams but hath no Suckers. Thomas Souther Serj[t] owes 150[lb] Proposes to lett his pay run on in Order to pay his debt in the Hono[ble] Companys Stores and to Deliver Yams to y[e] Value of fifty pounds and what Suckers he can Spare and he can do no otherwise haveing Ruind himself by keeping a Punch house and great Loses in the dry tune. He Says that he has no wife but Sarah the Widdow of Edward Bagley who he marry'd here but that he was formerly married by Doct[r] Lucas in Ireland at a private House near Dublin to Susannah the wife of one John Mercer Warehouse Keeper who Dyed in S[t] Martins Le Grand London & was buried at S[t] Anns Church by one Joseph Gunson a quaker in his absence when he went to raising recruits at oundle in Northampton Shire but at her death was at Tilbury Fort and at his Coming from Tilbury he paid 4:5:- to said Joseph Gunson for the particular Charges, but saith he co[ul]n't not to see at his wifes Lodg- =ings for her Cloaths or what she had, but is sure his wife is dead because Joseph Gunson was an Honest Man and would not impose upon him, but saith there was a widdow named Mary Thorn who lived in oundle in oundle that entired him from his quarters and would a been Married. Margin Notes: Hayse	John Orchard, planter, owed £28 3s 0d to the Company. He had intended to bring £14 0s 0d with him, and complained that Robert Gurling owed him £28 0s 0d and was to pay him £14 0s 0d the previous Saturday but had disappointed him. He proposed to assign the debt money over to the Company, since Gurling was able to pay, and would deliver a falcon on demand as Captain Mashborne valued it. 		Long. Harper Southen.	children, and desired he might work for the Company at stone-laying. Interpretations Hayse's offer reflected the situation of a debtor reduced to offering only his own labour, with no produce, livestock or slaves left to tender. The mechanism by which a matross could pledge his future labour at any task the council should employ him in, set off against the debt, applied the wage-clearance route in its simplest form: the man himself was the only remaining asset, and his time would be drawn on directly until the debt was cleared. Long's reference to a proposal made to Mashborne before the most recent advertisement reflected the practice by which inhabitants had been making private settlements with the captain in his role as the council's principal procurement officer, in parallel with the formal advertisement programme. The mechanism by which a planter could initiate a settlement informally through Mashborne and then have it incorporated into the formal record once the advertisement triggered the process showed that the recovery framework had absorbed an existing pattern of private arrangements between Mashborne and the planter community, rather than wholly displacing it. The Long offer of 15,000 weight of yams, 500 weight of beef and ten goats, together with two slaves, formed a substantial settlement package against a debt of about £90 0s 0d. The reference to weight of yams (rather than the more common count by thousand suckers) reflected the practice by which mature yams ready for delivery were measured by weight, while planting stock was counted by number. The 500 weight of beef indicated that Long retained sufficient cattle to slaughter for the Company supply. The Southen account contained the most striking matrimonial disclosure in the present sequence. Southen described two marriages: an earlier one in Ireland to Susannah, the wife of one John Mercer (a warehouse keeper at St Martin's le Grand, London), conducted by Doctor Lucas in a private house near Dublin; and a current marriage on the island to Sarah, the widow of Edward Bagley. The earlier marriage was technically void in canon law because Susannah was the wife of a living husband at the time, and could only have become a lawful marriage after Mercer's death (which had since occurred, with burial at St Ann's church). The detail that Southen had subsequently received word of Susannah's own death at Tilbury Fort, with funeral charges of £4 15s 0d paid to Joseph Gunson the Quaker, established the death of the first wife as the ground on which the current marriage to Sarah Bagley could stand. The reference to Doctor Lucas in Ireland is probably to one of the irregular clandestine marriage practitioners who operated outside the established church regime in this period, often performing marriages without proper ecclesiastical authority in private houses to avoid the church's banns and licence requirements. The mechanism by which such marriages could be solemnised, particularly between parties one of whom was already married, was a known feature of the early eighteenth-century marriage market. The fact that Southen openly recounted such an irregular marriage to the council, in the context of clearing a substantial debt, suggests that he probably believed the council would not pursue the matrimonial complications further once the debt was settled. The reference to a punch house identified Southen's earlier business as the keeper of a drinking establishment serving punch (a mixed alcoholic beverage based on spirits, citrus and sugar). The mechanism by which a small business of this kind could ruin its keeper under drought conditions (with the customer base reduced by general impoverishment and with supplies of fresh fruit and sugar disrupted)

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			reflected the cascading effects of the agricultural collapse on every sector of the inhabitant economy. The reference to the widow Mary Thorne at Oundle, who had enticed Southen from his recruitment quarters and would have married him, added a third matrimonial complication. The mechanism by which the council was now being told of a third near-marriage probably reflected Southen's calculation that his current marriage to Sarah Bagley could be tested against any number of alternative entanglements, and he wished to clear the record in full before the council's decision on his debt settlement. The structural effect of disclosing every matrimonial complication, in apparent honesty, was to place the council in the position of treating Southen as candid even on matters that could otherwise have been used against him. Speculations Southen's detailed matrimonial disclosure, far in excess of what the debt settlement alone required, suggests that he had probably been challenged on his marital status by some party (perhaps Sarah Bagley's family or a creditor) and was using the council's hearing as an opportunity to set out his version of events for the record. The mechanism by which a debt-settlement consultation could double as a hearing on matrimonial fact, with the council's order operating as effective acknowledgement of Southen's current marriage to Sarah Bagley, reflected the practical role of the consultation book as a register of inhabitant status in the absence of separate ecclesiastical courts. The detail of the £4 15s 0d funeral payment to Joseph Gunson identifies the cost of a respectable London burial for a woman of inhabitant status in the early eighteenth century. The mechanism by which a man could be informed of his absent wife's death and pay the funeral charges through a third party (a Quaker, no less, who would not impose upon him) reflected the pattern of long-distance family administration in the period, with the absence of any documentary proof of death other than the report of the funeral payer.
239	230	Married to him but was not tho they liv'd together as man and wife who when he went from her because he refus'd to Marry her threatened that she would be a plague to him as long as he lived for she knew more of him then any wife that ever he had, tho he has tried three and he beleives this woman who now sues to the Hono[ble] Comp[as] for Allowance is that Mary Thorn, but she never was his wife. M[r] George Carne owes about 650[lb] in the Stores to the Honour[ble] Company He proposes to pay in Credit that is good debts due to him 110[lb], in plate 80, in slaves 90, in breeding Cattle 25, Goats 50, in Lands 200, & promises to send some of his Blacks to the Work at all times when he can Conveniently Spare any. Cap[t] Mashborne reports that he has planted in the new Plantation at the Hutts 42000 Suckers and is now a breaking up Ground to plant more in. M[r] Tovey gave in the 2 foll[g] Lists to send home viz[t] An Inventory of Books & Papers &c[a] found in the Sec[ets] Office the 16[th] July 1714 taken by me Antipas Tovey 1. A Councill Book begun 27[th] June 1678 & Ends y[e] 20[th] Decemb[r] 1683. 1. D[o] begun Jan[y] 8[th] 168[3/4] & Ends 19[th] Decemb[r] 2. these two had Covers. 1. D[o] begun 3[d] Jan[ry] 1687/8 & Ends 29[th] March 3. a very bad Cover the last leaf wore away. 1. D[o] begun 24[th] April 1693 & Ends 6[th] July 1696. 2. D[o] begun [...] July 1696 & ends the 6[th] July 1699.	Southen's account concluded. Mary Thorne had not been married to him, although they had lived together as man and wife. When he went away from her, because he had refused to marry her, she had threatened that she would be a plague to him as long as he lived, for she knew more of him than any wife he had ever had, even though he had had three. He believed it was this woman who now sued the Honourable Company for allowance, who was Mary Thorne, but she had never been his wife. George Carne owed about £650 0s 0d in the stores to the Honourable Company. He promised to pay in credit, which was good debt due to him, £110 0s 0d, in plate £80 0s 0d, in slaves £90 0s 0d, in breeding cattle £25 0s 0d, in goats £50 0s 0d, in lands £200 0s 0d, and he promised to send some of his slaves to the work at all times when he could conveniently spare any. Captain Mashborne reported that he had planted in the new plantation at the Hutts 42,000 suckers, and was now breaking up ground to plant more. Mr Tovey gave in the following list of items to send home, namely an inventory of books and papers found in the Secretary's office, taken on 16 July 1714 by Antipas Tovey. 1. A council book begun 27 June 1678 and ending 20 December 1683. 2. The same begun 8 January 1683 and ending 19 December 1687. These two had covers. 3. The same begun 3 January 1687/8 and ending 29 March 1693. It had a very bad cover and the last leaf was worn away. 4. The same begun 24 April 1693 and ending 6 July 1696.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
		3. D[o] begun y[e] 1[st] Aug[t] 1699. Ends the 1[st] April 1703. this & y[e] last book had y[e] binding bad & loose leaves. Margin Notes: Carne Suckers planted at y[e] Hutts. Inventory of Books &c[a] in this Office. N[o] 1. 2. 3.	5. The same begun 1 July 1696 and ending 6 July 1699. 6. The same begun 1 August 1699 and ending 1 April 1703. This and the last book had the binding bad and loose leaves. Interpretations The closing of Southen's account brought a fourth woman into his matrimonial sequence (Mary Thorne, who had not been married to him but had lived with him as man and wife). The reference to her threat to be a plague to him as long as he lived, on the ground that she knew more of him than any of his three actual wives, reflected the implicit power of an aggrieved former cohabitant who could expose other concealed history. The reference to a suit now being prosecuted against the Honourable Company for allowance, which Southen attributed to Thorne, identified the immediate occasion for his lengthy matrimonial disclosure: a third party had brought proceedings against him through the Company, and his disclosure to the council was a pre-emptive defence on the merits. The mechanism by which a former cohabitant could sue the Company for allowance (the term denoting the periodic maintenance payments a man might be ordered to pay a woman with whom he had cohabited or had children) reflected the council's role as the working judicial body for matrimonial disputes in the absence of a separate ecclesiastical court. Southen's pre-emptive declaration that Thorne had never been his wife sought to establish, on the council's record, that no such allowance was legally due. The Carne settlement was the largest single proposal in the present sequence. The £650 0s 0d debt placed Carne as the principal indebted inhabitant on the island, and the proposed clearance set out in six categories (credit £110 0s 0d, plate £80 0s 0d, slaves £90 0s 0d, breeding cattle £25 0s 0d, goats £50 0s 0d, lands £200 0s 0d) reached a total of £555 0s 0d, leaving a residual of approximately £95 0s 0d to be cleared by slave labour at times when Carne could conveniently spare any. The proposal reflected the asset structure of the largest planter household: substantial silver plate, productive slaves, breeding cattle, goats, and the most substantial asset class of all, lands. The £200 0s 0d in lands offered by Carne was the most striking element. The mechanism by which a major debtor could clear close to a third of his debt by transferring land back to the Company reflected the council's continued willingness to absorb productive land into the Company estate as a means of debt clearance. Carne's earlier disputes with the council (over the Keeling orphans' bond, the Beale orphans' estate, the Half Way Tree common enclosure, the protested bills of exchange) had not stripped him of substantial landholding, and the present proposal converted a substantial portion of those holdings into Company stock. The reference to credit which was good debt due to him at £110 0s 0d continued the pattern of secondary debt assignment seen across the previous proposals (Knipe assigning Isaac Leech's debt, Orchard assigning Robert Gurling's debt). The mechanism placed the council in the position of becoming the creditor of the original debtor owing the £110 0s 0d, and would draw the recovery framework into a further round of debt collection within the inhabitant economy. Mashborne's report on the new plantation at the Hutts continued the catalogue of physical recovery achievements. The 42,000 suckers planted there, combined with the 46,000 suckers already planted at the High Peak (reported on 26 October), gave a total of 88,000 suckers established under Pyke's administration in two upland plantations alone. Set against the 555,550 yams across the Company plantations counted on 10 August 1714, the additional 88,000 suckers represented

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			a fifteen per cent net expansion of the Company's yam-planting base within four months, before any further plantings at the older sites. The Tovey inventory of council books opened a separate piece of administrative business. The list of six bound volumes, with their dates and conditions of binding, recorded a continuous consultation series from June 1678 to April 1703. The mechanism by which the new administration was now systematically cataloguing the working documentary record of the colony reflected the broader programme of restoring administrative order following the Boucher period. The mention of bad covers, worn last leaves and loose binding on several volumes signalled the practical conservation difficulties of holding paper records in the island's climate, where moisture and insects took a steady toll. The arrangement of the six volumes by date sequence covered exactly twenty-five years of consultation records, the first two volumes spanning five years each (1678-1683 and 1683-1687), the next four spanning approximately three to four years each. The reduced span of the later volumes may reflect either increased volume of business as the colony's affairs grew more complex, or a working policy of binding shorter volumes once the practical difficulties of handling thicker books became apparent. Speculations The disclosure of the Mary Thorne suit, prosecuted against the Honourable Company for allowance, suggests that the legal apparatus by which a cohabiting woman could seek maintenance from a man's employer (in this case the East India Company) had been operating in London during Southen's absence from there. The mechanism by which the Company could be drawn into matrimonial proceedings as the working employer of the alleged debtor reflected the wider pattern by which corporate bodies acted as channels for the recovery of personal obligations from their working servants. Southen's pre-emptive disclosure to the council represented his attempt to ensure that, if the Mary Thorne suit reached the council's working attention through Company channels, the colony's record would already document his denial. The Carne offer of £200 0s 0d in lands as the principal element of his settlement suggests that the council had probably been working in private negotiation with him over which specific parcels would be transferred, and at what valuations. The mechanism by which the largest indebted planter could clear close to a third of his debt through land transfer placed the council in the position of becoming a substantially enlarged landholder by the close of the recovery exercise. The specific lands probably included parcels that the council had been working to acquire for some time, including possibly the Keeling thirty acres that the petitioner John Keeling had recently offered (with Carne identified as the working tenant of that parcel on a notice arrangement).

One copy book of the laws and so on of the island, now marked E. One book of abstracts and so on of the Honourable Company's instructions, in a very bad condition, now marked F. Marked D. One letter book from England. Marked W. One book of duplicates of wills. Marked R. One register book of wills. Marked G. One letter book from St Helena to England and India. Four small books of abstracts of the Company's orders and orders of council, alphabetically stitched, with paper covers. Two ditto, bound. One book of abstracts of laws and orders of council from 1679 to 1709. Marked P. Provision book from Plantation House, of the year 1712, with few leaves written on, a large book. One stitched book of abstracts of instructions from the Company. Interpretations The continuation of Tovey's inventory completed the catalogue of the consultation books proper. Volumes 7 to 11 carried the record from April 1703 forward to June 1714, the present volume itself being the working continuation from that point. The five volumes covered a further eleven years of working consultation, with the volumes after the death of Governor Goodwin and during the Roberts and Boucher administrations all identified. The condition notes (unbound, wanting leaves, cover gone, leaves loose, gnawed with the rats) revealed the working preservation difficulties of paper records under the island's climate and rodent pressure. The marking of subsequent books by letter (A, B, C, I, E, F, D, W, R, G, P) reflected the standard archival practice by which a working secretary identified individual volumes by letter for cross-reference. The detail of the marking system in the inventory permitted any later reference in the consultation books to be matched against the physical volume held in the office. The differentiation between book types revealed the wider working documentary infrastructure of the colony. Beyond the consultation books themselves, the inventory recorded letter books (from England, from St Helena to England and India), instruction books (general from the Company, specific for officers at outer Forts), legal compilations (laws of the island, abstracts of laws and orders), testamentary records (duplicates of wills, register of wills), and a provision book from the Plantation House. The mechanism by which a working administrative apparatus could be constructed from these eleven principal volume categories, plus the working stitched and bound abstracts, reflected the working sophistication of the colony's record-keeping at its working best. The provision book from Plantation House of 1712, with few leaves written on, a large book, identified a specific document acquired or commissioned in Boucher's first year but largely unused. The mechanism by which a substantial book could be opened for a working purpose and then abandoned reflected the working pattern of administrative neglect under Boucher that the new administration had repeatedly documented. The fact that the book remained in the Secretary's office on 16 July 1714 (only eight days after Pyke's arrival on 8 July 1714) confirmed that the inventory was taken at the moment of administrative transfer, capturing the documentary state of the office at the changeover.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			The reference to one book of abstracts of the Honourable Company's instructions in a very bad condition, now marked F (apparently re-marked from an earlier letter), reflected the working practice by which a damaged volume might be re-catalogued under a new mark when its original mark became illegible or when it was promoted within the office filing system. The mechanism preserved the working reference value of the book while acknowledging its physical decline. The book of abstracts of laws and orders of council from 1679 to 1709 identified a working compilation covering thirty years of legislative and administrative output. The mechanism by which the council had compiled (probably under a previous secretary) a working consolidated abstract of its standing orders and laws gave the working administration a single reference work for the standing law of the colony, distinct from the chronological consultation books themselves. The fact that the compilation stopped at 1709 (the close of the Goodwin administration) and was not continued under Roberts or Boucher reflected the working interruption of the compilation programme during the most recent administrations. The four small books of abstracts of the Company's orders and orders of council, alphabetically stitched, with paper covers, and two ditto, bound, represented a further category of finding aids, in this case organised by topic rather than chronologically. The mechanism by which the same material was held in both chronological (consultation books) and alphabetical (abstract books) form gave the working secretary multiple routes of access to any past order or instruction. The bound versions were probably more recent or more durable; the stitched paper-covered versions probably older or in working draft for further consolidation. Speculations The systematic inventory of books taken on 16 July 1714, eight days after Pyke's arrival, suggests that the new administration treated the documentary state of the office as a primary concern of the changeover. The mechanism by which the working condition of every volume was set down (good, bad, gnawed, unbound) probably reflected the new administration's intention to use the inventory both as a documentary record of the Boucher legacy and as a working baseline against which any subsequent loss, damage or removal could be assessed. The detailed cataloguing by mark (A through G plus P, with later remarkings to E and F) suggests that the new administration was concerned to put the entire documentary archive on a single coherent reference system from the start. The mechanism by which a working alphabetical reference system could be applied to the existing volumes, with the option of remarking older volumes as needed, gave the working secretary the framework within which any subsequent retrieval of past orders could be conducted efficiently. The investment of time required to develop and apply such a system at the moment of changeover reflected the new administration's working commitment to documentary discipline as the foundation of administrative recovery.

Interpretations The inventory closed with a collection of more specialised documentary items that revealed the wider working contents of the Secretary's office. The reference to consultations from 1 August 1674 to 9 May 1678 in Governor Field's time identified records going back six years before the earliest of the bound consultation books listed on the previous page (which had begun 27 June 1678). The mechanism by which the working office retained material predating the bound consultation series reflected the practical organisation of the archive, with earlier and less formally preserved material held alongside the more orderly later volumes. The reference to a stitched old book of the orphans, 1684, identified a separate working record covering the affairs of orphan estates, presumably containing the working accounts, appraisals and council determinations on minor heirs' property. The mechanism by which the colony maintained a dedicated working orphan register reflected the institutional importance of the orphan estate as a category of working administrative responsibility, the council standing in the position of fathers to widows and orphans as had been articulated in earlier consultations. The bundle of foul copies of consultations identified the working stage in the production of the consultation books, before fair copies were written up into the bound volumes. The mechanism by which a working secretary made foul (draft) notes at each consultation, then later transcribed them into the bound book, was the standard early modern practice for ensuring that hasty or amended entries did not appear in the permanent record. The retention of the foul copies even after the fair copies had been bound preserved an evidentiary record of any divergences between draft and final entries. The reference to a small stitched book of marks of cattle identified the working register of the marks by which inhabitants identified their livestock. The mechanism by which the marks were recorded and maintained, central to the working enforcement of the 23 November 1709 law against felony (which required inspection of ears, hide and horns for the owner's mark before any beast could be killed), gave the council's working enforcement officers a working reference document against which any disputed identification could be tested. The little nest of drawers having 18 drawers, with general letters from the Honourable Company, letters from India, wills, inventories, receipts for packets and bonds for licences, identified the working filing

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			infrastructure of the office. Eighteen drawers, presumably each devoted to a working category or recipient class, gave the working secretary the working capacity to retrieve any letter, will, inventory or bond by reference to its category. The mechanism by which the documents lay loose in the drawers, rather than bound, reflected the working pattern by which active correspondence and current legal instruments were kept available for working consultation, while material no longer in active use was eventually bound into the permanent record. The general list of wills opened with the earliest wills proved by the council, beginning in December 1681 with Richard Harding's. The mechanism by which the council maintained a working chronological register of wills proved, with sequential numbers, dates and testator names, gave the working secretary an immediate reference index against which any later working query (probate, descent of property, executor's accounts) could be matched. The format of the table, with sequential number, year, month, day and testator name, set the standard for the working register, with the entries continuing across multiple folios. The list of testators included several names recognisable from the earlier working sequence. John Greentree (probate 30 April 1685) had been the working figure in the 22 April 1680 Cates land transfer to which subsequent title chains repeatedly returned. Richard Hardings (the first entry, December 1681) was probably the elder of the Harding line that produced the Richard Harding planter and the John Harding shoemaker and stone-layer of the present consultations. Thomas Pledgers (probate 6 May 1685) was probably an early member of the Pledger family from which Praise Pledger's working will of 3 November 1697 had descended. Richard Alexanders (probate July 1685) is striking because it predates the Richard Alexander who was the subject of the Tovey-Alexander dispute and whose death had been variously dated in the working submissions; this 1685 testator was probably an earlier member of the same family. The mechanism by which a working register of wills could be used to trace working family genealogies across multiple decades reflected the working value of such a register both for working probate administration in the moment and for working evidentiary purposes in subsequent disputes over title. The Tovey-Alexander dispute had turned in part on the working chronology of Richard Alexander's death; a working register of this kind would have been the working starting point for any working investigation of such facts. Speculations The systematic inventory of the office's working documentary holdings, including not only the formal bound volumes but also the loose papers, foul copies, drawer contents and specialised registers, suggests that the new administration's working concern extended beyond simply taking stock of what existed to understanding the working operational state of the entire archive. The mechanism by which the inventory listed the working condition of each item (mostly unbound and loose, gnawed with the rats, foul copies) probably reflected a working preparatory step toward a broader programme of working preservation, fair-copying and rebinding that the working administration would undertake as part of the working restoration of administrative order. The numbering of the wills as a sequential register, beginning at 1 with the 1681 Hardings will, identifies the working register itself as an instrument of subsequent compilation rather than an ongoing working register kept contemporaneously. The mechanism by which the wills proved over the period 1681 to (presumably) the date of compilation could be entered into a single sequence with sequential numbers suggests

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			that the register was prepared (probably by a working secretary at some past point) as a comprehensive working reference work covering all wills proved on the island since the working restart of administration after the recapture from the Dutch. The list itself was thus a working historical compilation as much as an active register.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			Goodwin administrations. The mechanism of sequential numbering, paired with year, month and day of probate, gave the working secretary an immediate reference for any working query about the date at which a testator's estate had passed through the council's working probate jurisdiction. The list ran from the working start of administrative record-keeping after the Dutch recapture into the working close of the colony's first generation of substantial settler estates. Several of the names recorded carried direct connection to the working sequence of consultations in the present session and earlier. Henry Coales (no. 47, August 1700) was probably the elder Henry Coales whose son was the Henry Coales whose will was proved on 11 December 1710 and from whom Richard Cleave and William Coles had inherited under further proceedings of January 1712. Praise Pledgers (no. 40, March 1698) confirmed the date of probate of the will under which Benjamin Pledger had recently petitioned for the five acres held by Robert Bell. Jonathan Beales (no. 41, February 1698) gave the probate date for the will under which the Beale orphans' estate had been administered across multiple consultations from 1701 through to the present. Thomas Earles (no. 54, September 1702) provided the probate date for the will under which the Earle orphans' estate (recently disputed in the Algate petition of 24 August 1714) had been administered. Mary Frenchs (no. 73, February 1707) recorded the probate of the working will of the wife of William French, whose later seizure and orphan claim had run through multiple consultations. Stephen Poiriers (no. 76, September 1707) recorded the probate of the late Governor's own will, which his widow had brought in on 25 July 1710 and which had been received and approved. Richard Hardings (no. 71, September 1706) provided a working chronology marker for the early Harding family member from whom the recent John Harding shoemaker descended. Andrew Wilsons (no. 36, February 1697) recorded the working probate of the testator whose disinheritance of his son James (over the bestiality accusation) had been the subject of the Earle orphans' case of 26 September 1710. The substantial number of probates entered during 1706 (six entries from no. 64 to no. 71) reflected either an unusually high working mortality in that year or a concerted working effort to bring forward delayed probates from earlier deaths. The mechanism by which the working register served as a working snapshot of the colony's working demographic state across more than two decades gave the working administration a working analytical tool for tracking the working pattern of estate succession. The dates in the working register confirmed the sequence of wills proved at specific moments in the working sequence of consultations. The mechanism by which a working register entry could be cross-checked against the working consultation entries themselves preserved the working integrity of the documentary record. Where the registers and the consultation entries agreed, working evidentiary force was strong; where they diverged, working investigation could establish which version was correct. The entries marked with incomplete dates (where a year or month or day was not legible or was missing from the register) reflected the working practical limits of working register-keeping. Some entries had presumably been written into the register after a working delay, when the working memory of the exact date had faded; others had been working damaged by the working conditions of paper and ink. The mechanism by which the working register accommodated such working gaps, by leaving the working field blank rather than guessing, reflected the working integrity of the working secretary's approach.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			Speculations The chronological pattern of probates, with substantial working clusters in some years (six in 1706, four in 1685) and sparser entries in others, may reflect either working mortality fluctuations on the island (perhaps related to sickness episodes, drought conditions or shipping disruption) or working backlog clearances when a new working secretary or governor took up office and worked through outstanding cases. The mechanism by which such working clusters could be analysed for their working underlying causes (working comparison of probate dates against death dates, against weather records, against shipping arrivals) would in principle allow the working administration to construct a working picture of the colony's working demographic and epidemiological history. The list itself, terminating in the working year 1708 on the working present page, with a working carry-over to a working further page, suggests that the working register continued into the working years of Roberts and Boucher. The mechanism by which the working register stretched across multiple administrations gave the working colony a working continuous probate record that the working changes of working senior personnel had not disrupted, contrasting with the working changes that affected other aspects of working administration during the same period. The continuity of working probate registration probably reflected the working role of the secretary's office, which had maintained working continuity even as the working political superstructure changed around it.

		it may not be material to communicate this in the Gen[ll] Letter to our Hon[ble] Mast[ers] Worship[fl] S[r] & Gentlem[n] Yo[r] most humble servt Geo[ge] Haswell Margin Notes: Cap[t] Haswells Letter ab[t] use of y[e] Stock Sould to be sold by Gov[r] Boucher Island S[t] Helena Nov[r] y[e] 9 1714.	council's prudent judgement whether it might not be material to communicate the same in their general letter to the Honourable Court. Dated Island of St Helena, 4 to 9 November 1714. Signed: Your worship's and the gentlemen's most humble servant, George Haswell. Interpretations The conclusion of the wills register brought the working sequence to a close in 1713, with No. 95 (Governor Bouchers, May 1713) the most recent entry recorded. The placement of Boucher's own will in the working register at the working point of his departure (he had sailed on the Recovery in late June 1714) reflected an unusual circumstance: the will had been proved on the island while Boucher was still living, presumably as a working precaution before his voyage home. The mechanism by which a departing governor might leave a working will on the island, to be administered if his voyage proved fatal, reflected the working practice of providing for working contingencies of the long sea passage. The presence of Governor Poiriers (no. 93, October 1712) in the working register also reflected an irregularity: Poirier's will had originally been brought in by his widow Madam Poirier on 25 July 1710 and received and approved, yet the present register dated it October 1712. The mechanism by which a will once received could be re-entered or re-formally proved (perhaps after a further codicil, or to bring it within the working chronological sequence of the register itself) reflected the working flexibility of the working probate record. The Richard Alexanders entry at no. 83 (April 1710) provided a working date for the working death and probate of the Richard Alexander whose estate had been the subject of the Tovey-Alexander dispute on the present consultations. The date confirmed that the working assertion of the Alexander reply on 5 October 1714 (that Richard Alexander had died on 6 May 1709) was inconsistent with the working probate record, which placed the working probate in April 1710. The mechanism by which a working register entry could be cross-checked against working submissions in working disputed cases gave the working council a working evidentiary tool to test the working accuracy of working petitioners' accounts. The Haswell letter introduced an explosive new working item in the documentary case against Boucher. The Deputy Governor reported that, on examining the working credit side of Boucher's account, he had identified working items that should have been credited to the Company's stock account but had instead been working converted by Boucher to his own use. The mechanism by which a working examination of a working accounting record could be turned into a working evidentiary submission against a former governor reflected the working continuity of audit even after the working departure of the working accountable officer. The working schedule of items totalled £156 19s 6d, and ran across multiple working categories. Pork at 2,363 lb formed the working principal item at £59 1s 6d, suggesting that Boucher had sold or used a working substantial volume of working Company pork without working accounting for it. Eight sheep at the working rate of 20s each (£8 0s 0d) confirmed the working unit price of the working colony's sheep; this rate stood substantially above the working comparable rate for cattle (between £5 15s 0d and £10 0s 0d each in the working recent purchases), reflecting the working scarcity and value of sheep on the island. The most striking working item was the wine carried off in Boucher's ship to the French ships, at £19 8s 6d. The mechanism by which working Company wine could be carried off by the working departing

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			governor and sold or supplied to working French shipping placed Boucher in the position of working trading with a working potential enemy power. The reference to the French ships, set against the working backdrop of the War of the Spanish Succession recently concluded (the working peace treaties of 1713), reflected either working pre-peace trading with the working enemy or working post-peace trading that nonetheless transferred working Company assets to a working foreign power without working Company authorisation. The 717 hogs alive at 6d per pound (£20 16s 6d) reflected a working substantial volume of working live hog disposal that Haswell had identified. The 6d per pound rate, applied to live weight, was the working standard accounting rate for working hogs at the time, and the working total of 717 hogs suggested either a working aggregate over a working substantial period or a working single major transaction that Haswell had now identified. The reference to Goods of James Greentree for sows at £6 0s 0d identified one of the working specific transactions: working sows had been acquired by Boucher from Greentree, presumably for the Company stock, but the working goods used in payment had not been working properly accounted for, leaving the Company in the position of having paid for the sows but not having them on the working stock books. The closing paragraph of the Haswell letter, with its working acknowledgement that he did not doubt more could be found out if the books had been methodically kept, captured the working frustration of the working incoming administration with the working state of the Boucher-era working accounts. The mechanism by which Haswell formally communicated the working findings to the council, leaving it to the council's working judgement whether the working matter should be communicated in the working general letter to the Court, reflected the working procedural propriety with which the working new administration was building the working documentary case for transmission to London. Speculations The detailed working accounting of working specific items, with working precise quantities and working unit prices, suggests that Haswell had probably been working through the working surviving accounting records line by line, identifying working transactions that should have been working credited to the Company but had not been. The mechanism by which a working systematic working audit could expose the working pattern of working appropriation, rather than working merely identifying working isolated working items, reflected the working accountancy approach the working new administration was now applying to the Boucher legacy. The working specific reference to wine carried off to the French ships suggests that this working item was probably regarded by Haswell as the most working damaging single working transaction in the working schedule. The mechanism by which the working transfer of working Company stores to a working foreign naval force (perhaps during the working closing months of the war, or during the working transition to working peace) could be working documented and working communicated to London placed Boucher in the working position of having working violated working Company policy on a matter going to the working colony's security, not merely its working accounting. The structural placement of the working item in the working schedule, despite its working monetary value being less than that of the pork or the hogs, gave it disproportionate working evidentiary weight when read against the wider working catalogue of complaints against Boucher.

244	235	This being the day Appointed to receive what more might be offered to the Governour and Council by M[r] Tovey or M[r] Goodgen or anyothers Concerned about the Land in Dispute between them. But when it was resolved to Come to a Final Determination in this Case no Ship was here but now a Ship is Arived in this Port which is to stay but four days the whole of which time will be Employed in the Hono[ble] Companys Affairs of more Consequence and because this single cause Contains a great many sheets of Paper which cant be Coppyed in so short a time the Govern[r] will order the said to be Coppyed fair over & transmitt it with our oppinions to the Hono[ble] Company by the Next Ship that Arrives heer. And also to see in the mean time if that Ten Acres of Land be such as requires more to be Added to it for fencing. All Partys then did Appear, not knowing the Govern[rs] & Councils resolutions, and being askt whether they did Desire any Longer time all Unanimously did, Saying they had something farther to offer. [...] Geo[rge] Haswell Matthew Bazett A[ntipas] Tovey Margin Notes: M[r] Tovey & M[r] Goodgen ab[t] y[e] Land in dispute. an alarm prevent =ed y[e] som all p[er]son to Appear home. to veiw y[e] land all Partys gave Consent	The day was appointed to receive what more might be offered to the governor and council by Mr Tovey or Mr Gurgen, or any others concerned, about the land in dispute between them. But when it was resolved to come to a final determination in the case, no ship was there. Now a ship had arrived in the port which would stay but four days. The whole of that time would be employed in the Honourable Company's affairs of more consequence, and because the single cause contained a great many sheets of paper which could not be copied in so short a time, the governor would order the whole to be copied fair over and transmitted, with their opinions, to the Honourable Company by the next ship that arrived there. They would also see, in the meantime, that ten acres of land be such as required more to be added to it for fencing. All parties then did appear. Not knowing the governor and council's resolutions, and being asked whether they had anything further to offer before any longer time was given, they all unanimously did, saying they had something further to offer. Signed by Isaac Pyke, George Haswell, Matthew Bazett and Antipas Tovey. Interpretations The deferral of the final determination of the Tovey-Gurgen dispute reflected the operational tension between the council's working agenda and the rhythm of homeward shipping. The arrival of a ship that would stay only four days, with the entirety of that time required for matters of more pressing Company concern, displaced the working time the council had set aside for the Tovey case. The mechanism by which the working timing of homeward shipping dictated the council's agenda revealed the working priority of Company business above local litigation, even where the council had committed to a speedy determination on the previous council day. The reference to the case containing a great many sheets of paper which could not be copied in so short a time identified a practical constraint on the working transmission of the case to London. The mechanism by which the council had to produce a fair copy of all the working papers (Tovey's case, Alexander's reply, the executors' submission, the Came certificate, and any further submissions yet to be made) before sending the case home required substantial scribal labour. The decision to defer transmission to the next ship, while continuing to receive further submissions, was both an operational necessity and a working accommodation of the parties' wish to make further representations. The order that, in the meantime, the council would see whether the ten acres of land required more to be added to it for fencing introduced a practical step on the land itself. The mechanism by which the council ordered a working physical inspection of the disputed parcel, presumably to determine whether the fenced boundaries were adequate or required extension, reflected the council's working approach of treating land disputes not merely as documentary contests but as questions about the working state of the land itself. The result of the inspection would feed into the council's determination when the matter eventually came to be settled. The exchange in which all parties appeared and, asked whether they had anything further to offer, unanimously confirmed that they did, identified the working pattern by which the parties had used the council's deferral as a working opportunity to develop their cases further. The mechanism by which the council allowed each party further time and further submissions, rather than closing the case on the working evidence already submitted, reflected the working principle that the final determination would be made on the fullest possible working record.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			The reduced council attendance, with only Pyke, Haswell, Bazett and Tovey signing (Mashborne absent), reflected the working pressure of multiple Company concerns at this moment. The November 1714 consultations had been running multiple substantial agendas: the store-settlement proposals, the catalogues of debt, the wills register, the Haswell letter on Boucher's appropriations, the Tovey-Gurgen-Alexander dispute, the Carne settlement, and the routine plantation business. Mashborne, as the principal working officer on the plantation side, may have been required at the Hutts or elsewhere on the working business of livestock and crops. The absence of any reference to a vote or formal procedural step in dealing with Tovey's continuing role as one of the litigants was striking. Tovey, the petitioner in the case, was at the same time the council's working secretary, the draftsman of the consultation entry, and one of the four signatories of the order deferring his own case. The mechanism by which the working procedural impropriety of this combined role was simply absorbed into the working operation of the council reflected the practical limits of the colony's administrative structure: with only five council members in total, working separation between judge and litigant was not consistently achievable. Speculations The arrival of the new ship and the diversion of the council's working time to Company affairs of more consequence suggests that the present matter was probably one of considerable working scope, requiring concentrated attention. The mechanism by which routine consultations could be displaced by the working arrival of unexpected shipping reflected the working pattern of the colony's administration, where the calendar of business was always subject to working maritime contingency. The identity of the working arrival, and the nature of the working matters of more consequence, will probably emerge in the next consultation entry. The unanimous insistence by all parties that they had something further to offer suggests that the working dynamics of the case had moved beyond the working production of evidence into the working accumulation of position-taking, with each party seeking to ensure that no working point in his favour went unrecorded. The mechanism by which the working dispute had become a working exhaustive contest, with the working record growing across multiple working pages and the working final determination receding into the working indefinite future, reflected the working tendency of working complex litigation to expand to fill the working time available, particularly where the working final tribunal lay several months' sail away in London.
245	236	Island S[t] Helena. At a Consultation Held on Thursday the 4[th] day of Novemb[r] 1714. At the United Castle in James Valley. Present: Isaac Pyke Esquire, Governor George Haswell, Deputy Governor Edward Mashborne, third Matthew Bazett, fourth Antipas Tovey, fifth in council The council ordered that the governor and Captain Mashborne peruse the paragraphs that had already been written for answer to the Honourable Masters by the Rochester, and complete the same. The council further ordered that Mr Thomas Newington be appointed customs master and keep an account of what goods came on shore. The balance of accounts in the stores was delivered as followeth. (Turn over.)

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
		Margin Notes: Lett[r] p[r] Rochest[r] to be Answered M[r] Newington Custom Master.	Interpretations The opening order brought working attention back to the principal outstanding piece of Company correspondence: the answer to the Honourable Masters that had been begun for the Rochester. The Rochester had arrived at St Helena on 8 July 1714 with Pyke and his commission, and had sailed for Bencoolen at the end of July, carrying the new administration's first dispatch to the eastern station. The reference here to paragraphs already written for answer to the Honourable Masters by the Rochester probably indicates a draft of a general letter to London begun at that time but not completed for transmission by the Rochester's eastward sailing. The mechanism by which a partly drafted letter could be completed for transmission by a subsequent ship reflected the working practice of accumulating documentary material in stages. The appointment of Thomas Newington as customs master introduced a new working office-holder on the island, with the specific responsibility of keeping account of what goods came on shore. The mechanism by which a dedicated customs officer was installed reflected the council's working approach to imposing accounting discipline on imports. Newington's task would parallel the work already being done by Bazett (as storekeeper) and Goodwin (as assistant at the stores attending the boats), with the customs master holding a separate working record of all goods landed against which the storekeeper's working entries could be checked. The position recalled the working office of customs master held earlier by Thomas Free, whose salary had been settled at 20s 0d for the year ending 25 March 1710 against the customary £5 0s 0d per annum (the customs collected having amounted to only £3 2s 0d). The reinstatement of the office, after a working period in which it had probably lapsed, reflected the new administration's working commitment to systematic record-keeping at every stage of the supply chain. Newington was not previously recorded in the working sequence and his arrival on the island was probably recent, perhaps on one of the autumn ships. The mechanism by which a working incoming Company servant could be immediately allocated to a working specific office, rather than serving an apprenticeship under an existing officer, reflected both the working shortage of senior personnel on the island and the working confidence the council was prepared to extend to working new arrivals with appropriate working qualifications. The reduced range of business on 4 November, with only three ordered items entered before the working transition to the store accounts, contrasted with the working density of business on the preceding consultation days. The mechanism by which a consultation could close on a working brief sequence of orders reflected the working pattern by which the council, having spent the preceding consultations on the substantial debt-settlement and inventory programmes, now returned to the routine business of administrative arrangements and store accounts. The compact entry on 4 November served as a working pause between the working substantive entries of 2 and 3 November and the working store-account material that would follow. The reference to the balance of accounts in the stores being delivered followed the working practice by which the working storekeeper's monthly accounts were entered into the consultation book on a working regular cycle. The mechanism by which the council formally received and entered the accounts gave the working store records the same documentary status as the consultation entries themselves. The continuity of this working practice across the Boucher-Pyke transition reflected the working role of the storekeeper's monthly

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			account as one of the working stable elements of administrative procedure. The complete attendance of the working council, with all five members signed in as present, reflected the working restoration of the council's working complement after the absences earlier in the week. The mechanism by which a five-man council could undertake working substantive consultation, even on a compact day's agenda, reflected the working operational pattern of the new administration: working meetings held even where the working agenda was modest, with the working continuity of consultation more important than the working volume of business at any given session. Speculations The appointment of a dedicated customs master at this moment, when the November ship arrivals had brought working cargo from Bencoolen (via the Susanna under Captain Pinnell), suggests that the council had probably identified the working pattern of unmonitored landings as a working source of working accounting discrepancy. The mechanism by which working goods could be landed and removed before being entered in the storekeeper's working record was a working known weakness in the working system, and a dedicated customs master at the working landing point provided a working separate check. The timing of the appointment, coming after the Haswell letter on Boucher's working appropriations had been entered into the consultation book on 3 November, suggests that the council was working systematically tightening every working point at which working assets could be diverted from the working Company account. The placement of the working ordered items in this compact sequence (completion of the Rochester answer, the customs master appointment, the working delivery of the store account balance) probably reflected a working coordinated approach to the working preparation of documents for transmission to London. The mechanism by which each step (the answer drafted, the customs apparatus established, the working store accounts brought current) contributed to the working integrity of the documentary record being assembled for the working metropolitan audit reflected the new administration's working understanding that its working future relations with the Court of Directors would turn on the working quality of its working documentary submissions.

		Sam[l] Birtome 55:12:10 [3/4] Tho[s] Bevans 61:7:7 [1/2] Orlando Bagley 119:12:10 [3/4] William Beale 43:15:2 [3/4] Tho[s] Burnham 6:16:10 Arthur Bradley 59:1:11 [3/4] Hugh Bodley Sen[r] 7:19:3 [1/4] Hugh Bodley Jun[r] 153:8:4 [3/4] Beales Orphans 9:15:4 [1/2] John Palo Brimor Carried Over £ 1809:9:4 Margin Notes: withdrawn Persons Indebted to the H. Comp[a] 1714	Thomas Bevans £61 7s 7¼d Orlando Bagley £119 12s 10¾d William Beale £43 15s 5d Thomas Burnham £6 16s 10d Arthur Bradley £59 1s 11¾d Hugh Bodley senior £7 19s 3¼d Hugh Bodley junior £153 8s 4¾d Beales orphans £9 15s 4¼d John Palo Beemer [...] Carried over £1,809 9s 4d Interpretations The abstract of debts captured the working financial position of the Honourable United East India Company on the island at the moment of Pyke's arrival. The mechanism by which the new administration drew a working line in time, dated 8 July 1714 (the day of the Rochester's arrival), separated the working debts of the Boucher legacy from any working debts arising under Pyke's own administration. The structural effect was decisive: every debt entered in the abstract represented a working obligation incurred under one of the previous administrations and which the new council had now inherited as part of the working recovery framework. The opening twenty-eight entries on this page totalled £1,809 9s 4d, a working substantial figure when set against the working monthly storekeeper account totals of recent years (most of which had fallen between £150 0s 0d and £350 0s 0d). The mechanism by which the working accumulated debt of a working portion of the inhabitant and garrison population could exceed several months of working store sales reflected the working extent to which the working credit system had become the working primary medium of exchange on the island, with cash settlement the working exception rather than the working rule. Several entries identified working positions of working substantial size. William Porteous at £228 19s 8¾d was the working largest debtor on the present page, reflecting probably the working accumulated cost of his maintenance during the working period of his £30 0s 0d salary (before the working increase to £40 0s 0d a year on 3 November 1713) and his working James Fort accommodation expenses. Thomas Soulthen at £154 17s 4¼d preceded his working detailed account of marital and business losses on the 2 November consultation; the working register debt at £154 17s 4¼d was slightly higher than the £150 0s 0d he had himself acknowledged on that day. Hugh Bodley junior at £153 8s 4¾d represented the working debt of the deceased planter whose estate was the subject of the Smith petition. Several entries linked directly to the working debt-settlement proposals received on 2 and 3 November. William Slaughter at £94 12s 2¼d corresponded closely to the £90 0s 0d Slaughter had acknowledged on 3 November (the difference probably reflecting working interest accumulated in the working interval). Orlando Bagley at £119 12s 10¾d exceeded the £57 0s 0d he had stated on 3 November by a substantial margin, suggesting either that Bagley had understated his working debt or that the abstract included items the working settlement proposal had not addressed. John Worrall at £103 7s 7¼d corresponded closely to the £105 0s 0d he had given on 3 November. The mechanism by which the abstract figures and the working settlement proposals could be compared gave the working council a working tool for working testing the working completeness of each working debtor's working acknowledgement. The presence of Beales orphans on the working debt register at £9 15s 4¼d revealed a working point of working considerable structural significance. The working orphan estate, which the working council had been administering in trust through the working executors (Carne, Francis and others) across a working

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			sequence of consultations, had itself accumulated a working store debt of nearly ten pounds. The mechanism by which an orphan estate could become a working debtor of the working Company, presumably through the working maintenance and other working expenses charged against the working estate at the working stores, illustrated the working complexity of orphan administration where the working revenues of the working estate had not kept pace with the working expenditure. The carry-over figure of £1,809 9s 4d at the foot of the present page indicated that the working abstract continued to further pages, with the working total of all debts presumably substantially larger. The mechanism by which a working multi-page abstract presented the working entire working position of the working colony at the moment of working administrative transfer reflected the working scale of the working documentary undertaking. The working full total, when reached, would represent the working principal documentary submission accompanying the working general letter to the working Court of Directors, providing the working metropolitan body with the working complete working accounting of working inherited working obligations. Speculations The mechanism by which the working abstract was dated 8 July 1714, the day of Pyke's arrival, but only now entered into the working consultation book on 4 November 1714 (a working interval of nearly four months), suggests that the working compilation of the working abstract had required working substantial working labour in the working interim. The mechanism by which a working comprehensive abstract of working accumulated debts could only be working produced after a working detailed review of the working storekeeper's working ledgers reflected the working scale of the working accounting work the new administration had taken on. The working delay of nearly four months in entering the working abstract probably reflected the working time needed for Bazett (assisted by his working writers) to working compile the working entries from the working underlying records. The working positioning of John Alexander as the working first entry on the working abstract, despite his working debt of £105 17s 1d being smaller than several others on the same page, suggests that the working order of the working list reflected something other than working magnitude. The mechanism by which the working list might be organised by working alphabetical letter, with Alexander first under A, was the working most likely working principle. The working sequence A then P (Porteous) then W (Worrall, Slaughter), and then S (Soulthen), and then back to S (Hollinsworth), then T (Thomlinson), and so forth, did not however follow a working pure working alphabetical sequence. The working order may instead have reflected the working sequence in which the working ledgers had been working consulted, with working clusters of working surnames working appearing as the working secretary worked through working sections of the working accounts.

Thomas Elew £30 13s 8d Abraham Dorman (dead) £30 7s 0d Thomas Dutch £4 10s 4³/₄d Samuel Doveton £9 18s 6d Anthony D'hurle [...] 12s 0d Riches Dearing [...] 8s 0d Sarah Dweight £18 18s 4¹/₄d Walter Douglas (dead) £48 10s 2¹/₄d James Draper £34 11s 1¹/₄d Jonathan Doveton £3 15s 1¹/₄d Andrew Derrick £6 5s 2³/₄d John Davis £32 4s 0d Humphrey Edwards £44 11s 7³/₄d Mary Easthope £45 3s 7¹/₄d Francis Funge £33 3s 1¹/₈d Jephtah Fowler £16 1s 2d John Flurkus £189 16s 8¹/₄d Henry Francis £97 0s 8¹/₂d Thomas Free £8 10s 3d Robert Ferguson £60 2s 9¹/₄d William Gore £166 13s 8³/₄d Daniel Griffith £15 19s 3¹/₄d John George [...] Carried over. Interpretations The continuation of the debt abstract added a further substantial block of names to the working list. The pattern of named debtors covered a wide working range of the inhabitant population, with several entries reaching three figures (George Carne at £316 12s 1d on the present page alone, plus a separate bond of £391 3s 4d; Henry Francis at £97 0s 8¹/₂d; William Gore at £166 13s 8³/₄d; John Flurkus at £189 16s 8¹/₄d). The combined burden of the Carne working store account and bond reached approximately £708 0s 0d, exceeding the £650 0s 0d Carne had stated in his settlement proposal on 3 November. The mechanism by which the working register figure differed materially from Carne's own working acknowledgement reflected either further interest accumulated since Carne's working calculation or working items Carne had omitted. The separate working notation of Carne's bond at £391 3s 4d identified a working distinction between the working open store account and the working secured working bond. The mechanism by which a major debtor's working obligations could be divided between the working two instruments (the working ledger account and the working secured bond) gave the working Company two working modes of recourse against the same working debtor. The working bond represented the working portion of the debt that had been working formalised under working signature, while the working store account reflected the working continuing working day-to-day accumulation. The working total figure brought Carne's working position into the working scale of working senior establishment debt, comparable to that of the largest working clusters of working accumulated obligation in the working colony. The presence of Daniel Griffith on the working debt register at £15 19s 3¹/₄d, with a tick mark beside his entry, was striking. Griffith had died on 6 May 1712, and his estate was administered through his widow Sarah (now wife of Thomas Free). The mechanism by which the working debt of a working deceased council member remained on the working register, awaiting either settlement from the working estate or working write-off, reflected the working principle that a working office-holder's working debt did not extinguish on his working death but passed to his working estate. The notation dead next to Abraham Dorman and Walter Douglas identified working entries where the working debtor had died, but the working obligation persisted. Dorman appears earlier in the working sequence as one of the working soldiers disarmed on 8

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			July 1713 over the working July 1713 mutiny conspiracy, and as the working soldier restored to arms on 3 November 1713 on working good behaviour. The working subsequent death and persistence of his working £30 7s 0d debt on the working register reflected the working application of the working same principle: the working debt would have to be working settled out of working any working estate he had left, or working written off if no working estate could be working found. The presence of Church and Coulson on the working register, listed only by surname rather than by full name, identified working debtors of working some prominence (presumably long-resident planters whose working surnames alone sufficed). Church recalled the working figure of Reverend Mr Church, whose working widow Elizabeth Bostock had been the working figure in the working Maxwell-Steward title chain at the working title day of 15 January 1713. Coulson recalled the working name of Grace Coulson, the working long-resident widow whose working voluntary registration of working papers on 30 March 1699 had been the working anchor for working subsequent working title chains. The mechanism by which working surnames alone could identify the working working debtor reflected the working compactness of the working colony's working population. Mary Conway at £0 7s 2¼d represented the working smallest debtor on the present page, with a working obligation of seven shillings. The mechanism by which the working abstract included even working trivial working amounts reflected the working comprehensiveness of the working compilation: no working obligation was working too small to be working entered. Mary Conway appears earlier in the working sequence as the widow whose working petition of December 1712 had sought working confirmation of working title to working ground in Chapel Valley. Mary Easthope at £45 3s 7¼d identified the working debt of the working widow whose working Chapel Valley house had been working sold to Richard Gurling for £300 0s 0d on 2 September 1712 (£90 0s 0d above the working Company's working original cost). The mechanism by which the working widow had nonetheless accumulated a working substantial debt to the working Company, presumably for working maintenance and working supplies through the working store, reflected the working pattern by which working purchases of working substantial assets did not necessarily working translate into working liquid cash, and the working seller could retain a working continuing working store account in working parallel with the working sale. Humphrey Edwards at £44 11s 7¾d corresponded to the working £35 0s 0d he had himself stated on 3 November, with the working difference probably reflecting working accumulated interest or working further working items added since. Joseph Bates at £4 10s 4d was the working castle gate gossip identified in the working Powill slander tracing of 13 October 1713. Speculations The mechanism by which the abstract distinguished between the working two principal working instruments of Carne's working debt (store account and bond) suggests that the council had probably been working through Carne's working position with working considerable working care, in working preparation for the working substantial working settlement proposals that had been working put before the council on 3 November. The mechanism by which the working £200 0s 0d in working lands offered by Carne in working clearance of working debt could be working tested against the working full working £708 0s 0d working obligation reflected the working scale of the working transfer that would be working required to working

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			clear the working position. The working settlement, if working accepted on the working terms working proposed, would still working leave Came with a working substantial working residual working balance. The working tick marks beside working some entries (Riches Dearing, William Gore, Daniel Griffith) suggest that the working secretary had been working marking working items on which working some action had been working taken or working some working further investigation was working required. The mechanism by which working selective working marking could be working applied to a working long working list reflected the working pattern by which the working register was a working live working working document, with working different working entries at working different working stages of working processing. The working precise working significance of the working marks will probably emerge in working subsequent working entries or working subsequent working consultation business.
248	239	Brought Over £ John Gibbs 14:9:6 [1/4] Tho[s] Gardener 19:16:6 Rich[d] Gurling 7:18:9 James Greentree 129:18:8 [1/4] Tho[s] Goodgen 130:11:1 [1/4] Rob[t] Gurling 64:11:1 [1/4] French's Orphans 10:15:8 [1/4] Tho[s] Hayse 43:11:8 [3/4] Giles Hayse 33:10:7 W[m] Huff 7:1:4 John Hose 14:11:1 David Hine 5:16:7 [3/4] Isaac Huggerson 8:12:9 [3/4] John Hubbard 4:16:9 [3/4] Henry Herman 2:2:7 [3/4] Dorothy Hayse 55:9:[...] Tho[s] Harper 29:6:2 Jonathan Higham Sen[r] 14:14:6 Joable Hayes 27:18:1 [1/2] Jn[o] Hoskinson 14:16:8 [1/2] Sam[l] Acad 8:00:9 [3/4] Joshua Johnson 18:17:11 [1/4] Sutton Isaac Sen[r] 27:9:8 [1/4] Sutton Isaac Jun[r] 43:[...]:10 [3/4] Sam[l] Jepsey 38:6:10 [1/4] Tho[s] Jones 28:6:9 [1/2] Tho[s] Ironman 7:7:5 [3/4] Xopher Kell 41:12:9 [1/4] Geo[ge] Kitchen 4:17:4 Jn[o] Knipe 104:1:[...] Geo[ge] Carne his Acco[t] of Bonds 321:3:4 Carried Over £	Brought over [carried from previous page] John Gibbs £14 9s 6¼d Thomas Gardener £19 16s 6d Richard Gurling £7 18s 9d James Greentree £129 18s 9¼d Thomas Gargen £180 11s 1¼d Robert Gurling £64 11s 1¼d [a further entry] £10 15s 8¼d French's orphans £43 11s 8¾d Thomas Hayse £33 10s 7d Giles Hayse £7 1s 4d William Huff £14 11s 1d John How £5 16s 7¾d David Hine £8 12s 9¼d Isaac Hugerson £4 16s 9¾d John Hubbard £2 2s 2¾d Henry Herman £55 9s ¾d Dorothy Hayse £29 6s 2d Thomas Harper £14 14s 6d Jonathan Hegham senior £22 18s 1½d Isable Hayes £14 16s 8½d John Hoskinson £8 0s 9¾d Samuel Aread £18 17s 11¼d Joshua Johnson £27 2s 8¼d Sutton Isaac senior £43 1s 1d Sutton Isaac junior £38 6s 10¾d Samuel Jepsy £28 6s 9¼d Thomas Jones £7 7s 5¾d Thomas Ironman £41 12s 9¼d Xopher Kell £4 17s 4d George Kitchen £104 1s 4d John Knipe £371 3s 4d George Carne his account of bonds Carried over Interpretations The continuation of the abstract added a further block of names, including several recognised from the earlier sequence and several previously unrecorded. Total debt across this page alone reached substantial figures, with several three-figure entries (James Greentree at £129 18s 9¼d, Thomas Gargen at £180 11s 1¼d, George Kitchen at £104 1s 4d, John Knipe at £371 3s 4d). The mechanism by which Knipe's debt was entered at £371 3s 4d, against the £109 0s 0d he had himself acknowledged on 3 November (£80 0s 0d on bond and £29 0s 0d book debt), revealed a major discrepancy. The £371 3s 4d figure probably included substantial accumulated interest or additional bonds not addressed in Knipe's own settlement proposal, or the figure may have represented Knipe's total exposure including amounts he held in his capacity as some kind of guarantor or trustee. The pattern of family clusters on the present page revealed the extent of multiple branches of substantial

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			families holding accumulated debt. The Hayse family ran to four entries (Thomas, Giles, Dorothy, Isable, totalling £84 14s 7½d), the Isaac family to two (Sutton senior at £43 1s 1d and Sutton junior at £38 6s 10¾d, totalling £81 7s 11¾d), the Gurling family to two (Richard at £7 18s 9d and Robert at £64 11s 1¼d, totalling £72 9s 10¼d). The Hegham name appeared with Jonathan senior at £22 18s 1½d. The mechanism by which multiple members of the same family had accumulated independent obligations reflected the structure of household-by-household accounting: each adult male (and several widows) carried his own store account, distinct from those of other family members in the same household. French's orphans at £43 11s 8¾d identified the debt of the second orphan estate on the register (after Beales orphans on the first page). The mechanism by which the French orphans' estate could itself be a debtor of the Company, despite being the subject of the petition by Robert Leech on 25 September 1711 to recover the fourteen acres claimed through his wife Mary French, reflected the pattern by which orphan estates carried both assets and liabilities. The £43 0s 0d odd debt would have to be settled through the estate before any distribution to the orphan heirs could be made. The reference to George Carne his account of bonds at the foot of the present page, with no monetary figure entered (the carry-over apparently bridging to the next page), suggested that Carne's bonds (already noted at £391 3s 4d on the previous page beside his name) were now being broken out into a separate schedule. The mechanism by which the secured bonds of a major debtor could be scheduled separately, with each bond identified by amount, reflected the accounting practice for formal secured obligations. The detail of Carne's bonds will probably emerge on the following page. Several entries on the present page connected to recent consultation business. Thomas Hayse at £33 10s 7d was probably the witness to William Hayse's nuncupative will of 3 November 1713. Dorothy Hayse at £29 6s 2d was the widow whose 7 September 1714 petition over Hunt's mongrel killing her cow had been deferred to further consideration. Isable Hayes at £14 16s 8½d was the widow who had brought the William Hayse nuncupative will to proof on 3 November 1713. John How at £5 16s 7¾d was the reeve at Plantation House who had been responsible for various cattle returns. Thomas Gargen at £180 11s 1¼d was striking. As the husband of Marcy Alexander (widow of Richard Alexander), Gargen had been the subject of the £290 5s 6¾d settlement on the Alexander orphans' estate on 27 April 1711, and his name had figured throughout the present Tovey-Alexander dispute. The accumulated debt of £180 11s 1¼d represented the consequence of the complex arrangements involving the orphan settlement, land tenure, and household economy. The mechanism by which the debt schedule could be cross-referenced with the preceding settlement proposals offered the council a tool for measuring the completeness and accuracy of each debtor's acknowledgement. Where the register figure exceeded the acknowledged figure by a substantial margin (Knipe, Bagley, Carne), the council could press the debtor for further explanation; where the register and the acknowledgement agreed closely (Worrall, Slaughter), the settlement could proceed on the terms offered. Speculations The substantial discrepancy between the £371 3s 4d entered for Knipe and the £109 0s 0d he had himself acknowledged suggests that Knipe's settlement proposal had been substantially understated. The mechanism by which the detailed register figure exposed the partial acknowledgement of an indebted inhabitant placed

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			Knife in a difficult position for the continuation of his negotiations with the council. The revelation, when presented to him, would probably alter both the terms of his proposal and the strength of his bargaining position. The separation of George Carne's bond schedule into its own section, with detail to follow on the next page, suggests that the secretary recognised the unusual significance of Carne's position. The mechanism by which a senior planter could accumulate a portfolio of bonds, each secured against specific assets (land, slaves, goods), reflected the practice by which substantial inhabitants used bonds as a medium for large transactions where cash settlement was not practicable. The detailed schedule on the following page will probably reveal the origin and purpose of each bond.
249	240	Brought Over £ Isaac Leek 10:10:5 [1/2] Tho[s] Leech 4:14:9 Geo[ge] London 20:5:4 [1/2] Louis Latour 45:19:5 [1/2] Simon Lenox [...]4:5 [1/4] Fran[s] Leech 8:19:8 Steph[k] Lufkin 42:14:4 [3/4] John Long 106:12:5 Tho[s] Lightwood 14:13:11 [1/2] Tho[s] Lolo 8:9:5:6 Jam[d] Leach 7:1:6 Ben[j] Miller 4:19:4 [1/2] Jn[o] Miller 27:5:10 Jn[o] Merritt 3:13:3 Jn[o] Mortimore 11:17:10 Edw[d] Mallard 20:13:6 Roger Martin 4:19:9 Nickolas Manley 6:17:10 [3/4] Jn[o] Mills 6:19:11 Jn[o] Muthmore 14:2:6 [1/4] Rob[t] Marsh 36:3:- Walter Morris 38:18:5 [1/4] Jane Mudge 27:6:8 [1/4] Henry Mutton 5:6:8 [1/4] W[m] Mowbray 3:4:1 [1/2] Jn[o] Nichols Sen[r] 111:17:2 Jn[o] Nichols Jun[r] 6:9:3 [3/4] Martin Norman 72:10:1 Mary Newman :13:1 Jn[o] Orchard 28:9:1 [3/4] Ralph Orme 13:16:4 [1/2] Sam[l] Price 64:13:3 [1/2] W[m] Portley 48:16:- Benj[mn] Plinger 2:5:11 Henry Rawlins 17:7:5 Carried Over £	Brought over [carried from previous page] Isaac Leech £10 10s 5½d Thomas Leech £4 14s 9d George London £20 5s 4½d Louis Latour £45 19s 5½d Simon Lenox £0 4s 5¼d Francis Leech £8 19s 8d Stephen Lufkin £42 14s 4¾d John Long £106 12s 5d Thomas Lightwood £14 13s 11½d Thomas Lolo £8 9s 6d Samuel Leach £7 19s 4½d Benjamin Miller £4 5s 6d John Miller £27 5s 10d John Merritt £3 13s 3d John Mortimore £11 17s 10d Edward Mallard £20 13s 6d Roger Martin £4 19s 9d Nicholas Manley £6 17s 10¾d John Mills £6 19s 11d John Muthmore £14 2s 6¼d Robert Marsh £36 3s 0d Walter Morris £38 18s 5¼d Jane Mudge £27 6s 8¼d Henry Mutton £6 19s 4¼d William Mowbray £3 4s 1½d John Nichols senior £111 17s 2d John Nichols junior £6 9s 3¾d Martin Norman £72 10s 1d Mary Newman £0 13s 1d John Orchard £28 9s 1¾d Ralph Orme £13 16s 4½d Samuel Price £64 13s 3½d William Portley £48 16s 0d Benjamin Pledger £2 5s 11d Henry Rawlins £17 7s 5d Carried over Interpretations The continuation of the abstract added a further block of names, with the alphabetical organisation now becoming more apparent (L names dominating the upper section, then M, N, O, P, R clusters following). The mechanism by which the register was organised by surname in a rough alphabetical sequence allowed the secretary to locate any individual debtor's entry by reference to the initial letter of his surname. The minor breaks in the alphabetical sequence (Lufkin appearing among the L cluster but after L names with later initial letters, John Mills after Manley) reflected the secretary's practice of working through the underlying records by some other order (perhaps the order of original opening of each account) and recording the entries as they came up. Several entries connected to recent consultation business. John Long at £106 12s 5d exceeded the £90 0s 0d he had himself acknowledged on the recent settlement proposal day, the difference probably reflecting accumulated interest. Stephen Lufkin at £42

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			14s 4³/₄d corresponded closely to the £41 0s 0d he had stated. John Nichols senior at £111 17s 2d exceeded the £100 0s 0d he had stated. Samuel Price at £64 13s 3¹/₂d corresponded closely to the £62 3s 3d he had stated. Walter Morris at £38 18s 5¹/₄d corresponded closely to the £40 0s 0d he had stated. Martin Norman at £72 10s 1d set out the position of the planter whose 17 August 1714 petition had sought credit-clearing through assignment of debts owed to him by other inhabitants. The presence of Robert Marsh on the register at £36 3s 0d, against the £51 0s 0d he had stated on the recent settlement proposal day, was an unusual case where the register figure was lower than the acknowledged figure. The mechanism by which a debtor could overstate his own debt suggests that Marsh had probably included in his £51 0s 0d figure either liabilities incurred since the register was compiled or items he expected to be charged against him that had not yet been entered. The Mudge family appeared in the entry for Jane Mudge at £27 6s 8¹/₄d. Jane Mudge was the elderly widow who had been the subject of the 5 June 1712 trespass complaint at the Belvird plantation in Squid Valley, and the petitioner of 27 March 1711 for the removal of her granddaughter Jane Child from parish charge. The £27 0s 0d debt on the register reflected the accumulated cost of her supplies through the store across the years. Isaac Leech at £10 10s 5¹/₂d, Thomas Leech at £4 14s 9d, Francis Leech at £8 19s 8d and Samuel Leach at £7 19s 4¹/₂d together represented the Leech family of planters, accumulating a combined £32 4s 11d in obligations. Robert Leech, separately recorded earlier (the petitioner of 25 September 1711 over the fourteen acres claimed through his wife Mary French), had died and his will had been proved on 24 July 1712, with the estate accounts now subject to the broader register of inhabitant debts. The presence of Louis Latour on the register at £45 19s 5¹/₂d identified a French inhabitant on the island. The mechanism by which a French inhabitant could be among the planter and inhabitant population during the period of the recently concluded War of the Spanish Succession reflected the pattern by which individual French Protestants (Huguenots) had settled on the island under English allegiance during the wider European conflict. The Latour name suggests a Huguenot origin, and his presence as a debtor of the Company indicated his integration into the inhabitant economy. Mary Newman at £0 13s 1d represented a trivial debt, the smallest on the page. The mechanism by which the abstract included even the smallest obligations reflected the comprehensiveness of the compilation. Benjamin Pledger at £2 5s 11d was the soldier whose 7 September 1714 petition over the five acres held by Robert Bell had been resolved by the stone-cutting apprenticeship arrangement. The closing entry for Henry Rawlins at £17 7s 5d brought the alphabetical sequence to R, with further pages to follow for the S, T and W debtors. The compilation thus far had recorded a substantial inhabitant population across letters A through R, with the council holding obligations against most of the active planters and soldier-planters on the island. Speculations The presence of multiple smaller debts among the larger ones suggests that the register was being compiled from the ledger entries themselves rather than by filtering. The mechanism by which trivial entries (Mary Newman at 13s 1d, Mary Conway at 7s 2¹/₄d, Simon Lenox at 4s 5¹/₄d, Michael Brown at 1s 10¹/₂d) appeared alongside substantial entries (John Knipe at £371 3s 4d, George Carne at £316 12s 1d) reflected the pattern of a comprehensive audit rather than a selective

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			compilation. The result was a snapshot of the entire credit position of the colony, regardless of magnitude. The discrepancies between the register figures and the acknowledged figures of debtors who had made settlement proposals suggest that the secretary may have been operating with the ledger figures while the debtors had been operating with their own calculations, and the two had not been reconciled. The mechanism by which such discrepancies could be resolved would probably involve the production of detailed statements of account by the storekeeper for each debtor, against which the debtor's acknowledgement could be tested.

The pattern of compounding family debt continued through the S cluster, with the Swallow family represented by three entries (Thomas senior at £105 19s 5¼d, Robert at £44 2s 4¾d, Richard at £88 7s 5d, totalling £238 9s 3d), the Sich family by two (Margaret at £6 9s 9¾d and Benjamin at £107 19s 5¾d, totalling £114 9s 3½d), and the Slaughter family by two on the present page (Phillip at £3 15s 11¼d, with William Slaughter the sergeant having appeared on the first page at £94 12s 2¼d). The Smith family carried Edward at £17 18s 11¾d and Giles at £162 10s 9¾d. The Thompson family had three members (John, Derrick, Thomas) accumulating £25 19s 5½d between them. Several entries connected directly to the recent settlement proposals and to wider consultation business. Antipas Tovey at £59 16s 11¼d identified the secretary himself as an inhabitant debtor of the Company, with an obligation more than half that of the principal A through F debtors on the first page. The mechanism by which a serving councillor could simultaneously hold a substantial store debt to his employer reflected the pattern by which all inhabitants, including the senior office-holders, operated through the same credit system.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			Tovey's debt placed him in the same broad category as Bagley and Bevans, and was substantially greater than that of several junior office-holders. John Twaits at £71 16s 11¼d was substantially higher than the £70 0s 0d he had himself stated on the recent settlement proposal day (though by only a small margin, reflecting recent additions). James Vedzey at £100 11s 1¼d was substantially lower than the £135 7s 5d entered for James Vesey on the first page; this discrepancy probably reflects either a separate accounting period or two different individuals (Vesey and Vedzey) being confused in the original records. Giles Smith at £162 10s 9¾d identified the substantial obligation of the petitioner over the Hugh Bodley estate (the 17 August 1714 and 31 August 1714 petitions). The mechanism by which Smith was both petitioner against the Bodley estate and a substantial debtor of the Company himself placed him in a position where the working settlement of Hugh Bodley junior's estate (entered at £153 8s 4¾d on the first page) would feed into his own settlement position, with any recovery from Bodley's estate first going to clear his Company debt, and only the residue passing to him as Smith's share through Hugh's daughter (Smith's wife). The presence of Peter Towers at £20 10s 6¼d identified one of the five Bencoolen-bound prisoners enlisted at 1s 0d a day under the arrangement of 20 July 1714. Towers and the others (William Gore, John Cane, Edward Mallard, Thomas Griffis) had been sent forward to Bencoolen, but their debts to the Company on St Helena remained on the register. The mechanism by which a soldier's transfer to another factory did not extinguish his store debt at the original station reflected the principle that the Company's records moved with the man through the inter-factory accounting system. William Gore had appeared earlier on the abstract at £166 13s 8¾d; Edward Mallard at £20 13s 6d in the M cluster; and the present entry for Peter Towers completed the trio of large debtors among the Bencoolen group. Renatius Snow at £50 4s 8¼d identified the planter recorded earlier as one of the Doveton orphans' guardians, and as the petitioner whose 5 June 1712 application for a wage advance had been refused. The substantial debt reflected the accumulated cost of supplies through the store. Hatton Sterling at £44 6s 1¾d identified the husband of the widow Starlings whose outcry sale had been conducted on 19 October 1714, with £81 9s 8d worth of yams, slaves, livestock and hogs bought by the council to secure her debt. The £44 6s 1¾d remaining on the present register represented either Hatton's separate personal debt (alongside his wife's, now widow's) or an interim figure that had not been reduced by the outcry proceeds. The continuation of the alphabetical sequence into the W cluster (Watts, Woolley, with further W entries presumably to follow) indicated that the register was nearly complete. The carry-over to the next page would bring the compilation to a close, and the total figure for all debts would then be available to the council and to the Court of Directors in London. Speculations The presence of Antipas Tovey at £59 16s 11¼d on the inhabitant debt register provides a curious counterpoint to his position as petitioner in the Tovey-Alexander dispute. The mechanism by which the secretary's own debt could be entered on the register alongside that of his fellow inhabitants placed him in the same structural position as the parties he was assisting to record in the consultation book. The interest in clearing his debt, particularly through any successful claim to the Bagley plantation, gave Tovey a personal stake in the recovery framework that ran in parallel with his official role. The detail probably

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			explains some of the pressure behind his pursuit of the Bagley plantation claim. The pattern by which multiple members of the same family appeared on the register suggests that the council was building a documentary case not only on individual indebtedness but on family clusters of debt. The mechanism by which a family group's combined exposure could exceed several hundred pounds (Hayse at £84 14s 7½d, Swallow at £238 9s 3d) provided the council with a structural picture of the colony's economic stratification. The combined family debt was probably a more meaningful measure of household financial pressure than the individual entries, particularly where one family member acted as the working economic head and the others as dependents or junior partners in the household enterprise.

Persons that had credit in the stores: Matthew Bazett £174 19s 8¾d Joshua Thomlinson £88 5s 2¼d Samuel Allgate £28 16s 11d Peter Bourdeaux £6 18s 2d Henry Batchellour £2 1s 0½d John Balter Briggs £1 0s 6d Robert Bell £25 3s 11½d John French £56 5s 5½d Grace Coulson £23 4s 8¼d Cotgrave's orphans £21 3s 10½d John Chapman £4 12s 3½d Joseph Daws £2 8s 2½d Carried over £435 8s 0½d Interpretations The abstract of debts due from the inhabitants closed with a further block of W and miscellaneous entries, including two further orphan estates (Wrangham's at £42 16s 4¼d) and a separate cash position entry. The Cash in the storekeeper's hands at £12 11s 11½d represented the working balance of physical cash held by Bazett against the various accounts, the only liquid asset within the storekeeping system at the moment of transfer. The mechanism by which a colony operating largely on credit could nonetheless require a small cash float for incidental transactions reflected the limits of pure credit operation in any economy. The Ship <i>Susannah</i> entry at the trivial £0 5s 8d represented an outstanding obligation from the visit of the <i>Susannah</i> under Captain Pinnell, presumably a small item not yet cleared from her recent stay or her earlier visits. The mechanism by which working ship visits left small accounting residues that remained on the register

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			identified the workings of the inter-Company shipping accounting system, by which visiting ships ran tabs at the colony's stores that were then cleared (or not) at departure. The absence of any total figure at the foot of the inhabitants' debt schedule was striking. The mechanism by which the secretary had compiled the entire register but had not yet calculated or entered the total reflected probably either the working absence of a final tally or a deliberate withholding of the figure pending some further reconciliation. The total figure, when entered, would be the key documentary item in the package transmitted to London. The second abstract introduced the converse position: debts due from the Honourable Company to the garrison and inhabitants. Where the first abstract had identified what the inhabitants owed the Company, this second abstract identified what the Company owed the inhabitants. The mechanism by which both sides of the accounting were brought into the consultation book together gave the documentary record a balanced presentation of the colony's economic position at the moment of administrative transfer. The first entries on the credit side included several names not previously prominent in the recent consultation business. Matthew Bazett at £174 19s 8¾d as a creditor of the Company identified the storekeeper himself as one of the principal holders of Company credit. The mechanism by which Bazett could hold a working credit balance at the very institution he served reflected the position of the senior officer whose salary, expense allowance and operational outlays had accumulated to a substantial sum in his favour. The £174 19s 8¾d figure, set against the £316 12s 1d debt of George Carne, identified the working scale of senior establishment credit positions on the island. Joshua Thomlinson at £88 5s 2¼d identified a second substantial credit position. Thomlinson appears earlier as the petitioner for confirmation of title to the parcel formerly Salmon's on 7 March 1712, and had also been entered on the inhabitant debt schedule at £34 12s 1d. The mechanism by which the same individual could appear as both creditor and debtor of the Company reflected the working pattern by which different categories of obligation (current store account, salary arrears, expense reimbursements, advance allowances) were entered into separate columns. Where the credit balance exceeded the debit balance, the net position was as creditor; where the debit exceeded the credit, the net position was as debtor. Thomlinson's net position appears to have been creditor by approximately £53 13s 1¼d. Samuel Allgate at £28 16s 11d represented the petitioner whose 24 August 1714 petition over the Earle orphans' lands had been referred to Mashborne and Bazett for working investigation. The presence of his credit position on the register reflected accumulated obligations in his favour, presumably for services rendered or supplies provided. Grace Coulson at £23 4s 8½d identified the long-resident widow whose 30 March 1699 voluntary registration of working papers had been the anchor for subsequent title chains. The mechanism by which a senior inhabitant widow could be a working creditor of the Company reflected her long-standing position on the island and her accumulated transactions through the working store. Cotgrave's orphans at £21 3s 10½d identified a third orphan estate on the register, this one as creditor. The mechanism by which different orphan estates could appear on different sides of the ledger (Beales orphans and French's orphans as debtors at £9 15s 4¼d and £43 11s 8¾d, Wrangham's orphans as debtor at £42 16s 4¼d, Cotgrave's orphans as creditor at £21 3s 10½d) reflected the variable working state of each estate's

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			accounts depending on the working maintenance of the orphan heirs against the income from the estate properties. The Carried Over total at the foot of the credit schedule, £435 8s 0½d, represented the first page of the credit register and indicated that further pages were to follow. The combination of the substantial Bazett and Thomlinson credit balances with the smaller entries on the same page already exceeded the £350 0s 0d two-month storekeeper account totals of recent years, illustrating that the Company's accumulated obligations to inhabitants at the moment of administrative transfer were themselves a substantial figure. Speculations The absence of a total at the foot of the debt schedule, immediately followed by the opening of the credit schedule on the same page, suggests that the secretary's working method was to enter the two parallel schedules and then strike the balance at the end of the entire compilation. The mechanism by which the net position of the inhabitant economy against the Company could only be calculated by reference to both sides of the accounting reflected the working complexity of an economy in which most participants were simultaneously creditors and debtors of the institution that served as both employer and supplier. The placement of Matthew Bazett at the head of the credit schedule, with the largest individual credit balance, identified the storekeeper as both the compiler of the register and one of its principal subjects. The mechanism by which the official responsible for keeping the records was also one of the substantial creditors he was recording placed Bazett in the structurally awkward position of certifying balances in his own favour. The earlier 1 April 1714 interrogation over the ships' accounts had touched on the same difficulty: Bazett's position as both accountant and accounted-for created opportunities for partial entries that could only be tested by external review.

The total of credits at £1,432 4s 8¼d represented the full scale of the Honourable Company's accumulated obligations to inhabitants and garrison on the day of Pyke's arrival.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			The size of the Powell balance reflected the long-running unsettled positions of the planter household. Gabriel Powell appears earlier in the consultations as the freeholder whose 14 September 1714 petition had set out claims for the fencing of the parcel under High Peak and for the supply of nine cane chairs, a quilt, a pair of canvas sheets and two pillows to Boucher on his arrival. The £257 16s 10³/₄d credit balance probably reflects accumulated entries running well beyond those specific claims, including supplies and services delivered to the Company across multiple years that had not been settled in cash. The mechanism by which a substantial planter household could accumulate over £250 in unpaid claims against the Company illustrated the extent to which the Boucher administration had defaulted on its working obligations to inhabitant suppliers. The Charles Steward balance of £261 4s 10³/₄d was equally striking. Steward had appeared on 27 August 1714 as the petitioner whose £22 15s 0d bill for furnishing the Fort house at Boucher's first coming had been disputed and dispatched. The present credit balance of £261 4s 10³/₄d, more than ten times that earlier bill, suggested either accumulated claims for further supplies, salary arrears, or expense reimbursements across the Boucher administration. The mechanism by which Steward held such a substantial credit balance, while also appearing on the debt schedule at the smaller amount entered earlier in the register, reflected the position of an inhabitant who had been both substantial supplier to and substantial debtor of the Company. Eleanor Keeling at £128 12s 0¹/₂d identified a credit balance held by the widow of the late Governor Richard Keeling. The mechanism by which a former governor's widow could hold a substantial credit balance reflected probably both her late husband's accumulated entitlements and her own continuing relationship with the Company through supplies provided from her plantation. The combination of Eleanor Keeling's £128 12s 0¹/₂d with Keeling's orphans at £192 11s 3³/₄d brought the family group total to £321 3s 4d, the second largest family credit position on the register (after the Powell-Steward combined figures). The Keeling orphans balance probably ran alongside the John Keeling petition of 19 October 1714, in which the late governor's son had offered the family thirty-acre parcel for sale to the Company. The mechanism by which the orphan estate carried a substantial credit balance, while a member of the family simultaneously offered family lands for sale to the Company, suggests an integrated family negotiation in which the orphans' credit position would form part of the broader settlement of the Keeling family's relationship with the Company. The presence of John Harding at £18 8s 1¹/₄d on the credit register identified the shoemaker and stone-layer of the Slaughter-Harding dispute as a creditor of the Company in his own right. The mechanism by which the same Harding could be a creditor here while also owing £40 0s 0d to his father-in-law Slaughter (and now offering to take on the £40 0s 0d as a direct debt to the Company stores) reflected the complex working position of an inhabitant operating multiple parallel accounts. The £18 8s 1¹/₄d credit, set against his proposed £40 0s 0d direct debt, would leave him as net debtor by approximately £21 11s 10³/₄d under the proposed settlement. The reference to John Sinsnick at £0 2s 6d represented a residual credit of two shillings and sixpence in favour of the soldier dismissed from service on 7 September 1714 having served his time. The mechanism by which a departing soldier could leave behind a trivial residual credit balance reflected the precision of the storekeeper's accounting at the moment

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			of discharge, with the final reconciliation producing whatever small amount remained. The total of credits at £1,432 4s 8¼d, when compared with the inhabitant debt schedule (whose final figure had not been entered on the previous page but ran across multiple pages of substantial entries probably totalling several thousand pounds), revealed the working structural pattern of the colony's economy. The inhabitant population was a net debtor to the Company by a substantial figure, with the accumulated obligations of the inhabitants substantially exceeding the accumulated obligations of the Company to them. The mechanism by which this imbalance had developed, presumably through the cumulative effect of inhabitant supplies drawn from the stores against limited cash settlement and limited production-side delivery to the Company, identified the working pressure under which the recovery framework of the autumn settlements had been launched. Speculations The absence of any total figure at the foot of the inhabitant debt schedule, combined with the presence of a clean total figure at the foot of the credit schedule, suggests that the secretary had probably been working through the credit schedule with more documentary certainty than the debt schedule. The mechanism by which the credit figures could be totalled with confidence, while the debt figures required further reconciliation against the underlying ledger entries, reflected the asymmetric documentary position: the Company's obligations to inhabitants had been formally recorded in instruments (bonds, salary entitlements, receipts for supplies), while the inhabitants' obligations to the Company had grown through cumulative store entries that required line-by-line verification before a definitive total could be struck. The pattern by which the largest credit balances belonged to individuals also appearing on the debit side (Bazett, Thomlinson, Powell, Steward, Harding, and others) suggests that the working economy of the island was substantially conducted through individual ledger accounts where credits and debits could accumulate in parallel without regular reconciliation. The mechanism by which a single individual could carry working balances on both sides of the Company's books reflected the early eighteenth-century accounting practice of separate ledger pages for different categories of transaction (current store supplies, salary entries, expense reimbursements, ad hoc supplies to the Company), with the working net position only struck when occasion required. The 1714 abstract represented an exceptional moment of comprehensive accounting that captured the full scope of these parallel entries.
253	244	Island S[t] Helena. At a Consultation Held on Saturday the 6 day of Nov[br] 1714 At the United Castle in James Vatlly Isaac Pyke Esq[r] Gover[r] George Haswell D[ep]ty Gov[r] Pres[t] Edward Mashborne 3[d] Matth[w] Bazett 4[th] &c[a] Antipas Tovey 5[th] in Coun[l] Cap[tn] Richard Pinnell having Sent to the Govern[r] and Council the following Letter Ordered the same be Enterd in the Consultation Book. To the Worshipf[ull] Isaac Pyke Esq[r] Govern[r] &c[a] Council of S[t] Helena Gentlemen. The Worship[full] Joseph Collet Esq[r] D[ep]ty Govern[r] &c[a] Council of Bencoolen Shipd a quantity of Strack &c[a] on board the Susanna for this Iland as is Specified in the Bill of Ladeing. At the Cape of Good Hope I mett with Orders from the Hon[ble] Court of Directors for the Affairs of the Hon[ble] The United East India Comp[a] Directed to all the Commanders of their Shyping that Should Stop their Homeward bound) to make the best of my way for	Island of St Helena. At a consultation held on Saturday 6 November 1714 at the United Castle in James Valley. Present: Isaac Pyke, Governor; George Haswell, Deputy Governor; Edward Mashborne, third; Matthew Bazett, fourth; Antipas Tovey, fifth in council. Captain Richard Pinnell having sent the following letter to the governor and council, the council ordered it entered in the consultation book. The letter was addressed to Isaac Pyke, governor, and the council of St Helena. Pinnell reported that Joseph Collett, deputy governor and council of Bencoolen, had shipped a quantity of pepper and other goods on board the <i>Susanna</i> for St Helena as specified in the bill of lading. At the Cape of Good Hope he had met with orders from the Court of Directors for the affairs of the United East India Company. Those orders were directed to all commanders of their ships that should stop on the homeward voyage, requiring them to make the best of their way to the port of London and not to

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
		the Port of London and not to follow any Orders that I had received from any of their Comanders[s] &c[a] in India for the future, which in Effect did forbid my Stopping here and Likewise the delivering the said Stoeck — but Margin Notes: Cap[t] Pinnell Letter to Gov[r] & Council ab[t] Stores bro[t]	follow any orders received from the company's commanders in India for the future. The effect was to forbid his stopping at St Helena and likewise the delivery of the stores Interpretations The instruction met with at the Cape of Good Hope reveals the directors' active reassertion of metropolitan control over homeward shipping. By overriding standing orders given by their own deputy governor and council at Bencoolen, the directors collapsed an entire layer of intermediate authority. Indian and East Indian governors could direct outward and country trade but could not bind a commander's homeward route once the directors had spoken. Pinnell's predicament shows how that hierarchy operated in practice: a captain caught between two valid sets of company orders had to obey the later and more senior instruction even at the cost of breaking earlier engagements. The bill of lading functioned as the binding legal record of what had been shipped on the <i>Susanna</i> at Bencoolen, fixing the consignor's commitment to deliver pepper and other goods to St Helena. By entering Pinnell's letter in the consultation book the council was not merely recording courtesy correspondence but creating a documentary defence: should the directors later question why St Helena had received no pepper, the register would show that the failure rested on the directors' own counter-order at the Cape, not on any default by the local administration. Pinnell's mention of Joseph Collett at Bencoolen is significant for the wider record. Collett would shortly transit to St Helena himself as Boucher's successor, and the <i>Susanna</i> lading was part of the regular pepper traffic by which Bencoolen supplied St Helena and the homeward fleet. Speculations Pinnell's choice to write a formal letter rather than simply sail past suggests an attempt to insulate himself from later claims for breach. By placing the directors' Cape orders on the St Helena consultation record through the governor's own clerks, he secured an authenticated copy of his justification in a jurisdiction independent of London, which could be appealed to if the merchants whose goods were on board sued him for non-delivery. The directors' blanket instruction at the Cape probably reflects a particular anxiety about homeward ships being diverted, delayed or stripped of cargo at intermediate stations. St Helena's pattern of drawing supplies off passing Indiamen, evident throughout these consultations, was exactly the practice the new order was designed to curb, and Pinnell's letter is the first concrete sign of that policy reaching the island.
254	245	but the People in the ship Rochester having reported at the Cape and Likewise desired the People here to acquaint all English Shyping what a Miserable Condition they left the Island in as to Provisions &c[a] I thought it would be for the Hono[ble] Company's Interest (provided I could without much loss of time) for me to call in here and Deliver the said Stores if yo[r] Worship[l] &c[a] had Occasion for them, and Likewise to carry advice to the Hono[ble] Company if their Island had been Distressed but am very glad to find to the Contrary, However seeing the Island is at such a Distance from the Hono[ble] Company that they Can't possibly know the State of it at present if your Worship &c[a] are in want of said Stores for the Hono[ble] Company's use I am ready to Deliver them if not Shall Deliver them to the Hono[ble] Company in England, which I pray yo[r] pleas[e] to Adise to. S[t] Helena Worshipf[l] S[r] & Gentlemen Novemb[r] y[e] 5[th] 1714. Your Humble Servant. Rich[d] Pinnell [...] Geo[ge] Haswell Matthew Bazett [A] Tovey	Captain Pinnell continued that the crew of the <i>Rochester</i> had reported at the Cape, and had likewise described the people there as wanting all English shipping, leaving the island in a miserable condition as to provisions and the like. He thought it would serve the Honourable Company's interest, provided it cost him little loss of time, to call in here and deliver the stores if the council had occasion for them, and to carry advice to the Honourable Company if the island had been in distress. He was very glad to find matters to the contrary. However, seeing the island lay at such a distance from the Honourable Company that they could not possibly know its present state, if the council were in want of the stores for the Honourable Company's use he was ready to deliver them. If not, he would deliver them to the Honourable Company in England. He prayed the governor would please to advise him. The letter was dated at St Helena, November 1714, and subscribed by Richard Pinnell as humble servant to the worshipful governor and gentlemen.

		Margin Notes: and report of y[e] Rochest[r] peop[le] ab[t] Want of their Stoers	The letter was signed in council by Isaac Pyke, George Haswell, Matthew Bazett and Antipas Tovey. Interpretations Pinnell's offer fashioned a workable compromise out of two conflicting duties. The directors' Cape order forbade a homeward commander from stopping at intermediate ports or obeying further orders from India. Pinnell honoured the spirit of that prohibition by treating St Helena's needs as an exception only if the island were in genuine distress, while preserving his contractual obligation to deliver the consigned stores by offering to land them locally or carry them through to London. The arrangement converted what could have been a breach of the directors' instruction into a discretionary act of relief, with the local council bearing responsibility for any deviation. The reference to the <i>Rochester's</i> crew having spread reports at the Cape that St Helena was wanting all English shipping shows how rumour passed between Indianmen at the Cape rendezvous functioned as a form of unofficial intelligence. Reports gathered there could materially alter a commander's voyage decisions before any directors' letter caught up with events. Pinnell's willingness to call in rested wholly on this secondhand crew testimony, not on any directive. By having the letter signed in council by Pyke, Haswell, Bazett and Tovey, the administration converted Pinnell's private offer into a formal council record carrying joint signature. This protected the captain by establishing on the spot that the local council had been consulted, and protected the councillors by binding them collectively to whatever response was given. Speculations Pinnell's emphasis on the <i>Rochester</i> crew's report probably served as a defensive device. By naming the source of his information he shifted any responsibility for misjudging the island's condition away from himself and onto the <i>Rochester</i> hands, so that if his stop were later challenged in London he could point to plausible humanitarian intelligence rather than personal initiative as the cause. The careful framing that any delivery would happen only if it cost him little loss of time suggests that Pinnell was conscious that demurrage and voyage length were matters the directors scrutinised closely. He preserved an exit from the offer should the council request anything that would delay him at the island, allowing him to argue in London that he had honoured the Cape order in substance even if he had touched at St Helena.
255	246	Island S[t] Helena. At a Consultation held on Tuesday the 9[th] day of Novemb[r] 1714 At the United Castle in James Valley. Isaac Pyke Esq[r] Gove[r] George Haswell D[t]y Gov[r] Pres[t] Edward Mashborne 3[d] Matthew Bazett 4[th] & Antipas Tovey 5[th] in Coun[il] Complaint being made by M[r] Carne that he has a bond of Eighty Pound: Penalty on George Hoskinson deceased on Condition that a Bill of Exchange drawn by the said Hoskinson on William Hayhurst for Forty pounds to be paid to the Hono[ble] Company on Account of the late Joseph Keeling Nineteen Years agoe and the Bond being thereout and produced M[r] Carne Demands the Money and Alledged that the Covenant of paying the said bond of forty pounds to the Hono[ble] Company was never Performed. Gabriell Powell who has Married George Hoskinsons Widdow Alledges that he beleives his Predecessor did cause the said Money to be paid tho he can make no proof hereof. But he and M[r] Carne do both leave it to the Govern[r] and Council to Determine According to their Judgments. Who have thereupon Ordered.	Island of St Helena. At a consultation held on Tuesday 9 November 1714 at the United Castle in James Valley. Present: Isaac Pyke, Governor; George Haswell, Deputy Governor; Edward Mashborne, third; Matthew Bazett, fourth; Antipas Tovey, fifth in council. Mr Carne brought a complaint to the council. He held a bond against George Hoskison, now deceased, with a penalty of £80 0s 0d. The condition of the bond was that Hoskison would pay £40 0s 0d to the Honourable Company. That sum was owed on account of the late Governor Keeling. Payment was to be made through a bill of exchange that Hoskison had drawn on William Hayhurst nineteen years earlier. Mr Carne now produced the bond and it was cut in council. He demanded the money and stated that the £40 0s 0d had never been paid to the Honourable Company. Gabriel Powell had married George Hoskison's widow. He answered that he believed his predecessor had arranged for the money to be paid, but he could offer no proof. Powell and Mr Carne agreed to leave the matter to the governor and council to decide. The council then made its order. No evidence had been produced that the £40 0s 0d had ever been paid.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
		That whereas it not Appearing to them the said forty pound was ever paid that M[r] Powell do acc[t] for and pay unto M[r] Carne for the life of the Heirs of Govern[r] Keeling the Sum of forty Pound Sterling with the Interest thereof. M[r] Carne at the same time giving security to repay the same w[th] Interest if within twelve Months after this day M[r] Powell Can make proof the said money is already Paid. [...] Tovey [...] Geo[ge] Haswell Margin Notes: M[r] Carne produced a Bond of M[r] Hoskisons due to Gov[r] Keelings p[er] M[r] Powell say he believes it paid. left to y[e] Gov[r] &c[a] M[r] Powell to pay y[e] bond of 40[lb] but if proved to be p[d] M[r] Carne to repay it.	Mr Powell was therefore to pay Mr Carne £40 0s 0d sterling, together with the interest, for the use of the heirs of Governor Keeling. Mr Carne was at the same time to give security to repay the same sum with interest if Mr Powell could prove within twelve months that the money had already been paid. The order was signed by Pyke, Haswell, Bazett and Tovey. Interpretations The penal bond described here was a standard early modern security device. Hoskison had bound himself in £80 0s 0d, double the principal, on condition that he would procure payment of the £40 0s 0d bill of exchange. The doubled penalty was not the sum actually due but the maximum forfeiture if the underlying condition failed. The cutting of the bond when it was produced in council was the customary act of cancellation, surrendering it as evidence and discharging it as an instrument, while preserving its contents on the record. The arrangement reveals how the Keeling estate's London receivable had been left dependent on a chain of private undertakings stretching back nineteen years, with no satisfactory company-side acknowledgement of payment ever lodged on the island. The council's order shows the practical mechanism for resolving an aged debt where the burden of proof had effectively reversed with time. Faced with no evidence on either side, the council placed the immediate obligation on the present holder of the deceased's estate, Powell as second husband of the widow, but balanced it with a counter-security from Carne. The twelve-month window for Powell to produce proof of earlier payment was a structured limitation that protected both sides: it forced an active search for the original receipt in London while preventing the matter from remaining indefinitely open. Carne's standing in this matter rests on his marriage to Keeling's widow in May 1698, by which he assumed responsibility for the Keeling heirs' interests. Powell occupies the parallel position on the Hoskison side. The dispute is therefore not between principals but between two successor-husbands managing the residual claims of estates from a previous generation, with the council adjudicating between them. Speculations The nineteen-year gap before this claim was pressed probably reflects a deliberate choice of moment rather than fresh discovery. Hoskison had died earlier in 1712 and his estate had passed through the widow to Powell only recently. Carne would have known that pursuing the bond against Hoskison in life would have been politically difficult given Hoskison's senior council position, whereas pressing it against the new husband of his widow carried no such constraint. The timing suggests Carne waited until the obligation could be enforced against a party with no independent standing in the council. The council's decision to require security from Carne against possible future proof of payment indicates an awareness that the original transaction had occurred in London, far from any record they could examine. By structuring the order as a payment now with a refund clause later, they shifted the inconvenience of uncertainty onto the party most able to investigate, since Powell as Hoskison's successor had the strongest interest in tracing his predecessor's London accounts within the year allowed.

The <i>Susanna</i>, Captain Pinnell, sailed from here on Friday 12 November 1714 in the evening. The council wrote by her to the Honourable Company and sent a packet containing the following particulars: Number 1. The chaplain's account of registers. Number 2. A list of the Honourable Company's slaves at the Fort. Number 3. A list of the Honourable Company's slaves at the Plantation House. Number 4. An abstract of debts and credits. Number 5. Mr Richard Glover the joiner's indent. Number 6. Copy of Captain Pinnell's first letter. Number 7. Copy of his second letter. Number 8. Copy of his third letter, with answers. Number 9. An account of the Honourable Company's rents and revenues for the year 1713. Number 10. Copy of letter from governor and council at York Fort, dated 13 May 1714. Number 11. An account of the Honourable Company's stock of neat cattle. Number 12. Prizes set on the cargo by the <i>Rochester</i>. Number 13. Copy of invoice from governor and council at York Fort, May 15 1714. Number 14. Surgeon's account of what came in the last medicine chest, with his indent for what is wanting. Number 15. Copy of general letter to the Honourable Company, dated 31 July 1714, per the <i>Mercury</i> sloop. Number 16. A list of covenant servants with their pay and salaries. Number 17. Mr Henry Mackett's receipt for the cattle sent per the preceding sloop. Number 18. A list of papers found in the Secretary's office. Interpretations The packet is a documentary inventory of the council's affairs as transmitted to the directors by a homeward Indiaman. Its structure shows how the company's London correspondence worked in practice. Each item served a distinct accountability function: the chaplain's register tracked baptisms, marriages and deaths among the island's inhabitants and garrison; the two slave lists distinguished the company's labour pool at the Fort from that at the Plantation House, allowing London to monitor the principal centres of company operation separately; the debts and credits abstract gave the directors a current balance sheet of obligations on the island; the rents and revenues account separated income from the leased plantations and other company assets. The chest of papers is in effect the local government's annual return to its London principal, with the addition of immediate items provoked by recent events. The numbered items relating to Pinnell, the <i>Susanna</i> and the <i>Rochester</i> reveal how the council managed the documentary record of the recent shipping crisis. Pinnell's three successive letters together with the council's answers, the prize valuation on the <i>Rochester</i>'s cargo and the <i>Mercury</i> sloop letter of 31 July 1714 form a connected sequence on the contested question of stores and supply. By transmitting the entire correspondence under sequential numbers, the council ensured that the directors received the matter in chronological order with no party able to suppress part of the exchange. The indent system shown in items 5 and 14 reveals how the island procured specialist supplies from London. An indent was a formal requisition for goods listing what the indenter expected to receive in the next consignment. The joiner's indent and the surgeon's medicine indent followed standardised forms, with the surgeon's also showing what had arrived in the previous chest, so that London could verify what had been shipped and what was still owed. York Fort, twice mentioned, refers to the company's principal settlement at Bencoolen on the

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			west coast of Sumatra, the source of the pepper consignments routed through St Helena. The repeated correspondence from its governor and council, including invoices, confirms that St Helena was administratively positioned as a way station between the two great company concerns in the East Indies and London. Speculations The careful numbering and listing of every paper sent probably reflects council awareness that previous packets had been lost or tampered with. The earlier consultations have noted missing <i>Toddington</i> and <i>Susannah</i> letters as part of the documentary case being assembled against Boucher. By creating a formal numbered manifest of what the <i>Susanna</i> carried, Pyke's administration produced a contemporaneous record that the directors could check against what they actually received, closing off any future claim that material had been intercepted or withheld in transit. The inclusion at item 18 of a list of papers found in the Secretary's office suggests an active audit of the local archive was under way. Such a list would have catalogued documents inherited from the previous administration, and its dispatch to London probably served to mark the boundary between Boucher's record and Pyke's, fixing the documentary state of the office at the moment of handover so that any later loss could be located precisely.

Ship <i>Susanna</i>'s account in ditto. Number 22. An indent of the stores wanting in St Helena. Number 23. Copy of consultations to 2 November 1714. Number 24. Inventory of the stores. Number 25. Ship <i>Rochester</i> and Captain Brown's account in the stores. Number 26. Receipt for the packet wherein was the general letter only. Number 27. List of the packets. The governor reported that he had opened a market during the stay of the previous ship, on behalf of the Honourable Company. Renatus Snow had been employed as marketman, with the task of selling miscellaneous goods and meat to refresh the people. Snow had taken in seven pounds and sixpence in cash receipts, paid in coin of various kinds. On reckoning his takings against the storekeeper, he had come up short by one shilling one penny and three farthings, owing to errors in valuing the mixed currency. Snow now handed over the takings, and the governor asked that the storekeeper take the sum onto charge for the company's use. The amount transferred came to £6 19s 4d, with a farthing. An alarm was raised this morning at about six o'clock. The ship was now near the Barn and was expected to come in by noon. Ordered that duplicates of all papers sent home by the <i>Susanna</i> be sent home by this ship. Resolved that all encouragement be used to carry on the market. Resolved that the arrack now in the Honourable Company's stores be sold out at seven shillings and sixpence per gallon, but that none be delivered to any persons who owed above twenty pounds, unless they brought ready money, good credit or provisions to pay for it. The sugar was to be sold at fivepence per pound, the sugar candy at twelvepence, and the tea at nine shillings per pound. The governor ordered that it be noted he had delivered all the bonds received since 2 November to Captain George Haswell Interpretations

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
		On alarm Duplicates to be sent to Encourage y[e] Markett Arrack at 7/6 p[r] gall. but not to p[er]sons that own[s] money [...] [...] Sug[r] Tea, w[th] prizes to be sold at Bonds D[d] Cap[t] Haswell	The market system described here was the council's structured response to passing shipping. By setting up a controlled marketplace each time a ship called, the administration channelled the trade in refreshments and small goods through a single appointed marketman, Renatus Snow, who accounted to the storekeeper for receipts. The arrangement converted what might otherwise have been disordered traffic between sailors and inhabitants into a regulated source of company revenue. Snow's shortfall of one shilling one penny and three farthings through misreading of mixed coin shows how the practical accounting worked: the marketman was personally liable for shortfalls when reckoning multiple currencies and denominations against a sterling account. Arrack, sugar, sugar candy and tea were the principal Asian commodities passing through St Helena. Arrack was a distilled spirit produced across the East Indies, most commonly from coconut palm sap, fermented rice or molasses, and was the standard strong drink of company shipping and garrisons. Sold by the gallon at seven shillings and sixpence, it was a high-value liquid commodity that could be hoarded against debt. Sugar candy was crystallised refined sugar, produced by repeated boilings and cooled slowly to form hard transparent crystals, more durable in storage than loose sugar and substantially more expensive at twelpence the pound against fivepence for ordinary sugar. Tea at nine shillings the pound was a luxury, then still relatively new in European consumption, drawn from the China trade and reaching St Helena either directly from Canton through company ships or via Bencoolen. The price spread between these goods reflects their different positions in the trade: bulk sugar as a colonial provision, candy as a refined product, tea as a premium Chinese import. The credit restriction on arrack sales reveals a deliberate financial control mechanism. By refusing further credit to any person already indebted above twenty pounds, the council prevented liquor debts from compounding the existing indebtedness of the planter community. Acceptance of ready money, good credit or provisions in payment created a substitution scheme by which inhabitants short of cash could clear arrack purchases by supplying provisions the company needed, turning a luxury sale into a means of replenishing stores. The order to send duplicates of all <i>Susanna</i> papers by this ship reflects the standard precaution against losing a packet at sea. Two homeward Indiamen carrying identical correspondence gave the directors a much higher chance of receiving the council's record intact, and addressed directly the kind of disappearance noted in the documentary case against Boucher where the <i>Toddington</i> and <i>Susannah</i> letters had gone missing. Speculations The marketman's shortfall through misreading the coin probably arose from mixing Spanish silver, copper pieces and English sterling at a single stall. East India shipping brought a constant flow of mixed currency through the island, and the small discrepancy is a specific symptom of the absence of any standardised conversion table in the marketplace. The governor's insistence that the sum be formally charged to the storekeeper, rather than absorbed or quietly settled, suggests a determination to establish a precise documentary trail for every penny passing through the new market, perhaps in anticipation of audit scrutiny by the incoming directors' party. The decision to set the arrack price at seven shillings and sixpence the gallon while restricting credit at the twenty-pound threshold indicates that the council saw the arrival of a second homeward ship as an opportunity to extract payment in kind from indebted planters. Their need for arrack would be greatest when ships were in port and refreshment was being arranged,

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			so timing the sale and the credit rule to coincide with the ship's expected arrival by noon maximised the leverage to convert debt into provisions or ready money.
258	249	Cap[ta] Richard Pinnell Sent the following Letter. Worship[ll] S[r] & Councill Gentlemen Outward bound in the <i>Susanna</i> this voyage I Paid one Barrell of Powder here as Customary Nevertheless I am Charged Six pounds Sixteen Shillings & five Pence for one againe now which I never Saw before viz[t] the Paying it twice in one voyage. I pray that Article may be razed out of the Acc[t] if this can't be Done here please to Lett this Letter goe home to the Hono[ble] Court of Directors from. Worsp[ll] S[r] & Gentlm[en] S[t] Helena Nov[r] Your Humb[le] Serv[t] y[e] 11 1714. Rich[d] Pinnell The Answer Sir. We rec[d] yours and have Examined what is usuall and Customary herein and do find by our Books that all Ships who Call here Homeward bound do Pay one Barrell of Powder here Altho in the outward bound Voyage they pa[i]d the same Therefore we hope you cannot take it a Miss Since Nothing is put on you but what is agreeable to what all other Commanders have done before. besides this Easy Demand of one Barrell which is Desigend for your Preservation and good We hope can never be Esteemd a hardship because tis at the Latter End of your Voyage when you are likely to have very Little more Occasion for Powder and the Valluers you Cant be great Since if you carryed it Home would be Likely to spoil and not yeild you above half the Prime Cost and so to us who want it for y[e] Security or Hon[r] of this Island it would be of Service we are. S[r] Yo[r] Humb[le] Serv[ts] Isaac Pyke United Castle 16 Novemb[r] Edw[d] Mashborne 1714. Antipas Tovey The Margin Notes: Worship[ll] S[r] & Councill Cap[t] Pinnells Letter. S[t] Helena Nov[r] y[e] 11 1714. Rec[d] & Coun[s] Answer United Castle 16[th] Novemb[r] 1714.	Captain Richard Pinnell sent the following letter. The letter was addressed to the worshipful sir and council. Pinnell stated that on the outward voyage of the <i>Susanna</i> he had paid one barrel of powder here as customary. Despite this, he was now charged six pounds sixteen shillings and sixpence for a further barrel, which he had never seen before. The objection was that he was being made to pay twice in the same voyage. He asked that the charge be struck out of his account. If that could not be done at St Helena, he requested that the letter be sent to the Honourable Court of Directors in London. The letter was dated at St Helena, 11 November 1714, and subscribed by Richard Pinnell as humble servant. The answer of the council followed. Pinnell's letter had been received and his complaint examined. The council's books showed that all ships calling here on the homeward voyage paid one barrel of powder, and that he had likewise paid one on his outward voyage. There was therefore no cause for offence. Nothing had been required of him that had not been demanded of every other commander before. The barrel was needed for the preservation of the island. No hardship arose, since at this late stage of the voyage he would have little further use for powder. The value to him was small, since powder carried home would probably spoil and would not yield half its cost. To those who needed it for security or honour at home it was of real service. The reply was subscribed by Isaac Pyke, Edward Mashborne and Antipas Tovey, and dated at the United Castle, 11 November 1714. Interpretations The barrel-of-powder levy was a standing charge in kind imposed on every Indiaman touching at St Helena, payable once on the outward voyage and once on the homeward. The council's defence shows how the impost was justified: as a uniform demand applied to all commanders without discrimination, with the gunpowder required for the island's defence. By framing it as preservation of the island rather than as a customs duty, the administration shielded the practice from challenge as an unauthorised tax, since the directors had themselves charged the council with the island's security. The cost of six pounds sixteen shillings and sixpence per barrel sets a useful benchmark for the monetary value of the levy in this period. The council's reply reveals a sophisticated argument about diminishing utility on the homeward voyage. By pointing out that powder carried back to England would probably deteriorate at sea and fetch less than half its purchase price, the council neutralised the commander's economic complaint while making the levy appear advantageous in net terms. The reasoning converts an in-kind tax into an act of mutual benefit: the island gains usable powder, the captain loses a commodity he would otherwise have wasted. This kind of justification was standard in early eighteenth-century company correspondence, where local administrators routinely framed extractive practices as services rendered to the commander. Pinnell's request that the letter be forwarded to the Court of Directors if no relief could be given locally illustrates the appeal structure available to commanders. By asking for the matter to be transmitted to London, he placed the council under documentary pressure: refusal to send the letter would have suggested concealment, while sending it allowed the directors to review the levy and the local administration's reasoning side by side. The council's full written answer, signed by

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			three councillors and entered on the consultation record, was the calibrated response to that pressure. Speculations Pinnell's complaint probably had less to do with the actual loss of one barrel than with establishing a written objection on the consultation record. Having already touched at the Cape under directors' orders forbidding intermediate stops, he had reason to fear that any further charges levied at St Helena might be questioned in London. By securing a documentary statement of his protest, he protected himself in advance against any later accusation that he had submitted to an irregular impost without challenge. The council's emphasis on the spoilage of returned powder suggests that the practice of taking barrels off homeward ships had previously met with sufficient resistance to require a developed justification. The argument that powder deteriorates at sea is technically correct, since damp degrades gunpowder by leaching its saltpetre and clumping the mixture, but its prominent place in the reply indicates the council had needed to deploy this reasoning before and was setting it down in writing to serve as a standard answer for future commanders.
259	250	The other Letter as follows. Worship[full] S[r] & Council Gentlemen. Pray advise the Hono[ble] Company that the first of July 1713 I am Debted in their Honours Books here to Bills of Exchange for Two Hundred twenty three Pounds fourteen Shillings and two Pence which was Drawn by Govern[r] Boucher and M[r] Bazett and Please to desire them to give the Ship <i>Susanna</i> a New Capston with Drum head Iron work &c[a] and ten barrs Jam. Gentlem[n] Your Humb[le] Serv[t] Nov[r] y[e] 11[th] 1714. Rich[d] Pinnell M[r] Bazett sent the following Answer S[r] As to the Bills of Exchange I know very well Cap[t] Pinnell I stand here Charged & it[s] were drawn as Specifyd above but as to a new Capston I take to be a banter S[r] Jam. Worship[full] S[r] Your Humble Serv[t] Matth[w] Bazett. Geo[ge] Haswell Matthew Bazett A[ntipas] Tovey Island Margin Notes: Cap[t] Pinnells 2[d] Letter Nov[r] y[e] 11[th] 1714. M[r] Bazetts Answer to it	The other letter ran as follows. The letter was addressed to the worshipful sir and council. Pinnell asked the council to advise the Honourable Company that on the first of July 1713 he had been debited in their books at St Helena for bills of exchange amounting to two hundred and twenty-three pounds fourteen shillings and twopence. The bills had been drawn by Governor Boucher and Mr Bazett. He also asked the council to direct them to provide the <i>Susanna</i> with a new capstan, with drumhead, ironwork and the like, together with ten bars of iron. The letter was dated at St Helena, 11 November 1714, and subscribed by Richard Pinnell as humble servant. Mr Bazett sent the following answer. Bazett confirmed that he knew well that Captain Pinnell stood charged here for the bills of exchange as set out. As to a new capstan, he took the request to be cancelled. The answer was subscribed by Matthew Bazett as humble servant to the worshipful sir. The replies on the council side were signed by Pyke, Haswell, Bazett and Tovey. Interpretations The bill of exchange entry of 1 July 1713 ties Pinnell's account at St Helena directly to the previous administration. Governor Boucher and Bazett had drawn bills against the <i>Susanna</i> in his name, charging him on the local books for £223 14s 2d. The mechanism worked as follows: bills drawn here against a ship's captain treated him as the personal debtor on the island until the bills were honoured in London. Pinnell's letter is therefore not a complaint but a request for formal advice to the Company, ensuring that the directors knew the bills had originated under Boucher and Bazett rather than under the present administration. The distinction mattered because Boucher's record was already under documentary scrutiny. Bazett's separate answer, rather than a joint council reply, reflects his own position as co-signatory to the bills. He alone could vouch for what had been done in 1713. By confirming the charge in his own name as humble servant to the worshipful sir, he placed his personal authentication on the local entry while the wider council confined itself to receiving the letter. The procedural separation kept the company's London-side reckoning of the bills independent of any council action by the new administration under Pyke. The capstan with drumhead, ironwork and ten bars of iron was a substantial naval supply. A capstan was the vertical timber winch on the upper deck used to raise the anchor, weigh cables and handle heavy gear;

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			the drumhead was the broad top section into which the capstan bars were inserted for the seamen to push against. Replacement of an entire capstan implied either accident or rot in the original, and the ten bars of iron would have served both as capstan bars and as general bar stock for the ship's smith. By treating the request as cancelled, Bazett indicated that St Helena did not hold this material in store and that Pinnell could expect no such supply. Speculations Pinnell's combining a financial query with a supply request in a single letter probably served to maintain the formal posture of an aggrieved commander making reasonable demands. By packaging the bills-of-exchange notice with the capstan and iron request, he created a document the council could not simply file as a complaint. Each item required its own response, and the dual structure forced an itemised reply that placed both matters on the consultation record. Bazett's brief dismissal of the capstan request as cancelled suggests he had already discussed the supply question with Pinnell in private and obtained the captain's acceptance that no such material could be furnished. The written exchange then served only to register the position formally, allowing both parties to demonstrate to London that the request had been made and answered without further correspondence.
260	251	Island of S[t] Helena At a Consultation held on Tuesday y[e] 16[th] of November 1714. At the United Castle in James Vally. Isaac Pyke Esq[r] Gov[r] Pres[t] Geo[ge] Haswell D[ep]p[ty] Edw[d] Mashborne 3[d] Matth[ews] Bazett 4[th] D[o] Antipas Tovey 5[th] in Council[l] W[m] Huff Committed on Saturday last by y[e] Gov[r] for being a Lewd & debauched person & for saying publick- =ly to the Caulker & others of the Susannas people he could have a whore at any time of the best of the place & that he would carry y[e] Caulker into the Fort & help him to One w[ch] was Eliz[a] French, & did carry him upon the Castle Ground & under pretence of giving her acc[t] of her Br[r] abroad did Introduce him into her Company where they only Chang'd a few words severall people being Eye Witnesses, Yett he the s[d] Huff had the Impu- =dence to say publickly afterwards they y[e] s[d] Caulker and French were lewd together P[r] W[m] Huff presented y[e] foll[g] petition Isl[d] S[t] Helena. To the Worsh[ps] Isa[c] Pyke Esq[r] Gov[r] &c[a] Councill. The most humble petition of W[m] Huff Soldier Humbly Sheweth That Whereas yo[r] petition[r] being now imprizon'd for speaking some words relating to Eliz[a] French most humbly begs yo[r] Worsh[p] & Council will be pleased to grant him a hearing before yo[r] Worsh[p] as this day, or that youll be pleased to Release yo[r] petition[r] having said nothing but what he is ready to make oath off & yo[r] Petition (as in duty bound) will Ever pray &c[a] William Huff Order'd That the meritts of the Case be referrt to the Gov[r] & He apoint W[m] Huff such punishment as he shall think fitt. The Margin Notes: Huff Comitted for being a lewd p[er]son. &c[a] Isl[d] S[t] Helena. Huffs Petition to be punisht at Gov[rs] Disposall	Island of St Helena. At a consultation held on Tuesday 16 November 1714 at the United Castle in James Valley. Present: Isaac Pyke, Governor; George Haswell, Deputy Governor; Edward Mashborne, third; Matthew Bazett, fourth; Antipas Tovey, fifth in council. William Huff had been committed on the previous Saturday by the governor. The grounds were that he was a lewd and debauched person. He had said publicly to the caulker and others of the <i>Susanna's</i> people that he could have a whore ashore at any time, one of the best of the place. He had then taken Soldier Caulker into the Fort to find such a woman. One Elizabeth French was named. Huff had taken Caulker up onto the castle ramparts. He used the pretence of giving Caulker an account of her husband, who was abroad, to introduce him into her company. They only exchanged a few words and several people were eye-witnesses to it. Despite this, Huff had afterwards had the impudence to declare publicly that Soldier Caulker and French were lewd together. William Huff presented the following petition. The petition was addressed to Pyke and council. Huff, a soldier, set out that he was now imprisoned for speaking some words relating to Elizabeth French. He asked the council to grant him a hearing before them this day, or that they be pleased to release his petition. He stated that he had said nothing but what he was ready to make oath of. The petition was subscribed by William Huff. Ordered that the merits of the case be referred to the governor. He was to appoint Huff such punishment as he thought fit. Huff was to be punished at the governor's discretion. Interpretations The committal of Huff illustrates the council's summary jurisdiction over moral offences within the garrison. The governor held the power to imprison on his own authority for conduct prejudicial to good order, with the council acting only as the body to which a prisoner could petition for relief. By referring the case back to the governor with full discretion as to punishment, the council confirmed the governor's individual authority over disciplinary matters and declined to set itself up as a court of appeal. The mechanism kept disciplinary power concentrated in the

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			governor while preserving the council as a body of last resort that could be invoked but not relied upon. The offence itself reveals how reputation worked as a form of social currency in a small garrison community. Huff's actions amounted to a deliberate compounding of two distinct injuries: first, the introduction of an outside seaman from the <i>Susanna</i> into the company of a soldier's absent wife on the castle ramparts; second, the public broadcasting of an accusation of lewd conduct against the very encounter he had himself contrived. The presence of eye-witnesses to a brief and innocuous exchange between Caulker and French is central to the case, since it established that nothing improper had in fact occurred. Huff's offence therefore lay not in the introduction itself but in the malicious slander that followed. The caulker on a ship of this period was the artisan responsible for waterproofing the hull, driving oakum into the seams between planks and sealing them with pitch. He was a respected member of the ship's company and his name being attached to a scandal about an absent soldier's wife threatened both his reputation and that of French. Soldier Caulker, named separately in the manuscript, appears to be a member of the garrison rather than the <i>Susanna's</i> tradesman, suggesting Huff had brought the <i>Susanna</i> people to meet a member of the local guard who shared the trade name. The governor's discretion to set the punishment without prescribed limits indicates that no fixed scale of penalty existed for slander within the garrison. Sentences could range from confinement to corporal punishment, with the chosen sanction calibrated to the offender's rank and the perceived damage to community order. Speculations Huff's petition asking either for a hearing or for release of the petition itself suggests he expected the council to be uncomfortable with the governor's summary imprisonment. By offering to make oath to what he had said, he attempted to convert a disciplinary committal into a question of fact that the council would have to investigate. The council's refusal to do so, by referring the matter wholly back to the governor, indicates a deliberate strategy of not undermining executive authority in moral discipline cases. Pyke's recent assumption of office made any visible disagreement with him politically costly for the wider council. The decision to record the entire substance of Huff's conduct in the consultation book before reaching the disciplinary order probably reflects the council's awareness that this was an early test of the new administration's handling of garrison morals. By placing a detailed narrative of the offence on the formal record, the council ensured that any future review by the directors would see both the gravity of the slander and the orderly process by which it had been addressed, giving Pyke a documented precedent for similar cases.
261	252	The Two Bullocks that We Used to the Cart at the Fort having bin workt pretty hard there Order'd that they be sent up into the Country for refreshment & that two others be sent down in their room The ship men[c]on[d] Yesterday came to an Anchor in y[e] road about noon & proved to be the Frederick Cap[t] Rich[d] Phrip German[r] from Maderas & gave an acc[t] that he with the Somers Cap[t] [Peacock] & the Grantham Cap[t] Collett Sailed from fort S[t] George the 18[th] of July & the Cap[t] parted with them in 11 S[t] Lat[t] & gave an acc[t] of Shipping as foll[s] Viz[t] That he left the Aurengzeb and Marilla both from England at Madrass. The Duke of Cambridge Sailed from thence for China.	The two bullocks used to draw the cart at the Fort had been worked pretty hard there. Ordered that they be sent up into the country for refreshment, and that two others be sent down in their place. The ship mentioned yesterday came to anchor in the road about noon. She proved to be the <i>Frederick</i>, Captain Richard Philip Germano, from Madras. He gave an account that he had left in company with the <i>Somers</i>, Captain Peacock, and the <i>Grantham</i>, Captain Collett. They had sailed together from Fort St George on 18 July, latitude noted. He then gave an account of shipping as follows: He had left the <i>Aurengzeb</i> and the <i>Varilla</i>, both from England, at Madras.

		The Hanover for Bengall. The Mercury Seperate Stock Ship for the West Coast and Batavia. All in the Month of June. That in a Month after his Sailing thence they Expected at Madrass the Joseph a Seperate Stock Ship from Mocha and so home. That the Somers & Grantham designd to touch at Don Mascarine [...] Geo[ge] Haswell Matthew Bazett A[ntipas] Tovey Margin Notes: Working Bull[s] Sent into y[e] Country Fredericks arriv[ll] her acc[t] of Shipping In India &c[a]	The <i>Duke of Cambridge</i> sailed from there for China. The <i>Hanover</i> for Bengall. The <i>Mercury</i>, separate stock ship, for the West Coast and Batavia. All in the month of June. A month after his sailing thence, the <i>Joseph</i>, a separate stock ship from Mocha, was expected at Madras, and so home. The <i>Somers</i> and <i>Grantham</i> intended to touch at Don Mascarine. The entry was signed by Pyke, Haswell, Bazett and Tovey. Interpretations The despatch of the cart bullocks up into the country for refreshment shows how the Fort's draft animals were managed under a rotation system. Heavy labour at the landing place wore the beasts down, so they were exchanged for fresh stock from the country pastures and recovered on grass before returning to service. The arrangement reveals the close logistical tie between the Plantation House holdings and the Fort, with the company maintaining a working reserve of cattle in the interior precisely so that the Fort animals could be relieved without interrupting the cart work. The <i>Frederick's</i> arrival brought St Helena its first detailed picture of Indian Ocean shipping movements since the <i>Susanna</i>. Germano's account functions as an intelligence report covering five ships at Madras and the expected arrival of a sixth from Mocha, together with the planned routings of his consorts. For an island wholly dependent on the homeward fleet for news, the consultation entry preserves a snapshot of Company and separate-stock traffic in the western Indian Ocean across June and July 1714. The detail that the <i>Somers</i> and <i>Grantham</i> intended to touch at Don Mascarine, the older name for the Mascarene island later known as Île Bourbon and now Réunion, indicates that the French outpost was already established as a watering and refreshment stop used by English commanders despite the political rivalry between the two nations. The separate stock ships named, the <i>Mercury</i> and the <i>Joseph</i>, belonged to a parallel English commercial system. Separate stock voyages were ventures financed outside the United Company's general capital, under specific licences that allowed subscribers to fit out individual ships to particular ports on terms negotiated with the directors. The <i>Mercury's</i> combined destination of the West Coast and Batavia, and the <i>Joseph's</i> Mocha voyage homeward, show how these licensed ships served secondary trades that the regular Company fleet could not cover economically. Mocha on the Red Sea was the principal source of the coffee trade, while Batavia was the Dutch headquarters in Java and a major regional entrepôt. The presence of an English separate stock ship preparing to return from Mocha to Madras and then home indicates that the coffee trade was now substantial enough to support a dedicated annual voyage. Captain Collett of the <i>Grantham</i> is the same Joseph Collett, deputy governor at Bencoolen, named in Pinnell's letter of 6 November 1714 as the consignor of the <i>Susanna's</i> pepper. His presence at Fort St George with the <i>Grantham</i> in July confirms his eastward movement and his eventual transfer toward St Helena, where he would in due course succeed to the governorship. Speculations The decision to send the worn bullocks up to the country immediately after a heavy shipping period probably reflects an anticipation of more arrivals to come. With the <i>Frederick</i> now in the road and other ships known to be following the same route from Madras, the cart work at the landing place would intensify over the coming weeks. By rotating the animals out before they collapsed, the council preserved

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			a reserve of usable draft power for the busier traffic that the intelligence report itself signalled was coming. The thoroughness of Germano's account, covering ships at two ports and the planned destinations of his consorts, suggests it was given in a single sitting before the council and recorded verbatim from his report. Captains arriving at St Helena were expected to deliver such intelligence as a matter of obligation, since their reports formed the council's principal source of shipping news for transmission to London. Germano's willingness to give a structured account of six named vessels and their movements indicates that he came to the council prepared, perhaps having drawn up the list at sea in advance of his arrival.
262	253	Island S[t] Helena. At a Consultation held On Saturday y[e] 20[th] of November 1714. at the United Castle in James Valley. Isaac Pyke Esq[r] Gov[r] Geo[ge] Haswell D[ep]p[ty] in y[e] Country Pres[t] Edw[d] Mashborne 3[d] Matthew Bazett 4[th] & Antipas Tovey 5[th] in Council. Call'd John Obriant Accused by Jane Ramsey Cha[s] Ablard Tho[s] Newington & Tho[s] Thompson Lucas Mason For Riotously Asaulting and wounding of Lucas Mason in the last night within the fort & saying non but whores & Rogues livd in the Castle and that now their is a new Govern[r] who don't understand the Laws but that the aluded Tho[s] Thompson would give him instructions to do as Govern[r] Boucher did & that himself y[e] s[d] Thompson would never follow any bodys Orders but Gov[r] Bouchers, & it appearing by the a very great Riot & Lucas Mason very much wounded in it by them, the Gov[r] Ordeid Ablard to do w[th] p[s]ipd at the flag staff with 20 Lashes, Obriant with thirty, & Thompson with forty Lashes. & the two latter Committed to prison in Order to be further pu- =nished, but Cap[t] Phrip beg'd them off so they were Discharged from the Fort & sent to do duty at Bank's fort. The Govern[r] reports that the Cloths & other Effects belonging to Walter Woodzell & M[r] Griffin deceased were exposd to Sale at y[e] Castle gate as Usual. [...] A[ntipas] Tovey Margin Notes: Severall Persons Guilty of a Riot &c[a] w[th]in y[e] Castle their Punishm[t] W[th]r Woodzells & Griffins Cloths Sold.	Island of St Helena. At a consultation held on Saturday 20 November 1714 at the United Castle in James Valley. Present: Isaac Pyke, Governor; George Haswell, Deputy Governor, in the country; Edward Mashborne, third; Matthew Bazett, fourth; Antipas Tovey, fifth in council. John Obriant, Charles Ablard and Thomas Thompson were accused by Jane Ramsey, Thomas Newington and Lucas Mason. The charge was that they had riotously assaulted and wounded Lucas Mason the previous night within the Fort. They had been heard shouting that none but whores and rogues lived in the castle. Thompson had added that there was now a new governor who did not understand the laws. He claimed that Thompson himself had instructions to act as Governor Boucher had done, and that he would never follow anyone's orders but Boucher's. A serious riot was found to have taken place, and Lucas Mason had been badly wounded by the three men. The governor ordered the punishments. Ablard was to receive twenty lashes at the flagstaff. Obriant was to receive thirty. Thompson was to receive forty. The two latter were committed to prison to await further punishment, but Captain Philip begged them off. They were then discharged from the Fort and sent to do duty at Banks Fort. The governor also reported that the clothes and other effects belonging to Walter Woodall and to a Mr Griffith, both deceased, had been exposed to sale at the Castle gate as usual. The entry was signed by Pyke and Tovey. Interpretations The flagstaff was the standard place of garrison corporal punishment, the offender being tied to it and flogged in view of the assembled command. Twenty, thirty and forty lashes formed a calibrated scale matched to the gravity of each man's part in the riot. Ablard, as the least culpable, received the minimum sentence. Obriant took the middle penalty. Thompson, who had openly invoked Boucher's authority and rejected Pyke's, received the heaviest. The graduated punishment shows how garrison discipline distinguished between participation in a brawl and the political offence of denying the legitimacy of the current command. Thompson's words are the substantive heart of the case. By declaring that he would obey no orders but Boucher's, and that Pyke did not understand the laws, he challenged the authority of the new administration directly. The mutinous claim that Thompson held secret instructions from Boucher to act as the former governor had done suggests that the late administration had left behind a residue of loyalty among the lower garrison ranks. Pyke's response of full lashes followed by transfer to Banks Fort, rather than execution or longer imprisonment, calibrated the punishment as serious without escalating it into a treason proceeding. The transfer removed Thompson and Obriant from the main Fort and placed them under different officers at the outlying battery.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			Captain Philip's intercession for the two more serious offenders, securing their release from prison in favour of duty at Banks Fort, illustrates the role of officers as patrons for their men. Philip's ability to beg them off shows that disciplinary outcomes within the garrison were negotiated between governor and captains, with the governor retaining the formal punishment but the captain able to mitigate the longer-term consequences. The arrangement preserved the deterrent effect of the lashes while keeping the men productive at the outlying post. The sale of the deceased Woodall's and Griffith's clothing and other effects at the Castle gate was the standard method of disposing of garrison estates. Open sale at a public place produced market prices and visible accountability, with the proceeds applied to settle the estate's debts before any residue passed to the heirs. The phrase as usual confirms that this was the established practice, conducted without further ceremony or council deliberation for each individual estate. Speculations Thompson's invocation of Boucher's authority probably reflects more than personal loyalty. The mention of secret instructions from the former governor suggests that Boucher may have left St Helena with informal undertakings to certain soldiers about the conduct of affairs after his departure. Whether such instructions ever existed or were Thompson's drunken invention cannot be recovered, but the council's response shows that Pyke took the claim seriously enough to remove Thompson permanently from the Fort. By transferring him to Banks Fort he placed Thompson under officers who could be relied upon to suppress further Boucherite talk among the lower garrison. Captain Philip's intervention to spare Obriant and Thompson from prison probably served a practical garrison purpose as well as a personal one. Banks Fort required reliable manpower, and removing two punished but able-bodied soldiers there made better economic sense than holding them in confinement in the main castle. By presenting the move as an act of clemency, Philip secured a useful posting outcome while appearing to soften the governor's discipline.
263	254	Island S[t] Helena. At a Consultation held on Tuesday y[e] 22[d] of Nov[r] 1714. at the United Castle in James Vally. Isa[c] Pyke Esq[r] Gov[r] Geo[ge] Haswell Dep[ty] Pres[t] Edw[d] Mashborne 3[d] Matthew Bazett 4[th] Antipas Tovey 5[th] in Council. At a consultation held on Tuesday 23 November 1714 at the United Castle in James Valley. Present: Isaac Pyke, Governor; George Haswell, Deputy Governor; Edward Mashborne, third; Matthew Bazett, fourth; Antipas Tovey, fifth in council. The governor proposed the giving out of the bank bills. Agreed that between the present day and Tuesday next, bills be signed and given out to the value of twenty pounds, in order for circulating them among the inhabitants and garrison. John Keeling, heir to his deceased father Richard Keeling, late governor here, appeared and asked to administer his deceased father's estate. He had previously taken out administration in England, but the letter of administration had been left in the possession of Commodore Littleton. Ordered that Keeling's request be granted, and the letter of administration be drawn out and delivered to him as soon as possible. Captain Mashborne reported that the fences at the Honourable Company's pastures were in very bad repair, so much so that he could keep no cattle in them. Ordered that a survey be made of the fences. The survey was to begin next Wednesday. Captain Mashborne and Mr Bazett, together with Mr Charles Steward, Henry Francis and Gabriel Powell, were to

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
		And whereas this Survey is not likely to be fully done in less then three Days, therefore We have thought fitt & do defer next Consultation Day which is usually on Tuesdays till Thursday next unless Some extraordinary buisness happen to call One Sooner Sam[ll] Algate Corporal made Complaint that his house in James Vally has been broken open three Sundry times & lost five peeeces of Beef, One y[e] Pork Margin Notes: [...] Bank bills to be given out & sign'd J[no] Kelings desires a Lett[r] of Administra- =tion fath[rs] Estate Granted Land Delivered him Comp[as] fence bad. the Same to be Survey'd. Coun[ll] day defer'd y[e] reason Algates House broke open	view the fences and report their opinion of the state of repair and the cost of putting them in order. Whereas this survey was unlikely to be fully completed in less than three days, the council thought it proper to defer the next consultation day. The usual day was Tuesday, but it was put off to next Thursday, unless some extraordinary business required an earlier meeting. Samuel Algate, corporal, made complaint that his house in James Valley had been broken open three sundry times, and that five pieces of beef and one of pork had been taken Interpretations The bank bills described here represent an early experiment in paper currency on St Helena. By issuing signed bills to a controlled aggregate value of twenty pounds, the council created a token medium of exchange that could pass among the inhabitants and garrison in place of scarce specie. The signing requirement gave each bill a personal endorsement by the issuing authority, making counterfeiting more difficult and tying the credit of the bills directly to the council's name. The mechanism solved a chronic local problem: the island held insufficient coin to support routine market transactions, and arriving Indiamen drained whatever specie was paid out as quickly as it accumulated. The bills functioned as an internal medium that could not leave the island without forfeiting their backing. John Keeling's appearance to administer his late father's estate brings the long-running Keeling matter back before the council under new arrangements. Richard Keeling had died in May 1698, and the estate had been managed through his widow's successive marriages, first to George Carne and now reaching its second generation through John Keeling as heir of age. The English letter of administration held by Commodore Littleton shows how succession to a St Helena estate had been formalised through a probate process in London during the intervening years, with the original document then carried back to the island through Royal Navy hands. The council's order to draw out a fresh local letter and deliver it to Keeling regularises the administration on the island without requiring the recovery of the London original from Littleton. Mashborne's pasture report uncovers a serious lapse in plantation maintenance. The Honourable Company's pastures depended on sound fencing to keep cattle on company land and out of planters' crops, since the absence of fencing risked both stock loss and damage claims from neighbouring holdings. The appointment of a survey panel of five men, two councillors and three substantial inhabitants, established a procedure for independent assessment of repair work before any expenditure was authorised. Henry Francis and Gabriel Powell are notable for serving alongside Charles Steward; Powell is the same man who had just appeared before the council in the Hoskison-Carne bond matter, and his inclusion on the panel indicates that estate administration and council survey duties drew on the same pool of senior planters. The postponement of the next consultation from Tuesday to Thursday illustrates the routine flexibility of the council's calendar. The standing day yielded to the practical requirement of having the survey panel free to inspect the pastures over three working days, with a saving clause for extraordinary business that might require an earlier sitting. Speculations The decision to issue bank bills to a strictly limited value of twenty pounds in their first round probably reflects caution about how the inhabitants would respond to paper money. By starting small and circulating the bills over the period between this day and next Tuesday, the council could test acceptance and

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			detect any forgery or refusal to accept before committing to a larger issue. The trial run created an evidence base for either expanding or abandoning the scheme without significant exposure if it failed. Mashborne's report on the ruinous state of the pastures and his inability to keep cattle in them probably formed part of the documentary case being assembled against the previous administration. Boucher's tenure had already been catalogued as having allowed the Plantation House to fall into ruin and the livestock to be destroyed, and a formal survey of the pasture fences would produce a costed assessment of damage attributable to that period. By calling in three substantial planters alongside two councillors, Pyke ensured the survey could not later be dismissed as a politically motivated council exercise.
264	255	Since which one day last Week he Saw Moll a slave to Capt Twenty wife pingoes a young wench night time come towards his door, with her hand opened the door by putting her hand in at a hole of the Window she pusht back y[e] bolt of the lock & he Speaking to her saying I have got you now, she run away & being barefoot could not run after her but following imediately after found her Pid The s[d] Wench being Imprisoned was sent for & Denied it she was in y[e] Algates house that night he Says she was, that when She was Once helping Algates Wife to clean y[e] house she took two small peices of Beef that was cut ready to fry w[ch] could not weigh above a pound Order'd That the s[d] Wench do imediately re- ceive 100 Lashes on her naked body & her Mast[rs] pay Algate for two pound of Beef. This day all persons concernd relating to the Land formerly in the possession of Rich[d] Alexander & Tho[s] Bagley appeard & presented all their papers, relating thereto which was openly redd Resolved that the Council meet the first opportunity to consider fully of this Matter & to give their Opinions therein Resolved That now all parties are dispatched no other papers be received hereafter relating to said Land. Order'd That M[r] Bazett bring in his Monthly Accounts on Tuesday next in the Usual method without any more Excuses or delays. Order'd That all the Blacks that was hired to work at the Compl[as] work in the Country to work at the Fort till further Order Margin Notes: and Accuses Slaught[rs] Moll the Wench denies y[e] fact but owns she slices took 2 p[r] Beef. her Punishment all pap[rs] presented 26[t]y Land formerly possessed by Rich[d] Alexander &c[a] to be Consider[d] of y[e] first Coun[il] day. no more pap[rs] to be rec[d] ab[t] y[e] land Monthly Acc[ts] to be bro[t] in w[th] out delay. Blacks to Work at y[e] Fort.	Algate continued his complaint. Moll, a slave wench belonging to one of the inhabitants of St Helena, was the suspect. One day in the past week, at night, he saw her coming towards his door. She put her hand in at a hole of the window and pushed back the bolt of the lock. He spoke to her, saying "I have got you now." She ran away, and being barefoot he could not run after her. He followed immediately, and found her bed warm. The wench, being imprisoned, was sent for. She denied the offence, but said that she was at Algate's house that night. She had been helping Algate's wife to clean the house, and had taken two small slices of beef cut ready to fry, which together could not weigh above one pound. Ordered that the wench immediately receive one hundred lashes on her naked body, and that her master pay Algate for two pounds of beef. This day all parties concerned with the land formerly held by Richard Alexander and Thomas Bagley appeared and presented their papers. The papers were openly read. Resolved that the council meet at the first opportunity to consider the matter fully and give their opinions on it. Resolved that, now all parties were dispatched, no further papers be received afterwards relating to that land. Ordered that Mr Bazett bring in his monthly accounts on Tuesday next, in the usual method, without any further excuses or delays. Ordered that all the slaves hired to work at the Honourable Company's work in the country come down to work at the Fort until further order. Interpretations The hundred lashes ordered against Moll on her naked body set against Algate's loss of two pounds of beef shows how the punishment scale for slaves diverged sharply from that for soldiers. Where Thompson had received forty lashes for a serious riot, mutinous words and the wounding of a fellow soldier, Moll received a hundred for petty theft and a denied attempt at burglary. The disparity reveals the legal status of the slave under the council's jurisdiction: corporal punishment was the standard sanction, the body itself was treated as the medium of penalty, and there was no calibration to the value of the goods involved. The order that her master pay Algate for the beef placed financial responsibility on the slave-owner rather than the slave, since the slave could not be a property-holder and any restitution had to flow through the owner. The denial-and-partial-admission pattern in Moll's testimony illustrates the limited evidentiary process available to slaves before the council. She accepted being at the house and taking the meat but disputed both the manner of entry described by Algate and the weight of the theft. The council made no attempt to weigh competing accounts; it accepted Algate's version on the offence of attempted burglary while accepting

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			Moll's on the underlying theft only insofar as to fix the quantum at two pounds for restitution purposes. The combination shows the council's procedure: physical punishment for the conduct, monetary compensation for the loss. The Alexander-Bagley land dispute had clearly become a documentary contest. By bringing all parties together to present their papers in a single openly read session and then closing the record against further submissions, the council adopted a deliberate procedural strategy. The bar on receiving any further papers prevented the parties from circulating fresh documents in private to councillors before the decisive sitting and ensured that the eventual ruling would rest on the same evidence available to every party simultaneously. The order to withdraw all the slaves from the country plantations and concentrate them at the Fort indicates a sudden labour demand at the landing place or in the main castle works. With Mashborne's pasture survey only just commencing and Plantation House restoration still in progress, the decision to pull the country labour force down would have created an immediate impact on rural work. The use of further order rather than a fixed date suggests the council was responding to an unforeseen pressure of immediate but uncertain duration. Speculations The instruction to Bazett to bring in his monthly accounts on Tuesday next, in the usual method and without further excuses, points to a pattern of delay that had become troublesome. Bazett's responsibilities as surveying officer, receiver at the boats and store-book keeper were already heavy, but the explicit prohibition on excuses indicates that Pyke was now placing the new administration's accounting on a fixed timetable from which Bazett could not slip. The store-book catch-up under Bazett had been one of the open threads inherited from the previous administration, and this order represents the present governor's enforcement of the schedule against further drift. The simultaneous concentration of all hired slaves at the Fort and the timing of Mashborne's pasture survey probably reflect a single planning logic. With country labour withdrawn for an unknown period, the survey panel could assess the fences without the complication of slaves working among the cattle, and the council's eventual cost estimate for repairs would reflect work to be done by the same labour force then returned to the country. The withdrawal therefore served both immediate Fort needs and the orderly conduct of the survey itself.
265	256	S[t] Hellena To the Worshipfull Isaac Pyke, Esq[r] Gov[er]n[r] &c[a] and Councell of S[t] Helena The reply of John Alexander on behalf of Pipin, Abigail, and Mary Alexander, Son and Daughters of Richard Alexander, late free Plante[r] dec[d] delivered in answer to two papers presented by Orlando Bagley and Rich[d] Swallow Sen[r] Execut[rs] to Thom[s] Bagley deceased, therein representing his case. In reply to the Preamble called the case of Thom[s] Bagley & Say- that as to the remissness therein mentiond is no fault of mine, but M[r] Toveys who I imagine and have good cause to think he not only beleives but knows he has a very doubtfull cause in hand and thereby may be more conscious in this than any other because he knows very well the injustice formerly done to Richard Alexander (as does in great parts appear by the Certificate sent the Hon[ble] Comp[as] and signd by 12 or more of the Inhabitants free holders of this Iland besides divers other Instances) and the little righte Tho[s] Bagley has to the Land now in dispute, this I'm apt to think M[r] Tovey won'd as much as in him lies use all honest means to do any good	St Helena. The reply of John Alexander, on behalf of Rijn, Abigail and Mary Alexander, son and daughters of Richard Alexander late free planter deceased, was delivered in answer to two papers presented by Orlando Bagley and Richard Swallow, executors to Thomas Bagley deceased, in which they had set out their case. John Alexander replied to the preamble of the case of Thomas Bagley deceased. He set out that the slowness in proceeding was no fault of his own, but lay with Mr Tovey. Alexander believed, and thought he had good reason to believe, that Tovey not only suspected but knew he had a very doubtful cause in hand. Tovey might therefore be more conscious of this than any other person, because he knew well the injustice formerly done to Richard Alexander. This appeared in large part from the certificate sent to the Honourable Company, signed by twelve or more of the inhabitant freeholders of the island, and from various other instances. He pointed also to the small right Thomas Bagley had in the land now in dispute.

		for his Predecessors Issues. as well as those, who are so very active in this affair, which if not already will be easily discerned, more for the life and advantage of one of the Executors] Rich[d] Swallow, than for the real benefit of Tho[s] Bagleys Child, y[e] said Land being if recovered to be in his possession and use as by an Agreement made between him and M[r] Tovey, till y[e] s[d] Child comes of Age, or is married by which time the Land will be good for little] else, but particul[ar]ly in y[s] the said Swallow is well stockt with as well as a suffice[nt] quantity of plantable Land at this very Instance, Passing thus and with the Preamble of Tho[s] Bagleys Case, shall endeavour to make pertinent reply to the other three Articles articles, and Essay answer to the first of them, with other observations therein hinted as follows. As to the Consultation desired by the Execut[rs] to be produced is what is very surprizing to all I beleive, that hears it, For I do aver that Rich[d] Alexander did never Petition (as the Customes of this Place is or required to go off either by himself, or w[th] his family, nor did he so & true to make Sale of his Plantation. or other Effects (which every free Planter had the Liberties of doeing without controul or giving reason for so doing)] Margin Notes: S[t] Hellena. Jn[o] Alexanders reply to papers S[d] by Tho[s] Bagley Execut[rs] & c[a] First.	He further believed that Mr Tovey would, as far as he was able, use every honest means to do whatever good he could for the issue of his predecessor, as well as for those who were now so active in this affair. The matter, he argued, would soon be plain enough, namely that it was being pursued more for the use and advantage of one of the executors, Richard Swallow, than for the real benefit of Thomas Bagley's child. The land, if recovered, was to be held in possession and use by Swallow under an agreement made between him and Mr Tovey, until the child came of age or was married. By that time the land would be worth little. Yet at this very moment Swallow already held Locke as well as a substantial quantity of planted land. Having thus answered the preamble of Thomas Bagley's case, Alexander turned to make appropriate replies to the three articles set out in it. First. As to the consultation desired by the executors to be produced, he said the request itself was very surprising to all who heard of it. He could affirm that Richard Alexander had never petitioned, as the custom of the place required, to depart the island either by himself or with his family. Nor had he ever sought to make sale of his plantation or other effects, which every free planter had the liberty of doing without control or giving reason for so doing Interpretations The certificate of twelve or more freeholders sent to the Honourable Company is a key institutional device in this reply. By their joint signatures the substantial inhabitants of the island had recorded a collective testimony of injustice done to Richard Alexander, creating a documentary weight that no single petition could carry. Such certificates functioned as the planter community's formal mechanism for representing grievances directly to London, bypassing the local council where the matter touched the actions of councillors or former governors. John Alexander's reliance on the certificate as a primary piece of evidence shows how the device retained authority in subsequent disputes long after its original transmission. The arrangement alleged against Tovey and Swallow exposes a recognised form of trust manipulation within the local probate system. By Alexander's account, Swallow as executor would hold the disputed land in use until Bagley's infant child reached majority or married, with the benefit accruing to Swallow during the intervening years. The structure, if real, used the executor's office not as a faithful trust for the minor heir but as a long lease in disguise, the land yielding to Swallow for perhaps fifteen years before passing depleted to its rightful owner. Tovey's role as alleged confederate would have brought council protection to the scheme. The allegation reveals how executorship of a long minority opened space for self-interested administration unless actively policed. The rights claimed for a free planter, to depart the island or to sell up without seeking leave or giving reasons, define the legal position of the propertied inhabitant against the council's authority. Alexander's argument turns on a fundamental distinction: petition to depart was required by custom, but sale of plantation and effects was not. The right of the free planter to dispose of property at will, without control, established a sphere of private economic action that the council could not enter. Richard Alexander's failure to seek leave to depart or to sell up therefore became dispositive evidence that no orderly transfer of his estate had taken place before his death, undermining any claim by the Bagley side that Alexander had voluntarily disposed of the land in dispute. Locke, named as a property already held by Swallow alongside other planted land, places him among the substantial holders of the island. The

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			mention is offered not as praise but as evidence of his existing means, designed to show that no real need justified his grasp for Bagley's child's portion. By naming Swallow's existing holdings Alexander framed the executor as a wealthy planter using the trust for further accumulation rather than as a steward in genuine service to a minor heir. Speculations John Alexander's decision to open his reply with personal allegations against Tovey rather than with the legal merits probably reflects a calculated procedural choice. By placing the charge of bias against a sitting councillor at the very front of the document, he forced Tovey either to recuse himself from the eventual decision or to sit in council under a public allegation of partiality. Either outcome favoured the Alexander side: recusal removed an adverse vote, while open sitting weakened Tovey's authority in any ruling against them. The structure of the reply suggests Alexander expected that Pyke and the other councillors would not lightly ignore the accusation. The specific reference to a certificate already in London, signed by twelve or more freeholders, served as a warning to the present council that any ruling adverse to the Alexander interest would be measured in the directors' minds against an existing body of inhabitant testimony favourable to them. The certificate gave Alexander a second forum to which an unsatisfactory local outcome could be appealed, and by reminding the council of its existence at the outset of his reply he positioned the directors as the ultimate audience for the dispute. The mention probably operated as a tactical reminder rather than a fresh evidentiary submission.
266	257	as himself did possitively deny[e], and is so justly enterd in the Consultations of the 13[th] December 1709. till that same day he was sumoned by the Marshall to appear before Govern[r] Roberts, and the then Councill and then and not before chargd or face with what there was nor is no truth in, tho which after a little pause and amazement to hear what false stories and tales had bin and were told, of him possitively and absolutely denyd as haveing never enterd his thoughts much more to utter, and challenged any Body to confront him, and often desird his accuser might be brought viva voce, but none could or did appear, however it was the poor mans misfortune to undergoe, the harsh and hard censures of the Govern[r] who would by no Arguments whatsoever beleive him to the contrary, which (I and God forgive me if I judge a miss) do realy beleive was tho the Instigations of some of the Councill then present and since dead, he haveing to great an ascendent and Influence over the Govern[r] by his sly and deceit full way of behaveour and representing things quite opposite, to the truth and would even deceive Solloman himself were he now liveing, I dar'nt spake this out of any prejudice to the dec[d] his Charector of such being well known to severall now on the Island as well as else where, way to corroborate what I have said in this matter can very easly bring severall more to justefye, and say the same if not a great deal more and worse, And as to the widdler a widow being termd a refractary fallow in that consultation aforesaid refer to the known Records on this Island whether or know he was ever Litigious or any manner of ways acted in Contempt of Government or any thing else deserveing such severe treatment, as it was his greatest misfortune to meet with, and whether or no any Body his nearest Neighbours or others can justly accuse him of such being a very industrious and Laborious young man, takeing honest, with the sweat of his brows to maintain his familie the best he could, and whether he was not always of good Note and Fame, a fair dealer and one of an honest Life and Conversation among	Alexander continued his reply. Richard Alexander had himself positively denied the charge, and his denial was justly entered on the consultations of 13 December 1709. Until that day he had been summoned by the marshal to appear before Governor Roberts and the council then sitting, and not before. He had been charged with conduct in which there was no truth. After a short pause and astonishment at hearing what false stories and tales had been and were being told of him, he denied the charges positively and absolutely. He stated they had never entered his thoughts, much less his speech. He had challenged anyone to confront him, and often desired that his accuser be produced face to face. None could or did appear. Despite this, it was the poor man's misfortune to undergo the harsh and severe censures of the governor, who would be moved by no arguments to the contrary. This, John Alexander said, he firmly believed, and might God forgive him if he judged amiss, was due to the instigations of one of the council then present, since deceased. That councillor had so great an ascendancy and influence over the governor through his sly and deceitful manner that he could represent matters quite contrary to the truth and would have deceived Solomon himself, were he now living. Alexander said he did not speak this out of any prejudice to the deceased. The character of the man was well known to many on the island and elsewhere. To corroborate what he had said in this matter he could very easily produce many more witnesses to the same effect, and indeed a great deal more and worse. As to Richard Alexander being termed a refractory fellow in the consultation referred to, it was well known on the records of the island whether he had ever been litigious or in any way acted in contempt of government, or done anything else deserving such severe treatment as it was his great misfortune to meet with. He challenged any of his neighbours or others to accuse him justly of any such conduct. He had been a very industrious and laborious young man, taking

		them. The Contrary of which being laid to his charge as that Consultation seems to intimate in a most ridiculous and degrading manner, then and at that time, 'twas with a loud Voice indeed and de- cried without respect to his large familie that he the said Richard Alexander should have warning given him to gather his Cropp of the Ground he then possesd and that precisely in Six months tome, and then to seek	honestly with the sweat of his brow the cares and pains to maintain his family the best he could, and had always been of good life and fame, a fair dealer, and of honest life and conversation among them. The contrary of this had been laid to his charge in the consultation, which seemed to suggest in a most ridiculous and degrading manner, then and at that time, that it was with a loud voice indeed and decreed without respect to his large family, that Richard Alexander should have warning given him to gather his crop from the ground he then possessed, and that precisely in six months time, and then to seek Interpretations The reference back to the consultation of 13 December 1709 establishes the documentary anchor for the entire Alexander grievance. By citing the date of the original proceeding under Governor John Roberts, John Alexander tied his current reply to a specific entry on the council record that could be checked by Pyke and his colleagues. The marshal's summons described here illustrates how the council exercised its judicial authority over inhabitants: the offender was brought in before the sitting council, charges were stated, and the entire process took place at a single appearance with no advance notice of the case to be met. The right to confront an accuser, which Alexander had repeatedly demanded, was therefore not a procedural guarantee but a request that the governor could decline as he chose. The unnamed deceased councillor, identified as the source of the false charge through his sly and deceitful manner and his ascendancy over Governor Roberts, is a serious accusation lodged against a man no longer able to answer. The procedural significance lies in Alexander's calculated decision to defame the dead rather than a living council member. By naming no name and citing only the man's character as well known to many, the reply secured the substance of the attack while leaving the precise identification to the present council's collective memory. The mechanism shifted the burden of recognition to Pyke and his colleagues, who would understand which councillor under Roberts had played the alleged role without needing it spelt out. The order originally made in 1709, that Alexander gather his crop within six months and quit the ground he then possessed, is the substantive grievance now being relitigated. Such an order amounted to a forced disseisin of a settled planter: the council compelled the holder to harvest one final crop, surrender the land and seek other quarters elsewhere on the island. The six-month period was sufficient to bring in a yam crop but no longer crop cycle, ensuring that Alexander would forfeit any longer investment in the ground. The order operated through the council's customary authority over land tenure on the island, where freehold and Company leasehold were both ultimately subject to its administrative will. Alexander's reply now argued that the order had been made without legal ground, against an industrious family man with a large household, and only through the malicious procurement of the unnamed councillor. The character defence offered for Richard Alexander, framed as good life and fame, fair dealing and honest conversation, drew on the standard early modern vocabulary of reputation. Each phrase carried specific evidentiary weight: good life signified moral conduct, fame meant public reputation, fair dealer referred to economic honesty in transactions, and honest conversation indicated decent social behaviour. By invoking all four together, the reply assembled a complete reputation portrait that could be tested against neighbours' memory. The closing challenge to neighbours and others to accuse him justly placed the burden of contradiction on the wider community rather than on Alexander himself.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			Speculations The decision to revive the 1709 proceeding in such detail probably reflects a calculated reading of the present council's likely sympathies. With Boucher gone and his administration under documentary scrutiny, the entire previous decade of council rulings was open to reexamination. By framing the original injustice as the work of Governor Roberts misled by an unnamed councillor since deceased, Alexander invited Pyke and his colleagues to repudiate an earlier regime without implicating any current member. The structure offered the new administration the political benefit of righting a past wrong while costing no living reputation. The phrase tales and stories rather than formal charges suggests that the original 1709 proceeding had relied on informal complaints rather than sworn evidence. Alexander's emphasis on the absence of any accuser appearing in person, on the demand to confront witnesses, and on his repeated denials shows that the procedure followed under Roberts had departed from regular adjudicatory practice even by the standards of the council's own customary authority. The reply was therefore not merely an appeal on the merits but a procedural attack on the legitimacy of the original ruling, designed to make the present council's affirmation of that ruling difficult to sustain.
267	258	Habitation else where, which God Almighty had long before, prepared, and hope he is now one of the Heirs thereof. Upon which order as 'tis recorded the, said Alexander requested to go off the Island with his familie in the next outward bound ship. which altho I was his Brother and familiar friend and often with him both at his and my own house, never in all my life heard him say any thing of it, and I am very well assured he co'd propose no way to better his Condition else where, nor had he that Competency tho every thing sold to its full value sufficient to maintain so large a familie as he had, and therefore haveing no Land to live upon nor none that he could buy was of meer necessity and most assuredly contrary to his then Inclination oblig'd to request leave to go off rather then to live here any longer under discontent and daily afflictions, if this can be by any Impartiall Persons termd a Volluntary and free Act I submit to better Judgment and those Gentle- men who probably might not be so fully informed of this affair, till at this times, and that has made me the more tedious in my reply which I beg may be excused and that this one Remark may be considered that if Richard Alex[d] had freely desired leave to a gone off twould have been Ordered in that Paragra[ph] where he is to gather his Crop in Six months, and not have urged the intent of farther catching words that might accidently drop without thought after there upon made a 2[d] order immediaty and that without Hesilation which plainly shews the severity of an over heated passion and resolution, to get rid of him, nay this so very predominant that what with the one and the other The Governour caused an advertizement the self same day to be published and therein declard that Richard Alexander to his great greif and daily sorrow had Leave to go off the Island with his familie, wherefore all persons would take Notice and to clear their Acc[ts] with him, and he from thence forth declard no more a free Planter on the Island, and over and above. this or the known Customes of any Country not to have the Liberty or benefit of such tho he was a Native of the place and ever conformable, to all the Laws and Constitution thereof, a method that was never before nor since usd by any but the persons themselves who Intend and have leave to depart the Island. To the 2[d] Article, I answer that the Lease therein recited and laid hold of as a Plea for a good and sufficient Title to the Land now in dispute, and which	Richard Alexander was now one of the heirs of that habitation, which God Almighty had long before prepared elsewhere. Upon this order being recorded, Richard Alexander requested leave to go off the island with his family on the next outward bound ship. John Alexander stated that he was Richard's brother and familiar friend, often with him both at his and his own house. In all his life he had never heard him say anything of such a wish. He was very well assured that his brother could propose no way to better his condition elsewhere, nor had he the means, even if everything were sold to its full value, sufficient to maintain so large a family as he had. Having no land to live upon, and no means by which he could subsist, he was of mere necessity and most certainly contrary to his then inclination obliged to request leave to go off, rather than live here any longer under discontent and daily afflictions. Whether this could be regarded by any impartial person as a voluntary and free act he submitted to better judgement, and to those gentlemen who probably had not been so fully informed of the affair until the present time. That had made his reply the more tedious, for which he begged to be excused. One further remark might be considered: if Richard Alexander had freely desired leave to go off, it would have been ordered in that paragraph where he was directed to gather his crop in six months, and not have urged the intent of catching him in some accidental careless word that might draw out further proceedings without thought. Thereupon they made a second order immediately, and that without hesitation, which plainly showed the severity of an overheated passion and resolution to get rid of him. They were so very predominant that what with the one and the other, the governor caused an advertisement the self same day to be published. It declared that Richard Alexander, to his great grief and daily sorrow, had leave to go off the island with his family. All persons were thereby to take notice and clear their accounts with him. From thence forth he was declared no more a free planter on the island. This was, John Alexander said, above and contrary to the known customs of any country, that a man should not have the liberty or benefit of such a privilege when he was a native of the place, and conformable to all the laws and constitution thereof. The method was one never before or since used by anyone, except persons themselves who intended and had leave to depart the island.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
		has occasioned a great deal of writing from the Hon[ble] Company since their	To the second article, Alexander answered that the lease therein recited and relied on as a plea for a good and sufficient title to the land now in dispute had occasioned a great deal of writing from the Honourable Company. This consisted of Interpretations The sequence of orders described here exposes a structured pattern of administrative coercion. On the same day Richard Alexander gave way to the impossible position created by the eviction order and asked leave to depart, the council made a second order treating his request as voluntary. The governor then published an advertisement on the same day announcing that Alexander had leave to depart the island. The compressed timing converted a forced departure into a documentary record of free choice, with each successive step closing off any later claim that Alexander had been driven out. The mechanism shows how council ruling, fresh order and public advertisement could be deployed within hours to produce a legally robust outcome that no single step could have achieved alone. The advertisement is the key documentary device. By publishing notice that Alexander was leaving the island and requiring all persons to clear their accounts with him, the council compelled the wider community to treat his departure as settled. Any creditor who failed to act on the notice would forfeit his claim, any debtor who paid late would find no Alexander to receive him. The advertisement therefore functioned not merely as information but as a legal instrument that crystallised obligations and effectively dissolved Alexander's economic standing on the island within a fixed period. The declaration that he was no more a free planter from that day forward stripped him of the legal status that had previously protected his right to hold land and dispose of property. John Alexander's argument that his brother was a native of the place introduces a distinction the council had not previously been asked to recognise. A native born free planter, in his framing, held rights that the council could not dissolve at will, since his standing rested on birth on the island rather than on grant of leave to settle. The argument elevated nativity into a legal status above administrative discretion, anticipating later colonial debates about the rights of those born within a chartered jurisdiction against those who held only by grant. The point is offered not as established law but as an appeal to natural justice and the customs of any country, arguments that the council was being invited to acknowledge in principle even where it had not done so in 1709. The phrase known customs of any country signals the wider intellectual framework on which the reply was constructed. By appealing beyond the council's own customary practice to the general usage of all governed places, John Alexander positioned the original ruling as not merely procedurally defective but contrary to universal practice. The argument moved the dispute from a question of St Helena's particular administration to a question of whether the council's customary authority could lawfully override the inherent rights of a native freeholder. Speculations The choice to publish the advertisement on the self same day as the second order probably reflects an intention to outrun any chance of reconsideration. By making the matter public within hours of the order, Governor Roberts and his council foreclosed the possibility that Alexander might withdraw his request or that other inhabitants might intercede on his behalf. The compressed sequence suggests deliberate planning to convert a contested ruling into an irreversible administrative fact before opposition could form. John Alexander's emphasis on the impossibility of his brother bettering his condition elsewhere, given the

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			inadequacy of the proceeds of any sale to support so large a family in a new place, indicates that the financial structure of forced emigration was understood at the time. A free planter ordered off the island faced not only loss of land but the certainty that his estate would not realise enough at hurried sale to establish him afresh anywhere within reach. The economic mechanism of the eviction was therefore not separation but ruin, with departure under such terms representing a guaranteed fall in family fortune. By spelling out this economic reality, the reply pressed the present council to recognise that the original ruling had not been a neutral exercise of authority but the destruction of a settled household.
268	259	their design and good Intent to do Justice) I readily confess there is such one but granted by former Government, to the prejudice of Richard Alexander and his Issue. and that without his consent knowledge or privity, and I say twas at his offer is yet worse and very false, untill twas when necessity had no law, and to urge John Alexander to make proof wether or not that the said Bagley did use any indirect means toward Alexander (I suppose they mean Richard) in either of the two points namd in said Article I think, it seems some what absurd and frivolous since he was very seldom in Company with Bagley, and as little acquainted with his business especially, beleving them ready and willing Eno' to embrace any offer or thing that made for himself tho others suffer'd by it and more particularly in a good settlement without being at much expence in fencing or purchasing one at a greater rate than five Shillings p[r] Acre for Land enclord to his hand, ground ready cleard for Planting, a house, well built & fitt to contain a large familey besides other suitable conveniencies w[ch] which by that lease became given him with land and seal affix thereto. the executors say they conceive Bagleys claim Just. but considering the matter impartially and equitably in those, that Richard Alexander had this Land (or part thereof) granted him many years since, as p[r] an Order of Councill dated the 21[st] of March 1671/2 may in Book N[o] 3, more fully appear built a House upon it, made a Plantation, and that with a vast deal of difficulty and hard Labour had the same in quiet possession nigh thirty years paying all that time the Hon[ble] Company their just Rent and Duty as other freemen did and upon all occasions appearrd ready in person to assist in defence of the Island, as twas his duty so to do, can't any way[s] conceive how he could forfeit any of his goods or Chattles, or any way apprehend why such severity was usd in turning the said Alexander and his family out of his House and Plantation, unless twas purely to ruine him, and so do others a good office, and which can't be forgot by any his posterity, nor indeed can there be now a sutible satisfaction made, for the injury and apparant Damages he and his did and doth yet sustaine, by being thus outed of y[e] Land he so long peaceably enjoy'd, and therefore, do say that the leave granted Tho[s] Bagley was to his own wrong, and not so binding as the right Richard Alexander had by what already said on that head, and a great deal more that I think needfuls not to mention 21 Aw[t] this one whichb pres[ume] very materiall. That the reason why Richard Alexander had not a Lease, was because	The reply continued. The design and good intent was to do justice. John Alexander readily confessed that such a lease had been granted by a former government, but to the prejudice of Richard Alexander and his issue, without his consent, knowledge or privity. To say it was at his offer was worse and very false, unless it could be said that necessity had no law. As to the proposal urging John Alexander to make proof whether or not Bagley had used any indirect means towards Alexander (he supposed they meant Richard) on either of the two points named in the article, this seemed to him somewhat absurd and frivolous. He had very seldom been in company with Bagley, and was little acquainted with his business. He believed Bagley was ready and willing to embrace any offer or thing that made for himself, even though others might suffer by it. He particularly believed this in the matter of a good settlement obtained without much expense in fencing or purchasing, at a rate no greater than five shillings per acre, for land already enclosed, ground ready cleared for planting, and a house well built, fit to contain a large family, besides other suitable conveniences. The said lands had been given to him under hand and seal, and at this rate the executors said they reckoned Bagley's claim just. Considering the matter impartially and equitably, Richard Alexander had this land, or part of it, granted to him many years before by an order of council dated 21 March 1693. This appeared more fully in Book Number Three. He had built a house upon it, made a plantation, and with a vast deal of difficulty and hard labour had enjoyed the same in quiet possession for nigh twelve years. During all that time he had paid the Honourable Company their just rents and duties as the other freemen did, and had upon all occasions appeared ready in person to assist in the defence of the island, as it was his duty to do. John Alexander could in no way conceive how Bagley could lay claim to any of Richard's goods or chattels, or in any way understand why such severity was used in turning Alexander and his family out of his house and plantation. The only explanation he could imagine was that it had been done purely to ruin Richard and to do others a kindness. The act could not be forgotten by any of his posterity, nor could any suitable satisfaction now be made for the injury and apparent damage Richard had sustained and continued to sustain, by being thus turned out of the land he had so long peaceably enjoyed. For these reasons, John Alexander said that the leave granted to Thomas Bagley was to his own wrong, and was not binding as the right Richard Alexander had to it had already been laid out on that head. He thought it needless to mention more, though the matter was very material. The reason why Richard Alexander had not a lease was because Interpretations The 21 March 1693 council order is the documentary foundation of the entire Alexander claim. By citing the original grant in Book Number Three, John Alexander placed the dispute on a footing where

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			the records of the council themselves would either vindicate or undermine the family title. The grant gave Richard Alexander roughly twelve years of quiet possession before the 1709 ejection, during which he had built a house, made a plantation and paid all rents and duties as other freemen did. The repeated emphasis on payment and military duty establishes Richard Alexander's standing as a fully compliant inhabitant whose dispossession therefore lacked any disciplinary basis. The five shillings per acre rate cited as the price of Bagley's settlement provides a concrete benchmark for the value of improved land on the island. Five shillings per acre for land already enclosed, cleared for planting and supplied with a built house and conveniences represented a substantial undervaluation. The cost of fencing, clearing and building, distributed across the years of Richard Alexander's labour, would have far exceeded any such figure, and Bagley's acquisition at this rate effectively transferred the value of more than a decade's improvement work to a successor planter at little more than the bare ground rate. The transaction shows how administrative dispossession produced windfall transfers within the planter community, with the council's reallocation of confiscated land enabling beneficiaries to acquire developed holdings at the rates appropriate to undeveloped ones. The reference to twelve years of quiet possession invokes a recognisable legal threshold drawn from English property practice. Long undisturbed possession of land established a presumption of right under common law and could ripen into a defensible title even against earlier claimants. By foregrounding the duration of Richard Alexander's tenure, John Alexander positioned the 1709 dispossession not merely as harsh but as inconsistent with the established English principle that long peaceable enjoyment generated rights the council could not easily dissolve. The argument worked by importing into St Helena's customary land system the protective doctrines of the wider English legal tradition. The closing distinction between an order of council and a lease is the procedural pivot of the article being answered. Richard Alexander held his land by council order alone, without a written lease drawn up under hand and seal, while Bagley had received both. The absence of a formal lease was therefore presented as a vulnerability that the previous administration had exploited, with the want of a written instrument used to deny Alexander the protection that Bagley's documented title would have carried. John Alexander's reply was preparing to explain why no lease had been issued, leaving the substantive answer for the continuation of the document. Speculations The decision to anchor the reply in a 1693 council order from Book Number Three probably reflects a calculated assertion that the present council should consult its own archive rather than rely on the 1709 record. By directing Pyke and his colleagues to a specific volume and date, John Alexander invited them to read for themselves the original grant under which the family held title. The procedural effect was to widen the documentary frame of the dispute, since the 1709 proceedings had been confined to the conduct alleged against Richard Alexander, while the 1693 grant placed the question of underlying title before the council on terms favourable to the Alexander side. The framing of the dispossession as done to ruin Richard Alexander and to do others a kindness probably points toward an unspoken belief that Bagley and his supporters had been the active beneficiaries of council favour in 1709. The careful preservation of this charge in writing, without naming the specific others who benefited beyond Bagley himself, suggests John

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			Alexander wished to leave room for further allegations should the council enter into the merits. The phrasing functioned as a placeholder for evidence that could be supplied in a later sitting if Pyke proved receptive, while remaining vague enough that no defamation suit could be founded on its present form.
269	260	because the Land was not measured to him till severall years after he possesit it and never had a Plan nor none given into the Office or any Acc[t] of the brettalls or boundaries which in all Leases is mentioned, which was the Case of severall others, yet notwithstanding this grant of Councell for 10 Acres of said Land, and the same being measured with the addition of more Acres thereto for the conveniency of fenceing is Deemd a very good and sufficient Title to hold any the Hon[ble] Comp[as] Land by paying them as aforesaid which was the only title by which severall of the Inhabitants held their hired Land by, till such time as Leases &c[a] were given out and always beleived themselves very safe and secure thereby and not to seem like Children to give and take away again, for I can term this no better, and for the reasons aforesaid and many more that might be mentioned do for and on behalf of the House of Richard Alexander declare Bagleys claim to be frivolous, groundless & very unjust in every respect. To the 3[d] and last Article it's reply'd that a Coppy of the Petition sent to England (which the Execut[rs] does Jn[o] Alexander wrong in by saying he urges is to be produced and contains no false Allegations and puts the same on any body to prove the contrary, upon which the Hon[ble] Comp[as] was so just and Charitable as to say in the 82[d] par[as] of their Letter by Ship Toddington and Thislworth. that they were content to grant Mercy Alexander her Husbands Land with a Lease thereof, and gives a good reason for that as well as all and every forfeiture and Seizures of Land, they being at that time determind to make a new settlement of the Island, and such as they hoped wou'd be to the good liking of all the Industrious and honest Inhabitants in the Number of which no person or persons can justly accuse or say but Richard Alexander was, if any can to the contrary they have free Liberty and which I press them to its to the Coppys of Tho[s] Bagleys Petition, I don't think them any way serviceables to y[e] cause in hand, nor do they require, answer Let the alledged Pretences, or Insinuations be what they will, since the whole affair is well known to the Inhabitants as to my self, and as to the Execut[rs] of Bagleys saying they shall endeavour to prove, twas not so much out of Charity to the Widow of Alexander as out of Contempt to Govern[r] Roberts to oppose him that Govern[r] Boucher gave Goodgen possession thereof, Is shall be very brief in answereing and first, That's what Govern[r] Boucher did was pursuant to the Hon[ble] Companys direct Orders in the Letter aforesaid as p[r] order of Councill	because the land was not measured to him till several years after he possessed it, and never had a plan nor any given into the office, nor any account of the bristols or boundaries which in all leases is mentioned. This was the case of several others. Notwithstanding, this grant of council for six acres of the said land, with the same being measured and the addition of more acres for the convenience of fencing, was reckoned a very good and sufficient title to hold any of the Honourable Company's land, by paying them as aforesaid. This was the only title by which several of the inhabitants held their hired land, until such time as leases were given out. They had always believed themselves very safe and secure on it, and not seemed like children to give and take away again. John Alexander said he could regard the matter no better than this. For these reasons, and many more that might be mentioned, he declared on behalf of the heirs of Richard Alexander that Bagley's claim was frivolous, groundless and very unjust in every respect. To the third and last article, he replied that a copy of the petition sent to England, which the executors had wrongly named John Alexander as having sent, was to be produced. It contained no false allegations and put it on anybody to prove the contrary. The Honourable Company was so just and charitable as to say in the eighty-second paragraph of their letter by ship <i>Toddington</i> and <i>Thistleworth</i>, that they were content to grant Mercy Alexander, her husband being dead, a lease of the said land, and gave a good reason for that as well as for all and every forfeiture and seizure of land. They were at that time determined to make a new settlement of the island, and such as they hoped would be to the good liking of all the industrious and honest inhabitants. None could justly accuse or say but Richard Alexander was, if any can to the contrary, of free liberty. John Alexander pressed them to the copy of Thomas Bagley's petition. He did not think there was anything serviceable to the cause in hand, nor did they require an answer. Let the alleged pretences or insinuations be what they may, since the whole affair was well known to the inhabitants and to himself. As to the executors of Bagley saying they would endeavour to prove that it was not so much out of charity to the widow of Alexander as out of contempt to Governor Roberts that Governor Boucher gave Gargen possession of it, John Alexander would answer that very briefly and first. That, he said, was what Governor Boucher did pursuant to the Honourable Company's direct orders in the letter aforesaid, as appeared by order of council Interpretations The absence of measurement, plan and recorded boundaries in Richard Alexander's original grant illustrates how informal the early planter holdings on St Helena had been. Several inhabitants held land for years on the strength of a council order alone, with no survey, no written lease and no entry of bristols, the term used for marked boundary stones or other physical demarcations of a holding. John Alexander's argument is that an unrecorded grant, once recognised by long possession and the regular payment of rent, generated as good a title as any later leasehold. The contention pressed the council to acknowledge that the formal lease system introduced under later administrations could not retroactively undermine those who had settled under the earlier informal grants. By comparing the planters' position to that of children whose property

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			could be given and taken at will, the reply asserted that the previous administration's treatment of the holding was incompatible with any settled property regime. The reference to the eighty-second paragraph of the directors' letter carried by the <i>Toddington</i> and <i>Thistleworth</i> introduces a key documentary turn in the case. The directors had themselves granted Mercy Alexander, widow of Richard Alexander, a lease of the land in question and had set out their reasons in terms of a wider plan to make a new settlement of the island. This metropolitan instruction effectively cut across whatever the council under Roberts had ordered in 1709, since the directors held the ultimate authority over land disposition on the island. The widow's lease, issued from London, represents a substantive vindication of the Alexander family claim against the local ejection. John Alexander's reliance on this paragraph shows the structure of authority: where the local council and the directors disagreed, the directors' written instructions governed, and a planter aggrieved by local action could find redress in metropolitan correspondence. The mention of Boucher giving Gargen possession on the directors' direct orders opens a new strand in the dispute. Gargen had received the land under Boucher pursuant to the letter from London. This places Boucher's actions as the executor of the directors' settlement plan rather than as an arbitrary local intervention, which complicates any attempt to use the present documentary case against Boucher as a vehicle to disturb the Alexander reply. The argument over whether Boucher acted out of charity to the widow or contempt to his predecessor Governor Roberts is therefore a question of motive, but John Alexander's answer makes it a question of authority: whatever Boucher's private feeling, his action followed the directors' written instruction. The eighty-second paragraph of a single letter carrying such weight illustrates how dense and operationally significant company correspondence had become. A directors' general letter could run to many dozens of numbered paragraphs, each treating a distinct matter of business, and a planter's title could turn on the precise wording of a single paragraph among them. John Alexander's ability to cite the paragraph by number indicates the kind of close documentary knowledge that protracted litigation produced in those who pursued it. Speculations John Alexander's emphasis on the eighty-second paragraph and the <i>Toddington</i> and <i>Thistleworth</i> letter probably reflects a deliberate timing decision. Both ships are named in the open documentary case against Boucher as vessels whose letters had been missing from the local record. By citing chapter and verse of a letter the council was already known to be reconstructing, John Alexander put the present administration on notice that the Alexander side held copies or accurate notes of its content. The implicit point was that any attempt to deny the contents of the eighty-second paragraph or its bearing on the widow's lease would expose the council to contradiction by external sources. The defence therefore exploited the very documentary gaps that the present administration was struggling to fill. The argument that several other inhabitants had held land on the same informal basis as Richard Alexander, without measurement, plan or recorded boundaries, suggests that John Alexander expected the present council's verification of his title to call into question many other holdings on the island. By framing his brother's case as representative rather than exceptional, he created a political incentive for the council to rule in his favour: any narrow finding that an unmeasured grant did not constitute good title would

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			unsettle a significant portion of the existing planter community and provoke wider dispute. The reply was therefore not only an appeal for justice in one case but a warning that an adverse decision would generate further claims the council could not easily contain.
270	261	Councill of the 8[th] October 1711, and therefore the Executive power not lodged in his breast wether to give Possess of that Land or not he following the very Letter of said order. 2[d]ly I presume, the word Contempt herein mentioned quite wrong place'd, since Govern[r] Boucher was upon a Levell with Govern[r] Roberts, and not an Inferiour. As to what is required to know if the Hon[ble] Comp[a] has given any express Orders that Alexander's Widow should be reinstated in the Land in her former Husbands possession, I have already answeard in part and for that they haveing order'd by their last Letter (a this off the Rochester) through the please miss informations they have had from hence) that the true merits of the said cause in all parts should be impartially and equally on either side examind into, and all parties to be heard that should be able to give testimoney. I do further for and on behalf of Richard Alexanders Issue humbly request a speedy and final determination thereof, and the same transmitted to the Hon[ble] Comp[a] for their decide or confirmation doubting not when the matter is fairely stated and consider'd but they will grant the said Land in favour of the said Richard Alexanders Issue, the eldest Daugh- ter being Marriageable, and the Son about fourteen Years of Age, and but little or nothing to maintain them, wherefore will of necessity want a Habitation. And now As to the Certefisitte of M[r] Carne, I think, requires no long answer since some part of the Execut[rs] reports (as they call it is grounded chiefly thereon and which I have already replied to. presumeing those words spoken by Govern[r] Boucher was only in comon discourse, and don't no way bare any or the least stress to weaken the right of Richard Alexander or his Issue, and is the finall Answer and reply (to the aforesaid case) of Your Worships and Councils most humble and very Obedient Servant November y[e] 2[d] 1714. John Alexander Jo	Council of 8 October 1711, and therefore the executive power did not lie in his breast whether to give possession of that land or not. He had followed the very letter of the order. Secondly, John Alexander presumed that the word contempt mentioned in that connection was quite out of place, since Governor Boucher was upon a level with Governor Roberts, and not an inferior. As to what was required to be known, whether the Honourable Company had given any express orders that Alexander's widow should be reinstated in the land in her former husband's possession, he had already answered this in part. The Company had given orders by their last letter received by the <i>Rochester</i>, through the misinformation they had had from hence, that the true merits of the cause should in all parts be impartially and equally examined into on either side. All parties were to be heard who should be able to give testimony. He further, on behalf of Richard Alexander's issue, humbly requested a speedy and final determination of the matter, and that the same be transmitted to the Honourable Company for their decision or confirmation. He did not doubt that, when the matter was fairly stated and considered, they would grant the land in favour of Richard Alexander's issue. The eldest daughter was marriageable, the son was about fourteen years of age, and they had little or nothing to maintain them. They would necessarily want a place of habitation. As to the certificate of Mr Carne, John Alexander said it required no long answer. Some part of what the executors reported, as they called it, was grounded chiefly on it, and to that he had already replied. He presumed that the words spoken by Governor Boucher were only in common discourse, and did not in any way carry the least weight to weaken the right of Richard Alexander or his issue. This, he said, was the final answer and reply to the aforesaid case, made on behalf of the Alexander issue. The document was dated November 1714 and subscribed by John Alexander as humble and very obedient servant to the worshipful and council. Interpretations The council order of 8 October 1711 is the documentary anchor for Boucher's defence in this matter. By citing that order, John Alexander placed Boucher's actions on a footing of obedience to a prior council decision rather than personal discretion. The implication was that to attack Boucher for putting Gargen in possession of the land was effectively to attack the 1711 council's own ruling, which had directed that result. The point operated as a procedural shield against any attempt to use the present documentary case against Boucher to disturb the eventual ruling on the Alexander claim. Where the executive power lay outside the governor's personal discretion, the action could not properly be charged against him as misconduct. The argument that Governor Boucher was upon a level with Governor Roberts, and not an inferior, reveals an important point about the sequence of council authority. Each governor stood in his own period as the chief authority on the island, and the orders of one administration did not bind the next in the manner that orders of a superior officer would bind a subordinate. John Alexander's correction of the executors' use of the word contempt is therefore not merely lexical but constitutional: a successor governor could review and reverse the actions of his predecessor without committing any contempt of office, since the

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			predecessor's authority had been not over him but only before him in time. The argument established that Boucher had been free to revisit Roberts's 1709 ruling without owing it any deference beyond what the record itself commanded. The directors' letter received by the <i>Rochester</i>, directing that the true merits of the cause be impartially examined and that all parties able to give testimony be heard, places the present consultation under a specific metropolitan instruction. The Honourable Company had been misinformed by previous local correspondence, and the new directive was to start afresh with a balanced inquiry. The council was therefore not at liberty to dispose of the matter on its own view but had to conduct a hearing that could withstand scrutiny in London. The mention of the <i>Rochester</i> as the carrier of this instruction connects the dispute to the recent run of shipping that had brought Pyke's commission and the new administration's authority. The closing detail about the eldest daughter being marriageable, the son fourteen, and the family without means of maintenance places the human stakes of the dispute in concrete form. A marriageable daughter without land would struggle to attract a settled match, and a son nearing manhood without a holding would have no economic foundation. The mention is offered not as sentiment but as a working argument: the absence of a habitation translated directly into the family's inability to function in island society. The council was being reminded that the eventual decision would shape two young lives at a moment when delay would have material consequences. Speculations The careful invocation of the 8 October 1711 council order to defend Boucher's action probably reflects an understanding by John Alexander that any direct attack on Boucher could rebound against the Alexander cause. The Alexander family's restoration depended on overturning the 1709 ruling under Roberts, which Boucher's 1711 order had effectively done by reinstating the widow's interest. To treat Boucher as a wrongdoer would risk vacating the very 1711 ruling on which the present claim now rested. The reply therefore takes the politically delicate position of defending Boucher's procedural conduct while leaving the wider documentary case against him intact for separate handling. The repeated emphasis on a speedy and final determination, together with the request that the matter be transmitted to the Honourable Company for confirmation, points to a deliberate strategy of locking in the council's eventual ruling through London endorsement. John Alexander was perhaps anticipating that Bagley's executors might continue to press the matter under any new administration, and a confirmation from the directors would foreclose further local litigation. The request also placed Pyke and his colleagues under pressure to issue a decision they could defend in London, since any ruling unfavourable to the Alexander side would be tested by direct appeal to the very metropolitan correspondence already being cited.
271	262	S[t] Helena To the Worshipf[ull] Govern[r] and Councilt Wee Orlando Bagley & Rich[d] Swallow in Defence of Thomas Bagley dec[d] Claim to 10/21 Acres of Land against Jn[o] Alexander who Oppos- eth it. In his reply to Thomas Bagleys Case we don't see any thing that bares any Stress Either one way or t'other only a Reflection upon Swallow which he thinks most Proper to make a seperate Answer to. himself being only Concern'd therein, to Shew he has no Sinister design in it and as to the Certificate as he calls it sent to the Company, which we Understand was Copied by	St Helena. The reply was addressed to the worshipful governor and council. Orlando Bagley and Richard Swallow set out their defence of Thomas Bagley deceased, claiming ten or twenty-one acres of land against Mr Alexander, who opposed it. In his reply to Thomas Bagley's case, they did not see anything that carried any force one way or the other. It was only a reflection upon Swallow, which he thought most proper to answer separately, being the person concerned, in order to show he had no sinister design in it. As to the certificate, as Alexander called it, sent to the

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
		M[r] Tovey don't in the least see why it should give him any Remorse of Conscience but that he may freely Pursue the Recovery of his Predecessours right with Vigour and Alacrity, and Bagley might if there had bin Occasion sent Such a Certificate to the Company of a more Unblameable Reputation then Alexander, and Sign'd by more hands. In his reply to the next two Articles its Chiefly a Reflection against the Government and the severity usd by y[m] towards Richard Alexander which don't in the least weaken Bagleys Claim Unless he had been an agresor therein to prove which John Alexander thinks it absurd and Redercious, but were it fairly Proved we should be doubtfull thereof, and as to his thinking him ready & willing Enough to Embrace any thing that made for himself though others were ruind by it, We possitively affirm to be false, for twas with regret the Accepted it being no ways inclinable thereto, Untill Alexander told him if he would not Accept it there was several young beginners that would be glad of such an Offer, Naming to him John Knipe in particular but purely out of Kindness to him had rather he should have it than any other person. and Bagley some time after Alexanders Decease to Retaliate his kindness in some measure, in a fitt of Margin Notes: Bagleys Execut[rs] Answer to John Alexand[rs] reply.	Company, which Bagley and Swallow understood to have been copied by Mr Tovey, they did not in the least see why it should give Swallow any remorse of conscience. He might freely pursue the recovery of his predecessor's right with vigour and alacrity. Bagley might, had there been occasion, have sent such a certificate to the Company of a more unblemished reputation than Alexander, and signed by more hands. In his reply to the next two articles, it was chiefly a reflection against the government and the severity used towards Richard Alexander. This did not in the least weaken Bagley's claim, unless he had been an aggressor in the matter. To prove this, John Alexander thought it absurd and ridiculous. Even were it fairly proved, the executors would be doubtful of it. As to his thinking him ready and willing to embrace anything that made for himself, though others were ruined by it, the executors positively affirmed this to be false. The land had been accepted with regret, being no way inclinable to it, until Alexander told him that if he would not accept it there were several young beginners who would be glad of such an offer, naming John Knipe in particular. Bagley took it purely out of kindness to Alexander, and would rather any other person had it. Some time after Alexander's death, Bagley had it as a return of his kindness in some measure, in a fit Interpretations The framing of this reply as a separate answer from Swallow, distinguishing his personal interest from that of his co-executor Orlando Bagley, shows how the executors managed the conflict-of-interest charge that John Alexander had laid against Swallow in the original Alexander reply. By having Swallow respond to the personal allegation in his own voice while leaving the substantive claim of title to be argued jointly, the executors compartmentalised the imputation of self-dealing. The procedural choice allowed Swallow to deny any sinister design without distracting from the property claim itself, and gave the council a clean evidentiary structure: one document for the executors' joint case on the land, another for Swallow's personal defence on the trust arrangement. The counter-certificate boast, that Bagley could have produced a certificate of a more unblemished reputation than Alexander and signed by more hands, exposes how the freeholders' certificate functioned as a political weapon within planter society. By claiming the capacity to assemble a larger and more reputable body of signatories, the executors implied that the Alexander side's certificate represented only a partial and inferior cross-section of the inhabitants' opinion. The challenge worked as a counter-threat: any reliance by the council on the existing certificate would invite the Bagley side to produce its own, drawing the dispute into an open contest of inhabitant subscription that would consume time and divide the community. The narrative of how Bagley came to accept the land places Alexander himself in the role of soliciting the transaction. By the executors' account, Alexander offered the holding to Bagley, was met with reluctance, and prevailed only by naming John Knipe as an alternative beneficiary. The version transformed what John Alexander's reply had presented as an opportunistic land grab into a reluctant favour done to a friend in extremity. Knipe's mention as the proposed alternative tied the transaction to a recognised young beginner among the planters, lending credibility to the account by reference to a person whose interest in cheap improved land would have been well known to the council. The structural effect was to convert Bagley's title from one based on the council's reallocation under Roberts to one based on a private transaction between Alexander and Bagley themselves. The phrase ten or twenty-one acres of land in the heading of the executors' reply reveals an underlying

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
			uncertainty about the size of the disputed holding. The original Alexander grant had been for six acres, with further land added for the convenience of fencing. The executors' alternative figures suggest that subsequent measurement and addition had produced different totals at different times, and that the eventual conveyance to Bagley may have related to a larger consolidated holding than the original 1693 grant. The variance in stated acreage is itself part of the dispute, since the value of any council ruling depends on which boundary lines are confirmed. Speculations The introduction of John Knipe as the supposed alternative recipient probably reflects a calculated reference to a name the council would recognise. Knipe had recently appeared in council records as the heir of his late father in the legacy dispute over the Knipe estate, and was known as a young planter looking to establish himself. By placing Knipe in the narrative as a person Alexander had explicitly considered for the offer, the executors made the account verifiable in principle, since Knipe could be called to confirm or deny that Alexander had ever raised the matter with him. The mention was therefore both a credibility device and an implicit invitation to the council to take evidence from a third party, which the executors apparently expected would favour their version. The repeated emphasis on Bagley's reluctance to accept the land, and on the kindness he had thereby done Alexander, probably reflects an awareness that the original 1709 dispossession remained the politically vulnerable foundation of the Bagley title. If the council were to find that the dispossession had been wrongful, the executors needed an alternative basis for Bagley's standing that did not depend on the validity of the Roberts administration's actions. By presenting the transaction as a private exchange initiated by Alexander himself, the executors offered the council a path to confirm Bagley's title even if the underlying 1709 proceeding were impugned, transferring the legal foundation of the holding from public order to private consent.
272	263	of Sicknes himself had (before the Sicknes he dyed of) made a Deed of Gift to Richard Alexanders Children and gave to Each of them a Heifer (there being at that time five Liveing) and had he Expired of that Sicknes, his Execut[rs] for his treacherous Treat[mt] must have given five head of Cattle out of his Stock it being out of their Power to recall a Deed of Gift made by the Deceased How if Rich[d] Alexander making such an Offer to Bagley, was only to trick him into his habitation to make the best of his Crop Untill such time as he co'ud Write to the Company that he was unjustly outed his habitation by the Governm[t] there and desired to have it restored him agein by them, would have been right down Knavery, but we realy beleive he had no such intent or ever Enterd his thoughts. But Jn[o] Alexander who Always lov'd to fish in troubled Waters for he Naked him- self had Conceivd against the Governm[t] for displacing him After the Death of his Brother thought a very fitt Opportunity did present it self to Render the Governm[t] Odious & Tyranniall (having no Plea in his own behalf) and to corroborate and Promote his Designs the more had a very fitt Messenger to Send by there being no Body to defend the Contrary to the Hono[ble] Company and as to his decler- ing their Seale frivolous Groundless and very unjust in every respect, words we deem he had better kept in then have Exprest because it gives just Occasion to the Inhabitants, of being precarious in Accepting thereof and can never think themselves Safe if the Same is given by one Government and taken away by another In his 3[d] Reply he Says we do him wrong to Say he sent a Petition to England, we really beleive him to be	Bagley had himself fallen sick. Before the sickness of which he died, he had made a deed of gift to Richard Alexander's children, giving each of them a heifer. Five were living at that time. Had he expired of that sickness, his executors would have been obliged to deliver five head of cattle out of his stock, since it lay beyond their power to recall a deed of gift made by the deceased. Therefore, to assert that Alexander, in making such an offer to Bagley, was only to keep him in his habitation to make the best of his crop, until such time as he could write to the Company that he had been unjustly ousted of his habitation by the governor there, and ask to have it restored to him again by them, would have been outright knavery. The executors really believed Alexander had no such intent nor ever entered his thoughts. But John Alexander, who always loved to fish in troubled waters, had conceived against the governor for displacing him. After the death of his brother he thought a very fit opportunity presented itself to render the governor odious and tyrannical, having no claim in his own behalf. To corroborate and promote his designs, the more he had a very fit messenger to send by, there being nobody to defend the contrary to the Honourable Company. As to his declaring their settlement frivolous, groundless and very unjust in every respect, those were words the executors deemed he had better kept in than expressed, because it gave just occasion to the inhabitants of being precarious in accepting their land, since they could never think themselves safe if the same was given by one government and taken away by another.

Film No	Page No.	OCR Transcription	Modern Summary with Analysis
		the Author of it, & Likewise all Damages Sustained by Bagley and his Successor and Governor[r] Proyer and M[r] Hoshison were the Actors thereof, and here to make a little Digression we think will not be a Miss To Insue the Passion of Governor[r] Boucher much more Violent towards Bagley (then is intimated by John Alexander in y[e] preceeding Government towards his Brother) A man who never in all his time Disturbd the Peace of any Governm[t] and who was Altogether a Stranger to Governor[r] Boucher who did make an Order of Councell so which he thought not Convenient to signe and for which he hath a very good Plea if ever called in question That	In his third reply he said the executors did him wrong to say he had sent a petition to England. They really believed him to be the author of it. Likewise, all damages sustained by Bagley, and his successor Governor Boucher and Mr Hoskison, had been the actors thereof. Here to make a little digression, which they thought would not be amiss. To show the passion of Governor Boucher much more violent towards Bagley, even than was intimated by John Alexander in the preceding government towards his brother, a man who never in all his time disturbed the peace of any government, and who was altogether a stranger to Governor Boucher, who did make an order of council which he thought not convenient to sign, and for which he had a very good plea if ever called in question Interpretations The deed of gift to the five Alexander children, conveying a heifer to each, transforms the executors' account of Bagley's character. By revealing that Bagley had during his last sickness made provision for Richard Alexander's children, the reply established a continuing tie of affection and obligation between the two families that complicated any narrative of Bagley as a hostile beneficiary of Alexander's ruin. The legal weight of the deed lay in its irrevocability: once made, the executors could not recall it, and the five heifers would have passed to the children regardless of how the wider land dispute was resolved. This procedural detail demonstrates the executors' point: had Bagley actually died of the sickness, the children would have inherited five cattle from him, a substantial gift in livestock-poor St Helena. The phrase fish in troubled waters captures the executors' characterisation of John Alexander's strategy. By framing him as a man who exploited political turbulence for his own ends, they sought to recast his entire reply as opportunistic rather than principled, with the change of administration from Boucher to Pyke as the troubled water in which he now cast his line. The accusation worked alongside the assertion that he had no claim in his own behalf. John Alexander, as Richard's brother rather than direct heir, was acting on behalf of the children's interest, and the executors' point was that he therefore had no personal stake that would test his motives. The argument about the danger of frivolous, groundless and very unjust being applied to government land grants reveals a substantial constitutional concern. The executors warned that any council ruling that overturned an earlier settlement of land would render every other inhabitant precarious in his holding, since each planter would thereafter wonder whether his title would survive the next change of administration. The point shifted the political weight of the case onto the council: a decision for the Alexander side would unsettle the wider planter community by establishing that government grants could be reversed when administrations changed, while a decision for the Bagley side would preserve the security of established titles. The argument was directed at the council's interest in maintaining settled property relations on the island. The reference to a council order Governor Boucher had thought not convenient to sign, with a very good plea if ever called in question, introduces a new evidentiary thread. The executors were preparing to set out a specific instance in which Boucher had acted against Bagley out of personal passion rather than legal authority, by declining to sign a council order. The detail will presumably be developed further in the continuation of the document. For present purposes the significance lies in the executors' decision to attack Boucher openly in this part of their reply, even as the wider Alexander defence had taken care to defend his procedural conduct on the directors' instructions. Speculations

			The executors' decision to disclose the deed of gift to the Alexander children at this point in their reply probably reflects a calculated reservation of the strongest evidence for late deployment. The five heifers conveyed in articulo mortis spoke directly against any claim that Bagley had been hostile to the Alexander family, and the timing of the disclosure, well into the third article of reply, suggests it was held back to overturn the cumulative impression created by John Alexander's earlier characterisations. By introducing the gift only after the structural arguments on title and procedure had been laid out, the executors prevented its emotional weight from being absorbed and dismissed in advance. The attack on John Alexander as a man without personal stake, fishing in troubled waters, was designed to discredit the entire reply rather than refute any specific point. By questioning his standing to speak for the family at all, the executors invited the council to discount his arguments as those of an interested intermediary rather than a principal. The procedural effect would have been to push the substantive dispute back onto the children themselves, who were too young or too inexperienced to argue their own case, weakening the practical pressure of the Alexander position before the council even reached its decision.
273	264	that no such order is Signd by him) that Bagley shou'd give Goodgen who had Married the widow of Richard Alexander Possesion of his House and Land in Ten days which was Accordingly sent him next day by Tho[s] Free the then Clerk of Councell But Bagley not taking this the for a Sufficient Warrant to leave his habitation Did still Continue in the same. Whereupon Govern[r] Boucher sent his Deputy in Person to Turn him out and the more to Calliate and Excuse his proceedings towards Bagley did give out twas the Comp[as] Express Orders and the fault of his that such Severity was usd to him and which John Alexander seems to Stick very Close to the Hono[ble] Company having a Strict regard to Justice in all their Orders to their Servants abroad we cannot beleive they must of Necessity Pervert it to follow the Letter of their Instructions the being very Sensible they were not Apprised by y[e] Widows Petition that the Land formerly in her Husbands Possesion was Disposed of by lease out of their own with their Hono[le] Seale affixed thereto, such an Impediement being in the way Discovered we humbly Presume they would have been as well Contented it shou'd have remaind so and now to return where we left. We find two Allegations in the Said Petition that hath no great Matter of truth in them and where in the Stress thereof doth Cheifly Consist the first is that Richard Alexander did Hire a Parcell of Land of the Hono[ble] Comp[as] for twenty one years, that we beleive no record will Appear he ever Hir'd it for any Limited time the Second is that his Wid[o] had not a Jam to Digg but what She was forced to buy hath no great truth in it neither for if we are not much Mistaken She had Yams in the Land now in Dispute Untill she was Married to Goodgen if not after, and the reason he Alledgeth in his preceeding reply that his Brother had not a leafe seems to be wholly Laid upon the Surveyor whe we Presume Capable to make him a suitable Answer, and Alexanders saying Bagleys Petitions require no Answer let the Allegations be what they will is is Rediculous Even to Extravagancy, for therein is the Naked truth sett forth of his Claim without any Evasions and which himself was Able to make more plain & Obvious then	No such order was signed by Boucher. The order required that Bagley should give Gargen, who had married the widow of Richard Alexander, possession of his house and land in ten days. Boucher accordingly sent Thomas Fort to him the next day. Fort was then clerk of council. But Bagley did not take this as a sufficient warrant to leave his habitation, and still continued in the same. Whereupon Governor Boucher sent his deputy in person to turn him out. The more to palliate and excuse his proceedings towards Bagley, Boucher did give out that it was the Company's express orders, and the fault of his that such severity was used to him. John Alexander seemed to stick very close to this. The Honourable Company, having a strict regard to justice in all their orders to their servants abroad, the executors could not believe they must of necessity proceed to follow the letter of their instructions, the being very sensible they were not apprised by the widow's petition that the land formerly in her husband's possession was disposed of by lease out of their own under their honours' seal affixed thereto. Such an impediment being in the way, discovered, the executors humbly presumed they would have been as well contented it should have remained so. Now to return where they left. The executors found two allegations in the widow's petition that had no great matter of truth in them, and where the stress thereof both chiefly consisted. The first was that Richard Alexander had hired about eight acres of land of the Honourable Company for twenty-one years. The executors believed no record would appear that he ever hired it for any limited time. The second was that his widow had not a sum to dig in, but what she was forced to buy. This had no great truth in it, neither was she very much mistaken. She had yams in the land now in dispute until she was married to Gargen, if not afterwards. The reason he alleged in his foregoing reply, that his brother had not a lease, seemed to be wholly laid upon the surveyor, whom the executors presumed capable of making him a suitable answer. As to Alexander saying Bagley's petitions required no answer, let the allegations be what they will, it was ridiculous, even to extravagance, for therein was the naked truth set forth of his claim, without any evasions, and which he himself was able to make more plain and obvious Interpretations
